Good Afternoon Susan,

Please find the Florida Missing Children's Day 5th Grade Essay Contest submissions attached. There is a spreadsheet listing all of the submissions and a PDF file containing scanned copies of all submissions.

The essays are numbered and grouped by region.

If you need any additional information, please let me know.

Thanks so much!!!

Dana M. Bloodworth

HOW TO PREVENT CHILD ABDUCTION

By Naydelin Reyes

Abel Elementary School – Manatee County

There are a number of methods, and steps, that may be considered to use when making preventions for the abduction of children, which is listed through out my research paper. When it is suspected that a child may be abducted, there is a proper way to handle the situation. I will include some facts about missing children as my second main point. My third point I will explain how to find your way when you get lost.

"Although abductions by nonfamily members receive more public attention, a number of child abductions are committed by family members such as moms, dads, uncles or noncustodial parents, commonly called parental kidnapping." Parental kidnapping can have a deep effect on the child. They must suffer the consequences of being departed from there home and there parents. Here are some tips on how to PREVENT abduction. First of all, never talk to strangers and NEVER ever keep secrets. Stay away from cars you don't know such as vans and other types of vehicles. What if you were walking home from school and someone says to you "Can you help me I've lost my dog and I can't find him/her?" or "Hey sweetie do you want a ride home?" What do you do? You don't say NO you don't say anything just turn around and run away find a safe place and tell someone you need help. The reason you don't say anything is because at the moment you say No the kidnaper is going to turn around and grab you! But if you are in a public place and they tell you to be quiet, you scream and shout and bring as much attention to yourself as much as you can because the second you get into their car your chance of survival goes down.

Many children in the United States and through out the whole world have been abducted. Here are some facts & statistics about missing children: An estimated 2,300 children are missing every day in the United States. Missing children and victims of family abduction and non-family abduction, can be runaways which means that they have runaway from their homes. Family/Parental Abductions-1.) 78% of abductors are the non-custodial parent, 2.) 35% of children were between 6-11 years old, 3.) 24% of the abductions lasted between 1 week and 1 month, 4.) 21 % are other relatives, 5.) 42% of children were living with a single parent when kidnapped, 6.) 66% were taken by a male relative. *Non-Family abduction and stereotypical kidnapping findings:* 1.) 40% of stereotypical kidnappings, the child was killed, 2.) In another 4%, the child was not recovered 3.) The abducted children were usually female.

Have you ever gone to the grocery store with your parents, stopped to look at something and all of a sudden you turn around and they aren't there? Most of the time it will be fine just look around the corner and they'll probably be there, But wait what if there not? What will you do? Well, you need to find a female adult with children, a cashier, another person who works at the store or a police officer wearing a black green or blue uniform a big badge and a gun. There is no doubt in my mind that they will help you. WAIT! Before I forget to tell you a very important rule that I am certain you should NEVER break. If you are lost you should NEVER go out to the parking lot to check if your car is still there because I am pretty sure your parents won't leave without

you.

I've tried really hard to try to teach and explain to you how to prevent child abduction. I hope you've learned a lot by reading my research paper. I also hope I've reached my goal of explaining to you my 3 points and have made the world a safer place.

#2

If you look closely on the streets
you are going to see many fliers of missing
kids. Many of those fliers are caused by
social media. Be careful parents maybe someday
a picture of your child will be on one of
those fliers.

The Risks of Social media

HELLO!! Stop don't type your name there. Seriously, it wants your cell phone number too. **NO NO** don't, ~~Oh~~ man, you just typed your home address now nothing can save you.

There are many consequences because of social media like kidnapping and murder. Almost everyday a kid gets kidnapped due to social media. Parents **BEWARE** supervise your children when they are online because one day you might not be able to see them again.

One of the online dangers is phishing, **P-H-I-S-H-I-N-G**. Phishing is the act of attempting to acquire sensitive information such as usernames, passwords, and credit card details by masquerading as a trustworthy entity. Many people get fooled because of this.

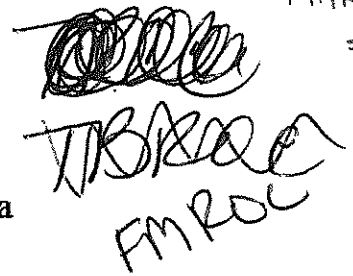

Think before you act. Be wary of communications that implores you to act immediately, offers something that sounds too good to be true, or asks for personal information. Parents, kids secure your accounts. Passwords are no longer the only protection from would-be hackers. Passwords should be different for each account, have as many characters as allowed and include numbers, symbols and letters.

THINK BEFORE YOU CLICK:

Staying Safe on the Internet and Social Media

FMROC

Internet safety is an important topic. Almost everyone is able to access the internet. It just makes it a more dangerous place. This is why I came up with these three tips that you should always be aware of when using the internet.

My first tip is to not share your personal information. When I say information I mean your school, age, email and much more. For example, if you give someone your phone number or address they can find you and possibly stalk or harm you. This is why it is so important not to share your personal information.

Another tip is about knowing who you talk with on the internet. Meeting up with someone is a very dangerous thing to do. Do not just trust people online. If someone asks to meet up tell a trusted adult. If you do meet up with someone you are putting yourself in danger. They could harm or abuse you. Many people lie about their age and are actually much older adults trying to get you to trust them.

Be careful what you share. You especially don't want to share your password. If you do share your password someone can possibly take your identity or bully you. When someone bullies you on the internet it is called cyber bullying. Many people have committed suicide because someone stole their identity and put them in embarrassing situations. This is why you do not want to share your password.

I hope that these three tips will help you be safe on the internet. In the future think about these tips. Remember, no sharing personal information, never meet up with someone on the internet, and keep your password private. Always be safe on the internet, but don't forget about the real world too. BE SAFE AND PRACTICE SAFETY.

Backspace

Everyone is always saying how important online safety is. Do they actually take their own advice, though? I'm about to tell you how to avoid unsafe internet and social media situations, as well as my own experience with these scenarios.

To kickoff, most online issues are actually preventable! There are a few do's and don'ts to the wide world of web. First, you should not accept any friend requests if you are unsure of whom they are. Try to stay away from chat rooms, too. And the Golden Rule: Never should you ever, under any circumstance, give out personal information online. This can lead to serious problems. If you ever get a message that makes you scared or uncomfortable, tell a parent or trusted adult immediately. After they have viewed the message, they will probably tell you to delete the message and block the user. Don't hide something like this from adults, though. This will harm you, not help you.

Internet issues can happen to anyone. Even you or me. As a matter of fact, it did happen to me. One peaceful Friday, I was on a social media site after school. Then I saw a message that sent chills down my spine. A random user had sent me a message that said "Give me your phone number and address so we can play!" I immediately told my mom. "Hey Mom, could you check this out for me?" She was as astonished as I was, and told me to delete the message and block the user. I was glad that I had told her. It surely was a weight off my shoulders!

All in all, avoiding internet dilemmas is plain and simple. All you have to do is think before you click!

Essay # 5-12

Think Before You Click!
By: Rachel Woods
Callahan Intermediate School

You could be putting yourself in danger without even knowing it. If you play online games or use social media, then you have a higher risk of putting yourself in danger. There are lots of things to be careful about online. Several of them are people you communicate with, information you give out, and your passwords. Personally, I believe with a little help, everyone can be safe online.

To start off with, you should be careful about the people you communicate with. Believe it or not, some people try to trick kids into giving them information so they pretend to be someone they're not. You may think that they're young and sweet, but they could truly be old and cruel. If you're communicating with someone online in anyway and they begin to ask you personal questions, or are making you feel uncomfortable, then you need to tell a parent about it. Your parent or guardian could help you figure out how to get them to leave you alone.

Next, the information you give out. If you're giving out any personal information to someone online, you could be putting yourself in danger, and you could be putting friends and family in danger. You could be so caught up in the game you're playing, that before you know it, someone you're communicating with knows everything about you. The kind of personal information that you don't want strangers to know about you, is your address, your phone number, your password, and if you stay home by yourself or not. There are lots of other things, too. In my opinion, I don't believe a stranger should know anything about you.

Last, but definitely not least, you should be careful about your passwords. Some people are so focused on finding all about your life that they will try to hack into your social media accounts. To prevent being hacked, try to make your password something long that only you will be able to know it. If unusual things begin to happen to your social media account, or feel like somebody has hacked you, then delete your account, and start fresh! Keeping your password secure is highly important.

Now you can see, you should be careful about the people you communicate with, the information you give out, and your passwords. Remember, think before you click!

By: Tanner Dawson

Date: 5/8/14

THINK BEFORE YOU CLICK

Staying safe on the internet is important. Read on to find out why.

First, if someone (a random person you do not know) asks for personal information you should say I can not give that out. You always say no because of identity theft. Identity theft is when someone steals your identity. When a person steals your identity they do not only have your name they also have your personal information. Personal information not only includes bank accounts, credit card numbers (if you are an adult), and all of your other personal information.

Second, if you are on a website that you can chat with people on be sure not to expose anything your not supposed to. Something you never give out is your address. If you give out your address to the wrong person bad things can happen. Bad things include but are not limited to break ins, robbery. Also do not give out phone numbers because someone you do not know can keep calling.

Third, do not give out bank account numbers. If you give that out say goodbye to all your money in the bank. When or if you give this out someone can login as you and with draw all of your money. So never ever give out bank account number.

Fourth, do not and I mean do not give out your name. You never give out your name because somebody can look you up and find out about your life. When the person looks you up there is a chance they will find your home address. We already know we do not want that to happen. They also might find your phone number.

Fifth, do not talk about family members lives. If you do and it is someone you do not know but the family member knows they can black male the family member. When someone black males another they have something the person they are black maling does not anybody else to know. They can black male your family member into doing something illegal. What they do might or might not get arrested.

Sixth, while on a computer do not just randomly click buttons. If you like games like me then get a gaming console. I say this because it can put a virus on the computer. The virus will screw up a lot of things. Say you have an essay do in a few days, so you try trusty old Microsoft word. Well as I type this my computer is screwed up because all of the internet surfing I do. So do not play online games all the time on your computer. I know it is hard for all of you computer gamers out there but you must do what you have to do. Do not screw up your computer like me.

Please do what these paragraphs say. Watch out on the internet.

JROC #7

Internet Safety

On the internet there are many dangerous things and people to help us stay safe. There are many helpful tools.

When Pop-up boxes appear asking for information you should X-out. NEVER give out personal information, such as, phone number, address, name, e-mail, etc.

When someone or something make you uncomfortable you need to always tell an adult, they will take care of it.

If you are chatting online and they ask to meet up with you, do not go! They could try to take or hurt you.

Instagram, Face book, and twitter are some websites we need to stay safe on.

JROC # 7

Whenever you go online
Remember to be safe. Think
Before You Click!

Internet safety is so important! Do you ever wonder why so many kids disappear every year? That's because they share photos, personal information, and don't get their parent's permission half of the time. Here is how I think we can reduce those 100 kids that disappear each year into zero kids; by informing parents and kids of how dangerous it is on the internet.

First of all, don't share photos of you, or your peers. Putting photos online can put your whole future in jeopardy, and anybody can copy and edit that photo, and make it look like something that it isn't. Also, someone can print thousands of that picture and put them all across their walls, and be your number one stalker. Then it would lead them to dressing the same way as you, and that psychopath does everything like you. I bet you wouldn't want that to happen, so don't post photos of yourself!

Secondly, don't share personal information! That is like asking to get kidnapped! Don't give away your address to that 11 year-old kid you thought you were talking to online. He might actually be a 10 year-old man who is going to take your things while you are out. Also, don't give away your age and school name. That "online friend" can easily trick you into thinking he goes to your school. He will tell you to meet him after school in a quiet place, and just like that, you are kidnapped and you would have wished you never gave away your school name!

Third, get your parents' permission to register for that online site you are dying to get on. If there's one thing your parents know, it's what is best for you, and what will keep you safe and happy. Plus, trying to hide something will make your punishment even bigger. You probably already know it's wrong if you are trying to hide it.

In conclusion, sharing photos, personal information online, and not getting your parents' permission can either get you in serious trouble, or you could even come up missing. So, whatever you do, please listen to those safety tips so you will not be the next missing kid.

Tony Johnson

Oakcrest Elementary School

Ms. Lipphardt's class

Everyday, children go missing, and most of the time they are never found. Many times, only the lucky children survive things like this. Those who do survive are never the same they could develop paranoia or there friendships destroyed. It is important to be vigilant and to understand the importance abduction.

When you visit a friends house many times you forget about the dangers. It's all fun and games, but when it's time to leave and your alone; you may feel as if some one is watching you. It is important to always follow your instincts. If you feel frightened or uncomfortable, go straight back to your friend's house, or to your own home if that's closer. If neither is close grab your cellphone and call for help. If none of these suggestions help neighbors are always there to help. It is better to be safe than sorry.

When you are in a public space you develop a false sense of security, but you should know you can be taken by anyone from anywhere. However, this doesn't mean the tons of people in your location won't come to your aid, but if nobody comes to help you must take matters into your own hands. If a person grabs you and places a hand over your mouth, don't be afraid to bite, kick, punch, or scream. You must do whatever it takes to get away from the person's grasp. There are many ways to get from your attacker, but my favorite bite their hand, and scream as loud as you can. Then, run faster then you have run in your life screaming for help the whole time. Any of these things can happen, but only one scenario is most common and there are many ways to get from it. This is when that person comes up to you when you are alone and may ask you to go with him (or her) for a favor, or from helping to get a kite, to meeting a puppy. The only things to do in this situation is to check if they're telling the truth by mentioning you can get your mom or dad to help.

A tip I would recommend is don't freeze up, it seems impossible but if you act normal and pretend that they have caught you attention, you could turn around sprint off and yell for help. The situations above are not always what may happen sometimes the monsters who call themselves human can be smart. They use the internet social media websites like Twitter, Facebook , or even Instagram. Many times they trick children by using fake photos. When your mom or dad tells you no "personal information". It's because these online monsters can learn what you like and where you live. They say things alluring to children, so that when they have you in their grasp they can trap you and there is no way out. Being careful online is not being over protective, it's just making sure your safe.

Be carful wherever you go in life and online. Remember what you put out there is not only for family and friends. Remember that real life monsters do exist. They are predators (the people who take kids or any type of person really) They can find anyone, but this doesn't mean stay locked up in your home, it just means to stay safe and to always think before you click.

THINK BEFORE YOU CLICK:

Staying Safe on the Internet and Social Media

Internet safety is important. Here are some ways to stay safe on the internet, don't talk to strangers in chat rooms, don't answer strange e-mails, don't be a Cyber Bully and don't post pictures or videos that you don't want everyone to see.

Talking to strangers in chat rooms is dangerous. You don't know who they are or if they want to hurt you or not. Even if they seem nice you should not take a chance. There are many different safeguards to protect yourself from letting someone strange know who you are. Never give out any personal information such as your birthday, address or your age.

Strange e-mails could be dangerous too. You never know who they're from or what it might say. It could be something mean and nasty. If you see a strange e-mail send it to trash.

Safe websites for kids are KidZui, Yahoo Kids and PikLuk. Parents should know that there are different internet filters such as Net Nanny and monitoring software such as Web Watcher that are there to help protect their children. No tool is 100% effective.

Parents should make sure to put the computer in a family room not in the child's bedroom. Watch what your child is doing online at all times. Many electronic devices can also be dangerous, including MP3's, video games, computers, smart phones and any electronic devices.

In conclusion don't do something online that you feel is unsafe. Remember ask your parent to set up a safe web site for you and your family!

By: Erik Garratt

Staying Safe

My parents are very strict about safety and have taught me many things about strangers, being On line, and how to avoid uncomfortable situations. This essay will tell you what I do to stay safe. I hope it helps you to understand how important being safe is.

My cousin was kidnapped when she was six years old. The men who took her got her to go with him by telling her she could play with his grandkids. My cousin Regina went and she was never seen again until the police found her skill and dress three years later. I don't talk to strangers or go with anybody that doesn't know the family password. I never tell anybody including my friends what the password is. My parents have to meet and know anybody that I play with. They also have to know the parents and where they live. If a stranger ever comes near me or tries to get me to go with them I would scream and run.

When I log onto the computer I can't go to certain websites. I have to use the computer room with my parents so they can monitor me. If anybody tries to chat with me I don't talk to them unless my mom or dad says it is ok. I can't accept any friends on Face Book unless my parents say approve. When a new window comes up I can't click on it without showing my parents what it is. If a web site asks for my name or age I show my parents to make sure it is not a stranger trying to trick me. There are bad people on the internet that will try to make and make me give them my personal information like name, address, phone number or my picture. The bad people may want to use the information to hurt me. That's why it is important to tell my parents when a stranger tries to talk to me on line.

Another rule in my house is that I am not allowed to go somewhere by myself. When I am in the yard I have to stay there unless my parents know exactly where I am going. If a person or car comes near my house while I am outside alone I have to run back inside and tell my parents. I am not allowed to answer the door without my mom or dad saying it is ok. I may not know who is at the door and they might try to harm me or come into my house.

I try hard to follow the safety rules and stay safe. If I don't know what to do I ask my parents, my teacher, or a grownup that I trust. I hope these ideas help others stay safe like me.

Jayden Kelly

Youth Development Center

Hello, my name is Jayden, and I am here today to tell and explain to you why thinking before you click is important. Thinking before you click is something the world needs to know about and so should you. When you click on a website, do you think about how this can effect your position or your situation? When I click on a site that I want, I do not necessarily think right away. However, when I do, I try to make sure it does not harm me or others.

According to Internet Predator Statistics, predators commit over 16,000 abductions, over one hundred murders and, thousands of rapes each year. A strategy to protect yourself on the internet involves a student requesting the help of an adult when finding a website. Determining the site's reliability is another important step for safety. If you do not trust the site, do not have personal and private information given to the website. You do not want to have regrets about not heeding this advice.

Twenty percent of U. S. teenagers who log daily onto the computer have experienced unwanted sexual solicitation. They were told to either talk about sexual activities or to give sexual information. Extortion, blackmail, occurs when a predator threatens the safety or dignity of a person. Pictures or information are often used to humiliate another individual. Before you meet any unseen online friend or individual, make sure that your parents' approval of that individual has been made. Otherwise, you could be harmed or in serious danger. As I conclude, remember thinking before you click is necessary and very important in some situations; however, for your family and friends remain cautious and careful.

THINK BEFORE YOU CLICK!
STAYING SAFE ON THE INTERNET

Sometimes there are bad men and women in the world who try to hurt, abuse, or trick us kids. So, have you thought about what could we do to keep safe? Lucky for you, I brainstormed some good ideas, which I call **S.A.F.E.**

STAY AWAY FROM INAPPROPRIATE WEB SITES

Many social networking websites (Facebook, Twitter, Second Life and MySpace) and blog hosting websites have minimum age requirements to sign up. These requirements are there to protect you! Talk to your librarian, teacher or parent about safe and accurate websites for research. The public library offers lots of resources. If you use online information in a school project make sure you explain where you got the information.

ALWAYS ASK YOUR PARENT FIRST

Don't give out personal information without your parents' permission. This means you should not share your last name, home address, school name, or telephone number. Don't share your password with anyone but your parents. Don't post photos or videos online without getting your parents' permission or buy anything online without talking to your parents first. Some ads may try to trick you by offering free things or telling you that you have won something as a way of collecting your personal information. Talk to your parents before you open an email attachment or download software. Attachments sometimes contain viruses. Never open an attachment from someone you don't know.

FASTLY REACT TO CYBERBULLYING

Don't send or respond to mean or insulting messages. Tell your parents if you receive one. If something happens online that makes you feel uncomfortable, talk to your parents or to a teacher at school immediately.

EVERYONE YOU DON'T KNOW PERSONALLY IS A STRANGER

Don't agree to meet an online friend unless you have your parents' permission. Unfortunately, sometimes people pretend to be people they aren't. Remember that not everything you read online is true. Remember, just because someone asks for information about you does not mean you have to tell him or her anything about yourself! When creating your screen name, do not include personal information like your last name or date of birth.

I hope that S.A.F.E. is way you can remember how to not get into trouble on the Internet. The Internet is such a wonderful thing that we can use in our day-to-day life, but only if we use it sensibly. So, please stay S.A.F.E.!

Think before you click essay

By Samantha Gelberg

The internet, place of fun, information, online games and more but we should be careful what we post and look up. From face book to insagram to twitter we should always control how many selfies we take, because omg and lol is not always sss (seriously super safe.)

When using social media networks it is important not to give your full name or address. With networks like these most users are regular people like you and me but it is so easy to hide your real identity that it is recommended to not "favorite" or "like" someone unless you have met them in person because they might not be who you think they are.

Keeping a strong password is part of staying safe a password like 1234 is too easy for someone to hack. Let's say the name of your goldfish is Mr. Bubbles mix up some letters and numbers and Bata Bing Bata Boom you have a strong password like "M.Bubs145" or to make things easier just enter an important day in your life birthdays, anniversaries, or even holidays, pick a date any date.

Think Before you Click; Staying Safe on the Internet and Social Media

Essay by: Jane Nguyen

In our society today, we children have technology. Technology is helpful, but sometimes it could be very harmful. As children we learned to stay safe, teachers and parents show that safety is important for all human beings, from being a baby to an elder. This applies to every choice you make, even if it's online. So, I have gathered up some tips that will help you be safe everywhere you go.

1. Stay with a trusted adult

Being alone without an adult makes you vulnerable. The predator will know when it is the right time to attack its prey.

2. Don't talk to strangers

We all know how mothers keep on nagging you as a child to never talk to strangers. Even though she does this, she is trying to teach you to be safe. As nice as they may seem, they aren't what they seem.

3. Say "No"

When a stranger asks you to come with them someplace, say no and go to a trusted adult and tell them about it. As I mentioned before, having a trusted adult near will ensure safety.

4. Walk Away and Tell.

When a stranger approaches you and you feel uncomfortable, walk away and go tell a trusted adult. Never hide your feelings from your trusted adult, who knows what that person was and what they were planning on doing.

5. Don't Share It!

When you are on a social media site or in a chat room and a stranger asks your personal information (such as a photo, where you live, or what school you go to) don't share it. Get away from that chat room. Ignore that person. Predators may seem to be your friend, but they are just lying and wanting to know where they can pick up their prey.

No matter what situation you are in, children of Florida, be safe so that our parents don't get a heart attack and you are in a comfortable position!

Good afternoon. This is the essay for the contest from my student, Joseph. He is in my 5th grade class at Citrus Cove Elementary in Boynton Beach, Florida. Thanks so much.

Julia Morien

THINK BEFORE YOU CLICK: STAYING SAFE ON THE INTERNET AND SOCIAL MEDIA by Joseph

You see an ad after watching a video on YouTube saying you won a free iPad. All you have to do is click on the button, enter your serial number, and you got a free iPad. WRONG! You just got scammed. You are never going to receive a free iPad. And then you never know who's on the other side of the screen, and you possibly just gave your serial number to a bad person.

Did you know children under the age of 18 are 35% more likely to have their identity stolen because they give out their personal information like their phone number, address, and last name? I learned this information from the communication specialist at University of Texas' Center for Identity. So before you friend someone on Facebook or Instagram, make sure you know the friend and still ask your parents if you're allowed to let the friend see your personal info.

Also, if you see an advertisement with inappropriate remarks or saying you won a free iPad, just exit out.

If you want a social media account like MySpace, Facebook, Twitter, or Instagram, have a family discussion about internet safety and be careful who you friend because you never know who's on the other side of the screen. They could steal your identity by stealing your school name or maybe even your password of your social media account. If someone hacks your password and then someone likes, comments, friends, and even hacks things that you don't want to be liked, commented, friended, or hacked, you could get in serious trouble for

something you aren't even aware has occurred. If you have an iPhone or an iPod, try using Chinese, Spanish, or even Arabic characters for your password.

Now that you have learned a few tips about how to be safe on the internet and social media websites, I hope you use these tips in the real world. Some of these tips are just common sense, so be cyber smart.

Think before you click: Staying safe on the internet and social media.

Do you ever think twice before clicking the send button? Well if you do, great! That probably means that you're responsible. Anyway, you wouldn't want anybody stealing your personal information. By giving information like your date of birth or your phone number, you're inviting hackers or identity thieves. That's why I use the words "think twice". Hackers and identity thieves are people who go into people's personal things, trust me it's not funny at all. They could take all the money out of your bank account. They do it for the money. CHA-CHING!

Let's first talk about social media, such as facebook, instagram, and twitter. I believe that kids under 13 should not be allowed to use any kind of social media. Some kids don't know how to control themselves while using social media. They cyberbully someone or get cyberbullied by someone else. Some kids should know that they need to inform an adult as soon as it happens or it might be too late to do so. Trust me I've been in a very similar situation.

Anyhow, so many kids in my class have asocial media, and that's not good. Some kids don't do so well at school because they always have their minds thinking that when they get home they'll use their social media. It also makes other kids feel bad because they're not allowed to have a social media. Actually they shouldn't care, because the ones with social media are the ones who are wrong.

Now let's talk about the internet. People use the internet for lots of things. Good things and bad things. We're mostly concerned about the bad things. Kids could go online and look up really inappropriate things such as pictures or words. That will probably have a tremendous negative effect on a kid. It's really not right. I believe kids should be more cautious while they're surfing the web.

I just think that kids should not have all this control. I know what your thinking-how can a kid say that. It's a little bit of common sense. I just want what's best. So next time think before you click.

How to stay safe

More than 50,000 predators and cyberbullies roam around the internet world. Their goal is to make kids feel comfortable around them. And when the perfect moment arrives the predators strike. But you can not only find them on the internet. You can find them on the streets, in subways, even around schools. You might not want to be one of the kids that fall into their trap. In this essay, I will tell you how to stay safe on the internet and in real life.

Let's begin with Rule #1, which is don't share personal info. Don't give out your last name, e-mail address, home address, phone number, your school's name and/or address and your parents' place of work to a complete stranger on the street. Use that information to sign up for a school or for a job. Even having information to a site is dangerous so make sure you read the privacy policy at the bottom of every site before you share any information.

Next we will talk about Rule #2, also known as: pay attention what's around you. You might not know when a suspicious human might kidnap you and take you to a place who knows where to kill you. This can also happen in the internet world. First they will chat with you like an ordinary kid your age. Second, they will make fake relationships so you can gain their trust. And finally, they will tell you to meet somewhere in real life so they can do something to you (kill you, kidnap you etc.). So if you feel irritated where you stand, look around to make sure everything's ok.

Lastly, let's talk about Rule #3, that is, to be careful when you download something. That download might be filled with viruses that can hack (or worse, crash) your computer. You can also have a lot of pop-up ads if you install too many downloads at the same time. It also depends where you get the download. You MUST get the original download, or you will break the copyright rules, and you will end up going to jail. So be careful what or where you're downloading.

In conclusion, the internet, even real life is dangerous. The rules that I told you about were three of the of the many important rules of safety for kids. Children are kidnapped each day (not just in U.S.A.). Many people are still trying to find the lost kids. You do not want to be one of them, so please, follow these rules to be safe for now. Remember, the predators are watching your every move, so be alert every time, every day.

THINK BEFORE YOU CLICK

Have you ever been on a social media website with someone you never meet? Well that is ok for an adult, but what if a kid went onto a social site and was talking to someone they didn't know? In this essay I will talk about asking an adult first, saying no to someone you don't know and, if it feels creepy it is creepy.

ASK AN ADULT FIRST

You should always consult an adult before going on to a social media website because billions of people young and old have access to these types of sites. Some adults pose as kids to try to get kids personal information such as phone numbers or even addresses. If someone asks for this information DO NOT give it to them consult a trusted adult and stay away from that site. An adult's permission is advised for almost everything on the internet because the internet is full of things for ranges of ages.

SAYING NO TO SOMEONE YOU DONT KNOW

If they continue to ask for personal information don't be afraid to say NO. If you realize that the person seems older than they suppose they are then keep away from the site all together. Say you are a 6-8 year old girl and your online with a new kid you never seen who wants to talk to you. So when you guys start talking she starts to ask for lots of personal information. Should you give her the information or tell an adult? If you said tell an adult you are absolutely correct, but if it is someone you really do know and that your parent is ok with you giving that person that kind of information to then that would be considered ok as long as you asked an adult .

IF IT FEELS CREEPY IT IS CREEPY

As a kid we were always told to trust our guts. Have you ever knew something was creepy because your guts tells you it is? Sounds crazy right but not interlay. Here's an example you go to the mall without an adult and you see an adult staring at you. Your guts try to send this feeling of creepiness to your entire body, and when this happens you leave the area were the person is at. Even though you don't know this person you can still get the sense that something isn't right. You have to trust your gut to get you out of sticky situations like these. Make up a secret code with your parent so they know when something isn't right. Say you come up with the code "red trucks run around outside" when you want to let your parents know you want to leave and that something isn't right they will automatically know to come get you RIGHT AWAY!!!

In conclusion, you now know to ask an adult first, say no to someone you don't know, and if it feels creepy it is creepy. These are only basics in internet safety there's plenty of more. These tips in more can help you a lot when being on the internet or on social sites so stick to the rules and be internet safe.

Florida's Missing Children's Day
Alyssa Jones ~~ESSAY~~ Mrs. Kudlinski's

When you're online in a chat room or something and you meet someone that asks you for your personal information, you may be talking to an online predator. A online predator is someone who meets children online and gets their information to try to hurt them. Here are some ways to avoid them.

First of all, never give any one online your personal information. Such as phone number, address, school, password and more. If someone online asks you something that makes you feel uncomfortable, tell a trustworthy adult such as a teacher, parent and/or guardian. In some case scenarios call the police. They know how to handle online predators!

Second of all, never agree to meet someone online in person. If someone online asks to meet somewhere, make sure you bring a friend, parent or guardian. Meet at a location where

MROC
#20

there's alot of people, such as ^a mail.
So if they want to meet in a
forest, that won't be the best idea.

Last but not the least, never
make a username or password that's
easy to figure out. Use letters, numbers,
and symbols in your username or
password. Tell an adult your username
and password. Make sure it's
something you can remember. If your
username and/or password is easy
then online predators and hackers can
get into your account and get
your email, birth date, age, and more.

In conclusion, it's a good idea
to stay safe on the internet. Use
these tips + tips to avoid online
predators and hackers from getting
into your personal information. Also,
remember think before you click. They
may not seem to be who they
say they are. Sometimes adult
predators pretend to be kids.

Essay Contest

Topic: What would you do if you were approached by someone who made you feel uncomfortable?

If someone approached me and made me feel uncomfortable. I will contact an adult, or go get help, or just run away from that person. When you find an adult tell them what happened explain how the person approached you. Tell the adult how the person looked. Explain whether the person is short or tall, fat or skinny, and tell what their ethnic race is also. Tell the adult everything that person did. And most importantly tell the entire truth of what happened.

You can go get help from an adult that you can trust. If you cannot find a trusted adult, then look for a police officer. Law Enforcement officers are your friends and will always be ready to help a person in need of their services. If you call 911, remember to talk calmly and clearly. And give the officer your name and address. So they can get to you quickly.

If in a case a stranger grabs, you need to run away as fast as you can. Do not look back. Scream as loud as you can. As soon as you see your parents tell them what happened. They will help you get through the situation. Never go somewhere alone, because anything can happen. My teacher always says, "There is safety in numbers." It is better to be protected by an adult you trust than getting in a bad situation. These are the steps I would take to get away from someone who makes me uncomfortable and tries to harm me. All these are good actions to take in order to be safe. Follow these steps in order to stay safe in your neighborhood, park, mall, and pools.

Think Before You Click-Staying Safe on the Internet

Two of the most significant things children learn while growing up are how to stay safe and how take care of themselves. Parents, teachers, and even grandparents tell us not to talk to strangers but, there's more to it than that.

Of the 837,055 missing people in the world, 80 percent are children. It is important to stay safe from those who would do you harm. To safely use the internet, listen to steps one through three.

First and foremost, always know who you are talking to even if you're chatting online. Someone you meet online may not be your friend. They may be trying to steal private information from you. For example, they may ask "what's your name and address," "where do you live," or "do you want to meet in person?" Those are just a few things they might try to get you to reveal. Also, never agree to meet a stranger somewhere. They may be trying to trap you as if they were a dog catcher and you were a stray.

Secondly, before you click on any site, read the description in the search engine. The description may provide clues about whether a site is credible or can't be trusted. You may not know it at the time, but you could be on a site set up to trick you so that the creator can try to steal your private information and use it against you.

Finally, watch out for cyberbullies! Cyberbullies are bullies that stroll through the internet in hope of finding the perfect prey. Translation, they may try to post something online that could be embarrassing or just plain mean. If you are ever cyberbullied **DO NOT WRITE BACK!** Instead, tell a trusted adult and they will take care of everything.

Remember, always stay safe online and think before you click!

By,

Talula Foote

"How I stay safe all day?"

Kidnappers! Missing children! Abduction! Can you guess what day it is? If you guessed my big sister's birthday, then you are 100% correct! Today is a sorrowful day for my family and me because on the day of my big sister's birthday she had been kidnapped, raped, and abused. It all happened when she was returning home from college to celebrate her 20th birthday during the year of 1999. She exited a tri-rail train where a man in a black mask snatched her right off the streets. Ever since that day, I've learned a huge lesson to follow the rules and to protect myself from any harm. Now that I've told you, I better explain ways I stay safe all day.

To begin with, missing children in the United States are a major problem that can be prevented. Within every second in the world, there's a child reported missing because of abduction. On the day I was born, my parents became my guards and protectors who always provide me with shelter, food, and clothing. But as I continue to grow up to become an obedient person, my mom always inform my siblings and me that there will be a lot of strangers approaching us who may look bad but are good some times when they help you in certain circumstances. With mom's advice, I've learned that strangers don't have to look ugly in order to be bad. They can be ugly, pretty, or handsome but in either way all I know is "they may look pretty on the outside but bad on the inside" and this phrase all adds up to several questions almost every parent would ask a child. What would you do if you were approached by someone who made you feel uncomfortable? If someone tried to take you somewhere or get you to go somewhere with them, what would you do? If you are chatting online and the person asked you to meet them somewhere or asked you for personal information, what would you do?

In response to these three questions, there are four important words. These critical words will remind you of what your parents used to ask you when you were little. "What would you do?" Well, I'm not a scientist, a psychic, or a teacher, but I do know a lot about safety. First, be aware of your surroundings at all times! A predator can be waiting for its opportunity to catch you. Second, make sure you know your relatives. Do not go anywhere with a predator or let them take you to certain places you're of which you are not familiar. Predators have sneaky ways to take or convince you to go to harmful destinations and third, be internet safe. There's a lot of predators online who may pretend to be nice by trying to be your friend and impress you by their looks or pictures they send you in certain websites. However, these sites would spread out your information in just split seconds, so don't forget the phrase "they may look pretty on the outside but bad in the inside." If you're a parent your child will learn the importance of safety especially when they're at school. But here's some advice! If you're facing a life changing situation and you're about to lose your love one, always remember, just because you're not strong like some bad guys doesn't mean you're not smart about safety. Certainly, the incident with my sister has altered by family's life structure.

In short, all of these things that I've told you would help you or your child (if you're a parent) stay safe when you're facing a life changing situation. If you follow these rules, your life would change in a blink of an eye. Remember, be street smart and always know the ways to stay safe. Be aware of your surroundings at all times because someone can be watching you!

Think Before you Click!**By: Mia Guarnaccia**

The internet is an exciting place and an exceptional educational tool, however, we all have to be aware of the hidden dangers online. It is of the utmost importance that we make good choices while on the internet and any type of social media. Ways to safe while on online and using social media are you shouldn't let strangers follow you, this includes only chatting with friends or family when chatting online. Second, you should not put personal information on websites or social media. Lastly, you need to inform a parent or guardian immediately if someone makes you feel uncomfortable online.

On social media, such as Instagram, Facebook, and Twitter strangers might request to follow you. Do not let them! No matter how nice or harmless they seem, you shouldn't let strangers look at your page. While chatting online, make sure you're talking to people you know. You should only chat online with friends or family. Predators can use this internet feature as a lure. Another reason you should only video chat or communicate with people you know online is because strangers may be trying to gather as much information about you as they can. Make sure who you talk to online is a close friend, family member, or trusted adult.

Another rule to staying safe on the internet is to never put personal information online. Putting personal information online, such as your address, phone number, and what school you attend is very dangerous. If a dangerous stranger has an opportunity to contact you they will ask you personal questions or they may ask to meet you somewhere. Predators can be very convincing and often can trick their prey into doing what they want. Be sharp and ahead of the game; leave your private information off the internet and make sure all your social media is set to private. Remember to never put any personal information online!

If you are online and someone says something or shows you something that makes you feel uncomfortable you need to tell a parent or guardian right away. Keeping this kind of information from your parents or guardian will allow child predators to get away with it time and time again. Never be afraid to report inappropriate internet behavior because your report just might save a life one day.

There are many ways to stay safe on the internet and these are just a few. Make sure you don't let strangers follow you on social media and only chat with close friends or family online, don't put personal information on the internet, and make sure you tell an adult if someone makes you feel uncomfortable online. While the internet is fun, it is also a dangerous trap for innocent children. To stay safe online, follow all these safety tips to the internet world and remember to always think before you click!

The internet! Two words that can change your life forever. While the internet can be good in various ways, there is a dark side, and if you're not careful and wise you'll get reeled into it all. Knowledge about how to be safe in the world is essential and puts you at the top of the food Chain from predators that lurk in the World Wide Web. Smart use of the internet, abduction safety tips, and where to go to get away from unbearable and frightening situations are three life saving and key components to being safe when using the internet.

Use Your Brain on the Web

The internet is a great way to get information and also a great way to share loads of privacy. Not giving out personal information is a way you can be smart on the web because, the less they know about you the better. For example, if you're online and an anonymous advertisement pops up asking you a lot of private questions, like your location or password. Hackers can hack into your private accounts and ruin your life. Take my friend for a good reason why not to give out your personal information. She was purchasing a product online and gave out information that didn't need to be shared. Not too long after, her account was hacked. It was very stressful to know that her private information was being read and used. My recommendation for that situation is to change your password immediately. When you change your password the hacker will get locked out right away, in other words your privacy will now be secured. Websites are not valuable enough to give out your private data. Securing your personal information is a shield to your privacy.

Abduction safety tips

There are monstrous people in the world, who pretend to be someone they're not. A tip to this dirty trick is to never talk to strangers. Internet users hide behind this so called wall, the Web. They pretend be anybody they want to be, and usually want to put you in a dangerous situation. These people creep their way into your life and act like they care, but really their intention is to put you in an awkward situation. Not talking to strangers is extremely beneficial. If you're online and a random person bribes you to meet up with them, ignore and delete the message. This will help you resist temptation. One of my experiences of dealing with this situation was when I was on a social media site and all of a sudden, a message pops up bribing me to meet up for an amazing prize. This scam was really wicked. Almost falling for this trick, I remembered that people play this dirty hoax so I deleted it without a doubt. I resisted, and got myself from harm's way. Flee From Harm

You're on your computer, all of a sudden a message comes up bribing you to talk to them, meet up with them, and slowly crawl into your life. Continuously the messages keep popping up. What do you do? Where can one go for help? I suggest going to a parent. After all, they are your protector and guardian since the day you were born. Another person you can go to is your guidance counselor. They are trained especially to deal with these situations. "An uncomfortable situation can really be awkward, says Michelle Johnson, going to a guardian or relative can really relieve the stress and get your questions answered. The best thing to do is don't respond and consult a family member and alert them of your situation." Never doubt the power of a conversation; it can really make your perplexity go away.

Questions and Answers with the Web

Q: How does one keep safe from other internet dangers?

A: Do not share regretful information and don't follow strangers on social media. This will prevent cyber bullying and eliminate talking to strangers.

Q: Should one just stop using the internet completely?

A: No, it's a great source of information; you just have to be cautious when using it.

The internet can be a great way to connect with the world but it's more enjoyable when you're safe on the web. With the three wise ways to use the internet, smart use of the internet, abduction safety tips, and where to get away from unbearable situations, you will no longer be pray to hunt. Using the internet smartly equals a path away from trouble.

Safety on Social Media

Safety on social media is very important. You can get hurt or even worse be abducted. There are bad people who are out there and want to hurt you. Here are some ways you can stay safe.

Do not follow anyone you do not know and do not lie about your age. There are predators who will follow you on social media for the purpose of abducting you or causing you harm.

Never lie about yourself or provide too much information about yourself such as where you live, your phone number or any other personal information about your family. Do not click on sites that you do not know. This can put you into some bad areas on the web. Keep safe by not commenting on inappropriate photos or posting "likes" on the pictures or comments.

Cyber bullying is also a problem on social media such as Facebook, Instagram, Twitter, etc. It can hurt people's feeling by saying mean things. These mean things can make someone hurt themselves or even make them hurt other people. Cyber bullying is never the answer to anything.

There many more ways to stay safe on the social media sites. Always make sure your parents are aware of how you use social media and share your experiences with them. Your parents can also set up controls for your safety. Always alert your parents if you see something that makes you feel uncomfortable or you think it is wrong. You can also block users that are bad.

Social media safety is something you should share with your friends and talk about how to stay safe.

Think Before You Click

Think before you click. What do you think that means? What would you do if you were approached by someone who made you feel uncomfortable? Or what if someone tried to take you somewhere or get you to go with them? Or if you were chatting online and the person asked you to meet them somewhere or asked you for personal information? What would you do? Well, I am going to tell you.

What would you do if you were approached by someone who made you feel uncomfortable? For example, you are walking home from school and while you are walking this guy comes walking towards you. Then he stops you when walking by him. He asks your name. You feel scared. What do you do? What you do is take two steps back and don't answer his question and turn and run until you can find a trusted adult to talk to about what happened.

Secondly, what do you do if someone tries to take you somewhere or get you to go somewhere with them? For example, you are playing outside when a man pulls up at the end of the driveway with his car. The man said "I am a friend of your neighbor. Can you come here to my car? I have a painting that they want to give to you." What you do is run inside and get a trusted adult or if no adult is there just run inside, lock the door, and call your trusted adult.

Lastly, if you were chatting online and the person asked you to meet them somewhere or asked you to meet them somewhere or asked for personal information, what would you do? For example, you are playing an online game when you get a message from one of the players asking you where you live and what is your address. What you do next is do not reply and go tell your trusted adult about the message and let them handle it.

Think before you click. I hope you learned about what to do if you were approached by someone who makes you feel uncomfortable or what to do if someone tries to take you somewhere or get you to go somewhere with them. Remember to never give personal information to someone online. Think, what would you do? Think before you click.

Think Before You Click;
Staying Safe on the Internet and Social Media

In life, it is really important to stay safe. Staying safe on the internet is not always easy, but kids need to learn about it to stay safe. You should never give someone you don't know your phone number, address, school name, or information of where your parents work. Also you should never post or take pictures of any part of your body that your bathing suit covers. If you feel uncomfortable with something you should always tell an adult you trust.

Never give your phone number to anyone. If someone approaches you online and ask you for your phone number, do not give it to him. People can call you and know your location. Only give your phone number to close friends or family members you know. One time I answered the phone and a guy wanted my address because he said his daughter was at my house, and he wanted to pick her up. I hung up and told my mom because there was nobody at my house to be picked up. Here's my advice, if you don't know who you're talking on the phone with or who is asking you for information online, hang up and don't give any of your personal information to anyone.

You should never give anyone your address. Never, ever post your address on any social media. Someone could go to your house and kidnap, rob, or hurt you or your family. You would always want to keep you, your family, and your house safe. Every single day the news and the newspaper talk about how people are getting kidnapped and how people are giving information they shouldn't online. Never give your address to anyone you don't know.

Another thing you should know is to never post the name of your school anywhere. Someone could go to your school and hurt you or kidnap you or any of your friends. Last year on the news there was a guy in Connecticut who shot one class, some teachers, the principal, and even himself. Sometimes people ask because they are looking for a good school for kids to go to. It is still important to stay safe and not to give or post the name of your school to anybody.

You should never tell someone you don't know where your parents work. It is ok to tell others what they do for a living, but not the address where they work at. Some information is private and strangers should not be asking for private information like that.

Make sure if you're texting someone or chatting with someone, that you know that person. Some people aren't always the age, gender, or height you think they are. Or what they say they are. It is important to have a magic word with your parents and friend. It is very important you know what to do if someone makes you feel uncomfortable or if someone wants you to go somewhere with them. Always remember to be smart about being safe, say no, and go away to tell an adult.

I think staying safe is an important part of life. It is not just keeping you safe, but it is what you think is best for you and your family. If someone asks you something you don't feel comfortable responding back don't respond. Never let anyone make you do anything you don't want or feel comfortable doing. Don't do it! Most of all think before you click.

OROC #29

Think Before You Click

By: Alexis La Rosa

(celebration K8)

If you're 10, 11, or 12 and have anything to do with social media and you think it's cool to have the most followers, well it's not cool. Those people let random people follow them. And the random people can see where you are and can locate you. Then will you think it's cool?

People out there create fake accounts and use them to locate the people they're following. Also whatever you're doing on the internet and you think it's private-it's really not. Nothing on the internet is private.

You shouldn't follow people you don't know even if you like their posts. Did you know that the people monitoring can see every little thing you're doing? So be careful with what you're clicking on, and if by any chance you accidentally click on something bad, immediately tell an adult or the person you're with so they know what you have seen.

An example for accounts you might want to follow is @free_apple_give_aways on instagram. They say if you give them a shoutout then you will get an iPhone. Well that is fake! They just want to get your address when they mail it to you. When they do mail it they can show up at your front door. It could be an adult when you thought it was a kid around the age of 10. They may try to persuade you to leave with them. Then only bad things can happen from there.

All I am saying is think before you click.

How To Stay Safe On The Internet

By Jaylee Torres

We all use the internet and social media websites, but we all must remember that the internet is as dangerous as the real world. For example when you are in a chat room and someone suspicious wants to talk to you. They can seem friendly and pleasant at first but they are just trying to lure you in little by little. As soon as you trust them, it can lead to more serious situations. That might put you and others in danger. However here are three precautions that you can do to prevent the danger of online active.

The first precaution you can do is to know what to do when you are approached by someone online that makes you feel uncomfortable. If you are facing this situation you should first block the person. By doing this you are preventing the person from contacting you anymore. After you block the person if you still feel uncomfortable about the situation you should report it to a trusted adult. By telling a trusted adult you are taking something off your chest. Which can help the adult on making you feel comfortable, and help you resolve the problem.

The second precaution you can do is to be familiar with what to do when someone online tries to get you somewhere with them. When or if you are faced with this obstacle you should respectfully decline the offer. There are thousands of inappropriate images, videos, comments, websites, among many other inappropriate things on the internet. Someone might want you to do or see something that is not age appropriate for you. As you see and do the things that are not appropriate you will be slowly breaking away your innocence. After you decline the offer you should probably block the person. Even if the person has no intentions to show you anything inappropriate better safe than sorry!

The third precaution you can do is to be very cautious of what you post online and to never plan to meet with someone you met online. When I say be very cautious of what you post online I mean I mean it! You should never post anything that is hurtful to or about someone. Whether you are just saying it for your amusement or because they said something to you first. You shouldn't or else you are going to be considered a cyber-bully. So always think before you click. Which brings me to another reason you should be very cautious when you are online. You should never post any personal information. If you give out personal information you can risk many dangers including but not limited to someone stealing your identity, someone being able to locate you among other possible dangers. If the wrong person gets your personal information there is a risk of you getting abducted. Which brings me to my next point. You should never arrange to meet with someone that you never met in person before. You never really know who is behind the screen so you should never meet with someone you meet online. The person can be a predator looking for some prey, which is you. This can lead to many dangers. You can never become too trusting or you might become a victim. There are a lot of predators online as there is in the real world. No matter how long you have been talking to the person never be 100 percent sure that you can trust them. Every 40 seconds in the United States a child becomes missing or abducted. About 135 children were abducted or molested as a result of internet contact and going to meet the person. This states why you should never meet with someone you meet online and be cautious.

To summarize, the three precautions we can take to be safe when online is to know what to do when you feel uncomfortable online, what to do when someone tries to get you to go somewhere with them, and to be cautious of what to post online and to never meet a person you meet online. By doing all these precautions you're ensuring that you will be safe if you ever have to face one of these dangerous situations. You are making it a safer environment when you are online, and last but not least of all you are protecting yourself from potential predators.

How Children Can Stay Safe

Jimmy Ryce was only nine years old when he was abducted from his school bus stop at gunpoint on September 11, 1995. After he was raped, Jimmy tried to escape the clutch of his predator and was shot as he tried to escape. Jimmy Ryce is only one of the many children that are abducted in America. This could happen to you at any time so don't get angry at your mom for not letting you go to the movies alone with your friends or not letting you talk to that cool guy on Facebook. Whether you are online or offline, predators are always watching you so take your embarrassing mom with you to the movies and keep on talking to your besties because you don't know who's watching you.

All those cool apps like Kik, Facebook, and Instagram are actually full of creepy stalkers that aren't really those cute guys that go to that school. Those are most likely those nosey people that stalk your profile because you never know who is on the other side of the screen. What if that "cute" guy says to meet him at the mall alone? Would you meet up with him or would you stay home? You never go meet someone you don't know from online without a parent or a trusted adult because you never know if he is a predator, waiting to take you. For example, you are creating a profile on Facebook (which your parents should know about), and it asks you for your school, address, phone number, or birthdate, do you think you should put ALL of that personal information? NO! A predator could easily find out your age, school, where you live, etc. This doesn't mean you have to scrub all of your profile from things about you, but just keep private things private. A quick reminder too: if that mean girl, Lindsey, at school texts you mean things through Kik, don't just take her unthoughtful words, report her to your school principal and they'll take care of her. What if Lindsey texts you again and you reply with a mean comment? Now you are going on her level and being as mean as her. Just drop the online drama people because the Internet is to have fun.

Not only is the Internet a dangerous place where predators lurk around, but the real world is no safe haven either. Not only are those stalkers on your favorite social network sites, but they can be watching you hang out with your friends at the mall or even when you're walking from school. That's creepy! So, when you're walking home from school and getting home, lock your doors. So, your doorbell is ringing and you don't know who it is, but you don't know if to answer or not. The answer is no because you don't know if that is a predator wanting to take you. Also, if you are at the mall and a random person asks to take you home, say no and run away.

So everywhere you go, online or offline, keep these safety tips in your mind.

OROC #32

Karina Jimenez

There are many ways to stay safe on the internet and social media. The internet is great, but you have to be careful of strangers and stalkers.

To begin with, a way to stay safe on the internet and social media is to have a private account. I say this because if you have a private account strangers and or stalkers can't see your information or pictures, only your contacts can see this. This way it is better and safer for you on the internet and social media.

Secondly, another way to stay safe on the internet and social media is to only be friends with people you know. I say this because if you only be friends with people you know you can prevent strangers from knowing where you live, how old you are, and what's your name and many more things. But if you are only friends with people you know you can prevent this from happening. So this is another way to

In conclusion, there are many
ways to stay safe on the internet
and social media. If its by having
a private account or by only being
friends with only people you know.
You always have to try your best
to stay safe on the internet and
social media.

INTERNET ABDUCTION

IS REAL

Internet abduction is a really bad problem these days. For example *Java* was just recently hacked because of a hole found in the interior of the running system. When kids play games such as *Roblox* or *Minecraft* they usually ask for a password at least eight digits long. When making a password you should always go to a website called *HowSecureIsMyPassword.com*. A password three digits long such as 911 can be cracked in 0.00000025 seconds, or a three digit letter password such as boo can be cracked in 0.000004394. This is because computers are better with numbers then letters.

Some hackers can be in pop-ups, so if a random pop-up appears, press the x in the corner of the ad if it is available. Another name for a pop up is a cookie. Additionally, a way they can get your info is from Spyware. Spyware is like a mini virus that is used to watch what you type on the computer and memorizes things you type more frequently such as, passwords or usernames. Spyware does not watch through your computer camera, but through a screen camera virus.

Samuel P. Zyak

Avoiding dangerous people online is EXTREMELY easy. What's difficult is when you are approached in real life. On the internet, you have full command of what happens (what you say, what you do etc.), but out on the streets, one may not be able to control the situation they're in.

One day, at my friend's house (Bea) we were talking and having a nice time. All of a sudden, Bea gets a mysterious message from her Facebook asking her to meet someone at the park. She told me she'd been getting the same question from that person a few times lately. I asked her if she'd told her parents, which she replied with a no. Therefore we decided to go ask what to do. Bea and I went and found Mr. Utiful (Bea's Dad). He suggested we block the person and report him or her.

to Facebook. Bea and I thanked Mr. Utiful and gave it a try. It was getting dark, and I had to go home, she said she'd tell me if she got anymore strange messages. Days passed weeks went by, and NO MORE STRANGE MESSAGES!!! Yay! Mr. Utiful's idea had worked. To celebrate, Bea and I popped open a soda next to the fireplace, and cooked s'mores. As we were talking I said, "I never realized your name was Bea Utiful." We both chuckled, and she never recieved any strange messages ever again.

Ways to Avoid Stranger Danger

Most preteens have their social life on social networking. In our society today seventy-three percent of teens are online. As a preteen, I have learned how I can stay safe on the internet and on social media like Instagram, Kik, Facebook and Twitter. I always have to remember things that I put on the internet can last forever, and I try to always enforce good behavior on the internet.

I stay safe on the internet in many ways, my mom is really carefully about what I put on there and makes sure it is not too personal. When I got an Instagram and a Facebook account she made sure I had a good password and made sure there was no information about me on there. I am not allowed to put my address or phone number on my websites so I cannot be tracked or followed. I try to change my password every few months so people cannot sneak onto my account. In my opinion no one should ever go on websites that you know you aren't supposed to. Posting things that are inappropriate is also risky because the internet is forever. Some teens put postings and pictures on their accounts and other people can then, look at these pictures and spread them all over the internet. It can be very dangerous and embarrassing for the victims and their families. I know not to do those things, for one because my mom would get really mad and I would not be allowed to ever go online again. I have to show her who I talk to on Kik. If she doesn't know who the person is she makes me delete and block them. I am also not allowed to be on any social networking website with anyone who my mom doesn't approve of. I am very careful because I know my mom can log on and check up on anything I do on these sites, and she does.

Overall the internet is an incredible resource, however, it can also be very dangerous. I took a poll out of my fifth grade class and some sixth graders in my school. Eleven out of fourteen have social media sites, that same group of students all have smart phones. Nine out of fourteen kids can go on the internet without their parents knowing what they are doing online. I think all parents should have access to their kid's phone and social media sites; that way we can avoid the dangers that the internet holds.

Online Safety

Online safety is very important! If you end up making a mistake online it can turn out badly. If you are chatting online and the person asked you to meet them somewhere or asked you for personal information, what would you do? In order to prevent having to make this decision you must follow many online safety tips. In this essay about online safety I will be telling you all about what to do.

No matter what websites you may go on, you should always be careful not to give out your personal information. These things may be, but aren't limited to your name, number, pictures of yourself, your school, address, or any other information to strangers online. This is because if giving out personal information you are allowing a stranger to find and know everything about you. This can lead to them stalking you, or tracking your every move. If your information gets into the wrong hands it can ruin your whole life and there's no turning back to erase what you've done. This can cause depression or even thoughts of suicide. Before making a mistake that can hurt you for the rest of your life, think before you send.

Along with keeping personal information to yourself comes chatting online. Everyone knows that kids like to go online and chat with friends, but you must be careful of who you're talking to. Even with what you say, strangers can figure out things that you don't want them to know. It's good to keep parents involved with situations like this. For instance, if you want to talk to someone online but you don't know them, make sure you get approval from your parents before starting a conversation with that person. After getting approval from your parents, if the conversation starts to get a little weird make sure to tell your parents or a trusted adult, cut off the conversation, and if needed block that person. Sometimes with this type of situation people online may not be who they say they are and the things they may tell you aren't always true, so be careful with chatting online.

Lots of kids have accounts on social networks such as Facebook, Instagram, and kik. On these websites you must be careful not to give anyone any hints about your life. This starts with your account's name. You should never use your real name or even put parts of your name in it. If doing this people online can research your name and find out things about you. These things can be, but are not limited to where you live, your number, your school, and even the places that you go. This subject goes along with not giving out your passwords for your accounts to anyone at school or anywhere. If strangers get a hold of this type of information they have the power to post certain things on your accounts that may not be true or that can get you into a lot of trouble. It's good to always be safe online.

Depending on your actions, the internet can be either a safe or scary place. To avoid having to go through anything bad be sure not to give out your name, number, images of yourself, your address, or school. Also remember that if you don't know someone online don't talk or chat with them. Don't forget that you should never give out your name or password to anyone. I'm sure that if following these tips you will be able to have a great time on the internet and not get into a situation. Just remember to always be safe and not sorry.

Rebekah Pratt

By: Sydney Mulligan (maybe that was too much information)

Think Before You Click: Staying Safe on the Internet and Social Media

Think before you click. You should know some safety tips before you go online. First you should know how to use your privacy settings on any electronic or social media. Limit who can see what is on your profile, game, and pictures, anything that has personal information. Say NO to unknown emails which can be ads or traps for finding out your login or password. Avoid social broadcasting, more than your friends could learn personal information. Only tell who needs to know. For example, if you are going on vacation your friends and others don't need to know. Only post the past. If you are giving out information it can be about the past, because you don't want unwanted people knowing where you are going ahead of time. Verify links before clicking them.

Have you ever heard the saying the more the merrier? Well in this case it's the more the worst. The more computers the more chances of bad things happening to them like viruses. Did you know that 100% of online users are targeted by marketing? Also over 50% of online users are targeted by scams and fraud. 1 in 7 children are solicited online and a violent crime happens every 25 seconds. Stop and think about that for a while and be more aware of the internet. Stay updated about the latest crime and tragedy (on the news or other resources). Stay educated about viruses and other problems with your computer. If you have a problem with your computer ask your network provider about it. If you see something online that's wrong like bullying say something. Selfie safely, pictures give more than you think. Pictures give date, time, and location. There could be clues in the background of a selfie also you might have a piece of clothing with a team you like. For example a Miami dolphin shirt is in the background of your selfie then an abductor would suggest you live in Miami.

Do you know how you get followers or friends on apps or online? 30% or any amount could be a bunch of creeps trying to get information about you and maybe abduct you. A tip to get out of this situation would be to forget the popularity contest, only have people you know in person be your friend or follower. Keep your social network tight and hard to get through. In a worst case scenario of any abduction situation you either run (if the person is chasing you), hide (if the person is looking for you), or fight (if the person has you). Avoid giving too much information. Don't give anyone online your name, address, phone number, social security number, place of birth, or any other information. I had my own personal experience on Animal Jam. This person asked me where I lived but I am glad I could not of said where I lived because I didn't have free chat. I reported the person and tried to keep away from them. I also had an experience on Clash of Clans, I was looking through chat and found someone trying to be someone's girlfriend I said that wasn't right and blocked the person hoping he/she learned her/his lesson. Extra tips: 1. If you were approached by someone that made you feel uncomfortable you probably should walk away with a trustworthy adult. 2. If someone tried to get you to go with them somewhere you should tell your parent or the authorities and don't go with them. 3. If you are chatting online and someone asks you to meet them somewhere or asks you for personal information you should see if its someone you know first. Then if its someone you don't know you should tell your parents or the police.

Think about what you put online it stays there FOREVER.

Luis Martinez 4-28-14
 "Think Before You Click"

There are many good uses for the Internet such as communication with friends and family, watching videos, playing games, and more. But, today people use the Internet for bad uses such as cyberbullying, identity theft, etc. Yet there is another major problem with the Internet, and that is cyberabduction. Cyberabduction is when certain adults secretly pretend to be kids or teens on the Internet in order to abduct other children. It is most likely to occur on social media. These are the many ways for you to prevent cyberabduction.

Educate yourself. To prevent cyberabduction from happening you must learn and understand what it is. Research what makes cyberabduction, as well as how and where it is most likely to befall.

Protect your password. Safeguard your password and other private information from sneaky, curious eyes. Do not leave passwords or other identification where lots of people can see it. The reason why you should do this is so that no one else will be able to steal your private information.

Google yourself. Habitually search your name on search engines such as Google, Bing, Yahoo, etc. Try your best not to be open and remove all personal information or

photos, if any. The purpose of doing this is so that you will know if someone had stolen your information or not.

Don't be a cyberabductor yourself. Treat others with respect on the Internet. Do unto others as you would want others to do unto you. Being sneaky and knowish will reinforce the idea that the behavior is sufficient. As shown above, these are the many ways to prevent cyberabduction.

Think Before You Click: Staying Safe on the Internet and Social Media

By Zelle Towery
Trinity Christian School
Apopka, FL

If someone you don't know comes up to you and asks you to come into their van to go to Taco Bell what would you say? I know I would say no and run away. If anyone ever approaches you and makes you feel awkward always get help, if you have to scream, go ahead. You should also watch out when you're on social media sights. You never know what you're going to get asked, but you should never give out your phone number, address, or your full name. I really hope you don't give out any personal information.

If anyone you don't know ever asks you to go get ice cream or to grab a snack with them always say no. When I took martial art classes they always told me to scream, "Fine! Fine! This is not my daddy (or mommy)". Don't go anywhere with someone you don't know. Always ask your parents if you can go somewhere with someone. Always tell your parents if anyone ever asks you to go somewhere with them.

If you are online and someone asks you to meet them somewhere, never say yes. If anyone asks where you live, never tell them. Don't tell a person that you don't know where your school is or where your parents work. If you're on Instagram or Twitter and someone asks you something inappropriate, always show your parents so they can block and report them. To be safe always listen to your parents and show them what you are doing.

Think Before you Click; Staying Safe on the Internet and Social Media!

The internet is a dangerous place! It can be dangerous for many reasons. Websites such as Facebook, Twitter, and Instagram should be used with caution. Here are some things you should never do on the internet.

One thing you should never do is post any inappropriate pictures. Once a picture is on the internet it is on there forever! Even though you delete it, the picture is always there. Though posting a picture may seem insignificant at the time, it could reveal personal information about you or your family. An example of this would be what you look like, or the appearance of your house and vehicle. This could result in someone stalking you, or even robbery. Another thing to avoid is posting or sharing explicit pictures of yourself.

Also, you should always consult your parents before logging on the World Wide Web. Make sure that you only go to sites that you know and are approved by your parents. While on social media sites like Facebook, Twitter, and Instagram make sure that you only friend people that you actually know. Never accept or like posts from someone unfamiliar to you. You may think that you are talking to someone you know, but you could actually be talking to someone who is trying to hurt you or your family. Be very careful about posting where you are going or that you are home alone. There are predators that stalk social media in hopes of catching kids that are not careful.

The internet can be an unsafe place! If you don't use caution while on the internet especially social media sites, bad things could happen. Some of the things that you should never do are posting inappropriate pictures, posting personal information or revealing where you are going or if you are home alone. Use good judgment when on the internet and ALWAYS get permission from your parents or guardians.

Think Before You Click

PROC#41

By: Banks Benitone

Destin Middle School

Mrs. Pittman's Class

Think before you click. I hope that really sticks. Everyday kids everywhere are stolen because gave away information online; sometimes they don't even realize it! To stay safe on the Internet, always ask a parent or trusted adult before giving out information, like your phone number, zip code, address, and all other personal information.

If you get an instant message, phone call, FaceTime, or anything else from a mysterious number, or the person sends an inappropriate picture, do not reply. Think, "Should I do this?" If you have to think about this for more than thirty seconds then the answer is, "no!" When in doubt, think it out. Ask yourself again, "Will this affect me? Will this harm me or anybody I know? Could I get in trouble?" If the answer is "yes" for any of these questions, tell your parents or any other trusted adult.

If anyone is trying to get personal information from you, think of the word "S.T.O.P." "S" stands for safety; think about your safety and other people's safety before giving out personal information. "T" is for think; remember, when in doubt, think it out. "O" is for obedient; try to be good and remember what to do. "P" is for parent; they are the best people you could go to, if you think you are in danger.

So, if you're on the Internet and someone asks you for personal information, think S.T.O.P., and hopefully you will never be harmed.

PROC #42

Social media websites can be unsafe for kids. Here are some ways that might help children stay safe on social media websites if they are allowed to have them. I'm 12 and I actually do have an Instagram account which is a type of social media. I knew from the beginning though, that I really shouldn't have made one, but I did. My parents monitor the sites that I visit.

To start with, what happens if someone gets all of your personal information from one of your social media accounts and contacts you? First, before you do anything, you block and report that user. Second, you would want to tell your parents as soon as possible. Initially, don't go in your front yard or anywhere by yourself if they tell you they know where you live. Then, immediately delete the account where the hacker found your information.

Next, if someone you don't know asks you to meet them somewhere so you could get to know each other what do you do? Before you do anything, DON'T RESPOND. If you respond they could get more of your information even if it's just a simple "No." After you do that, tell your parent or your guardian. The last thing you need to do is delete all of your personal information that is on your social media account.

Another thing is, what if someone or some inappropriate website gets your phone number or e-mail? What are you going to do? Again, Tell a parent or guardian right away. Next, DO NOT RESPOND TO ANYTHING. Last, if they get your address and say that they'll hunt you down, notify the police.

You can trust me about all of this because someone got my phone number and e-mail. They were asking me to tell them where I lived and other things. I simply didn't reply. I have an iPhone and it would've told them my exact location. That's when I immediately deleted my account and told my parents. My mom is a probation officer. She mostly deals with child abuse, kidnapping, and hackers. The other day, she was given a case where someone hacked a girls Facebook and Instagram account and threatened her. She is currently investigating the case.

Never put any of your personal information on worldwide social media websites. Better yet, don't even get a social media account like Twitter, My Space, Facebook, or Instagram unless you are 18 years old or older. Make sure, even if you are 18 years old, DON'T put any personal information on there.

"Oh! Thank you! I love it!" said Chrissy Kendrick on her 11th birthday. She had just received an iPod. "Now I can text Lianne and all my other friends," thought Chrissy.

The next day at school, Chrissy got her friends' numbers and was planning to chat with them all night. But when she got home, it seems she had lost the paper with all the numbers on it. Lianne was her best friend, so she had to know hers already. She typed in her number from memory, or what she thought was her number.

At school Chrissy was talking to Lianne, "Yeah, I love texting, it is so much fun!" said Chrissy. "Oh have you started texting anyone yet?" asked Lianne. Chrissy thought that Lianne was messing with her. She went home to text Lianne.

"Hey mom, can I meet Lianne at the park?" asked Chrissy. "Lianne" had texted her and told her to meet her at the Bellview Park in Chrissy's neighborhood. "Okay, but you need to be home at 4:25," agreed Chrissy's mom.

When Chrissy got to the park she couldn't spot out Lianne. But there was someone who Chrissy had never seen around their small neighborhood. There was a tall, skinny man who was leaning against a van with Oregon License plates. The number on the plate was 9713NXX. He saw her and started to walk towards her. "Hi, are you Chrissy," said the odd man. "Yes, why?" asked Chrissy. "Because I've been waiting for you," he said. "You look lost, let me drive you home." At that moment Chrissy remember the "Stranger Danger" lesson that she had been taught at school. She immediately turned and ran as fast as she could back to her house. She looked back and saw him following her.

As soon as she got in her house she told her mother the story. Her mother called 911. A police officer came to her house. Chrissy told the police officer that the man had said he "knew" her, but she had never seen him before. The officer asked her if she had been texting anyone lately. She told him that she had been texting her friend, Lianne. She then told him that she wasn't sure that it was Lianne because of the conversation that she and Lianne had had at school. She then saw all the dots connecting. "That man was texting me, pretending to be Lianne!"

The officer asked if she had remembered anything about the man. Chrissy told him that he drove a black van with an Oregon license plate with the numbers 9713NXX.

The next week her mother was reading the newspaper and there was an article about a man that was accused of attempt to kidnap. He would spend the rest of his life in jail.

Chrissy felt bad that she had fallen for his trick and was relieved that he had been caught. After all of this, Chrissy decided to stay as far away from texting sites where predators might be lurking.

Think Before You Click

By: Jaela Bandes

“Mom can I please have an Instagram?” “Dad can I please have a Snapchat?” Numerous parents have been hearing this plea from their children throughout the past several years, as social media becomes more typical in our daily lives. There are parents whose children haven’t ask this question, and may have already signed on to these social networks. This is a dangerous thing because their safety might be compromised. Participating in these social media sights might sound fun, but there are great risks. Online hacking has become a more serious and frequent problem. Hacking can be done in a variety of ways such as breaking into a person’s social network profile without their permission or clicking on a link that was sent through a message that isn’t expected. Social networks are very entertaining and convenient, but just like you were behind the wheel for the first time, there are some significant rules that you need to follow.

Be careful about the information you share online. This goes for pictures as well as words. You should understand that many of these social media sights can be viewed by anyone. Leave out details that could easily identify you such as your email, home address, and date of birth, mobile phone number, or the name of your school. Just remember that once you publish this kind of information on line, it is not always easy to delete it. The internet never forgets anything that you post, whether you make it private or not, it could become public sometime in the future. I clearly remember a time when I was with my grandma, and I was five years old. An ad had popped up on the screen saying ‘you can win a computer! Just click here!’ If I knew at five years old what I know today, I wouldn’t have clicked on the ad. And let’s just say that my grandma wasn’t up to date with all of the ways people could hack into your electronic devices. The curiosity got the better of my grandma and me. We clicked on the ad, and entered all of the information needed. We waited for days, and weeks, and months, and the computer never came. Ads continuously popped up on her screen shortly after. To this day I am regretful of the mistake I made with my grandma.

Never click on links or install applications that are sent to you if you’re not expecting them. Hackers will frequently use links or apps to install viruses onto your electronic devices. They can even hack into your friends’ accounts, and use their accounts to send you links. If a message seems out of character from your friend, don’t click on it. Especially never click on the side ads when you are in a website. Hackers will often

hack into websites so they can post interesting ads on them. When you come across a fascinating side ad on a website, chances are, it isn't true. If you were to click on the side ad, you might install a virus or a spam onto your computer.

To avoid being hacked, you need to keep your software up to date. It may seem obvious, but keeping all of your software up to date is vital in keeping your computer secure and safe. Also, use a strong password when you are signing up for a social media site. Everybody knows they should have complex password, but some people don't. Passwords should be a random combination of letters, symbols and numbers. It is crucial to use a very strong password whether you are signing up for a website, or a social network.

Social networks and websites are great fun, and extremely useful in today's connected world, but it's best to follow a few basic ground rules to make sure you stay safe and get the most out of them. The internet is filled with millions of people looking to meet, chat, and share information with each other. As the social network has become enormously popular, so many kids have become increasingly keen to sign up. In my opinion it is best to avoid these social networks when you are 14 and under. Just remember to stay safe whether you are on a website or a social media sight, and think before you click!

"Think Before You Click"

Who is safe from danger? Well, if you think you are, you should know that not everyone is safe. Some people get hacked on the internet or taken in person. It is a very bad thing, so that's why I'm here, to teach you how to stay safe.

The internet is a dangerous place if you are not careful. People you don't know could see your posts or a comment that you don't want to get out. Just think of this saying before you post or make a comment on a post, "If you wouldn't say it to your principle or boss, don't say it at all." People can get really hurt or mad and try to hurt you. So remember, "Think Before You Click."

You are not just unsafe online, but you are also sometimes not safe in public, either. People can kidnap and hurt other people. My mom says, "It's because they had problems when they were little." Now that I'm older I believe it, too.

These are some tips you can follow. Travel in groups, follow only people you are friends with on the internet, don't say rude things about people, and yell for help if you are in trouble.

I hope you follow these tips and my advice so you will be safe. You never know who is watching or listening. Remember, if you wouldn't want your boss or principle hearing it, don't say it.

THINK BEFORE YOU CLICK:
Staying Safe on the Internet and Social Media

Jenna: Hey, I need your Email address to give you that URL for the cheat code.

Kristen: Why can't you just tell me?

Jenna: Uh... I have to go.

Jenna leaves the message.

"Man," Kristen says to herself "I was about to beat Mining Mayhem's 100th and final level! There's no way I can beat it without that cheat code!"

Did Kristen do the right thing? No. She was using a public chat room on the open chat setting. Kristen didn't know Jenna very well when she accepted Jenna's friend request. Here are some tips on how both you and Kristen can be safer online

For starters, make sure you inform a parent whenever you create any type of account and include their Email address and not yours. Make sure you have parental controls, such as private chat (an online messaging system where only approved players can join your conversation) activated. Kristen could have avoided her conversation with Jenna if she were on private chat. Use a fixed messaging system, where you can only send pre-written and appropriate messages. These systems are commonly provided on sites designed for youth.

Be careful who you friend! They may be predators. Have a parent approve anybody who you would like to friend before you send them a request. Think to yourself, *would I be friends with this person in the real world?* If not simply don't friend them. If you have online accounts only so you can make new friends, think, you can make plenty of friends on a sports team, in an art club, and even in a book meeting, live and in person. Continue your friendship by safely interacting with your new friends online!

Just in case somebody does send you an inappropriate or personal message, you need to inform an adult (preferably a parent) about what happened. Don't leave out any details at all, because that could change the whole story. In order to keep you safe they need to know about any questionable online activity.

So remember, when you are online you may just want to think before you click!

Staying Safe on the Social Media and the Internet

My fifth grade class and I had a statewide essay assignment on how to stay safe on the Social Media and the Internet. Well, this is what I want to share with you. At the age of eleven years old, my mother told me that about 20% of my family was raped or molested by sexual encounters. Forty one people in Polk County were arrested in 2013 in an online child sex sting.

From the people I interviewed and from my research on the internet here are a few tips on how to stay safe on the Internet and staying safe when encountered by strangers and some tips for the parents.

- Be aware of your environment
- Do not talk to strangers
- Never be alone walking by yourself
- Be aware of how you dress
- Know where your children are at all times
- Never leave your children in the car

If I am approached by someone who makes me feel uncomfortable, I would not respond and try to get away to safety and talk to an adult about it. If someone tried to take me somewhere or get me to go with them, I would try to get people's attention by screaming or trying to fight back. If I am in the parking lot of a store and a predator tries to get in the car, I will try to get someone's attention by blowing the horn. If I am on the internet chatting online, and someone asks me to meet them or ask for my personal information, I would go to my parent or guardian and show them. I will not text back.

What I want you to learn is to be careful on the internet because there are predators waiting to pounce on their prey. Be careful on Facebook, instagram, oovoo, and kik. Be aware of your environment!!! Do not give anyone your personal information. This is a dangerous world so be careful on the social media and the internet.

Safety on the Internet

Once upon a time, there was a young girl. It was two days before her twelfth birthday and she was chatting on Facebook. "Hey girls!" she typed. "Saturday's my B-day! My parents are taking me to California for the week! See you later!" After she left Saturday morning, something terrible happened. Her house was robbed! It was all because she said that she wouldn't be there.

The Internet is educational and fun but it can also be a dangerous black hole. Dear reader, posting on websites like "Facebook" and "Instagram" is like announcing information to the entire world! Some information should not be shared. Here are some tips on Internet safety.

Private!

Phone numbers, addresses, passwords, locations, schools, and other similar things are for private eyes only. Posting them in any way will let the world know. Even family photos are private! If that information gets onto the wrong screen, there could be consequences for you, your family, and your friends.

Pick your People

Reader, make sure you know who you are talking to. Don't give random people access to your page just because they asked. Only chat with good and trustworthy friends. With webcams, ask parents' permission before starting.

Strange?

Have you ever received a strange email? Well, DON'T OPEN IT! It could be a virus that will damage your computer! Don't open emails unless it is from a friend that you know.

Have "free download" or "You've won money!" ads ever popped up? Well, DON'T TRUST IT! Those pop-ups are not true! Beware of them!

Think

Before you hit the "send" button, pause and think. Ask yourself: "Does this reveal any private information about my family?" "Will this hurt anybody?" "Will my mother be okay with this post if she saw it?" The answers to those questions should be "no".

Get Help!

Now, picture this: Once there was another girl, chatting on Yahoo. She suddenly got threats and insults from a kid in her class at school. But she didn't tell anyone, thinking that nobody will understand her. Now reader, do you see something that the girl is doing wrong? She isn't telling anybody! For these types of issues, you need help or it will get worse. So reader, know when you need and should get help.

Internet safety is very critical. The Internet can be a dark and unforgiving place yet fun and interesting if used wisely. One wrong click can ruin your life! Reader, think before you post!

"Think Before You Click: Staying Safe on the Internet and Social Media"
by: Nicolas Machado

Fifty years ago, no one had ever heard of internet safety. Kids and their parents never knew that there could be adults that wanted to know where they lived, worked or played. In the 1990's, the main risks for children were pornography and sexual predators. By 2008, the growth of social media like Facebook had led to children being exposed to internet crime and abuse.¹

In the U.S., statistics published by the Kaiser Family Foundation show that 95% of 12 to 17 year olds use the internet. Seventy percent go online daily resulting in an increased risk of abuse or cyberbullying.² Thus, learning to be a responsible "digital citizen" is a new concept in the 21st century.

I interviewed Mrs. Carolyn McDonough, a security officer for the Office of Quality Management at the James A. Veterans' Hospital in Tampa, Florida. She told me one of her most important roles is to protect patient information. She told me that the Veterans' Administration is very strict about having proper clearance for personnel. They receive specialized training in order for them to handle patient information belonging to veterans. The VA computer system has a very strong firewall that protects against viruses and hackers, particularly their electronic medical records system. Mrs. McDonough told me she encrypts e-mail messages so they are "locked" and can only be used by people who have proper computer clearance. Many passwords and user names expire within ninety days which helps protect information if there is a breach.

Internet safety for young adults and children needs to incorporate similar safety mechanisms as those that exist with the Veterans' Administration. Today, many computers and gaming systems have parental controls that if used can ensure a high degree of internet security. Microsoft programs can block inappropriate sites and downloads from the internet. There are also controls that will allow only messages from approved contacts. Smartphones even have controls under "settings" where certain phone numbers and restricted sites can be blocked using password protection. Parents can also set web browser security levels.

I think that parents and children should work together to ensure safety on the internet and social media sites. Children have to be educated on internet safety at home and at school. As Mrs. McDonough told me, the age of a child using the internet without adult supervision depends on the child's maturity. However, parents should routinely monitor common sites they visit. Internet safety is a responsibility that goes with parenting.

I don't think children under age 17 should have chat capability because it is too easy for predators to masquerade as other children. There are other ways you can be safe on the internet:

1. Never share personal information and turn off your location services on your smartphone.
2. Stay away from web based gaming sites. Invite friends over so you don't have to worry about potential predators pretending to be children joining your player network.
3. Look for secure websites that have the letter "s" at the end of the usual https. The "s" represents "secure" and that the site is using SSL (Secure Socket Layers) which keeps information encrypted.

Knowledge is power. Proper education and parental guidance are essential so that children can be safe on the internet. In the United States, we take freedom of speech and our privacy very seriously. Consequently, internet safety should go hand in hand with freedom of speech and our privacy. Digital citizenship is a privilege which should be taken very seriously.

Think Before You Click

By: Alexis Guzman

Today's children love the new technology that people are creating today. Like me, many kids are curious about different things and we're constantly using the latest technology. When your child gets a phone or any electronic device, they are most likely going to be finding themselves looking up inappropriate pictures or being on an unsafe website. There are many different ways that you can prevent yourself from doing these things. Here are some tips so you can do just that.

- 1) Never respond to weird phone calls or text messages.
- 2) Make sure you know what you're clicking on and if you don't, ask an adult for help.
- 3) Think about why you should be safe on the internet and if you don't understand, then ask any adult for help.
- 4) Be responsible of your actions.
- 5) If you have trouble looking up appropriate things ask your parents to put blockings on your website access.

When it's time for me to get a phone, I will use these tips because it will help me stay safe and help me stay out of trouble. Also, it will make you feel good if you're being responsible. When you take good care of your things, don't get into trouble while you're looking up stuff and your parents know you're making good choices on the internet, you might just get more privileges by showing how responsible you are. But, you should not take advantage of it because that is wrong.

Being safe is very important because if you're not safe, bad things can happen, especially on the internet. I always make sure I am on the right web sites and looking up appropriate things because it's the right thing to do. Also, if you use my safety tips and your parent's safety tips, you will stay happy, healthy, and have a great life!

TBROC#51

Think Before You Click: Staying Safe on the Internet and Other Social Media

My parents keep me safe on the internet. I'm not allowed on Instagram, Facebook, Twitter, Vine, Foursquare, etc. Instead, I go on a site, which is a safe organization just for girls. You have to pay, but there's a reason: that's what makes it so safe. You don't have to worry about getting yourself into trouble. It's still loads of fun - just safer.

There is nothing wrong with social media and the internet. Sites don't try to hurt you. There are just pros and cons. Here are 10 of them. On the up side, you can learn new things. You can acquire bigger vocabulary. The sites try to protect you - you are supposed to be 13 or older to go on Instagram, Facebook, Twitter, or other sites like those. You can see photography, reviews, ideas, etc. You can keep in touch with friends who aren't near you. On the down side you could end up getting hurt. Something could happen to you. Older people can lose their money. You could get kidnapped. You can see bad things.

Facebook, Instagram, Twitter, Vine - they all have guidelines that say you have to be 13. One of the best ways to stay safe on the internet is to follow those guidelines. If you follow them, you can also prepare yourself and write out a script ahead of time. I follow the guidelines. I want to be on Instagram with all my friends, but I'm not. I follow the rules that the site has put in place. One thing you need to do is be prepared for sticky situations. Have a list of practiced answers for if someone asks you a risky question. Then you'll know what to do should something occur. For example, if someone asks for advice, you might have written down "ask my dad, ____ ____." Then you should answer to the person "ask my dad, ____ ____." That helps you avoid bad things. If you're on sites that have 13+ rules, a script is something you'll want!

I go on a website where you don't have a really big possibility of getting hurt. The website is called NMG, or New Moon Girls. You have to pay, but that makes it safer. You don't have other people that could hurt you on the site. It's only for girls, and it's loads of fun! On NMG, you can read stories, ask other girls for advice, and post almost anything! You get your own avatar, you can participate in book club chats, and write stories that could go into the magazine! It's really safe, too.

No one wants to be a missing child. I know I definitely don't. That's why guidelines are put in place. That's why you always want to follow the guidelines. That's why you want to have a pre-made script that will come in handy. You want to stay safe, so you follow the rules.

Think Before You Click

By Missy G. Poe

You see a picture on Facebook that makes you laugh. It's of a very close friend but contains personal information. You share it not thinking clearly. Does it contain personal information? Can it put people in danger?

Those are questions you should ask. You never know who looks at that picture after you share that. The Internet isn't as safe as many people think. It can contain predators, bullying, and false ads.

Bullies are common on the Internet. This is called cyber bullying, and happens more than you'd want. Bullying isn't just physical, but can be verbal and mental too. Bullying is made of two or three types of people. There are bullies, victims, and bystanders. If you're a bystander you shouldn't give approval. That's what bullies want. You should tell an adult if you get bullied, or witness bullying. However, it's not okay if you're a bully yourself.

There are also predators. They often pretend to be young. You may often think they're sixteen, fourteen, ten, or even six. They might even pretend to be a different gender, religion, or homosexual. You should never give away personal info, such as email, phone number, or address. If anybody asks to meet you offline, you should say no, even if you think you know him or her.

False ads are also found on the Internet. Sometimes they'll say things like you just won a free car, but you really didn't. Sometimes these people are predators, or want money. Don't give anybody personal information. If they ask for credit card, then they probably lie. They might charge you if you give them the information.

If you ever see or hear inappropriate words on the Internet, it is best to tell an adult and leave the site immediately. This includes sexual jokes, racial jokes, or jokes with bad words in them. Never repeat the bad things you hear or see. Sometimes sites have a reporting system. You can tell an adult the problem while playing the game. You might also be able to ignore someone, so that you can't hear or see what he or she says.

Remembering this will keep you safe. Just like you, your parents, your friends, and God wants. Philippians 4:8-9 says, "Finally, brothers and sisters, keep your thoughts on whatever is right or deserves praise: things that are true, honorable, fair, pure, acceptable, or commendable. Practice what you've learned or received from me, what you heard or saw me do, then the God who gives this peace will be with you." Remember this next time you think about forwarding a picture.

Think Before You Click: Staying Safe on the Internet and Social Media

Jennifer Williams logged onto her Instagram account and was shocked to find that someone she didn't know had asked her what school she went to. Immediately, without thinking, she replied, "Highland Lakes Elementary." Her mother walked over and asked, "What are you doing?"

"I'm just answering a question about what school I go to," Jennifer replied.

Jennifer's mother asked, "Who was asking?"

"I don't know. What difference does it make? It's only my school name," Jennifer replied.

Jennifer had no idea what she had done. Just imagine what could happen if she then told the stranger how old she was, what she looked like, or where she lived.

What would have been the safer thing to do? Jennifer shouldn't have responded at all if she didn't know exactly who was asking her. If you have any doubt about who is asking you for personal information, don't respond. You should always ask a parent, guardian, or teacher for assistance and advice if someone you don't know is asking you for personal information. After you ask an adult for help, you should report the incident to the website manager. Finally, if the problem persists, you should always ask an adult to assist you in notifying the police. My father is the technology director at my school so he has taught me how to stay safe online.

How can you be smart when setting up online accounts for virtual worlds and social medias? First, be careful when you are creating usernames for online accounts. You should never include birth dates, personal names, or addresses. Second, make your password complicated by using a mixture of uppercase letters, lowercase letters, numbers, and special characters. Also, use information that is not openly known about you. Often, password resets require answering security questions. Always, choose the questions that no one knows about you. One example of these questions is, what is your grandmother's pet's name?

Should you ignore the age restrictions on social media websites? Absolutely not! The restrictions are there for a reason. The creator of a website sets an age restriction for your benefit and safety. Someone under the age limit doesn't have the maturity to make decisions about how to use the site safely.

Should you question whether the guidelines apply to you? No, of course they apply to you. No matter what firewalls, safety programs, or other web watcher filters you have on your devices, there is still a chance that someone could be trying to use the internet to locate you and hurt you. Furthermore, why take a chance? Is being on Facebook or some other social media really worth the risk that someone could find and harm you?

REWIND! Jennifer Williams logged onto her Instagram account, and was shocked to find that someone she didn't know had asked her what school she went to. Immediately, she called her mother over, and together they called the website manager to report the incident. When the stranger asked again, Jennifer and her mother called the police and reported the problem. Which Jennifer will you be?

TROC

Essay # 54-55

Dina Cisneros

Click, click, and click. That's the sound of a mouse. By mouse, I mean a computer mouse, of course. I'm here to talk about the dangers of the World Wide Web. In this generation, we all use the internet, so we need to be aware of stranger danger, spammers, and social media trouble. You never know what you might get yourself into on the computer.

Now, let's start with stranger danger. This also ties a bit into social media. Bad strangers are usually always looking for a gullible kid to trick. One way they can do so, is by pretending to be a friendly person. Say you're on your social media when a completely random person messages you. Possibly saying they want to be your friend, asking for personal information, wanting to meet up with you somewhere, and so on. They are, most likely, some weirdo who isn't actually a good person. You should never give any information to those people, especially not your address!

Next up, we'll be talking about spammers. These are the people who send you those fake "Congratulations! You have just won a free iPad!" messages. I, personally, have gotten these sort of messages, tons of times. My friend once got a message from, what appeared to be her favorite YouTuber, saying she had won her most recent giveaway. In the message, they were asking for credit card information so she could pay for shipping fees. Luckily, she never gave it away, because we later found out a scammer had hacked her account and sent that message to a lot of people. The point is, that some people are really good at suckering people to believe they're someone they're not. So it can be pretty tricky when it comes to that.

Last but not least, is being careful on social media. Social media can be a good and a horrible thing. In this case, I'm trying to warn you from the bad side of it. For example, cyberbullies are something you want to avoid. Cyberbullying is an awful thing that is meant to hurt you, but if you think about it this way, it might make you feel better about yourself. They're wasting time writing nonsense about you, which is ridiculous. There is also inappropriate content often on social media. This is most likely why most schools just block off those websites completely.

In conclusion, the internet can be a pretty dangerous thing. So, be careful when you're surfing the World Wide Web. You don't know what you can find on there, really. To review those were tips to help you be aware of stranger danger, spammers, and social media trouble. In other words, there are many dangers of the internet, so just remember to keep safe, and think before you click.

Think Before You Click: Staying Safe on the Internet and Social Media

Internet Safety Tips by Elijah Hunt

Lee Elementary School, 5th Grade

We have been learning in our class about how kids should think about the consequences of clicking the mouse on their computer before they make a terrible mistake. I have chosen a few tips that I think are important for kids to know before they click anything on the computer.

- Never talk to strangers on the Internet.
- Don't click on pop-ups.
- Be careful downloading apps.
- Report cyber-bullying.
- Block bad web pages.

Now, I'm going to tell you why you need to watch out for these things.

Never talk to strangers on the Internet. You never know if they could be old creeps who want to hunt you down. And never give them your real name or your phone number. And do not, I mean do not, give them your address!

Now, I'm going to tell you a rather helpful tip. Don't click on pop-ups. Some pop-ups may give your electronic devices a virus that will mess up your computer where you cannot use it. Some viruses can really do weird things to your computer where it won't even turn on!

Here's another tip. Be careful downloading apps. Just like pop-ups, some apps give you viruses and it can mess up your computer or your lap top.

Want another tip? Here you go. Report cyber-bullying. If you see cyber-bullying happening, you need to report it to a grown-up or tell the bully to stop! Some people cyber-bully to make people feel bad about themselves.

Block bad web pages. If you see one, you should block it. If you see a nasty web page, you should block it. Blocking a web page is the best way to get it off of your computer!

Here's a bonus tip: Keep kids underage off of social websites such as Facebook, Twitter, Instagram and other websites kids should not get on. If the kids meet a person they have never met, you don't know who really is behind the profile. The person could pretend to be a nice little kid but it could be an old man, a guy, or even a girl who wants to snatch you.

There are tips that I think are very important. So, be careful in what you do on the Internet!

No: 12-15738

**UNITED STATES COURT OF APPEALS
FOR THE ELEVENTH CIRCUIT**

Karla Vanessa Arcia, et al.,

Plaintiffs-Appellants,

v.

Florida Secretary of State,

Defendant-Appellee.

Case No. 12-15738-EE

**ON APPEAL FROM THE UNITED STATES DISTRICT COURT
FOR THE SOUTHERN DISTRICT OF FLORIDA
CIVIL ACTION NO. 12-CV-22282-ZLOCH**

DECLARATION OF MARC A. GOLDMAN

I, Marc A. Goldman, hereby declare as follows:

1. I am a partner at Jenner & Block LLP (“Jenner”) and counsel for Plaintiff-Appellants Karla Vanessa Arcia, *et al.*, in the above-captioned case. The testimony set forth in this Declaration is based on first-hand knowledge, about which I could and would testify competently in open Court if called upon to do so, and on records contemporaneously generated and kept by my Firm in the ordinary

course of its law practice. This Declaration is submitted in support of Plaintiff-Appellants' Motion for an Award of Attorneys' Fees and Expenses.

2. Jenner became involved in this litigation in June 2012. From that time forward, Jenner led and coordinated the litigation. Jenner was primarily responsible for representing Plaintiffs-Appellants in the Eleventh Circuit when Plaintiffs appealed (handling the legal research and merits brief writing). Marina K. Jenkins, an associate at Jenner, was principally responsible for preparing this fee petition.

3. Jenner is a national law firm that has won repeated recognition for its strength in complex litigation in general and appellate litigation in particular. Jenner's appellate practice has been named to the *National Law Journal's* "Appellate Hot List" for five consecutive years, and has also been consistently recognized by *Chambers USA* as being among the nation's foremost appellate law practices. Jenner has extensive experience in voting rights cases. For many years, Jenner's pro bono program has been ranked by *The American Lawyer* as among the top ten in the country, which, along with Jenner's paying cases, provides Jenner with extensive experience in the civil rights arena. The Jenner lawyers involved in this litigation are all from Jenner's Washington, D.C. office.

4. Along with Lorelie Masters, I supervised this litigation. I have twenty years of litigation experience. With the exception of six months when I taught

constitutional law at the University of Iowa Law School and a year spent clerking on the Third Circuit, I have been at Jenner since graduating from Harvard Law School in 1993. I am in Jenner's Supreme Court & Appellate Practice Group, as well as its telecommunications group. In the latter role, I am involved in district court litigation around the country. I have also worked on a number of civil rights cases, including two voting rights cases.

5. At the time of this litigation, Lorelie Masters was in Jenner's Insurance Practice Group and had more than thirty years of experience litigating complex cases. Ms. Masters has received numerous awards for being among the top insurance litigators in the country. For example, she has been recognized by "Best of the Best USA 2013" as one of the top thirty insurance and reinsurance attorneys in the country. She is also a member of the Board of Directors of DC Vote.

6. The other Jenner attorneys involved in this litigation for whom Jenner is requesting fees were litigation associates in 2012: Joshua N. Friedman (a 2009 graduate of Stanford Law School), Lindsay Eyler Kaplan (a 2009 graduate of Yale Law School), Kristen M. Rogers (a 2010 graduate of Harvard Law School), and Marina K. Jenkins (a 2010 graduate of Stanford Law School). Three of them had prior experience in voting rights cases. Biographies of the Jenner team involved in this matter are attached hereto as **Goldman Exhibit A**.

7. Because of the expedited nature of the litigation in this case at the district court and the initial stage of the appeal, this case required involvement by a fairly large team of lawyers. Because we were also coordinating with multiple civil rights groups both as clients and co-counsel, there also needed to be regular calls to plan strategy and provide updates. Moreover, the appellate stage of this case involved substantial submissions beyond those involved in a typical appeal. Plaintiffs engaged in significant work related to a first appeal (appeal number 12-15220-EE) of the district court's denial of Plaintiffs' motions for a preliminary injunction and summary judgment. Plaintiffs filed that appeal because of the threat of removal of voters prior to the 2012 general election. They then submitted an emergency motion (and reply) seeking an expedited briefing schedule. As they needed to do for this proposed briefing schedule to work, Plaintiffs also drafted a brief to file if the Court agreed to this expedited schedule, focused significantly on preliminary injunction factors. After this Court denied the emergency motion based on a promise in Defendants' opposition brief not to purge anyone before the general election, Plaintiffs waited for – and appealed – the final judgment in district court. Plaintiffs substantially revised the brief they had previously drafted because they now had more time to craft a strong brief, because they needed to eliminate the focus on the preliminary injunction factors, and because they needed

to add material on procedural issues that only became relevant post-election (in particular, concerns about mootness).

8. Given the importance of this voting case, Plaintiffs also spent significant time encouraging participation of amici and ensuring their efforts were not duplicative. Plaintiffs also (1) briefed a response to this Court's December 31, 2012 jurisdictional question, (2) submitted a January 28, 2013 scheduling motion prompted by that jurisdictional question, (3) responded to two 28(j) letters filed by Defendants (one of which Plaintiffs responded to in their Reply brief and one separately), and (4) strategized over – and filed two motions related to – the timing for submission of their fee petition, which appeared to be due in May under the rules, but which Plaintiffs did not believe it made sense to file at that time since the mandate had not issued.

9. While this case involved substantial work beyond that in an ordinary appeal, in the exercise of billing judgment, and in order to ensure that the fees Jenner seeks are reasonable, I have significantly reduced hours that may have appeared duplicative. For example, I have generally ensured that hours for at most three Jenner lawyers are submitted for an individual meeting even though in many instances, broader meetings were the most efficient way of dividing tasks and communicating information. (Many of these meetings also involved participants from each of our co-counsel, none of whom are requesting fees related to these

large meetings.) In the exercise of billing judgment, I have also eliminated billing entries where the total hours seemed potentially high for particular tasks.

10. I have also entirely eliminated time entries for Jenner attorneys beyond those listed above. Several other Jenner attorneys worked on discreet aspects of the litigation, such as performing individual research and drafting tasks encompassing a significant part of the overall brief drafting, commenting on drafts, or participating as judges in moot courts. But we are not seeking fees for their work even though the aggregate of these fees is more than \$50,000.

11. Attached hereto as **Goldman Exhibit B** are the forms required by this Court and the time records for this case detailing the time for which Jenner is seeking compensation in this appeal. Throughout the time Jenner worked on this matter, its timekeepers have been required to keep daily time records that reflect the amount of time spent on this matter each day, along with a transcription of the tasks performed. These records are entered into a computer database, checked, and maintained in computer-readable format. For the reasons described in the paragraph above, we have excluded a significant number of time records related to this case for which we are not seeking fees. We have also eliminated records related to work in the district court for which we will seek fees in that court. We redacted one of the remaining time entries to protect attorney work product (namely, entries that revealed particular issues evaluated prior to oral argument).

12. Finally, three of the time entries (entries for Lorelie Masters on October 9 and 10, 2013 and an entry for Marc Goldman on October 10, 2013) included travel time to and from oral argument. For these entries, we assumed travel time of four hours, which we reduced by two hours in each entry, reflecting a judgment that billing should be half for travel time.

13. Of the time for which Jenner is seeking fees, 49.4% was billed in discreet entries, while 51.6% was billed as part of block entries that included multiple tasks performed by the attorneys. In other words, they reflect block billing. In order to facilitate evaluation of these entries, and in order to fill out the forms this Court requires on divisions of tasks, we have estimated the amount of time in each of these entries that was associated with the various tasks on the Eleventh Circuit forms – briefs, research, meetings, records, and other. For purpose of this analysis, we considered time spent communicating via e-mails to be meeting time. Versions of the Jenner time entries with these specific allocation estimates are included as part of Goldman Exhibit B.

14. In making the estimates of time apportioned to different tasks in block entries, to the extent possible, we estimated meeting time in block entries by comparing those entries with other entries for the same meeting that were not block billed. Beyond that, we estimated hours for each task based on our understanding of the tasks in the case, such as how long the conference calls in the case typically

lasted. But while we believe this provides a very rough sense of the division among tasks, we are not suggesting it has accuracy beyond that. We also note that although the Eleventh Circuit forms seek hours related to research, many time entries on brief writing likely included research without dividing research and writing tasks. We have not, however, categorized any time as related to research unless a time entry specifically discusses research.

15. Jenner attorneys expended the following hours at the appellate stage of this litigation for which we are seeking compensation:

ATTORNEY¹	HOURS
Lorelie S. Masters	140.00
Marc A. Goldman	264.25
Joshua N. Friedman	60.75
Lindsay Eyler Kaplan	214.50
Marina K. Jenkins	132.00
Kristen M. Rogers	55.25

16. Jenner normally charges for the services of its attorneys on the basis of hourly rates. These rates change from year to year. For 2012, the following rates were in effect: Lorelie S. Masters: \$700, Marc A. Goldman: \$650, Joshua N. Friedman: \$440, Lindsay Eyler Kaplan: \$440, Marina K. Jenkins: \$395, Kristen M.

¹ Some of these attorneys are no longer with Jenner.

Rogers: \$395. For 2013, the following rates were in effect: Lorelie S. Masters: \$725, Marc A. Goldman: \$675, Lindsay Eyler Kaplan: \$510, Joshua N. Friedman: \$510, Marina K. Jenkins: \$470, Kristen M. Rogers: \$470.

17. As set out more completely in the Declaration of Randall C. Marshall, Marshall Decl., Jenner is not seeking those rates in its motion. Instead, Jenner seeks the following rates for this matter, reflecting the difference in market rates in the Southern District of Florida: Lorelie S. Masters: \$550, Marc A. Goldman: \$500, Joshua N. Friedman: \$275, Lindsay Eyler Kaplan: \$275, Marina K. Jenkins: \$200, Kristen M. Rogers: \$200. Finally, for travel time for Lorelie Masters and me to attend oral argument, we reduced these rates by half. (For the three entries on October 9 and 10, 2013 that included travel time, we assumed that four hours of each of those entries were associated with travel and simply deleted two hours for each of those entries.)

18. Applying these rates to the hours expended, Jenner seeks the following in attorneys' fees:

NAME	HOURS	RATE	SUBTOTAL
Lorelie S. Masters	140.00	550	\$77,000
Marc A. Goldman	264.25	500	\$132,125
Joshua N. Friedman	60.75	275	\$16,706.25
Lindsay Eyler Kaplan	214.50	275	\$58,987.50

Marina K. Jenkins	132.00	200	\$26,400
Kristen M. Rogers	55.25	200	\$11,050
TOTAL	866.75		\$322,268.75

19. In addition to the participation of attorneys, the head paralegal in Jenner's D.C. office, Cheryl L. Olson, and a Jenner project assistant, Francis Aul, provided significant assistance in preparing the Eleventh Circuit filings, including cite-checking, editing, and handling filing logistics. In 2012, Cheryl Olson expended 16.5 hours; in 2013, Cheryl Olson expended 11.75 hours. In 2012, Francis Aul expended 84.25 hours; in 2013 Francis Aul expended 47.5 hours.

20. Jenner normally charges for the services of its paralegals and project assistants on the basis of hourly rates. These rates change from year to year. For 2012, Cheryl Olson's hourly rate was \$295, for 2013 it was \$310. For 2012, Francis Aul's hourly rate was \$165, for 2013 it was \$180.

21. As discussed in the Marshall Declaration, taking into consideration the market rates in the Southern District of Florida, Jenner seeks the following rates for Cheryl Olson and Francis Aul: Cheryl Olson: \$150, Francis Aul: \$100.

22. Applying these rates to the hours Cheryl Olson and Francis Aul expended, Jenner seeks the following in fees:

Name	Hours	Rate	Subtotal
Cheryl Olson	28.25	150	\$4,237.50
Francis Aul	131.75	100	\$13,175.00
TOTAL	160		\$17,412.50

23. Jenner is seeking the following in travel costs and expenses: \$1,873.67. *See Goldman Exhibit C* (redactions are for privacy). These are based on flights, hotel rooms and meals for Lorie Masters and me to attend oral argument.

24. The total fees sought by Jenner are \$339,681.25. That reflects a substantial reduction from the hours specified in the time records at Florida rates.

25. The total of these fees and costs is \$341,554.92.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Marc A. Goldman

December 8, 2014

Exhibit A

LORELIE S. MASTERS, Partner

Lorelie S. Masters is a litigator and a member of the Firm's Insurance Recovery and Counseling Practice. Companies and individuals turn to her for counsel in enforcing insurance coverage under general liability, directors and officers, fiduciary liability, first-party property, business-interruption, and other types of insurance. Experienced in e-commerce and electronic-discovery issues, Ms. Masters has represented clients in state and federal trial and appellate courts and in arbitrations in the United States and abroad and won significant trials and arbitrations enforcing insurance coverage for her policyholder clients.

Ms. Masters is AV Peer Review Rated, Martindale-Hubbell's highest peer recognition for ethical standards and legal ability. *Chambers & Partners USA* has named her one of the country's leading insurance law attorneys since 2005. In 2010, *Law360* identified her as one of the "10 Most Admired Insurance Attorneys." *Washington DC Super Lawyers* consistently recognizes her for insurance coverage litigation as does *The Best Lawyers in America* for insurance law. She was named to "Best of the Best USA 2013" as one of the top thirty insurance and reinsurance attorneys in the country.

Ms. Masters speaks and writes extensively on topics related to her practice and is co-author of two widely recognized legal treatises: *Insurance Coverage Litigation*, updated annually, and *Liability Insurance in International Arbitrations: The Bermuda Form*. Ms. Masters served as the policyholder Co-Chair of the American Bar Association's Insurance Coverage Litigation Committee from 2000-2003. She is a former editor of the group's award-winning journal. Ms. Masters served as president of the Women's Bar Association of the District of Columbia from June 1, 2007, to June 1, 2008, and currently serves on the ABA Commission on Women in the Profession, and in other bar leadership positions.

In 2011, the *National Law Journal* honored her in its "Champions and Visionaries" award series for her work on voting rights and women's rights issues, saying she "upheld the profession's core values through public service, pro bono effort and advocacy for civil liberties." The National Association of Women Lawyers recognized Ms. Masters with the 2005 Service Award for her work as chair of the group's Amicus Committee. At the Firm, Ms. Masters serves on the Diversity & Inclusion Committee.

Below is a list of representative litigation matters handled by Ms. Masters (client names in bold):

- ***Tyson Foods Inc. v. Allstate Ins. Co., et al., No. 09C-07-087 (MJB) (Del. Super. Ct. Aug. 31, 2011).*** Principal counsel in the briefing and argument of this case. The court granted the policyholder's motion for partial summary judgment, upholding the primary insurers' duty to defend the policyholder in actions alleging environmental contamination. In reaching this result, the court rejected the insurers' various policy defenses, most importantly

BAR ADMISSIONS

District of Columbia, 1981

New York, 2000

COURT ADMISSIONS

U.S. Supreme Court, 1998

U.S. Court of Appeals, D.C. Circuit, 1982

U.S. Court of Appeals, Fourth Circuit, 1986

U.S. District Court, District of Columbia, 1982

U.S. District Court, Eastern District of Michigan, 1985

U.S. District Court, District of Maryland, 2013

arguments under the "absolute" and "sudden and accidental" pollution exclusions.

- **New Century Liquidating Trust:** *In re: New Century TRS Holdings, Inc.*, Case No. 07-10416 (KJC) (D. Del.); and *In re Arbitration Involving New Century Liquidating Trust against Philadelphia Indemnity Insurance Co.* Represented the New Century Liquidating Trust, successor to New Century Financial Corporation and its affiliated companies, in an arbitration to recover millions of dollars in defense costs incurred by the Debtor in an underlying ERISA action seeking damages for alleged breaches of duty under certain employee benefits plans. New Century's fiduciary liability insurer paid only a fraction of those costs, arguing that it was obligated to pay no more than \$200/hour in defense costs. The matter settled in December 2011, on the eve of trial. Ms. Masters also advised the Trust (and, before the trust arose, the debtor) on myriad coverage issues that had arisen in the bankruptcy and liquidation proceedings since mid-2007 when I was retained.
- **Olin Corp., et al. v. Continental Cas. Co., et al.**, No. 2:10-cv-00623-GMN-RJJ (D.Nev. Feb. 2011); *Continental Cas. Co. v. Olin Corp.*, No. 4:10-cv-00343-JCH (E.D. Mo. Aug. 2010). The federal court in Missouri granted Olin's motion to a first-filed action initiated by the insurer in favor of Olin's later, comprehensive action filed in federal court in Nevada seeking to enforce the company's boiler and machinery and property insurance coverage for a large loss at Olin's Henderson, Nevada plant.
- *2200 M Street, LLC, et al. v. St. Paul Fire & Marine Ins. Co., et al.*, Index No. 127209/02 (N.Y. Sup. Ct., New York County); *Carol Anderson v. Millennium Partners, LLC, et al.*, Civil Action No. 04-7454 (DC Super. Ct.); *Federal Insurance Co. v. Bovis Lend Lease, et al.*, Civil Action No. 04-0008306 (DC Super. Ct.); *Alyson Gannon v. The Ritz-Carlton Hotel Co. LLC, et al.*, Civil Action No. 05-ca-001130 (DC Super. Ct.); *2200 M Street LLC v. Bovis Lend Lease, Inc., et al.*, Index No. 0602690/2003 (N.Y. Sup. Ct., New York County). Represented general contractor in insurance coverage dispute and other related actions. After a lengthy mediation, achieved a successful settlement of this complex matter, resolving all coverage aspects favorably for client, as well as significant aspects of the construction disputes in 2005.
- *In re the Arbitration of Ticona (formerly HoechstCelanese Corp.) v. XL Insurance Co., Ltd.* Lead trial counsel for the policyholder in this arbitration conducted under the English Arbitration Act, 1996, in London. As reported under financial disclosure laws, a three-member arbitration panel, comprised of a retired chief judge of the United States Court of Appeals for the Third Circuit, a member of the House of Lords, and a distinguished Queen's Counsel, in June 2003 awarded Ms. Masters policyholder client the full policy limit of \$75 million plus \$20 million in pre- and post-judgment for mass-tort liabilities covered under the policyholder's excess general liability insurance policy.
- **Central Me. Power Co. v. Ernest A. Moore**, No. CV-93-489 (Me. Super. Ct. May 16, 1999, and Jan. 10, 2000). Court granted the policyholder's motions to add the Equitas companies as the real parties in interest for the liability insurance policies at issue sold by pre-1994 Lloyd's syndicates. The court later denied the Equitas defendants' motions to dismiss alleging lack of personal jurisdiction, failure to state a claim, and insufficiency of service of process. The case settled soon thereafter, on the eve of trial.
- *Transit Cas. Co. v. Hoechst Celanese Corp.*, No. CV696-0002CC (Mo. Cir. Ct.). Represented the policyholder Hoechst Celanese Corporation in contested proceeding over more than \$100 million in insurance coverage for hundreds of thousands of product-liability claims alleging property damage due to incorporation of policyholder's product into polybutylene plumbing systems. Obtained rulings in policyholder's favor on issues relating to timeliness of notice to excess insurer Transit Casualty and trigger and allocation. Achieved in 1998 a settlement of tens of millions of dollars for the policyholder.
- **Hoechst Celanese Corp. v. North River Ins. Co.**, No. 89C-SE-35 (Del. Super. Ct. Sept. 26, 1997). A jury rejected all of the insurance company's defenses to coverage and adopted a continuous trigger of coverage after an eight-week trial. The jury deliberated just two-and-a-half hours in reaching its verdict. Ms. Masters served as lead trial counsel.

- **Hoechst Celanese Corp. v. Certain Underwriters at Lloyd's, London**, 673 A.2d 164 (Del. 1996). This decision reversed the trial court's grant of summary judgment in favor of the insurance company defendants on trigger of coverage under "occurrence" insurance policies and adopted the injury-in-fact trigger of coverage advocated by the policyholder under applicable New York law. Ms. Masters was the principal strategist overseeing production of motion for interlocutory appeal from the lower court and appellate briefs filed in the Delaware Supreme Court and Record on Appeal.
- *In re the Matter of an Arbitration Between XL Ins. Co., Ltd. and Dow Corning Corp.* As discussed in public bankruptcy proceedings in 1996, Ms. Masters worked with Dow Corning to achieve a settlement for millions of dollars in insurance coverage for silicone gel breast implant claims pending against Dow Corning. Settlement was consummated on the eve of the final arbitration hearing.
- **Hoechst Celanese Corp. v. Certain Underwriters at Lloyd's, London**, 656 A.2d 1094 (Del. 1995). Reversed the trial court's grant of summary judgment in favor of the London insurer defendants and adopted the policyholder's position on trigger of coverage and the applicability of "tail" coverage under claims-made insurance policies drafted in the London Market.
- **North Am. Philips Corp. v. Republic Ins. Co.**, No. 376040, 1991 Conn. Super. LEXIS 1768 (Conn. Super. Ct. Mar. 8, 1992). Adopted the policyholder's position that based on the follow-form provisions, second-layer excess insurance policies were required to drop down in the place of underlying insolvent insurance.
- **Monsanto Co. v. Aetna Cas. & Sur. Co.**, No. 88C-JA-118, and **North Am. Philips Corp. v. Aetna Cas. & Sur. Co.**, No. 88C-JA-155 (Del. Super. Ct. Sept. 19, 1990). In the first decision in the country that refused insurer motions for summary judgment on the "absolute pollution exclusion" in an environmental coverage case, court found that genuine questions of material fact required denial of insurance companies' motion for summary judgment that coverage was precluded by the "absolute" pollution exclusion in certain insurance policies.
- **Independent Petrochemical Corp. v. Aetna Cas. & Sur. Co.**, 654 F. Supp. 1335 (D.D.C. 1988). Denied insurance companies' motions for summary judgment that punitive damages were not covered and that the policyholder's notice was "late."
- **Martin Marietta Corp. v. Fuller Co.**, No. 83-2359 (D. Md.), aff'd, 852 F.2d 566 (4th Cir. 1988). Awarded, after six-week trial, damages to plaintiff for breach of contract to build a cement plant in Utah.
- **Keene Corp. v. Insurance Co. of N. Am.**, No. 78-1011 (D.D.C.), on remand from 667 F.2d 1034 (D.C. Cir. 1981). Worked on all aspects of pretrial proceedings in the damages portion of the landmark insurance coverage case that established the "continuous trigger" theory of coverage. Case settled on the eve of trial.

MARC A. GOLDMAN, Partner

Marc A. Goldman is a litigator who is a member of the Firm's Appellate and Supreme Court Practice and Communications Practice. He focuses on regulatory litigation, particularly telecommunications issues, as well as environmental, patents, and securities issues. He represents clients before the Supreme Court and other appellate courts, in district courts and before regulatory agencies.

Many of Mr. Goldman's recent commercial cases have revolved around regulatory-arbitrage schemes designed to dramatically increase charges by rural telecommunications carriers to long-distance companies such as Sprint. Acting as national counsel for Sprint in these cases, Mr. Goldman has helped block efforts to collect these charges. Mr. Goldman has also recently worked on multiple aspects of the EPA's rules for renewable fuels. Mr. Goldman also has substantial experience with patent appeals that span the gamut of patent issues including claim construction, validity, inequitable conduct and attorneys' fees. In addition, he has worked on major securities cases.

Mr. Goldman has an active pro bono practice. His pro bono clients have included, among others, individual Florida voters and a coalition of nonprofit civil rights groups, the Brennan Center for Justice, the American Bar Association, one of the first Guantanamo detainees charged with war crimes, and public housing residents in major U.S. cities. In 1999, Mr. Goldman took a sabbatical from Jenner & Block to serve as a Visiting Professor of Constitutional Law at the University of Iowa Law School.

Much of Mr. Goldman's work has involved litigation related to regulatory issues including telecommunications, environmental, and securities issues. For more than a decade, Mr. Goldman represented MCI in cases primarily involving the application of the Telecommunications Act of 1996. More recently, in his role as national counsel for Sprint in cases involving regulatory arbitrage, Mr. Goldman has obtained dismissal of claims against Sprint in two court cases on procedural grounds, prevailed in an FCC complaint to invalidate a tariff designed to facilitate collection of these charges, and has mustered arguments leading to favorable settlements in many others. Some of these cases are continuing.

In recent months, Mr. Goldman has represented a subsidiary of Delta Airlines in both regulatory and court proceedings relating to EPA's renewable fuel standards.

Mr. Goldman has also continued his work on patent appeals and in securities litigation. Representative cases over the course of his career include:

Telecommunications

- Represented Sprint in *Beehive Telephone Co., Inc v. Sprint Communications Company, L.P.* (D. Utah, 2:10cv00052), leading to dismissal of complaint based on principles of issue preclusion.

COURT ADMISSIONS

U.S. Supreme Court

U.S. Court of Appeals, Federal Circuit

U.S. Court of Appeals, Third Circuit

U.S. Court of Appeals, Fourth Circuit

U.S. District Court, District of Columbia

JUDICIAL CLERKSHIP

Hon. Edward R. Becker, U.S. Court of

- Represented Sprint in *Beehive Telephone Co., Inc. v. Sprint Communications Company, L.P.* (D. Utah, 2:08-cv-00380), leading to dismissal of Beehive's claims under Section 207 of Communications Act and continuation of case as to Sprint's counterclaims.
- Represented Sprint in *Sprint Communications Company, L.P. v. Northern Valley Communications, LLC* (FCC), leading to invalidation of Northern Valley's tariff as inconsistent with multiple statutory and regulatory provisions.
- Represented Sprint in numerous other cases involving regulatory arbitration, leading to favorable settlements.
- Filed Supreme Court amicus brief on behalf of law professors in *Sprint Communications Company v. Jacobs* to argue that federal court should not have abstained from hearing preemption challenge to state commission decision, a proposition with which the Supreme Court later agreed.
- Represented MCI in three class actions involving alleged overbilling, resulting in dismissal of one and successful resolution of two others prior to class certification.
- Represented MCI in successful FCC arbitration involving pricing and other issues under the 1996 Telecommunications Act
- Represented MCI in successful challenge to Illinois legislation constraining the authority of the Illinois Commerce Commission to set rates
- Represented MCI in FCC proceeding to obtain approval of merger with Verizon
- Represented MCI in Supreme Court cases involving interaction of Communications Act and antitrust laws and involving application of Communications Act to cable modem service.
- Provided advice to multiple clients on a gamut of regulatory issues.

Appeals, Third Circuit 1993 - 1994
(Clerkship)

Other Regulatory Litigation (Environmental)

- Represented subsidiary of Delta Airlines in D.C. Circuit challenge to EPA's 2013 rule on renewable fuel standards and in crafting strategy at EPA to waive or revise policy going forward.

Securities

- Represented General Motors Corporation in a now-settled SEC investigation involving pension, derivatives and commodities accounting and disclosure issues
- Represented trustees of bankrupt Fortune 500 company in successful effort to obtain recourse from banks that sold auction rate securities that later became nearly valueless

- Helped defend largest FINRA arbitration award in history arising from the failure of the auction rate securities market

Intellectual Property

- Drafted *amicus* brief for American Intellectual Property Law Association in *Lexmark International, Inc. v. Static Control Components, Inc.*, regarding standing for false advertising under the Lanham Act. Brief was described as “powerful” in a Bloomberg Law Scotusblog article and many of its arguments were accepted in the Supreme Court’s decision.
- Drafted *amicus* brief for Pharmaceutical Research and Manufacturers of America in the *Bilski v. Kappos* Supreme Court case on the scope of patentable subject matter
- Helped successfully defend a major patent verdict at the Federal Circuit and to obtain a remand for award of additional damages
- Drafted Federal Circuit briefs on claim construction, validity, inequitable conduct and attorneys’ fees
- Drafted summary judgment motion that helped facilitate successful settlement of patent litigation between MCI and AT&T

Mr. Goldman has an extensive pro bono practice. His cases have included:

- Represented two Florida voters and a coalition of nonprofits in a challenge to a 2012 voter purge in Florida that resulted in: (1) an 11th Circuit decision declaring the purge illegal because such systematic purges could not occur within 90 days of a federal election, and (2) settlement of other claims resulting in restoration of voters to the rolls prior to the 2012 election.
- Prepared Supreme Court *amicus* brief for coalition of social scientists in *Town of Greece v. Galloway*, arguing that prayer before town council meetings is coercive in a manner different than that before federal or state legislative sessions.
- Represented David Hicks, the second Guantanamo inmate charged with war crimes. After several years of litigation, the parties reached a plea deal under which Mr. Hicks served less than a year’s additional time.
- Represented class of Miami public housing residents in action that resulted in ten-year consent decree aimed at desegregating Section 8 and public housing programs.
- Represented class of Baltimore public housing residents in successful appeal to Fourth Circuit of a decision modifying an earlier consent decree.
- Prepared Supreme Court *amicus* brief for the Brennan Center for Justice arguing that Court should permit continued enforcement of Section 5 of Voting Rights Act, rather than holding it unconstitutional -- a position with which the Court agreed with at the time, though it has since reached a different conclusion.
- Prepared Supreme Court *amicus* brief for Northern Region Disability Network arguing that it is constitutional to require states to provide their records to entities established to protect those with developmental disabilities – a position with which the Court agreed.
- Prepared Supreme Court *amicus* brief for American Bar Association in case upholding the constitutionality of IOLTA (Interest On Lawyers’ Trust Fund Accounts) programs - a position with which the Court agreed.
- Prepared Supreme Court *amicus* brief for American Bar Association arguing that a California law reducing welfare benefits for new California residents was unconstitutional - an issue the Court ultimately did not reach.

Hon. Beverly B. Martin, U.S. Court of Appeals, Eleventh Circuit 2010 - 2012 (Clerkship)

LINDSAY EYLER KAPLAN, Associate

Lindsay Eyler Kaplan is an associate in the firm's Litigation Department.

Ms. Kaplan graduated *summa cum laude* and Phi Beta Kappa from Northwestern University, where she earned a B.A. degree in History and Legal Studies in 2006. She received her J.D. from Yale Law School in 2009. While at Yale, Ms. Kaplan was awarded the John Currier Gallagher Prize in trial advocacy in the Spring 2007 Barristers' Union Finals and, along with her co-counsel, the Potter Stewart Prize for best overall written and oral argument in the Fall 2008 Moot Court Finals. She also served as Submissions Editor of the Yale Law & Policy Review, and as an intern with the U.S. Department of Justice, the U.S. Attorney's Office for the District of Connecticut, and the Federal Election Commission.

Prior to joining Jenner & Block, Ms. Kaplan served as a law clerk to the Honorable James E. Boasberg on the U.S. District Court for the District of Columbia. She also worked as an associate in the litigation department of a large, international law firm where she handled matters involving complex civil litigation, securities litigation, and white-collar criminal defense, and maintained an active pro bono practice.

Ms. Kaplan is admitted to practice law in Maryland and the District of Columbia.

A horizontal bar chart with a light gray background. The y-axis lists four categories: 'All respondents', 'Men', 'Women', and '18-29'. The x-axis represents percentages from 0 to 100, with major grid lines every 20 units. Each category has three horizontal bars: a dark gray bar for 'U.S. should take action', a medium gray bar for 'U.S. should not take action', and a light gray bar for 'Don't know'. The data is as follows:

Category	U.S. should take action (%)	U.S. should not take action (%)	Don't know (%)
All respondents	77	18	5
Men	78	17	5
Women	76	19	5
18-29	79	16	5

Subject: AJS Diversity Study

Dear Court Staffer,

Last year, the American Judicature Society developed and executed a survey of judicial nominating commissioners, in order to better understand the process and people behind nominating commissions. We were very grateful for all the help we received; and we are hoping to build upon that work as we revisit another aspect of judicial selection research.

In 1999, conducted a study on the extent to which judicial merit selection programs affect diversity on the bench. We would like to follow up on that study, to see how the relationship between merit selection and judicial diversity has changed in the new millennium. We are hoping to gather as large a base of data as possible, and we would like to use information from your commission. Specifically, we would like to know some information about the following groups involved in the judicial merit selection process in your state for each year from 1999 through 2011 where the data are available:

- *Pool of applicants for all judicial vacancies in that year.* We would like to know the total number of applicants for all judicial positions in a given year, and then, among these applicants, know how many were women and how many were from each minority group noted below. If an individual applied for more than one judicial vacancy in a given year, please count each application separately if possible.
- *Nominees for all vacancies in that year.* We would like to know the total number of nominees forwarded to the governor for all judicial vacancies in a given year, and then, among these nominees, let us know how many were women and how many were from each minority group. If an individual was nominated more than once in a given year, please contact each nomination separately if possible.
- *Appointees to judicial positions in that year.* Out of all the appointments the governor made in a given year, let us know how many were women and how many were from each minority group.
- *Commission membership.* Out of all of the commission members that served in a given year, let us know how many were women and how many were from each minority group. Please count a commission member as having served even if he or she did not serve the full year.

Categories for minority groups include, but are not limited to, African American, Anglo (or white), Hispanic, Native American, and Asian. Again, we would like to have this information reported by year, and for as many years as you have data available. We are especially interested in showing how the process has changed in the time since the last study, so the more years of data you can provide the better we can make this study.

We're aware that confidentiality is a concern, and we want to assure you that we won't be reporting on any individual person's information. We plan to complete this study using only aggregated data from each year, and to report the data in this form, so that we protect individual confidentiality. If

staff time or cost in compiling the data is also a concern, we have resources available to assist with that process.

We have previously contacted a variety of Florida commission chairs, and have been as yet unable to locate the data we are interested in. We are hoping that you will have some of this information available in a format that can be passed on to us for analysis. We are hoping to conclude data gathering on the 15th of December, so if your office can provide any of the above information or a better point of contact, please let us know as quickly as possible.

Thank you in advance for assisting us with this project. Of course, we will provide you with copies of any papers, reports or publications that result from this effort. If you are unable to assist us directly, it would be much appreciated if you could direct us to the individual or organization that might be more able to help us. Please feel free to contact us if you have any questions or concerns.

Sincerely,

Bryan Hays K.O. Myers

Research Assistant Director of Research and Programs

Subject: AJS Diversity Study

Dear Court Staffer,

Last year, the American Judicature Society developed and executed a survey of judicial nominating commissioners, in order to better understand the process and people behind nominating commissions. We were very grateful for all the help we received; and we are hoping to build upon that work as we revisit another aspect of judicial selection research.

In 1999, conducted a study on the extent to which judicial merit selection programs affect diversity on the bench. We would like to follow up on that study, to see how the relationship between merit selection and judicial diversity has changed in the new millennium. We are hoping to gather as large a base of data as possible, and we would like to use information from your commission. Specifically, we would like to know some information about the following groups involved in the judicial merit selection process in your state for each year from 1999 through 2011 where the data are available:

- *Pool of applicants for all judicial vacancies in that year.* We would like to know the total number of applicants for all judicial positions in a given year, and then, among these applicants, know how many were women and how many were from each minority group noted below. If an individual applied for more than one judicial vacancy in a given year, please count each application separately if possible.
- *Nominees for all vacancies in that year.* We would like to know the total number of nominees forwarded to the governor for all judicial vacancies in a given year, and then, among these nominees, let us know how many were women and how many were from each minority group. If an individual was nominated more than once in a given year, please contact each nomination separately if possible.
- *Appointees to judicial positions in that year.* Out of all the appointments the governor made in a given year, let us know how many were women and how many were from each minority group.
- *Commission membership.* Out of all of the commission members that served in a given year, let us know how many were women and how many were from each minority group. Please count a commission member as having served even if he or she did not serve the full year.

Categories for minority groups include, but are not limited to, African American, Anglo (or white), Hispanic, Native American, and Asian. Again, we would like to have this information reported by year, and for as many years as you have data available. We are especially interested in showing how the process has changed in the time since the last study, so the more years of data you can provide the better we can make this study.

We're aware that confidentiality is a concern, and we want to assure you that we won't be reporting on any individual person's information. We plan to complete this study using only aggregated data from each year, and to report the data in this form, so that we protect individual confidentiality. If

staff time or cost in compiling the data is also a concern, we have resources available to assist with that process.

We have previously contacted a variety of Florida commission chairs, and have been as yet unable to locate the data we are interested in. We are hoping that you will have some of this information available in a format that can be passed on to us for analysis. We are hoping to conclude data gathering on the 15th of December, so if your office can provide any of the above information or a better point of contact, please let us know as quickly as possible.

Thank you in advance for assisting us with this project. Of course, we will provide you with copies of any papers, reports or publications that result from this effort. If you are unable to assist us directly, it would be much appreciated if you could direct us to the individual or organization that might be more able to help us. Please feel free to contact us if you have any questions or concerns.

Sincerely,

Bryan Hays K.O. Myers

Research Assistant Director of Research and Programs

Table 1

Alcohol use in past month, individuals age 18+: 2013

Alcohol	Number	Percent
Any use	134,000,000	56.4
Binge use	58,000,000	24.6
Heavy use	16,200,000	6.8

Source: SAMHSA, Center for Behavioral Health Statistics and Quality, National Survey on Drug Use and Health (NSDUH), 2013.

Table 2

Illicit drug use in past month, individuals age 18 or older (2013)

Substance	Number	Percent
Illicit drug use	22,376,000	9.4
Marijuana	18,048,000	7.6
Abuse of prescription drugs	5,935,000	2.5
Pain relievers (opioids)	4,096,000	1.7
Cocaine	1,505,000	0.6
Hallucinogens	1,179,000	0.5
Inhalants	375,000	0.2
Heroin	277,000	0.1

Note: Numbers and percentages do not sum to the illicit drug use estimate as individuals may have used more than one illicit drug.

Date of Birth: June 23, 1959

Place of Birth: Miami Beach, Florida

Present Positions: Assistant Professor
Divisions of Addiction Medicine, Pain Medicine, and Forensic Psychiatry
Department of Psychiatry
University of Florida College of Medicine
Gainesville, FL

Education:

1985 M.D. George Washington University School of Medicine
Washington, DC

1981 B.S. Trinity College
Hartford, CT

Postdoctoral Training:

2009-2010 Fellowship in Addiction Medicine
Department of Psychiatry
University of Florida College of Medicine
Gainesville, FL

1996-1997 Fellowship in Pain Management
Harvard Medical School / Massachusetts General Hospital
Boston, MA

1986-1989 Residency in Anesthesiology
University of Florida College of Medicine
Gainesville, FL

1985-1986 Internship in Internal Medicine
George Washington University School of Medicine
Washington, DC

Additional Training:

2007	<i>Certified</i> Medical Review Officer, AAMRO
2004	<i>Practitioner</i> , Office-based opioid agonist therapy with buprenorphine

Board Certification:

2010	American Board of Addiction Medicine
2001	American Board of Hospice and Palliative Medicine
1998	American Board of Pain Management
1990	American Board of Anesthesiology
1986	<i>Diplomat</i> , National Board of Medical Examiners

Licensure:

1996	Commonwealth of Massachusetts, #15117
1987	State of Florida Board of Examiners, #ME 54511

Professional Positions and Major Visiting Appointments:

2005 – 2008	Consultant in Palliative Medicine Haven Hospice of Jacksonville Jacksonville, FL
2001 – 2002	Medical Director, inpatient unit Community Hospice of Northeast Florida Jacksonville, FL
1989 – 2001	Staff Anesthesiologist <ul style="list-style-type: none">• Chairman (1994-1995)• Vice-Chairman (1993-1994; 1995-1996) Orange Park Medical Center Orange Park, FL
1996 – 1997	Clinical Fellow in Anesthesia (Pain Management) Associate Editor, MGH Pain Center Internet Journal Harvard Medical School Massachusetts General Hospital Department of Anesthesia and Critical Care

Committees:

2014	American Academy of Pain Medicine, Acute Pain Special Interest Group
2014	Organizing Committee, International Conference on Opioids 2014
2013	Organizing Committee, International Conference on Opioids 2013
2012 –	Committee on Drug Testing – American Society of Addiction Medicine

- 2011 – Drugged Driving Committee – Institute for Behavior and Health (Washington, DC)

RE: Executive Order 11-58

Dear Mr. Tanner,

In response to your request, I have documented my opinions on 1) the nature of addiction; 2) the current landscape of drug and alcohol use, abuse, and addiction in the United States; and 3) drug and alcohol use, abuse, and addiction with regard to the workplace. This letter summarizes my opinions, which I hold with a reasonable degree of medical certainty. The facts and data that I used in forming my opinions are listed in the reference section of this letter. I have included several tables to allow for easier viewing and to provide more granularity.

I am a medical doctor, licensed to practice medicine in the State of Florida. I am board certified in the specialty of anesthesiology and the subspecialties of addiction medicine and pain medicine. I am also a faculty member of the University of Florida College of Medicine, Department of Psychiatry, Divisions of Addiction Medicine, Pain Medicine, and Forensic Psychiatry. In these capacities, I routinely evaluate and provide clinical care to individuals who use, abuse, or are addicted to alcohol, illicit drugs, and prescription controlled substances. I also teach and research on these and related subjects.

My qualifications and publications can be found in the attached curriculum vitae. My testimony history and the University of Florida Forensic Institute fee schedule are also attached.

1. **Alcohol and drug consumption exists on a continuum from use to abuse to addiction. Addiction is a chronic brain disease that is characterized by diminished control over drug use despite negative consequences.**
 - a. **Definitions of addiction**
 - i. The National Institute on Drug Abuse, one of the National Institutes of Health, defines addiction as "a chronic relapsing brain disease that is characterized by compulsive drug-seeking and use, despite harmful consequences."¹

- ii. The American Society of Addiction Medicine defines addiction as “a primary, chronic disease of brain reward, motivation, memory, and related circuitry. Dysfunction in these circuits leads to characteristic biological, psychological, social, and spiritual manifestations. This is reflected in an individual pathologically pursuing reward and/or relief by substance use and other behaviors.

“Addiction is characterized by inability to consistently abstain, impairment in behavioral control, craving, diminished recognition of significant problems with one’s behaviors and interpersonal relationships, and a dysfunctional emotional response. Like other chronic diseases, addiction often involves cycles of relapse and remission. Without treatment or engagement in recovery activities, addiction is progressive and can result in disability or premature death.”²

- iii. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-V)³ defines substance use disorders (which include abuse and addiction) as “a problematic pattern of drug use leading to significant impairment or distress, as manifested by at least two of the following:”
 - 1. The drug is used in larger quantities or over a longer period than was intended.
 - 2. There is a persistent desire or unsuccessful efforts to cut down or control the use of the drug.
 - 3. A great deal of time is spent obtaining, using, or recovering from the effects of the drug.
 - 4. Craving for the drug.
 - 5. Continued use of the drug despite failure to fulfill major role obligations at work, school, or home.
 - 6. Continued use of the drug despite recurrent social or interpersonal problems caused by its use.
 - 7. Important social, recreational, or occupational activities are given up or reduced because of drug use.
 - 8. Recurrent use of the drug in physically hazardous situations
 - 9. Continued drug use despite knowledge that it has caused or worsened a physical or psychological problem.
 - 10. Tolerance (the need for increasing amounts of the drug to achieve the desired intoxicating effect *or* markedly diminished drug effect with the same amount of drug).
 - 11. Drug withdrawal.

- b. Addiction and the brain. The risk for developing an addiction is the product of a complex interplay of “nature” and “nurture.” With regard to nature, genetic factors account, on average, for about 50% of risk, and psychiatric co-morbidities (e.g. anxiety, mood, and thought disorders) also contribute to risk. With regard to nurture, factors such as early drug use (risk is higher in adolescence than in adulthood) and environmental factors (e.g. access to

drugs; type of drugs; drug use by peers and role models; poor parental support) contribute to risk.⁴

i. The effects of drugs on the brain.

1. The rewarding properties of drugs derive, in part, from their ability to increase the neurotransmitter dopamine in the nucleus accumbens and associated mesocorticolimbic pathways (i.e. brain pathways that subserve reward, motivation, and cognitive control). Under normal conditions, physiologic dopamine release in these brain pathways motivates the individual to seek adaptive rewards such as food, sex, and social interaction. Drugs of abuse, however, release dopamine in a more prolonged and unregulated manner, producing intensely pleasurable effects that dwarf those of adaptive rewards, and thereby reinforcing drug use. The potency with which drugs increase dopamine release, and the precise mechanism(s) by which they do so, vary by drug and route of administration.⁵
2. Although the initial decision to use drugs is a voluntary one, with continued use the individual's ability to control their drug use may diminish.⁶
3. In addiction, obtaining and using drugs become the major motivational drives, displacing other, adaptive drives, such as those associated with familial, social, occupational, and recreational activities. The addicted individual is highly motivated by (immediate) drug reward and experiences diminished motivation to pursue (delayed) non-drug rewards.⁵
4. Addiction is accompanied by functional and, sometimes, structural brain changes. Positron emission tomography (PET) and functional magnetic resonance imaging (fMRI) studies have demonstrated that addiction affects not only the "reward" pathways, but also pathways involving interoception (awareness of cognitive, emotional, and physical states), memory and learning, and executive function (assessment of value, inhibitory control, evaluation of outcomes associated with behavioral choices, emotional regulation, insight, motivation, decision-making).^{5,7}

2. Alcohol and drug use, abuse, and addiction are prevalent in the United States.

The data in subsections a., b., and c. below are derived from the 2013 National Survey on Drug Use and Health (NSDUH).⁸

a. Alcohol and drug use

- i. Alcohol is the most used psychoactive drug in the United States. Past-month alcohol use (defined as one or more drinks) was endorsed by about 134 million individuals (56% of individuals age 18 or older); past-

month binge use (defined as five or more drinks per occasion) was endorsed by 58 million individuals (25%); and past-month heavy use (defined as five or more drinks on a single occasion, on five or more days) was endorsed by 16 million individuals (7%) (Table 1).

- ii. Cumulatively, past-month illicit drug use was endorsed by more than 22 million individuals (9.4% of individuals age 18 or older). Specific drug use, in descending order of prevalence, included marijuana (18 million; 7.6%), (nonmedical use of) prescription drugs (6 million; 2.5%), cocaine (1.5 million; 0.6%), hallucinogens (1.2 million; 0.5%), inhalants (0.4 million; 0.2%), and heroin (0.3 million; 0.1%) (Table 2).
- b. Alcohol and drug abuse or addiction (Table 3).
 - i. Alcohol is the most common drug of abuse or addiction. Past-year alcohol abuse or addiction was endorsed by 16.6 million individuals (7.0% of individuals 18 or older).
 - ii. Abuse or addiction to illicit drugs was endorsed by 6.0 million individuals (2.5% of individuals 18 or older). Abuse or addiction to specific drugs, in descending order of prevalence, included marijuana 3.5 million (1.5%), prescription drugs 2.1 million (0.9%), cocaine 0.8 million (0.3%), heroin 0.5 million (0.2%), hallucinogens 0.2 million (0.0%), and inhalants 0.1 million (0.0%).
- c. Alcohol and drug addiction (Table 4).
 - i. Past-year alcohol addiction was endorsed by 7.7 million individuals (3.3% of individuals age 18 or older).
 - ii. Past-year illicit drug addiction was endorsed by 4.4 million individuals (1.9%)
- d. Financial aspects of drug use, abuse, and addiction.
 - i. Illicit drugs. The acquisition costs of illicit drugs vary in accordance with supply, demand, drug type, and quantity and frequency of use. According to a 2014 study by the Rand Corporation, the monthly cost of illicit drugs ranged from a low of \$165 for 4-10 episodes of methamphetamine use to \$1,834 for 21+ episodes of heroin use ⁸ (Table 5).
 - ii. Prescription controlled substances. The acquisition costs of prescription drugs vary by specific drug, strength, dose, brand vs. generic, procurement on the black market vs. by physician prescription. If acquired by physician prescription, costs will be dependent insurance status, specific insurance plan, co-payment, and other factors. A major prescription drug of abuse in Florida is immediate-release oxycodone, 30 mg. Recently, black market cost of this drug has been approximately one dollar per mg. ^{10,11}

3. Alcohol and drug use, abuse, and addiction are legitimate workplace concerns

- a. Alcohol and drug abuse or addiction and employment status.

The statistics in this subsection were obtained or derived from the 2013 NSDUH⁸ (Table 6).

- i. Overall, past-year abuse or addiction to drugs or alcohol in individuals age 18 and older was endorsed by 11.3 million (9.5%) of full-time employed individuals and by 3.1 million (9.3%) of part-time employed individuals.
 - ii. Most individuals who endorsed past-year abuse or addiction to alcohol or illicit drugs were employed.
 - iii. Of employed individuals who endorsed past-year abuse or addiction to alcohol or illicit drugs, most were employed full-time.
 - iv. The prevalence of abuse/addiction to alcohol or illicit drugs was greater in the 18-25 age range than in the 26+ age range.
- b. Alcohol and illicit drug use and impairment in the workplace. The data in this subsection derive from the National Survey of Workplace Health and Safety (2002-2003).^{12,13}
- i. Alcohol. An estimated 2.3 million individuals (1.8% of the workforce) endorsed consumption of alcohol at least once *in the two hours before reporting to work* in the previous year. Twenty-nine percent of these individuals indicated having done so at least monthly.

An estimated 8.9 million individuals (7.1% of the workforce) endorsed consumption of alcohol *during work* in the previous year. Thirty-eight percent of these individuals endorsed having done so at least monthly.

An estimated 2.1 million individuals (1.7% of the workforce) endorsed *working under the influence of alcohol* in the previous year. Forty-two percent of these individuals reported having done so at least monthly.

An estimated 11.6 million individuals (9.2% of the workforce) endorsed *working with a hangover* during the previous year. Twenty-one percent of these employees endorsed having done so at least monthly.

- ii. Illicit drugs. Past-year illicit drug use *in the workplace* was endorsed by 3.9 million employees (3.1% of employed adults). This included, in descending order of prevalence, marijuana (2 million; 1.6%), (illicit use of) prescription drugs (2.3 million; 1.8%), and cocaine (169,000; 0.1%).

Past-year *working under the influence* of illicit drugs comprised, in descending order of prevalence, marijuana (2.2 million; 1.7%), (illicit use of) prescription drugs (1.8 million; 1.4%), cocaine (233,000; 0.2%). Overall, 3.6 million employees (2.9% of the workforce) reported being impaired in the workplace from any illicit drug.

- c. Signs and symptoms of alcohol and drug use, abuse, and addiction in the workplace
- i. Signs of drug and/or alcohol use in the workplace exist on a spectrum from none to witnessed impairment and/or drug use. The presence and recognition of these signs are influenced by several variables, including whether the behavior represents use, abuse, or addiction; the severity of the addiction; the specific drug(s); the presence of acute effects, alcohol or drug withdrawal, or chronic effects; the cognitive and/or psychomotor demands of the job; the experience of the employee; and the number, type, and sophistication of witnesses.
 - ii. Drug use, abuse, and addiction can go unnoticed (and/or unreported) in the workplace for weeks, months, or even years.
 - iii. Alcohol or drug-related impairment may result from the acute effects of drug(s); the chronic effects of drug(s); or from drug withdrawal. Note: drug withdrawal typically manifests with signs and symptoms that are opposite those of acute effects. Thus, for example, acute effects of stimulants, such as confidence, energy, focus, and mood elevation, may be replaced in withdrawal by anxiety, depression, fatigue, and inability to concentrate.
 1. General effects. In general, drug abuse/addiction affects brain pathways that subserve alertness, decision-making and judgment, emotions, learning, memory, mood, and psychomotor function. These brain changes manifest as drug craving, compulsive drug use, diminished control over drug use, and continued use despite adverse consequences.
 2. For clarity, I will divide drugs of potential abuse into two major classes: central nervous system (CNS) stimulants and CNS depressants. Note that these signs and symptoms, in and of themselves, are nonspecific, and may be the result of medical or psychiatric illness. They are of greatest value when occur in characteristic patterns, and when viewed in the context of the specific circumstances.
 - a. Stimulants (e.g. amphetamine, cocaine, methamphetamine). Acute and chronic effects include aggression, anxiety, appetite loss, bloody or runny nose and/or frequent sniffing, dental hygiene deterioration, dilated pupils, erratic behavior, financial difficulties, grinding of teeth, insomnia and/or diminished need for sleep, itching/scratching, interpersonal difficulties, irrational behavior and/or speech, irritability, paranoia, persistent stereotyped behaviors ("punding"), psychosis, sweating, talkativeness, twitching/jerking, weight loss.¹⁴
 - b. Depressants (e.g. alcohol, marijuana, opioids). Acute and chronic effects include balance difficulties, concentration

difficulties, confusion, financial difficulties, gait unsteadiness, impaired distance perception, impaired time perception, increased appetite and/or thirst, interpersonal difficulties, odor of alcohol or marijuana on breath or clothes, pinpoint pupils, psychomotor impairment, redness or glassiness of eyes, sleepiness, slurred or slowed speech.¹⁴

iv. Workplace implications

1. Use of, abuse of, or addiction to alcohol and/or illicit drugs can result in 1) psychomotor impairment, with resulting diminished productivity, inconsistent or lower work quality, accidents and workers' compensation claims; 2) cognitive impairment, with impaired memory, judgment, insight, concentration, and decision-making ability, with resulting diminution in creativity and productivity; 3) financial hardship, with resulting potential for theft and law enforcement encounters; 4) neglect of health needs, with resulting tardiness, absenteeism, sick time, and healthcare use.^{15,16}
2. Data from the National Survey of Workplace Health and Safety indicated that drug use in the workplace is associated with lower perceptions of workplace safety, higher perceptions of work strain, and lower levels of employee morale.¹⁷

Sincerely,

Gary M. Reisfield, M.D.
Assistant Professor

Dani,

Could you please add this to the law clerk file and schedule a phone interview tomorrow or Wednesday with Jeremy Schwarz?

Thanks!

Ben,

Great to speak with you earlier today and thank you for considering one of our students for this upcoming summer. Jeremy provided me a number of references in case you are not able to get a hold of one of the top three. (He doesn't want that to delay your decision making process). Please feel free to contact him directly to schedule an interview. If you can let me know when you have reached a decision about him, that would be helpful on my end.

Thanks again.

Best regards,

Paul Watkins

PLAINTIFF'S EMERGENCY MOTION FOR TEMPORARY INJUNCTION

Plaintiff North Brevard County Hospital District d/b/a Parrish Medical Center ("North Brevard County Hospital District" or "PMC"), by and through undersigned counsel and pursuant to Fla. R. Civ. P. 1.610 and Fla. Stat. § 542.23, hereby moves this Court to enter a temporary injunction enjoining the Defendants Health First, Inc., Health First Physicians, Inc. ("HF Physicians"), and Health First Medical Group, LLC ("HF Medical Group"), from purchasing or otherwise acquiring Brevard Hematology and Oncology Consultants – Levine, Zimm and Sprawls, M.D., P.A. d/b/a Space Coast Cancer Center ("SCCC"). All of the Defendants in the above captioned matter, Health First, Inc., HF Physicians, HF Medical Group, Health First Insurance, Inc., and Health First Health Plans, Inc. are collectively referred to herein as "Health First." In support of this Motion for Temporary Injunction, PMC states as follows:

I. INTRODUCTION

PMC is a public, not-for-profit hospital in North Brevard County. Health First publicly claims to be a “fully integrated” healthcare system operating in all aspects of the healthcare system, including hospital services, physician services, ancillary services, and private health insurance products. HF Medical Group, owned by HF Physicians (which is a wholly owned subsidiary of Health First, Inc.), has entered into an agreement to acquire SCCC. The acquisition is scheduled to close this month, September 2015. SCCC is a physician practice that offers medical and radiation oncology services in North Brevard County. HF Medical Group’s purchase of SCCC would result in an impermissible increase in Health First’s market power and an impermissible increase in concentration in the markets for medical and radiation oncology physician services in North Brevard County. This increase in market power and concentration has the potential to irreparably harm PMC’s business and a temporary injunction is necessary.

As a result of HF Medical Group’s conduct, PMC moves this Court for the entry of a temporary injunction that enjoins Health First, Inc., HF Physicians, and HF Medical Group’s from acquiring SCCC or, alternatively, orders the divestiture of SCCC from HF Medical Group.

II. FACTUAL BACKGROUND

1. North Brevard County Hospital District is a political subdivision of the State of Florida created by the Legislature to provide for the health care needs of the public, and to operate a hospital, PMC. Ch. 2003-362, Laws of Florida.

2. PMC is the hospital of last resort insofar as it bears the burden of providing medical services to the uninsured and/or indigent communities of North Brevard County. (Affidavit of Christopher McAlpine ¶ 4, attached hereto as Exhibit A).

3. Defendant, Health First, Inc. owns and directs the affairs of Defendants, HF Health Plans, HF Insurance, HF Physicians, and HF Medical Group. (Health First, Inc. 2013 Tax Return, pgs. 7 and 8, attached hereto as Exhibit B).

4. Defendant, HF Health Plans is licensed as a health maintenance organization (“HMO”) and Third Party Administrator (“TPA”) in the State of Florida. (Florida Office of Insurance, Authorized Lines of Business for HF Health Plans, attached hereto as Composite Exhibit C).

5. Defendant, HF Insurance is licensed as a Life and Accident Health Insurer in the State of Florida. (Florida Office of Insurance, Authorized Lines of Business for HF Insurance, attached hereto as Exhibit D). HF Insurance’s plans are administered by HF Health Plans. (Florida Office of Insurance Regulation, Report on Examination of Health First Insurance, Inc., p. 6, attached hereto as Exhibit E).

6. Defendant, HF Physicians is the Managing Member of Defendant, HF Medical Group (HF Physicians and HF Medical Group are collectively referred to herein as “HF Doctors”). (HF Medical Group’s 2015 Florida Limited Liability Company Annual Report, attached hereto as Exhibit F). HF Medical Group is Brevard County’s largest multi-specialty physician group. (HF Medical Group Description, Exhibit G).

7. HF Health Plans, HF Insurance, HF Physicians, and Medical Group are wholly owned subsidiaries of the parent healthcare corporation, Health First, Inc. (Exhibit B at 7 and 8). In addition to HF Health Plans, HF Insurance, HF Physicians, and HF Medical Group, Health First, Inc. owns and operates various entities, including, without limitation, hospitals, urgent care centers, outpatient centers, rehabilitation facilities, diagnostic and treatment centers, and a network of fitness and wellness services. (*Id.*)

8. Health First, Inc. has acquired, and currently owns and operates, the following hospitals in Brevard County: (i) Holmes Regional Medical Center (“Holmes”); (ii) Cape Canaveral Hospital (“Cape Canaveral”); (iii) Viera Hospital (“Viera”); and (iv) Palm Bay Hospital (“Palm Bay”) (Holmes, Viera, Palm Bay and Cape Canaveral collectively referred to herein as “Health First Hospitals”). (Exhibit B at 7).

9. Health First, Inc. through Health First Hospitals, refuses to permit competitor health insurers to include Holmes in their provider networks unless those competitor health insurers also include Health First, Inc.’s other hospitals (Viera, Palm Bay, and Cape Canaveral) at above competitive reimbursement rates. These rates are obtained by Health First, Inc. and Health First Hospitals’ exploitation of their market power. (Affidavit of McAlpine ¶ 5).

10. Further, Health First, Inc. through Health First Hospitals, contracts with its affiliated health plans, HF Health Plans and HF Insurance, at lower reimbursement rates than those charged to competitor health plans. (Affidavit of McAlpine ¶ 6).

11. By coercing competitor health insurers to contract with all of Health First Hospitals at supra competitive prices, Health First, Inc. and Health First Hospitals are exploiting their market power in South Brevard County to increase profits beyond those they would otherwise earn in a competitive market and to increase the reimbursement expenses of competitor health insurers. (Affidavit of McAlpine ¶ 8). For example, to increase profits, HF Health Plans’ officials have stated to PMC that it need only reimburse physicians that comprise HF Medical Group at 85% of the applicable Medicare rate. (*Id.*) HF Health Plans then uses its rates with such physicians in negotiations with PMC, a competitor of Health First Hospitals, to support HF Health Plans’ position that it will not reimburse PMC above that rate. (*Id.*) These arrangements allow HF Health Plans and HF Insurance to charge lower premiums to their members and reduce member

cost-share amounts, which in turn, grows HF Health Plans' and HF Insurance's market power and Health First's market power as a whole. (*Id.*)

12. Health First requires that the physicians which comprise HF Medical Group, including those physicians that practice in North Brevard County, to admit exclusively or almost exclusively to Health First Hospitals, and refer exclusively or almost exclusively to other physicians employed by HF Medical Group and/or HF Physicians and facilities owned by Health First. (Affidavit of McAlpine ¶9). In addition, HF Medical Group imposes on its employed physicians non-compete agreements that restrict the physicians from practicing within a certain geographic area after end of the employment relationship. (*Id.*)

13. Also, Health First, Inc. through its affiliated health plans, HF Health Plans and HF Insurance, uses its dominant market share in the private health insurance market, to refuse to contract as participating providers with physicians practicing in Brevard County, including North Brevard County, unless they agree to admit exclusively or almost exclusively to Health First Hospitals, and refer exclusively or almost exclusively to the physicians that comprise HF Doctors, physicians contracted with HF Health Plans and HF Insurance, and facilities owned by Health First. (Affidavit of McAlpine ¶ 10).

14. Health First also requires the physicians which comprise HF Doctors and other participating providers, including those physicians that practice in North Brevard County, to refuse to refer to physicians that do not refer all or nearly all of their patients to: (a) Health First Hospitals or other facilities owned by Health First; and (b) the physicians which comprise HF Doctors and/or physicians that are contracted with HF Health Plans and HF Insurance. (Affidavit of McAlpine ¶ 11).

15. Parrish Medical Center has determined that patients exercise the most autonomy in terms of choosing health care providers in their selection of their initial physician to see. Once that initial physician refers a patient to another facility or physician, the patient usually obliges and goes with the physician's recommendation given the physicians increased knowledge of the industry compared to their own. (Affidavit of McAlpine ¶ 12). A patient's utilization of a particular physician's or facilities' services is generally guided by a single purchase decision. This single purchase decision is typically seeking treatment at a hospital's emergency department or with a primary care physician. Most of a patient's subsequent healthcare-related choices will be dictated from that original decision by physician referrals. As such, physician referrals generally control the course and scope of services rendered to patients. Due to the passive nature of healthcare consumers, an entity that is able to influence physicians, will, to a substantial degree, control the patients' treatment options. (Affidavit of McAlpine ¶ 13).

16. Further, when independent physicians acquiesce to Health First's coercion, Health First expands its control over all the markets in which it participates. For instance, when independent physicians join HF Doctors, which competes with independent physicians in the physician services and ancillary services markets, HF Doctors increases its market share and loses competitors. (Affidavit of McAlpine ¶ 14).

17. Health First, Inc. also ensures that Health First Hospitals, HF Medical Group, and HF Physicians render services to members of competitor health insurers' plans as much as possible through the restrictions related to referrals. Therefore, these referrals increase HF Health Plans' and HF Insurance's competitive advantage in the private health insurance market by maximizing competitor health insurers' reimbursement expenses. Further, the higher revenue

generated by Health First Hospitals from Health First's competitor health insurers allows Health First to shift those profits to its affiliated health plans. (Affidavit of McAlpine ¶ 15).

18. As a result and by Health First's design, it has become apparent to physicians practicing in Brevard County that, in order to provide services at Health First, Inc.'s affiliated facilities, gain access to patients enrolled in HF Health Plans' and HF Insurance's health plans, or obtain referrals from HF Doctors, Health First's affiliated entities, and/or participating providers in HF Health Plans' and HF Insurance's networks, they are forced into Health First's restrictive arrangements. (Affidavit of McAlpine ¶ 16).

19. PMC designates the physicians that have privileges at PMC, as active staff or associate staff, according to PMC's bylaws. Active staff members are required to have their principal place of residence and their principal office location within North Brevard County. Active staff members are the face of the department to the community. Associate staff members are required to have an association with the practice of an active staff member at PMC in the same specialty. Associate staff members perform the same duties as active staff, but in a reduced capacity. Associate staff members often serve as coverage physicians when active staff members are not available. (Affidavit of McAlpine ¶ 17).

20. SCCC is a medical and radiation oncology physician practice and a free standing medical and radiation oncology center. (SCCC Medical Oncology Description, attached hereto as Exhibit H); (SCCC Radiation Oncology Description, attached hereto as Exhibit I). SCCC currently employs and/or contracts with seven (7) medical oncologists and two (2) radiation oncologists, all of which practice in North Brevard County. (SCCC Physician List, attached hereto as Exhibit J); (Dr. Prendergast Article, attached hereto as Exhibit K). Upon the closing of HF Medical Group's acquisition of SCCC, the physicians that comprise SCCC will become employees of HF

Medical Group and/or HF Physicians. (Affidavit of McAlpine ¶ 18). Also, upon the closing of the acquisition of SCCC, one (1) of the seven (7) medical oncologists is potentially retiring. (*Id.*). As such, the potentially retiring medical oncologist is not included in the calculation set forth below. Therefore, for the purposes of this motion, after the acquisition closes there will be six (6) medical oncologists considered as employed by HF Medical Group practicing in North Brevard County. (*Id.*) All such six (6) medical oncologists will also be in-network providers for HF Health Plans and HF Insurance. (Excerpt of HF Health Plans and HF Insurance's Provider Directory, attached hereto as Exhibit L). Further, all such six (6) of the medical oncologists that will be employed by HF Medical Group after the acquisition of SCCC and that are currently employed and/or contracted with SCCC currently have privileges at PMC. (*Id.*)

21. There are also three (3) medical oncologists practicing in North Brevard County that are independent of SCCC and HF Doctors. (Cancer Care Centers of Brevard Physician List, attached hereto as Exhibit M). There is an additional medical oncologist that has not been included in this calculation. That not included physician is currently on administrative leave and is not expected to return to practice in North Brevard County. (Affidavit of McAlpine ¶ 19). All three (3) of the medical oncologists at Cancer Care Centers of Brevard that practice in North Brevard County are participating physicians in HF Health Plans' and HF Insurance's networks. (Exhibit L). Also, all such three (3) medical oncologists currently have privileges at PMC. (Affidavit of McAlpine ¶ 19).

22. Currently, in the market for radiation oncology physician services in North Brevard County there are four (4) radiation oncologists. (Affidavit of McAlpine ¶ 20). However, one (1) of the radiation oncologists is not included in the calculation set forth below because of his potential retirement. (*Id.*) Therefore, for the purposes of this motion, there are three (3) radiation

oncologists practicing in North Brevard County. (*Id.*) All three (3) radiation oncologists practicing in North Brevard County are currently in-network providers for HF Health Plans and HF Insurance. (Exhibit L). The two (2) radiation oncologists currently employed by and/or contracted with SCCC currently have privileges at PMC. (Affidavit of McAlpine ¶ 20). The one (1) radiation oncologist that is independent of SCCC and HF Doctors consults at PMC. (*Id.*)

23. After the acquisition, HF Doctors will employ six (6) of the nine (9) (i.e. 67%) medical oncologists practicing in North Brevard County and two (2) of the three (3) (i.e. 67%) radiation oncologists practicing in North Brevard County. (Affidavit of McAlpine ¶ 21).

24. Subsequent to that acquisition, HF Medical Group will almost certainly impose on all or most of those physicians the restrictions regarding referrals that are imposed on other physicians associated with Health First practicing in North Brevard County. (Affidavit of McAlpine ¶ 22). Although the medical and radiation oncologists that are currently practicing at SCCC may or may not retain privileges at PMC after the acquisition, such privileges will, in practice, likely only be used for emergency services due to the restrictive referral arrangements that such oncologists will have entered into with HF Medical Group. (*Id.*) Further, HF Medical Group will almost certainly impose on all or most of those physicians non-compete agreements that will deprive North Brevard County of the continued service of such physicians after their employment relationship with HF Medical Group ends. The contractual inability for such physicians to provide continued service exacerbates difficulties in access to care in North Brevard County. (*Id.*)

25. After the closing of the acquisition, there will only be three (3) medical oncologists in North Brevard County that are outside of HF Doctors' employment and there will only be one (1) radiation oncologist in North Brevard County outside of HF Doctors' employment. Since all

of the medical oncologists and radiation oncologists practicing in North Brevard County are in-network providers of HF Health Plans and HF Insurance, they will be subject to the restrictions regarding referrals detailed above. (Affidavit of McAlpine ¶ 23).

26. Given the imposition of HF Medical Group's restrictive referral arrangements referenced above, PMC will then experience a reduction or cessation of referrals from HF Doctors' newly acquired medical oncologists and radiation oncologists and/or a reduction or cessation of acute care inpatient hospital services and outpatient services for medical and radiation oncology. Patients residing in North Brevard County, including members enrolled in health plans other than those plans affiliated with Health First, who would otherwise have received inpatient and/or outpatient oncology services at PMC through the medical and/or radiation oncologists acquired by HF Medical Group, will instead receive such services at a hospital owned by Health First, Inc. significantly further south in Brevard County. (Affidavit of McAlpine ¶ 24).

27. PMC will lose referrals and admissions due to the pending acquisition of SCCC. Medical oncologists and radiation oncologists practicing in North Brevard County will be deprived of a referral choice as to where their patients receive oncology services and the hospitals they are admitted to, to their and their patients' detriment including quality of care. Moreover, patients will be subject to punishing travel times, while coping with cancer, potential displacement from work, and burdens upon their family or caregivers for the extended transport. (Affidavit of McAlpine ¶ 25).

28. Beyond losing patients for medical and radiation oncology physician services, other independent service lines offered by PMC could also be negatively affected. (Affidavit of McAlpine ¶ 26).

III. MEMORANDUM OF LAW

a. Legal Standard for Temporary Injunction

The purpose of a temporary injunction is to preserve the status quo in order to prevent irreparable harm from occurring before a dispute is resolved. *Bailey v. Christo*, 453 So. 2d 1134 (Fla. 1st DCA 1984). To obtain a temporary injunction, the moving party must establish: (1) irreparable injury will result if the injunction is not granted; (2) there is no adequate remedy at law; (3) the party has a clear legal right to the requested relief; and (4) the public interest will be served by the temporary injunction. *Provident Mgmt. Corp. v. City of Treasure Island*, 796 So. 2d 481, 485 (Fla. 2001); *see also DiChristopher v. Board of County Commissioners*, 908 So. 2d 492, 495 (Fla. 5th DCA 2005). A clear legal right to relief essentially means substantial likelihood of success on the merits. *See e.g. Fla. High Sch. Ath. Ass'n v. Rosenberg*, 117 So. 3d 825, 826 (Fla. 4th DCA 2013); *Citizens for Sunshine, Inc. v. Sch. Bd. of Martin Cnty.*, 125 So. 3d 184, 187 (Fla. 4th DCA 2013); *Millennium Communs. & Fulfillment, Inc. v. Office of the AG, Dep't of Legal Affairs*, 761 So. 2d 1256, 1260 (Fla. 3d DCA 2000).

Each of the required elements is established by the facts set forth in the declaration filed herewith.

b. PMC will Suffer an Irreparable Injury if the Injunction is not Granted and PMC Lacks an Adequate Remedy at Law

There is no adequate remedy at law when damages are unavailable or are inadequate in view of the defendant's ongoing failure. *So. Colonization Co. v. Derfler*, 75 So. 790, 794 (Fla. 1917); *see also Thompson v. Planning Comm'n*, 464 So. 2d 1231, 1237 (Fla. 1st DCA 1985); *Florida Power Corp. v. City of Winter Park*, 827 So. 2d 322, 327 (Fla. 5th DCA, 2002)); *Amelio v. Marilyn Pines Unit II Condo. Ass'n*, 2015 Fla. App. LEXIS 10694 (Fla. 2d DCA July 15, 2015). An "[i]rreparable injury is an injury of such nature that it cannot be redressed in a court

of law; an injury for which monetary compensation will not suffice.” *Gonzalez v. Benoit*, 424 So. 2d 957, 959 (Fla. 3d DCA 1983); *see also Jewett Orthopaedic Clinic, P.A. v. White*, 629 So. 2d 922, 927 (Fla. 5th DCA 1993) (irreparable injury means, in essence, that injunction is the only practical mode of enforcement). The impossibility of ascertaining the amount of plaintiff’s legal damages can also support the granting of injunctive relief. *Derfler, supra*, cited in *Liza Danielle, Inc. v. Jamko, Inc.*, 408 So. 2d 735, 739 (Fla. 3d DCA 1982). In addition, impeding day to day operations of a business is enough to bring about irreparable harm. *Zuckerman v. Profl Writers of Fla.*, 398 So. 2d 870, 872 (Fla. 4th DCA 1981).

Health First has acquired and/or is in the process of acquiring a dominant market share of healthcare related markets in South Brevard County and certain healthcare related markets in North Brevard County which Health First has achieved by improperly augmenting the market power it possesses in one product/service market to gain control of other related product/service markets. Health First improperly augments the market through illegal tying arrangements, group boycotts, and concerted refusals to deal. (Affidavit of McAlpine ¶¶ 6-10). Health First is now attempting to replicate this behavior in North Brevard County including through HF Medical Group’s acquisition of SCCC. The acquisition of SCCC will therefore pose a dangerously high probability that HF Doctors will have a monopoly in the markets for medical and radiation oncology physicians services in North Brevard County.

The acquisition of SCCC by HF Medical Group will disrupt the day to day operations of PMC. The exclusive dealing arrangements, in particular threaten to disrupt PMC’s daily operations. These arrangements ensure that physicians employed by HF Medical Group refer exclusively or almost exclusively to other physicians which comprise HF Doctors and to facilities that are owned by Health First. Through an exclusive dealing arrangement, the medical

and radiation oncologists that will be employed by HF Medical Group after the acquisition, will likely refer to PMC solely for emergency services and otherwise refer the patients away from PMC. (Affidavit of McAlpine ¶ 22). Every medical and radiation oncologist currently at SCCC is either considered an active staff member or an associate staff member at PMC. (Affidavit of McAlpine ¶¶ 18, 20). That means these physicians are an integral part of the day to day operations at PMC. Therefore, the day to day operations at PMC will be disrupted. Also, cancer patients will endure an unnecessary hardship in the form of extended travel while undergoing chemotherapy, radiation therapy, and/or treatments.

The damages that PMC will suffer as a result of the acquisition are impossible to discern in an amount at present and therefore PMC has no adequate remedy at law. PMC will suffer an irreparable injury for which there is no adequate remedy at law if the acquisition of SCCC is not enjoined.

c. PMC has a Substantial Likelihood of Success based on the Merits

A substantial likelihood of success on the merits is shown if good reasons for anticipating that result are demonstrated. *Naegele Outdoor Advertising co., Inc. v. City of Jacksonville*, 659 So. 2d 1046 (Fla. 1995).

Under the Florida Antitrust Act, Fla. Stat. § 542.19 makes it unlawful to monopolize or attempt to monopolize or combine or conspire with another person to monopolize any part of trade or commerce in Florida. Fla. Stat. § 542.18 makes unlawful every contract, combination or conspiracy in restraint of trade or commerce in Florida. Pursuant to Fla. Stat. § 542.23, a party may sue for injunction relief against threatened loss or damage by a violation of Florida Antitrust Act.

Sections 542.18 and 542.19, Florida Statutes, are the legislative counterparts to the federal Sherman Act Sections 1 and 2 of the Sherman Act, 15 U.S.C. §§ 1, 2. Fla. Stat. § 542.32 provides that in construing that chapter, due consideration and great weight are to be given to the interpretations of the federal courts relating to the comparable federal antitrust statutes, and the Florida Legislature accordingly has adopted as the law of Florida the body of antitrust law developed by the federal courts under the Sherman Act. *See St. Petersburg Yacht Charters, Inc. v. Morgan Yacht, Inc.*, 457 So. 2d 1028 (Fla. 2d DCA 1984), cited in *McLeod v. Barber*, 764 So. 2d 790, 794 (Fla. 5th DCA 2000). The Florida courts look to federal antitrust precedent in construing the Florida Antitrust Act. *See Petition of Ezell*, 446 So. 2d 253, 255 (Fla. 5th DCA 1984).

Sherman Act precedent holds that a monopolist should not be rewarded for eliminating competition in its incipiency; nothing in Section 2 of the Sherman Act limits its prohibitions to actions taken against threats that are already well-developed. *Sunbeam Television Corp. v. Nielsen Media Research* 763 F.Supp. 2d 1341, 1356 (S.D. Fla. 2011), *aff'd*, 711 F. 3d 1264 (11th Cir. 2013). Under the antitrust laws, arrangements held to restrain trade or commerce include group boycotts and concerted refusals to deal, tying arrangements, and exclusive dealing arrangements. Group boycotts and concerted refusals to deal are practices that have such a pernicious effect and lack any redeeming value that they are conclusively presumed to be unreasonable and therefore are deemed illegal without elaborate inquiry as to the precise harm they have caused or the business excuse for their use. They are thus considered “per se” violations of the antitrust laws. *See, e.g., Continental, Inc. v. GTE Sylvania*, 433 U.S. 36, 50 (1977); *Jacobs*, 626 F. 3d at 1334; *Seagood Trading Corp. v. Jerrico, Inc.*, 924 F. 2d 1555, 1568 (11th Cir. 1991). Tying arrangements, i.e., agreements by a party to sell one product but only on

the condition that the buyer also purchases a different (or tied) product, or at least agrees that he will not purchase that product from any other supplier, are also considered to be per se antitrust violations. *Palmyra Park Hosp. Inc. v. Phoebe Putney Memo'l Hosp.*, 604 F. 3d 1291, 1296 n.4, 1303 (11th Cir. 2010); *see also Tic-X-Press, Inc. v. Omni Promotions Co. of Georgia*, 815 F. 2d 1407, 1414 (11th Cir. 1987).

In certain circumstances exclusive dealing arrangements can also harm competition, by allowing one supplier of goods or services unreasonably to deprive other suppliers of a market for its goods or services. The concern is that creating or increasing market power through exclusive dealing is the means by which the defendant is likely to increase prices, restrict output, reduce quality, slow innovation or otherwise harm consumers. In the absence of competition a dominant firm can impose exclusive dealing on downstream dealers to strengthen or prolong its market position. Such arrangements can also run afoul of the antitrust laws as an improper means of maintaining a monopoly. *McWane, Inc. v. F.T.C.*, 783 F. 3d 814 (11th Cir. 2015).

Exclusive dealing arrangements are assessed under the antitrust “Rule of Reason,” i.e., a thorough factual inquiry into the anticompetitive and precompetitive effects of the practice, under which a plaintiff must show either actual or potential harm to competition. *Jacobs*, 626 F. 3d at 1334; *see also Midwestern Waffles, Inc. v. Waffle House, Inc.*, 734 F. 2d 705, 711 (11th Cir. 1984). Under a standard Rule of Reason analysis, a plaintiff must define both a geographic market and a product/services market in which the adverse anticompetitive effects have occurred or threaten to occur. *Jacobs*, 626 F.3d at 1336.

However, when a defendant’s conduct is blatantly anticompetitive, a “quick look” analysis is applied and precise markets definitions are not required. *See, e.g., California Dental Ass’n v. F.T.C.*, 526 U.S. 756, 770 (1999); *Food Lion, LLC v. Dean Foods Co.*, No. 12-5457 (6th

Cir. Jan. 3, 2014) (*In re Southeastern Milk Antitrust Litig.*); *In re Terazosin Hydrochloride Antitrust Litigation*, 352 F.Supp. 2d 1279 (S.D. Fla. 2005). Here, application of the “quick look” analysis is proper because of Health First’s blatantly anticompetitive conduct. Nonetheless, to the extent market definitions may be required in this case, the geographic market is North Brevard County, and the service market is medical and radiation oncology physician services.¹

Corporate mergers or acquisitions are illegal when, in any line of commerce or activity affecting commerce, the effect may be substantially to lessen competition or to tend to create a monopoly. A merger which yields a firm controlling an undue percentage of the relevant market and results in the concentration of firms in that market is so inherently likely to lessen competition substantially that it must be enjoined in the absence of evidence clearly showing that it is not likely to have such anticompetitive effects. *Polypore, Inc. v. F.T.C.*, 686 F. 3d 1208, 1214 (11th Cir. 2012).

Through this acquisition, and further through its anticipated and standard imposition of referral restrictions on the acquired SCCC oncologists, Health First is both effectuating an illegal acquisition² and attempting to monopolize the medical and radiation oncology markets in North Brevard County. An attempted monopolization claim requires a showing that the defendant: 1) has engaged in predatory or anticompetitive conduct; 2) specifically intends to monopolize; and

¹ Note that market definitions may plainly rely on qualitative economic evidence with the need for further technical or expert witness analysis. *McWane*, at 829 (“... there appears to be no support in the case law for McWane’s claim that such a technical analysis is always required. Indeed, as the Commission correctly noted, ‘[c]ourts routinely rely on qualitative economic evidence to define relevant markets.’”).

² Section 7 of the federal Clayton Act, 15 U.S.C. § 18 prohibits mergers and acquisitions when the effect “may be substantially to lessen competition, or to tend to create a monopoly.” However, Section 1 of the Sherman Act also applies to acquisitions and mergers. *See U.S. v. First National Bank & Trust Co. of Lexington*, 376 U.S. 665, 669 (1964). The standards for assessing a proposed acquisition or merger under Section 7 of the Clayton Act and Section 1 of the Sherman Act are the same. *See, e.g., U.S. v. Rockford Memorial Corp.*, 898 F. 2d 1278, 1281-83 (7th Cir. 1990), cert. denied, 111 S.Ct. 295; *McCaw Personal Communications v. Pacific Telesis Group*, 645 F.Supp. 1166, 1173 (N.D. Cal. 1986); *Community Publishers, Inc. v. Donrey Corp.*, 892 F.Supp. 1146, 1173 (W.D. Ark. 1995). As the purpose of the Florida Antitrust Act is to complement federal antitrust litigation. (*Sabates v. Int’l Medical Centers, Inc.*, 450 So. 2d 514, 517 (Fla. 3d DCA 1984)), it also prohibits such mergers and acquisitions, at least under Fla. Stat. § 542.18, the counterpart of Section 1 of the Sherman Act.

3) that there is a dangerous probability of the defendant achieving monopoly power. *Lockheed Martin Corp. v. Boeing Co.*, 390 F.Supp. 2d 1073, 1077 (M.D. Fla. 2005); *see also Omni Healthcare, Inc. v. Health First, Inc.*, 2015 U.S. Dist. LEXIS 7284, at n. 21 (M.D. Fla. Jan. 21, 2015).

HF Medical Group will own approximately two thirds (67%) of each of the markets for medical and radiation oncology physician services in North Brevard County after the purchase of SCCC. HF Medical Group will have six medical oncologists (all obtained from SCCC) and Cancer Care Centers of Brevard will retain the remaining three (3) in North Brevard County. HF Medical Group will also have two radiation oncologists (all obtained from SCCC) and Cancer Care Centers of Brevard will retain the remaining one (1) radiation oncologist in North Brevard. That percentage exceeds what the federal district court in this jurisdiction has indicated is sufficient to make an attempted monopolization claim viable. *See Lockheed Martin Corp. v. Boeing Co.*, 314 F.Supp. 2d 1198, 1229 (M.D. Fla. 2004) (“Generally, a showing that a defendant has between sixty and sixty-five percent market share is sufficient to present the issue of market power to a jury.”).³ If the acquisition is consummated before the Court can rule on the

³ Additionally, in evaluating the effects of the merger, a resulting market share of the merged entities of over 30% indicates the lack of competition. *Federal Trade Com'n v. Cardinal Health, Inc.*, 12 F.Supp. 2d 34, 52 (D.D.C. 1998). Another element of the evaluation is increase in market concentration. *See Polypore, supra*, 686 F.3d at 1215 (“the acquisition ensured a continuation of the high concentration and eliminated the decrease in concentration that would result from the acquired company's entry into the market... the pre-acquisition market activity by the acquired company ... had a substantial, actual pro-competitive effect on the market.”). Initial consideration of employment status shows how anticompetitive the proposed acquisition will be. Here, there are ten (10) medical oncologists currently practicing in North Brevard County. Seven (7) are employed by SCCC, three (3) are employed by Cancer Care Centers of Brevard (“CCCB”), and all ten (10) are on staff at Parrish. After the acquisition of SCCC by HF Medical Group, one (1) of those medical oncologists will potentially retire. SCCC will presumably disappear, CCCB will continue to have three (3) employed medical oncologists, HF Medical Group will employ six (6) medical oncologists. Health First’s market share of employed medical oncologists will increase from 0% to 67% (6 out of 9 medical oncologists as employees). With respect to radiation oncologists, there are currently four (4) practicing in North Brevard County, two (2) are employed by SCCC, one (1) is employed by CCCB, and one (1) is employed by Radiation Therapy Centers of Brevard. After the acquisition, one (1) radiation oncologist will potentially retire, two (2) radiation oncologists will be employed by HF Medical Group, and one (1) radiation oncologist will be employed by CCCB. Health First will have a 67% market share of employed medical oncologists. Although the medical and radiation oncologists that will become employees of HF Medical Group may or may not retain privileges at PMC, such privileges will, in practice, likely only be used for emergency services.

motion for temporary injunction, divestiture is also permissible relief. *California v. American Stores Company*, 495 U.S. 271 (1990); *see also Omni Healthcare, supra*, at n. 19 (considering divestiture).

Antitrust plaintiffs must also show antitrust injury; i.e., the type of injury the antitrust laws were intended to prevent, and that they are efficient enforcers of the antitrust laws. *Palmyra Park Hosp., Inc.*, 604 F. 3d at 1299 (11th Cir. 2010). Antitrust injury should reflect the anticompetitive effect either of the violation or of anticompetitive acts made possible by the violation. The efficient enforcer analysis includes consideration of the directness and remoteness of the injury, whether other potential plaintiffs are better suited to vindicate the harm, whether the damages were highly speculative, and whether the plaintiff is able to efficiently and effectively enforce the judgment. *Id.* In *Palmyra Park*, antitrust injury was found when defendant's exclusivity arrangements forced insurers who would otherwise prefer to deal with both plaintiff and defendant hospitals to deal only with defendant hospital, preventing the plaintiff from competing, as it had before, in the market for the tied products. *Id.* That resulted in less competition for the tied products, which would mean higher prices and fewer choices for consumers. When only injunctive relief is sought (the case in this motion for temporary injunction), the danger of mismanaging the antitrust laws is less pervasive and there is less concern with whether the plaintiff would be an efficient enforcer. *Duty Free Americas, Inc. v. Estee Lauder Cos.*, 2015 U.S. App. LEXIS 13837 (11th Cir. 2015)

Once this acquisition takes place, HF Medical Group will steer patients that received services at SCCC to Health First Hospitals, other Health First facilities, HF Doctors, and/or other

The fact that physicians employed by HF Medical or in the network of HF Health Plans and/or HF Insurance are prohibited from making referrals outside the Health First collection of companies further cements in Health First's increase, and PMC's decrease, in market shares, and overall market concentrations.

physicians contracted with HF Health Plans and HF Insurance. Therefore, HF Medical Group's pending acquisition of SCCC constitutes an acquisition which has the tendency to reduce competition in the relevant markets for medical oncology physician services and radiation oncology physician services to the detriment of consumers.

Upon the acquisition of SCCC, the prices for medical services in North Brevard County in the relevant service markets will likely increase, while incentives to improve the quality of medical services provided will have been removed. HF Medical Groups' pending acquisition of SCCC thus has a high probability of reducing competition and increasing market power in North Brevard County to the detriment of PMC, as well as consumers.

These injuries reflect the type of injuries that antitrust laws were designed to prevent and are directly derived from the anticompetitive behavior of Health First described above. PMC is an efficient enforcer of the antitrust laws as it will be directly impacted by the acquisition, as discussed above. PMC knows of no other private entities that have indicated an intent to take action to prevent the acquisition. (Affidavit of McAlpine ¶ 27). Also, there are no pro-competitive justifications for the acquisition and exclusionary practices described herein that would be sufficient to overcome their anticompetitive effects. Therefore, PMC is likely to succeed based on the merits of this case.

d. PMC's Threatened Injury Outweighs Possible Harm to the Defendants

The threatened injury to PMC is severe and outweighs any potential harm to Health First, Inc., HF Medical Group, and HF Physicians. The injury to PMC is significant because the oncology services and other services offered by PMC are interconnected and rely on each other. Beyond losing an unascertainable amount of business and clientele for medical and radiation

oncology physician services, other independent service lines offered by PMC could also be negatively affected.

The temporary injunction sought herein is merited. The injunction will not adversely affect Health First, Inc.'s, HF Medical Groups', or HF Physicians' legitimate business operations. When calculating possible harm, the amount derived from an increase in referrals due to the improper exclusive dealing arrangements cannot be considered because such revenue will be a direct result of illegal actions. There can be no recognizable harm to Health First, Inc., HF Medical Group, or HF Physicians by preventing them from enforcing an illegal arrangement. The relief requested herein, therefore, would only restore the status quo.

e. The Public Interest will be Served by the Temporary Injunction

The public interest favors granting an injunction. PMC is a governmental entity that was created by the Florida legislature for the public good in an effort to address the medical needs of the communities in North Brevard County. Consequently, allowing the acquisition of SCCC by HF Medical Group and the imposition of exclusive dealing arrangements and group boycotts thwarts the legislative purpose behind the creation of PMC and allows a private entity to obstruct PMC in its pursuit of that public good.

If SCCC is acquired by HF Medical Group, the public will face higher prices for medical and radiation oncology services. Health First through the acquisition of SCCC augments its monopolistic power to increase prices, which inevitably will be passed on to the patients.

Patients will not only have to endure economic hardship in the form of increased prices, but also unnecessary physical hardships. Patients will be steered from North Brevard County unnecessarily to Central Brevard County and/or South Brevard County to receive medical and radiation oncology treatments. While additional travel may not seem an undue physical

hardship, the added burden and physical discomfort of traveling for patients enduring the pain chemotherapy or other forms of cancer treatment is indeed a hardship.

Further, the non-competition agreements that HF Medical Group will impose on the medical and radiation oncologists pursuant to the acquisition will deprive North Brevard County of the continued service of such physicians after their employment relationship with HF Medical Group ends. The contractual inability for such physicians to provide continued service exacerbates difficulties regarding access to care in North Brevard County.

Therefore, an injunction preventing the purchase of SCCC is in the public's best interest.

WHEREFORE, Plaintiff, PMC, respectfully requests that the Court:

- (1) Issue a temporary injunction prohibiting the acquisition of SCCC by HF Medical Group, HF Physicians, Health First, Inc., or any other Health First entity or, alternatively, order the divestiture of SCCC from HF Medical Group; and
- (2) Grant such other and further relief as would be just and equitable under the circumstances.

BOND

Pursuant to Fla. R. Civ. P. 1.610(b), as Plaintiff is a statutory political subdivision of the State, the Court in its discretion and with due regard for the public interest, may dispense with the requirement of a bond. PMC respectfully requests that, accordingly, a bond not be required in this case. However, should the Court deem that a bond, with or without surety and conditioned for the payment of the cost of damages sustained by Health First, Inc., HF Medical Group, and HF Physicians if they are wrongfully enjoined, should be required in this case, Plaintiff will supply such a bond.

REQUEST FOR AN EMERGENCY HEARING

Plaintiff respectfully requests that the Court hold an emergency hearing on its Emergency Motion for Temporary Injunction.

Dated: September 18, 2015

HEALTH FIRST MEDICAL GROUP, LLC,**

Defendants.

/

AFFIDAVIT OF CHRISTOPHER MCALPINE

Christopher McAlpine, being first duly sworn, states as follows:

1. I am a resident of Brevard County, Florida. I am over 18 years of age.
2. I have personal knowledge of the facts stated herein.
3. I am currently employed with North Brevard County Hospital District d/b/a Parrish Medical Center ("PMC") as Senior Vice President, Administration Transformation/CTO. I have been employed with Parrish Medical Center since July 2000. My duties at Parrish Medical Center include management of outpatient clinical departments, operational oversight for Corporate Compliance and the Exclusive Provider Organization known as Florida Health. Additionally, I am licensed in Risk Management and serve as in-house legal liaison through the Department of Quality/Risk Management. I also have responsibility for Parrish Medical

Center's Community Health Partnership, a network of approximately 300 psycho-social support agencies, city government and employers.

4. Parrish Medical Center is a hospital of last resort in that provides care for the uninsured and/or indigent communities of North Brevard County.

5. Health First, Inc. owns Holmes Regional Medical Center ("Holmes"), Cape Canaveral Hospital ("Cape Canaveral"), Viera Hospital ("Viera"), and Palm Bay Hospital ("Palm Bay") (Holmes, Viera, Palm Bay, and Cape Canaveral are collectively referred to herein as "Health First Hospitals").

6. Health First, Inc. through Health First Hospitals, refuses to permit competitor health insurers to include Holmes in their provider networks unless those competitor health insurers also include Health First, Inc.'s other hospitals (Viera, Palm Bay, and Cape Canaveral) at above competitive reimbursement rates. These rates are obtained by Health First, Inc. and Health First Hospitals' exploitation of their market power.

7. Further, Health First, Inc. through Health First Hospitals, contracts with its affiliated health plans, Health First Health Plans, Inc ("HF Health Plans") and Health First Insurance, Inc. ("HF Insurance"), at lower reimbursement rates than those charged to competitor health plans.

8. By coercing competitor health insurers to contract with all of Health First Hospitals at supra competitive prices, Health First, Inc. and Health First Hospitals are exploiting their market power in South Brevard County to increase profits beyond those they would otherwise earn in a competitive market and to increase the reimbursement expenses of competitor health insurers. For example, to increase profits, HF Health Plans' officials have stated to PMC that it need only reimburse physicians that comprise Health First Medical Group, LLC ("HF Medical Group") at 85% of the applicable Medicare rate. HF Health Plans then uses its rates with such physicians in

negotiations with PMC, a competitor of Health First Hospitals, to support HF Health Plans' position that it will not reimburse PMC above that rate. These arrangements allow HF Health Plans and HF Insurance to charge lower premiums to their members and reduce member cost-share amounts, which in turn, grows HF Health Plans' and HF Insurance's market power and Health First's market power as a whole.

9. I am aware that Health First requires that the physicians which comprise HF Medical Group, including those physicians that practice in North Brevard County, to admit exclusively or almost exclusively to Health First Hospitals, and refer exclusively or almost exclusively to other physicians employed by HF Medical Group and/or Health First Physicians, Inc. ("HF Physicians") and facilities owned by Health First. HF Medical Group and HF Physicians are collectively referred to herein as "HF Doctors." In addition, HF Medical Group imposes on its employed physicians non-compete agreements that restrict the physicians from practicing within a certain geographic area after end of the employment relationship.

10. Health First, Inc. through HF Health Plans and HF Insurance, uses its dominant market share in the private health insurance market to refuse to contract as participating providers with physicians practicing in Brevard County, including North Brevard County, unless they agree to admit exclusively or almost exclusively to Health First Hospitals, and refer exclusively or almost exclusively to the physicians that comprise HF Doctors, physicians contracted with HF Health Plans and HF Insurance, and facilities owned by Health First.

11. Also, the physicians which comprise HF Doctors and other participating providers in HF Insurance and HF Health Plans, including those physicians that practice in North Brevard County, are required to refuse to refer to physicians that do not refer all or nearly all of their patients to: (a) Health First Hospitals or other facilities owned by Health First; and (b) the

physicians which comprise HF Doctors and/or physicians that are contracted with HF Health Plans and HF Insurance.

12. Parrish Medical Center has determined that patients exercise the most autonomy in terms of choosing health care providers in their selection of their initial physician to see. Once that initial physician refers a patient to another facility or physician, the patient usually obliges and goes with the physician's recommendation given the physicians increased knowledge of the industry compared to their own.

13. Put another way, a patient's utilization of healthcare is generally determined by a single purchase decision, the decision with whom to seek care from initially. A patient's utilization of a particular physician's or facilities' services is generally guided by a single purchase decision. This single purchase decision is typically seeking treatment at a hospital's emergency department or with a primary care physician. Most of a patient's subsequent healthcare-related choices will be dictated from that original decision by physician referrals. As such, physician referrals generally control the course and scope of services rendered to patients. Due to the passive nature of healthcare consumers, an entity that is able to influence physicians, will, to a substantial degree, control the patients' treatment options.

14. Further, when independent physicians acquiesce to Health First's coercion, Health First expands its control over all the markets in which it participates. For instance, when independent physicians join HF Doctors, which competes with independent physicians in the physician services and ancillary services markets, HF Doctors increases its market share and loses competitors.

15. Health First, Inc. also ensures that Health First Hospitals, HF Medical Group, and HF Physicians render services to members of competitor health insurers' plans as much as possible

through the restrictions related to referrals. Therefore, these referrals increase HF Health Plans' and HF Insurance's competitive advantage in the private health insurance market by maximizing competitor health insurers' reimbursement expenses. Further, the higher revenue generated by Health First Hospitals from Health First's competitor health insurers allows Health First to shift those profits to its affiliated health plans.

16. As a result and by Health First's design, it has become apparent to physicians practicing in Brevard County that, in order to provide services at Health First, Inc.'s affiliated facilities, gain access to patients enrolled in HF Health Plans' and HF Insurance's health plans, or obtain referrals from HF Doctors, Health First's affiliated entities, and/or participating providers in HF Health Plans' and HF Insurance's networks, they are forced into Health First's restrictive arrangements.

17. PMC designates the physicians that have privileges at PMC, as active staff or associate staff, according to PMC's bylaws. Active staff members are required to have their principal place of residence and their principal office location within North Brevard County. Active staff members are the face of the department to the community. Associate staff members are required to have an association with the practice of an active staff member at PMC in the same specialty. Associate staff members perform the same duties as active staff, but in a reduced capacity. Associate staff members often serve as coverage physicians when active staff members are not available.

18. Upon the closing of HF Medical Group's acquisition of Space Coast Cancer Center ("SCCC"), the physicians that comprise SCCC will become employees of HF Medical Group and/or HF Physicians. Also, upon the closing of the acquisition of SCCC, one (1) of the seven (7) medical oncologists, Dr. Richard Levine, is potentially retiring. As such, Dr. Levine is not

included in the calculation set forth below. After the acquisition closes there will be six (6) medical oncologists considered as employed by HF Medical Group practicing in North Brevard County. PMC anticipates that all such six (6) medical oncologists will also be in-network providers for HF Health Plans and HF Insurance. Further, all such six (6) of the medical oncologists that will be employed by HF Medical Group after the acquisition of SCCC and that are currently employed and/or contracted with SCCC currently have privileges at PMC.

19. There are also three (3) medical oncologists practicing in North Brevard County that are independent of SCCC and HF Doctors. There is an additional medical oncologist, Dr. Carl Raisonne Tahn, who has not been included in this calculation. Dr. Tahn is currently on administrative leave and is not expected to return to practice in North Brevard County. All three (3) of the medical oncologists at Cancer Care Centers of Brevard that practice in North Brevard County are participating physicians in HF Health Plans' and HF Insurance's networks. Also, all such three (3) medical oncologists currently have privileges at PMC.

20. Currently, in the market for radiation oncology physician services in North Brevard County there are four (4) radiation oncologists. However, one (1) of the radiation oncologists, Dr. James Giebink, is not included in the calculation set forth below because of his potential retirement. There are three (3) radiation oncologists practicing in North Brevard County. All three (3) radiation oncologists practicing in North Brevard County are currently in-network providers for HF Health Plans and HF Insurance. The two (2) radiation oncologists currently employed by and/or contracted with SCCC currently have privileges at PMC. The one (1) radiation oncologist that is independent of SCCC and HF Doctors consults at PMC.

21. After the acquisition, HF Doctors will employ six (6) of the nine (9) (i.e. 67%) medical oncologists practicing in North Brevard County and two (2) of the three (3) (i.e. 67%) radiation oncologists practicing in North Brevard County.

22. Subsequent to that acquisition, HF Medical Group will almost certainly impose on all or most of those physicians the restrictions regarding referrals that are imposed on other physicians associated with Health First practicing in North Brevard County. Although the medical and radiation oncologists that are currently practicing at SCCC may or may not retain privileges at PMC after the acquisition, such privileges will, in practice, likely only be used for emergency services due to the restrictive referral arrangements that such oncologists will have entered into with HF Medical Group. Further, HF Medical Group will almost certainly impose on all or most of those physicians non-compete agreements that will deprive North Brevard County of the continued service of such physicians after their employment relationship with HF Medical Group ends. The contractual inability for such physicians to provide continued service exacerbates difficulties in access to care in North Brevard County.

23. After the closing of the acquisition, there will only be three (3) medical oncologists in North Brevard County that are outside of HF Doctors' employment and there will only be one (1) radiation oncologist in North Brevard County outside of HF Doctors' employment. Since all of the medical oncologists and radiation oncologists practicing in North Brevard County are in-network providers of HF Health Plans and HF Insurance, they will be subject to the restrictions regarding referrals detailed above.

24. Parrish Medical Center anticipates these referral restrictions will cause Parrish Medical Center to experience a reduction or cessation of referrals from HF Medical Group's newly acquired medical oncologists and radiation oncologists and/or a reduction or cessation of acute

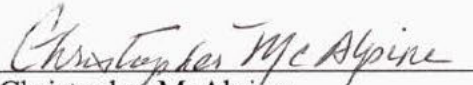

care inpatient hospital services and outpatient services for medical and radiation oncology. Patients residing in North Brevard County, including members enrolled in health plans other than those plans affiliated with Health First, who would otherwise have received inpatient and/or outpatient oncology services at Parrish Medical Center through the medical and/or radiation oncologists acquired by HF Medical Group, will instead receive such services at a hospital owned by Health First, Inc. significantly further south in Brevard County.

25. Parrish Medical Center anticipates that the acquisition of SCCC by HF Medical Group and imposed restrictions regarding referrals may cause a decrease in oncology patients seen at Parrish Medical Center that Parrish Medical Center. Medical and radiation oncologists practicing in North Brevard County will be deprived of referral choice as to where their patients receive oncology services and the hospitals they are admitted to, to their patient's detriment including quality of care. Moreover, patients will be subject to punishing travel times, while coping with cancer, potential displacement from work, and burdens upon their family or caregivers for the extended transport.

26. Beyond losing patients for medical and radiation oncology physician services, other independent service lines offered by PMC could also be negatively affected.

27. Parrish Medical Center knows of no other private entities that have indicated an intent to take legal action to prevent the acquisition of SCCC.

FURTHER SAYETH AFFIANT NOT.

Christopher McAlpine

STATE OF FLORIDA)

Report of Independent Certified Public Accountants

The Board of Trustees
Health First, Inc.

We have audited the accompanying consolidated financial statements of Health First, Inc. and Subsidiaries, which comprise the consolidated balance sheets as of September 30, 2013 and 2012, and the related consolidated statements of operations, changes in net assets, and cash flows for the years then ended, and the related notes to the consolidated financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in conformity with U.S. generally accepted accounting principles; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free of material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Health First, Inc. and Subsidiaries at September 30, 2013 and 2012, and the consolidated results of its operations and its cash flows for the years then ended in conformity with U.S. generally accepted accounting principles.

Supplementary Information

Our audits were conducted for the purpose of forming an opinion on the financial statements as a whole. The consolidating details on pages 39 through 42 are presented for purposes of additional analysis and are not a required part of the financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. The information has been subjected to the auditing procedures applied in the audits of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States. In our opinion, the information is fairly stated in all material respects in relation to the financial statements as a whole.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements

September 30, 2013
(Dollars in Thousands)

1. Reporting Entity

Health First, Inc. (the Parent) is a not-for-profit parent holding company located in Brevard County, Florida, whose primary purpose is to direct the affairs of a multi-entity health care system, which includes the following affiliates:

- Holmes Regional Medical Center, Inc. (HRMC) – a tax-exempt, 514-bed acute care hospital.
- Palm Bay Hospital (PBH) – a tax-exempt, 152-bed acute care hospital that is a division of HRMC.
- Pro Health Fitness Center (PH) – a tax-exempt division of HRMC with four state-of-the-art health and fitness centers.
- Cape Canaveral Hospital, Inc. (CCH) – a tax-exempt, 150-bed acute care hospital and home health agency.
- Viera Hospital (VH) – a tax-exempt, 84-bed acute care hospital.
- Health First Health Plans, Inc. (HFHP) – a taxable entity providing various health care insurance services to employees of the Parent, other employers, and Medicare Advantage Plans.
- Health First Medical Group, LLC (HFMG), Health First Physicians, Inc. (HFPI), and Health First Medical Management, Inc. (HFMM) – taxable entities providing a system of primary care centers, specialty and ancillary services, as well as physician practice management services.
- Hospice of Health First, Inc. (HHF) – a tax-exempt entity that provides care for terminally ill individuals.
- Health First Foundation, Inc. (HFF) – a tax-exempt entity that performs philanthropic activities.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

1. Reporting Entity (continued)

- Other affiliated organizations include Cape Health Properties, Inc. (CHP), a subsidiary of CCH; Health First Holding Corp. (HFHC); Holmes Regional Enterprises, Inc. (HRE); Viera Medical Plaza at Viera Health Park (VMOB); Health First Insurance, Inc. (HFII); Health First Family Pharmacy (HFFP), a division of HRMC; Doctor's GI Partnership, LTD. (DGP), a majority-owned partnership of HRMC; and taxable entities that manage health care-related and/or other businesses and professional services.

The Parent is the sole member or owner of each of the above entities except CHP and DGP, and controls the multi-entity structure through appointment by the Board of Trustees (Board) and approval of all major transactions.

2. Significant Accounting Policies

The accompanying consolidated financial statements include the accounts of the Parent and its controlled affiliates (referred to herein collectively as the Corporation). All significant intercompany accounts and transactions have been eliminated in consolidation.

Use of Estimates

The preparation of these consolidated financial statements in conformity with generally accepted accounting principles (GAAP) in the United States requires management to make estimates and assumptions that affect the amounts reported in the consolidated financial statements and accompanying notes. Actual results could differ from those estimates.

Financial Statement Presentation

The Corporation conforms to the requirements of the *Presentation of the Financial Statements – Not-for-Profit Entities* Topic of the Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC), which establishes standards for external financial reporting by not-for-profit organizations and requires that resources be classified for accounting and reporting purposes into three net asset categories (unrestricted, temporarily restricted, and permanently restricted) according to externally (donor) imposed restrictions.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

Cash and Cash Equivalents

The Corporation classifies all highly liquid investments with an original maturity of 90 days or less when purchased as cash and cash equivalents, excluding amounts limited as to use by Board designation or other arrangements under trust agreements. Cash deposits are federally insured in limited amounts.

Investments and Investment Income

The Corporation conforms to the requirements of the *Investments – Not-for-Profit Entities* Topic of the FASB ASC. In accordance with those requirements, investments in equity securities with readily determinable fair values and all investments in debt securities are stated at fair value in the consolidated balance sheets. Investment income or loss, including realized gains and losses on investments and interest and dividends, is included in the excess of revenues, other support, and gains over expenses and losses unless the income or loss is restricted by donor or law.

Unrealized gains and losses on investments are excluded from the excess of revenues, other support, and gains over expenses and losses unless the investments are trading securities. Other-than-temporary impairment of investments represents losses on debt and equity securities for which the decline in the fair value below the cost basis was determined to be other than temporary.

Assets Limited as to Use

Assets limited as to use primarily include assets held by trustees under bond indenture agreements and designated assets set aside by the Board for malpractice and other obligations, over which the Board retains control and may, at its discretion, subsequently use for other purposes. Amounts required to meet current liabilities of the Corporation are reported as current assets (see Note 4).

Inventories

Inventories, consisting primarily of medical supplies and pharmaceuticals, are stated at the lower of cost (first-in, first-out) or market value.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

Property and Equipment

Property and equipment are stated at cost or, if donated, at fair value at the date of the gift. Expenditures that materially increase values, change capacities, or extend useful lives are capitalized, as are interest costs during the period of construction for such expenditures. Depreciation is computed utilizing the straight-line method at rates estimated by management to amortize the cost of the various assets within the periods of expected use. Amortization of assets recorded under capital leases is included in depreciation and amortization expense and accumulated depreciation and amortization.

Impairment of Long-Lived Assets

The Corporation reviews long-lived assets to be held and used, including intangible assets, for impairment annually or whenever events or changes in circumstances indicate that the carrying amount of the asset may not be recoverable. Such evaluation relies on a number of factors, including operating results, future anticipated cash flows, business plans, and certain economic projections. In addition, the Corporation's evaluation considers nonfinancial data, such as changes in operating environment and business relationships. If the sum of the undiscounted expected future cash flows is less than the carrying amount of the asset, the Corporation recognizes an impairment loss. Impairment losses are measured as the amount by which the carrying amount of the asset exceeds the fair value of the asset. When fair values are not available, the Corporation estimates fair value using the expected future cash flows discounted at a rate commensurate with the risks associated with the recovery of the asset.

Goodwill

Goodwill represents the excess of the purchase price and related costs over the value assigned to the net tangible and identifiable intangible assets of the businesses acquired. These amounts are evaluated annually for impairment or when there is an indicator of impairment. In accordance with ASC Topic 350, in performing the annual assessment, the Corporation chose to complete a qualitative assessment to determine whether it is more likely than not that the fair value of its reporting unit is less than the carrying amount. Management has determined that it is not more likely than not that the fair value of the Corporation's reporting unit is less than the carrying amount. Therefore, the two-step impairment test under ASC Topic 350 was not required.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

Contributions

The Corporation records contributions in accordance with the *Revenue Recognition – Not-for-Profit Entities* Topic of the FASB ASC, which establishes accounting standards for contributions for donees (and donors) and generally requires unconditional promises to give cash and other assets (including multiyear promises) to be recognized at fair value as revenue and expenses in the period made.

Noncash contributions are valued at fair value on the date of the gift. Contributions are reported as either temporarily or permanently restricted support if they are received with donor stipulations that limit the use of the donated assets. When a donor restriction expires, that is, when a stipulated time restriction ends or purpose restriction is accomplished, temporarily restricted net assets are reclassified as unrestricted net assets and reported in the consolidated statements of operations and changes in net assets as net assets are released from restrictions.

Donor-restricted contributions whose restrictions are met within the same year as the contributions received are reflected as unrestricted contributions in the accompanying consolidated financial statements. Temporarily restricted net assets are primarily available for property and equipment purchases and support of specific programs administered by HRMC, CCH, PBH, VH, and HHF.

Excess of Revenues, Other Support, and Gains Over Expenses and Losses

The consolidated statements of operations and changes in net assets include excess of revenues, other support, and gains over expenses and losses. Changes in unrestricted net assets that are excluded from excess of revenues, other support, and gains over expenses and losses include changes in unrealized gains and losses on other-than-trading investments, distributions to noncontrolling interests, and contributions of long-lived assets, including assets acquired using contributions that, by donor restriction, were to be used for the purpose of acquiring such assets.

Net Patient Service Revenue, Accounts Receivable, and Allowance for Uncollectible Accounts

Patient service revenue and accounts receivable are reported at the estimated net realizable amounts from patients, third-party payors, and others for services rendered. The Corporation recognizes patient service revenue associated with patients who have third-party payor coverage

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

on the basis of contractual rates for the services rendered. For uninsured patients who do not qualify for charity care, revenue is recognized on the basis of discounted rates in accordance with the Corporation's policy.

Patient service revenue is reduced by the provision for bad debts, and accounts receivable are reduced by an allowance for uncollectible accounts. The provision for bad debts and allowance for uncollectible accounts are based upon management's assessment of historical and expected net collections and historical write-off experience by payor and aging category, trends in health care coverage, and other collection indicators. Management regularly reviews collections data by major payor sources in evaluating the sufficiency of the allowance for uncollectible accounts. On the basis of historical experience, a significant portion of the amounts owed by the Corporation's self-pay patients for services rendered will not be paid. As such, the Corporation records a significant provision for bad debts in the period services are rendered related to self-pay patients. The Corporation's allowance for uncollectible accounts for self-pay patients was 91% and 89% of self-pay accounts receivable as of September 30, 2013 and 2012, respectively. For receivables associated with patients who have third-party coverage, the Corporation analyzes contractually due amounts and provides an allowance for uncollectible accounts and a provision for bad debts, if deemed necessary. Accounts receivable are written off after collection efforts have been followed in accordance with the Corporation's policies. Accounts written off as uncollectible are deducted from the allowance, and subsequent recoveries are added.

The Corporation has determined, based on an assessment at the reporting entity level, that patient service revenue is primarily recorded prior to assessing the patient's ability to pay and as such, the entire provision for bad debts is recorded as a deduction from patient service revenue in the accompanying consolidated statements of operations and changes in net assets. The Corporation has not experienced significant changes in write-off trends and has not materially changed its charity care policy for the fiscal year ended September 30, 2013.

Patient service revenue is not recognized for those patients who qualify for charity under the Corporation's policies. For all other patients, patient service revenue, net of contractual allowances and self-pay discounts and before the provision for bad debts, recognized from major payor sources is as follows:

	Year Ended September 30	
	2013	2012
Third-party payors, net of contractual allowances	\$ 620,934	\$ 514,879
Self-pay patients, net of discounts	73,643	93,702
	<u>\$ 694,577</u>	<u>\$ 608,581</u>

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

The Corporation grants credit without collateral to its patients, most of whom are local residents and are insured under third-party payor arrangements. Significant concentrations of patient accounts receivable due from third-party payors at September 30, 2013 and 2012, include 15% and 17% from the Medicare program and 59% and 55% from contracts with other third parties, respectively.

Revenue from the Medicare program represented approximately 32% and 39% of net patient service revenue for the years ended September 30, 2013 and 2012, respectively. The Corporation is subject to retroactive revenue adjustments due to audits, reviews, and investigations. Included in prepaid expenses and other current assets is \$15,354 and \$11,808, in estimated third-party settlements at September 30, 2013 and 2012, respectively. Included in other assets is \$996 and \$0 in estimated third-party settlements at September 30, 2013 and 2012, respectively. Included in accounts payable and accrued liabilities is \$15,926 and \$10,318 in estimated third-party settlements as of September 30, 2013 and 2012, respectively. Retroactive adjustments are considered in the recognition of revenue on an estimated basis in the period the related services are rendered, and such amounts are adjusted in future periods as adjustments become known or as years are no longer subject to such audits, reviews, and investigations. Adjustments to revenue related to prior periods as a result of settled cost reports and changes in estimates increased patient service revenue by \$3,570 and \$37,223, for the years ended September 30, 2013 and 2012, respectively.

Included in the adjustments to revenue related to prior periods that increased patient service revenue for the year ended September 30, 2012, is \$23,600 relating to the impact of the federal government's finalization of a key input to the calculation of disproportionate share payments to the Corporation for several prior years, \$6,216 relating to the settlement by the Corporation, along with other providers, with the federal government of a challenge to the implementation of the rural floor budget neutrality provision of the Balance Budget Act of 1997, and \$8,575 in settlements relating to reimbursement issues with certain third-party payors.

Laws and regulations governing the Medicare and Medicaid programs are extremely complex and subject to interpretation. As a result, there is at least a reasonable possibility that recorded estimates will change by a material amount in the near term. However, management is not aware of any matters that could have a material effect on recorded estimates.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

Charity Care

The Corporation provides care without charge or at amounts less than its established rates to patients who meet certain criteria under its charity care policy. Because the Corporation does not pursue collection of amounts determined to qualify as charity care, these amounts are not included in patient service revenue. The Corporation estimates the direct and indirect costs of providing charity care by applying a cost to gross charges ratio to the gross uncompensated charges associated with providing charity care to patients. Funding received to offset or subsidize charity services provided was de minimis for the years ending September 30, 2013 and 2012. The cost of providing charity care was \$40,423 and \$36,623 for the years ended September 30, 2013 and 2012, respectively.

EHR Incentive Payments

The American Recovery and Reinvestment Act of 2009 included provisions for implementing health information technology under the Health Information Technology for Economic and Clinical Health Act (HITECH). The provisions were designed to increase the use of electronic health record (EHR) technology and establish the requirements for a Medicare and Medicaid incentive payment program beginning in 2011 for eligible providers that adopt and meaningfully use certified EHR technology. Eligibility for annual Medicare incentive payments is dependent on providers demonstrating meaningful use of EHR technology in each period over a four-year period. Initial Medicaid incentive payments are available to providers that adopt, implement, or upgrade certified EHR technology. Providers must demonstrate meaningful use of such technology in subsequent years to qualify for additional Medicaid incentive payments.

The Corporation accounts for HITECH incentive payments as a gain contingency. Income from Medicare incentive payments is recognized as revenue after the Corporation has demonstrated that it complied with the meaningful use criteria over the entire applicable compliance period, and the cost report period beginning during the payment year has been completed. The Corporation recognized revenue from Medicaid incentive payments after it adopted certified EHR technology. Incentive payments in the amount of \$8,506 and \$9,750 for the years ended September 30, 2013 and 2012, respectively, are included in other revenue in the accompanying consolidated statements of operations and changes in net assets. Included in prepaid expenses and other current assets in the accompanying consolidated balance sheets is \$7,190 and \$3,295 in incentive payments earned but not received at September 30, 2013 and 2012, respectively.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

Income from incentive payments is subject to retrospective adjustments as the incentive payments are calculated using Medicare's cost report that is subject to audit. Additionally, the Corporation's compliance with the meaningful use criteria is subject to audit by the federal government.

Premium Revenue

Commercial membership contracts are written to groups on a yearly basis subject to cancellation by the employer group or HFHP according to the termination provision of the contract. Medicare membership contracts are written to individuals and may be terminated by the member at any time. Premiums are due monthly and are recognized as revenue during the period in which the Corporation is obligated to provide services to members. Approximately 73% and 72% of total premium revenue was received under the Medicare program for the years ended September 30, 2013 and 2012, respectively, and 27% and 28% was received from contracts with other employer groups during the years ended September 30, 2013 and 2012, respectively.

Functional Expenses

The Corporation does not present expense information by functional classification because its resources and activities are primarily related to providing health care services. Further, since the Corporation receives substantially all of its resources from providing health care services in a manner similar to a business enterprise, other indicators contained in the consolidated financial statements are considered important in evaluating how well management has discharged its stewardship responsibilities.

Claims Payable

Claims payable are recorded in accounts payable and accrued liabilities in the consolidated balance sheets and represent the amount of payments to be made on individual claims that have been reported to HFHP, as well as estimates of claims incurred that have not yet been reported as of the consolidated balance sheet date. Claims payable are estimated using various statistical methods that use both historical financial and operating data. Although considerable variability is inherent in such estimates, management believes that the reserves for unpaid claims are reasonable. Adjustments to claims payable to reflect actual experience, if any, are reflected in the consolidated statements of operations and changes in net assets in the period in which such

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

adjustments become known to management. Due to uncertainties inherent in the claims estimation process, it is at least reasonably possible that the claims paid in the near term could differ materially from the accrued amounts. Management believes that the recorded reserves are adequate

The following table provides a reconciliation of the beginning and ending balances of unpaid claims liabilities included in accounts payable and accrued liabilities, net of reinsurance recoverables:

	Year Ended September 30	
	2013	2012
Unpaid claim liabilities, at beginning of year	\$ 20,418	\$ 17,576
Incurred losses:		
Current period	142,267	160,646
Prior periods	(3,000)	(1,724)
Payments for claims, net of reinsurance:		
Current period	(121,511)	(140,346)
Prior periods	(15,112)	(15,734)
Unpaid claim liabilities, at end of year	<u>\$ 23,062</u>	<u>\$ 20,418</u>

Medical Services Expense

HFHP contracts with various health care providers for the provision of certain medical care services to its members. Medical services consist partially of inpatient and outpatient hospital services and pharmacy. Hospital services are paid on a fee-for-service, capitation, and fixed-rate basis. The provision for medical services includes estimates of payments to be made on health care services reported as of the consolidated balance sheet dates and estimates of health care services rendered but not reported to HFHP as of the consolidated balance sheet dates. Medical services reserves are reviewed and adjusted periodically. As adjustments are made, differences are included in current operations.

Estimated Malpractice Costs

The provision for estimated medical malpractice claims includes estimates of the ultimate costs for both reported claims and claims incurred but not reported.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

Income Taxes

The Parent and its tax-exempt affiliates are generally exempt from federal and state income taxes applicable under Section 501(a), as organizations described in Section 501(c)(3), of the Internal Revenue Code and Section 220.13 of the Florida Statutes, respectively. The taxable affiliates, except CHP, file a consolidated income tax return for both federal and state income tax purposes. The provision for income taxes and income taxes paid included in these consolidated financial statements is not significant. The consolidated income tax returns for the tax years ended September 30, 2010 through 2012, are still subject to federal and state income tax examination.

ASC Topic 740, *Income Taxes*, prescribes the accounting for uncertainty in income tax positions recognized in financial statements. ASC Topic 740 provides guidance for recognition threshold and measurement attributes for the financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return.

Reclassifications

Certain reclassifications were made to the 2012 consolidated financial statements to conform to the 2013 presentation. These reclassifications had no effect on the consolidated change in net assets previously reported.

Recent Accounting Pronouncements

In July 2011, the FASB issued Accounting Standards Update (ASU) 2011-06, *Fees Paid to the Federal Government by Health Insurers*. ASU 2011-06 requires health insurers to estimate the liability for the annual fee mandated by the Patient Protection and Affordable Care Act and record in full once the entity provides qualifying health insurance in the applicable calendar year in which the fee is payable with a corresponding deferred cost that is amortized to expense using a straight-line method of allocation unless another method better allocates the fee over the calendar year that is payable. ASU 2011-06 is effective for calendar years beginning after December 31, 2013. Management is currently evaluating the effects of ASU 2011-06 on the Corporation's consolidated financial statements.

In July 2012, the FASB issued ASU 2012-02, *Testing Indefinite-Lived Intangible Assets for Impairment*. The objective of ASU 2012-02 is to reduce the cost and complexity of performing an impairment test for indefinite-lived intangible assets by simplifying how an entity tests those

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

assets for impairment and to improve consistency in impairment testing guidance among long-lived asset categories. ASU 2012-02 permits an entity to first assess qualitative factors to determine whether the existence of events and circumstances indicates that it is more likely than not that the indefinite-lived intangible asset is impaired. If, after assessing the totality of events and circumstances, an entity concludes that it is not more likely than not that the indefinite-lived intangible asset is impaired, then the entity is not required to take further action. However, if an entity concludes otherwise, then it is required to determine the fair value of the indefinite-lived intangible asset and perform the quantitative impairment test by comparing the fair value with the carrying amount. ASU 2012-02 was effective for fiscal years beginning after September 15, 2012, with early adoption permitted. The Corporation adopted the provisions of ASU 2012-02 effective October 1, 2012. The adoption of this guidance did not have an impact on the Corporation's consolidated financial statements.

In October 2012, the FASB issued ASU 2012-05, *Not-for-Profit Entities: Classification of the Sale Proceeds of Donated Financial Assets in the Statement of Cash Flows*. ASU 2012-05 requires not-for-profit entities to classify cash receipts from the sale of donated financial assets consistently with cash donations received in the statement of cash flows if those cash receipts were from the sale of donated financial assets that upon receipt were directed without any imposed limitations for sale and were converted nearly immediately into cash. Accordingly, the cash receipts from the sale of those financial assets should be classified as cash inflows from operating activities, unless the donor restricted use of the contributed resources to long-term purposes, in which case those cash receipts should be classified as cash flows from financing activities. ASU 2012-05 is effective for fiscal years beginning after June 15, 2013. Management is currently evaluating the effects of ASU 2012-05 on the Corporation's consolidated financial statements.

In December 2011, the FASB issued ASU 2011-11, *Disclosures about Offsetting Assets and Liabilities*. Offsetting (netting) assets and liabilities is an important aspect of presentation in financial statements. The differences in offsetting requirements of GAAP compared to International Financial Reporting Standards (IFRS) account for significant differences in the amounts presented in statements of financial position as reported under each set of accounting requirements. These differences reduce the comparability of statements of financial position. ASU 2011-11 requires disclosure about offsetting and related arrangements to enable financial statement users to understand the effect of those arrangements on financial position. In January 2013, the FASB issued ASU 2013-01, *Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities*. The amendments in ASU 2013-01 and 2011-11 are effective for

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

2. Significant Accounting Policies (continued)

fiscal years beginning on or after January 1, 2013, and interim periods within those annual periods. The Corporation will adopt ASU 2013-01 and 2011-11 effective October 1, 2013. Management is currently evaluating the effects of the new guidance on the Corporation's consolidated financial statements.

3. Investments

The Corporation used medium-term, equity-linked notes with embedded derivatives as a protection against the risk of adverse movements in the equity indices. The equity-linked notes did not pay interest or dividends and did not guarantee a full return of principal at maturity. The Corporation had a protection clause against the first 15% decline in the S&P 500 Index. The notes paid an amount based on the closing value of the S&P 500 Index at maturity. The Corporation's participation rate in any appreciation of the S&P 500 Index was 132.10% at maturity, which occurred during April 2013. The notes had a maturity date of six years from the issue date and were considered senior notes. The notes were classified as trading securities and were recorded at fair value. All changes in fair value (both realized and unrealized gains and losses) were reflected within excess of revenue, other support, and gains over expenses and losses in the accompanying consolidated statements of operations and changes in net assets.

The Corporation follows the provisions of the *Derivatives and Hedging* Topic of the FASB ASC, which requires not-for-profit health care entities to apply those provisions in the same manner as for-profit entities. Since the entire hybrid instrument was carried at fair value with changes in value included in earnings, the standards do not require separate accounting for any embedded derivatives. During the year ended September 30, 2013 and 2012, unrealized (losses) gains of (\$562) and \$7,290, respectively, are included in change in value of equity-linked notes in the accompanying consolidated statements of operations and changes in net assets. Upon maturity of the equity-linked notes, the Corporation realized a gain of \$3,306, which is included in investment income in the accompanying consolidated statements of operations and changes in net assets.

The investment in equity-linked notes represented a significant concentration of market risk within the Corporation's investment portfolio. At September 30, 2012, equity-linked notes represented approximately 12% of total investments and assets limited as to use.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

3. Investments (continued)

The composition of investments and assets limited as to use is presented below:

	September 30	
	2013	2012
Cash and cash equivalents	\$ 17,197	\$ 15,216
Equity-linked notes	—	25,563
Equity securities	241,358	83,892
U.S. Treasury and agency obligations	59,703	48,355
U.S. corporate bonds	49,164	36,472
Municipal bonds	491	752
Certificate of deposit	—	403
	<u>\$ 367,913</u>	<u>\$ 210,653</u>

Unrestricted investment income comprises the following:

	Year Ended September 30	
	2013	2012
Interest income	\$ 6,130	\$ 2,903
Realized gain (loss) on sales of securities	1,178	(2,953)
Unrealized (loss) gain on trading securities	(1,502)	313
	<u>\$ 5,806</u>	<u>\$ 263</u>

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

4. Assets Limited as to Use

Assets limited as to use are composed of the following:

	September 30	
	2013	2012
Board designated for malpractice and other obligations	\$ 26,923	\$ 26,973
Cash and investments held by trustee under bond indenture agreements – debt service and project funds	17,488	17,240
Board designated for the Foundation	7,179	6,755
Other	1,000	–
	52,590	50,968
Less amounts required to meet current obligations	13,993	13,819
	\$ 38,597	\$ 37,149

5. Other Assets

The composition of other assets is as follows:

	September 30	
	2013	2012
Investment in joint ventures	\$ 15,700	\$ 11,996
Deferred financing cost	4,654	3,261
Other	7,451	6,271
	\$ 27,805	\$ 21,528

The Corporation accounts for its investments in joint ventures in accordance with the *Investments – Equity Method and Joint Ventures* Topic of the FASB ASC. Accordingly, the Corporation records an investment in the net assets of the joint venture at cost and adjusts the carrying amount of the investment to recognize the Corporation's share of the income or losses of the joint venture after the date of acquisition. The Corporation's share of income from joint ventures for the years ended September 30, 2013 and 2012, was \$2,029 and \$847, respectively.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

5. Other Assets (continued)

HealthSouth of Sea Pines Limited Partnership (HSSP), in which the Corporation has a 25% interest, is the Corporation's significant unconsolidated subsidiary that is accounted for using the equity method of accounting. Summarized financial information for the Corporation's investment in HSSP as of and for the years ended September 30, 2013 and 2012, assuming 100% ownership interest, is as follows:

	September 30	
	2013	2012
Balance sheets		
Current assets	\$ 6,390	\$ 6,019
Noncurrent assets	10,591	10,272
Total assets	<u>\$ 16,981</u>	<u>\$ 16,291</u>
Current liabilities	\$ 3,239	\$ 3,088
Partners' capital	13,742	13,203
Total liabilities and partners' capital	<u>\$ 16,981</u>	<u>\$ 16,291</u>
Statements of operations		
Net operating revenues	\$ 18,775	\$ 18,874
Operating expenses	16,518	15,597
Income from continuing operations	2,257	3,277
Other	3	(2)
Net income	<u>\$ 2,260</u>	<u>\$ 3,275</u>

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

6. Property and Equipment

A summary of property and equipment is as follows:

	September 30	
	2013	2012
Land and improvements	\$ 87,138	\$ 70,074
Buildings and improvements	778,760	648,142
Fixed equipment and major movable equipment	618,627	586,471
	1,484,525	1,304,687
Less allowances for depreciation and amortization	750,812	690,962
	733,713	613,725
Construction-in-progress	1,811	1,527
	\$ 735,524	\$ 615,252

Construction-in-progress at September 30, 2013, represents costs incurred to date related to construction and renovation projects expected to be completed over the next five years. At September 30, 2013, the estimated cost to complete construction and renovation projects in progress is approximately \$10,504, which will be funded principally from operations.

The Cape Canaveral Hospital District (District) was created under the laws of the state of Florida on August 18, 1959, and includes a special tax district in Brevard County, Florida. The District was re-created by Chapter 2003-337, Laws of Florida, which codified all special acts related to the District. The District leases the hospital facility and operating assets to CCH. CCH makes payments to the District sufficient to pay the principal and interest on the District's outstanding obligations. The assets and liabilities of CCH revert to the District upon completion of the lease term in 2039. The District may levy taxes upon all real and personal taxable property in the District, not to exceed 2.25 mills annually. The District did not levy taxes for either of the years ended September 30, 2013 or 2012.

The future minimum lease payments at September 30, 2013, under the capital lease obligation with the District are de minimis.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

6. Property and Equipment (continued)

A summary of assets under the capital lease with the District included in property and equipment is as follows:

	September 30	
	2013	2012
Land and improvements	\$ 2,591	\$ 2,591
Buildings and improvements	91,501	91,103
Fixed equipment and major movable equipment	77,891	76,667
	171,983	170,361
Less allowance for amortization	119,862	113,909
	52,121	56,452
Construction-in-progress	72	132
	\$ 52,193	\$ 56,584

During 2013, the Corporation determined a support services and rental building was in an excessive state of disrepair. The Corporation recognized an impairment charge relating to the vacated building of \$927, which is included in impairment and restructuring charges in the accompanying consolidated statements of operations and changes in net assets.

During 2012, the Corporation vacated a support services building that was in disrepair. The Corporation recognized an impairment charge related to the vacated building of \$2,840, which is included in impairment and restructuring charges in the accompanying consolidated statements of operations and changes in net assets.

7. Goodwill

The changes in the carrying amount of goodwill for the year ended September 30, 2013, were as follows:

Goodwill at September 30, 2012	\$ —
Acquisitions	17,162
Impairments	—
Goodwill at September 30, 2013	\$ 17,162

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

8. Long-Term Debt and Capital Lease Obligation

Long-term debt and capital lease obligation are as follows:

	September 30	
	2013	2012
Term loan with two lenders, secured by certain assets of the Corporation, interest payable monthly at a fixed rate of 4.49%, due March 2038	\$ 143,141	\$ —
Term loan with a financial institution, collateralized by revenues of the borrowers, interest payable monthly at a variable rate (1.43% at September 30, 2013), due February 2023	36,000	—
Term loan with a financial institution, collateralized by revenues of the borrowers, interest payable monthly at a variable rate (1.78% at September 30, 2013), due September 2017	10,880	11,282
Term loan with a financial institution, collateralized by the revenues of the borrowers, interest payable monthly at a variable rate (1.43% at September 30, 2013), due November 2020	9,238	10,525
Term loan with a financial institution, collateralized by revenues of the borrowers, interest payable monthly at a variable rate (1.43% at September 30, 2013), due November 2020	13,116	15,108
Health Facilities Revenue Bonds, Series 2013A, including a premium of \$8,047	72,977	—
Health Facilities Revenue Bonds, Series 2012A	20,131	20,555
Health Facilities Revenue Bonds, Series 2009A	60,375	63,875
Health Facilities Revenue Bonds, Series 2010, extinguished in 2013	—	21,835
Health Facilities Revenue Bonds, Series 2009B, recorded net of a discount of \$875 and \$909, respectively	84,975	84,941
Health Facilities Revenue Bonds, Series 2005, recorded net of a discount of \$1,536 and \$1,606, respectively	173,464	173,394
Health Facilities Revenue Bonds, Series 2001, extinguished in 2013	—	49,290
Other	12,787	12,243
Total long-term debt and capital lease obligation	637,084	463,048
Less current maturities	(14,298)	(9,041)
	<u>\$ 622,786</u>	<u>\$ 454,007</u>

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

8. Long-Term Debt and Capital Lease Obligation (continued)

Maturities of long-term debt, excluding capital leases, consist of the following:

Year ending September 30:	
2014	\$ 13,286
2015	16,749
2016	18,451
2017	28,696
2018	19,739
Thereafter	531,181

Future minimum lease payments under the capital leases, together with the present value of net minimum lease payments, consist of the following:

Year ending September 30:	
2014	\$ 1,130
2015	1,138
2016	964
2017	428
2018	21
	<hr/> 3,681
Less amount representing interest	(335)
Present value of net minimum lease payments	<hr/> 3,346
Current portion	1,012
Long-term capital lease obligation	<hr/> <hr/> \$ 2,334

A Master Trust Indenture, dated May 15, 2001, and modified in February 2013, covers all bonds issued and outstanding by the Parent, HRMC, CCH, and VH (collectively, the Obligated Group) at September 30, 2013 and 2012. Under the Master Trust Indenture, all members of the Obligated Group are jointly and severally liable for the obligation covered by the Master Trust Indenture. HRMC has executed a mortgage on a portion of HRMC's property in favor of the Master Trustee to secure the Obligated Group's repayment obligation under the Master Trust Indenture. The mortgaged property has a carrying value of \$226,339 at September 30, 2013. In addition, all revenues of HRMC, PBH, CCH, and VH are pledged as security for the payment of the obligations outstanding under the Master Trust Indenture. At September 30, 2013, total debt outstanding related to the Master Trust Indenture is approximately \$464,641.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

8. Long-Term Debt and Capital Lease Obligation (continued)

The Master Trust Indenture provides for specific restrictive covenants, including a debt service coverage requirement. The Corporation was in compliance with all such restrictive covenants at September 30, 2013.

In February 2013, the Corporation issued \$65,910 of Health Facilities Revenue Bonds, Series 2013A. The proceeds were used to refinance the Health Facilities Revenue Bonds, Series 2001, and Health Facilities Revenue Bonds, Series 2010. The loss on extinguishment of debt related to the refinancing of \$2,468 is included in nonoperating gains (losses) in the accompanying consolidated statements of operations and changes in net assets.

In February 2013, the Corporation executed a \$36,000 term loan with a bank. The loan proceeds were used by the Corporation to purchase certain assets of Melbourne Internal Medicine Associates, PA (MIMA) (see Note 9).

In February 2013, the Corporation entered into a credit and security agreement with two lenders. The credit and security agreement provided a term loan in the amount of \$145,000. The loan proceeds were used by the Corporation to acquire certain assets of MIMA.

In May 2012, the Corporation issued \$20,550 of Health Facilities Revenue Bonds, Series 2012A, the proceeds of which were used to refinance a portion of the Health Facilities Revenue Bonds, Series 2001. Also in May 2012, the Corporation modified the interest rate on the Health Facilities Revenue Bonds, Series 2009A, and accounted for the modification as an extinguishment. The loss on extinguishment of debt of \$1,124 is included in nonoperating gains (losses) in the accompanying consolidated statements of operations and changes in net assets.

Interest expense approximates interest paid.

9. Business Combinations

On February 15, 2013, HFPI acquired certain assets and assumed certain liabilities of MIMA. The acquisition will enable the Corporation to combine MIMA physicians with its expanding multi-specialty physician group in order to improve the health and well-being in Brevard County. Additionally, the acquisition will allow the Corporation to enhance its Integrated Value Based Delivery Network, reducing costs to those served. MIMA is a multi-specialty physician group

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

9. Business Combinations (continued)

providing services in Brevard County, Florida. The acquisition of MIMA resulted in goodwill of \$12,819, which was derived primarily from intangible assets that do not qualify for separate recognition.

The following summarizes the estimated fair values of the assets acquired and the liabilities assumed at the date of acquisition:

Current assets, net of cash received	\$ 5,715
Property and equipment	16,341
Goodwill	12,819
Other assets	6,227
Total assets acquired, net of acquired cash received	<u>41,102</u>
Current portion of capital lease obligation	1,711
Long-term portion of capital lease obligation, less current portion	<u>1,432</u>
Total liabilities assumed	<u>3,143</u>
Net assets acquired	<u>\$ 37,959</u>

The following pro forma combined results of operations give effect to the acquisition as if it had occurred on October 1, 2011. The pro forma combined results of operations do not necessarily represent the Corporation's consolidated results of operations had the acquisition occurred on the date assumed, nor are these results necessarily indicative of the Corporation's future consolidated results of operations. The Corporation expects to realize certain benefits from integrating MIMA into the Corporation and to incur certain one-time costs. The pro forma combined results of operations do not reflect these benefits or costs. These combined results reflect the impact of amortizing certain acquisition accounting adjustments, such as fair value adjustments to property and equipment as of October 1, 2011.

	Year Ended September 30	
	2013	2012
Pro forma total operating revenue	<u>\$ 1,112,696</u>	<u>\$ 1,145,781</u>
Pro forma excess of revenue, other support, and gains over expenses and losses	<u>\$ 28,989</u>	<u>\$ 29,972</u>

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

9. Business Combinations (continued)

The Corporation has determined that it is impracticable to disclose the amounts of revenues and earnings of MIMA since its acquisition. Upon its acquisition, the operations of MIMA were integrated into HFPI; therefore, separate revenues and earnings amounts for MIMA since its acquisition are not available.

In connection with the acquisition, the Corporation acquired a controlling interest in DGP. Prior to the acquisition date, the Corporation accounted for its 39.67% interest as an equity-method investment. The acquisition-date fair value of the previous equity interest, held by HRMC, was \$2,220. The Corporation recognized a gain of \$1,775 as a result of remeasuring its prior equity interest held before the business combination. The gain is included in other revenue in the accompanying consolidated statements of operations and changes in net assets. This transaction resulted in goodwill in the amount of \$4,343, which was derived primarily from intangible assets that do not qualify for separate recognition.

On February 15, 2013, the fair value of the 20.6% noncontrolling interest was estimated to be \$1,157. The fair value of the noncontrolling interest was estimated using a combination of the income and market approaches. As DGP is a private entity, the fair value measurement is based on significant inputs that are not observable in the market and thus represents a Level 3 measurement as defined in ASC Topic 820 (see Note 13). The fair value estimates are based on (a) a discount rate range of 11% to 15%, (b) a terminal value based on a range of terminal EBITDA multiples between 5 and 7 times, and (c) adjustments because of the lack of control or lack of marketability that market participants would consider when estimating fair value of the noncontrolling interest.

The following summarizes the estimated fair values of the assets and liabilities assumed on February 15, 2013:

Current assets	\$ 1,251
Property and equipment	190
Goodwill	4,343
Total assets	<u>5,784</u>
Current liabilities	187
Noncontrolling interest	1,157
Net assets acquired	<u><u>\$ 4,440</u></u>

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

9. Business Combinations (continued)

Goodwill recognized as part of the transaction described above is expected to be deductible for tax purposes.

10. Employee Benefit Plans

Retirement Plan

The Corporation, excluding HFMG, has a defined contribution plan covering substantially all employees. Under the plan, the Corporation contributes 1% of the eligible employees' gross wages. Eligible employees are allowed to contribute up to 100% of the eligible employees' gross wages not to exceed the maximum permissible standard deferral amount. This is in addition to any catch-up deferral amount for qualifying individuals. In addition to the Corporation's contribution previously noted, the Corporation will match up to 8% of the employees' contribution at a 30% rate. As a result, a maximum 3.4% contribution may be made by the Corporation for the years ended September 30, 2013 and 2012. Retirement plan expense was \$5,383 and \$5,579 for the years ended September 30, 2013 and 2012, respectively.

Employee Health Plan

The Corporation is self-funded for health benefits for substantially all employees. The self-funded benefits are administered by HFHP. Employee health benefits expense was \$15,816 and \$15,815, for the years ended September 30, 2013 and 2012, respectively.

11. Malpractice Insurance Plan

The Corporation maintained insurance for malpractice coverage under claims-made policies at September 30, 2013 and 2012. A claims-made policy covers only malpractice claims reported to the insurance carrier during the policy term. Management has recorded a liability for estimated losses from reported and unreported claims of \$21,242 and \$26,649 at September 30, 2013 and 2012, respectively, of which \$4,047 and \$9,461 and \$17,195 and \$17,188 is included in accounts payable and accrued liabilities and other noncurrent liabilities as of September 30, 2013 and 2012, respectively, in the accompanying consolidated balance sheets. Management, with the assistance of consulting actuaries, estimates claims liabilities at the present value of future claims payments using a discount rate of 3.5% at September 30, 2013 and 2012. Medical malpractice expense of \$6,641 and \$13,585 for the years ended September 30, 2013 and 2012, respectively, is included in supplies and other expenses in the accompanying consolidated statements of operations and changes in net assets.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

12. Commitments and Contingencies

Litigation

The Corporation is involved in litigation arising in the ordinary course of business. After consultation with legal counsel, management believes that these matters will be resolved without material adverse effect on the Corporation's future consolidated financial position or results of operations.

On May 23, 2007, Wuesthoff Health System, Inc. (Wuesthoff) filed a lawsuit (the Wuesthoff Complaint) in the Circuit Court for the Eighteenth Judicial Circuit in and for Brevard County, Florida (the Court), alleging seven counts of various antitrust violations by the Parent, HRMC, CCH, HFPI, and HFHP, hereinafter collectively referred to as the Health First Group. Wuesthoff alleges, among other things, that the Health First Group has "impermissibly obtained market power in the general acute care in-patient hospital market, and managed care markets" in the central and south portion of Brevard County as a result of the merger between HRMC and CCH in 1995 in violation of Section 7 of the Clayton Antitrust Act.

In November 2012, the Wuesthoff Complaint was settled. The settlement had several components, certain of which will be paid in future years. The cost of the settlement, on a discounted basis, is included in supplies and other expenses in the accompanying consolidated statements of operations and changes in net assets for the year ended September 30, 2012. Amounts relating to the settlement to be paid in future years are included in accounts payable and accrued liabilities and other noncurrent liabilities in the accompanying consolidated balance sheets as of September 30, 2013 and 2012. The specific terms of the settlement may not be disclosed due to a confidentiality provision in the settlement agreement.

On May 15, 2007, a local physician and Brevard Orthopaedic, Spine & Pain Clinic, Inc. filed a lawsuit (the Brevard Complaint) in the Court, alleging 12 counts of various antitrust and other violations by Health First Group. The Brevard Complaint alleges almost identical acts as the Wuesthoff Complaint.

On February 21, 2008, the Health First Group filed its Answer and Affirmative Defenses with the Court and will continue to vigorously contest the allegations contained in the Brevard Complaint. While the case has been set for trial twice in the last year, the Court has continued the case on the motion of Plaintiffs and has recently re-opened and expanded the time period for discovery. Although it is premature to assess the likely course or outcome of the Brevard Complaint, if the outcome of the litigation is adverse to the Health First Group, the Health First Group could incur material liabilities for damages or other adverse financial consequences.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

12. Commitments and Contingencies (continued)

On September 27, 2013, a physician group, OMNI Healthcare (OMNI), and ten other physician and physician assistant plaintiffs filed an antitrust lawsuit (the OMNI Complaint) in the United States District Court, Middle District against the Health First Group, alleging certain violations of the federal antitrust laws based primarily upon the merger of HRMC and CCH in 1995 and subsequent alleged exclusionary conduct in the market for inpatient acute care hospital services in South Brevard County and through the 2013 acquisition by HFPI of MIMA. On December 6, 2013, an Amended Complaint was filed in this action adding three additional entity plaintiffs, and making essentially the same allegations as the OMNI Complaint. As of the date of this disclosure, the Health First Group has not been served with either the OMNI Complaint or the Amended Complaint, so no action has been taken. Should the Health First Group be served, the Health First Group intends to vigorously defend against the allegations. Although it is premature to assess the likely course or outcome of the OMNI Complaint, assuming the OMNI or Amended Complaint is served and litigation ensues, if the outcome of the litigation is adverse to the Health First Group, then the Health First Group could incur material liabilities for damages or other adverse financial consequences.

Guarantees

The Corporation has guaranteed the promissory note payments of a certain limited partnership in which the Corporation is a partner. The guaranteed promissory note had a balance as of September 30, 2013 and 2012, of \$2,403 and \$2,537, respectively.

Operating Leases

The Corporation leases certain property and equipment under operating leases. Lease and rental expense was approximately \$10,215 and \$7,147 for the years ended September 30, 2013 and 2012, respectively.

Net future minimum lease payments under non-cancelable operating leases as of September 30, 2013, are as follows:

2014	\$	7,103
2015		4,298
2016		2,188
2017		1,745
2018		1,411

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

13. Fair Value of Financial Instruments

As defined in ASC Topic 820, fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. ASC Topic 820 establishes a fair value hierarchy that prioritizes the inputs used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurement) and the lowest priority to unobservable inputs (Level 3 measurement).

The three levels of the fair value hierarchy defined by ASC Topic 820 and a description of the valuation methodologies used for instruments measured at fair value are as follows:

Level 1 – Quoted prices (unadjusted) in active markets for identical assets or liabilities as of the reporting date.

Level 2 – Pricing inputs other than quoted prices included in Level 1 that are either directly observable or that can be derived or supported from observable data as of the reporting date.

Level 3 – Pricing inputs include those that are significant to the fair value of the financial asset or financial liability and are generally less observable from objective sources. These inputs may be used with internally developed methodologies that result in management's best estimate of fair value. The Corporation has no financial assets or financial liabilities with significant Level 3 inputs.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

13. Fair Value of Financial Instruments (continued)

The following tables present the fair value of financial assets and financial liabilities that are measured at fair value on a recurring basis at September 30, 2013 and 2012:

	September 30, 2013			
	Total	Level 1	Level 2	Level 3

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

13. Fair Value of Financial Instruments (continued)

The fair values of the securities included in Level 1 were determined through quoted market prices. The fair values of Level 2 financial assets and financial liabilities were determined as follows:

Equity-linked notes – These securities were valued by discounting the estimated cash flows from each note using a discount rate that reflects the credit quality of the issuer. The discount rate is determined based on mid-market inputs obtained from third-party sources.

Interest rate swaps – The fair value of the interest rate swap agreements was determined through the use of widely accepted valuation techniques, including discounted cash flow analysis on the expected cash flows of each derivative. The analysis reflects the contractual terms of the interest rate swaps, including the period to maturity, and uses observable market-based inputs, such as interest rate curves. In addition, credit valuation adjustments are included to reflect both the Corporation's nonperformance risk and the respective counterparty's nonperformance risk. The Corporation pays a fixed rate ranging from 2.29% to 4.89% and receives cash flows based on 65% to 100% of one-month LIBOR, plus a fixed spread.

U.S. corporate bonds – These securities were valued through the use of third-party pricing services and use evaluated bid prices adjusted for specific bond characteristics and market sentiment.

The carrying values of accounts receivable and accounts payable and accrued liabilities are reasonable estimates of their fair value due to the short-term nature of these financial instruments. The carrying value of the Corporation's variable rate obligations, consisting of term loans and certain other long-term debt, approximates fair value. The fair value of the Corporation's fixed-rate obligations is estimated using Level 2 inputs based on quoted market prices for the same or similar issues. The carrying value and fair value of long-term debt at September 30, 2013, are \$637,084 and \$658,466, respectively. The carrying value and fair value of long-term debt at September 30, 2012, are \$463,048 and \$491,624, respectively.

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

14. Restructuring Charges

During 2012, the Corporation implemented a significant organizational restructuring. The restructuring was designed to:

- Improve the value created and delivered to patients, members, and others that the Corporation serves
- Establish and convey a single unified identity for the Corporation
- Transition from a service model built on restoration (sick care) to prevention (wellness) by bringing together and integrating the combined resources across the system
- Grow the number of members and patients served by the Corporation
- Allow more efficient decision-making to respond to rapid changes in the market

Significant restructuring actions undertaken during 2012 included a reduction associated with management transitions and consolidation of redundant support function activities. During 2013, continued efforts were undertaken for residual transitions. Restructuring charges of \$4,355 and \$6,150 relating to those actions are included in impairment and restructuring charges in the accompanying consolidated statements of operations and changes in net assets for the years ended September 30, 2013 and 2012, respectively. The Corporation does not expect to incur any additional material charges related to the restructuring.

A reconciliation of the beginning and ending restructuring liability, which is included in accounts payable and accrued liabilities in the accompanying consolidated balance sheets, relating to the restructuring charge is as follows:

	September 30	
	2013	2012
Restructuring liability, at beginning of year	\$ 2,375	\$ —
Restructuring charges	4,355	6,150
Payments	(5,095)	(3,775)
Restructuring liability, at end of year	<u>\$ 1,635</u>	<u>\$ 2,375</u>

Health First, Inc. and Subsidiaries

Notes to Consolidated Financial Statements (continued)

15. Statutory Compliance

Health First Health Plans, Inc. (HFHP)

HFHP is required by Section 641.225(1) of the Florida Statutes to maintain at all times a minimum surplus in an amount that is the greatest of \$1,500, 10% of total liabilities, or 2% of total annualized premium revenue. In addition, Section 641.35(9) of the Florida Statutes stipulates that HFHP must maintain an amount equal to its required minimum surplus in coin or currency of the United States on hand or on deposit in any solvent national or state bank, savings and loan association, trust company, or in eligible securities or obligations. HFHP was in compliance with such requirements at September 30, 2013.

The Florida Department of Financial Services Office of Insurance Regulation (the Department) limits distributions of earnings or equity transfers to no more than 10% of statutory surplus from accumulated earnings in any one year unless prior approval is received from the Department. In addition to this payment, and to the extent accumulated statutory surplus exceeds the required amount, HFHP may make distributions out of its entire preceding fiscal year's net operating profits. During the fiscal years ended September 30, 2013 and 2012, HFHP paid dividends of \$607 and \$11,543, respectively. At September 30, 2013 and 2012, HFHP had \$0 available for the payment of dividends without regulatory approval.

The state of Florida requires HFHP to maintain a deposit with the Department for uncovered claims relating to nonparticipating providers. HFHP complies with this requirement by maintaining the required deposit of \$3,226 and \$3,281 as of September 30, 2013 and 2012, respectively, with the Department, which is included in other assets in the accompanying consolidated balance sheets.

HFHP is required by Title 69O-191.076 of the Florida Administrative Code to ensure that income from operations before federal income taxes is no less than 2% of total revenues on an annual basis. As of December 31, 2012, HFHP was not in compliance with this requirement. Because HFHP had positive pretax income, its surplus exceeded 200% of required minimum surplus, and it is not operating under a corrective action plan, it received a waiver under the provisions of the Florida Administrative Code.

16. Subsequent Events

The Corporation evaluated events and transactions occurring subsequent to September 30, 2013, through December 17, 2013, the date the accompanying consolidated financial statements were issued.

The inclusion of, or linking to, other web site URLs does not imply our endorsement of, nor responsibility for, those web sites, but has been done as a convenience to our Web site visitors.

EXAMPLES

The Office of Insurance Regulation company search does not require you to know exactly how Office of Insurance Regulation has the company's name recorded. It will take your input and return every name that contains your input as it appears in any part of all records. In other words, if your search is:

Floricorp

then the search will return all the names that have "Floricorp" in any part of the record. For example:

FLORICORP, INC.
FLORICORP PROPERTY AND CASUALTY COMPANY
SOUTHERN FLORICORP UNLIMITED

If you entered

Floricorp P

you would get only

FLORICORP PROPERTY AND CASUALTY COMPANY

Note that even though the whole name is searched, the service still looks for an exact match. So if you entered

FLORICORP,

(i.e., with a comma) you would only get

FLORICORP, INC.

Conclusion	14

SCOPE OF EXAMINATION

We have completed a financial condition examination of Health First Insurance, Inc. (the “Company”), a single-state insurer domiciled in Florida. Our examination covered the period of January 1, 2013 through December 31, 2013 and took place primarily in the Company’s Rockledge, Florida office. The last financial condition examination of the Company by the Florida Office of Insurance Regulation (the “Office”) was as of December 31, 2012.

We conducted our examination in accordance with the National Association of Insurance Commissioners (NAIC) *Financial Condition Examiners Handbook*. The Handbook required that we plan and perform our examination to evaluate the financial condition and identify prospective risks of the Company. It required that we do so by obtaining information about the Company including corporate governance, identifying and assessing inherent risks within the Company, and evaluating system controls and procedures used to mitigate those risks. Our examination included assessing the principles used and significant estimates made by management. It also included evaluating overall financial statement presentation and management’s compliance with statutory accounting principles and NAIC annual statement instructions when applicable to domestic state regulations. All accounts and activities of the Company were considered in accordance with the risk-focused examination process.

SUMMARY OF SIGNIFICANT FINDINGS

The examination resulted in findings that the minutes of the Company's board of directors meetings did not indicate whether the Company's appointed actuary had reported to the Board or Audit Committee on items within the scope of the actuarial opinion; the Office was not notified that the audit committee of Health First, Inc. served as the Company's audit committee; and the Company overstated the amounts of certain assets and understated the amount of a liability in its 2013 annual statement.

COMPANY HISTORY

The Company was incorporated in Florida on September 7, 2011 and licensed by the Office as an insurer on October 27, 2011. It was authorized by the State of Florida to operate as a life and health insurer in accordance with Section 624.401, Florida Statutes (F.S.).

Dividends and Capital Contributions

The Company received \$3 million of contributed capital and surplus in 2013. No dividends were distributed during the period examined.

CORPORATE RECORDS

We reviewed the minutes of the Company's shareholder and board of directors meetings held during the period examined. The Board's approval of Company transactions, including the authorization of its investments as required by Section 625.304, F.S., was recorded in the minutes of its meetings.

The minutes of the Company's board of directors meetings did not indicate whether the Company's appointed actuary had reported to the Board or Audit Committee on items within the scope of the actuarial opinion, as required by the NAIC annual statement instructions.

MANAGEMENT AND CONTROL

The Company was wholly owned by Health First Holding Corp. (HFHC), a for-profit corporation. HFHC was a wholly owned subsidiary of Health First, Inc., a not-for-profit corporation the primary purpose of which was to direct the affairs of a multi-entity health care system. The Company was affiliated with various other entities through common ownership including Health First Health Plans, Inc. (HFHP), a Florida health maintenance organization and third party administrator. The Company's senior officers and directors were:

Senior Officers

Name	Title
Steven P. Johnson, Ph.D.	Interim President, CEO & Interim Secretary
Joseph G. Felkner	Treasurer
David E. Mathias	Assistant Secretary

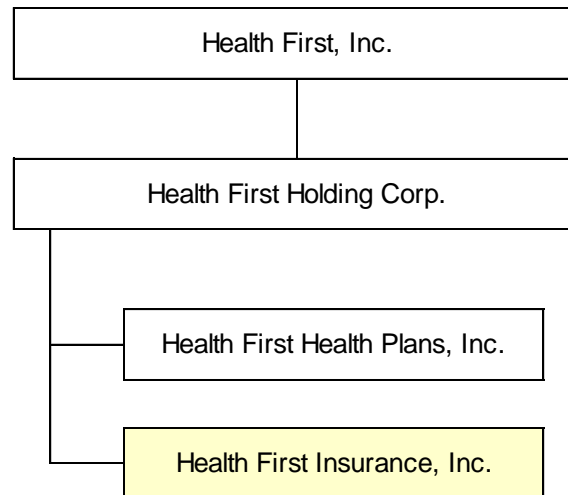

Board of Directors

Name	Location
Joseph G. Felkner	Viera, Florida
Steven P. Johnson, Ph.D.	Satellite Beach, Florida
Kevin S. Pruett	Cocoa Beach, Florida
James C. Shaw	Melbourne, Florida

The Company was a member of an insurance holding company system. Its latest holding company registration statement was filed with the State of Florida as required by Section 628.801, F.S., and Rule 69O-143.046, Florida Administrative Code (F.A.C.), on February 27, 2014.

An abbreviated organizational chart reflecting a holding company system is shown below.

**Health First Insurance, Inc.
Abbreviated Organizational Chart
December 31, 2013**

Tax Allocation Agreement

The results of the Company's operations were included in the consolidated federal income tax returns of HFHC pursuant to a September 7, 2011 tax sharing agreement. The income tax liability of the consolidated group was allocated to members on a pro rata basis according to each member's separate tax return liability in an amount not to exceed the company's separate tax return liability.

Administrative and Financial Management Agreements

Health First, Inc. provided administrative, management and financial services to the Company pursuant to an agreement effective September 7, 2011, to include management, legal, human resources, information system support and financial services in return for \$75,165 in 2013.

HFHP provided administrative, customer service, medical and pharmaceutical management, underwriting, actuarial, claims and other services to the Company pursuant to a May 28, 2013 agreement in return for \$146,115 in 2013.

FIDELITY BONDS AND OTHER INSURANCE

The Company maintained fidelity bond coverage of \$1,250,000 with a deductible of \$50,000 which adequately provided for the suggested minimum amount of coverage for the Company as recommended by the NAIC.

PENSION, STOCK OWNERSHIP AND INSURANCE PLANS

The Company had no employees and did not directly provide employee benefits or sponsor retirement plans. Employees of HFHP performed functions on behalf of the Company. HFHP provided various benefits to eligible employees including health and dental insurance, educational assistance, paid leave and participation in a 401(k) retirement plan sponsored by Health First, Inc.

TERRITORY AND PLAN OF OPERATION

The Company operated solely in the State of Florida. It offered Medicare Supplement coverage and individual, small and large group preferred provider organization (PPO) plans within its service area of Indian River and Brevard Counties. The Medicare Supplement and PPO plans were underwritten by the Company and administered by its affiliate HFHP. The Company marketed its products primarily through licensed brokers and sales agents.

REINSURANCE

The Company maintained specific excess of loss reinsurance coverage with Zurich American Insurance Company for its commercial individual PPO line of business. The policy covered 90% of the Company's eligible expenses in excess of \$225,000 per person per year up to \$2,000,000.

ACCOUNTS AND RECORDS

The Office was not notified, as required by Rule 69O-137.002(14)(e), F.A.C., that the audit committee of Health First, Inc. served as the Company's audit committee.

STATUTORY DEPOSITS

The Company maintained a cash deposit of \$100,000 with the Office, as required by Section 624.411, F.S.

Net change in capital and surplus				(169,012)
Capital and surplus, December 31, 2013 - per examination				<u><u>\$ 4,115,212</u></u>

COMMENTS ON FINANCIAL STATEMENTS

Cash, Cash Equivalents and Short-Term Investments

The \$5,307,853 reported by the Company in its 2013 annual statement as 'cash, cash equivalents and short-term investments' has been reduced by \$147,980 to \$5,159,873. The Company reported \$136,428 which was held in the name of an affiliate and, therefore, not owned by the Company, and \$11,552 which was pledged as collateral. As a result, the claimed assets have been nonadmitted in accordance with Section 625.012, F.S., and Statement of Statutory Accounting Principles (SSAP) No. 4.

Uncollected Premiums and Agents' Balances

The \$104,479 reported by the Company in its 2013 annual statement as 'uncollected premiums and agents' balances' has been reduced by \$4,088 to \$100,391. Because \$4,088 in uncollected premiums were over 90 days due, they have been nonadmitted in accordance with Section 625.012(5), F.S., and SSAP No. 6.

General Expenses Due or Accrued

The \$85,136 reported by the Company in its 2013 annual statement as 'general expenses due or accrued' has been increased by \$16,944 to \$102,080. During the examination, examiners determined that the Company had understated an accrued expense by \$16,944 as of December 31, 2013.

RECOMMENDATIONS

Corporate Records

As reported on page 3, the minutes of the Company's board of directors meetings did not indicate whether the Company's appointed actuary had reported to the Board or Audit Committee on items within the scope of the actuarial opinion. **We recommend that the Company's appointed actuary report to the Board or Audit Committee on items within the scope of the actuarial opinion, as required by the NAIC annual statement instructions, and that the Board or Audit Committee acknowledge the reported items in the minutes of its meetings.**

Audit Committee

As reported on page 7, the Office was not notified that the audit committee of Health First, Inc. served as the Company's audit committee, as required. **We recommend that the Company comply with Rule 69O-137.002(14)(e), F.A.C.**

Accounting and Reporting Errors

As reported on page 12, the Company overstated the amounts of certain assets and understated the amount of a liability in its 2013 annual statement. **We recommend that, in future statements filed with the Office, the Company accurately report its assets and liabilities in accordance with Part I of Chapter 625, F.S., and the NAIC annual statement instructions.**

CONCLUSION

The customary insurance examination practices and procedures as promulgated by the NAIC have been followed in ascertaining the financial condition of Health First Insurance, Inc. consistent with the insurance laws of the State of Florida.

At December 31, 2013, the Company's capital and surplus was \$4,115,212 and the Company was in compliance with the minimum capital and surplus requirement of Section 624.408, F.S.

In addition to the undersigned, the following individuals participated in the examination: Walter F. Banas, CIE, Financial Specialist; Kerry Krantz, Actuary; and Darlene L. Lenhart-Schaeffer, CFE, CISA, Financial Examiner/Analyst Supervisor.

Respectfully submitted,

Scott R. Slaughter, CPA
Financial/Examiner/Analyst

Health First Medical Group - Same Day Family Practice Appointments Available

Having a primary care physician will keep you healthier as you age. Studies have revealed that states with more primary care physicians per capita have better health outcomes, including fewer deaths from cancer, heart disease or stroke. Other studies suggest that having a primary care physician is associated with a longer life span.

MEDICAL ONCOLOGY & CHEMOTHERAPY

At the Space Coast Cancer Center , you can count on the expertise of an entire team of caring, compassionate health care professionals to help you or your loved one battle cancer. One of these specialists is your medical oncologist.

The Role of the Medical Oncologist

A medical oncologist is a doctor who specializes in detecting cancer, and then treating it using medication such as chemotherapy, hormones and pain medicine. He or she is often the person who definitively discovers cancer when you or your regular physician suspect you may have it.

Our medical oncologists are board-certified and expertly trained to understand the patho- physiology of cancers at different places in the body. Medical oncology specialists at Space Coast Cancer Center, specialize in treating all types of cancer and have a detailed knowledge of the use of medications for the management of invasive cancer. Some Of Space Coast Cancer's oncologists participate in clinical trials, working to improve outcomes and quality of life for their patients.

What You Can Expect From the Medical Oncologist

At the Space Coast Cancer Center, you can rest assured our medical oncologists will take advantage of the most up-to-date knowledge, technologies and therapies to accurately assess your medical condition, address your symptoms and thoroughly educate you on your treatment options. They work in

conjunction with radiation oncologists, surgical oncologists, and other physicians specializing in particular types of cancer when necessary to provide the most comprehensive care available in executing your treatment regimen.

Exhibit I

RADIATION THERAPY- TRUEBEAM & TRILOGY

Please watch this video of Dr. Cynthis Bryant, radiation oncologist at SCCC and her staff in the Titusville Cancer Center.

The TrueBeam and Trilogy Stereotactic Systems from [Varian Medical Systems](#) are the most advanced, sophisticated machines of its type in the world. As the leading image-guided radiotherapy (IGRT) system, the TrueBeam and Trilogy mark the beginning of a new generation of cancer care. Space Coast Cancer Center is the first to offer [RapidArc](#) technology in Central Florida. This provides patients the most safe and effective, state-of-the-art cancer therapy. These versatile systems can be used to deliver the widest range of external beam radiotherapy: 3D conformal radiotherapy, IMRT, stereotactic radiosurgery, fractionated stereotactic radiation therapy and intensitymodulated radiosurgery for cancer and neurosurgical treatments.

The Benefits for You the Patient:

- More effective at treating the cancer tumor
- Most precise delivery of radiation therapy
- Reduces side effects from the treatment
- Drastically reduced treatment times
- Accuracy and effectiveness reduces surrounding tissue damage
- State-of-the-art motion management techniques reduces stress
- Treatment can be used on various types cancer without invasive techniques

Description and Overview

Advanced imaging capabilities built into the system allow therapists to position patients for treatment with sub-millimeter accuracy, making sure the tumor is lined up precisely with the radiation beam before the treatment is started. A respiratory gating system takes into account the tumor movement that can occur as a patient breathes, turning the beam off and on, so that treatment is delivered only when the tumor is stationary.

How it Works

At the core of the TrueBeam and Trilogy systems is [Varian's Linac](#), the linear accelerator that has been enhanced for stereotactic applications that involve delivering higher doses of radiation to smaller areas over a shorter period of time. These system's feature an ultra-precise multi-leaf collimator (MLC), and the tightest isocenter, or beam focal point, currently available.

Prior to treatment, images of a patient's tumor and the surrounding anatomy are generated (using MRI, CT or PET scanning), and clinicians use this information, along with sophisticated analytical software programs, to prepare a detailed treatment plan. The treatment plan specifies the exact dose to be delivered to the tumor, as well as how the technology can best deliver that dose, given the three-dimensional geometry of the target and surrounding tissues. When the patient arrives for treatment, clinicians use the TrueBeam and Trilogy's advanced imaging system to confirm the exact tumor position relative the radiation beam, and make any needed adjustments before treatment begins. Some treatments, primarily for small lesions and metastases, can be accomplished

in a single session, while other treatments require multiple sessions.

Patient Benefits

Through more precise targeting of the beam, radiotherapy may become more effective at treating disease while simultaneously reducing side effects of the treatment.

Due to the increased accuracy and power, smaller lesions can be treated more easily and effectively.

State-of-the-art motion management techniques allow doctors to coordinate treatment with a patient's breathing patterns. During these treatments, patients can continue to breathe naturally, reducing stress and increasing comfort.

Radiotherapy can be used to treat more different types of cancer, which means that more patients can be spared surgery and/or chemotherapy.

PHYSICIANS AND STAFF

PHYSICIANS AND STAFF

>[Richard M. Levine, MD](#) (video Link to Dr. Levine)

Dr. Levine is a [Phi Beta Kappa](#) graduate from [Indiana University](#) and graduated with a combined degree from [Indiana University School of Medicine](#) (MS Pharmacology, MD). He completed his internship and residency in internal medicine at the [University of Cincinnati Medical Center](#), and completed his medical oncology training at the National Cancer Institute ([NIH](#)), where he was Chief Fellow. Dr. Levine is Board Certified in Internal Medicine and Medical Oncology. Dr. Levine is a member of the [American Society of Clinical Oncology](#), [Brevard County Medical Society](#), [Florida Medical Association](#), and the [Florida Society of Clinical Oncology](#) (Past-President). He is the Medical Director of the Cancer Program at [Viera Hospital](#) and [Cape Canaveral Hospital](#), as well as being on the American Society of Clinical Oncology ([ASCO](#)) National Quality of Care Committee.

Office Locations: [Titusville Cancer Center](#), [Merritt Island Cancer Center](#), [Viera Cancer Center](#)

Primary Specialty: [Hematology/Oncology](#)

[Solomon Zimm, MD, FACP](#) (video Link to Dr. Zimm)

Dr. Zimm graduated from the Medical College of Virginia. He completed a residency in internal medicine at the Medical College of Virginia, followed by a two-year fellowship in medical oncology and then a three-year research fellowship at the National Cancer Institute. Dr. Zimm then served as an Assistant Professor of Medicine in the Division of Hematology/Oncology, School of Medicine at the University of California, San Diego from 1985-1987. Since then Dr. Zimm has been in practice in Brevard County as a member of Space Coast Medical Associates. Dr. Zimm is a Fellow of the American College of Physicians and a member of the following societies: the American Society of Clinical Oncology, the Florida Society of Clinical Oncology and the Brevard County Medical Society. Dr. Zimm is Board Certified in Medical Oncology and Internal Medicine.

Office Locations: [Merritt Island Cancer Center](#), [Titusville Cancer Center](#), [Viera Cancer Center](#)

Primary Specialty: [Hematology/Oncology](#)

[R. Duff Sprawls, MD](#) (Video Link to Dr. Sprawls)

Dr. Sprawls graduated from the University of Louisville School of Medicine. He completed his internship and residency in Internal Medicine at the University of South Florida, and he completed his Medical Oncology Fellowship at the University of South Florida, H. Lee Moffitt Cancer Center. Dr. Sprawls is board certified in Medical Oncology. He is a member of the American College of Physicians, the Brevard County Medical Society, the Florida Medical Association, the American Society of Clinical Oncology and the American Society of Internal Medicine.

Office Locations: Viera Cancer Center, Titusville Cancer Center

Primary Specialty: Hematology/Oncology

Juan L. Castro, MD (Video Link to Dr. Castro)

Dr. Castro graduated from the University of Puerto Rico with a Bachelor of Science in Biology, magna cum laude, in 1985. He completed his medical doctorate at the Universidad Central del Caribe in Puerto Rico in 1990, and then he completed his three-year residency in Internal Medicine at the University District Hospital Center in Puerto Rico in 1993. Dr. Castro furthered his training in Hematology and Oncology as a fellow at the Milton S. Hershey Medical Center, completing his three-year program in June of 1997. Dr. Castro is board certified in Hematology, Medical Oncology and Internal Medicine. He is a member of the American Society of Clinical Oncology, Brevard County Medical Society and the Florida Medical Association.

Office Locations: Merritt Island Cancer Center, Titusville Cancer Center, Viera Cancer Center

Primary Specialty: Hematology/Oncology

Ashish V. Dalal, MD (Video Link to Dr. Dalal)

Dr. Dalal graduated from the M.S. University Medical College of Baroda, Gujarat, India. He completed a rotating internship in Medicine, Surgery, Pediatrics and Obstetrics and Gynecology at the M.S. University. He furthered his training as a Clinical Research Associate in the Department of Oncology at the Montefiore Medical Center in Bronx, New York. Dr. Dalal also completed a residency in Internal Medicine and a fellowship in Hematology and Oncology at the Beth Israel Medical Center in New York. Dr. Dalal is Board Certified in Hematology and Medical Oncology. He is a member of the American Society of Clinical Oncology, the Florida Society of Clinical Oncology, the Brevard County Medical Society and the Florida Medical Association.

Office Locations: Merritt Island Cancer Center, Titusville Cancer Center, Viera Cancer Center

Primary Specialty: Hematology/Oncology

Firas R. Muwalla, MD (Video Link to Dr. Muwalla)

Dr. Muwalla graduated from the University of Jordan Medical School in Amman, Jordan. He completed his residency in Internal Medicine at the University of Arkansas for Medical Sciences in Little Rock, Arkansas. He was an Assistant Professor of Medicine, Director of Inpatient Bone Marrow Transplant Unit at the Myeloma Institute for Research and Therapy, University of Arkansas for Medical Sciences,

where he participated in clinical research trials and co-authored multiple publications in reputable medical journals. He completed his Hematology/Oncology fellowship at the University of Florida Shands Medical Center in Gainesville, Florida. Dr. Muwalla is Board Certified in Hematology, Medical Oncology and Internal Medicine. He is a member of the American Society of Hematology, the American Society of Clinical Oncology, the Brevard County Medical Society and the Florida Medical Association.

Office Locations: Merritt Island Cancer Center, Titusville Cancer Center, Viera Cancer Center

Primary Specialty: Hematology/Oncology

Cynthia J. Bryant, MD ([Video Link to Dr. Bryant](#))

Dr. Bryant received her MD degree from the Medical College of Wisconsin and completed her five-year residency in Radiation Oncology at Emory University School of Medicine in Atlanta, Georgia. She is Board Certified in Radiation Oncology and accepted a faculty position at Emory following completion of her residency. She is trained and knowledgeable in the use of the state-of-the-art radiation therapy Linac, utilizing the Varian Trilogy and TrueBeam. The Trilogy and True Beam deliver precise radiation therapy treatment, maximally avoiding normal tissues, to improve the opportunity for patients to receive the most effective and safest therapy. Dr. Bryant is also proficient in radioactive prostate seed implantation. She is a member of the American Medical Association, the Florida Medical Association, the American Society of Therapeutic Radiology and Oncology, the American College of Radiology and the American Brachytherapy Society.

Office Locations: Titusville Cancer Center, Viera Cancer Center

Primary Specialty: Hematology/Oncology

Jorge Perez De Armas, MD ([Video link to Dr. Perez De Armas](#))

Dr. Perez graduated from the University Central del Caribe, a United States accredited school in Bayamon, Puerto Rico. The U.S. Army National Guard veteran completed his residency in internal medicine at Lehigh Valley Hospital. Dr. Perez completed his advanced training in Hematology and Oncology at Penn State Hershey Medical Center in Hershey, Pennsylvania. He is board certified in Hematology, Medical Oncology and Internal Medicine.

Office Locations: Titusville Cancer Center, Merritt Island Cancer Center, Viera Cancer Center

Primary Specialty: Hematology/Oncology

Katie Wilkerson, MSN, ARNP ([Video Link to Katie Wilkerson](#))

Katie Wilkerson, ARNP, graduated from the University of South Florida with a Master of Science in Nursing degree in August 2003. The University is an affiliate of the H. Lee Moffitt Cancer Center where she did her clinical training. Ms. Wilkerson is certified as an advance oncology nurse practitioner. Prior to becoming a nurse practitioner, Ms. Wilkerson worked a number of years as a certified oncology nurse. Ms. Wilkerson is a member of The Oncology Nursing Society, American Academy of Nurse Practitioners, Florida Nurses Association and American Nurses Association.

Office Location: Titusville Cancer Center

Primary Specialty: Hematology/Oncology

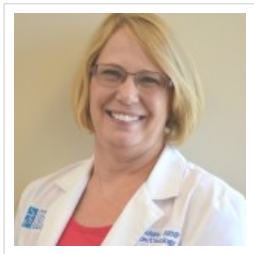

Jackie Luker, ARNP ([Video Link to Jackie Luker](#))

Jackie Luker, ARNP graduated from Fort Hays State University in Hays, Kansas with a Master of Science in Nursing Degree in December of 2009. Prior to becoming a nurse practitioner, Ms. Luker worked for 11 years as an RN on an acute care oncology unit. She was involved in Chemotherapy administration and education of both patients and staff and clinical coordinator of the unit for four years. Ms. Luker is a member of The Oncology Nursing Society, and American Academy of Nurse Practitioners.

Office Location: Merritt Island Cancer Center

Primary Specialty: Hematology/Oncology

Delori M. Dulany, ARNP, BC

With over 20 years of experience in many medical disciplines, Delori brings to Space Coast Cancer Center a broad range of expertise and experience. Included in her vast knowledge base is a strong concentration in oncology and now radiation oncology.

Certifications/Licensure Florida Advanced Registered Nurse Practitioner, Board Certified Acute Care Nurse Practitioner, ACLS, BLS

Education Wichita State University – 2004 Masters of Science in Nursing, Acute Care Nurse Practitioner, Southwestern College – 2001 Bachelor of Science in Nursing, Registered Nurse, Butler County Community College – 1995 Associate of Science Degree, Registered Nurse

Office Location: Titusville Cancer Center and Viera Cancer Center

Primary Specialty: Radiation Oncology

Health First offers health care coverage options through two companies. Health First Health Plans, Inc. offers Medicare Advantage, Individual, and Group HMO and POS (point of service) health plans. Health First Insurance, Inc. offers Group and Individual PPO insurance. Both companies offer Marketplace plans. Health First Health Plans & Insurance does not discriminate on the basis of race, color, national origin, disability, age, sex, gender identity, sexual orientation, or health status in the administration of the plan, including enrollment and benefit determinations. Health First Health Plans & Insurance has entered into an agreement with CMS to provide health insurance coverage through Qualified Health Plans offered through the Federally Facilitated Marketplace.

Introduction

Welcome to Health First Health Plans & Insurance. We have designed this directory to provide you with valuable information about the physicians participating with Health First Health Plans & Insurance.

Choosing a primary care physician

We encourage you to choose your personal doctor, known as a primary care physician (PCP), from our network of local physicians. Primary care physicians are family and general practitioners, internal medicine physicians, and pediatricians. The primary care physician coordinates all of your medical care, including offering preventive care, ordering necessary laboratory, x-ray, and other routine diagnostic tests, arranging for hospital admissions, and working with specialists when medically necessary. Local participating physicians are also most familiar with our plans and benefits.

All participating PCPs are on call 24 hours a day, 7 days a week. If you need urgent care after normal office hours, call your primary care physician to coordinate your care or visit an urgent care or walk-in clinic.

We recommend you establish a relationship with your PCP and seek services from him or her before seeing a specialist. By becoming “established” with a PCP, you’ll be able to receive care in the event your doctor no longer accepts new patients. Your PCP will help make sure you’re seeing the appropriate specialist, and also keep track of all your medications to reduce the chance of any complications. Plus, many times your PCP will be able to get you an appointment with a specialist more quickly than if you tried on your own. Therefore, we urge you not to discount the advantages offered by PCPs to assist in coordinating your entire spectrum of care.

Specialty care

There may be occasions when a medical service is needed that your primary care physician is unable to provide. Health First Health Plans & Insurance members have “open access” to see specialists without first obtaining a referral from their PCP. When treatment is required from a specialist, you may contact specialist offices to make appointments as necessary and pay the applicable cost share at the time services are rendered.

It’s important to note that while Health First Health Plans & Insurance does not require referrals for specialty care, some specialists still ask patients to get a PCP referral to ensure the proper care is provided and medical records are available.

For HMO members: If services are not available within our network, your PCP will coordinate approval with us and make arrangements for you to receive care outside the network. If you directly access care outside our network

without a referral from your PCP and approval from Health First Health Plans & Insurance, you may be responsible for the entire cost.

Behavioral and mental health

We contract with Magellan Behavioral Health (Magellan) to manage mental health and substance abuse services for our members. Magellan is a leader in behavioral health care management with services that help individuals and families to recover, improve their overall health, and achieve wellness. Magellan connects members with the right care when it is needed most. Magellan manages care for both inpatient and outpatient services and also provides crisis intervention at any time day or night.

Local providers are listed in this directory. You can find a complete, nationwide listing of providers at [MagellanHealth.com/member](https://www.MagellanHealth.com/member). **Registration is not required to search for providers.** To get started without logging in, click on “New or Unregistered Users,” enter Magellan’s toll-free exclusive phone number for Health First members (**1.800.424.4347**) and follow the instructions. Then click “skip registration” when asked to create a user name and password.

You can also visit the Magellan website at [MagellanHealth.com/member](https://www.MagellanHealth.com/member) to find tools, resources and general educational information addressing health and well-being issues. Please note that as a new user, you may need to register a new account to access detailed information.

For more information or to access behavioral health services, call Magellan at **1.800.424.4347** (TDD/TTY: 1.800.424.1694).

Magellan Behavioral Health, Inc. is a subsidiary of Magellan Health Services, Inc.

More information about providers

Physician assistants, nurse practitioners, and others who are not licensed as physicians offer many medical services. These services are rendered in accordance with Florida regulations and may require the same cost-share as you would pay for seeing a physician.

Providers’ participation status is subject to change at any time. For the most up-to-date list, please call us at **1.855.443.4735**. Customer Service is available weekdays from 8 am to 5 pm.

Services that require prior authorization

While Health First Health Plans & Insurance does not require a *referral* to see network specialists, there are certain services that require *prior authorization* whether you are an HMO, POS or PPO member. This ensures the right care is provided in the right setting. Local network physicians have information on the services that require prior-authorization from Health First and the steps required to obtain approval. Some examples of services that require prior-authorization include MRI, PET, CT scans and nuclear cardiology studies.

If you're a POS or PPO member and using an out-of-network provider or an in-network provider that is outside of our local area, please be sure you've discussed the authorization process with your provider and have notified Health First Health Plans & Insurance before receiving care. You have the ultimate responsibility to notify your provider that authorization is required for these procedures. For more information on which procedures require prior authorization or how to obtain approval, please contact our Customer Service Department.

For POS and PPO members

Point of Service (POS) members and Preferred Provider Organization (PPO) members can see any provider they choose for covered services, regardless of whether or not the provider is a Health First Health Plans & Insurance participating provider. Your plan documents show your share of the cost for receiving services both in and out of our network.

Since your cost depends on whether the provider participates with us, you can save money by using Health First Health Plans & Insurance providers while in Brevard and Indian River Counties, or PHCS Healthy Directions providers when outside of Brevard and Indian River Counties, whenever possible. Actual costs will depend on the benefit plan you have, the providers you see, and the services you receive.

Your cost can vary quite a bit depending on which providers you choose:

- \$ If you choose to see a participating (in-network) provider,** you are responsible for paying only for your "in-network" cost-share. We have contracts with these providers limiting the amount they can bill for services.
- \$\$ If you choose to see a non-participating (out-of-network) provider,** you are responsible for paying the higher "out-of-network" cost-share. We do not have contracts with these providers limiting the amount they can charge for services, so if they charge

more than our allowable amount, you may be responsible for the additional cost (also called "balance billing").

When seeking out-of-network services, we encourage you to talk with your provider in advance—ask what the charges for service will be and if they will accept a lower amount. Some providers will agree, which could reduce your total cost.

Finding a participating doctor or provider

Local participating doctors and other providers are listed in this Provider Directory and at myHFHP.org. The directory includes information on their credentials, languages spoken, age limitations, if any, and whether they are accepting new patients. It also lists other participating providers like hospitals, outpatient surgery centers, pharmacies, labs, etc. You can also contact Customer Service for additional information on doctors' professional qualifications.

There are some providers outside of our network and service area (Brevard and Indian River Counties) who are part of a national network we have contracted with, and have already agreed to accept a reduced rate. If this rate is higher than our allowable fee schedule, you'll still be responsible for the difference, but seeing these providers is another way to help limit your out-of-pocket expenses.

The participating providers located outside of the service area are listed at MultiPlan.com:

- Select "PHCS Healthy Directions" and click Go.
- Choose provider type (Doctor or Facility) and click Continue.
- Follow the prompts to enter your search criteria.

The customer service representatives at MultiPlan can also help you find a provider outside of Brevard and Indian River Counties. Simply call **1.888.378.7427** Monday through Friday from 8 a.m. to 8 p.m. (Eastern Standard Time), and identify yourself as a health plan participant accessing the PHCS Healthy Directions Network.

It is your responsibility to confirm your providers' continued participation in the PHCS Network and accessibility under your benefit plan. **Please also be sure to follow any required pre-authorization procedures,** and always present your benefits ID card upon arrival at your appointment.

Prescription drugs

You can get your covered prescriptions filled by any participating Health First Health Plans & Insurance pharmacy throughout our service area. Local pharmacies as well as participating national chain locations are listed in this Provider Directory. For the most recent updates,

visit our web site, or contact our Customer Service Department.

Health First Health Plans & Insurance has a drug formulary, which is defined as a list of drugs, both brand name and generic, approved by the plan as covered medications. A committee comprised of doctors, pharmacists and other health care professionals evaluates formulary drugs. Our Pharmacy and Therapeutics Committee regularly reviews the formulary list to be certain it meets the medical needs of our members and physicians.

Physicians are expected to prescribe the appropriate medication for you from this list. Non-formulary drugs are not covered unless approved by the health plan. If you need a copy of the current formulary, please call the Health First Health Plans & Insurance Customer Service Department at **1.855.443.4735** (TTY/TDD relay: 1.800.955.8771) weekdays from 8 am to 6 pm.

Anytime you receive a prescription for a new drug, be sure to ask your physician if the prescribed drug is on our formulary.

Emergency services and care

Your health is always our most important concern. In case of an emergency, go to the closest medical facility or call 911. Health First Health Plans & Insurance will provide coverage for any emergency medical condition, anywhere in the world. An emergency medical condition is defined as a medical condition manifesting itself by acute symptoms of sufficient severity, which may include severe pain or other acute symptoms, such that the absence of immediate medical attention could reasonably be expected to result in any of the following:

- serious jeopardy to the health of a patient, including a pregnant woman or fetus;
- serious impairment of bodily functions; or,
- serious dysfunction of any body organ or part.

During pregnancy, the condition may be considered an emergency when:

- there is inadequate time to safely transfer to another hospital prior to delivery;
- a transfer may pose a threat to the health and safety of the patient or the fetus; or,
- there is evidence of the onset and persistence of uterine contractions or rupture of the membranes.

Health First Health Plans & Insurance will provide emergency services and care that includes screening, examination, and evaluation by a physician or, to the extent permitted by applicable law, other appropriate personnel under the supervision of a physician to

determine if an emergency medical condition exists and, if it does, the care, treatment, or surgery for a covered service by a physician necessary to relieve or eliminate the emergency medical condition, within the service capability of the medical facility.

Urgent or walk-in care

If you need care right away but your condition is not a true emergency, call your primary care physician to coordinate your care. All primary care physicians are on call 24 hours a day, 7 days a week. If your PCP cannot see you quickly enough, you can visit an urgent care or walk-in clinic.

Urgent care and walk-in providers can treat sinus and ear infections, colds, bronchitis, strep throat, pink eye, strains, minor burns, skin infections, rashes and cuts. Urgent care centers can also treat minor fractures and cuts that need stitches. Visiting an urgent care center or walk-in clinic instead of a hospital emergency department can often save you time and money.

Local participating locations are listed in the ancillary section of this directory. Locations, phone numbers, and hours of local participating urgent and walk-in providers are also online at myHFHP.org/Clinics. No appointment is needed. For Health First NOW locations, you can visit HFnow.org, check in online and choose an estimated treatment time.

Confidentiality

To safeguard your privacy, your personal health information is released only with your written consent or if required by law. To maintain the strict confidentiality of members' health information:

- Health First Health Plans & Insurance has confidentiality policies and procedures in place based on good practices and legal requirements.
- Health First Health Plans & Insurance requires facilities, providers and their medical record departments to keep members' records confidential.
- All Health First Health Plans & Insurance employees adhere to a confidentiality policy as well as adhere to Standards of Conduct that prohibit release of medical records.

Use of members' identifiable information

Identifiable information is data that may cause the patient to be recognized or known. Examples of identifiable information include the patient's name, address, and date of birth or social security number. At the time of enrollment, Health First Health Plans & Insurance members authorize Health First Health Plans & Insurance to use their member identifiable information for general treatment, coordination of care, quality assessment, utilization review, fraud detection, and accreditation

purposes. If patient-identifiable information is to be used for any other purpose or shared with any other organization, Health First Health Plans & Insurance must obtain clear and specific consent from you, unless such release is legally required.

As a Health First Health Plans & Insurance member, you have the right to . . .

- Review your health information as well as review which departments or agencies have access to your identifiable health information.
- Protect against unauthorized disclosure of identifiable health information.
- Approve the release of any identifiable information beyond Health First Health Plans & Insurance unless mandated by law.
- Give explicit consent prior to your employer having access to your identifiable health information unless mandated by law.
- Protect against release of any identifiable health information for the collection, use or sharing of data.
- Expect that all information used for research or performance measurement will be limited, in that all data will be de-identified or aggregated before release.
- Contact the Health First Health Plans & Insurance Compliance Officer to file a complaint or appeal if you feel that your health information was used without proper consent.

Physician overview

This directory provides the following physician specific information:

- **Physician's name and gender**
- **Specialty**—Visit abms.org/Who_We_Help/Consumers/specialties.aspx for an explanation of what body part or condition each type of specialist treats.
- **Hospital affiliations**—Indicates which hospital(s) have granted that physician privileges to see patients in their facility. If you want to use a particular hospital, it's important to choose a physician who can see you there.
- **Medical group affiliations**—Indicates whether the physician is part of a group of doctors.
- **Board certification**—To achieve and maintain board certification, physicians must complete an extensive process of specialty education and exams to demonstrate competency with the latest advances in medical science and technology in his or her specialty as well as best practices in patient safety, quality healthcare and creating a responsive patient-focused

environment. To learn more, visit the American Board of Medical Specialties (abms.org) or American Osteopathic Association (osteopathic.org).

- **Board eligible**—Indicates a provider whose boards have expired or those who are awaiting testing or test results.
- **Accepting new patients**—Indicates whether a physician will see new patients. If not, you must be an “established” patient to see this physician.
- **Languages spoken**—Indicates any language(s) the physician may speak other than English.
- **Office locations**—Includes street addresses and phone numbers.

Participating physicians, hospitals and other health care providers are independent contractors and are neither agents nor employees of Health First Health Plans & Insurance. Although we make every effort to maintain this information as accurately as possible, the availability of any particular provider cannot be guaranteed, and provider network composition is subject to change. The provider directory is continually updated as information becomes available.

Physicians in our network have undergone a thorough evaluation and verification of their education and credentials. Our providers submit their medical credentials (education, board certification, hospital privileges, etc.), and office information (group affiliation, address, phone, office hours, foreign languages spoken, etc.). Health First Health Plans & Insurance then verifies medical credentials directly with each corresponding organization, and confirms office information with the physician's office staff. After initial verification, this process is repeated every 3 years. The web based directory is updated within 5 days of receipt of changes and the written version is updated quarterly.

Health First Health Plans & Insurance does not use quality, member experience or cost-related measures when selecting hospitals, ancillary services, and practitioners to participate in our Marketplace plans. We use the same criteria when approving any providers to participate in our networks, regardless of which plans they accept.

Visit us on the web!

You can also see the latest version of this provider directory (as well as other health plan information) on our web site — myHFHP.org.

The Honorable Rick Scott
Governor of Florida
The Capitol
400 S. Monroe Street
Tallahassee, FL 32399-0001

RE: Senate Bill 604

Dear Gov. Scott:

I am writing to respectfully request that you veto Senate Bill 604, related to “Consumer Protection.”

Despite its given subject title, this bill has nothing to do with protecting consumers. It is an Internet regulation bill that forces owners of any website that hosts music or video files to publish their “true names,” addresses, telephone numbers, and emails, regardless of whether or not such a website is engaging in commerce or transacting business.

As a free-market public-policy research organization (“think tank”) we believe this both sets a dangerous precedent and is bad policy. Requiring website owners to disclose their personal information would discourage many who prefer to remain anonymous due to fear of retribution or other reasons from exercising their freedom of speech.

Anonymity and the use of pseudonyms have been key threads in the fabric of American life since the Colonial Era. From arts to politics, from the Revolutionary Era-tracts known as Cato's Letters to the street art of the elusive Banksy, there is a long tradition, respected in practice and protected by the First Amendment, of publishing or distributing material while concealing all or part of one's identity. Since our nation's independence, our courts have recognized that the First Amendment requires protections for anonymity to protect speakers from fear of retaliation as well as to encourage all speakers to engage in open discourse. (See, e.g., the U.S. Supreme Court's 1960 decision in *Talley v. California*, 362 U.S. 60.)

Governor Rick Scott
May 8, 2015
Page 2

This measure would allow big record labels, movie studios and other “aggrieved” copyright holders to file suits against and go after website owners simply for failing to provide the adequate disclosures, without needing to separately prove that those websites had actually infringed their rights or caused injury.

Even if this bill were truly about enforcing copyright and protecting intellectual property, it quite simply is not the proper role of the states to do so. The U.S. Constitution enumerated that specific power to Congress, and none other than James Madison himself opined in The Federalist No. 43 that, when it comes to copyright, “the states cannot separately make effectual provision.”

But this isn't just a matter of ancient constitutional wisdom. Congress explicitly enjoined the states from legislating in this area as part of the Copyright Act of 1976. That law prohibits states from offering any additional copyright protections or remedies that aren't already provided under federal law.

Proponents of this bill will note that they have a precedent from 46 states and the District of Columbia that already require manufacturers of CDs, DVDs and other forms of audio-visual media to publish their name on the item's label. However, the courts have upheld such laws only because they serve additional functions beyond simply enforcing copyrights – namely that they protect consumers from fraud. Not only is there no similar nexus to consumer concerns in this bill, but it would apply across the board even to sites that do not engage in commerce.

Also notable is something this bill does not contain – the words “fair use.” There is no carve-out or exemption for the fair use of material. The mere act of sharing audio-visual files is deemed sufficient to sacrifice one's privacy or risk a lawsuit. Thus, Cuban and Venezuelan dissidents now living in Florida who published videos critical of the government back home would be required to reveal their true names and addresses, even if that might endanger the lives of family left behind.

This bill is a solution in search of a problem. The federal Digital Millennium Copyright Act already provides a process for copyright owners to obtain the contact information of those they believe have infringed their rights. Florida does not need new laws to enrich trial lawyers, increase litigation in this state, or further sacrifice our privacy to Hollywood and the rest of the Copyright Lobby.

I respectfully request that you veto this bad bill.

Sincerely,

**Re: Legal Representation for Florida Agency for Persons with Disabilities
regarding iBudget Fair Hearings**

Dear Richard:

Shutts & Bowen LLP submits this response to your request for informal (noncompetitive) proposals for outside counsel representation of the Florida Agency for Persons with Disabilities (APD) regarding the iBudget Fair Hearings. Shutts & Bowen can represent APD throughout the State of Florida subject to clearance of conflict checks upon identification of the requisite parties, which we do not contemplate will be an issue, and approval of a written engagement agreement.

Shutts & Bowen is a Florida focused law firm with approximately 250 attorneys in offices in major cities throughout Florida. We have been in business since 1910. Our long term success is based upon the following principle: the employment of highly competent attorneys, who are well-rounded and active in their communities, and who make the sustained success of their clients their primary goal.

Our team has the necessary administrative and litigation experience, including experience under Chapter 120, Florida Statutes, and Florida Administrative Code, to efficiently and effectively represent APD.

Rates and Maximum Amount

We propose the following alternative fee arrangement.

- For phase one, which will include training, planning, and general preparations leading up to the establishment of the iBudget Fair Hearings, we will bill you at the following significantly, discounted, blended rates: Partners/Lead Attorneys - \$385 per hour; Associates - \$285 per hour; Paralegals - \$170 per hour, and our ordinary and standard costs per State guidelines (collectively “Discounted Rates”).
- For iBudget Fair Hearings that settle without an administrative hearing, we will bill you a flat fee of \$2,500.00 plus any ordinary and standard costs per State guidelines.
- For iBudget Fair Hearings that are resolved after the commencement of an administrative hearing (without oral discovery), we will bill you a flat fee of \$7,500.00 plus any ordinary and standard costs per State guidelines.
- For iBudget Fair Hearing that are resolved after the commencement of an administrative hearing with oral discovery, we will bill you a flat fee of \$7,500.00 plus our time for handling any oral discovery billed at our Discounted Rates, including any ordinary and standard costs per State guidelines.
- APD agrees to retain Shutts & Bowen for any Circuit Court, District Court, or Appellate Court Litigation arising from any of the iBudget Fair Hearings we are handling at our Discounted Rates, including any ordinary and standard costs per State guidelines.

The Shutts & Bowen APD

Our APD team will be chaired by Joe Goldstein, who will also serve as one of the Lead Attorneys. Joe’s combination of business litigation and administrative experience is unmatched, and will ensure that all of our Lead Attorneys will have the benefit of his experience. The Lead Attorneys will also be supported by Stephen Maher, who is a Board Certified appellate attorney specializing in Administrative Law.

Joe will be the point person for APD and its leaders during phase one and will appear in Tallahassee as necessary to support the APD’s mission of success in the iBudget Fair Hearing Process. During phase one of the engagement, the Lead Attorneys, Deputy Lead Attorneys, and Assigned Staff will participate in weekly planning and strategy sessions with APD in Tallahassee, by phone, or by video teleconferencing. After some initial planning sessions, to increase efficiency, we contemplate that these sessions would only involve the Lead and Deputy Attorneys, who then in turn will debrief the remaining Team. The Shutts & Bowen APD Team

will share all materials electronically, and will be supported by its in-house Technology Services Group (TSG) through the use of internal document sharing websites and other litigation support technologies.

We will staff the iBudget Fair Hearing Team with at least one Lead Attorney in each of the Six Regions and with one Deputy Lead Attorney in the Four Largest Regions. Each Lead and Deputy Attorney will be supported by the requisite number of Associates, Paralegals, and Administrative Staff to sufficiently resolve the iBudget Fair Hearings. The Shutts & Bowen iBudget Fair Hearings Team will establish written policies, procedures, and electronic forms for the intake, processing, prosecution, and resolution of the cases to ensure high standards, consistency, and swift resolution.

The Shutts & Bowen iBudget Fair Hearings Team is ready, willing, and able to handle as many regions as APD should choose to assign to us. To increase efficiencies, while each Lead Attorney will be responsible for his or her own Region, we will maximize responsibilities by issue to ensure that there will be no duplication of work, and each Region will benefit from the work product of any other Region (and from the work product of inside counsel).

As in previous similar multiple party, document extensive cases, Shutts & Bowen will use a secure file transfer protocol (FTP) to facilitate the exchange of materials within the team and with outside parties and has the resources to use sophisticated litigation support software, such as Summation. In addition to its in-house TSG, the Shutts & Bowen APD team has access to its in-house marketing representative and its retained outside public relations firm, Wragg & Casas, that can assist with media relations as necessary.

Below is a brief summary of some of our APD Team Members who may serve as Lead or Deputy Lead Attorneys. Attached to this letter are detailed biographies of each Team Member. In selecting our team, we have focused on attorneys who have extensive trial and administrative experience and who have experience with government practice.

Chair and Lead Attorney: Joseph M. Goldstein

Joe literally has written the book on Florida Administrative/Procurement Law – the Florida Procurement Law Handbook, published by West-Thomson-Reuters. Joe has been recognized in *The Best Lawyers in America*®, for Administrative Law since 2011. In addition, Joe is an experienced trial attorney, having obtained Board Certification in Business Litigation by the Florida Bar since 2004, among numerous other business litigation honors. Joe has been lead counsel in thousands of administrative matters at the federal, state, and local levels. Joe recently led the Shutts & Bowen team that was retained by the Agency for Health Care Administration to assist it in the defense of its hundred billion dollar Managed Medicaid Procurement.

As a former government attorney, Joe was lead counsel to the United States Air Force in bid protests, including at the time the largest bid protest (the \$2 Billion Desktop IV Procurement,

which was the first government wide acquisition for desktop computers). Since entering private practice, in addition to representing companies in administrative and other litigation matters, Joe has often served as special counsel to the government in administrative matters, most recently on behalf of the Alliance for Aging, involving a multiple award bid protest, which was denied, as to the award for the Lead Agencies to provide services under the Community Care for the Elderly Program in Miami-Dade and Monroe Counties.

Administrative Law Expert: Stephen Maher

We call him the professor at Shutts & Bowen because of his authoritative knowledge of administrative law. During his more than 30 years in administrative law, litigation, and appellate review, Steve has experience as both a litigator and a legal educator. At Shutts & Bowen, he helps clients pursue their goals in court and before government agencies. He also serves as counsel in judicial reviews of litigation and administrative action by local, state and federal government. Having handled cases that set significant precedents in Florida, especially in administrative law, Mr. Maher tackles issues in diverse areas. His work includes agency proceedings, including those before DOAH, as well as appearances before state and local boards and commissions, licensing, professional discipline, permitting, petitions to initiate rulemaking, rulemaking hearings, rule challenges, rule waivers and variances, general regulatory matters, and judicial review of agency actions.

Steve has handled numerous appellate matters regarding administrative law, including *Diaz v. State, Agency for Health Care Administration*, 65 So. 3d 78 (Fla. 3d DCA 2011); *Board of Medicine v. Vazquez*, 11 So.3d 994 (Fla. 1st DCA 2009) (affirming DOAH Order under Florida APA); *CNL Resort Hotel, L.P. v. City of Doral*, 991 So.2d 417 (Fla. 3d DCA 2008) (interlocutory administrative appeal, revering DOAH Order); *Coastal Fuels Marketing, Inc. v. Canaveral Port Authority*, 962 So.2d 942 (Fla. 5th DCA 2007) (involved jurisdictional issue under Florida APA); *Simmons v. State, Agency for Health Care Administration*, 950 So.2d 431 (Fla. 1st DCA 2007); and *Barfield v. Department of Health*, 805 So.2d 1108 (Fla. 1st DCA 2001) (First District clarified the substantive jurisdiction limitation on board action within the Department of Health. The case was voted the second most important Florida administrative law case in the last ten years at a recent Pat Dore Administrative Law Conference) (a complete list of his relevant appeals is included in his biographical information).

Lead Attorney: Sidney C. Calloway

Sidney is the Co-Chair of the Firm's Government Law Practice Group. Like Joe, he combines extensive knowledge of the government administrative process with a sophisticated litigation practice. He has served as lead counsel in litigation for public agencies and private sector clients in procurement, land use, and construction related matters. Prior to entering private practice, Sidney honed his litigation skills in the Florida Attorney General's Office, as Bureau Chief for Eminent Domain. Sidney has been recognized by *Florida Super Lawyers* for his trial skills in the area of Civil Litigation Defense. As a result of his superior litigation skills, has

served as an adjunct professor at the University of Miami Law School, Litigation Skills Department.

Lead Attorney: Suzanne M. Driscoll

Suzanne is an attorney in the Eminent Domain Inverse Condemnation Practice Group. Having served as a senior attorney with both the Florida Department of Transportation and the Attorney General's Office, she has valuable experience in eminent domain law specifically and trial law in general. As a litigator with more than 50 bench and jury trials on record, Suzanne is a perfect choice to represent APD in these hearings.

Lead Attorney: Brent C. Bell

Like Bill, Brent has first-chair experience as a trial lawyer focusing his practice in commercial, real estate, and construction law. Board Certified by the Florida Bar in Construction Law, Brent has been recognized for his extensive litigation experience by *Best Lawyers in America*® for Litigation-Construction, by *Chambers USA: America's Leading Lawyers for Business*, Construction Law, and by *Florida Super Lawyers*, for Business Litigation.

Lead Attorney: Lonnie L. Simpson

Lonnie is a seasoned complex commercial trial lawyer with significant experience in financial services, securities, intellectual property, and technology matters. He has conducted bench and jury trials in courts across the United States and he has arbitrated significant matters internationally. In the administrative law context, Lonnie has represented clients in bid-protests at the federal level and in plenary proceedings before the United States Court of Federal Claims. Similarly, he has represented national business entities in special proceedings before administrative law courts in several states. Lonnie's litigation skills have been recognized by his selection in the *Best Lawyers in America*® for Commercial Litigation in 2013.

Lead Attorney: Mark Thomson

Mark combines the trial skills of an experienced litigator with the practical skills of a transactional attorney. As a partner in the Real Estate and Business Litigation Practice Groups (and a licensed Landscape Architect and former Vice President of Operations for one of the nation's largest production home builders), Mark has extensive litigation experience in a wide array of matters, including zoning and land use and complex business, corporate and construction litigation matters.

Lead Attorney: Suzanne Labritt

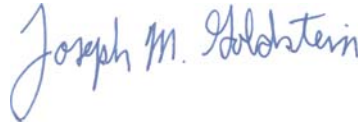

Suzanne Labrit has over 25 years of legal experience and focuses on appeals and complex

commercial litigation, including the health care field. From 2008 to 2010, Ms. Labrit served as national litigation coordinating counsel for an institutional pharmacy company and has participated in the statewide defense of thousands of diet drug litigation cases for a pharmaceutical manufacturer.

We look forward to serving as counsel for APD in these iBudget Fair Hearings and establishing a long-term beneficial relationship.

Sincerely,

SHUTTS & BOWEN LLP

Joseph M. Goldstein

T: 954-847-3837 T: (Tallahassee) 850-521-0600

Founded 1910

Businesses involved in disputes or government bid protests turn to Joseph M. Goldstein for several reasons: his expertise, trial experience and government background. He is the Managing Partner of the Fort Lauderdale office, where he is a member of the Litigation Department. Mr. Goldstein holds an office in Tallahassee as well.

Mr. Goldstein is among the less than one percent of attorneys who are Florida Bar Board Certified in Business Litigation. His qualifications in this area enhance his practice, which focuses on commercial litigation; government contracts, including bid protests; employment litigation, especially involving noncompetition agreements; and real estate disputes. He generally represents defense companies, technology firms, construction firms and government service providers.

REPRESENTATIVE CASES

- As the result of a bid protest trial, Mr. Goldstein successfully helped a technology company receive a government contract after its proposal was initially rejected.
- He reversed a potential debarment from government contracting for a construction services company that was under allegations of improper conduct.
- He successfully defended a business in a dispute involving alleged theft of proprietary materials and noncompete agreements. This was done through prosecution of evidentiary hearing and settlement negotiations, including overturning an injunction prohibiting competition.

AUTHOR

- Author, Practitioner Insights, "Government Employee May be qui tam Relator Under Federal but not State False Claims Act"
- Florida State Procurement Handbook
- Author, Chapter on Florida Procurement Law, American Bar Association, Section of Public Contract Law, "Guide to State Procurement, a 50-State Primer on Purchasing Laws, Processes and Procedures."

Founded 1910

Joseph M. Goldstein (*cont.*)

BACKGROUND

A former Assistant General Counsel for the federal government, Mr. Goldstein has experience in government contracting law and is well known within local and state procurement divisions. He has also been a part-time hearing officer for Broward County, presiding over bid protests and debarment hearings under the Broward County Procurement Code. He is a member of the City of Plantation Planning & Zoning Board as well.

Within the American Bar Association, he is the Florida State Co-Chairman for the Section of Public Contract Law, State and Local Contracting Division. He also acts as Vice-Chairman of the ABA's State and Local Procurement Division, as well as its State and Local Division Bid Protest Committee.

After graduating from law school, Mr. Goldstein served from 1989 to 1991 as a law clerk for Judge Patricia Fawsett on the U.S. District Court, Middle District of Florida. Following his clerkship, Mr. Goldstein fulfilled his military commitment arising from his ROTC scholarship. He was selected to serve in the Air Force General Counsel's Honors Program at the Pentagon, where he served on active duty from 1991 until 1994. There he represented the Air Force in more than 150 bid protests before the General Services Board of Contract Appeals and the General Accounting Office. He conducted legal reviews and negotiations with major defense contractors and assisted the Department of Justice in prosecuting fraud and qui tam suits. He later retired as a Captain and was awarded the Meritorious Service Medal.

Mr. Goldstein is a member of Leadership Broward and a member of its Board of Directors. He also formerly served as a Manager for the Plantation Eagles Soccer Club Athletic League.

The American Bar Association, Public Contract Law Section, has appointed Mr. Goldstein to the following leadership position: Vice-Chair of the State and Local Procurement Division for the 2012-2013 year.

Experienced in commercial and real estate litigation and Board Certified by The Florida Bar in Construction Law, Brent Bell aggressively pursues his clients' goals while maintaining a focus on cost effectiveness. His practice spans issues related to the construction industry and his clients include homebuilders, contractors, professionals and suppliers throughout the state. He is a partner in the firm's Orlando office.

As a partner in the Shutts & Bowen Construction Practice Group, Mr. Bell uses powerful legal strategies to pursue a cost-effective outcome for his clients. He counsels them with litigation avoidance and also handles disputes through negotiation, mediation, administrative proceedings and arbitration.

Whether a client's project is large or small, Mr. Bell represents the client's interests in court to, ultimately, protect the business overall. He handles cases involving construction defects, real estate disputes, lien and bond law, defective products and product liability claims. He also works on contracts, drafting and enforcement.

Mr. Bell is a frequent lecturer to audiences in the construction industry. He often speaks on bond and lien laws, construction defects, project delivery systems, the anatomy of construction lawsuits, the fundamentals of construction law and collections.

Suzanne M. Driscoll

Partner

200 East Broward Boulevard, Suite 2100
Fort Lauderdale, Florida 33301
sdriscoll@shutts.com
T: 954-847-3825

Founded 1910

Suzanne Driscoll is an attorney in the Eminent Domain Inverse Condemnation Practice Group. Having served as a senior attorney with both the Florida Department of Transportation and the Attorney General's Office, she has valuable experience in eminent domain law specifically and trial law in general. A litigator with more than 50 jury trials on record, Ms. Driscoll is based in the Fort Lauderdale office.

EXPERIENCE

Working with clients ranging from small, privately-owned businesses to national chains in oil, drugs and consumer products, Ms. Driscoll is committed to getting full compensation for clients whose property is being taken by the government. She works closely with clients to understand their goals and concerns, while acting to protect their property and access rights. She also applies her inside knowledge of the system to negotiate or file actions against the Florida Department of Transportation and other agencies.

Ms. Driscoll's practice also extends to appellate work, including a recent case that set important precedents for the industry. She successfully helped defend Tire Centers (a subsidiary of Michelin) in *FDOT v. Tire Centers LLC*. This case of first impression presented an issue that had never been specifically addressed by an appellate court. The 4th District Court of Appeals upheld an award of more than \$1.7 million in business damages to Tire Centers LLC, setting a precedent on whether a business' ability to relocate should offset the damages to which it would otherwise be entitled to from the condemning authority.

PROFESSIONAL INVOLVEMENT

A member of the Florida Bar Association's Eminent Domain Committee, Ms. Driscoll frequently speaks before various groups, including the Florida Bar Association, the Association of Eminent Domain Professionals and Continuing Legal Education (CLE) International. Based on the recent success with the case for Tire Centers LLC, she recently presented a paper on business damage mitigation for CLE International.

Suzanne Labrit

Partner

4301 West Boy Scout Boulevard, Suite 300
Tampa, Florida 33607
slabrit@shutts.com
T: 813-227-8113

Founded 1910

Suzanne Labrit has over 25 years of experience and focuses on appeals and complex commercial litigation for clients in various sectors, primarily financial services, healthcare and entertainment. She is a partner in the Litigation Department, based in the firm's Tampa office. Ms. Labrit holds the highest rating available from Martindale Hubbell (AV preeminent).

APPEALS

Ms. Labrit has extensive appellate experience and has handled well over a hundred appeals on diverse legal issues, including numerous arguments in the Florida Supreme Court, the Eleventh Circuit Court of Appeals and all the district courts of appeal in the State of Florida. She is experienced in all aspects of appellate advocacy and procedure, and routinely prepares briefs, jurisdictional petitions, extraordinary writs and related filings. She provides appellate support during trial and pretrial activities, assisting in development of legal theories and proper record establishment, as well as identifying and preserving error.

CLASS ACTIONS/COMMERCIAL LITIGATION

Ms. Labrit is well-versed in all aspects of class certification, merits determination and class action settlement/administration in state and federal courts. She is currently defending several putative class actions involving consumer-based claims in the insurance and finance industries.

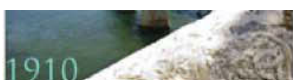

Ms. Labrit also counsels clients on issues that affect their ability to operate and compete fairly. She litigates contract disputes, whistleblower/false claims cases and has substantial experience with temporary restraining orders and injunctions to enforce/defend restrictive covenants and protect trade secrets.

HEALTHCARE LITIGATION

Ms. Labrit's healthcare background includes several years as a partner in the Miami office of McDermott, Will & Emery. A Shutts & Bowen partner since 2003, she represents diagnostic and treatment facilities, pharmacy companies, hospitals, payors, physicians, and group practices. She counsels clients in disputes over contract performance/termination, compliance and reimbursement issues, peer review, credentialing and related matters. She handles internal investigations, administrative proceedings, arbitrations, trials and appeals. From 2008 to 2010, Ms. Labrit served as national litigation coordinating counsel for an institutional pharmacy company; prior to that, she participated in the statewide defense of thousands of diet drug litigation cases for a pharmaceutical manufacturer.

ENTERTAINMENT LITIGATION

Entertainment-related litigation is another area of focus for Ms. Labrit. She represents motion picture companies, recording studios and publishers in enforcing and defending their copyrights, trademarks,

Lonnie L. Simpson

Partner

4301 West Boy Scout Boulevard, Suite 300
Tampa, Florida 33607
lsimpson@shutts.com
T: 813-227-8168

Founded 1910

Lonnie L. Simpson is a partner at Shutts & Bowen, resident in the firm's Tampa office. Mr. Simpson is a member of Shutts & Bowen's Business Litigation Group.

For over 20 years, Mr. Simpson has focused his complex commercial-dispute-resolution practice on financial markets, commercial and corporate finance, intellectual property and technology. Financial services providers from commercial and investment banks to individual broker-dealers have engaged Mr. Simpson for securities litigation matters in state and federal courts, before state and federal regulatory authorities and securities arbitration matters before self-regulatory organizations. Similarly, financial services providers, telecommunications service providers, product manufacturers and product distributors have engaged Mr. Simpson for litigation before the state and federal courts and arbitration before domestic and international private arbitration panels. Mr. Simpson's work has included appeals to the Florida District Courts of Appeal and the United States Court of Appeals for the Eleventh Circuit.

RELEVANT EXPERIENCE

- Prosecution and defense of customer and industry-related claims before FINRA Dispute Resolution across the United States, where the claims arbitrated varied from margin call and account liquidation issues to corporate and individual broker-dealer auction rate securities sales;
- Defense of a national corporate broker-dealer in registration revocation proceedings before a state administrative securities regulator, requiring in-depth internal investigation, legal analysis under an array of federal and state law, coordination of defense against similar claims across the United States;
- Prosecution and defense of Internet-related matters including domain name dispute proceedings before the World Intellectual Property Association, litigation under the Digital Millennium Copyright Act;
- Prosecution of copyright infringement and unfair competition matters on behalf of a national technical-education-provider and for computer software development companies;
- Advising national and international business entities as to information privacy, protections against unauthorized disclosure and remedial measures in the event of unauthorized disclosure;
- Advising national employers of skilled professionals as to compensation structures, trade secret protection, non-competition agreements preparation and enforcement;
- Prosecution of patent infringement and trademark infringement matters on behalf of an international product manufacturer and distributor;
- Defense of a domestic investment advisor, its principals, an offshore investment fund and its director against purported "death spiral" securities fraud and unlawful market manipulation claims asserted by a public company and arising out of a securities purchase agreement for future priced securities;

Founded 1910

- Defense of an individual investor, market-maker and CBOE seat-holder in defense against purported “naked short-selling, death spiral financing” securities fraud claims, civil conspiracy claims and claims based on state and federal securities regulation statutes;
- Direction and management of electronically-stored-data acquisition, analysis and production projects involving billions of records, along with supervision of staffs of attorney-reviewers across the United States to meet extremely short discovery deadlines;
- Defense of a multiple patent-owner in the general field of computer network communications against patent infringement claims and demand for preliminary injunctive relief in the federal courts;
- Defense of an international telecommunications service provider against improper provisioning, illegal billing, and deceptive trade practice claims before a Florida circuit court, requiring compilation and analysis of over one billion call-data-records and electronic communications over a five-year period to advise the client, to develop and execute litigation strategy and to comply with significant discovery requirements;
- On a pro bono basis, prosecution of claims under the International Child Abduction Remedies Act and the Hague Convention on Civil Aspects of International Child Abduction on behalf of parents of foreign-national children attempting to re-establish contact with their children following wrongful removal of the children from their home-countries.

Stephen Maher offers clients the experience of a skilled lawyer and the communications skills of an accomplished educator. He represents clients in cases that need in-depth analysis and strategic counsel. He practices in the Miami office.

EXPERIENCE

During more than 30 years in administrative law, litigation and appellate review, Mr. Maher gained experience as both a litigator and a legal educator. At Shutts & Bowen, he helps clients pursue their goals in court and before government agencies. He also serves as counsel in judicial reviews of litigation and administrative action by local, state and federal government.

Having handled cases that set significant precedents in Florida, especially in administrative law, Mr. Maher tackles issues in diverse areas. His work includes agency proceedings, including those before the Division of Administrative Hearings, as well as appearances before state and local boards and commissions, licensing, professional discipline, permitting, petitions to initiate rulemaking, rulemaking hearings, rule challenges, rule waivers and variances, general regulatory matters, and judicial review of agency actions.

An experienced litigator, Mr. Maher also counsels clients and represents them at trial, on appeal and in arbitration. He has decades of appellate experience and has appeared in courts at the state and federal levels. He has handled cases in every Florida District Court of Appeal, the Supreme Court of Florida, the United States Court of Appeals for the Fifth, Eighth, and Eleventh Circuit, and has filed for certiorari in the United States Supreme Court.

SIGNIFICANT APPELLATE DECISIONS

Mr. Maher has participated in a number of cases that have established significant legal precedents. These include:

Topol v. Polokoff, 88 So. 3d 341, 2012 WL 1605310 (Fla. 4th DCA 2011)
(Dissolution of marriage action was brought. After husband's death during the proceedings, one of husband's daughters sought declaratory decree that husband's redesignation of wife as the beneficiary of an individual retirement account (IRA), pursuant to an interlocutory order requiring him to do so, was invalid. The Circuit Court awarded summary judgment to daughter. Wife appealed. The Fourth District held that the trial court's interlocutory order, in the dissolution action, requiring husband to

Founded 1910

redesignate wife as the beneficiary of the IRA did not survive abatement of the dissolution action after his death, and as matter of first impression in the state, husband's redesignation of wife as the beneficiary pursuant to the interlocutory order did not survive abatement of the action.

Rainess v. In re: Estate of Machida, 81 So. 3d 504 (Fla. 3d DCA 2012) (Bank petitioned to reopen estate administration and brought as adversary proceeding interpleader action to determine rightful beneficiary of decedent's individual retirement account (IRA), and it named the decedent's widower and nephew as respondents. Widower and nephew filed cross-claims against one another. Widower filed counter-petition against bank for conversion, breach of fiduciary duty, negligence, and breach of contract. Following trial, the Circuit Court entered judgment awarding widower and nephew equal shares of the IRA and finding in favor of bank on widower's claims. Widower appealed and bank cross-appealed seeking attorney's fees. The Third District affirmed in part and reversed in part and held that the bank could interplead decedent's entire individual retirement account (IRA), that widower was not entitled to prejudgment interest, that an alleged photocopy of IRA simplifier was not admissible to the same extent as an original under best evidence rule, that that trial court's decision that decedent designated respondents as co-equal 50% beneficiaries of IRA was supported by substantial, competent evidence, that bank was not entitled to attorney fees and that widower was not entitled to post-judgment interest.

Rothman v. Marshall, 83 So. 3d 859 (Fla. 4th DCA 2011) (Co-trustee of trust benefiting ward filed objection to guardianship plan filed by guardian of ward's person 30 days after the plan was filed. The Circuit Court, which had already approved the plan, denied the objection as untimely. The Co-trustee appealed, claiming that the objection was timely because it had been filed within the 30 day period for filing of objections set out in the statute. The Fourth District reversed and remanded, holding that the objection was timely and the co-trustee was entitled to a hearing on her objection.

National City Bank v. Accent Marketing Associates, LLC, 82 So. 3d 1060 (Fla. 4th DCA 2011) (Contractor brought action against homeowners to foreclose a construction lien, and homeowners brought third-party complaint against bank for improperly disbursing money from a construction loan directly to contractor. After entry of default judgment against bank, the Fifteenth Judicial Circuit Court, Palm Beach County granted bank's motion to set aside the default on the basis of excusable neglect. Homeowners appealed, and the District Court of Appeal, 46 So.3d 1199, reversed and remanded. On remand, bank moved for a hearing on its alternative argument that it had a due process entitlement to a hearing on unliquidated damages. The Circuit Court, denied the motion and the Bank appealed. The Fourth District Court of Appeal reversed and remanded and held that: (1) the doctrine of res judicata did not bar trial court from considering bank's alternative argument on remand, and (2) the doctrine of law of the case did not bar trial court from considering bank's alternative argument on remand.)

Hock v. Legacy Bank of Florida, 82 So.3d 845 (Fla. 4th DCA 2011), (Mortgagee brought action to foreclose home equity mortgage, and mortgagors asserted affirmative defenses and a counterclaim, including an affirmative defense of rescission pursuant to the Truth in Lending Act (TILA). The Fifteenth Judicial Circuit Court, Palm Beach County, entered order requiring mortgagors to post a \$400,000 bond into the court registry as a condition of maintaining the rescission affirmative defense. Mortgagors sought review of that

Founded 1910

order by a petition for writ of certiorari. The Fourth District Court of Appeal refused to grant certiorari and held that mortgagors failed to show that trial court's order would cause irreparable harm not remediable on appeal.)

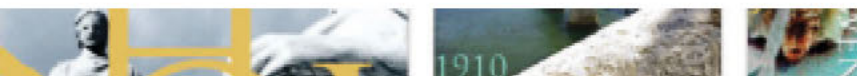

SR Acquisitions—Florida City, LLC v. San Remo Homes at Florida City, LLC, 78 So.2d 636 (Fla. 3d DCA 2011) (Mortgagee, which was formed by two of the three members of mortgagor in order to purchase the mortgage loan from the original lender, filed petition for writ of mandamus seeking to compel trial court in its underlying foreclosure action against mortgagor to set a foreclosure sale and deny any further requests for postponements of the date. The Third District held that mortgagee was entitled to writ of mandamus compelling trial court to rule on pending motion by non-party third member of mortgagor for relief from the foreclosure judgment.)

Schwartz v. Guardian Life Ins. Co. of America, 73 So. 3d 798 (Fla. 4th DCA 2011) (When insurer filed complaint for interpleader and declaratory relief, naming insured's widow and insured's sister as defendants, seeking to determine who was entitled to life insurance proceeds, insured's widow brought counterclaim for breach of contract. The Circuit Court denied the widow's motion for summary judgment, granted insurer's motion for summary judgment, and entered a final judgment. The widow appealed. The Fourth District reversed the judgment because it found a fact question, but, as a matter of first impression, determined that the facility of payment statute applies equally to claims that a change of beneficiary was obtained by fraud or by undue influence, and determined that a good faith requirement is not imputed to the application of the facility of payment statute and that the facility of payment statute does not impose a duty on insurer to investigate whether a change of owner or beneficiary has been procured by forgery.)

Diaz v. State, Agency for Health Care Administration, 65 So. 3d 78 (Fla. 3d DCA 2011) (Group homes for developmentally disabled Medicaid recipients. and the operator of the group homes, appealed from an order of the Agency for Health Care Administration (AHCA) dismissing, with prejudice, their petition for formal administrative hearing, and an order of the Agency for Persons with Disabilities (APD) denying their petition for formal administrative hearing, arising out of APD's termination without cause of its Medicaid provider agreement with operator, and AHCA's resulting termination of operator's Medicaid provider number. The Third District Court of Appeal held that: (1) no contractual provision or legal authority required resolution of the dispute to occur in a forum other than the circuit court, and (2) termination of the provider agreement without cause did not implicate operator's substantial interests, so as to warrant resolution of the dispute by administrative proceedings.)

Genovese v. Provident Life and Accident Insurance Company, 74 So. 3d 1064 (Fla. 2011) (Supreme Court of Florida, answering question certified to it by the Fourth District Court of Appeal, held that attorney-client privileged communications are not discoverable in an action by a first-party insured against insurer for bad faith).

PNC Bank v. Progressive Employer Services II, 55 So. 3d 655 (Fla. 4th DCA 2011) (Borrowers brought action against lender alleging that lender breached credit agreement entered into by the parties. The Circuit Court granted summary judgment in favor of borrowers. Lender appealed. The Fourth District

Founded 1910

reversed, holding that the lender did not breach the agreement, that the early termination fee provision did not constitute a liquidated damages provision, and that the trial court abused its discretion in denying lender's motion to amend to add a counterclaim.)

Bristol West Insurance Company v. MD Readers, Inc., 52 So. 3d 48 (Fla. 4th DCA 2010) (Provider of magnetic resonance imaging (MRI) services brought declaratory judgment action against automobile insurer, seeking a declaration as to the proper calculation for reimbursement of MRI services under personal injury protection (PIP) coverage. The Circuit Court certified class of MRI service providers who sought reimbursement from insurer, and Insurer appealed. The Fourth District held that the provider was not required to serve insurer with pre-suit notice, and thus its failure to do so did not disqualify it from serving as class representative. However, and the concurring Judge noted "since this is already 2010, any subsequently-filed cause of action for benefits due, either pursuant to contract or statute, would be barred by relevant statutes of limitations. See §§ 95.11(2)(b) and (3)(f), Fla. Stat. Therefore, I cannot envision that a declaration of the proper calculations of fees for services rendered in 2004 and 2005 serves any useful purpose, because the class's rights are no longer affected by a dispute, see § 86.021, Fla. Stat. (2010), as the time has long since passed for making a claim for benefits under the statute and/or contract.").

Vidal v. SunTrust Bank, 41 So. 3d 401 (Fla. 4th DCA 2010) (reversing order denying Vidal's motion to quash service and holding, as matter of first impression, that process server's failure to note time of service of bank's complaint on copy of complaint that was served on debtor rendered service of complaint defective, and that bank's re-service of summons and complaint on debtor while debtor's appeal from denial of motion to quash was pending did not render debtor's appeal moot).

Miami-Dade County v. Concrete Structures, 36 So. 3d 762 (Fla. 3^d DCA 2010) (The Third District affirmed, concluding that the trial court did not abuse its discretion and properly considered the purpose and underlying intent of the Settlement Agreement, which was to bring CSI into compliance with federal, state and local permitting requirements within a reasonable period, not to put them out of business.)

World Fuel Corp. v. Geithner, 568 F.3d 1345 (11th Cir. 2009) (Dismissing an appeal by the Treasury Secretary and others from a remand order entered by the District Court on the basis that it was not reviewable. The District Court had, over the government's objections, remanded the matter to the Office of Foreign Assets Control to reconsider an earlier decision denying the client a license).

Board of Medicine v. Vazquez, 11 So.3d 994 (Fla. 1st DCA 2009) (Affirming, in all respects, an order of the Division of Administrative Hearings Administrative Law Judge determining that, under the provisions of the Florida Administrative Procedure Act, a Board of Medicine Order could not be relied upon because it constituted an unpromulgated rule).

CNL Resort Hotel, L.P. v. City of Doral, 991 So.2d 417 (Fla. 3^d DCA 2008)(In an interlocutory administrative appeal, Third District reversed an order of the Division of Administrative Hearings that struck allegations of reverse spot planning and special use planning from a challenge to a proposed comprehensive plan, finding that such allegations were not allegations of a taking of property without due process of law and

Founded 1910

were thus properly raised before the Division, and noting that: "Private property rights have long been viewed as sacrosanct and fundamentally immune from government interference.")

Merrill Lynch & Co. Inc., v. Valat International Holdings, Ltd., 987 So.2d 703 (Fla. 3d DCA 2008) (On appeal from a judgment and an order refusing to vacate the judgment entered against a garnishee, Third District vacated a substantial default judgment and held that the judgment creditor in the garnishment action who obtained a default on writs of garnishment served on the garnishee "accepted the risks associated with being limited to the allegations contained on the faces of the writs" and, since the writs did not mention the corporation that the garnishor subsequently contended was connected to debtors, default judgment was improperly entered against the garnishee based on its failure to withhold funds held in the corporation's name.)

Weisser v. PNC Bank, 967 So.2d 327 (Fla. 3d DCA 2007) (Third District affirmed order dismissing action by borrower based upon improper venue where mandatory forum selection clauses in loan application and in subsequent interest rate lock agreement between borrower and lender selected different states as the exclusive forum for resolution of disputes between the parties. The fact that each agreement selected a different state did not create an ambiguity rendering the forum selection clauses permissive rather than mandatory where interest rate lock agreement provided that nothing in it could modify the loan application, making the conflicting forum selection clause in such interest rate lock agreement unenforceable and of no effect.)

Coastal Fuels Marketing, Inc. v. Canaveral Port Authority, 962 So.2d 942 (Fla. 5th DCA 2007) (Fifth District determined that the Canaveral Port Authority is not an agency as that term is defined in the Florida Administrative Procedure Act and that it therefore had no jurisdiction to review an Authority decision pursuant to that Act, so it transferred the case to circuit court for review.)

Simmons v. State, Agency for Health Care Administration, 950 So.2d 431 (Fla. 1st DCA 2007) (The First District issued a writ of mandamus, as requested by client, and held that a state agency has a duty to enter an order granting or denying an administrative petition filed under the Florida Administrative Procedure Act, and may not merely send a letter refusing to entertain the petition).

5220 Biscayne Blvd., LLC v. Stebbins, 937 So.2d 1189 (Fla. 3d DCA 2006) (prohibition raising issue of first impression concerning the meaning of 30-day time limit in Section 113.3215(3), Florida Statutes).

Blinco v. Green Tree Servicing LLC, 400 F.3d 1308 (11th Cir. 2005) (United States Court of Appeals held that arbitration clause was binding on a non-signatory of the arbitration agreement under the particular facts of the case, and ordered arbitration, as requested by client).

Blinco v. Green Tree Servicing LLC, 366 F.3d 1249 (11th Cir. 2004) (United States Court of Appeals held, as a matter of first impression, that since appeal was not frivolous, appellant seeking arbitration that had been denied below was entitled to a stay of the district court proceedings below, as requested by client, pending resolution of the appeal from that denial).

Founded 1910

Barfield v. Department of Health, 805 So.2d 1108 (Fla. 1st DCA 2001)(First District clarified the substantive jurisdiction limitation on board action within the Department of Health. The case was voted the second most important Florida administrative law case in the last ten years at a recent Pat Dore Administrative Law Conference).

Plante v. Department of Business and Professional Regulation, 716 So.2d 790 (Fla. 4th DCA 1998)(Fourth District reversed imposition of professional discipline by a state agency that had refused to consider its own precedents before imposing discipline, as requested by client, and remanded for reconsideration to state agency to consider agencies own precedents before imposing discipline).

Arias v. State, Department of Business and Professional Regulation, 710 So.2d 655 (Fla. 3d DCA 1998) (Third District held that the state agency's failure to adopt penalty guidelines as required by Legislature required reversal of a professional discipline penalty imposed in the absence of such guidelines, and Court allowed no remand for the imposition of any penalty, as requested by client).

Son v. Department of Professional Regulation, 608 So.2d 75 (Fla. 3d DCA 1992)(Third District allowed licensee to avoid professional discipline by rebutting presumption of guilt raised by plea of nolo contendere in criminal case, as requested by client).

McArthur v. Firestone, 817 F.2d 1548 (11th Cir. 1987) (rejecting mootness of challenge to unconstitutionality of election disclosure requirements as applied).

State v. Powell, 497 So.2d 1188 (Fla. 1986) (deciding constitutionality of Section 732.9185, Florida Statutes).

Guerra v. Department of Labor and Employment Security, 427 So.2d 1098 (Fla. 3d DCA 1983)(Third District required rulemaking by a state agency to correct procedurally deficient agency practice rules, as client requested).

Lamm v. Chapman, 413 So.2d 749 (Fla. 1982) (finding that Sections 409.2561(1)-(3) do not infringe on the constitutional right to be free from imprisonment for debt).

Curtis v. Taylor, 625 F.2d 645 *on rehearing*, 648 F.2d 946 (5th Cir. 1980) (determining adequacy of remedies under Florida Administrative Procedure Act and ruling on exhaustion and abstention issues).

Garrido v. State, Department of Health and Rehabilitative Services, 386 So.2d 811 (Fla. 1st DCA 1980)(First District required state agency to hold fact finding proceedings on petition to initiate rulemaking where agency disputed material facts in petition, as client requested).

Williams v. Florida Department of Commerce, 374 So.2d 1158 (Fla. 3d DCA 1979)(Third District found that refusal to issue subpoenas in state administrative proceedings was reversible error, as client requested).

Founded 1910

Stephen T. Maher (cont.)

State, Department of Health and Rehabilitative Services v. Florida Project Directors, 368 So.2d 954 (Fla. 1st DCA 1979)(First District affirmed proposed rule challenge's invalidation of state agency rule incorporating forms by reference only, as client requested).

Balino v. Department of Health and Rehabilitative Services, 362 So.2d 21 (Fla. 1st DCA 1978)(First District provided an early interpretation of Florida Administrative Procedure Act participation requirements in state agency rulemaking proceedings).

Balino v. Department of Health and Rehabilitative Services, 348 So.2d 349 (Fla. 1st DCA 1977)(First District imposed the burden of proof in state administrative proceedings under new Florida Administrative Procedure Act that was requested by clients).

LEGAL WRITING

Mr. Maher has written a variety of law review articles centered in four areas, Clinical Legal Education, lawyers and lawyering, Florida Administrative Law and other topics in Florida law. These articles include:

- *Beyond Notice and Comment: An Examination of the Rulemaking Process in Florida*, Virginia Bar Association News Journal, July, 2002 at 12, 14-17;
- *How the Glitch Stole Christmas: The 1997 Amendments to the Florida Administrative Procedure Act*, 25 FLA. ST. U. L. REV. 235-72 (1998);
- *The Death of Rules: How Politics is Suffocating Florida*, 8 ST. THOMAS L. REV. 313-347 (1996);
- *Lawfutures, or, Will You Still Need Me, Will You Still Feed Me, When I'm Sixty-Four*, 1 U. RICH. J.L. & TECH.6 (April, 1995) (essay in the first issue of the first law journal to be published entirely on the Internet);
- *Five Easy Pieces on Changing the Florida Administrative Procedure Act: An Introduction to the Symposium*, 22 FLA. ST. U. L. REV. 243-245 (1994)(and organized the Symposium on the Florida Administrative Procedure Act in that issue);
- *Getting Into The Act*, 22 FLA. ST. U. L. REV. 277-306 (1994);
- *The Florida Cabinet: Is it Time for Remodeling?* 18 NOVA L. REV. 1123-1132 (1994);
- *Emergency Decisionmaking During the State of Florida's Response to Hurricane Andrew*, 17 NOVA L. REV. 1009-1027 (1993);
- *The 1991 and 1992 Amendments to the Florida Administrative Procedure Act*, 20 FLA. ST.U.L. REV. 367-439 (1992);
- *Clinical Legal Education in the Age of Unreason*, 40 BUFF. L. REV. 809-834 (1992);
- *No Easy Walk to Freedom*, 1 DIST. COL. L. REV. 243 267 (1992);
- Patricia Ann Dore and *The Florida Administrative Procedure Act*, 19 FLA. ST. U. L. REV. 951 956 (1992);
- *The Seventh Administrative Law Conference Chairman's Introduction To the Symposium Issue*, 18 FLA. ST. U. L. REV. 607 616 (1991)(and organized symposium);
- *We're No Angels: Rulemaking and Judicial Review in Florida*, 18 FLA. ST. U. L. REV. 767 853 (1991);
- *Clinical Legal Education — Past, Present and Future*, THE FLORIDA BAR JOURNAL, July/August 1991, at 28 (and organized Journal theme issue on clinical legal education and served as guest editor);

Stephen T. Maher (cont.)

- *The Praise of Folly: A Defense of Practice Supervision in Clinical Legal Education*, 69 U. NEB. L. REV. 537 663 (1990);
- *A Strategy For Increasing the Mental and Emotional Fitness of Bar Applicants*, 23 IND. L. REV. 821 861 (1990)(co-authored with Dr. Lori Blum).

SPEAKING ENGAGEMENTS

Mr. Maher has lectured on administrative law and other legal issues for dozens of years. He has appeared before groups including various bar associations, the International Legislative Drafting Institute at Tulane Law School, the National Association of Secretaries of State, and Price Waterhouse Legal Tech (in Miami, New York, Chicago, Los Angeles, Atlanta and Washington).

OTHER PROFESSIONAL ACTIVITIES

Mr. Maher's international experience has included trips to South Africa after the end of apartheid as part of a delegation from the International Legislative Drafting Institute. There he lectured on administrative law and the Internet and consulted on proposed changes to South African law as that country worked to create its first administrative procedure act.

In Florida, Mr. Maher has been active in the organized bar. He served as Chair of the Administrative Law Section of The Florida Bar and as Chair of the Council of Sections of The Florida Bar. He also served as a director and member of the Executive Committee of The Florida Bar Foundation, where he is a Life Member.

RECOGNITION

- Martindale Hubbell A-V Rated
- *Florida Super Lawyers*, selected for inclusion in Appellate Law 2006, 2007, 2008, 2009, 2010, 2011, 2012

BACKGROUND

Before joining the firm, Mr. Maher was a full-time faculty member at the University of Miami Law School. There he taught a variety of subjects, directed the school's Clinical Program and coached the school's moot court teams. Before that, he practiced law with a national law firm.

EXPERIENCE IN LEGAL TRAINING

Mr. Maher used his experience in higher education to train lawyers throughout the country on discovery and trial practice. Through work as a consultant with the Practising Law Institute, he trained lawyers in-house at large law firms, using courses and materials he designed. He trained others on trial evidence, tactics and skills at the U.S. Court of Appeals for the Third Circuit Conference, the New York Legal Aid Society, the University of Pennsylvania Law School Center on Professionalism, and George Washington University, using interactive training materials developed at Stanford Law School.

Dear Jeff:

The email thread below refers to the SECOND DRAFT that was provided to Mary Ellen Klas. A copy of the SECOND DRAFT is attached.

The final version will include many changes. We expect to receive a copy sometime today and to post it at [Gaming Study webpage](#) as soon as it is delivered.

Sincerely,

John Guthrie

Katie, Ryan and LaQuisha --

Please provide me with an electronic copy of the draft report to the Legislature from Spectrum Gaming Group related to the following: [Part I.A. Assessment of the Florida gaming industry and its economic effects](#)

Since your staff is in receipt of this draft, it should be possible to forward me a copy by the end of the day today. I do not plan to post or publish the report, but will refer to it generally for a story on the gaming industry for the weekend. I plan to write about the report only when the final draft is submitted on July 1.

Thank you,
~ Mary Ellen

Executive Summary

Introduction

The Florida Legislature commissioned Spectrum Gaming Group to undertake a three-party study of legalized gambling, focusing on its economic effects (including the social costs). This report, the first in the series, is divided into two primary parts:

- The first provides overviews of many aspects of gambling generally, both nationally and as they pertain to Florida (as relevant). Because this part consists of summaries existing data and research, we have not attempted to summarize the content in this Executive Summary.
- The second provides the economic impacts of Florida's existing gambling industry as it stands now – including the Florida Lottery, the pari-mutuel industry including slot machines and cardrooms, and Indian casinos. We provide the key performance data by sector and, working in concert with project partner Regional Economic Models Inc. ("REMI"), we provide the economic and fiscal impacts of these gambling sectors. The key findings are provided below in this Executive Summary.

This report is the product of a far-reaching scope of research and analysis. In many respects, it is a collection of several reports. We have provided a detailed Table of Contents that allows readers to easily find the topics of greatest interest to them.

While reading this report, it is important that readers understand the Legislature's instructions:

- Spectrum will not make recommendations in any of its reports. The Legislature commissioned Spectrum to undertake an economic and academic study for the purpose of educating the state's policymakers and other stakeholders so that they may make enlightened decisions regarding the future of gambling in their state.
- This is the first of three reports due to the Legislature. The two additional reports will be delivered by Spectrum on or before October 1, 2013, are as follows: Part 1, Section B: *Assessment of potential changes and economic effects*; and Part 2: *Statistical relationships between gaming and economic variables for communities*.
- It is also important to note that Spectrum was tasked with analyzing the social costs of associated with gambling in the second report. While this initial report provides a discussion of the many social costs of gambling, in Part 1B, as part of our next report, we will determine the costs as they relate to expanded gambling in Florida.

Key Gambling Sector Findings

First, we review the key performance data for each of Florida's three primary gambling sectors – pari-mutuel (including the subsectors of slots, cardrooms and pari-mutuel wagering) lottery, and Indian casinos.

Pari-Mutuel

Three distinct types of gambling take place under the umbrella of Florida's pari-mutuel industry, only one of which actually involves pari-mutuel wagering. Because state-regulated slot machines and cardrooms must be coupled with a pari-mutuel license, these activities are offered only at racetracks and jai alai frontons. All three types of gambling are regulated by the Department of Pari-Mutuel Wagering, a unit of the Business & Professional Regulation.

Racetrack Slots

- The racetrack slot industry, which is legally restricted to Broward and Miami-Dade counties, has steadily grown since inception in 2006. The six racinos in 2012 reported gross slot revenue of \$489.2 million and are set for continued growth with the opening of slots at Hialeah Park in summer 2013.
- The racinos in 2012 had 3,319 employees and generated \$149.8 million in taxes directly from slot revenue. Gross slot revenue is taxed at 35 percent.

Cardrooms

- Twenty-four pari-mutuel facilities operate cardrooms, which are restricted to poker and dominoes (which is rarely offered or played). Cardrooms last year generated \$131 million gross receipts and paid a tax of \$13.1 million.
- Cardrooms pay a state tax of 10 percent on gross receipts. Additionally, at jai alai and greyhound facilities 4 percent of cardroom gross receipts are used to fund purses and player awards; the figure is 50 percent at horse race facilities.

Pari-Mutuel Wagering

Most pari-mutuel facilities lose money on their pari-mutuel operations and need cardroom and/or casino revenue to subsidize those losses.

It is important to note that the total handle numbers cited below are understated because the Department of Pari-Mutuel Wagering does not collect data on out-of-state generated handle, which is the single largest component of handle.

- *Greyhound racing:* Total handle for the 13 facilities that ran greyhound racing fell from \$933.8 million in FY 1990 to \$265.4 million in FY 2012, a decline of 67 percent – mirroring the decline nationally. The number of Florida greyhound performances (a racing card of at least eight races) fell from 3,853 to 3,636, a decline of only 6

SECOND DRAFT - CONFIDENTIAL

percent. One of the reasons for the relatively small decline is because of the 90 percent rule: Operators with cardrooms are required to conduct at least 90 percent of the live performances that were held the year before their cardrooms opened, which for many of them was 1996. Although attendance has declined precipitously since 1990, reliable figures are unavailable because most tracks no longer charge for admission.

- *Thoroughbred racing:* Thoroughbred racing is the dominant pari-mutuel sector in Florida, with the three tracks accounting for 61 percent of total Florida handle in FY 2012. A Florida thoroughbred operator must run a minimum of 40 performances a year. From FY 1990 to FY 2012, Florida thoroughbred performances fell from 348 to 327, a decline of 6 percent; paid attendance fell from 653,206 to 97,738, a decline of 85 percent. Total handle in FY 2012 was \$530.7 million and live handle was \$78.6 million; both figures are in decline, although they have somewhat stabilized since slots were introduced at two of the tracks. Purses increased from \$78.1 million to \$81.1 million, a rise of 16 percent. The three tracks generated a combined operating profit of \$13 million for FY 2012. Much of the profit, \$10.6 million, came from pari-mutuel operations, with the rest from slots and/or cardrooms.
- *Harness racing:* Florida's sole harness track, Isle Casino and Racing at Pompano, accounted for 5 percent of total Florida handle in FY 2012. The Pompano track must run at least 140 performances a year but it can seek a one-time, 10 percent reduction from the 140-performance minimum. Attendance has declined such that Isle Pompano no longer charges admission and attendance figures are not kept. Total handle in FY 2012 was \$49.5 million and live handle was \$4.4 million; both figures are about the same as the year earlier.
- *Quarter horse racing:* Quarter horse racing returned to Florida in November 2009 at Hialeah Park after an 18-year absence. Quarter horse racing accounted for less than 1 percent of total Florida handle in FY 2012. Quarter horse racing had 76 performances in FY 2012. It generated a live handle of \$1.7 million, total handle of \$2.1 million and purses of \$3.8 million. Almost all of the traditional quarter horse activity was at Hialeah, where the operator subsidized purses as part of its contract with horsemen.
- *Jai alai:* Of all the pari-mutuel sectors, jai alai has sustained the steepest cuts in attendance and popularity. Since 1990, total handle has fallen 91 percent, live handle 96 percent, player awards 63 percent and performances, 63 percent. In 1990, 3.9 million people paid to watch the sport. In 2012, total paid attendance was 9,068. From pari-mutuel operations, the jai alai sector sustained an operating loss of \$14 million. Their cardrooms were able to generate an operating profit of \$1 million. Miami Jai Alai had the highest handle at \$6.6 million in FY 2012.

Lottery

SECOND DRAFT - CONFIDENTIAL

The Florida Lottery reported FY 2012 sales of a record \$4.45 billion, up 11 percent over the previous year, ranking third in the nation in total sales revenue (FY 2011), behind New York and Massachusetts. On a per-capital basis, Lottery sales were \$233, also a state record.

Since its inception in 1988, the Lottery has provided a total of \$24 billion to the Educational Enhancement Trust Fund (“EETF”). In the past fiscal year the EETF has allocated \$317 million for construction bonds, provided \$271 million for public school finding, \$130 million for state colleges, and \$254 million for state universities. Since 1997 the Florida Lottery has also provided scholarships to more than 600,000 students through the Bright Futures Scholarship Program, funded primarily through Lottery financial transfers. Lottery tickets are sold at 13,300 retail locations throughout the state.

Indian Casinos

The Seminole Tribe of Florida operates six casinos and the Miccosukee Tribe operates one casino. The Seminole Tribe advised Spectrum that in 2012 its gaming facilities employed 9,562 total employees, or 7,725 full-time-equivalent employees. Another 4,000 are employed by Seminole casino tenants, such as retailers who operate on-site outlets. The Miccosukee Tribe, declined to participate in this study, though a Miccosukee Gaming & Resort employee advised Spectrum that its gaming property employs “over 800.”

The Seminole Gaming enterprise generated \$1.96 billion in GGR in 2012 at its six properties, and we estimate statewide GGR at Indian casinos \$2.2 billion.

At least two other Indian tribes/nations are trying to operate casinos:

- The Poarch Band of Creek Indians, based in Atmore, AL, has land in Escambia County, which is held in trust by the US government, and also owns, or has options to own, or agreements to control 10 pari-mutuel permits along the Interstate 10 corridor between Pensacola and Jacksonville. It is seeking to negotiate an agreement, which could include revenue-sharing, with the State to operate Class II gaming.
- For the past decade the Muscogee Nation of Florida has been pursuing federal recognition by act of Congress in order to initiate gaming operations as a means of economic development. Tribal landholdings are well positioned to offer casino gaming in the Florida panhandle.

Fiscal Impacts

Our analysis examines the total economic and fiscal impacts of the gambling industry by subsectors in 2012. The results show that there are, or would be:

- Racinos/Pari-mutuels:
 - 4,953 direct racinos/pari-mutuels jobs in 2012.

SECOND DRAFT - CONFIDENTIAL

- These direct jobs support an additional 1,062 indirect jobs.
- The induced jobs impact is minus-1,399; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
- The total economic activities from racinos/pari-mutuels generated \$194 million in tax revenue for Florida.
- Lottery:
 - 394 direct lottery jobs in 2012.
 - These direct jobs support an additional 8,277 indirect jobs.
 - The induced jobs impact is minus-14,960; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Households have a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery.
 - The total economic activities from the lottery generated \$1.9 billion in tax revenue for Florida.
- Retail Lottery:
 - 39,900 direct retail lottery jobs in 2012.
 - These direct jobs support an additional 4,206 indirect jobs and 14,042 induced jobs
 - The total economic activities from the retail lottery generated \$124 million in tax revenue for Florida.
- Native American Casinos:
 - 10,387 direct Native American casinos jobs in 2012.
 - These direct jobs support an additional 3,646 indirect jobs.
 - The induced jobs impact is minus-7,506; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities from the Native American casinos generated \$238 million in tax revenue for Florida.
- Floridian Out-of-State Gaming
 - No direct employment because we did not use an employment variable to model the reallocation of the gaming spending.
 - 693 indirect jobs and 3,143 induced jobs.
 - The total economic activities from the out-of-state gaming spending generated \$15.4 million in tax revenue for Florida.

The third section (“Assessment of Economic, Fiscal Impacts Over Time”) evaluates the total economic and fiscal impacts of the gambling industry by subsectors over between 2012 and 2060 under three different economic growth assumptions. Under normal economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,268 indirect jobs.
 - The average annual induced jobs impact is minus-3,611; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$561 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 12,510 indirect jobs.
 - The average annual induced jobs impact is minus-4,151; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities generated \$3.7 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,775 indirect jobs and 27,674 induced jobs.
 - The total economic activities generated an annual average \$590 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,952 indirect jobs.
 - The average annual induced jobs impact is minus-8,852; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$280 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 455 indirect jobs and 2,239 induced jobs.
 - The total economic activities generated an annual average \$27.1 million in tax revenue for Florida between 2012 and 2060.

Under slower economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,397 indirect jobs.
 - The average annual induced jobs impact is minus-3,030; There is a negative change in induced jobs primarily because for every dollar

SECOND DRAFT - CONFIDENTIAL

Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.

- The total economic activities generated an annual average \$544 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 13,645 indirect jobs and 147 induced jobs.
 - The total economic activities generated an annual average \$3.5 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 10,148 indirect jobs and 29,918 induced jobs.
 - The total economic activities generated an annual average \$581 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 4,429 indirect jobs.
 - The average annual induced jobs impact is minus-7,918; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$283 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 488 indirect jobs and 2,334 induced jobs.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities generated \$28.6 billion in tax revenue for Florida between 2012 and 2060.

Under stronger economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,159 indirect jobs.
 - The average annual induced jobs impact is minus-4,119; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$534 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 11,525 indirect jobs.
 - The average annual induced jobs impact is minus-7,778; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.
 - The total economic activities generated an annual average \$3.6 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,418 indirect jobs and 26,330 induced jobs.
 - The total economic activities generated an annual average \$551 million in tax revenue for Florida between 2012 and 2060.

SECOND DRAFT - CONFIDENTIAL

- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,542 indirect jobs.
 - The average annual induced jobs impact is minus-9,660; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$257 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 428 indirect jobs and 2,157 induced jobs.
 - The total economic activities generated \$24.5 million in tax revenue for Florida between 2012 and 2060.

I. Introduction

The study of gambling's economic and social impacts is a never-ending process that will only grow more critical over time: Some form of gambling is legal in 48 states, and debates over gambling expansion seem to be an annual event at statehouses across the country. Moreover, the effective legalization of Internet gambling at the state level has magnified such debates. At the same time, illegal and/or unregulated gambling is proliferating through such channels as so-called Internet cafes, gray-market electronic gaming devices, skill games, amusement games, and online games.

There is no debating that most Americans like to gamble. Some 53 percent of American adults played the lottery last year and 32 percent gambled in a casino.¹ As gambling historian David G. Schwartz notes, the activity is nearly as old as civilization itself. In America, colonial legislatures authorized 157 lotteries from the 1740s through 1776 to assist governments and other institutions.²

Legalized gambling as we know it today is relatively young. The first legal casinos of the modern era opened in Nevada in 1931. The country's first lottery, in New Hampshire, began in 1964. Betting on horse races has a longer history, dating to colonial days in the US but grew rapidly after the Civil War.³

Although popular in one form or another with most Americans, gambling remains controversial. On the one hand, regulated gambling can provide substantial revenues to governments and, in many markets, a substantial number of direct, indirect and inducted jobs; on the other hand, it can lead to compulsions that result in financial, familial and mental-health costs, as well as governmental costs ranging from gambling-addiction treatment centers to additional law enforcement. The arguments on both sides are strong – and usually impassioned.

This report will not resolve the debate over the merits of legalized gambling, nor is it the assignment of Spectrum Gaming Group to attempt to do so (nor has the Florida Legislature tasked Spectrum with recommending any course of action). Rather, the Legislature commissioned an economic and academic study for the purpose of educating the state's policymakers and other stakeholders so that they may make enlightened decisions regarding the future of gambling in their state.

This analysis relies on the experience of Spectrum professionals in various disciplines, many of whom have studied this issue for decades, and is supported by additional research and interviews with numerous stakeholders in Florida who care deeply about this issue, and about the

future of their state. Our experience is tempered and governed by certain observations and principles:

- The gaming industry is uniquely intertwined with government, arguably as much as any other industry, particularly any industry that is dependent on discretionary spending. Government can legislate gaming into – or out of – existence, which underscores this relationship.
- Gaming is a privilege granted to those who meet affirmative obligations for demonstrating their good character, honesty and integrity. That principle is largely universal, and is shared by federal, state and tribal governments.
- Governments not only authorize legalized gambling, but often grant regional monopolies for operators. The corollary to that is that operators have a responsibility to operate in the public interest.
- With proper planning and coordination, the public and private sectors are more likely to identify common goals, and to achieve those goals.

Methodology

The State of Florida on April 16, 2013, retained Spectrum Gaming Group (“Spectrum,” “we” or “our”) to complete a two-party study of the state’s gambling industry, pursuant to Invitation to Negotiate #859 (“the ITN”).⁴ This report is Part 1, Section A: *Assessment of the Florida gaming industry and its economic effects*. Two additional reports as part of this engagement will be delivered by Spectrum to the Legislature on or before October 1, 2013: Part 1, Section B: *Assessment of potential changes and economic effects*; and Part 2: *Statistical relationships between gaming and economic variables for communities*.

Following is the assigned scope of this report, as published in the ITN:

A. Assessment of the Florida gaming industry and its economic effects.

1. An assessment of gambling generally, including:
 - a. A general description of gambling in terms of popularity, profitability, regulatory considerations, and cost mitigation, including not only industries currently operating in Florida but also other gambling activities such as table games, Internet poker, destination resort casinos, and sports betting.
 - b. A general description of gambling regulatory schemes, including: State-operated, consolidated agency oversight, multi-agency oversight, and the use of local and state commissions; Authorizing and revocation mechanisms; Taxation schemes.
 - c. A general description of trends and best practices in governance and regulation of gambling activities.

⁴ See http://www.leg.state.fl.us/GamingStudy/docs/ITN_859_Invitation.pdf.

SECOND DRAFT - CONFIDENTIAL

- d. A general description of gambling as a public funding source, including: Comparison of states' reliance on and uses of gambling as a public funding source; Reliability and predictability of gambling revenues; Direct and indirect costs to the state.
 - e. A general description of gambling impacts, including: Social, criminal, and personal; Short- and long-term fiscal.
2. An economic assessment of the structure and performance of Florida's existing gaming industry, including:
 - a. An analysis of gaming subsectors and their size and economic importance.
 - b. A description of the direct, indirect, and induced components of the economic and fiscal impact of each of the subsectors. Impacts associated with facility construction should be distinguished from impacts associated with ongoing operation of a facility.
 - c. An assessment of the changes in those impacts over time until the present day, historically, and projections for the future.

In each section of the report, we provide the relevant ITN language (highlighted in gray) to provide an understanding of the scope of research with which Spectrum was tasked for this first report.

Our task was to study the impacts of legalized gambling. Like many other states, Florida had (and perhaps still has) illegal and/or unregulated gaming in the form of Internet cafes and slot-like arcade games. While we discuss the nature and issues involving such gambling, it is beyond the scope of this study to examine its performance and impacts.

Many of the topics covered herein are worthy of their own reports, but the broad, multi-subject scope of this report – and the directive of providing “an assessment of gambling generally” – limits the extent to which we could reasonably treat such topics. It is important to note, however, that in-depth analysis of several topics will be provided in the second and third reports of Spectrum's engagement. Further, our footnotes herein provide dozens of excellent document references – many available online, with the URLs included – where readers can find more information about these important topics.

Spectrum employed 16 project professionals for this report, all of whom are staff experts or associates, assisted by support staff as needed. We relied on publicly available data, as well as data requested from gambling operators and government sources, interviews with various Florida stakeholders (both in person, by telephone and by email), site visits, existing documents and research reports, and our own expertise in having studied gambling for more than three decades.

For the second part of this report, which assesses the economic structure of Florida's existing gaming industry, we teamed with Regional Economic Models Inc., a globally respected economic modeling firm based in Amherst, MA, that works with numerous state governments, including the State of Florida. REMI's goal in this report was to establish, as best the data would allow, a baseline of the economic contributions of the existing gaming industry in Florida. To this end, REMI relied on its Tax-PI model, data from the US Census Bureau, and data from the

SECOND DRAFT - CONFIDENTIAL

other project team members. REMI used each source of data to compliment the others in order to produce the best picture the data would support. Once a base year was established, REMI used an index of the growth in the relevant industry sectors in Tax-PI to forecast growth for the gaming industry into the future. With this baseline established, REMI then conducted a counterfactual study that removed the existing gaming industry from the economy in order to calculate its contribution.

II. General Assessment of Gambling

A general description of gambling in terms of popularity, profitability, regulatory considerations, and cost mitigation, including not only industries currently operating in Florida but also other gambling activities such as table games, Internet poker, destination resort casinos, and sports betting.

A. Growth and Evolution of Gambling in United States

Florida is not an emerging gambling state. In terms of revenue, employment, number of gaming locations and other important measures, it already is a major gambling state, with a wide array of options. Florida is arguably a microcosm of US gaming, with all of the forces that are shaping the industry in other states at play here. Absent a plan for growth, these forces will continue unabated in shaping the industry in both Florida and elsewhere. Moreover, the presence of such forces will also constrict the ability of lawmakers to chart the future of gaming. These forces can be segmented into the following broad areas:

- **Legal:** Within the bounds of the state Constitution and federal law, the Florida Legislature has significant ability to craft its own laws and policies in areas ranging from tax rates to governing Internet cafes, among many examples. The boundaries that limit legislative authority, however, are significant. Florida is bound by a compact with the Seminole Tribe of Florida, and that compact is, in turn, bound by federal laws and regulations, most notably by the Indian Gaming Regulatory Act (“IGRA”). Other states, such as Connecticut, have found themselves in a similar position, having learned that compacts can represent missed opportunities that are difficult to revise after the fact. The same holds true for constitutional amendments.
- **Market:** As with any gaming jurisdiction, the future size of the gaming industry will be partly dependent on the size of the resident population, as well as on the size of the existing and future tourism markets. Those markets will, in turn, be dependent on the number of gaming and other entertainment options, both inside and outside Florida. As gaming expands within the home markets of Florida visitors, as well as within markets that compete for those visits, it will impact the growth of gaming in Florida, as well as the ability of lawmakers to guide that growth.
- **Historic:** The two federally recognized tribes in Florida lay claim to a longstanding history of gaming in Florida, as well as other rights and privileges granted to sovereign governments. Historic claims to sovereignty are at the root of IGRA and various court decisions that have supported and bolstered the concept of sovereignty and gaming rights. At the same time, the pari-mutuel industry – in particular, horse racing – has a long history within the state as well, and extends into various geographic regions and

SECOND DRAFT - CONFIDENTIAL

economic interests, from breeding and training to racing. This factor is arguably more acute in Florida, but is not unprecedented.

- **Political:** Among various private industries, gaming is uniquely dependent on the political process for its success, and in many instances, for its very existence. In Florida, as in other states, this essential connection with government and the political process means that gaming operators and their allied interests have devoted – and will continue to devote – considerable resources toward influencing that process. At the same time, other interests that oppose the expansion of gaming, for reasons ranging from moral to economic, will play a role in that process.
- **Technological:** Gaming is hardly immune to changes in technology that are whipsawing many industries and changing business models around the world. The development of the Internet, and offshoots of that, including the expanded use of mobile technologies, have created new gaming opportunities, while presenting new challenges for lawmakers and regulators. In turn, as other states – and the federal government – adapt their own gaming laws, it will inevitably have an impact on the future of gaming in Florida.
- **Competitive:** While states compete against other states, in-state competition is also common. Lotteries and casinos can view each other as threats (even though arguably the experience is quite different, as is the demographics of the player base). Similarly, within the casino sub-sector itself, in-state competition can occur, and that can include competition for legislative and regulatory attention and resources. In Indiana, for example, the state's two racinos⁵ operate under different rules than the riverboats. For example, riverboats are allowed live table games, which are barred from racinos, while the tax rates also differ.

As these macro trends combine, a number of smaller yet still significant trends have emerged. For example, states that first legalized gaming with slots or video lottery terminals are evolving into full-service casinos, with both slots and table games. In part, this has been facilitated by political pressures for more gaming revenue and to create additional employment opportunities, but it has also been advanced through technology as well. Various companies, most notably Shuffle Master and International Game Technology, have developed popular electronic table games that mimic live table games, sometimes with virtual dealers, but can be governed like slot machines.

That is an example of how political and technological trends can combine to effect changes. The technology that created electronic table games was largely unanticipated when slots were initially authorized in many states, and as the technology developed, new questions arose, such as: Are the electronic games tables or slots?

⁵ "Racino" is a widely used portmanteau formed by the combination of two words, racing and casino. It is a synonymous term for racetrack casino.

SECOND DRAFT - CONFIDENTIAL

With that in mind, this interim step of electronic table games has made it easier from both a management and a government standpoint to take the next step of live table games. Moreover, in such instances, states are often responding to what other states are doing. This has clearly been the case with West Virginia first adding live tables to its slots-only mix, followed by Delaware and then by Pennsylvania.

Similarly, within the private sector, various operators are taking advantage of expansion by developing a “hub and spoke” business model, in which smaller properties that are generally in markets with a higher gaming tax can feed business to hub properties in destination markets where the tax rates are generally lower. This trend is explained in more detail later in the report.

With these factors combined, Florida is also emblematic of national trends. In-state competition is intense, not just on a geographic basis, but in terms of fighting for parity on issues ranging from the type of offerings allowed to the effective tax rate. Florida is arguably more heightened on the competitive front than other states.

As more than one stakeholder told us during the course of our research for this study, the pari-mutuel industry resembles a “circular firing squad.” Horse racing interests have little in common with their dog-racing counterparts, and both have little in common with jai alai. Even within horse racing, there are warring camps between those who favor racing as the principal line of business and those who favor the casino offerings.

The various parties that comprise the pari-mutuel industry have different agendas as well, with some favoring the addition of table games to pari-mutuels as the principal goal with others favoring a lower effective tax rate, for example. Pari-mutuels will generally find some common ground among themselves on the issue of a perceived “unlevel playing field” with the Indian gaming operations, as well as in opposition to Internet cafes. Going further, the pari-mutuels will also find common cause with the tribal operations in their shared opposition to proposals to authorize additional destination gaming resorts under a competitive bidding process.

On that latter issue, they all find common ground with business interests in the Orlando region and others, such as No Casinos, in their uniform opposition to the introduction of new destination resorts.

Such shifting alliances and differing agendas are not uncommon within gaming, and highlight two other truisms:

- The status quo always has its adherents, and can make for some unusual political bedfellows.
- Gaming will continue to evolve, with or without guidance or planning from public officials.

The former point is best exemplified by how gaming has evolved in different states. For example, Nevada – the state that is most dependent on gaming revenues for government operations – has no state lottery. At the same time, Internet gambling is just beginning to emerge

in the United States while it is a mature industry in Europe. In both instances, the same explanation applies: Those whose interests are tied to the status quo are more likely to resist.

That does not mean that the industry will stop changing and evolving. Change will continue, whether public officials play a lead role or not. The factors leading to change, as outlined in this section, will not render any effort to develop a gaming policy as moot. In fact, the presence of these critical factors heightens the need for a comprehensive policy. Based on our research and experience in Florida and elsewhere, gaming will evolve in Florida whether or not the Florida Legislature develops a plan and puts that plan into action. Absent any plan, however, that evolution would be haphazard and would be far less likely to address or advance any public-policy goals.

5. How Governments Respond to Gambling Expansion

Gaming has been expanding for decades and continues to do so. Even when limits are enshrined in the state Constitution, it does not preclude serious expansion efforts. Constitutional limitations, as well as tribal compacts, can be viewed as obstacles to expansion, but in a real-world sense, do not serve as permanent barriers. The best example of this can be found in New York, where the state constitution prohibits commercial gambling, yet it has a highly successful lottery, nine racinos and five Indian casinos – all operating through a variety of exemptions, rulings and legal interpretations. Today, New York Governor Andrew Cuomo is pushing to outright amend the state constitution to allow full-blown commercial casinos; i.e., those with true slot machines (as opposed to video lottery terminals) and live table games.

States place all sorts of limits on their gaming industry, from geographic locations (as with New Jersey, which restricts casinos to Atlantic City), to limits on the number of licenses (Pennsylvania, Illinois, Massachusetts and others), to limiting gaming to pari-mutuel facilities (as with many states, such as Delaware and New York), to limits on the number of gaming positions per property (Illinois, for example), to requirements that casinos be on riverboats (several Midwest states).

The following macro factors are driving the expansion of gaming:

- As states need more revenue, particularly in periods of economic recession, gaming bills and referenda are more likely to be introduced, and to be viewed favorably. This trend hails back to 1931, when Nevada introduced gambling in the midst of the Great Depression. In 1976, New Jersey voters approved casinos in large measure to assist economically depressed Atlantic City. Economic downturns in the 1990s prompted a number of Midwestern states, from Illinois down to Mississippi, to create riverboat casino industries.
- As related industries such as pari-mutuels see their own revenues and profitability decline, this prompts calls for subsidies, usually in the form of adding slot machines (often followed by table games) to pari-mutuel operations. Consequently, as racetracks

SECOND DRAFT - CONFIDENTIAL

use some of this additional funding to increase purses, that trend is further fueled as tracks that compete for horses and export signals are pressured to increase their purses in response.

- States respond to what occurs in other states. One political argument that often gains traction with legislatures and the general public is the notion that one state's residents are spending their dollars in neighboring states rather than at home. This argument has been used in a variety of states in the last decade including Kentucky, Massachusetts, Ohio and Pennsylvania.
- In the battles between pro-gaming and anti-gaming political campaigns, the playing field is not level in one important sense: Those who oppose gaming's expansion often succeed, but in many instances they have to continue doing battle in subsequent years. They have to win every time. Those who favor the expansion of gaming need to win only once.

That latter point can be illustrated in various states. For example, Ohio voters turned down four referenda between 1990 and 2008 that would have legalized casinos in various locations.⁶ In only one of those votes – a 2006 measure to approve two casinos in Cuyahoga County, plus slot machines at seven racetracks – did the measure gain support from more than 40 percent of the voters. Yet, a fifth ballot measure in 2009 to authorize one casino in each of four Ohio cities – Cleveland, Cincinnati, Columbus and Toledo -- was supported by 53 percent of Ohio voters.⁷ Consequently, despite four successful efforts to defeat casinos, Ohio is now a gaming state.

The most notable example of this phenomenon can be found in Florida itself, starting with a failed measure in 1978. The following account summarizes that effort:

“On November 4, 1978, Florida voters overwhelmingly rejected a proposal to legalize casinos along the Gold Coast – and in Miami Beach in particular. By a lopsided 73 to 27 margin, opponents of the casino legalization measure, led by two-term governor Reubin Askew, carried every county in Florida and beat back a referendum similar in style and substance to the successful 1976 New Jersey initiative.

“There were many obvious differences between the two states, which might account for the disparity in the vote. Of these, two are particularly notable: Florida has a large Baptist population and is generally regarded as a politically conservative state; and Florida's economy, including its tourism, was strong. ... As late as August 1978, polls conducted for the casino opposition had concluded that, while the November gambling contest

⁶ Rich Exner, “Ohio Casino vote passes on strength near would-be casinos; a look at the vote,” *The Plain Dealer*, November 4, 2009; http://www.cleveland.com/datacentral/index.ssf/2009/11/ohio_casino_vote_passes_on_str.html.

⁷ Ibid.

SECOND DRAFT - CONFIDENTIAL

would be close, the momentum of the election appeared to be with the gambling proponents. In the few months between those polls and the November election, a spirited campaign against casinos led by influential south Florida commercial interests appeared and turned a once close contest into a one-sided race.”⁸

That unsuccessful campaign – which relied on the same campaign manager who conducted the successful 1976 campaign in New Jersey⁹ – did not end such efforts in Florida.

Spectrum professionals, in previous careers, have been close observers of various gaming efforts in Florida. Indeed, working as a journalist for *The Press of Atlantic City* in 1986, Spectrum Managing Director Michael Pollock witnessed the first in-person meeting between the political directors of two referenda on the ballot that year: an effort to legalize land-based casinos in hotels with at least 500 rooms (subject to local approval), and another to legalize a state lottery. At an impromptu meeting at Tampa International Airport, the head of Citizens for Jobs and Tourism, the pro-casino lobby, suggested to his counterpart heading the lottery effort that they coordinate their campaigns to mutual benefit. The offer was politely but firmly rejected and, as it turned out, for good reason: The lottery referendum was approved by a 2-1 margin, while the casino effort lost by the same ratio.¹⁰

That 1986 Florida referendum, however, proved to be a harbinger as to how gaming issues would evolve throughout the United States, both in terms of public perception and in how pro- and anti-casino campaigns would be funded and operated. This was captured well in a prescient column in the *Sun-Sentinel*, “Money Shouts in Gambling Referendum,” that appeared about eight months prior to the November 1986 Florida vote:

“A few rich individuals and corporations have the potential of influencing - some even say buying - the result of the November 1986 referendum on legalizing casinos in Florida.

“In this state, no limits exist on what one can contribute to a referendum campaign. As gamblers say, the sky’s the limit. ...

“... Millions of dollars will be spent this year to debate casino gambling. Those who want legalized casinos ‘will have a more sophisticated campaign than in 1978,’ casino foe (former Gov. Reubin) Askew said. ‘I think they’ll run a political campaign as opposed to a PR campaign. It’s going to be a tough fight.’ ...

SECOND DRAFT - CONFIDENTIAL

“Pro-casino forces are sensitive about the big-spender image. Therefore they will seek their donations from within the state. And the staff of Citizens for County Choice is all from Florida.

“ ‘It shouldn’t be a carpetbagger image. It should be a Florida-supported effort and Florida-controlled effort,’ said Andrew Rubin, who led Citizens for Jobs and Tourism.

“Those favoring legalized casinos like to promote this referendum as democracy at its best, giving people a right to choose. (The proposed constitutional amendment that will appear on the ballot says if casinos are legalized by statewide vote, there still must be a local referendum to decide whether to permit casinos in a particular county.)

“ ‘This campaign is a more of a personal rights referendum as against a gambling referendum,’ said pro-casino leader Kennedy. ‘You are asking people to allow those people who may want casinos to have a right to vote on them.’ ¹¹”

Like the 1978 referendum, the 1986 referendum failed, albeit by a smaller margin of only 2-1 (while voters approved the lottery by about the same margin).¹² In between those two failed casino referenda, however, gambling was still emerging and evolving in Florida in the form of “cruises to nowhere,” simulcasting of races and high-stakes bingo.¹³ While another proposed constitutional amendment failed in 1994 by a 62-38 percent margin, gaming proponents eventually seized a narrow victory in 2004 when a constitutional amendment was approved with less than 51 percent of the vote to allow racinos to open in Miami-Dade and Broward counties.¹⁴

As noted in the previous section, these trends do not evolve in isolation, and the factors that are driving expansion can feed off each other. For example, as states respond to actions taken in neighboring states, gaming is more likely to expand. This has the impact of making states more dependent on gaming revenue for growing portions of their budgets. At the same time, political forces that are pushing for expansion are learning from previous efforts in their own and in other states as to how campaigns could be shaped more effectively with messages that resonate.

Consequently, as more states authorize and expand gaming, bringing it closer to more population centers, participation and familiarity with gaming will inevitably increase. As an industry, gaming is uniquely dependent on – and uniquely intertwined with – the political process, and this relationship largely guides the industry’s growth. John Sowinski, president of

¹¹ Diane Firth, “Money Shouts in Gambling Referendum, *Sun-Sentinel*, March 23, 1986 http://articles.sun-sentinel.com/1986-03-23/news/8601180125_1_pro-casino-forces-casino-referendum-casino-question.

¹² Mary Ellen Klas, “A Timeline of Gambling in Florida,” *Tampa Bay Tribune*, November 25, 2009 <http://www.tampabay.com/news/perspective/a-timeline-of-gambling-in-florida/1054345>.

¹³ Klas, “A Timeline of Gambling in Florida.”

¹⁴ Ibid.

No Casinos in Florida, observed a phenomenon that governs how elected officials largely view gaming: “The solution to having too much of it is to have more of it.”¹⁵

Indeed, that wry observation can be supported through various examples throughout the country. From New England to the Mid-Atlantic region and to the Midwest and beyond, states respond to the expansion of gaming in other states by expanding gaming within their states. As explained in more detail later in the report, the catalysts for such expansion include:

- A state’s residents are spending dollars elsewhere, and those dollars are best kept at home.
- The pari-mutuel industry is hurting, and needs expanded gaming in order to survive and to compete against larger purses available at competing tracks in other states.
- Gaming is viewed as a fiscal solution when states feel the pinch of an economic recession.

Gaming has been expanding for decades, and continues to do so. Even when limits are enshrined in the state Constitution, it does not preclude serious expansion efforts. Constitutional limitations, as well as tribal compacts, can be viewed as temporary.

Florida offers another telling example of that, in the 2004 constitutional amendment that led to the approval of racinos in Miami-Dade and Broward counties. That amendment initially limited that privilege to operating pari-mutuels, which would have excluded Hialeah. That was changed through 2010 legislation, which survived subsequent legal challenges, but created some new consequences. Veteran gaming reporter Nick Sortal identified those consequences in a report for the *Sun-Sentinel*:

“Hialeah Park is reveling in its rebirth, but the racetrack with the pink flamingos has caused a mess across the state.

“When its quarter-horse season ends ..., the track that first opened in 1921 will be eligible to house slot machines, thanks to a provision in a 2010 state law. But slot-machine proponents contend that law also applies to other venues, creating a flood of county referendums -- which legislators say illustrate how gambling in Florida has run amok.

“Last month, Gadsden and Washington counties approved slot machines via referendum. Palm Beach, Hamilton and St. Johns counties also expect to vote on slots in November, citing the 2010 law.

" ‘Opening the way to Hialeah opened the way to everything,’ said Ron Book, a lobbyist whose clients include Hialeah’s rival, Magic City Casino. ‘It created a slippery slope.’ ”¹⁶

¹⁵ Interview with John Sowinski, May 29, 2013.

a. States Endeavor to Realize Value from Gaming via License Fees

One important theme that resonates throughout this report is that no other private industry – and certainly none in the entertainment or hospitality fields – is as dependent as remaining in the good graces of public officials for its ability to earn a profit, or even for its very existence. The flip side of that is that no other private industry has the ability to secure such local or regional monopolies. Sometimes, these local monopolies are granted to private interests simply because those interests own a particular piece of land, such as a racetrack.

In Florida, the holder of a slot machine license must pay an annual license fee of \$2 million, which is due when the application is filed or with the renewal date. There is no fee to obtain an annual pari-mutuel operating license. But in conjunction with its monthly tax payment, each permitholder pays a daily license fee. For jai alai, it is \$40 per game. For greyhound permitholders, it is \$80 per race that may be offset with eligible tax credits under (550.0951(1), F.S.) For horse racing, the fee is \$100 per race. For cardroom operators, the state charges annually a fee of \$1,000 for each table when the application is submitted.¹⁷

In recent years, a number of states have endeavored to realize value from the issuance of such licenses by requiring license fees or some equivalent in exchange for the rights and privileges of operating a gaming facility. The core rationale in requiring such one-time fees is that licenses have value, and states should not give away something that could command significant dollars in the open market. Veteran investment banker Jeff Hooke, managing director of Focus Investment Bank, has been a longstanding advocate for the principle of states realizing the full value of such licenses. More than a decade ago, he noted the following regarding states that had authorized gaming in preceding years: “Illinois, Indiana and Michigan awarded the gaming licenses for free to politically connected groups, under the guise of aiding economically depressed areas or failing racetracks. Even after the impact of betting taxes were included, the awardees turned around and made vast profits.”¹⁸

Hooke collected the data for the following table:

¹⁶ Nick Sortal, “Hialeah Park: Flash Point for State’s Gambling Mess,” *Sun-Sentinel*, February 16, 2012. http://articles.sun-sentinel.com/2012-02-16/news/fl-hialeah-gambling-20120216_1_mutuels-pari-mutuels-slot.

SECOND DRAFT - CONFIDENTIAL

Figure 1: Gaming license transactions, values

Implied Value¹⁹ (Millions)	Date	Metro Location	Buyer/Seller	Transactions/ Offers
\$180	October 2011	New York City	Genting (Malaysia)/State of New York	Transaction ²⁰
\$435	December 2008	Chicago	Trilliant Gaming/State of Illinois	Offer/Transaction ²¹
\$407	August 2007	Indianapolis	LHT Capital/Oliver Racing (Indiana Downs)	Transaction ²²
\$250	April 2007	Indianapolis	Indiana Downs/State of Indiana, Hoosier Park/ State of Indiana	Two transactions at \$250 million each
\$160	December 2006	Pittsburgh	PITG Gaming/City of Pittsburgh	Transaction ²³
\$220	November 2006	Pittsburgh	Millennium/Magna	Transaction ²⁴
\$140	June 2006	Dania Beach	Dania Jai Alai/Boyd Gaming	Transaction ²⁵
\$340	April 2006	Pittsburgh	Isle of Capri City	Offer ²⁶
\$500	January 2005	Catskills	Seneca Ind./New York State	Offer
\$310	October 2004	Poconos	Mohegan/Penn National	Transaction ²⁷
\$442	July 2004	Philadelphia	Harrah's/Inv. Group	Transaction ²⁸
\$518	March 2004	Chicago	Isle of Capri/State of Illinois	Offer
\$750	January 2001	Cincinnati	Argosy/Inv. Group	Transaction ²⁹
\$663	November 2000	Detroit	Chippewa/Inv. Group	Transaction ³⁰

Source: Jeff Hooke

¹⁹ The value represents license value only. In several instances, the values of casino structure, horse racing track, jai alai track or relevant real estate were excluded from the transaction value in order to determine the license value. For Pennsylvania transactions/offers, the value includes the \$50 million license fee that is paid by the license holder. The Maryland 2009 license awards have been excluded since the sizable tax rate (67%) precluded high initial fees and the bidding process was not open, but rather skewed towards certain landowners.

²⁰ Aqueduct racetrack slots. The gross amount is \$380, minus \$200 for a state contribution to construction costs. The low price is partly due to New York's high gaming tax rate and high purse contributions. The slots operator may keep only 30% or 35% of the net revenue.

²¹ Trilliant Gaming offered \$435 million upfront for a Rosemont, IL location. The State, however, awarded the license to Midwest Gaming for a Des Plaines, IL location for \$125 million upfront and \$300 million to be paid at \$10 million per year for 30 years. The total NPV of the Midwest proposal is \$247 million at an 8% rate.

²² Oliver Racing paid \$53.5 million for a 34% interest, plus a \$250 million license fee.

²³ PITG agreed to pay a \$7.5 million annual fee to City of Pittsburgh to subsidize a new hockey arena. Hooke Associates estimated the "present value" of the annuity at \$110 million, plus the \$50 million license fee.

²⁴ \$30 million value of racetrack subtracted from \$200 million price (i.e., \$170 million, net) and \$50 million license fee added, in order to provide a \$200 million license value.

²⁵ \$13 million appraised value (tax records) of jai alai fronton excluded from \$153 million purchase price.

²⁶ Isle of Capri offered to build a \$290 million hockey arena and to pay \$50 million for the license.

²⁷ Mohegan Tribe paid \$290 million (after post purchase adjustment) for the license plus the track worth \$30 million. We add \$50 million license fee for a value of \$310 million (i.e., \$290 minus \$30 plus \$50).

²⁸ In exchange for 50% interest, Harrah's put up over \$400 million to construct casino and racetrack in Chester, PA.

²⁹ Excludes "brick and mortar" cost of the casino, as set forth in the SEC filings.

³⁰ Chippewa's buyout of a 40% interest, indicating a 100% interest at \$663 million.

SECOND DRAFT - CONFIDENTIAL

While Hooke is correct in that states can realize value in something that many states had given away, the more immediate incentive is that states can realize significant revenue quickly. That prospect has driven more states in recent years to seek license fees.

However, license fees do have a cost. From the standpoint of a potential developer, a license fee is part of the necessary investment in a potential project. It is the equivalent of the capital investment that would be made in various areas, ranging from site acquisition and improvement to architecture fees and construction costs. But, unlike the costs that are incurred to build a physical facility, the license fee does not add to the value of that facility. When calculating a return on investment (“ROI”), a license fee is part of the investment, which is the denominator in that ratio. But a license fee does nothing to increase the numerator, the profit. Consequently, the license fee is effectively a sunk cost that does not generate revenue, which would in turn fuel various public benefits from gaming taxes to employment.

An operator that does not have to carry that cost can invest more in the property to increase revenue and ROI. That is particularly important in a competitive bidding process. In 2008, Spectrum prepared a report for the Commonwealth of Massachusetts, in advance of gaming legislation that included a provision for a \$200 million initial licensing fee. That report noted the following:

“Initial license fees required of successful development bidders are generally viewed as part of their capital investments and therefore:

- Have a detractive effect on capital development spend, as the licensing expense competes internally for capital with construction spending.
- Pose a dampening effect on development interest among potential candidates, as the fees raise the cost of entry with no direct return on that expense, and thereby simultaneously reduce projected ROIC rates.

“This is not to say government entities should not impose substantial operator license fees, to both winnow out under-resourced bidders and help recoup the state’s own start-up and other infrastructure costs, but rather to make clear the underlying considerations.

“At a \$200 million minimum bid, the Massachusetts casino licensing fee, combined with the minimum development requirements, will ensure that only financially strong companies will apply. On the other hand, this is potentially \$200 million less in capital invested into each of the destination casinos. This fee could be viewed by both the state and license applicants as the price of operating in a closed, geographically protected environment.”³¹

³¹ Spectrum Gaming Group, “Comprehensive Analysis: Projecting and Preparing for Potential Impact of Expanded Gaming on Commonwealth of Massachusetts,” August 1, 2008. p. 119.

Three years later, the Expanded Gaming Act became law in Massachusetts, and included a minimum \$85 million licensing fee, significantly lower than what had been contemplated in the 2008 proposed legislation.³²

Between 2008 and 2011, a severe national recession struck, which certainly played a role in convincing lawmakers in Massachusetts to reduce the required minimum capital investment. At the same time, however, we suggest that lawmakers also recognized that a large license fee could also detract from capital investment and its subsequent economic benefits.

Based on the language within its statute³³ that governs the competitive bidding process, Massachusetts is a pioneer in the planning of gaming. The law requires bidders to put forth comprehensive proposals that address many areas that are often not addressed, or paid little heed, in other gaming statutes. Such areas range from impact on employment to impact on local arts, as well as on small businesses.

6. Racetrack Casinos Evolve, Table Games Arrive

In 1990, the concept of a racino was introduced to the US with the introduction of 165 video lottery terminals (“VLTs”)³⁴ at Mountaineer Park Racetrack in West Virginia. With the success of the West Virginia experiment, racinos soon spread to Rhode Island, Iowa and Delaware. Many states that introduce commercial casino gambling do so through the initial introduction of slots-only facilities. Examples of this include, among others, Pennsylvania, Delaware, West Virginia, Rhode Island, New York and Florida racinos – although poker at the Florida tracks is a notable exception. The logic behind such moves tends to include the following:

- Slots are viewed as more politically acceptable.
- Slots – because they lack live dealers, as well as necessary controls over dice and other gambling paraphernalia – are viewed as easier to regulate.

The latter point is particularly noteworthy for states in which the lottery is vested with the authority to oversee slots or VLTs such as Delaware, Maryland, New York, Rhode Island and West Virginia. However, even in lottery states, the natural evolution over the past decade has been to add live tables to slots-only facilities. We attribute that trend to two larger forces at play, which are dealt with in more detail elsewhere in this report:

³² Massachusetts Expanded Gaming Act <http://massgaming.com/about/expanded-gaming-act/> (accessed May 8, 2013).

³³ Massachusetts Expanded Gaming Act of 2011; see <http://massgaming.com/wp-content/uploads/Chapter-23K-2012.pdf>

³⁴ From the standpoint of a player, slots and VLTs are indistinguishable. The core difference is that slots can be standalone devices, while VLTs can be tied to a central system that monitors and/or controls all critical aspects of the games.

- Fiscal pressures to generate additional revenue, as well as pressure to add jobs.
- The need to respond to actions in other, often neighboring states.

Within a span of about two years, West Virginia added live table games, followed by Delaware and then Pennsylvania – states that, to varying degrees, have overlapping markets. Maryland followed suit by adding tables to its slots facilities this year. The trend was captured in a quote by Mark Nichols, an economics professor with the Institute for the Study of Gambling and Commercial Gaming at the University of Nevada at Reno: “Maryland is getting what the other states already have, which is going to make it very difficult for casinos in West Virginia and Delaware. The only way they can keep those Maryland residents from staying in Maryland is offering incentives or differentiated products that somehow make it worthwhile to travel. But almost anything they try, Maryland can copy. I’m not sure there’s much they can do.”³⁵

If regulated properly, the addition of table games can be a smooth transition that can also encourage capital investment and expansion. The addition of house-banked table games such as blackjack to a slots-only casino can serve to increase slot revenue. This seems counter-intuitive (the natural assumption is that new table games would simply cannibalize existing slot play) but experience in markets that have added tables to casinos that previously offered only slot machines shows otherwise. This phenomenon can be attributed to two major factors:

- Some new table-game customers (who previously had no incentive to visit a slots-only casino) can be expected to apportion some of their own spending to slots.
- Some of these new customers would be accompanied by other guests – such as a spouse or a friend – who would play slots during these visits.

Spectrum’s research finds no compelling evidence that adding table games to a slots-only casino would reduce slot revenue. In fact, research shows that slots and table games in a casino are complementary assets.

The remainder of this section of report shows examples of states and/or casinos where table games were added to what were once slots-only casinos.

a. Mid-Atlantic – Pennsylvania and Delaware, Collective Example

By way of example, casinos in both Delaware and Pennsylvania had been limited to slots only prior to May 2010, but then table games were added to all 12 casinos in these states between May and July 2010.

Through the 12-month period ending April 2010 (pre-table games), the 12 casinos generated \$3.09 billion in slot revenue. Through the 12 months ending July 2011 (the first full

³⁵ J. Freedom Du Lac, “Maryland raising stakes in casino wars with Delaware and West Virginia,” *Washington Post*, March 31, 2013 http://articles.washingtonpost.com/2013-03-31/local/38170896_1_maryland-live-delaware-park-table-games.

SECOND DRAFT - CONFIDENTIAL

annualized period when all 12 casinos had table games for the full duration of period), the same 12 casinos generated \$3.26 billion in slot revenue (an increase of 5.6 percent over the period without having table games). Table games revenue at these 12 casinos amounted to \$508 million through 12-month period ending July 2011.

The overall increase in gross gaming revenue (“GGR”) for both tables and slots between the two periods was 22.1 percent, while table games revenue accounted for 74.5 percent of the GGR growth and slot revenue accounted for 25.5 percent of the GGR growth. Importantly, this growth occurred at a time when other casinos were opening in the region (SugarHouse in Philadelphia, PA, and Hollywood in Perryville, MD, in September 2010, along with Ocean Downs in Worcester, MD, in January 2011).

b. Delaware

Slots-only casino gambling commenced at Delaware’s three racinos in 1995, with table games operations commencing in 2010. Since table games effectively came online midway in 2010, we examined slot revenue variance data – comparing second half of year to first half of year – for 2008 through 2012 (two entire calendar years before and after table games). In the two years before table games, slot revenue was less in second half of year (July through December) than it was in first half of year (January through June), and for each casino.

To determine whether the implementation of table games had a material impact on slot revenue we examined the slot revenue variance in 2010 (when all Delaware casinos offered table games in second half of year). If the introduction of table games had a significant, negative impact on slot revenue we would expect to see the slot revenue variance to be inconsistent with 2008 and 2009 variance data (i.e., prior to table games). The following table illustrates this slot revenue variance data in Delaware from 2008 through 2012 – where 2010 (as highlighted) was the year when table games commenced operations midway through the year.

Figure 2: Delaware casinos, slot revenue variance – pre and post table games (2008-12)

Slot Revenue Variance	Delaware Park	Dover Downs	Harrington Raceway	DE TOTAL
2008 (2nd Half vs. 1st Half)	(12.6%)	(2.5%)	(14.2%)	(9.4%)
2009 (2nd Half vs. 1st Half)	(13.1%)	(5.5%)	(10.9%)	(9.9%)
2010 (2nd Half vs. 1st Half)	(12.1%)	(5.5%)	(9.0%)	(9.0%)
2011 (2nd Half vs. 1st Half)	(7.4%)	(3.9%)	(11.6%)	(6.9%)
2012 (2nd Half vs. 1st Half)	(14.1%)	(17.4%)	(18.7%)	(16.4%)

Source: Delaware Lottery, Spectrum Gaming Group

As illustrated, on a statewide basis (and consistent amongst casinos), the decline in slot revenue (second half of year compared to first half of year) was greater in the two years without Delaware having table games than it was in both the first and second years following the commencement of Delaware offering table games. Specifically, slot revenue only declined by 9 percent in 2010 from the first half of year to second half of year (when table games were fully

operational); this percentage decline was greater in 2008 and 2009, absent presence of table games (at 9.4 percent and 9.9 percent, respectively). We note that in 2011, the decline in slot revenue from the first half of the year to the second half of the year was even less pronounced than in prior years (at only 6.9 percent), which may suggest that table games were complimentary to slots and/or that table games enhanced overall appeal of Delaware's casinos.

We acknowledge that myriad other factors may impact these aforementioned growth rates, as illustrated in 2012, when growth rates plummeted from first half of year to second half of year (i.e., possibly due to opening of Maryland Live Casino located near Baltimore, MD, in June 2012 along with widespread impact of Superstorm Sandy hitting the region in October 2012).

c. West Virginia

There are four racinos in West Virginia, with all four racinos offering table games. Initially, all four racinos were limited to slots: The racinos offer VLTs that are operated by the West Virginia Lottery, while there is also a network of limited VLT operations at numerous, licensed locations statewide.

In mid-2007, voters (via referendum at the host county level) supported allowing table games at three of the four racinos (the referendum failed in Jefferson county, home to Charles Town – the state's largest racino). Consequently, two casinos (Mountaineer Park and Wheeling Island) began table game operation in late 2007 while Tri-State Park began table game operations in August 2008. A December 2009 referendum to add tables at Charles Town did pass and table game operations commenced in July 2010. (A fifth casino, the Greenbrier resort, began operations in West Virginia in October 2009. The Greenbrier, a resort hotel with no racetrack, offers both slots and table games.)

We examined slot revenue performance at Charles Town, since this racino generates more than half of the GGR in West Virginia, and is relatively isolated from any other racino in West Virginia or other states. Specifically, we examined slot revenue variance data – comparing second half of year to first half of year – for 2008 through 2012 (two years before and after table games – as table games became operational in July 2010 at Charles Town). In the two years before Charles Town having table games, slot revenue was lower in the second half of the year than it was in the first half of year.

To determine whether the implementation of table games had a material impact on slot revenue, we examined the slot revenue variance in 2010 (when Charles Town added table games in the second half of year). If the introduction of table games had a significant, negative impact on slot revenue, we would expect to see the slot revenue variance to be inconsistent with 2008 and 2009 variance data (prior to table games). The following table illustrates this slot revenue variance data at Charles Town from 2008 through 2012 – where 2010 (as highlighted) was the year when table games commenced operations midway through the year.

SECOND DRAFT - CONFIDENTIAL

Figure 3: Charles Town Races (WV), slot rev. variance – pre and post table games (2008-12)

Slot Revenue Variance	Charles Town Races
2008 (2nd Half vs. 1st Half)	(8.3%)
2009 (2nd Half vs. 1st Half)	(13.2%)
2010 (2nd Half vs. 1st Half)	(1.5%)
2011 (2nd Half vs. 1st Half)	3.2%
2012 (2nd Half vs. 1st Half)	(18.6%)

Source: West Virginia Lottery, Spectrum Gaming Group

As illustrated, the decline in slot revenue (second half of year compared to first half of year) was greater in the two years without Charles Town having table games than in the initial year of Charles Town offering table games. Specifically, slot revenue only declined by 1.5 percent in 2010 from first half of year to second half of year (when table games were fully operational) while this percentage decline was greater in 2008 and 2009, absent presence of table games (at 8.3 percent and 13.2 percent, respectively). We note that in 2011, there was an increase in slot revenue from first half of year to second half of year, which may suggest that table games were complimentary to slots and/or that table games enhanced overall appeal of Charles Town (i.e., translating into greater slot revenue levels than what would otherwise be, absent table games).

We acknowledge that myriad of other factors may impact these aforementioned growth rates, as illustrated in 2012, when growth rates plummeted from first half of year to second half of year (possibly due to the opening of Maryland Live Casino located near Baltimore, MD, in June 2012).

d. Pennsylvania

There are 11 casinos in Pennsylvania, all of which prior to mid-2010 were limited to slots. Table games operations commenced in July 2010.

In reviewing slot revenue results for the first full year that Pennsylvania's casinos offered table games (LTM June 2011) compared to the full year prior (LTM June 2010) we see inconclusive results on the collective impact of table games on slot revenue. Collectively, slot revenue grew by 10.7 percent when comparing the two periods; however, nearly all of this slot revenue growth occurred at two of the newer casinos (Sands Bethlehem and Rivers, opening in May 2009 and August 2009, respectively) and as a result of a new casino in Philadelphia (which opened in September 2010).

The seven Pennsylvania casinos that opened in 2007 and 2008 had a collective 0.1 percent increase in slot revenue when comparing LTM June 2011 to LTM June 2010 (i.e., post- vs. pre- table games). Four of the seven reported increased slot revenue, while three of the seven reported declines in slot revenue.

This was, of course, a period of significant change in Pennsylvania's gaming industry, with additional casinos opening in-state and in surrounding area. That makes it difficult to isolate any precise cause and effect on either table or slot revenue. Still, we note that any expected cannibalization of slot revenue by the addition of table games did not materialize in Pennsylvania.

7. Battle for Entertainment Dollars: Competition on a Broader Scale

Caesars Entertainment Chairman, President and CEO Gary Loveman recently offered criticism of how the casino industry tends to break down revenue into two categories: gaming and non-gaming. Loveman suggested there is a problem in the industry's mindset when other revenues are defined by what they are not, rather than what they are. He noted, for example, that we don't divide people into two genders: "women and non-women."³⁶ Rather, he characterized other revenues as "entertainment" dollars, forecasting an evolution at his company and other gaming providers in which they broadly compete for a share of all discretionary income.

That might be a welcome and necessary step in an industry that is increasingly facing saturation in its core business. But that evolution has implications for other businesses, industries and regions that already battle for that entertainment dollar, and that do not offer gaming – nor do they intend to offer gaming as an option.

From Florida's standpoint, this issue is most readily apparent in Orlando, a successful, world-class resort by any standard that has managed to achieve success in multiple categories, most notably for purposes of this discussion: families with children; and business travel, particularly in the MICE (meetings, incentives, conferences and exhibitions) segment.

Due to its abundance of theme parks, hotels and other assets and infrastructure, Orlando competes nationally and globally in various segments, and Las Vegas – a destination centered on gaming – is clearly a competitor. Interestingly, Las Vegas endeavored to leverage its brand into the family segment, but has more recently sharpened its focus on more adult segments, as noted here:

"By the late 1980's gaming revenue in Las Vegas was down as other areas in the country started to legalize gambling. In an attempt to stimulate visitor numbers the city was reinvented in the image of Disney. Themed hotels such as the Luxor and Excalibur emerged allowing Las Vegas to market itself as a place for adults to gamble while their children played at theme parks such as the one built by the MGM Grand. Circus Circus a kid's themed hotel that was built in 1976 was the only hotel that attended to the needs of children. With the development of these new hotels Circus Circus would now face competition for the younger demographic of customers and their families. Las Vegas in the 21st Century saw its second major change in visitor demographics. No longer the

³⁶ Gary Loveman, keynote speech at East Coast Gaming Congress, Atlantic City, NJ, May 22, 2013.

place for the family, Las Vegas has morphed into one of the top party cities in the world, ranking top ten in numerous different polls'. Attracting 21 – 34 years olds from all over the world, Las Vegas now ranks number one in categories such as, top destination for bachelor and bachelorette celebrations (www.AskMen.com 2009), top destination to celebrate a 21st birthday (www.ehow.com).

"The sudden influx of younger tourist[s] can be attributed to the erection of new nightclubs and pool parties in many of the Las Vegas Hotels. MTV's reality TV show "the real world" portrayal of Las Vegas as a party city has also been a catalyst for the younger crowd to Las Vegas."³⁷

Based on our experience, we concur with the observation that Las Vegas operators determined that Las Vegas would not succeed in rebranding itself as a family destination, and began targeting hedonistic adults (best evidenced by the "what happens in Vegas stays in Vegas" campaign) and business travelers.

While Orlando and Las Vegas do not share the same *raison d'être*, they do share one critical characteristic: Both destinations developed from scratch, in a relatively brief period, a massive infrastructure of hotel rooms, meeting and convention space, and entertainment attractions. Each destination has a critical mass of attractions, which helps fuel visitation. John McReynolds, Senior Vice President of External Affairs for Universal Parks & Resorts, noted, for example, that Universal does well when other attractions in Orlando prove to be popular, and the success of the Wizarding World of Harry Potter serves as a magnet that, in turn, increases overall attendance, which benefits other non-Universal attractions.³⁸

According to McReynolds, almost 85 percent of the Orlando market is represented by the leisure market, with the remaining 15 percent being made up by the MICE market.³⁹ Total business attendance in Orlando has more than doubled in the past 20 years through good economic times and bad.

In Orlando, the conventions and meetings business is anchored by the Orange County Convention Center, where convention business is on an upswing and is approaching its pre-recession peaks.

Notably, that center has been hailed by Business Review USA as the top major convention destination in the nation: "Central Florida's OCCC is a massive center, offering 2,100,000 square feet of exhibit space in its 7,000,000 square-foot complex. But it's not just size that brought OCCC to the top of our list. The OCCC provides Central Florida with a remarkable

SECOND DRAFT - CONFIDENTIAL

amount of economic benefits at no cost to the county's citizens and it is estimated that activity in the center yields an annual tax savings of \$87.50 per Orange County household. This self-proclaimed "Center of Hospitality" offers amenities to please (including massage services, three full-service restaurants, eight food courts and remote airline check-in) and was the staging area for relief operations for Hurricanes Charley, Frances and Jeanne."⁴⁰

On a national level, many of the major convention destinations in Orlando's competitive set are also hosting casinos. The number of major convention cities with casinos already includes Las Vegas, Philadelphia, New Orleans, Detroit and New York, and will soon include Boston, and the possibility of additional gambling venues in Chicago. Atlanta, another major convention destination in the Southeast, has been contemplating gaming for several years.

In 2007, PKF Consulting released a report on the potential economic impact of a casino in Atlanta, and its executive managing director Mark Woodworth made this statement: "We're seeing more and more destinations that have gambling, which functions as an important amenity, especially in attracting group meetings and conventions."⁴¹

In our view, Orlando's ability to grow its conventions and meetings business in the face of this national trend underscores an important asset in this market: Orlando's strength in attracting business travelers is growing without gaming, and that absence is to some degree fueling that growth. Orlando has carved out a significant, profitable niche in that national market, and gaming would clearly be antithetical to that image and its ability to dominate that important segment.

Interviews with various hotel operators in the Orlando area, which are members of the Central Florida Hotel & Lodging Association, have lent support to that view. The members interviewed for this report note, for example, that many of the meeting planners who book Orlando for their groups cite the absence of gambling as a plus, since that attraction might otherwise be viewed as a distraction. Thea J. Sargent, General Manager of Disney's Contemporary Resort in Orlando, expressed a view that was endorsed by many of her colleagues when she said the absence of gaming and the focus on other attractions "differentiates us (as a) family-friendly destination."⁴² The Orlando hotel owners interviewed for this report note that convention attendees and other business travelers who visit Orlando often extend their stays and bring their families with them.

A 2011 survey of Orlando visitors shows the various activities they participate in during their stay. The percentages listed here reflect the percentage of visitors who reported participating in each activity.

Notably, gambling is listed as an activity, and the Orlando hotel operators interviewed for this study note that the Seminole Hard Rock Tampa – about 60 miles from the Orlando area – is an available attraction, which the hotel operators view as far enough away to not detract from the Orlando brand, but close enough to satisfy visitors who want to visit a casino during their stay.⁴³

But while Orlando can differentiate itself from Las Vegas or other gaming destinations, such convention markets still compete, in general and in specific instances. A conference of Wendy’s franchisees recently selected the MGM Grand in Las Vegas over Orlando, based on a \$250,000 incentive that the MGM provided, which the Orlando competition could not match – although it did match other factors, such as the average daily room rate.⁴⁴

Orlando is able to compete on other levels as well, such as the absence of union-related rules in other states that often add to the cost of setting up conventions and other meetings, as Florida is a “right to work” state.⁴⁵

⁴³ Ibid.

⁴⁴ Ibid.

⁴⁵ Ibid.

SECOND DRAFT - CONFIDENTIAL

We also note, however, that Orlando competes on an in-state as well as a national level, and would not be immune to the impacts of any change in gaming policy elsewhere in Florida.

The table above shows that, in both domestic leisure and convention/group business, designated market areas – which are independent media markets – in other regions of Florida are critically important to Orlando. Daryl Cronk, Director of Research at Visit Orlando, described this phenomenon:

“Yes, proximity is a factor. Please keep in mind the data includes both overnight stays and day-visits. The proximity of Daytona to the east, and Tampa to the west, makes Orlando a popular destination for day-trips. It may be to attend a convention, to visit a theme park, a special event such as Halloween Horror Nights at Universal or Food & Wine at Epcot, or something as simple as a Magic game (just like I have friends to go to Tampa for Rays games). And of course lots of VFR travel (visiting friends and relatives).

“Origin markets take on a slightly different look if day-trips are excluded. Still a lot of in-state but not as much.”⁴⁶

Even when the origin markets are limited to overnight stays, local markets play less of a role, as Cronk noted, but are still important:

Figure 6: Market of origin share of overnight stays in Orlando

Taken together, these factors – the evolution of gaming into broader entertainment, the availability of gaming in convention destinations, and Orlando’s dependence on both local and national markets – support many of the concerns expressed by the Orlando business community as to the expansion of gaming throughout Florida, particularly the possibility of new destination resorts.

Clearly, the addition of such destinations – which would add new supply to the competitive conventions and meetings business, while adding additional amenities to competing facilities in South Florida – raises the possibility of an adverse impact on business in the Orlando area.

John Sowinski of No Casinos said the impact would not necessarily be limited to the larger players in Florida markets, but could have serious ramifications for the smaller attractions, many of which depend on in-state and out-of-state visitors who are looking for secondary and tertiary activities during their leisure time. Sowinski suggests that such attractions – which might include Gatorland in the Orlando region or Jungle Island in the Miami area – might be more likely to lose out if more discretionary dollars are targeted toward gambling.⁴⁷

Las Vegas’s failed foray into re-branding itself as a “family” destination underscores the success of the Orlando region, which can rightfully claim ownership to that brand. Anecdotal evidence suggests that the brand equity of Orlando has benefits for the entire state of Florida. In fact, much of the image of the state of Florida is centered on theme parks and families.

The risk that gambling poses for Florida’s existing tourism brand was also noted by William Bunkley of the Florida Ethics and Religious Liberty Commission, who testified before the Senate Gaming Committee meeting earlier this year, and noted: “We have a brand here in Florida. It is tourism. It is fishing. It is outdoor sports. And though we have had some expansion of gambling, I got to tell you that Las Vegas tried the family gambling routine. It did not work,” Bunkley said. “We have a lot of people coming, supporting our state in the area of tourism, and I am very concerned about the future.”⁴⁸

⁴⁷ Interview with John Sowinski, May 29, 2013.

⁴⁸ Florida Senate Gaming Committee, February 18, 2013
http://www.flsenate.gov/media/videoplayer.cfm?EventID=2443575804_2013021203.

More generally, and with respect to Florida, expanded gambling may fundamentally change the state of Florida as a place to live and visit. Bill Lupfer, of the Florida Attractions Association, suggests that the expansion of gambling, particularly casino gambling, will be damaging to “the Florida brand.” Lupfer argues that many states with casinos legalized them in order to attract tourists. This was certainly true in the 1990s when casinos first began to expand outside Nevada and New Jersey. Florida, however, already offers more attractions than any other state; it doesn’t need casinos to attract tourism, he notes.⁴⁹ Rather than benefitting the state, expanded gambling (especially casinos) could make Florida a less-attractive tourist destination.

The tourism industry leadership in Orlando, as interviewed for this analysis, appears unified in its view that any expansion of gaming in Florida would have several tremendous economic and social impacts to the State.

If gambling were to be expanded in Florida, tourism leaders cite a variety of potential implications, including the following:

- Economic costs
 - Impact to Orlando’s global brand position.
 - Change in target market of the destination and thus potential economic losses.
 - Potential cost of moving to the unionization of hotels.
 - Economic impact to small businesses.
 - Lost business because some meeting planners will not book business in gaming destinations.
- Social costs
 - Change in the brand position and potential loss of global goodwill.
 - Change in staffing at properties that might impact the friendliness of the destination, which in turn might damage Orlando’s reputation as a friendly destination.
 - Change in the perceptions of safety, as the leisure market will not choose destinations where safety may be compromised.

8. Conclusion

Intentionally or not, the policies established by lawmakers – or the lack thereof – play a critical role in the evolution and expansion of gaming. Indeed, in the views of many, the “evolution” and “expansion” of gaming are largely synonymous. The industry rarely shrinks, and

⁴⁹ Bill Lupfer, Florida Attractions Association, phone interview, May 23, 2013.

quite often, expands as a result of expansion. As demonstrated in this section, the notion expressed by John Sowinski of No Casinos that the answer to saturation is often more gaming can be borne out by examples. Even industry segments that have seen their customer base decline – such as jai alai or dog racing, as well as other segments of the pari-mutuel industry – are still in business. Rules that may seem fixed and immutable – such as constitutional amendments – often prove to be less than immutable. Policymakers need to be aware that every change in policy creates consequences that, in turn, create a demand for more policy changes. As demonstrated in the past, such changes often lead to an expansion of gaming, which creates a demand for more changes.

Such changes could have significant impacts that extend beyond gaming, as evidenced by the concerns expressed by the business community in Orlando.

B. Types of Gambling and Their Performance, Participation

Legalized gambling is seemingly everywhere in the United States:

- 43 states have a lottery, with a 44th – Wyoming – having enacted lottery legislation in March 2013.
- 42 states have casinos of some kind, whether Las Vegas-style, floating, Indian, racetrack, or slots-only. Even Arkansas and Kentucky – considered non-casino states by the American Gaming Association – each have two racetrack gaming facilities that offer hundreds of Instant Racing machines⁵⁰ and/or skill-based reel games in a casino-like setting (and thus are included in our casino count), indicative of the efforts by operators and/or states to capitalize on the popularity of casinos. In total, there are 984 casinos in the US.⁵¹
- 33 states have pari-mutuel racing, whether horse racing, dog racing or jai alai.
- 7 states have what Spectrum terms “retail gaming,” which is the widespread placement of a small quantity of slot machines (generally 5 to 10) inside retail businesses throughout a state (typically liquor-licensed establishments).
- 5 states have standalone cardrooms, which offer poker and, in some cases, casino card games. At the end of 2012, there were standalone 407 cardrooms in the US.
- 2 states have sports betting.

For better or for worse, legalized gambling is growing – in dollars, in locations and in options. Many states are clamoring to either legalize a new form of gambling or expand what

⁵⁰ See description of Instant Racing machines at the Ellis Park website: <http://www.ellisparkracing.com/news-and-events/instant-racing/>.

⁵¹ Based on American Gaming Association and Spectrum counts.

they already have – and these debates are a regular occurrence in statehouses across the country. The proponents in such states argue either that they need the additional tax receipts and/or jobs, or that they need to stem the flight of residents' gambling dollars to neighboring states. The nascent rollout of Internet gambling has begun changing how gambling will be delivered, played, taxed and accepted – in statehouses, among gambling operators, and among patrons. Opponents argue legalized gambling has spread too far, leading to negative impacts that include addiction, personal bankruptcy, crime and industry cannibalization of consumers' discretionary dollars.

Florida is among the more gambling-rich states, as measured by number and types of options:

- 7 Indian casinos (6 Seminole, 1 Miccosukee)
- 1 state lottery, the nation's second-largest as measured by FY 2011 sales excluding VLTs
- 28 pari-mutuel facilities (plus inter-track at Ocala),⁵² including:
 - 24 with active cardrooms
 - 14 with live greyhound racing
 - 9 with live horse racing (quarter horse, thoroughbred and standardbred)
 - 6 with active jai alai
 - 6 with slot machines (a seventh, at Hialeah Park, opens in summer 2013)
- Charitable bingo throughout the state, regulated at a local level.

In addition, day-cruise vessels and cruise ships that dock at various Florida ports offer unregulated (but not illegal) casino gambling once they reach international waters three miles offshore on the Atlantic side, but 10 miles on the Gulf side.

1. The Prevalence of Gambling

a. Nationally

To our knowledge, the most comprehensive gambling studies, both for the US nationally and for Florida on a statewide basis, were conducted more than a decade ago. The first authoritative national gambling research was conducted by the Commission on the Review of the National Policy Toward Gambling in 1976. The most extensive and authoritative nationwide study was published in 1999 by the National Opinion Research Center at the University of

⁵² Data from Florida Division of Pari-Mutuel Wagering; July 24, 2012, facilities map and fiscal year-to-date data through April 2013. <http://www.myfloridalicense.com/dbpr/pmw/documents/FACILITIESMAP--Internet-hyperlinks.pdf> and <http://www.myfloridalicense.com/dbpr/pmw/documents/Stats/HandleandCardroom2012-2013--2013-05-13--April--YTD.pdf>.

SECOND DRAFT - CONFIDENTIAL

Chicago in a 768-page report. This groundbreaking research compiled survey results from approximately 3,000 gamblers and non-gamblers and was conducted as part of the National Gambling Impact Study Commission for the federal government. The study documented gambling prevalence among US residents at a lifetime rate of 68 percent and a past-12-months rate of 61 percent for all forms of gambling.⁵³

Gambling has expanded greatly since 1999, when some form of legalized gambling was being offered or had been approved in a total of 25 states,⁵⁴ to the present where 42 states currently offer some form of legal gambling other than the lottery. The most recent information on national gambling prevalence comes from the American Gaming Association's ("AGA") 2013 *State of the States* survey. While this is not a rigorous academic study it does represent the most up to date data released, released in the first week of May, 2013. This latest update to the annual study documents gambling prevalence as follows among the general US population:

- Past 12 months participation in the following gambling activities:
 - Lottery 53 percent
 - Casino gambling 32 percent
 - Casual betting with friends 26 percent
 - Playing poker 12 percent
 - Wagering on a race 6 percent
 - Internet gambling 3 percent

From the above information we can extrapolate that almost one-third of the adult population over 21 in the US has gambled in a casino within the past year. Among young adults, aged 21 to 35, the proportions playing the lottery, betting casually with friends, playing poker, and gambling over the Internet are significantly greater.

Of course, gambling incidence varies considerably with access to local or regional gaming facilities. Various studies commissioned by individual states since 1976 have shown lifetime prevalence rates ranging from 64 percent to 96 percent, with past-12-month prevalence rates ranging even more broadly from between 49 percent to 89 percent.⁵⁵ A meta-analysis of

⁵³ "Gambling Impact and Behavior Study, Report to National Gambling Impact Study Commission," National Opinion Research Center at the University of Chicago, April 1, 1999.

⁵⁴ American Gaming Association, 1999 *State of the States*; the yearly reports are available at <http://www.americangaming.org/industry-resources/research/state-states>.

⁵⁵ Howard J. Shaffer, Matthew N. Hall, Joni Vander Bilt, *Estimating the Prevalence of Disordered Gambling Behavior in the United States and Canada: A Meta-analysis*, Division on Addictions, Harvard Medical School, December 15, 1997.

available research across the US and Canada conducted in 1997 estimated a lifetime gambling prevalence rate of 81 percent in the general population across the country as a whole.⁵⁶

b. Florida

The most comprehensive study of gambling behavior across the state of Florida was conducted for the Florida Council on Compulsive Gambling Inc. (“FCCG”) by the University of Florida in 2001. This ground-breaking study documented gambling prevalence and participation rates as follows:⁵⁷

- Lifetime gambling prevalence of approximately 90 percent among Florida residents, ages 18 and older:
 - 10 percent of Floridians surveyed report they have never gambled
 - 20 percent have not gambled in the past 12 months
 - 45 percent have gambled in the past 12 months
 - 25 percent gamble weekly
- Lifetime participation in the following gambling activities:

○ Lottery	73 percent
○ Raffles	63 percent
○ Casino gambling	60 percent
○ Pari-mutuels and OTB	30 percent
○ Bingo	24 percent
○ Stock Market	23 percent
○ Cards (not at casino)	20 percent
○ Slot machines (not at casino)	18 percent
○ Pool	18 percent
○ Sports	16 percent
○ Jai Alai	14 percent
- Lifetime prevalence was highest for lottery, raffles or sweepstakes, casino gambling, and pari-mutuels or off-track betting (“OTB”) with nearly one-third to almost two-

⁵⁶ Ibid.

⁵⁷ Nathan A. Shapira, Mary Ann Ferguson, Kimberly Frost-Pineda, Mark S. Gold, *Gambling and Problem Gambling Prevalence Among Adults in Florida*, University of Florida, October 2002.

SECOND DRAFT - CONFIDENTIAL

thirds of respondents acknowledging participation in these activities on a lifetime basis.

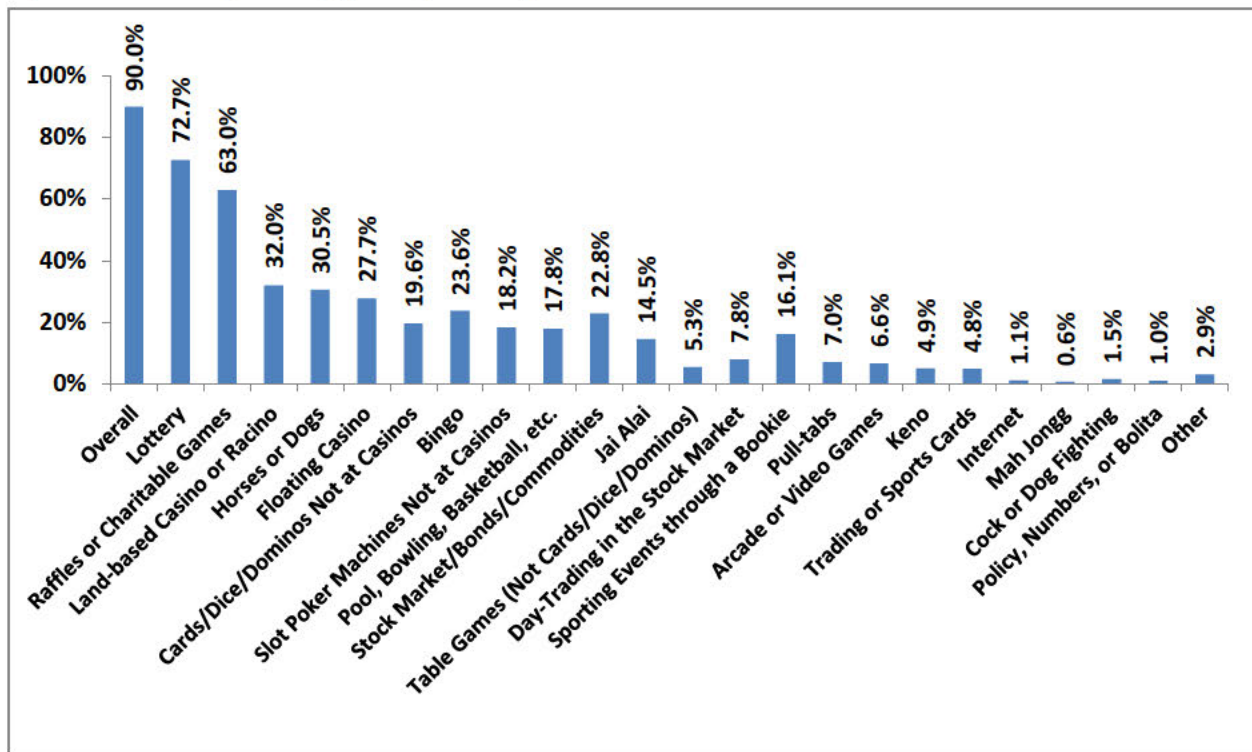

- Past-year participation rates were highest for lottery, raffle, casino and stock market gambling, followed distantly by bingo, cards outside a casino, day trading, horses, dogs or other animals and OTB, pool, sports and slot machines outside a casino.
- Respondents participating in one or more of these gambling activities did so by:
 - Gambling in a casino 32 percent
 - Gambled at a convenience store 16 percent
 - Gambling at the supermarket 13 percent
 - Gambled in their homes 8 percent
- Males are significantly more likely to be weekly gamblers than females (30.5 percent versus 20.2 percent)
- Florida residents in the 50 to 65 age range are most likely to be weekly gamblers
- Residents 18 through 29 are least likely to gamble weekly
- SOGS problem gambling⁵⁸ among adult Florida residents:
 - Past-year problem/pathological 2 percent
 - Lifetime problem/pathological 3.6 percent
- NORC DSM problem gambling⁵⁹ among adult Florida residents:
 - Past-year problem/pathological 0.8 percent
 - Lifetime problem/pathological 1.0 percent

Lifetime gambling participation among Floridians as documented in the 2001 study is illustrated in the following chart. Note that for land-based casino or racino gambling, in 2001 virtually all of this would have taken place outside of Florida, as the only casino open at the time was the original Seminole casino in Hollywood.

⁵⁸ Pathological and problem gambling based upon South Oaks Gambling Screen ("SOGS").

⁵⁹ Pathological and problem gambling based upon National Opinion Research Center's DSM Screen ("NORC DSM").

Figure 7: Lifetime gambling participation by Floridians, 2001

Source: Florida Council on Compulsive Gambling

The 2001 study was replicated 10 years later by the FCCG, with the University of West Florida collecting and analyzing the survey data. The 2011 replication survey published in January 2012, explored gambling behavior among a total of 2,500 Florida residents.⁶⁰ This update provides better granularity of data for gambling prevalence but in the process makes some direct comparisons more difficult. For instance, due to a stricter definition of gambling as “placing something of value at risk in hopes of gaining something of greater value”⁶¹ instead of simply “bet or spent money on” as gambling was defined in the 2001 study⁶² lifetime prevalence of gambling in the 2011 study benchmarks at only 60 percent as opposed to 90 percent in the earlier study.⁶³

Due to this difference in the broad definition of “gambling” it would not be appropriate to compare the two overall statistics, and the change from 90 percent to 60 percent lifetime gambling participation should in no way be construed as a decline in the overall prevalence of

⁶⁰ Robert J. Rotunda, Terry L. Schell, “Gambling and Problem Gambling Prevalence Among Adults in Florida: A 2011 Replication,” University of West Florida, January, 2012.

⁶¹ M.N. Potenza, T.R. Kosten, and B.J. Rounsaville, Pathological Gambling, *Journal of the American Medical Association*, 286, p.141-144, 2001.

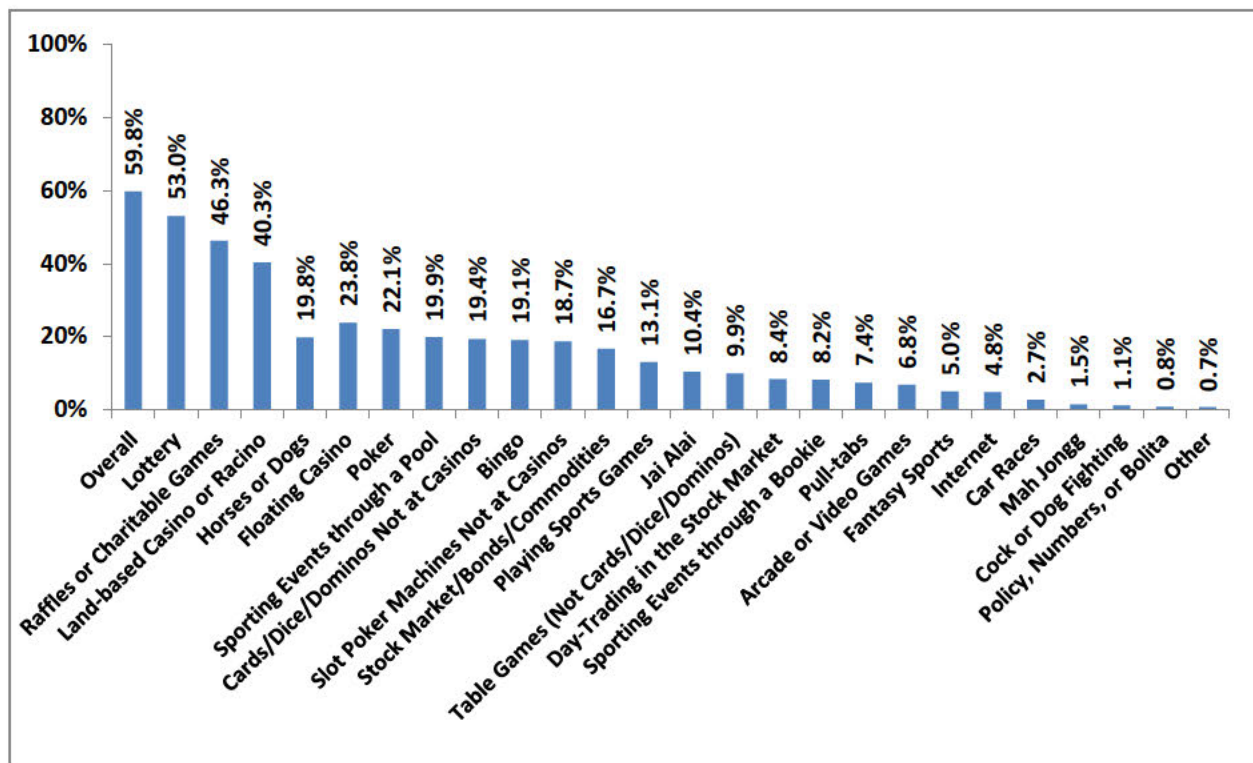

⁶² Nathan A. Shapira, Mary Ann Ferguson, Kimberly Frost-Pineda, Mark S. Gold, “Gambling and Problem Gambling Prevalence Among Adults in Florida,” University of Florida, October 2002.

⁶³ Ibid.

gambling in Florida but rather viewed as a refinement of the measurement criteria in the 2011 study and more consistent with the national rate of gambling participation.

Despite the difficulty in making overall gambling prevalence comparisons, the 2011 update agrees closely with the 2001 study in identifying lottery, raffles or charitable games, casinos, horse or dog racing, and bingo as the top five gambling activities among Florida residents. More than half of all survey respondents have played the lottery at least once in their lifetime, almost half have participated in a raffle, and 40 percent have gambled in a land-based casino.

Figure 8: Lifetime gambling participation by Floridians, 2011

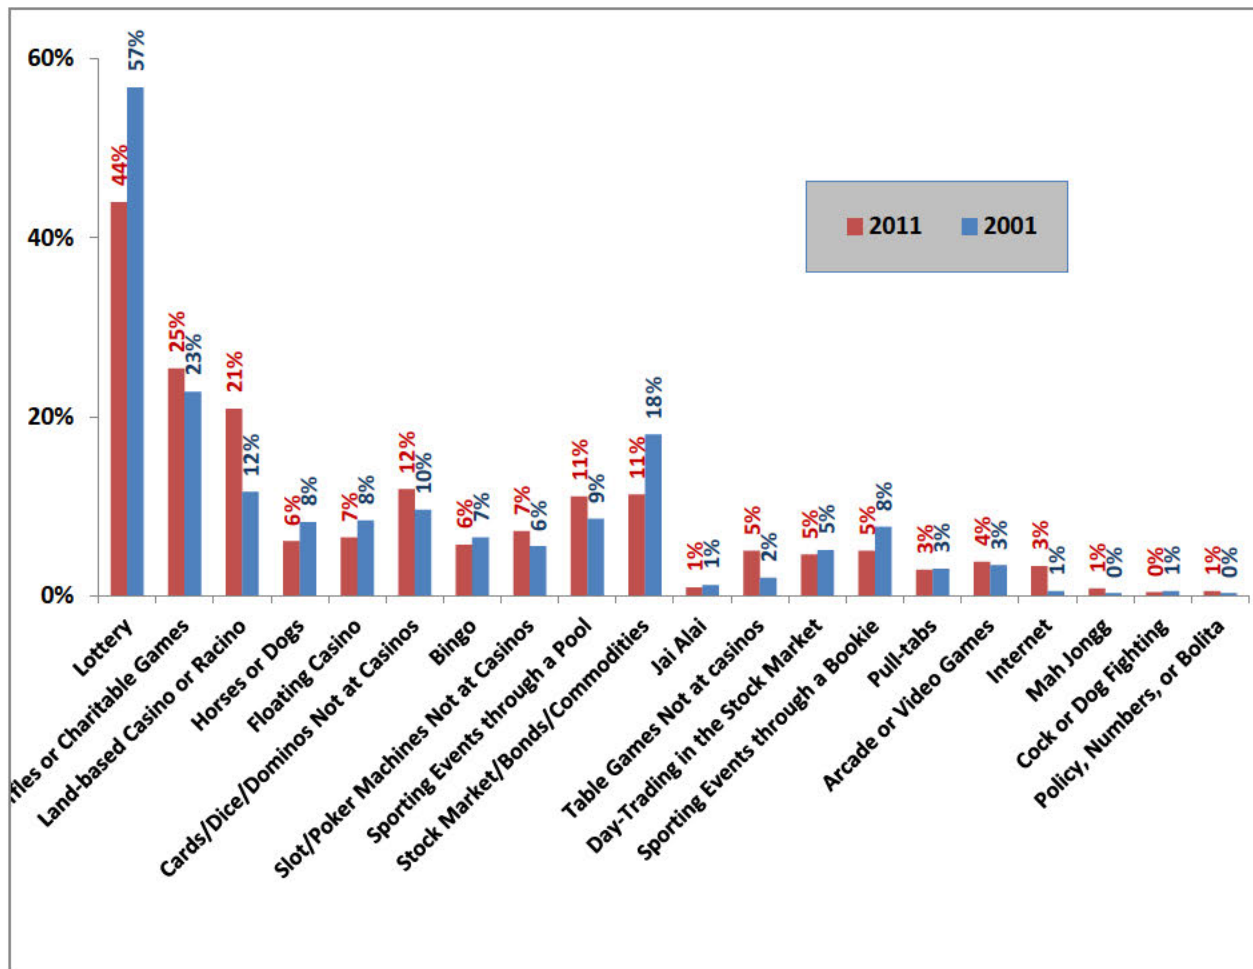

Source: Florida Council on Compulsive Gambling

Both gambling prevalence studies also break out past year gambling participation. Past-year gambling participation among Floridians is generally consistent with lifetime participation and similarly highest for the lottery, raffles or charitable games, and casinos (both floating and land-based), followed by cards/dice/dominos, horse or dog racing, and sporting events through a pool or between friends. What is most revealing about this behavioral comparison after a decade is that Florida residents report less past-year gambling participation for lottery, horse and dog racing, floating casino, the stock market, and sporting events through a bookie in 2011 than they did in 2001. Conversely, gambling participation has increased among Floridians since 2001 for

land-based casinos, cards, table games, and gaming machines found outside the casinos, sporting events through a pool, and gambling on the Internet.⁶⁴

Figure 9: Past-year gambling participation by Floridians, 2001 vs. 2011

Source: Florida Council on Compulsive Gambling

The statistics regarding prevalence have to be balanced and understood within the context of human stories, particularly among those with gambling problems. As Pat Fowler of the Florida Council on Compulsive Gambling noted in an op-ed article: “Every day we hear statistics about a variety of topics including dangerous activities, life style risk factors, and diseases of the world. Most of these statistics go in one ear and out the other. They are just numbers. But when a real story of hardship and devastation is tied to the numbers, it makes us think and consider the people behind the ratios and percentages.”⁶⁵

9. Competitive Issues

Florida's land-based casino industry competes within itself on two levels: for customers and gaming revenue, and for attention from the Florida Legislature.

Seminole Gaming – particularly its flagship Seminole Hard Rock in Hollywood – is a well-functioning, well-capitalized and well-managed operation that has succeeded in leveraging numerous assets, from its brand to its design to its tax structure and beyond, to the point where it essentially competes to varying degrees with all of the operating racinos in Miami-Dade and Broward counties.

The racinos themselves compete with each other and with the Seminole operations on the bases of their location, access, design, customer service, loyalty programs as well as their brands and racing operations. Various other rules they must operate under, from their hours of operation to their mandated no-smoking policies, also play a role. The most visible and impactful rules that limit their competitive abilities are the tax structure they operate under, as well as their inability to match the same array of offerings as their tribal competitors. The racinos, for example, are barred from offering house-banked card games, which are popular at the Seminole casinos.

While the racino operations share those concerns, they do not necessarily share the same priorities. Some put the need for table games as a top priority, while others would place tax parity higher on the list, or at least a reduced tax rate that would help justify additional capital investment.

This absence of a uniform agenda has made it difficult for the racinos to advance their cause(s), a situation that is exacerbated by a lack of understanding among the racinos themselves as to their individual challenges. While jai alai has little in common with dog racing, and neither has much in common with horse racing, there is little visible camaraderie between operators of thoroughbred and standardbred facilities, even the thoroughbred tracks themselves can find themselves at odds.

For example, Gulfstream announced its racing schedule this year and is breaking a longstanding tradition of cooperation with other thoroughbred tracks by extending its meet year-round, thus competing directly with Calder. This is one of several related issues regarding skirmishes between the tracks, which are about 10 miles apart.

Still, the issue of conflicting agendas – what was referred to earlier by some observers as a “circular firing squad” – has created a legislative stalemate, but has also led to other curious results, as exemplified by the situation in jai alai. That sport – which originated in Spain and first appeared in the United States in Miami nearly a century ago – enjoyed its heyday of popularity between the mid-1950s and 1970s, when nine jai alai frontons opened in Florida alone.⁶⁶ Starting

⁶⁶ Jai-Alai.info <http://www.jai-alai.info/history-of-jai-alai.html> .

SECOND DRAFT - CONFIDENTIAL

in the early 1990s, the sport endured a dramatic retreat in popularity, with many frontons closing.⁶⁷ Still, the sport survives, in large measure because it is tied to – and subsidized by – casino gaming and, to a lesser extent, by revenue from cardroom poker, which is roughly 4 percent of gross poker receipts.

Jai alai cannot make the same claims as the horse-racing industry that it supports numerous ancillary industries – such as racing’s ties to agriculture, as well as its span across multiple states and nations – yet its subsidies endure, with no visible efforts to eliminate, reduce or replace them.

With a jai alai fronton comes the ability to open a cardroom, a simulcasting parlor and/or a casino in Broward and Miami-Dade counties in South Florida. Those possibilities have been enough to entice investors to seek new jai alai permits even though investors realize that the jai alai portion of their investment will lose money. They hope to cover their losses with revenue from other forms of gambling. When Hamilton Jai Alai and Poker opened in December 2005, it was the first new fronton built in Florida in 22 years.⁶⁸ Its owner, Glenn Richards, told Spectrum in an interview that without the cardroom and simulcast parlor, he never would have built the fronton and it would have been closed long ago without the cardroom revenue.

Miami Jai Alai opened its slot facility on January 23, 2012. Its operator was hopeful that slot machine revenue would improve its fiscal situation. But the company has struggled to pay its debt service, resulting in a foreclosure action by its lenders. During its first six months of casino operation in 2012, it lost nearly \$7 million.⁶⁹

In addition to the prospects of cardroom and casino revenue, a jai alai license can be transferred or leased to another operator. The courts are currently reviewing whether a jai alai permit can be converted into a greyhound or racing permit. The bottom line is that jai alai permits are being issued and sought due to reasons that have nothing to do with the profitability of jai alai. Indeed, the jai alai sector as a whole sustained an operating loss of \$14 million in FY 2012.⁷⁰

So why do the subsidies for jai alai endure? The elimination or reduction of jai alai subsidies would give casinos tied to frontons an unfair advantage over casinos tied to other forms of pari-mutuel wagering. The same arguments could be made for dog racing as well. If dog-racing and jai alai were allowed to “decouple” their pari-mutuel operations from their gaming

⁶⁷ Ibid.

⁶⁸ “Hamilton Jai-Alai and Poker Opens Saturday,” *Suwannee Democrat*, December 21, 2005

⁶⁹ Brian Bandell, “Miami Jai Alai in \$84 million foreclosure,” *South Florida Business Journal*,
<http://www.bizjournals.com/southflorida/news/2012/09/14/miami-jai-alai-and-casino-in-84m.html?page=all>

⁷⁰ Spectrum review of annual audited financial statements submitted by jai alai operators to PMW

operations, this would effectively lower their overall obligations, the effective tax rate they now pay. By having a lower effective tax rate, this would eliminate parity with the pari-mutuels that are not decoupled, and any potential for eliminating parity can be expected to generate opposition. So, the subsidies endure because their presence helps ensure that all pari-mutuels pay a similar effective tax rate.

As a result, the current stalemate is perpetuated and policymakers are not encouraged by the industry to address issues that could arguably advance public policies, such as the possibility of shifting some revenue-sharing that now goes to various forms of pari-mutuel wagering to general revenues.

So, while racinos do not agree amongst themselves, nor do they agree with Indian gaming operators, on most critical issues, there is largely a consensus on another aspect of gaming in Florida: opposition to gaming expansion by allowing new entrants to develop destination resort casinos.

Last year, legislation to authorize three casino resorts with capital investments of at least \$2 billion each was “killed by an unlikely coalition of opponents: Central Florida tourism interests led by Walt Disney World and the Florida Chamber of Commerce; social conservatives opposed to more gambling; and the state's pari-mutuel industry and the Seminole Tribe of Florida, whose gambling interests would have faced new competition.”⁷¹

The value of this “unlikely coalition” was affirmed in a recent press release by Fitch Ratings, in which it noted: “Fitch believes there is a low likelihood that the integrated resort legislation passes in the near term, since it faces heavy opposition from STOF [Seminole Tribe of Florida], the pari-mutuels, the Orlando theme-park companies and other interest groups. If it eventually passes, Fitch expects the impact on STOF’s financial profile will be manageable. Per the compact agreement, STOF would be able to stop making the compact fee payments from its Broward County casinos (Hollywood Hard Rock, Seminole Hollywood Classic and Seminole Coconut Creek) which account for about half of the gaming division's revenues. Other facilities in Immokalee, Tampa and Brighton would not be directly impacted.”⁷²

10. Identifying, Capturing Markets

Depending on their location, access, neighborhoods, amount and quality of capital investment and distance from competitors, each existing Florida operation has developed its own marketing strategy and customer base.

⁷¹ Kathleen Haughney, “Destination casino bill is dead for this year,” *Sun-Sentinel*, February 3, 2013. http://articles.sun-sentinel.com/2012-02-03/news/fl-gambling-dies-or-lives-another-day-20120203_1_destination-casino-bill-gambling-regulation-debate-gambling.

SECOND DRAFT - CONFIDENTIAL

For example, Isle Casino Racing Pompano Park competes against the Seminole Hard Rock for its higher-end play and against Seminole Coconut Creek casino for the day-tripper business. Yet, with 1,450 slots and 48 poker tables, Isle still managed to generate \$155 million in gross gaming revenue during the past 12 months.⁷³

Isle generally generates about 40 percent of its annual revenue during the January-April period, thanks to the lift created by the incoming snowbird population that fills the condominiums and other housing units near the beach. In that sense, Isle is typical of many of the racino operations in South Florida.

Isle is also typical in its marketing strategy, eschewing relatively expensive mass-media options in favor of more targeted approaches, such as direct-mail and billboards. According to General Manager Rob Wyre, customers respond to the nature of the offer, which casino is providing the best deal, but also to the perception as to the looseness of the slots. Isle reports that between 60 and 65 percent of its slot play is “rated,” a term referring to players who have signed up for the loyalty program and who identify themselves as players during their visit to earn rewards.

That percentage is about 10 points higher than what is reported at Miami Jai Alai, an older property in a more urban area.⁷⁴ Miami Jai Alai management views its location as an asset that can be exploited, with heavy population centers nearby, and easy access to South Beach in Miami Beach. The property enjoys a strong police presence and patrons feel safe, according to management, which also notes that while the median player in its database is likely to be a female between 50 and 55 years of age, age drops noticeably after 2 a.m. Its demographics are also skewed heavily to the Cuban/Latino population, and to a lesser degree the Haitian population. With that in mind, management views the televising of jai alai on Telemundo and Univision as part of its marketing strategy.

Calder Casino and Race Course is also typical of the racino market in drawing most of its customers from within a 10-mile radius, and also competes against both the Hard Rock and Coconut Creek casinos, with the former being only two exit stops away on the Florida Turnpike. Calder competes against Coconut Creek for the market in the Boca Raton area.⁷⁵

Calder management believes that its close proximity to Sun Life Stadium, its Turnpike access, its equidistance of 20 miles from both Miami and Fort Lauderdale airports and its 220-acre site are assets that could benefit from additional capital investment in more amenities, but that possibility is presently precluded by the tax structure, which would prevent such investments from generating a sufficiently attractive return on investment.

⁷³ Interview with Isle Casino Racing Pompano Park General Manager Rob Wyre, May 1, 2013.

⁷⁴ Interview with Miami Jai Alai management, May 2, 2013.

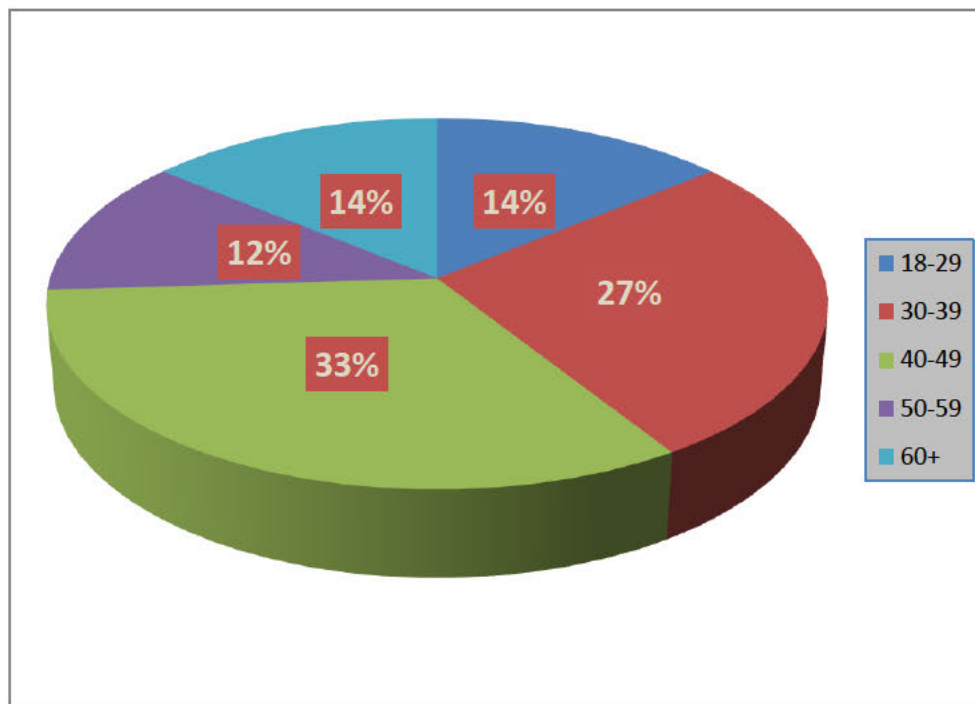

⁷⁵ Interview with Calder management, May 2, 2013.

SECOND DRAFT - CONFIDENTIAL

Calder competes with Gulfstream on multiple fronts, from geography to its thoroughbred racing meets, but the racinos clearly operate under different models. Gulfstream is being positioned as a racing destination and as a centerpiece for the Stronach Group, which is moving its racing operations to Florida, and which operates other tracks, including the signature Santa Anita in California. The core difference is that Gulfstream focuses more on racing, and views casino gaming primarily as a means of funding purses, which allows it to compete for top horses with tracks in northern states.⁷⁶

As noted earlier, Gulfstream is planning significant additional capital investment, undeterred by the tax rate. It has already managed to attract a younger demographic, in part because of its Village at Gulfstream investment, which opened in 2009. Gulfstream took a recent snapshot of its customer base to reveal the following about its customer base:

Figure 10: Gulfstream snapshot of customer demographics

Source: Gulfstream Park

A number of the racino operators report that competition is fierce, a competition heightened by the restrictions under which they operate. Not all restrictions are gaming-related. Magic City Casino reports, for example, that any plans it might consider to add a hotel are limited by restrictions on high-rise development near the airport.⁷⁷ Managers there are also concerned about capital investment that might be impacted by future destination resort casinos, a risk factor that discourages capital investment as well. Along that same line of reasoning, Mardi

⁷⁶ Interview with Gulfstream management, May 2, 2013.

⁷⁷ Interview with Casino Magic management, May 8, 2013.

Gras management said it would consider capital investments in hotel rooms, meeting space and restaurant improvements, if it had assurances that destination resort casinos were no longer a possibility.⁷⁸

Hialeah Park is pursuing significant capital investment in its facility, in an effort to recapture much of the appeal from its 1930s heyday as a racing icon. The \$470 million project will ultimately include, in addition to the casino, a 750-room hotel, convention and entertainment and retail centers.⁷⁹ The concept was summarized in a brochure produced by Hialeah management:

“(Hialeah Chairman) John Brunetti Sr.’s vision for Hialeah’s rebirth is a comprehensive development that supports the rich tradition and revitalization of the entire 200-acre Hialeah Park property and to energize the hospitality industry in Florida - a place that would entertain families, adults young and old and once again become a tourist destination.

“John’s plan restored Hialeah’s historic buildings and verdant gardens, brought horse racing back to the region and created a new entertainment experience for Miami – Dade County. Soon will come a small museum exhibiting the history of racing and the history of South Florida; the creation of an urban entertainment district for those who live, work, shop and play in the region; an outlet shopping village with restaurants; a new boutique hotel and a metro rail station and business complex for the City of Hialeah and Miami Dade County.”⁸⁰

The property plans to take advantage of some inherent assets, ranging from its location in the midst of a large Cuban-American population to its proximity to a train station in front of its property. Hialeah management plans to aggressively market itself throughout Latin America and Europe.⁸¹

11.Profitability

Casino gambling is generally a profitable business. As service businesses without costs of raw materials and inventory or the need to invest in research and development, casino companies are efficient operations, generating high operating margins. As shown in the following table, in 2012 the four largest publicly owned casino companies generated an average margin of cash flow (as measured by the commonly used metric of EBITDA, or earnings before interest, taxes,

⁷⁸ Interview with Mardi Gras management, May 9, 2013.

a. Reasons for Gaming Profitability

In terms of EBITDA return on total invested capital, a measure of profitability in relation to fixed plant, casino companies are very profitable. In 2012, the same four large gaming companies generated an average of 16.2 percent return on invested capital. The regional gaming companies generated a 13.6 percent return on the same measure. This compares to 18.8 percent for the hotel companies in this group and 2.1 percent for the three cruise companies.

Casinos tend to be profitable in great part due to the many barriers to entry that limit competition. First among these is the requirement for licensing. Many persons and companies will not want to get licensed due to the invasiveness of the process and its ongoing nature. Similarly, the transparency of the operations due to public reporting requirements is a deterrent to those not wanting to operate in a “fish bowl.” Possibly more importantly, most jurisdictions limit the number of gaming licenses or restrict the locales in which casinos can operate, thereby restricting the number of casinos that can open. Additionally, the capital-intensive nature of gaming, whether for the need for large and specialized physical plants or the high working capital needed to run the operations, result in a high capital cost, limiting participants only to those who can amass the great amount of capital needed. Lastly, gaming is a highly specialized cash-intensive operation requiring complex management controls regarding security, marketing and cost controls, which limits the number of capable operators.

b. Factors Affecting Profitability

Within the gaming industry, some properties are more profitable than others for a multitude of reasons:

- **Gaming tax rate** – The assessment made by the hosting jurisdictions is among the most significant determinants in casino profitability. Tax rates can range from 7 percent to 65 percent of house gaming win⁸², sometimes with additional up-front and ongoing payments to host communities, local public benefit organizations and the state or national government that is granting the gaming license. Higher rates are generally imposed in jurisdictions that limit competition, vesting greater value in the license rights. But obviously, the higher the tax rate, the lesser the ability of the gaming operator to absorb fluctuations in other elements of the business's operating results, jeopardizing profitability and the ability to withstand competition.

The absence of a gaming tax is a key element to the profitability of many Indian casinos. Without having to pay such a tax, the tribal gaming operation has substantially more flexibility to spend more on customer marketing including complimentary services such as rooms, food and beverage, giving them a potential competitive advantage against tax-paying commercial casinos. Additionally, non-tax-paying Indian casinos can return more to their owners or use the funds to pay down debt sooner, assuring them greater financial stability. The benefits of such a tax advantage are compounded by the tribe's exemption from corporate federal and state income taxes.

- **Cost of capital** – Gaming is a capital-intensive business, and getting more so as casinos get larger and incorporate ever more non-gaming amenities. The gaming company's ability to attract lower cost capital can make a huge difference in its profitability as measured by return to shareholders and its ability to pay down debt. Capital costs tend to be lower for larger projects, more diversified gaming companies, and companies with a longer track record.
- **Competition** – The level of competition in a market is a major determinant in any casino's profitability. This is best illustrated in operating margin performance, as a more competitive environment will force casinos to offer more incentives to customers to get them to play at any particular casino and reduce this margin. Return on investment will similarly be affected by greater competition as the operating profit declines in relation to the original capital cost.
- **Scope and diversity of offerings** – The efficacy of investment on the variety of amenities that can accompany a casino can have a dramatic impact on overall

⁸² "Win" and gross gaming revenue ("GGR") are effectively interchangeable terms, and both reflect the amount retained by the house after all winning bets are paid.

profitability. A hotel that was costly to build but unable to generate a sufficiently high average daily room rate due to the need to give away rooms can bring down a project's overall profitability. Similarly, restaurants and clubs that are overbuilt relative to their standalone profit-making capability can reduce the casino project's margins. Conversely, high volume turnover at any of these offerings can lead to highly efficient businesses that may generate profits beyond what similar operations not associated with a casino could generate, thereby enhancing the overall profitability of the project.

- **Accessibility** – Gaming is often convenience-driven, so accessibility, ease of parking, and matters of ingress and egress can have a major impact on profitability. Gaming customers are often repeat visitors and are attracted to facilities that make their arrival and departure easy. A casino in a competitive market with accessibility advantages will likely be more profitable by virtue of having more customers.
- **Management quality** – Operating efficiency is critical in gaming operations due to the high fixed cost nature of the business. Maximizing revenues is a key to successful operations of such businesses, so management skill in cost control and efficient marketing can make dramatic differences in operating margins and profitability.

Profitability within the Casino

Casinos are complex operations, in that there are many types of gaming and non-gaming operations occurring within the envelope of the casino development. This mix can vary significantly depending on the type of operation – destination vs. local, slots vs. tables vs. full service, standalone casino or a project with many amenities.

Generally, slots are the biggest contributor to profitability due to their low operating cost. There is little labor involved other than maintenance since the advent of ticket-in/ticket-out technology. Additionally, individual slot machines take up little room on the floor. Before considering gaming taxes, slots-only casino operations tend to generate among the highest returns on capital as they tend to have fewer amenities. The margins on net slot revenue can vary widely depending on the tax rate and regulatory requirements.

Tables generate higher individual bets than slots and the house retains a greater percentage in the individual gaming transaction, but table game transactions are much slower than the pull of a slot machine so calibrating the mix of tables and slots relative to demand is critical. Given the amount of labor required between dealers, supervisors, security personnel and cleaners, tables are generally less profitable than slots. An exception to this might be in extraordinarily high volume markets like Macau, where table games are the largest profit makers. The margins on net table games revenue can vary widely depending on the tax rate and regulatory requirements.

Hotel rooms may generate high operating margins in markets of ultra-high occupancy, but generally, due to the high labor, maintenance and utilities cost, their contribution is not as substantial as is gaming, especially after considering the development and recurring capital cost of building, maintaining and refurbishing hotel rooms. Similarly, casino food and beverage operations tend to run with little to no departmental profit with exception for certain “celebrity chef” restaurants in destination resorts.

As between destination resort casinos and local casinos, the profitability comparison cannot simply be made as so many of the elements affecting casino profitability, mentioned above, come into play. Destination casino project profitability is dependent on the efficacy of its design and appropriateness of the mix of demand generators – hotel, spa, restaurants, and clubs – and, management’s capability to get the various elements working together efficiently. Such projects’ successes are also dependent on being able to attract visitors from farther away and get them in and out of the project.

Internet gambling is just now being tested legally in the US, with the first Internet poker games just opening in Nevada in May. In Europe and other parts of the world, Internet gaming has proven very popular with the pure customer based gaming element generating cash flow margins of between 20 percent and 30 percent.⁸³ Capital cost in Internet gaming is based on technology investment or technology licensing fees (if using a third party online provider) and marketing to potential online gaming players.

12. Florida’s Competitive Landscape

Florida has an active land-based casino gaming industry, with seven Native American casino operations and six South Florida slots-only casinos at racetracks and jai alai frontons (collectively “racinos”). Three of the Native American casinos are located in Broward County and one each in Miami, Tampa, Immokalee and Okeechobee. The Seminole Tribe of Florida operates all of the Native American casinos except the Miami casino, which is owned and operated by the Miccosukee Tribe of Indians of Florida. Each of the South Florida racinos also offers poker, as do the majority of the pari-mutuel facilities elsewhere in the state. There is also one small Native American-owned slots facility in Clewiston on the southwest corner of Lake Okeechobee (a 5,600-square foot facility with a few slot machines), although we consider this to be too small to be truly defined as a casino.

Florida had a total population of 19 million in 2012, of which more than 14.6 million (77 percent) were adults (age 21+). Approximately 81 percent of the adult population (11.8 million adults) in Florida resides within a two-hour drive of an existing casino in Florida, excluding cruise ships, while 54.7 percent of the adult population (8 million adults) resides within a one-hour drive of an existing casino. The two-hour drive time figure comprises nearly all of the Florida population south of Gainesville. It should be noted that the drive-time population

⁸³ Thomas Allen, Morgan Stanley Report: Boyd Gaming Corporation; “Early to the Party,” April 11, 2013, page 7.

SECOND DRAFT - CONFIDENTIAL

projections presented in this report refer solely to permanent residents of Florida and do not include seasonal residents, either snowbirds or sunbirds.

Statewide, there are also a handful of casino cruises departing daily from ports throughout the state, some of which provide overnight cruises to the Bahamas and others which solely provide day-cruise excursions into international waters for gaming. The casino cruise industry in Florida is in a constant state of flux, generally downward. Ten years ago there were far more casino cruises in operation, but the industry niche has not fared well competing against land-based operations.

The racinos report their slot revenues to the State each month, which publishes the figures; Native American casino data are not published. The racinos also face a significant tax differential relative to the Native American casinos. Initially, racino slot revenue was taxed at 50 percent of net gaming revenues, excluding distributions to local governments. Effective July 1, 2011, the racino tax rate was lowered to 35 percent of GGR net of promotional credits and unclaimed tickets.

The Seminole Tribe historically (pre-2010) paid no gaming taxes, but was permitted to operate only slots and Class II table games (non-house-banked games). In 2010, the Seminole Tribe signed a 20-year compact with the State of Florida under which the Seminole Tribe agreed to pay the State an aggregate total of \$1 billion over the first five years of the compact (effectively less than 10 percent of gross gaming revenue), and potentially as much as \$1.5 billion based on an additional revenue-sharing component for the right to offer house-banked table games at its casinos in Hollywood, Immokalee and Tampa, with an option to add table games at its Coconut Creek casino. The compact also stipulated that all seven of the tribe's casinos could continue to operate Las Vegas-style slot machines for the next 20 years with no additional slot competition allowed outside of Broward and Miami-Dade counties, and that no Class III table games would be permitted anywhere else in the state.

Through 2012, we estimate that total GGR from the 13 racinos and Native American casinos in Florida was at least \$2.7 billion:

- The six racinos publicly reported GGR of \$527.6 million in 2012 (from an average of 6,327 slot machines over the course of the annual period and more than 140 poker tables). At year-end there were 6,393 slot machines and 147 poker tables operating.
 - Gross slot revenue was \$489.2 million (92.7 percent of GGR), while average slot win per unit per day was \$211;
 - Total cardroom revenue was \$38.3 million (7.3 percent of GGR), while average win per table per day was \$713;
 - Average GGR per gaming position per day was approximately \$198.
- We estimate the seven Native American casinos last year generated GGR of \$2.2 billion.

SECOND DRAFT - CONFIDENTIAL

- This estimate is based on two percent annual growth from the 2011 reported figure of \$2.16 billion (from 13,069 slots and 457 table games, or 15,811 gaming positions having \$374 in GGR per position per day).⁸⁴
- It should be noted that some expansion at Native American casinos has occurred since 2011, such that in aggregate, we estimate there are at least 14,500 slot machines and 450 table games (or 17,200 gaming positions) at Native American casinos in Florida in 2012.

The following table provides our estimated snapshot of the Florida casino industry for calendar year ended 2012 (based upon estimated results for Native American casinos, as applicable).

Figure 13: Florida casino supply and performance, 2012

	Racinos	Native American casinos	Statewide total
Estimated GGR (\$M)	\$527.6	\$2,200.0	\$2,727.6
No. Casinos	6	7	13
Slot Machines	6,393	14,500	20,893
Table Games	147	450	597
Est. Gaming Positions	7,275	17,200	24,475
Est. GGR/position/day	\$198	\$349	\$304

Source: Florida Department of Business and Professional Regulation; Spectrum Gaming Group estimates

We believe that the vast majority of GGR generated by Florida's casinos is generated by adults residing in close proximity to a casino (i.e., within a one-hour or two-hour drive).

13. Casinos (Commercial, Racetrack, Indian)

There are nearly 1,000 casinos in the United States, and in 2012 they generated an estimated \$66 billion⁸⁵ in gross gaming revenue ("GGR"). Put another way, gamblers experienced net losses of \$66 billion in US casinos last year. Casinos are the highest-grossing form of legal gambling in the country, having surpassed lottery sales.

In this section we provide an overview of various aspects and components of an industry that, from an economic perspective, has been highly successful.

a. National Overview

The modern casino industry began in Nevada, which was the first state to legalize casino gaming, when legislation was passed and signed into law by then-Governor Fred Balzar in 1931. While casinos grew in the state it was not until 1941 when the first casino El Rancho Vegas

⁸⁴ Alan Meister, *Casino City's Indian Gaming Industry Report*, 2013 Edition.

⁸⁵ Per American Gaming Association 2012 report of commercial casino revenue and 2012 4.7 percent commercial casino growth rate applied to National Indian Gaming Commission FY 2011 Indian casino revenue. Actual NIGC FY 2012 data are expected to be released later this year.

SECOND DRAFT - CONFIDENTIAL

Hotel-Casino – was built on Highway 91. This came to be known as the Las Vegas Strip and is now home to 41 casinos generating \$6.2 billion in gross gaming revenue (“GGR”), or roughly 57 percent of the total GGR in the state of Nevada. It then took until 1976 for another gaming jurisdiction to be legalized when New Jersey voters passed a voter referendum for a constitutional amendment to utilize privately owned casinos to revitalize Atlantic City – the former “Queen of Resorts” – that was in severe decline. This dynamic – economic recovery, urban renewal or Tribal self-sufficiency – has been one of the primary driving forces in the expansion of gaming throughout the US.

The following table provides a state-by-state breakout of the types of casino gambling. Of note, this review and analysis does not include a discussion of lotteries even though the proliferation of slot machines at racetracks is frequently operated under the auspices of the respective state lottery commissions. In the sections that follow we will provide a discussion of the various forms of casinos.

Source: American Gaming Association, Spectrum Gaming Group. Notes: Massachusetts has legalized casinos but they have yet to open. Florida does have “floating” casinos in that day-cruise vessels and cruise ships dock at state ports, but the gambling is unregulated and takes place in international waters.

SECOND DRAFT - CONFIDENTIAL

Note the second column in the above table, which indicates the year that commercial casinos were legalized in each state and note that most of the legislation was passed around the time of economic recessions in the US.⁸⁶ Of note, the legalization of casinos in Atlantic City followed the 16-month November 1973 recession, and the eight-month July 1990 to March 1991 recession can be considered as the impetus for the legalization of casinos in Colorado, Illinois, Louisiana and Mississippi. As previously indicated, economic recovery has been one of the leading reasons states and municipalities enact gaming legislation and casino gaming has become an economic mainstay in many communities.

The gaming industry is known for substantial capital investment in facilities, with the size and scale of the investment dependent upon potential returns that are, in turn, dependent upon population and visitation, regulations and proposed tax rate, to name a few factors that are considered in such investment decisions.

This investment creates construction jobs during the development phase of the project, followed by long-term job creation to staff the properties and service the customers. As an example, Tunica County, MS, was the poorest county in the country – 53 percent living below the poverty line and 15 percent unemployment – and was referred to as “America’s Ethiopia” by Jesse Jackson in 1985.⁸⁷ The first casinos opened in Tunica in 1992 and by 1994 when *U.S. News and World Report* revisited Tunica, 95 percent of all adults were working. The county budget, which was under \$3 million before the casinos commenced operations, is just under \$50 million for fiscal year 2013.⁸⁸ Farther south in Biloxi, MS, the experience was much the same. At the opening of the new Isle of Capri casino in Biloxi, MS, CEO Bernie Goldstein is quoted in his autobiography as, “We held a jobs fair, at which we were deluged with enthusiastic applicants. One in every 10 Mississippi workers was unemployed at the time, and we were offering outstanding salaries, benefits and promotion opportunities.”⁸⁹

The commercial casino industry⁹⁰ is large and growing. While this statement might seem counterintuitive given the challenges the industry faced during the economic recession and with certain companies still facing an uncertain future due to highly levered balance sheets, the fact remains that the gaming industry in the US has expanded to new jurisdictions, invested in new facilities and realized an almost 9 percent increase in GGR since the end of the Great Recession in June 2009.⁹¹ The commercial industry generated \$37.3 billion in GGR in 2012, just a slight

⁸⁶ Based on data provided by the National Bureau of Economic Research Business Cycle Dating Committee.

⁸⁷ James Popkin, “A Mixed Blessing for ‘America’s Ethiopia’,” *U.S. News and World Report*, March 6, 1994, http://www.usnews.com/usnews/news/articles/940314/archive_012562.htm.

⁹⁰ We are defining commercial casinos as land-based, riverboat and racinos. This definition does not include Native American casinos or cardrooms.

⁹¹ National Bureau of Economic Research Business Cycle Dating Committee.

half percent below the 2007 peak revenue of \$37.5 billion. Much of this growth can be credited to the expansion of gaming to new jurisdictions – Pennsylvania, Ohio and Kansas are examples – or new properties opening in existing jurisdictions – Resorts World New York, Rivers Casino Des Plaines (Illinois) and SugarHouse (Philadelphia) – but some of it can also be ascribed to the improving economy and stabilizing housing sector providing consumers with the confidence to again visit and spend in casinos.

Figure 15: US commercial casino gross gaming revenue

Source: American Gaming Association; state regulatory agencies.

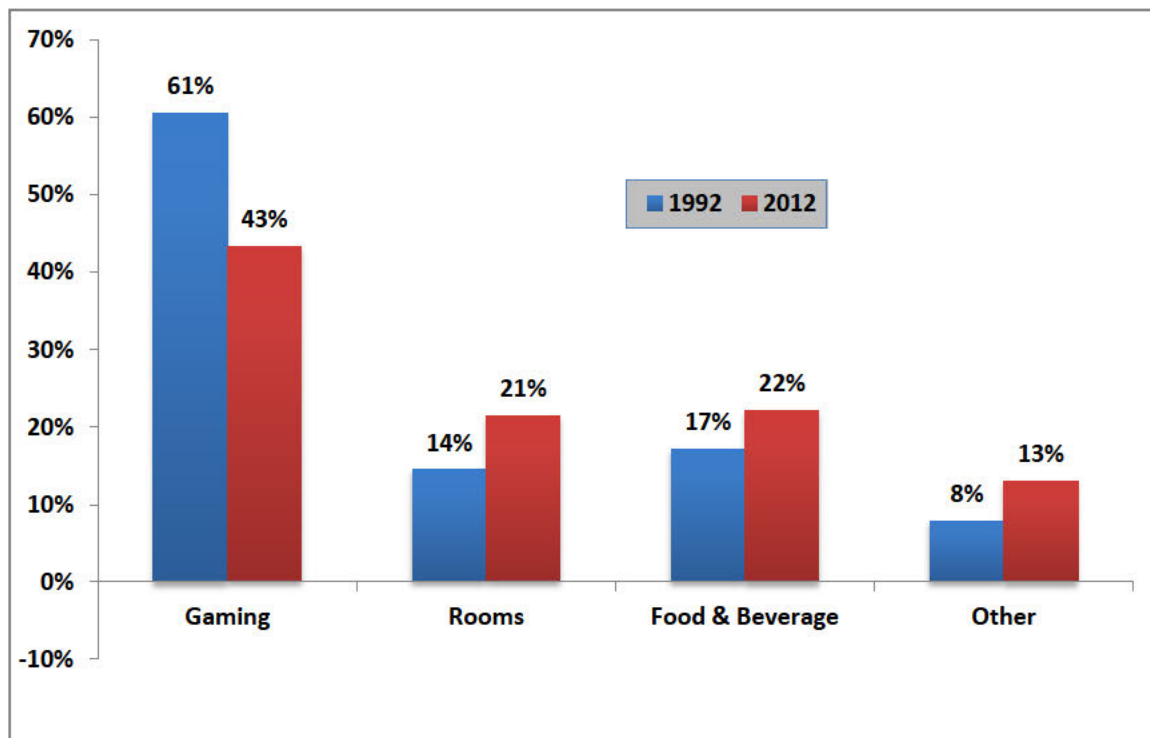

Today, 26 states have legalized commercial casinos of some type. As the casino industry expanded into other states and regions it has also evolved. To make casino gaming palatable to an electorate whose only exposure to the industry was from movies like *The Godfather* or *Bugsy*, states enacted legislation with certain requirements, such as limits on the number of gaming positions or the imposition of bet limits. In Colorado the casinos are only allowed in the former mining towns of Black Hawk, Central City and Cripple Creek and the casinos have architecture common to pre-World War I Colorado. Iowa riverboats must replicate 19th Century Mississippi steamships.

As the electorate became more comfortable with the industry and it contributed employment and raised revenue, many jurisdictions began to loosen regulations so that the in-state casino industry could continue to be competitive against the new casino jurisdictions being enacted throughout the country. The Iowa legislature voted in 1993 to remove bet and loss limits

and allow “as many gaming tables and slots as the boats could safely fit.”⁹² Missouri removed its loss limits in 2008. Colorado raised the maximum bet limit from \$5 to \$100 in 2009. Over the years, the requirement that riverboats cruise has been removed in all riverboat markets.

Because of the way regulations were written with riverboats enjoying monopoly-like status surrounded by other casinos throughout the state, most of the new jurisdictions became day-trip markets where customers drove from within a small radius, typically 50 to 75 miles, and stayed at each property for only a few hours. Properties located in Las Vegas, Atlantic City and Mississippi operated under different regulations that created a critical mass of properties and lower tax rates that incited the property owners to invest in larger facilities with hotels, more expansive food and beverage offerings, nightlife, entertainment and convention space. In the early part of the industry life cycle, the majority of the casino property’s revenue and earnings came from the gaming floor. Today, and especially for these larger properties, casino gambling now represents less than half of revenue.

Figure 16: Analysis of the shift in revenue contribution, Clark County, NV, casinos, 1992 vs. 2012

Note: Data from the Nevada Gaming Control Board all casino locations with Gaming revenue of \$1 million or larger. As such, the data reflect some casinos we would not consider “destination resorts.” For the destination resort casinos, the non-gaming portion of revenue in 2012 would be higher. Source: Nevada Gaming Control Board, Nevada Gaming Abstract 1992 and 2012.

⁹² Bernard Goldstein, *Navigating the Century; A Personal Account of Alter Company’s First Hundred Years*, p. 166.

b. Evolution of Destination Resort Casinos

As casinos expanded to other parts of the country they introduced the industry to new customers and drove increased visitation to Las Vegas and, to a lesser extent, Atlantic City. With the financial backing of the Wall Street high-yield bond markets, developers, particularly in Las Vegas, but also in Atlantic City and Mississippi, invested in larger and more luxurious properties. We classify these casino properties as destination resorts. The term “destination resort” is subject to interpretation, but Spectrum views it to be one with a critical mass of hotel rooms (typically 1,000 or more), restaurants, leisure activities and other resort features that has the ability to attract out-of-market patrons for a multiple-night stay. As an example, Bellagio in Las Vegas has 3,950 guest rooms, world-class architecture, a dancing-water show, a Dale Chihuly hand-blown glass lobby ceiling, and “O” Cirque du Soleil show to draw customers. Once the customer arrives Bellagio offers a spa, conservatory and botanical gardens, fine art gallery, nightclubs and several fine restaurants to keep the guest entertained outside of the casino.

Because there are more activities than gaming, the typical destination casino property employs a larger hotel with a higher ratio of rooms per gaming position⁹³ than regional or day-trip properties. Stated another way, at full occupancy there would be more people staying at a destination property than could be satisfied by the number of gaming positions. Thus, by design, there need to be more activities to keep the guests satisfied. The following table provides a snapshot of the ratio of rooms per gaming position for the destination, regional destination or day-trip property. The average number of rooms/gaming position for a destination casino is 1.75 rooms/gaming position, which is more than three times the ratio for a regional destination casino and a little over 10 times the ratio for the day-trip casino. This higher room count leads to more people in a property with a longer length of stay and higher spend/visit. Just adding hotel rooms will not ensure occupancy. It is the addition of other high-end amenities that draws the customers to the property with the demand justifying the larger hotel offering.

Figure 17: Analysis of select casino hotels ratio of hotel room count to gaming position

Property	Slot Machines	Table Games	Gaming Positions	Hotel rooms	Rooms/Gaming Position
<i>National Destination Resorts</i>					
Bellagio	2,111	146	2,987	3,933	1.32

In addition to the luxury hotels and spas, destination resort casinos now boast high-end restaurants, along with the all-you-can-eat buffets for which Las Vegas was previously known. The *Forbes Travel Guide* (formerly *Mobil Travel Guide*) evaluates properties on over 500 service criteria and delivers comprehensive ratings and reviews, including the prestigious Five Star ratings. Today, there are more four- and five-star rated restaurants in Las Vegas than in any other US city, including New York, Los Angeles and Miami.

Figure 18: Four- and five-star restaurants for select cities

Miami	10	Azul, NAOE, Palme d' Or
Orlando	5	Victoria and Albert's
New Orleans	3	The Grill Room

Source: Forbes Travel Guide and Startle.com

The amenities we cited within the control of the property developer. Despite a beachfront setting, Atlantic City and Biloxi have been unable to compete with Las Vegas for international visitors, because of factors outside the control of the developer. Of particular importance is accessibility to each respective market. Simply put, Atlantic City International Airport and the Gulfport-Biloxi International Airport do not – and cannot with their current infrastructure – provide the same airlift as McCarran International Airport in Las Vegas. In 2012, there were 41.7

million air passengers in Las Vegas,⁹⁴ while data from the Atlantic City Convention and Visitors Authority indicate that Atlantic City International Airport has more than 1 million annual passengers⁹⁵ and Gulfport-Biloxi air passengers were less than 1 million in 2012.⁹⁶ As such, we consider Las Vegas to be a national destination market, while both Atlantic City and Biloxi are regional destinations. Because of the critical mass of casino properties, combined with hotels and other amenities these two markets can draw from further away and for a longer stay duration than the primarily day-trip riverboats, but do not draw customers from as far or as long as Las Vegas.

c. Evolution to Hub and Spoke Business Model

The evolution of commercial casino gaming in the United States has evolved over a period of decades from a policy in which some states allowed casino licensees to cluster in a central location (Mississippi, Nevada, New Jersey) to one in which most states issue fewer licenses, giving some regional exclusivity, but balancing that with a relatively high tax rate. As the following table shows, the trend for higher tax rates has been rather strong, with few exceptions:

Figure 19: Changing tax rates over time

	Casino-revenue tax rate at adoption ⁹⁷	Year gaming was established
Nevada	6.8%	1931
New Jersey	8.0%	1978
Iowa	24.0%	1991

Massachusetts casinos	25.0%	2011
Massachusetts slots only	40.0%	2011

Source: State gaming commissions

In our experience and as detailed earlier, tax rates are often set on the basis of political considerations, rather than through an economic analysis. This is best illustrated through the anecdotal example of New Jersey, which today is viewed as a low-tax state, but did not start out that way.

In 2010, Spectrum authored a peer-reviewed white paper on tax policy⁹⁸ that included the following:

“New Jersey was the first state outside Nevada to legalize casinos, with voters approving a November 1976 referendum to authorize casinos in Atlantic City. The enabling legislation, the Casino Control Act, was approved eight months later, and the first casino opened in May 1978. The tax rate in New Jersey was set at 8 percent, which today is the second lowest in the nation (behind Nevada).⁹⁹

“In researching this paper, we asked Steven P. Perskie – who was a member of the state Assembly in 1976 and 1977, and is widely hailed as the architect of the Casino Control Act – to provide the thought processes that guided the decision to set the rate at 8 percent. He responded with the following written comment:

“ ‘In researching the drafting of the bill introduced in 1976, after the referendum passed, we found that the highest (combined) tax on gross revenues was 7.5 percent (in Nevada). For principally political reasons, we therefore set the initial rate for New Jersey at 8 percent. We assumed that this would inoculate us from any argument in either direction (that the tax was too high or too low), and indeed we never had to defend that decision. We didn't, at that time, make any effort to calculate the revenue estimates for the state, as

⁹⁸ Spectrum Gaming Group, *Casino Tax Policy: Identifying the Issues that Will Determine the Optimal Rate*, <http://www.spectrumgaming.com/dl/SpectrumNationalTaxAssociation.pdf>.

⁹⁹ New Jersey also imposes a 1.25 percent reinvestment obligation, which offers casinos a below-market return. We normally calculate the effective overall rate in New Jersey at 8.4 percent. That reinvestment obligation, however, was not imposed at the time of the statute's initial adoption.

SECOND DRAFT - CONFIDENTIAL

we had no idea (and, as experience would show, we had *no* idea) what we would be dealing with.”¹⁰⁰

That “inoculation” rationale could have been applied in many states, and demonstrates that gaming did not evolve based on market demand or player preferences. Still, the market did respond to these political arguments. In large measure, that evolution prompted the gaming industry to develop what has been termed the “hub and spoke” business model.

Under this model, one company would operate multiple properties. The higher-tax properties that are isolated in various regions would attract local business and develop databases of players within their respective regions. As these databases grow, players who earn loyalty points at these properties would be encouraged to redeem those points at “hub” properties where the tax rate is lower, and thus the profit margin is higher.

Caesars Entertainment embodies this model, and arguably pioneered the concept and developed it. Under this model, Caesars leverages its multiple locations, with spoke properties in feeder markets, and hub properties in markets such as Las Vegas and Atlantic City, as well as leveraging its loyalty program, known as Total Rewards.

In a recent column in *Global Gaming Business* magazine, Caesars Chairman, President and CEO Gary Loveman described the core of the program:

“Many commentators have identified Total Rewards as the leading loyalty program in the gaming industry. We agree that Total Rewards provides Caesars with some unique advantages. No other program allows patrons to earn reward credits or points at one property in Las Vegas, for example, and redeem them inside the casino in New Orleans or at a Harrah’s New Orleans strategic business partner’s restaurant in the French Quarter. No other gaming company comes close to matching Caesars’ distribution of 52 properties in the US and on four continents around the world, all of which create marketing opportunities for our home communities.

“Currently, there are more than 45 million customers in the Total Rewards database that have taken advantage of the program, 8 million of whom have been active in the past 12 months. The program provides for four tier cards or levels based on activity of the guest, with each card having a unique cadre of benefits. Patrons earn Reward Credits (points) while playing slots and table games, by making non-gaming purchases at our properties, or by using our Total Rewards-branded credit card to make purchases anywhere. These points accrue and can be redeemed across all Caesars Entertainment properties.”¹⁰¹

Others are moving in the same direction. The Mohegan Tribal Gaming Authority, which began with a hub property at its Connecticut casino, has since branched out to a spoke in

¹⁰⁰ Email from Steven Perskie, August 6, 2010.

¹⁰¹ Gary Loveman, “Heart of the City,” *Global Gaming Business*, April 30, 2013 <http://ggbmagazine.com/issue/vol-12-no-5-may-2013/article/heart-of-the-city1>.

Pennsylvania, is applying for a resort destination license in Massachusetts, is managing a casino in Atlantic City, and seeking to manage casinos elsewhere. A Florida example is the Seminole Hard Rock, which is developing plans to leverage its national brand in gaming markets such as Massachusetts and New Jersey, as well as in hotel markets. Hard Rock Chairman Jim Allen identified between eight and 15 markets that could potentially support a Hard Rock hotel casino, and as many as 50 markets that could support a Hard Rock hotel.¹⁰²

A recent article on HotelNewsNow.com noted:

“Hard Rock, which now has 18 properties in its portfolio, could triple that number over the next three to five years, Chairman Jim Allen told HotelNewsNow.com. ...

“Globally, Hard Rock has secured relationships with development partners in 58 countries, Allen said.¹⁰³”

Other operators, including those with properties in Florida, acknowledge the benefits of the model. Virginia McDowell, President & CEO of Isle of Capri Casinos Inc. said:

“If you look at the Caesars [Entertainment] business model, they benefited tremendously from stringing their regional operations together across the United States in their hub-and-spoke model, using that as drivers to their destination resorts. They built loyalty in the regional markets because people wanted to go to the destination markets. There’s enough independent operators in Las Vegas that, to the extent you want to partner with somebody, there are lots of opportunities for us to send our customers and the regional markets have changed enough that you don’t *have* to have a destination driver, although it’s nice to have.¹⁰⁴”

Notably, while the hub-and-spoke business is still evolving and has yet to reach its full potential, new models are emerging. Indeed, Caesars is pioneering a model that Loveman recently detailed:

“Policymakers and social scientists increasingly understand that casino development projects offer the most economic and social benefits when they are specifically tailored to the needs of their host communities. The long-held view that casinos exist across a spectrum anchored at one end by neighborhood slot parlors and other forms of convenience gaming and at the other end by integrated destination resort casinos has become incomplete.

“Over the past decade, a third dimension of casino gaming has emerged in North America that provides another option for urban policymakers to consider.

¹⁰² Shawn A. Turner, “Hard Rock Plans Global Hotel Push,” HotelNewsNow.com, February 1, 2013 <http://www.hotelnewsnow.com/articles.aspx/9822/Hard-Rock-plans-global-hotel-push>.

¹⁰³ Ibid.

¹⁰⁴ David McKee, “Meet Virginia McDowell,” Stiffs and Georges blog, January 18, 2012 <http://dmckee.lvablog.com/?p=8303>.

“I call this model the city-integrated or urban resort. Its defining feature is integration with its location’s pre-existing business community and attractions. In this model, the casino itself is both a physical and a metaphorical hub. Its spokes radiate not only to amenities in the casino complex itself, but also to established restaurants, shops, hotels and recreation offerings in the larger metropolitan area.”¹⁰⁵

This analysis should note that, while the hub-and-spoke model is still developing, a new business model may be forming in its wake. Whether the future includes new urban resorts or traditional destination resorts, the goals for policymakers remain unchanged: Capital investment remains the key target. Consider that a destination property – a “hub” in this model – will likely employ at least 3,000 full-time equivalents, and as many as 5,000. A typical “spoke” property, which focuses on its nearby adult population, will employ about 800, and possibly as many as 1,000.

All else being equal, a destination resort is more likely to:

- Promote tourism, as it has the ability to pull adults from more distant locations.
- Withstand competition, since it typically offers more amenities.
- Generate more revenue, since it will likely penetrate a greater percentage of the adult population.

One corollary to this trend is that properties that begin life as convenience-oriented facilities, which would include so-called “spokes,” are not necessarily destined to remain in that category in perpetuity.

For example, Dover Downs – a racino in southern Delaware – responded to the threat of competition from nearby Maryland, as well as from Pennsylvania and New Jersey, by adding a 232-room hotel and conference center, along with a combination ballroom/concert hall, a new fine-dining restaurant, pool and spa. The property also added a 425-seat buffet, among other investments. That investment helped the property weather competition, by becoming something closer to a destination. The expansion has continued, and the facility now has 500 rooms, and significantly more amenities.¹⁰⁶

In Florida, Gulfstream has significantly expanded over the year, starting with the addition of the 1-million-square-foot Village at Gulfstream, which includes 750,000 square feet of retail space. That property continues to expand, with plans now for a \$700 million expansion¹⁰⁷ that would include hotel rooms. As described by the *Sun-Sentinel*, “The development plan being formulated by The Stronach Group includes two hotels facing the track, greatly enlarged

¹⁰⁵ Loveman.

¹⁰⁷ Interview with Gulfstream executives, May 2, 2013.

SECOND DRAFT - CONFIDENTIAL

grandstand seating, as well as a standalone casino and adjacent concert hall. A giant statue of Pegasus will adorn a 4D theater nearby in a park area. But here's the most surprising aspect of a project that will cost hundreds of millions of dollars to complete: Public money is not part of the equation.¹⁰⁸

In one sense, properties such as Dover Downs and Gulfstream are defying the basic economics of hubs vs. spokes in that such properties are burdened by relatively high tax rates, which tend to discourage such investments by reducing the potential returns on investment. Yet, in another sense, such properties recognize that such investments can protect – or even enhance – market share.

We do not suggest, however, that destination gaming resorts are panaceas, nor do we ignore the downside or the challenges they present to local communities. By definition, they increase traffic and create other demands on public services. The more successful they are in generating revenue, the more such demands increase.

In 2009, Spectrum studied in great detail the economic and social impacts of two destination resorts in Connecticut on their local communities. The two tribal properties – Foxwoods and Mohegan Sun – were responsible for \$1.2 billion worth of personal income in Connecticut, both directly and indirectly. Between 1992 and 2008, they accounted for about 12 percent of the net new job growth in Connecticut.¹⁰⁹

At the same time, however, DUI arrests were up significantly. One town reported that such arrests doubled since the first casino opened in 1992, and three local communities reported that 20 percent of those arrested for DUI – including one motorist arrested for manslaughter for causing a fatal accident by driving the wrong way on a highway – acknowledged that they had their last drink at one of the casinos.¹¹⁰

Spectrum also noted that “with many casino workers unable to afford housing in southeastern Connecticut, some landlords have converted single-family homes into boarding facilities. The practice is not only illegal, it is unsafe as well.”¹¹¹

Such examples demonstrate that destination resorts present both challenges and opportunities.

¹⁰⁸ Craig Davis, “Gulfstream plans major expansion in pursuit of Breeders’ Cup, year-round racing,” *Sun-Sentinel*, November 27, 2012 http://articles.sun-sentinel.com/2012-11-27/sports/fl-gulfstream-park-expansion-1128-20121127_1_breeders-cup-gulfstream-park-race-track.

Source: Florida Department of Business and Professional Regulation

A seventh racino is scheduled to begin operating later this year at Hialeah Park.

e. Native American Casinos

Nationally

Congress passed the Indian Gaming Regulatory Act of 1988 (“IGRA”) because many Native American nations and tribes had established gaming activities but federal laws at the time did not establish a clear regulatory framework for the conduct of such games. IGRA was passed to fulfill certain goals, including promoting tribal economic development, self-sufficiency and strong tribal governments; maintaining the integrity of the Native American gaming industry; and ensuring that tribes are the primary beneficiaries of their gaming activities.¹¹³ Under IGRA, games are classified into three categories: Class I, Class II and Class III.

- Class I gaming includes social games solely for prizes of minimal value or traditional forms of Indian gaming engaged in by individuals as part of tribal ceremonies or celebrations.
- Class II gaming includes bingo, pull-tabs, lotto, punch boards, tip jars, certain non-banked card games (if such games are played legally elsewhere in the state), instant

¹¹² Florida Department of Business and Professional Regulation, Division of Pari-Mutuel Wagering <http://www.myfloridalicense.com/dbpr/pmw/fag-slots.html> (accessed April 29, 2013).

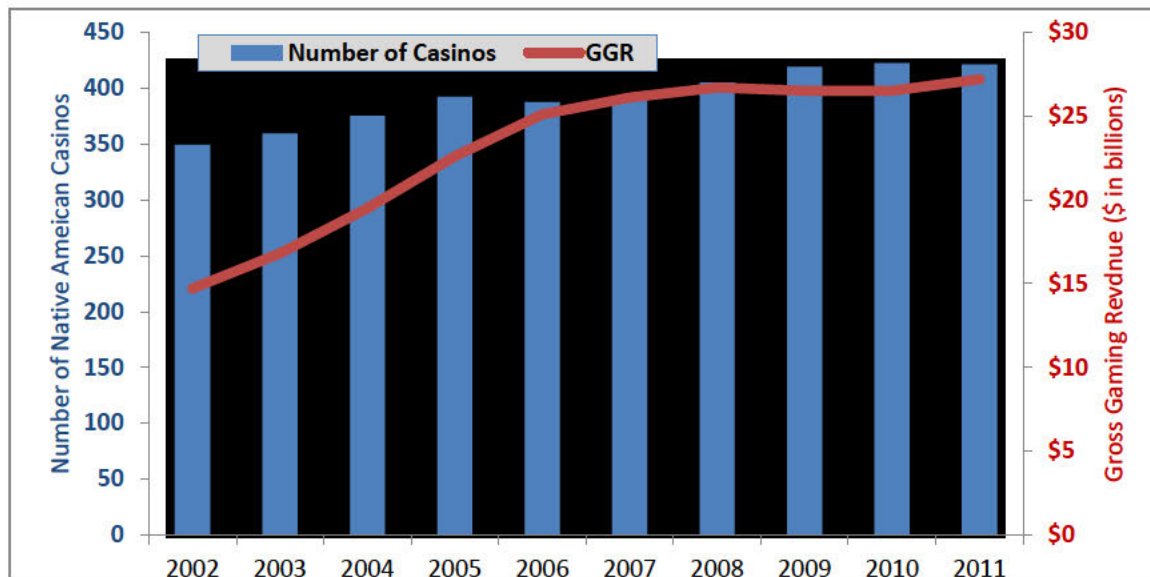

¹¹³ Indian Gaming Regulatory Act, National Indian Gaming Commission http://www.nigc.gov/Laws_Regulations/Indian_Gaming_Regulatory_Act.aspx.

bingo and other games similar to bingo, if those games are played at the same location where bingo is played.

- Class III gaming, meanwhile, includes all other forms of gaming, such as slot machines, video casino games (video blackjack and video poker), table games and other commercial gaming, such as sports betting and pari-mutuel wagering. To offer Class III games, federally recognized Indian tribes are required to negotiate a compact with the state in which they operate and attain approval of the compact by the US Department of the Interior.¹¹⁴

As in the commercial casino industry, the type of Native American casino is also varied, with the Seminole Hard Rock casinos, Foxwoods and Mohegan Sun being examples of national destination resorts. According to the National Indian Gaming Commission there were over 420 Native American casinos generating over \$27.2 billion in GGR in 2011.

Figure 21: Size of the Native American casino industry

Source: National Indian Gaming Commission.

Florida

Florida's seven Native American casinos are spread throughout five counties (Broward, Collier, Hillsborough, Glades, and Miami-Dade), while Broward is home to three of the seven Native American casinos.

Native American casinos in Florida, for the most part, provide a full-service gaming experience, although non-card games such as craps or roulette are not allowed. The Indian casinos, however, are not subject to state regulation and thus have substantial competitive

¹¹⁴ Adam Steinberg, "Know Your Odds: Gaming Industry Investment Primer," Morgan Joseph & Co. investment research report, p. 76, January 9, 2006.

SECOND DRAFT - CONFIDENTIAL

advantages over racinos including allowing patrons to smoke, offering live table games (except at Miccosukee, which is a Class II property) and paying no direct gaming tax.¹¹⁵

While there are two federally recognized tribes in Florida, the Seminole Tribe is dominant, and indeed Seminole Gaming is largely viewed as more than a Florida operation. As noted earlier, by virtue of its ownership of Hard Rock International, the Tribe is branching out with Hard Rock-branded casinos in other states. Notably, the Seminole Tribe has secured investment-grade rating for its debt, as noted by Fitch, a major rating agency:

“Fitch believes that STOF’s [Seminole Tribe of Florida] operating profile and credit metrics are consistent with 'BBB-' IDR (issuer default rating), and a further track record of fiscal prudence by the tribe may result in an upgrade of the IDR to 'BBB-' within the next 12-24 months. Specifically, an investment grade IDR can be supported by STOF’s ... solid competitive position ... (and) strong credit metrics.”¹¹⁶

At least two other Indian tribes are working through various legal channels to commence Florida gaming operations:

- The Poarch Band of Creek Indians, which is based in Atmore, AL, has land in Escambia County, which is held in trust by the US government, and also owns, or has options to own, or agreements to control 10 pari-mutuel permits along the Interstate 10 corridor between Pensacola and Jacksonville. The Poarch Band is seeking to negotiate an agreement, which could include revenue-sharing, with the State to operate Class II gaming (i.e., bingo-based slots and non-house-banked games) at the pari-mutuel facilities. “We believe that such an intergovernmental agreement between the Poarch Band and the State of Florida can be crafted in a legally viable manner that is allowable under State law, avoids the need for federal approvals and avoids violation [of] the Seminole Compact,” according to attorney Steven Paul McSloy.¹¹⁷ A market study showed that Poarch Band gaming at Pensacola Greyhound Track, Creek Entertainment Gretna, and Jacksonville Racing could generate \$1 billion in net revenue.¹¹⁸ The tribe currently operates three casinos (with electronic gaming machines only) in Alabama.
- For the past decade the Muscogee Nation of Florida has been pursuing federal recognition by act of Congress in order to initiate gaming operations as a means of economic development. Tribal landholdings are well positioned to offer casino gaming

¹¹⁵ As noted earlier, the Seminole Tribe of Florida compact with the State of Florida provides for payments of approximately \$1 billion over five years.

¹¹⁶ “Fitch Rates Seminole’s \$750MM Term Loan 'BBB-'; Affirms IDR at 'BB+'; Outlook to Positive,” April 1, 2013. <http://www.businesswire.com/news/home/20130401006002/en/Fitch-Rates-Seminole-750MM-Term-Loan-BBB->.

in an underserved tourism market close to Gulf beaches in the Florida panhandle, where the nearest competition are greyhound tracks in Pensacola and Ebro. In 2003 US Representative Jeff Miller, Republican from Florida, introduced House Resolution 323, The Muscogee Nation of Florida Federal Recognition Act (“H.R.323”).¹¹⁹ This bill, which has never been voted on, was assigned to the House Natural Resources, Indian and Alaskan Native Affairs Committee on January 13, 2013.¹²⁰ It has received repeated extensions over the past 10 years. The last extension was granted in December 2012, and expires in early June. It is our understanding that current prospects for recognition through Congress are not promising.

14.Pari-mutuel

a. National Trends

In pari-mutuel wagering, bettors bet against each other. The house has no stake in the outcome. The house takes out a portion of the amount wagered, which in racing is known as handle. Racetracks typically retain about 20 percent of handle.

National trends mirror that of Florida. Live handle in calendar year 2010 (the most recent year for which data are available) accounted for just 12 percent of total handle for horse racing, 29 percent for greyhound racing and 42 percent for jai-alai handle.¹²¹ For the 10-year period ending in 2010, pari-mutuel wagering fell from \$18.3 billion in 2000 to \$11.5 billion in 2010, a decline of 37 percent. States’ share of the revenue fell from \$470 million to \$191 million, a decline of 59 percent.¹²² The Association of Racing Commissioners International (“ACRI”) no longer reports attendance figures because it says the figures are no longer meaningful. Most jurisdictions no longer report them, and of those that do, they are “increasingly inaccurate,” according to ACRI. That comment made in the ACRI 2010 report offers a telling statement about the falling popularity of live pari-mutuel wagering.

Florida only reports paid attendance. Operators who choose to charge for admission must collect an admission tax for the state. There is no requirement that a facility charge for admission. And in Florida, admission is free at the state’s harness track at Pompano, at jai alai frontons and at most of the state’s 16 greyhound tracks.¹²³

SECOND DRAFT - CONFIDENTIAL

The following table puts pari-mutuel attendance nationally in perspective. Note that attendance for horse racing – the largest component by far of pari-mutuel wagering – attracts fewer than 3 percent of adults, although that percentage actually rose by two-tenths of 1 percent over the past four years.¹²⁴ As a participatory activity, it is on a par with chess, and significantly less popular than birdwatching.

Figure 22: Participation by adults in selected activities

Activity	Participated in the last 12 months (in thousands)		Frequency of Participation							
			Two or more times a week		Once a week		Two to three times a month		Once a month

Source: Statistical Abstract of the United States

Certainly, the creation of new wagering opportunities over the last several decades has given more adults more options. The history is summarized well in this excerpt from a report by Cummings Associates:¹²⁵

¹²⁴ Statistical Abstract of the United States <http://www.census.gov/compendia/statab/2012/tables/12s1240.pdf>

¹²⁵ Cummings Associates, "Analysis of the Data and Fundamental Economics Behind Recent Trends in the Thoroughbred Racing Industry," July 17, 2004, p. 7-8.
http://www.nationalhbpa.com/resources/cummings_report7-17-04.pdf.

“When they were first authorized in some states in the 1930s, and for a long golden age thereafter, race tracks essentially had a monopoly on legal gambling on a commercial scale. They were legalized because states needed money. During the economic collapse of the Great Depression, a number of states turned to legal gambling as a source of revenue. Nevada legalized casinos (in 1931), but every other state chose pari-mutuel betting on horse racing, and in a few states, on greyhound racing as well. This occurred, moreover, in the context of relatively simple leisure economies which, aside from movies and major league baseball, offered few alternative forms of commercial entertainment. In these circumstances, race tracks were by and large highly profitable. As businesses, horse tracks had little trouble developing large numbers of customers and were able to pay high rates of gambling ‘privilege’ taxes. They lived in a sheltered world.

“Over the past thirty years, however, the economic environment has changed dramatically. Competing forms of legal gambling have proliferated, starting with state lotteries in the late 1960s. Ironically, the same force that legalized racing led to lotteries: states needed money. Thirty-nine states now have them, and all the provinces of Canada. ...

“Then came an explosion of full-scale casino resort hotels in Las Vegas, New Jersey, Mississippi, Canada and Connecticut. These now attract tens of billions of dollars in consumer spending each year, with large amounts also spent on ‘limited’ casino gaming on riverboats in the Midwest, small casinos in Colorado and South Dakota, VLTs (‘video lottery terminals’) or slot machines at race tracks in seven states, and on a widespread basis in several Western states and much of Canada, on cruise ships operating out of many states, and at casinos on Indian lands across wide stretches of North America. ...

“In the 1980s, racing’s legal gambling competition more than doubled in size; in the 1990s, it more than doubled again. Over the same period, the U.S. leisure economy grew enormously and became vastly more diversified. Many leisure and entertainment activities are available today that did not exist in the 1930s, or even in the 1960s. Cable television, VCRs, DVDs, inexpensive air travel and the related (but not-so-inexpensive) theme park resort industries, major-league football and basketball and a host of other diversions now compete much more intensely with horse racing for the leisure dollars available.”

b. Florida

Florida first authorized pari-mutuel wagering in 1932.¹²⁶ In 2010, it accounted for 59 percent of the nation’s pari-mutuel wagering.¹²⁷ The Department of Business and Professional

¹²⁶ Florida PMW, *Annual Report, FY 2012*, p. 2.

¹²⁷ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010*, p. 1.

SECOND DRAFT - CONFIDENTIAL

Regulation (“DBPR”), through its Division of Pari-Mutuel Wagering (“PMW”), oversees gaming in Florida.

Pari-mutuel activities in Florida include thoroughbred horse racing, harness horse racing, quarter horse racing, greyhound racing and jai-alai games. In addition, pari-mutuel facilities can operate cardrooms, which can only be operated by the holder of a pari-mutuel license (though card games do not involve pari-mutuel wagering). Cardrooms cannot open in a facility unless live racing or jai first takes place.¹²⁸ Events at racing and jai-alai facilities are simulcast to other pari-mutuel facilities in Florida and to out-of-state venues.

Florida is the only state with live jai alai games. It is one of seven states with greyhound racing. Florida accounted for 64 percent of the nation’s live greyhound races in 2010.¹²⁹ Since 1993, 10 states have outlawed greyhound racing.¹³⁰

Florida allows slot machine casinos, also known as racinos, at pari-mutuel facilities in Miami-Dade and Broward counties. Numerous pari-mutuel operators in other areas of the state told us that they too need slot machine casinos to “even the playing field,” as they are unable to compete with racinos in and outside of Florida that use slot revenue to enhance purses, which, in turn, allow racinos to attract higher quality racing animals and make significant capital expenditures to improve their facilities.

As of April 3, 2013, there were 28 pari-mutuel facilities in Florida (plus inter-track at Ocala) that accepted bets on live races or jai alai games. They included 14 greyhound tracks, six jai-alai frontons, three thoroughbred tracks, one harness track and five quarter horse tracks. Twenty-four of them had cardrooms. Six had casinos. Ocala Breeders’ Sales in Ocala and Bestbet in Jacksonville operate simulcast parlors without live pari-mutuel racing. The overall financial trend for Florida pari-mutuels has been on a steady downward spiral. Many operations have sustained steep operating income losses, and those losses would have been much greater if it were not for racino and cardroom revenue. The worst-performing sectors have been jai alai and greyhound.

In FY 2012, Florida’s pari-mutuel facilities had a combined overall operating profit of just \$1.9 million. Thirteen had losses, with the largest of \$21.6 million at the combined Fort Pierce/Miami Jai Alai operation. The biggest operating profit was \$16.4 million at Flagler Greyhound Track, which also operates slot machines.¹³¹

¹²⁸ Florida Statute, 849.086 (5a).

¹²⁹ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010*, p. 39.

¹³⁰ Danny Valentine, “Proposal could hasten decline of greyhound racing,” *Tampa Bay Times*, April 28, 2011 <http://www.tampabay.com/news/business/proposal-could-hasten-decline-of-greyhound-racing-in-florida-nation/1166550>.

¹³¹ Florida PMW, Independent Auditor’s Report for Pari-Mutuel Permitholders, FY 2012.

SECOND DRAFT - CONFIDENTIAL

Pari-mutuel operations involve wagering on pari-mutuel events. The wagers occur at the track on live events or at track simulcast rooms. Those operations by themselves sustained an operating loss of \$50 million. Only eight facilities were able to show an operating profit from their pari-mutuel operations.¹³² The largest loss of \$11.6 million was at Fort Pierce/Miami; the highest profit of \$6.3 million was at Gulfstream, a thoroughbred track with slot machines.

State tax revenue is fraction of what it once was. From FY 1985 to FY 2012, it fell from:

- \$29.7 million to \$378,000 for jai alai, a reduction of 99 percent¹³³
- \$77.2 million to \$3.7 million for greyhound racing, a reduction of 99 percent¹³⁴
- \$12.5 million to \$7.6 million for horse racing, a reduction of 39 percent¹³⁵

The overall reduction in state revenue went from \$119.4 million to \$11.8 million, decline of 91 percent.¹³⁶

Slot machine casinos accounted for 77 percent of state gaming revenue in FY 2012. All of that slot machine money, \$144 million, was given to the state Department of Education. Unclaimed jai alai and greyhound winning tickets totaling \$1 million was also given to that same state agency. State tax revenue from cardrooms was split between the Pari-Mutuel Wagering Trust Fund and the General Revenue Fund. In accordance with Section 849.086(13)(h), Florida Statutes, one quarter of the moneys deposited into the Pari-Mutuel Wagering Trust Fund must be distributed to counties and municipalities that approved the cardroom. In October 2012, the division distributed approximately \$1,643,208 to the counties/municipalities from cardroom gross receipts.¹³⁷

Issues with PMW Annual Reports

In the course of our research, we discovered that purse numbers for the Isle of Capri at Pompano harness track were grossly overstated in PMW annual reports for fiscal years 2009 through 2012. PMW stated to us by email that it will be revising annual reports for Pompano to reflect the accurate figures. The mistakes were discovered when we asked standardbred horsemen to review purse information. The horsemen claimed that the numbers were wrong, and PMW asked the Pompano's comptroller to review them. The Pompano comptroller then acknowledged that errors had been made, and PMW said that the annual reports will be

¹³² Ibid.

¹³³ Florida PMW, custom report, May 10, 2013.

¹³⁴ Ibid.

¹³⁵ Ibid.

¹³⁶ Ibid.

¹³⁷ Florida PMW, *Annual Report*, FY 2012, p. 18

amended. The agency makes no effort to independently verify the information. The errors for the Isle of Capri at Pompano data raise issues as to whether other mistakes could have occurred at other pari-mutuel facilities.

In an email to Spectrum on May 21, 2013, PMW officials acknowledged that annual PMW reports fail to include out-of-state generated simulcast revenue. Gulfstream, for example, might send its signal to Yonkers, and revenue from wagers bet on Gulfstream races at Yonkers would not appear in PMW annual reports. The result is a significant understatement of simulcast revenues. To illustrate the point, PMW's 2012 report lists simulcast and intertrack handle for Gulfstream at \$102 million. But missing was out-of-state generated simulcast handle of \$605,319,440, an amount that is nearly six times the reported simulcast handle in the PMW FY report of 2012.¹³⁸ Other racing jurisdictions, such as New Jersey, include out-of-state export handle in their annual reports. The failure of PMW to indicate in its annual report that handle figures fail to include this category results in an incomplete picture of racing wagering in Florida. In a May 23 email to Spectrum, PMW explained it does not do so because the wagers made outside of Florida are beyond its regulatory authority and ability to impose taxes. PMW officials also noted they are unable to verify the data. Also unreported in out-of-state generated simulcast revenue is the amount through the Oregon hubs, which are companies that allow gamblers to place bets on races through the Internet or a cell phone.

PMW includes a category in its annual report identifying the amount of purses accounted for through "pari-mutuel" operations. Our research indicates that the number also includes financial contributions made by the operator. For example, the Melbourne Greyhound track contributed \$185,463 from pari-mutuel operations toward purses, according to the FY 2012 report.¹³⁹ Yet the annual report shows that the entire handle was only \$162,138, and only half of that goes into purses.¹⁴⁰ If the operator is making a contribution toward purses, reports should indicate that the figure includes such contributions.

It is critical for policymakers to have information relating to regulatory costs for each pari-mutuel sector. PMW told us in emails it cannot break down costs by sector. We note that Rep. Dana Young, R-57, asked the state agency for regulatory financial data relating to greyhound racing. In a letter dated August 19, 2011, Ken Lawson, Secretary of the Department of Business and Professional Regulation, said the state could identify only costs "directly attributable to all live greyhound racing," which he said totaled \$1.88 million for FY 2011, which was slightly less than the revenues of \$1.85 million that live greyhound racing generated. But the expense figure did not include any allocation for salaries and benefits paid to 66 PMW employees or expenses they incurred. Those two categories alone totaled \$4.7 million. The

¹³⁸ Interview with Kent Stirling, Executive Director, Florida Horsemen's Benevolent and Protective Association, May 22, 2013.

¹³⁹ Florida PMW, *Annual Report*, FY 2012, p. 26

¹⁴⁰ *Ibid*, p. 13.

Legislature needs to have detailed information concerning regulatory costs by sector in order for it to make informed decisions concerning the pari-mutuel industry.

Cutting Costs

Some operators say they have been adversely affected by a requirement that forces them to run a minimum number of racing performances (eight races make up a performance). Two greyhound tracks are conducting more than 350 performances a year, close to what they ran nearly 20 years ago because of the 90 percent rule. This rule requires pari-mutuel operators with cardrooms to conduct at least 90 percent of the live performances that were held the year before their cardrooms opened.¹⁴¹ For many operators, that was 1996. Florida had 3,857 live greyhound performances in 2010; West Virginia, the next-highest state, had 552.¹⁴² The required minimum number of performances varies from sector to sector, and then within a specific sector depending on when a facility opened. This issue will be addressed in more detail later in the report.

Some operators have responded to the cost of doing business by reducing race cards and, in the case of jai alai, the number of players on a roster. Others have used quarter horse racing permits to run barrel racing, which prompted an administrative law judge to call the offering “a new species of racing.” The judge ruled that PMW had no authority to issue a permit for barrel racing. Other operators have proposed staging greyhound races with two dogs in each race¹⁴³ and jai alai games that involve two players playing over and over.¹⁴⁴

Barrel racing is being run at Gretna in Gadsden County. It involves rodeo-type racing in which horses are timed as they run around separate obstacle courses. The winner is the one with the fastest time.¹⁴⁵ It is much less expensive to build a barrel-racing track, and the costs of operating it are also much less expensive. At issue is whether it falls within the definition of a horse race. Critics call it a phony horse race. We discuss this issue in more detail later in the report.

c. Decline of Purses, Handle

Purses are awarded to dog and horse racing owners who win races. They have declined slightly in recent years but the decline would have been much greater if it were not for revenue

¹⁴¹ Florida Statute 849.086 (5 b).

¹⁴⁵ State of Florida Administrative Hearings, Case No. 11-5796RU.

from slot machine and cardroom operations. The recent return of traditional quarter-horse racing in November 2009 at Hialeah Park also boosted overall purse numbers.¹⁴⁶

Total Florida pari-mutuel handle fell from \$1.8 billion in FY 1990 to \$876 million in FY 2012, a decline of 51 percent; live handle (the amount wagered by patrons at a host track where live racing was held) fell from \$1.8 billion to \$190 million, a decline of 95 percent; performances fell from 6,931 to 4,904, a decline of 41 percent and paid attendance fell from 15.3 million to 381,000, a decline of 83 percent.¹⁴⁷

Simulcasting first came to Florida on August 17, 1990, when Daytona Beach Kennel Club transmitted races to the Sports Palace in Melbourne. Prior to then, Florida handle came exclusively from live handle.¹⁴⁸

Simulcast wagering in Florida involves patrons visiting a pari-mutuel facility and wagering on live races conducted at other racetracks in Florida or at out-of-state tracks. In other words, the racetrack signal is being sent or imported to a Florida track to let its patrons bet on races/games at other facilities.

PMW categorizes intertrack handle as handle generated as a result of a Florida track/fronton exporting its signal to other Florida tracks or frontons, which enables patrons at those other Florida facilities receiving the signal to bet on those Florida races or games. Gulfstream, for example, would send its signal to the Palm Beach Kennel Club and patrons at the Palm Beach Kennel Club could then bet on those Gulfstream races. Intertrack involves only Florida-to-Florida facilities.¹⁴⁹

There is another simulcast category that PMW calls “Intertrack Simulcast.” It involves the rebroadcasting of simulcast signals received by a Florida track/fronton, which then sends that signal to other Florida tracks/frontons. Gulfstream, for example, would receive a signal from Yonkers Raceway in New York, and then rebroadcast that signal to other Florida pari-mutuel facilities. Again, it involves only Florida-to-Florida facilities.¹⁵⁰

The largest single category of simulcasting involves the export of signals from Florida pari-mutuels to out-of-state facilities. Gulfstream, for example, would send its signal to Yonkers. No information is available from PMW for this category, which is often called out-of-state generated simulcast revenue. The reason is because PMW does not track it. We note that other racing jurisdictions, such as New Jersey, do so. Without these data, it is not possible to offer a complete picture of simulcasting in Florida.

¹⁴⁶ Florida PMW, review of Annual Reports.

¹⁴⁷ Ibid.

¹⁴⁸ Florida PMW, *Annual Report*, FY 1991, p. 3.

¹⁴⁹ PMW Annual Report, FY 2012, p. 2

¹⁵⁰ Ibid

With the advent of simulcasting, live handle in Florida has accounted for less and less of total handle. By FY 2000, it accounted for 37.4 percent of total handle. Three years later, the figure fell to 29.7 percent, and for FY 2012 it was down to 24.3 percent.¹⁵¹

d. Impact of Advance Deposit Wagering ('ADW')

Advance Deposit Wagering allows patrons to wager on racing (greyhound and horses) electronically. Patrons establish an account with an ADW company, and deposit money into the account prior to making any wagers. They can then place wagers from a computer, a home telephone or even a mobile phone.

ADW companies have flourished in recent years primarily due to convenience. A gambler never has to leave his or her house to make a bet, and can do so from just about anywhere. In addition, the low overhead associated with ADWs enables these companies to offer rebates to customers based on their betting volume. Since the ADWs command so much betting volume, they are able to negotiate take-out rates with host tracks that are quite favorable. The amount wagered through an ADW is funneled into the wagering pool of a host track, but Kent Stirling, executive director of the Florida Horsemen's Benevolent and Protective Association, said the track and horsemen are often forced to split between 6 cents and 9 cents of every dollar wagered through an ADW as opposed to 20 cents if the bet were made at a Florida racetrack on a live race.¹⁵²

Those ADW rebates can be as much as 12 percent of what a gambler wagers. Rob Wyre, general manager of the Isle of Capri at Pompano Park, told Spectrum racetracks cannot compete with the ADW rebates. "What's really frustrating is we see people come to the track and place their bets through ADW," he added.

The problem is exacerbated at the thoroughbred tracks in South Florida, as both Calder and Gulfstream are owned by companies that operate ADWs. According to Stirling, the television sets at Calder urge patrons to place their bets through an ADW.

Most of the ADW firms have established themselves in Oregon through a hub network. At a time when handle across the country and especially in Florida has been decimated, the ADWs have flourished. Greyhound racing lobbyist Jack Cory said that the greyhounds are hurt much more by the Oregon hubs than horse racing. He noted that at least with horse racing, some of that Oregon-hub money is split with the horsemen. The dog owners get nothing, he said. And, like the thoroughbreds, some greyhound racetracks operate their own ADWs. These greyhound facilities encourage their patrons to place bets on live races through their ADWs, depriving the dog owners of revenues if the bet had been made at the track.

¹⁵¹ Ibid.

¹⁵² Interview with Kent Stirling, executive director of the Florida Horsemen's Benevolent and Protective Association, May 17, 2013

Cory argues the handle is better than that painted by PMW annual reports as those reports fail to capture the Oregon-hub betting and the out-of-state generated handle, which is sizable.

The Oregon hub opened for business in 2000. Its total handle that year was just under \$2 million. In 2012, it had mushroomed to \$2.24 billion. From 2007 to 2012, handle increased 47 percent. During the same time period, total pari-mutuel handle in Florida fell 41 percent and simulcasting handle (where patrons came to a Florida track and wagered on races held at other Florida tracks) fell by 59 percent.¹⁵³ Other Florida handle sectors sustained significant declines as well. Live handle at Florida pari-mutuels fell 46 percent from 2007 to 2012.

Kentucky, another major racing state, is looking to tax the ADW companies on bets made in that state. A bill that passed a House subcommittee in February places a tax of 0.5 percent on Internet and telephone wagers made by Kentucky residents. The state will get 15 percent of the revenue, and racetracks and purse accounts would get the remaining 85 percent. Kentucky expects the tax to generate as much as \$400,000 a year.¹⁵⁴

Florida pari-mutuels have also been adversely impacted by wagering through offshore outlets or tribal hubs that are not captured by regulatory agencies at all. With the Oregon hubs, there is some revenue going back to the host thoroughbred and harness track and also to the state. But with the offshore hubs, the pari-mutuels and the state receive nothing. ACRI says there is good evidence that such handle amounted to more than \$1 billion in recent seasons.¹⁵⁵

e. Impact of Slot Machine Casinos, Cardrooms on Purses

Florida voters approved a statewide slots referendum in November 2004 that made it possible for slot machine casinos to come to Broward and Miami-Dade counties. Voters in Broward County then approved a slots referendum in 2005 and Miami-Dade voters approved one in 2008.

As with handle, the source of Florida purse revenue has dramatically changed over the years. Before cardrooms and casinos, purses were funded exclusively through handle, and before simulcasting, all purses were funded through live handle.

Purses have received a significant boost with the introduction of cardrooms and slot machine casinos. At jai alai and greyhound facilities, 4 percent of cardroom gross receipts must be used to fund purses; the figure is 50 percent at horse race facilities. Unlike other racino states, Florida statutes do not mandate that a certain percentage of gross gaming revenue or a dollar

¹⁵³ Oregon Racing Commission, http://www.oregon.gov/Racing/docs/Hub_Data/2013_quarterly_hub_handle_report.pdf (accessed May 17, 2013) and review of Florida PMW Annual Reports

¹⁵⁵ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010*, p.1.

amount from slot machines be used to fund purses and for breeding purposes. About the closest Florida comes is a requirement that a thoroughbred or quarter horse operator have a contract with horsemen before a casino can open. The horsemen at Pompano and greyhound owners say they need a similar-type law. Without one, they say the boost that casino revenue was supposed to generate for purses for greyhounds and harness will never be realized.¹⁵⁶

Spectrum's analysis shows that the percentage of GGR going into purses is much higher at thoroughbred than it is at harness and greyhound tracks. The two racino thoroughbred racetracks, Gulfstream and Calder, paid 14 percent and 12 percent, respectively, in FY 2012. The thoroughbred horsemen benefitted when the state's tax on GGR was lowered in FY 2010 from 50 percent to 35 percent, as the contract with the horsemen called for an increase if the tax rate was lowered. The GGR contribution nearly doubled. There was no such increase in GGR contribution at greyhound and harness racinos.¹⁵⁷ The two greyhound tracks and the one harness track put roughly 2 percent of GGR into purses in FY 2012.¹⁵⁸

Florida slot revenue accounts for much less on a percentage basis of total purse revenue than it does in other racino states. In Pennsylvania, for example, casino GGR accounted for anywhere from 75 percent to 91 percent of purses.¹⁵⁹ In Florida, our review of the FY 2012 PMW annual report showed that the figure ranged from 22 percent to 48 percent. In Iowa, the percentage figure of GGR for greyhound racing at Bluffs Run in Council Bluffs was 4.9 percent (\$10 million) in FY 2012 and 6.2 percent (\$3.7 million) at Dubuque Park.¹⁶⁰

FY 2006 was the last year in which Mardi Gras and Isle Pompano operated without a casino. Comparing FY 2012 with FY 2006, purses increased by 33 percent at Mardi Gras and decreased by one-half of 1 percent at Isle Pompano. The Flagler dog track significantly increased its purses after its casino opened. The year before, Flagler paid purses of \$1.7 million; in FY 2012, it paid \$3.6 million in purses, an increase of 119 percent.¹⁶¹

The percentage increases at racetracks in Pennsylvania ranged from 126 percent to more than 200 percent when we compared the increase from the year before a casino opened to the FY 2012 numbers.¹⁶²

¹⁵⁶ Interview May 5, 2013, with Joseph Pennachio, president of the Standardbred Breeders and Owners Association, and Jack Cory, lobbyist for greyhound owners.

¹⁶² Florida PMW, *Annual Report FY 2012 and Pennsylvania Gaming Control Board custom report*.

Nonetheless, purse enhancements from Florida slot machines in FY 2012 totaled more than \$20 million. Overall purses increased slightly, from \$126.7 million in FY 2006 to \$129.5 million in FY 2012, an increase of 2.2 percent. The return of quarter horse racing generated \$4.1 million in purses during FY 2012.¹⁶³

f. Pari-Mutuels by Sector

Next, we discuss the pari-mutuel industry by sector. Two sets of reports were used for this analysis. One involved 2012 audited financial statements for each pari-mutuel license holder. They included detailed breakdowns of expenses and revenues. They are not normally available to the public. PMW agreed to make them available to us. Pari-mutuel operators are required to supply those audited financial reports on a yearly basis. We also reviewed annual reports from 1990 to 2012 that appear on the PMW website. These reports provide details as to purses paid, paid attendance, total handle and other items as well. The two reports cover different fiscal periods, and, as a result, the numbers sometimes do not match up.

Please note that Chapter III(A)(1) provides yearly performance and other key performance indicators for each sector.

Thoroughbred Racing

Thoroughbred racing is the dominant pari-mutuel sector in Florida, with the three tracks accounting for 61 percent of total Florida handle in FY 2012. Calder had the highest FY 2012 handle at \$207 million. Overall handle fell from \$789.2 million in FY 1990 to \$530.7 million in FY 2012, a decline of 33 percent while live handle fell even more, from \$170.5 million to \$78.6 million, a decline of 54 percent.¹⁶⁴

On a national level, handle losses were also significant. From CY 2001 to CY 2010, (CY 2010 was the most recent year data were available), total handle fell from \$10 billion to \$5.4 billion, a decline of 46 percent and live handle fell from \$1.8 billion to \$1 billion, a decline of 44 percent.¹⁶⁵

A Florida thoroughbred operator must run a minimum of 40 performances a year.¹⁶⁶ From FY 1990 to FY 2012, Florida thoroughbred performances fell from 348 to 327, a decline of 6 percent; paid attendance fell from 653,206 to 97,738, a decline of 85 percent. Purses increased from \$78.1 million to \$81.1 million, a rise of 16 percent.¹⁶⁷

¹⁶⁶ Chapter 550.002, Section 11.

¹⁶⁷ Florida PMW, review of *Annual Reports*.

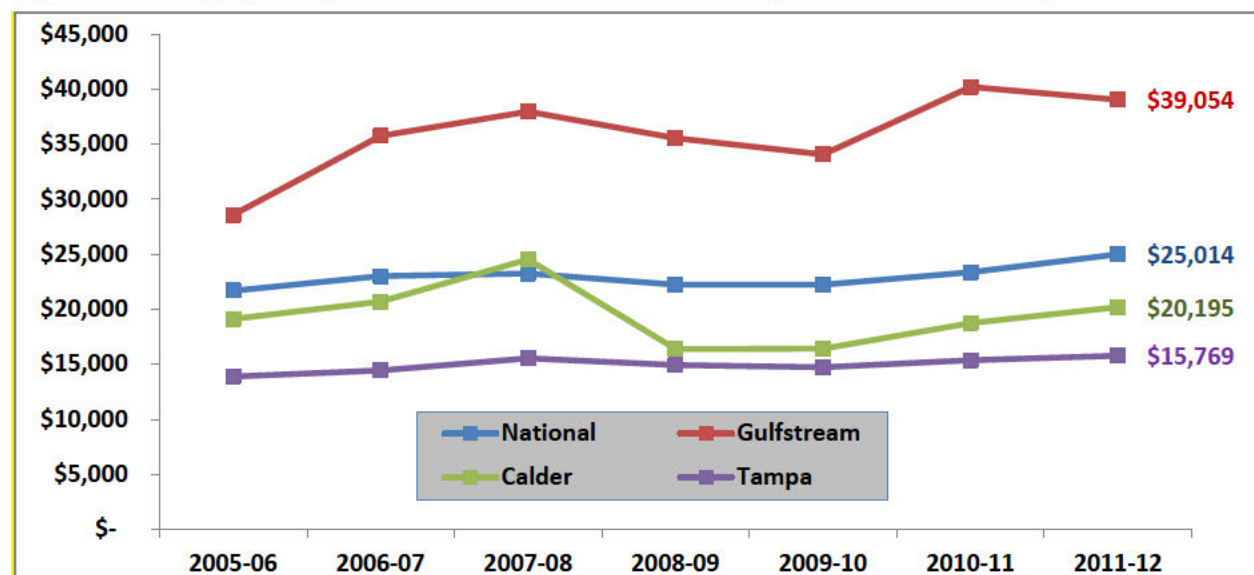

SECOND DRAFT - CONFIDENTIAL

The three thoroughbred tracks performed financially as a group much better than other sectors. They generated a combined operating profit of \$13 million for FY 2012. Much of the profit, \$10.6 million, came from pari-mutuel operations. Slot machines at Calder and at Gulfstream generated an operating profit of \$2.7 million. Cardrooms at the thoroughbred tracks had a gross operating profit of \$2.3 million.¹⁶⁸

Even Tampa Bay Downs, the one thoroughbred track in the state without a casino, generated operating income of nearly \$3 million. It currently ranks 12th out of 68 thoroughbred tracks in average daily handle although the figure has been declining in recent years. While its handle has held up well, its purses have not. It ranks 34th of 68 in average daily purses paid.¹⁶⁹ The Tampa Bay track is the only thoroughbred track in the country that competes with same-state racinos.

Average purses per race at Tampa Bay Downs in 2011-12 were \$15,769 – 42 percent below the combined Calder-Gulfstream average and 37 below the national average.¹⁷⁰ While Tampa Bay continues to be a top-tier thoroughbred track, officials are concerned how much longer that may be with purses declining.¹⁷¹ As General Manager Peter Berube put it, “Florida sunshine can go just so far.”

Figure 23: Average purse per race, Florida and national thoroughbred tracks, 2011-12

Source: Tampa Bay Downs

What has hurt Tampa Bay Downs is that it is unable to supplement its purses with casino revenue as other thoroughbred tracks in Florida and throughout the country have done. The

¹⁷⁰ Data from, and interviews with, Peter Berube, Tampa Bay Downs general manager, June 2013.

¹⁷¹ Ibid

competition is fierce for quality horses as the nationwide breeding program has collapsed, resulting in 23 percent fewer race-ready horses being available to compete. Tampa Bay Downs has seen its field size shrink by 12 percent in the past three years. Horse owners are taking their horses to tracks that offer higher purses, and that invariably means tracks that supplement their purses with casino revenue. “We are under siege,” Berube said.¹⁷²

Horsemen at thoroughbred racinos have much more leverage with regard to labor contracts than do other pari-mutuel sectors due to the law that says a contract must be negotiated with horsemen before a casino can open. Mike Couch, director of gaming at Gulfstream, said in an interview with Spectrum on May 16 that the law is unfair and results in Gulfstream paying out much more in GGR toward purses than the other sectors pay.

More than \$6.2 million, or 88 percent of Gulfstream’s operating profit, came from pari-mutuel operations.¹⁷³ No other pari-mutuel facility in the state comes close to that figure. In fact, most pari-mutuel facilities lose money on their pari-mutuel operations, and need cardroom and/or casino revenue to subsidize those losses. Couch said the reason Gulfstream is successful with its pari-mutuel operation is because it considers itself first to be a racetrack and then a casino, as noted earlier in this report.

The thoroughbred horsemen say that Gulfstream is a pari-mutuel success story that other pari-mutuel entities would do well to emulate. Gulfstream Park completed the 2013 winter race meet with a 20 percent increase in on-track wagering over the 2011-2012 race meet. Purses paid during the 2013 Gulfstream Park meet averaged more than \$411,000 daily. And \$658,000,000 was wagered on the Gulfstream Park signal outside of the state of Florida, or an average of over \$733,000 per race. California’s Santa Anita, at \$622,000, was the next-highest in the country followed by New York’s Aqueduct at \$508,000.¹⁷⁴

Harness Racing

Florida’s sole harness track, Isle Casino and Racing at Pompano, accounted for 5 percent of total Florida handle in FY 2012. The Pompano track must run at least 140 performances a year but it can seek a one-time, 10 percent reduction from the 140-performance minimum. The harness track stopped charging an admission fee in 2002. In 2001, the last year it levied an admission fee, paid attendance was 9,908. In 1990, it was 565,216.¹⁷⁵

Harness handle fell from \$112.1 million in FY 1990 to \$48.1 million in FY 2012, a decline of 57 percent while live handle fell from \$14.1 million to \$4.4 million, a decline of 69 percent. On a national level, total harness handle from CY 2001 to CY 2010 fell from \$866

SECOND DRAFT - CONFIDENTIAL

million to \$453 million, a decline of 48 percent and live handle fell from \$452 million to \$162 million, a decline of 64 percent. (CY 2010 was the most recent year available.)¹⁷⁶

The harness track is not required to have a contract with horsemen as thoroughbred tracks are required to do before a casino can open. The percentage of GGR to purses is much less than it is at thoroughbred tracks. In FY 2012, \$2.6 million of \$121 million in GGR went toward purses at Pompano. Gulfstream with a GGR of \$54.5 million put \$7.5 million of GGR into purses.¹⁷⁷

Joe Pennachio, president of the Florida Standardbred Breeders & Owners Association, told us in an interview on May 20, 2013, that track owners promised that 8 percent of GGR would go into purses when his group and others worked to support the 2004 statewide referendum that resulted in Pompano getting its casino. “It obviously never happened,” he said. “We feel we were hoodwinked. And even worse, the track operator has done everything possible to discourage people from coming to the track. What’s important to remember here is that if it were not for the pari-mutuel facilities, casinos would not be here.”

Purses have actually declined slightly, one-half of 1 percent, from FY 2006 (the last full fiscal year that Pompano did not have a casino) to FY 2012.

We toured the Pompano facility on May 20, 2013. Only the ground floor of the racetrack was open. The facility is in a state of disrepair. According to Pennachio, management will close the grandstand area later this summer, which will force patrons to watch live races from a row of seats set up outside the casino. That places spectators by the turn as horses approach the finish line, making it difficult from that angle for them to see who wins.

Michael Tanner, executive director of the United States Trotting Association, said closing the grandstand will adversely affect live handle and give little incentive to patrons to go to the track to watch live racing. “Pompano could become the only track in the world where you watch the race 1/16 of a mile from the finish line,” Tanner said.

Pompano General Manager Rob Wyre said all options are being considered. He noted that the track was built in 1963, and it is too expensive to rehabilitate. In addition, there are safety issues relating to some of the windows on the upper floors, he noted.

The purse figures for Pompano that appear on the PMW website are inaccurate. Pennachio disputed the purse numbers that appear in the PMW annual reports. We relayed his concerns to PMW. We received an email from Leon M. Biegalski, Director of PMW, on May 16, 2013, in which the director acknowledged that the PMW purse amounts were overstated by several million dollars. PMW will be amending its annual report as it relates to Pompano for FY 2009-2012. Biegalski said in his email that PMW relies on figures provided to it by pari-mutuel

¹⁷⁶ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010 and 2000*.

¹⁷⁷ Florida PMW, review of *Annual Reports*.

operators. We have made the adjustments to the data, and our analysis reflects the adjusted numbers.

Quarter Horse Racing

Quarter horse racing involves American Quarter Horses that run a quarter-mile at speeds as high as 55 miles per hour. Quarter horse racing returned to Florida in November 2009 at Hialeah Park after an 18-year absence. Quarter horse racing accounted for less than 1 percent of total Florida handle in FY 2012. Quarter horse racing had 76 performances in FY 2012. It generated a live handle of \$1.7 million, total handle of \$2.1 million and purses of \$3.8 million. Almost all of the traditional quarter horse activity was at Hialeah, where the operator subsidized purses as part of its contract with horsemen.

Hialeah has already begun negotiations with the state to offer live thoroughbred racing, in addition to the quarter horse racing.¹⁷⁸ Obtaining the quarter horse permit made it possible for Hialeah to open a casino (scheduled for summer 2013) but Hialeah representatives say they want to do far more than just build a casino. Hialeah owner John Brunetti acknowledged that he is not “a fan of slot machine casinos” but noted that it afforded him an opportunity to bring back racing to Hialeah.¹⁷⁹

Eventually, Hialeah Park expects to convert the 200-acre property into a destination resort that will feature a \$112.5 million casino hotel, a \$75 million casino hotel, a \$119 million entertainment and convention complex, a \$210 million town center and retail district and a \$61.3 million parking garage. The total cost of the project is estimated to be \$842.9 million. Brunetti noted that racing will be integrated into the complex so that it will never become an afterthought, which he believes is the case at too many Florida pari-mutuel facilities.¹⁸⁰

Steve Fisch, president of the Florida Quarter Horse Owners Association, said that Hialeah purses will total \$140,000 a day or \$5.6 million in FY 2013, 47 percent higher than it was in FY 2012, when Hialeah operated without a casino. Hialeah owner Brunetti explained in an interview with Spectrum on June 5, 2013, that live handle was so low the first three years that he had to pay almost the entire amount of purses himself from FY 2009 thru FY 2012. In FY 2012, Hialeah paid out purses of \$3.8 million. During the three-year period ending June 30, 2012, Brunetti said he lost nearly \$30 million as he had no cardroom or slot machine revenue to help him offset the loss.

Florida state law allows quarter horse racing to be imported only into Florida simulcast parlors while there is live racing at Hialeah. That is not an issue for the thoroughbreds since they race year-round. But it is a problem for the new quarter horse industry as the live meet is only 40

¹⁷⁸ Interview with Hialeah owner John Brunetti and other Hialeah representatives, June 4, 2013

¹⁷⁹ Ibid

¹⁸⁰ Ibid

days. The lack of year-round simulcasting of quarter horses in Florida makes it difficult to attract new customers.¹⁸¹

Barrel Racing

Another major issue for the quarter horse industry is PMW's racing permit granted to Gretna in Gadsden County for barrel racing. Fisch said the permit jeopardizes the future of legitimate quarter horse racing in Florida.

Barrel racing is conducted on an obstacle-type course that is often performed at rodeo and horse shows. Each horse is timed as it races around three barrels in separate, cloverleaf-type courses. The winner is the horse with the fastest time. No other racing jurisdiction has ever sanctioned such a pari-mutuel event. Gretna held its first race on December 1, 2011. Fisch's organization sued, arguing that the PMW decision made a mockery out of the state's pari-mutuel laws. An administrative law judge ruled on May 6, 2013, that PMW had no authority to issue a permit for barrel racing and that it had improperly created "a new species of horseracing."¹⁸²

With the permit, Gretna was able to establish a cardroom. And Gadsden County voters have approved a referendum that would allow it to have a casino. The state Constitution will have to be amended for that to happen, according to the Attorney General, as currently state law only permits racinos in Broward and Miami-Dade counties.

The Daily Racing Form reported that barrel racing represents an effort by permit holders to exploit the gambling opportunities in Florida presented by "a convoluted set of laws and regulations" in Florida.¹⁸³ Wesley Cox, a spokesman for the North Florida Horsemen's Association that represents the barrel riders, told us in an interview on May 14, 2013, that the administrative law judge decision will be appealed. He said the law is vague in its definition of a race. He acknowledged that the Gretna operator could not financially afford to build a traditional quarter horse race track so he turned to barrel racing.

Marc Dunbar, an attorney for Gretna, said his client would have had to have spent \$10 million to build a traditional 5/8 mile quarter horse track because of wetlands problems. It was prepared to build a \$3.5 million facility but the Florida Quarter Horse Racing Association refused to endorse the project so it then embraced barrel racing. "We believe that we will ultimately prevail," Dunbar said.

Fisch notes that barrel racing requires substantially fewer horses and personnel than traditional quarter horse racing as conducted at Hialeah Park. The cost of erecting a barrel race course is minimal when compared with the several million dollars that would have to be invested

¹⁸¹ Interview Steve Fisch, President, Florida Quarter Horse Owners Association.

¹⁸² State of Florida Administrative Hearings, Case No. 11-5796RU, Administrative Law Judge John Laningham, p. 55.

¹⁸³ Matt Hegarty, "Ocala Breeders' Sales Company plans Quarter Horse race Dec. 11," *The Daily Racing Form*, October 25, 2012; <http://www.drf.com/news/ocala-breeders-sales-company-plans-quarter-horse-race-dec-11>.

to build a quarter horse track, he noted. Gretna offered purses of \$202,000 in FY 2012; Hialeah offered purses of \$3.8 million. Gretna had a live handle of \$31,000; Hialeah, \$1.6 million.¹⁸⁴ Another track, Hamilton Downs, has also received a license to operate barrel racing.

Greyhound Racing

Greyhound racing accounted for 30 percent of total handle in FY 2012. Total handle for the 13 facilities that ran greyhound racing fell from \$933.8 million in FY 1990 to \$265.4 million in FY 2012, a decline of 67 percent. Palm Beach Kennel Club had the highest handle at \$36.3 million; Melbourne Greyhound Park, the lowest at \$162,000. Live handle (live handle and total handle were the same in 1990) fell even more, from \$933.8 million to \$93 million, a decline of 90 percent. Purses fell from \$34.5 million to \$26.3 million, a decrease of 18 percent.¹⁸⁵

On a national level, from FY 2001 to FY 2010 (the most recent year for which data were available), total handle fell from \$2 billion to \$706 million, a decline of 65 percent and live handle fell from \$829 million to \$203 million, a decline of 76 percent. Performances fell from 4,242 to 3,336, a decline of 21 percent; paid attendance fell from 653,206 to 97,738, a decline of 85 percent.¹⁸⁶

Florida greyhound performances (a racing card of at least eight races) fell from 3,853 to 3,636, a decline of 6 percent. One of the reasons for the relatively small decline is because of the 90 percent rule. Pari-mutuel operators with cardrooms are required to conduct at least 90 percent of the live performances that were held the year before their cardrooms opened, which for many of them was 1996.¹⁸⁷

The Naples-Fort Myers greyhound track had to run 393 performances in FY 2012 to keep its cardroom license. Often, performances are run twice a day during the 190-day meet to comply with state law.¹⁸⁸ Track spokesman Isadore Havenick told us in an interview that his company does not want to eliminate racing but needs some relief from what he calls the “onerous” 90 percent rule. He noted that the situation was quite different in 1996 when greyhound racing was much more popular than it is today. Running so many races and performances results in the track sustaining a loss of more than \$2 million a year on its dog operations, he said, and forces it to offer lower purses, which adversely affects the amount of money wagered on simulcasting and the quality of dogs that race. Havenick said there is still a demand for greyhound racing in the Fort Myers-Naples region but not as “much as we are running.”

¹⁸⁸ Florida PMW, *Annual Report FY 2012*.

SECOND DRAFT - CONFIDENTIAL

Repealing the 90 percent rule, or “decoupling,” could result in the closure of five to six greyhound tracks, according to operators we interviewed. Those facilities would still like to operate cardrooms, as they are profitable, but they cannot as current law states that a cardroom can only be operated at a licensed pari-mutuel facility that offers live racing. Top-tier tracks such as Naples-Fort Myers and the Palm Beach Kennel Club will benefit through higher simulcast revenue if other tracks were to close.

It is clear that pari-mutuel operations at greyhound tracks are loss leaders as the tracks sustained a combined operating loss from wagering on greyhounds of \$35 million. Only three tracks made a profit. Greyhound track cardrooms offset the loss with an operating profit of \$39 million.¹⁸⁹

“It is a dying sport,” said Michael Glenn, general manager of the Palm Beach Kennel Club, one of the country’s premiere greyhound tracks. “Decoupling (removing the requirement for minimum performances) will help us in the short run as we would run fewer races which, in turn, will lower our operating costs. Our simulcast revenue will also increase, but there just are not enough folks out there to come to the track and wager on these races. There is not any interest.” PBKC would shut down the dog track if it could, Glenn said.

Jamie Shelton, CFO of Jacksonville Greyhound Racing, agrees with Glenn. He said that no matter what efforts are made to prop up the sport, interest is not there. “We can see it by our live handle. The older folks are not being replaced,” he said. “There are just too many other things to do out there today. Watching a greyhound race is not at the top of most people’s agenda.”

Jacksonville has consolidated its operations. It has three greyhound permits, and runs all of them out of Orange Park. It shuttered its Jacksonville facility in March 2012, and, as the result of a declaratory statement from PMW, it was able to move its cardroom to a Jacksonville shopping center.¹⁹⁰ The track operator requested a ruling from PMW before it built its new facility in Jacksonville. In effect, PMW sanctioned a form of decoupling, allowing a pari-mutuel facility to open without having to operate a track oval and offer live racing. PMW based its decision on the fact that Section 550.475, Florida Statutes, “makes no reference to the existence of an actual track at the permitted location.” The Jacksonville permit was leased to Orange Park.

With the three permits, Orange Park operates year-round: 340 days and 417 performances in FY 2012. Shelton said the facility just about breaks even but he noted that it is just a matter of time before the losses on racing will become so large that Orange Park will have to close. Even slot machines would not help, as they would not compel people to bet on the dog races, he noted. Slot machines would prop up the business for a while but eventually the sport will die, he said.

¹⁸⁹ Florida PMW, *Independent Auditor’s Report for Pari-Mutuel Permitholders*, FY 2012.

¹⁹⁰ Petition for Declaratory Statement, Jacksonville Kennel Club, DS-2008-38, November 21, 2008.

SECOND DRAFT - CONFIDENTIAL

Shelton said the facility just about breaks even but he noted that it is just a matter of time before the losses on racing will become so large that Orange Park will have to close. Even slot machines won't help as that won't force people to bet on the dog races, he noted. Slot machines would prop up the business for a time but eventually the sport will die, he said.

Jack Cory, a lobbyist for greyhound owners, said the sport wouldn't be dying if track operators would reinvest in their properties. He noted that some of them have let them deteriorate to the point where going to those tracks is unpleasant. He noted that the intent of the 90 percent rule was to preserve live racing by making sure that live racing had to be offered in exchange for the right to operate a cardroom or casino. "Let's go back to the voters and see if they want to cut back on live racing," Cory said in an interview with Spectrum on May 29, 2013. "We might even agree to reduce the numbers but there is no way we would agree to no live racing at all."

As we have noted throughout this report, operators are looking for ways to reduce the costs of operating pari-mutuel events. Melbourne Greyhound track proposed running two-dog races with a two-kennel roster under the same ownership for its 2013 meet. The American Greyhound Association called the proposal "an affront to the greyhound owners and kennel operators in America who've raised, trained and invested in the development of greyhounds with the intent of competing in full fields (most preferably, eight entries per race), and to those fans who enjoy watching and wagering on such races."¹⁹¹ In light of the opposition, Melbourne withdrew its petition for two-dog races.

Grey2K USA, an organization calling for the end of dog racing on humane grounds, frames the issue this way: Should the state "force a business to conduct one activity so that it may offer another?"¹⁹² According to Grey2K, nearly two-thirds of the 1,199 licensed greyhound owners live out of state. As for humane issues, the organization claims that 8,000 greyhounds are kept in kennel compounds in rows of small stacked cages. Dogs are kept in cages 20 to 23 hours a day. Nine cases of severe neglect have been documented at Florida dog tracks and kennels since 2004.¹⁹³ As of May 21, 2013, Florida greyhound tracks must report to the state the death of any racing greyhound that occurred at a track or kennel.¹⁹⁴

Jai Alai

The object of Jai-Alai is to hurl the ball (pelota) against the front wall with the goal being that an opponent will be unable to return it. The game can involve doubles or singles. Games are

¹⁹⁴ Florida state statute 61D-2.

7 to 9 points. It used to be that as many as eight different teams would play. A losing team would go to the end of the bench.¹⁹⁵ Florida is the only state that continues to offer jai alai, which accounted for 3 percent of the state's total pari-mutuel handle in FY 2012.

Of all the pari-mutuel sectors, jai alai has sustained the steepest cuts in attendance and popularity. Since 1990, total handle has fallen 91 percent, live handle 96 percent, player awards 63 percent and performances, 63 percent. In 1990, 3.9 million people paid to watch the sport. In 2012, total paid attendance was 9,068.¹⁹⁶

The six jai alai operators suffered an operating loss for FY 2012 of \$25.6 million; \$21.6 million came from Ft. Pierce-Miami Jai Alai, whose auditor expressed concern whether the frontons could continue to stay in business. The slots at Miami Jai Alai may improve its fiscal situation.¹⁹⁷ From pari-mutuel operations, the jai alai sector sustained an operating loss of \$14 million. Cardrooms were able to generate an operating profit of \$1 million. Miami Jai Alai had the highest handle at \$6.6 million in FY 2012; Hamilton Jai Alai, the lowest at \$2.00.¹⁹⁸

The Miami fronton opened in 1926. Through the 1980s, business was brisk. The fronton was renovated and seating expanded from 7,000 to well over 13,000. But things changed as new forms of gambling became legal in 1960s and 1970s.¹⁹⁹

Like other pari-mutuel sectors, jai alai is required to offer a minimum number of performances to keep its cardroom open. And the number depends on when the cardroom opened. As noted in other pari-mutuel sectors, the 90 percent rule requires that live performances be equal to at least 90 percent of what was conducted the year before the cardroom opened. Performances in FY 2012 ranged from a high of 214 at Dania to 24 at Hamilton. A performance consists of eight games.

Last year, Ocala stretched the letter of the law when it hired two locals who played each other over and over to comply with the minimum-performance law. The operation drew protests from jai alai players in South Florida who picketed the fronton. They argued that having the same two players play was a gimmick to comply with the law. General Manager Brian Matthews told us in an interview on May 21 that he had no choice but to run jai alai the way he did because it loses so much money, adding, "We can't get anyone to watch it." According to the financial audited report submitted to the state for FY 2012, Ocala lost \$453,000 on jai alai. Part of that included a \$22,000 tax because Matthews elected to run only 41 performances instead of the 100

required by the state. “It was cheaper for me to pay the tax than it was to stay open,” he noted. “If this was just jai alai, we would have been closed long ago.

Glenn Richards operates Hamilton Jai Alai and Poker. He operates pretty much the same way as Ocala, and acknowledged to us in an interview on May 8, 2013, that he is not happy about it. “People call it a joke, and I cannot disagree,” he said. “It is either do this or shut the door. We cannot get anyone to watch this anymore.” Hardly anyone is betting on it any more either. The total handle in FY 2012: \$2.²⁰⁰

Richards relies on a four-person Jai Alai roster. One is a father and his son, who both at one time played professionally at South Florida frontons. Richards must hold 100 performances over a FY year to retain his cardroom license, which opened in 2004. He is hopeful he can stay open until next year when the law will allow him to reduce his performances to 40.

For now, his four players play several times a day over a one-week period from March to June to meet the 100-performance requirement.

g. Critical Issues to Address

The thoroughbred sector is clearly the healthiest of the sectors but it too has sustained steep declines in live handle. What’s keeping many of the other pari-mutuel facilities open is cardroom and slot revenue but eventually, if the downward trend continues, it is likely that even those revenues will not be enough to keep some greyhound tracks and frontons open. Many operators acknowledged to us that the prospect of possibly operating slot machines was enough for them to continue to stay in business and sustain significant losses. In FY 2012, the pari-mutuel operations at the greyhound tracks sustained operating losses of \$35 million, Jai Alai, \$14 million and harness, \$2.4 million. Only the thoroughbred tracks were able to realize an operating profit, \$10.6 million, from their pari-mutuel operations.

One area that Spectrum’s research indicates is in need of review is the law requiring a minimum number of performances. When the law was adopted in 1996, the intent was to assist pari-mutuels by providing a funding stream for purses. But operators say times have changed, and the current law prevents them from reacting to today’s business climate. Many track operators across the country have reduced racing dates, which, in turn, lets them increase average purses and lower operating costs. In Florida, a number of operators are forced to run well over 300 performances a year.

At the same time, horsemen and dog owners stress that some operators have done all they can to destroy their pari-mutuel operations in an effort to convince the Legislature to adopt “decoupling,” which would remove the requirement that a minimum number of performances be held.

²⁰⁰ Florida PMW, Annual Report, FY 2012,

Pennsylvania relies on a racing advocate to ensure that its racino operators do not ignore racing interests. Each year, the Pennsylvania Gaming Control Board compiles an annual benchmark report to measure the impact that slot machine revenues have had on the horse racing industry. Florida has no such review mechanism. Purses at the harness track, even with a casino, have actually declined, and horsemen say that casino operations overshadow the track. The track is considering shutting down the grandstand, which would make it the only track in the country where patrons watch the finish of a race one-sixteenth of a mile away from the finish line.

With respect to casinos, as we noted in this report, the thoroughbred and quarter horse sectors are treated differently when it comes to pari-mutuel requirements. This is true even within the horse racing sector itself. Thoroughbred and quarter horse operators, for example, must have a contract in place with horsemen before they can open a casino. There is no such requirement for harness of the other pari-mutuel sectors. Almost all racino states require that a certain amount of gross gaming revenue be set aside to enhance purses. There is no such requirement in Florida.

Another contentious issue that may come before the Legislature is how to define a race or a game. Jai alai and dog track operators have argued that the current law is vague enough that it allows them to run just two dogs in a race or have just two jai alai players play over and over. There is the barrel-racing issue that has drawn national attention. An administrative law judge recently ruled that PMW had no right to issue a barrel-racing permit for quarter horse racing.²⁰¹

15. Cardrooms

a. Nationally

Five states including Florida allow cardrooms that are not inside a casino. Typically, cardroom games are restricted to poker and poker variants, although Washington began allowing cardrooms in 1997 to offer blackjack.

It is difficult to compare cardroom performance in Florida with cardrooms in other states because Florida is the only state that restricts its cardrooms to pari-mutuel facilities that, for the most part, are racing-only operations. Other states such as Washington and California allow their cardrooms in standalone facilities. Montana does not provide any data. Minnesota has only one cardroom.²⁰² Because of the differences from state-to-state in cardroom operations, the American Gaming Association stopped collecting revenue numbers for cardrooms effective with its 2009 annual *State of the States* report.

²⁰¹ State of Florida Administrative Hearings, Case No. 11-5796RU, Administrative Law Judge John Laningham.

²⁰² 2008 *State of the States* p. 35.

We tracked performance data for California, as its cardroom business model is the closest to Florida's. California had 119 cardrooms in FY 2002. In FY 2007, the number fell to 92.²⁰³ Despite the drop-off, its gross receipts increased from \$563 million to \$794 million, an increase of 46 percent. During the same time period, Florida's gross receipts increased from \$2.8 to \$54.2 million, a nearly 17-fold increase.

b. Florida

The first Florida cardrooms, which are restricted to poker and dominoes, opened on January 1, 1997. While dominoes is a permitted game, most facilities do not offer it. Palm Beach Kennel Club said it stopped offering it after months went by and no one played the game. By the end of the first fiscal year, nine cardrooms were operating.²⁰⁴ Gross receipts, or the amount received by the cardroom from players, totaled \$2.2 million that first year. At that time, the winnings of any player in a single round, hand or game could not exceed \$10. Players at a five-handed seven-card stud table would simply put in \$2 each and all betting and raising would cease. The dealer simply dealt the rest of the hand face up. A cardroom could only operate two hours prior to post time and up to two hours after the last pari-mutuel event. The state established a 10 percent tax on gross receipts, a rate that continues to this day. Additionally, each operator must pay cardroom table fees annually in the amount of \$1,000 for each table to be operated.²⁰⁵

Poker in Florida began to increase in popularity in 2003, when the Legislature amended the law to enable the poker pot to exceed \$10, but players could still not bet more than \$2 with any given action. Up until then, poker gross receipts had not increased much at all but they soared from \$2.8 million in 2003 to \$18.5 million in FY 2004. With more venues added, the figure continued to rise by double-digit percentages through 2009 when it totaled \$102 million. In FY 2012, it reached \$131.5 million. The change that made Florida a major poker playing state was the removal of all betting limits as of July 1, 2010. Today, there are 24 cardrooms. In 2003, there were only 10. Other cardroom rule changes that increased the profitability of cardrooms included a provision that also took effect July 1, 2010, that increased their hours of operation to 18 hours during the week and 24 hours on weekends.²⁰⁶

The cardroom law was created to boost operations at pari-mutuel facilities. They had to be at a track or jai alai fronton. At jai alai and greyhound facilities, 4 percent of cardroom gross receipts are used to fund purses and player awards; the figure is 50 percent at horse race facilities.

SECOND DRAFT - CONFIDENTIAL

But with opening of Bestbet in Jacksonville in February 2012, Florida had its first off-track betting parlor. PMW made it possible for that to happen when it issued a declaratory statement to allow pari-mutuel businesses to operate a separate cardroom and simulcast parlor if the license holder closed an existing facility and opened a poker room in the same county and within 30 miles of the old one.²⁰⁷ Jacksonville Greyhound Racing Inc. closed its Jacksonville track in 2009 but retained its license and transferred its racing dates to nearby Orange Park, which it also owns. Jacksonville was then able to transfer its cardroom license to the off-site location in Jacksonville, and establish the biggest cardroom in the state of Florida, without having to build a track oval. Geographical constraints make it difficult for other such license transfers to occur.²⁰⁸ But we note that Palm Beach Kennel Club acquired an inactive jai alai permit and then converted it into a greyhound permit. At issue is whether it can now operate a cardroom from a remote location as Jacksonville Racing has done.²⁰⁹ The matter is currently before the courts.

Palm Beach Kennel Club had the highest cardroom receipts in FY 2012 at \$11.4 million; Hamilton Jai Alai and Poker the lowest at \$596,000.²¹⁰ Palm Beach Kennel Club Manager Noah Carbone, in a May 16, 2013, interview said the rule changes have made Florida one of the top poker venues in the country. He said before the rule changes, professional players from Florida would travel to Atlantic City and Nevada to play poker. Now, they stay here, he said. Further, many tourists are also playing now that the table limits have been removed.

Carbone said he would like to see the state remove the requirement that cash cannot be placed on a poker table. The law currently requires that players use only chips. He believes that relaxing the cash rule will increase profits for the cardrooms. The cardrooms have become so profitable that they have enticed new pari-mutuel operations to open and have resulted in still others continuing to remain open even though their pari-mutuel activity generate substantial losses, as we have noted throughout this report.

For example, the greyhound sector cardrooms generated an operating profit in FY 2012 of \$38.8 million while their pari-mutuel activities had an operating loss of \$35 million. Daytona Beach Kennel Club had the highest cardroom operating profit of \$6.4 million. All but one of the greyhound tracks had cardroom operating profits.²¹¹ The racing sector cardrooms also generated an operating profit of \$2.6 million.²¹²

²¹² Ibid.

Some operators, such as Jamie Shelton, the CFO of Jacksonville Greyhound Racing, noted though that cardroom revenues have begun to level off across the state. In an interview with Spectrum on May 30, 2013, Shelton said that it is unrealistic to expect cardroom revenue to continue to subsidize pari-mutuel operations. At some point, he noted that there will come a point where the cardroom profits cannot cover the pari-mutuel losses. “It is just a matter of time,” he said.

FY 2013 data show that cardroom revenue has begun to decline at many facilities. We compared the 10-month period ending April 30 with the previous year: Calder was off by 17 percent, Tampa Bay Downs, 14 percent and Pensacola Greyhound track, 10 percent. Thirteen of the 24 cardrooms associated with live racing sustained declines.²¹³ Should these downward trends continue, the ramifications for the pari-mutuel operations could be ominous.

16. Charitable Bingo

Florida’s bingo statute authorizes the conduct, handling of proceeds and limitations of bingo games by charitable organizations. All charitable organizations must meet the state’s statutory requirements as well as be qualified as an exempt 501(c.) organization under the federal Internal Revenue Code.

Florida’s bingo laws require that all proceeds from the conduct of the bingo games be donated to charitable organizations, less actual business expenses for the operation, conduct and playing of bingo. The statute strictly prohibits the net proceeds from bingo games from being used for any other purpose. For more detail on the regulatory aspects of bingo, see Chapter II (D)(1)(c).

Bingo is not regulated by the State of Florida. However, municipalities and/or counties that permit bingo have their own ordinances that govern its operation. Most municipalities require a business tax license, or occupational license, to conduct bingo. The licenses are issued annually and require copies of IRS financial statements.

Spectrum interviewed charitable bingo owners/operators, a bingo industry publisher as well as bingo equipment distributor executives in an effort to assess the size and state of charitable bingo in Florida.

In Florida, charitable bingo is conducted by charitable organizations on the premises of the qualified organization (such as a VFW hall, Elks Club, church, etc.) or at “bingo halls” that lease their premises to a charitable organization. The state statute also provides for a condominium association, a cooperative association, a homeowners’ association or a mobile home owners’ association to conduct bingo provided that any net proceeds after paying prizes and deducting operating expenses are donated to a qualified charitable organization.

²¹³ Review of PMW pari-mutuel wagering reports.

SECOND DRAFT - CONFIDENTIAL

Bingo halls and charitable organizations that utilize “hall-for-hire” arrangements must meet all state statutory requirements, including a minimum one-year lease agreement at a reasonable rental cost. Lease arrangements vary and often include “rent per session” or percentage of sales agreements.

Some bingo halls have lease arrangements with one “lead” charitable organization while others lease the premises to multiple qualified organizations. For example, Bingo Magic of Lake Worth, in Greenacres, has a “lead” charity lease arrangement with the Department of Florida Jewish War Veterans of the United States of America, and Bingo at Four Corners, in Pompano Beach, has lease agreements with 20 qualified charities with each charitable organization arranging to conduct a bingo session at the bingo hall on a scheduled day or night.

All charitable bingo conducted in Florida is run by volunteers who are members of the charitable organizations. In the bingo halls we observed, the facility’s owner/operator and any other compensated employees are paid by revenues derived from the facility’s food concessions.

Since bingo is not regulated by the State, the statewide total net proceeds from bingo games that is donated to charity is not quantifiable. Several bingo publications and/or websites list the available bingo games throughout the state; however, most of the published lists we researched were not inclusive or current. Spectrum estimates that there are currently between 300 to 400 bingo active operations in Florida.

Based on our interviews with bingo owner/operators as well as others associated with charitable bingo in Florida, it is apparent that statewide participation in charitable bingo is trending significantly downward. The number of available bingo locations is dwindling and participation is rapidly decreasing. For example, daily attendance at Bingo at Four Corners is down from a highpoint of over 400 bingo players per day in the 1990s to an average of approximately 100 players per day currently. Historically, the amount of revenues received by charities from this bingo hall has gone from \$30,000 to \$50,000 per month in 1995 to approximately \$10,000 a month currently. In Palm Beach County, the number of bingo halls in has decreased from six to two since over the past decade. Moreover, the general increase in rent and fixed operating expenses paid by bingo hall operators for their premises continues to rise and has had a negative effect on net proceeds.

Based on our research, the downward trend in bingo in Florida is attributable to several factors including:

- Overall downturn in the national economy
- Competition from other forms of gaming including casinos, racinos and lottery
- Competition from high-stakes bingo conducted at tribal gaming locations
- Statutory-limited jackpot prizes of \$250 maximum
- Aging demographic of bingo players

SECOND DRAFT - CONFIDENTIAL

- Statutory limitations preventing more progressive games
- Weather-related (hurricanes) events
- Proliferation of adult arcades and Internet cafes

Charitable bingo in Florida, as currently sanctioned, is increasingly less competitive. As each new form of gambling has been introduced – legal and otherwise – bingo revenues continue to decline. Those associated with bingo in Florida said the downward trend in bingo participation is multifaceted but pointed to the fact that bingo is unable to compete with the costly marketing efforts and giveaways of Indian casinos, pari-mutuel operators and high-stakes tribal bingo facilities. Most bingo players live fairly close to the bingo location, and in the regions with other forms of gaming located nearby, the revenue impact is most pronounced.

Bingo distributors we interviewed agreed with the observation that an overall downward trend due to competition from various other forms of gaming and the outdated \$250 statutory limit on jackpot prizes. They pointed to Miami-Dade and Broward counties as prime examples of where competition from the opening of racinos has substantially adversely affected bingo participation. For example, the number of bingo locations in Broward County has shrunk from eight to one since racinos have opened.

Florida's bingo operators indicated that the state's players tend to be older and are dying at a significant rate. Many are senior citizen who no longer drive or feel comfortable going out in the evening. These one-time regular bingo players now have expanded gaming options nearby and choose to frequent these facilities, which may offer bus transportation to casinos and/or racinos. However, the introduction in the 1990s of hand-held "card-minders" that automatically mark dozens of cards instantly has allowed older and/or handicapped bingo players to keep up and has leveled the playing field for many seniors and disabled patrons.

In Florida, the downward trend in net bingo proceeds directly impacts the charitable organizations intended to benefit from this activity. However, those associated with bingo interviewed by Spectrum all emphasized that bingo and expanded gaming can coexist if bingo is allowed to offer the right jackpot prizes and game content. Most agree that bingo, unlike other gaming options, is an "a social thing" that people play with friends and relatives. Bingo is considered "social or soft gaming" that distinguishes it from harder forms of gaming such as casinos or pari-mutuel gaming.

Indeed, numerous published reports, including a recent *Wall Street Journal* article,²¹⁴ point to a renewal of bingo in the United States. Progressive approaches that include new technological advances, coupling bingo with other entertainment amenities, linked jackpots and higher prize offerings have resulted in more bingo participation by younger players and college

²¹⁴ Julie Jargon, "How Do You Spell Hipster? It Could Be B-I-N-G-O," *The Wall Street Journal*, Page A1, April 10, 2013 <http://online.wsj.com/article/SB10001424127887324883604578398973682460716.html>.

SECOND DRAFT - CONFIDENTIAL

students. Some of these innovative practices range from bingo being offered in bowling alleys and in venues that offer alcoholic beverages to specialized offering such as “hip-hop” and “cosmic” bingo. These newer, “hip” versions of bingo have given rise to younger patrons, particularly among the Hispanic population in South Texas, Arizona and California. Also noteworthy is a new approach in Illinois, where legislation has been introduced to allow bingo on hand-held devices in bars and restaurants.

The bingo equipment distributors we interviewed indicated that bingo participation across North America has been trending downward but provided several particular examples of upward trends in states where recent progressive statutory reforms have been implemented. For example, in Virginia and Minnesota, electronic pull-tab bingo and other newer game offerings have resulted in an increase in participation rates. Other progressive reforms, such as in Ontario, Canada, where new regulations provide for splitting proceeds between the bingo owner/operators and charities has resulted in significant upward trends in overall proceeds.

In several other states, the proliferation of Internet/sweepstakes cafes has adversely affected traditional bingo participation. Tim Stewart, President and CEO of Bingo King, a worldwide bingo equipment distributor, estimates that gross sales in states such as Ohio and California where Internet cafes have spread have declined more than 20 percent.

In Florida, the recent enactment of legislation that bans Internet cafes and adult arcade has adversely affected some bingo operators in the state who also had adult arcade games on their premises. The bingo halls we visited that previously had operational adult arcade games took the games out of play in order to comply with the new law.

The bingo operators with arcade games had previously offered prizes that were essentially free credits for regular bingo play. Many traditional bingo players would arrive well before the scheduled start of regular bingo and play the arcade games hoping to win free credits (such as “bingo bucks”) toward the cost of bingo cards for that day. It was also pointed out the extra time spent in the bingo hall usually resulted in the patron purchasing food or beverages at the hall’s concession. Now, bingo players have little incentive to arrive early because there are no “gaming activities” until the traditional bingo game starts. The loss of the adult arcade games in bingo halls have driven many bingo players to casinos and racinos where gaming is basically around the clock.

The legal challenges to the new Florida Internet cafes and adult arcades prohibition are currently ongoing and the final remedy is unclear at this time. Local law enforcement authorities now have enhanced tools to enforce the new law and recent published reports have documented considerable law enforcement efforts throughout every part of the state.

Gale Fontaine, President of the Florida Arcade and Bingo Association, said her trade group currently has about 215 members and has been losing bingo members steadily over the past decade. With all the recent developments regarding arcade games, she said the organization has over 50 new arcade members that joined this year. The connection between bingo and adult

arcades is quite prominent with many bingo hall owners/operators also in the arcade business or having arcade games within the bingo hall itself.

Michael Wolf, the Bingo Association's legal counsel, said the group has filed a lawsuit seeking to halt enforcement of the new law in regard to adult arcades. He said the same types of games are in bowling alleys and children's arcades and the law is being enforced discriminatorily against the adult arcades.

In regard to the new law's effect on traditional bingo, Dennis Conroy of *Bingo Bugle*, a monthly publication distributed in metro markets throughout the United States (including several Florida editions), pointed out that the new law may be a positive development for bingo in Florida. He said he it is likely that there will be an increase in applications for traditional bingo game operations due to the new law and the end result would be an increase in overall bingo revenues.

Florida also has one of the nation's most prominent high-stakes Indian bingo markets. In fact, most point to Florida's Seminole Classic Casino in Hollywood to be the birthplace of high-stakes Indian bingo. The Seminole Classic Casino is located across the street from the Seminole Hard Rock Casino. The one-story building started as a high stakes bingo hall about 30 years ago; however, the facility has slowly been transformed mostly into a slots-heavy casino with only about 15 percent of the gaming floor still devoted to bingo. On a recent tour of the Seminole Classic Casino, Spectrum observed that the bingo parlor that once had over 1,500 seats is now down to about 400 seats. Seminole Gaming advised Spectrum that its bingo revenue for 2012 was \$4.1 million, continuing a steady decline from \$24.6 million in 2001.

The Miccosukee Tribe of Indians of Florida, located in Miami, operates a 1,000-plus seat High Stakes Bingo Hall within its Resort & Gaming complex. The facility operates daily bingo games from 9 a.m. to 11 p.m. and has extensive bus service to the facility from throughout the greater Miami-Dade area. The bingo hall advertises over \$35,000 in daily bingo jackpots and has a large email promotion system that caters to regular bingo players.

Most observers agree that Florida's state-sanctioned model of charitable bingo is good for Florida, in that it provides needed funding for the state's many charitable organizations. Many of the bingo hall owner/operators have a genuine connection to the charitable organizations they help support. As Chris Thomas, owner/operator of Bingo Magic in Lake Worth, said for the system to work you have to be "in your community" through the charitable organizations that bingo helps to support.

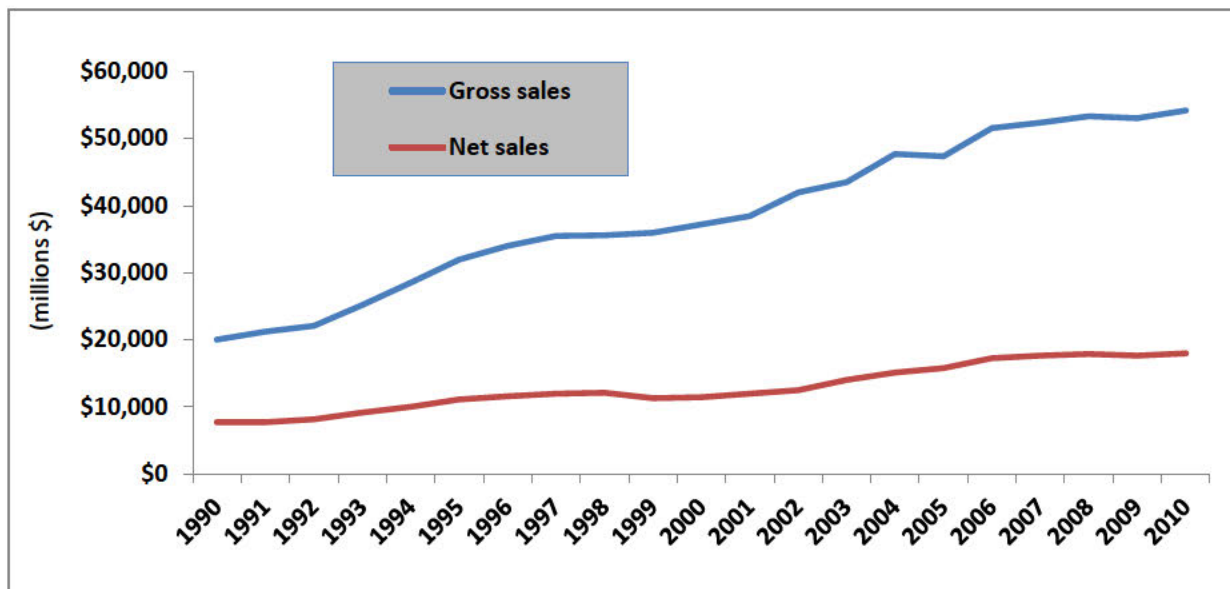

Unlike the other forms of gaming available in Florida, bingo is distinctive in that it is truly a "social thing" that players often enjoy with friends and relatives. Its traditional role in charitable organizations is well documented in the state. Policymakers and stakeholders need to closely exam the role bingo plays in Florida so it can fulfill the intent of the original enabling legislation.

17. Lottery

a. Nationally

The first modern state lottery began in New Hampshire in 1964.²¹⁵ A large number of states began introducing lotteries in the 1980s, and currently, the only states without a lottery are Alaska, Alabama, Hawaii, Mississippi, Nevada, Utah, and Wyoming (although Wyoming in March 2013 enacted lottery legislation). By 2012, the Florida Lottery ranked third in the nation, behind New York and Massachusetts, in total sales revenue (FY 2011).²¹⁶ Each of these states had net receipts (total sales minus prizes paid and administrative costs) of over \$1 billion.²¹⁷ The following chart shows the trend in US lottery sales between 1990 and 2010, in nominal dollars. Gross sales (handle) represents total lottery sales for all states; net sales represents gross sales minus prizes paid out and administrative costs, or the net amount of revenue for the states. As the chart shows, the net revenue to states has increased modestly over this period.

Figure 24: US lottery sales, 1990-2010

Source: US Census Bureau, *Statistical Abstract*, various years. For fiscal years.

As shown in the chart, lotteries raised almost \$2 billion for state governments in 2010. Lotteries are very popular among politicians because they are often viewed as a “voluntary tax.” That is, even though lotteries represent a relatively high tax rate on spending, citizens can easily avoid the tax simply by not purchasing lottery tickets.

²¹⁵ Charles T. Clotfelter and Philip J. Cook, “On the Economics of State Lotteries,” *Journal of Economic Perspectives*, vol. 4, 1990, p. 107.

²¹⁶ Teresa Markle La Fleur, Byron la Fleur, *La Fleur’s 2012 World Lottery Almanac*, p. 259.

²¹⁷ Douglas M. Walker, *Casinonomics*, 2013), p. 68.

Lotteries are, by far, the most profitable form of legalized gambling. For each \$1 ticket sold, the state keeps approximately 50 cents as “net revenue.”²¹⁸ Roughly 10 to 20 cents is directed to administrative costs, and the remainder is paid out in prizes. Based on the data in the chart above the proportion of net revenue to states was roughly 40 percent in 2010 (over \$5 billion in gross sales and about \$2 billion in net revenue).

Despite the benefits touted by the lottery’s proponents, the lottery – like other forms of gambling – has its critics. A long-running criticism of lotteries is that the revenues tend to come disproportionately from lower-income individuals. As such, the lottery is a “regressive tax.”²¹⁹ In addition, studies have found that the benefits from lottery funded educational initiatives tend to accrue to higher-income individuals.²²⁰ When combined with the tax effect, this compounds the regressivity of the lottery. While critics have termed state lotteries “a tax on the stupid”²²¹ due to their unfavorable odds, lottery play remains the most broadly popular and regionally widespread gambling activity both nationally, where 53 percent report playing the lottery within the past year,²²² and within Florida, where 60 percent of residents report having played the lottery at least once in their lifetimes and 44 percent say they have played within the past year.²²³

Another criticism of lotteries is that, despite the fact that they are often earmarked for programs such as education, it is not clear that the overall level of funding for such programs actually increases. For example, politicians could reduce other types of education funding as lottery contributions to education increase. Thus, the lottery may result in a net increase or decrease to educational funding in a state.

A variety of research has examined the demographics of lottery players. Clotfelter and Cook have provided what is regarded as the most important economic research on lotteries. They find that “the most active 10 percent of [lottery] players account for 50 percent of the total amount wagered, while the top 20 percent wager about 65% of the total.”²²⁴ In addition, Clotfelter and Cook (p. 112) summarize:

- Men play more than women

SECOND DRAFT - CONFIDENTIAL

- Adults play more in their middle years than when young
- Catholics play more than Protestants
- Lottery play falls with formal education
- 46 percent of laborers play; 25 percent of advanced professionals play
- Retirees and students play least of all
- Hispanics in the west and blacks in the east play more than non-Hispanic whites

The Ipsos Reid study for the Florida Lottery discusses demographics specific to Florida lottery players. The study includes a variety of survey questions aimed at understanding people's opinions of the lottery and attitudes toward gambling in general. While 42 percent of respondents agreed that "lotteries are an innocent form of entertainment," 19 percent indicated that they were "morally opposed to gambling."²²⁵ This finding reflects the general differences in opinion that exist across the states.

Overall, state lotteries are the most common forms of legal gambling in the United States. In aggregate, lotteries generate far more income for states than any other form of gambling. Lotteries also provide employment and economic benefits, both from direct employment of approximately 440 employees²²⁶, as well as assistance to a large and diverse network of retailers throughout the state. The Florida Lottery provides local sales through a network of 13,138 retail agents who receive a 5 percent commission on ticket sales.²²⁷ This sales network operates through a wide variety of establishments including convenience stores, gas stations, bars, restaurants, grocery stores, drug stores, liquor stores, newsstands, etc. Spectrum research in Massachusetts demonstrates the importance of lottery sales to the continued operation of these many small businesses providing entry level employment throughout the state.²²⁸

b. Florida

Florida is one of many states that has adopted lotteries that earmark the revenues for special purposes, such as education. The Florida Lottery contributed over \$1.3 billion to the state's Educational Enhancement Trust Fund during the 2012 fiscal year and \$24 billion since the lottery's inception in Florida in 1988. Lottery revenues are used for scholarships for college

students, construction and renovation on college campuses and at K-12 schools in the state.²²⁹ Many states have similar programs that use earmarked lottery funds.

As noted above, the Florida Lottery is one of the highest selling in the country. The following chart illustrates Florida lottery gross sales and per capita sales from 1990 through 2012.

Figure 25: Florida lottery sales, 1990-2012

Data source: Florida Lottery, Florida Office of Economic & Demographic Research; for fiscal years

In Florida, as in other states, the lottery has been criticized as being a regressive form of raising government revenue, disproportionately targeting the poor. For example, a 2005 report from the Brookings Institution notes:

“A number of studies have investigated the demographic predictors of lottery gambling and have tended to find that, on average, state lottery products are disproportionately consumed by the poor. ... The data reveal the following general trends. First, lottery gambling extends across races, sexes, and income and education groups. Second, black respondents spend nearly twice as much on lottery tickets as do white or Hispanic respondents.

“The average reported expenditure among blacks is \$200 per year, \$476 among those who played the lottery last year. Black men have the highest average expenditures. Third, average annual lottery spending in dollar amounts is roughly equal across the lowest, middle, and highest income groups. This implies that on average, low-income households spend a larger percentage of their wealth on lottery tickets than other households. Interestingly, the regressivity of the state lottery appears to vary across lottery products.

²²⁹ Florida Lottery, “Dollars to Education” <http://www.flalottery.com/education.do> (accessed May 9, 2013).

SECOND DRAFT - CONFIDENTIAL

“Low-income lottery players are more likely than other lottery players to bet on instant games. Among NORC survey respondents who report playing the lottery, 38 percent of those in the lowest-income third report that they purchased an instant ticket the last time they played the lottery, compared to 27 and 19 percent of players in the middle and highest-income third. Higher-income players are more likely to have purchased a ticket on a jackpot lotto game - 56 percent of those in the highest-income third, 49 percent in the middle group, and 39 percent in the lowest-income third.

“The NORC survey also asks respondents about their favorite state lottery game. Instant games are the most common reported favorite among those in the lowest-income third, while jackpot lotto games are by far the most common stated favorite among those in the higher income categories.”²³⁰

Spectrum has asked the Florida Lottery for Zip Code and other information related to examining both the proportion of lottery purchases in poor neighborhoods, as well as the proportion of tickets sold to non-Florida residents. As of this writing, Spectrum has not received a response.

18. Retail Gaming

Seven states currently authorize what Spectrum terms “retail gaming,” which is the placement of a small number of electronic gaming devices (typically 5 to 10) in authorized retail locations – often liquor-licensed establishments. Electronic gaming device (“EGD”) is a catchall term for slot machines, video lottery terminals, video poker machines, electronic bingo game, or any other slot-like gambling machine. At year end 2012, EGDs operated in 12,042 locations in the seven states.²³¹ In the five states where full-year data were reported for fiscal year 2012, the retail EGDs generated \$2.3 billion in gross gaming revenue.

In Illinois, Louisiana, Montana and Nevada, the retail gaming programs are regulated by their respective gambling control boards/agencies. In Oregon, South Dakota and West Virginia, the respective state lottery operates the retail gaming programs. The states use a variety of taxes, revenue sharing, franchise fees and/or device fees to collect revenue from the EGDs. The host establishments receive a share of the revenue based on a formula established by the state.

Retail gaming programs are seen as successful from a revenue standpoint because of their wide geographic distribution and convenience. However, they are controversial because they

²³⁰ Melissa Schettini Kearney, “The Economic Winners and Losers of Legalized Gambling,” Brookings Institution, February 2005, p. 16 <https://www.documentcloud.org/documents/266971-the-economic-winners-and-losers-of-legalized.html>

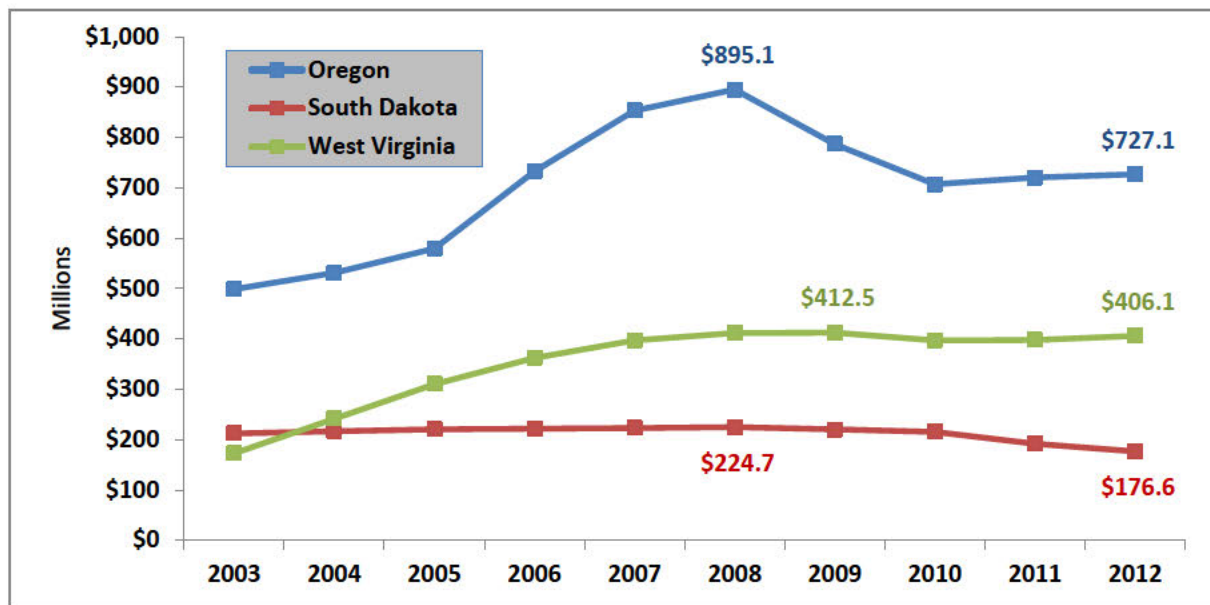

²³¹ 2013 *State of the States*, p. 4.

SECOND DRAFT - CONFIDENTIAL

EGDs may be too convenient for those with, or susceptible to, gambling problems and because they may be in plain view of children.

Following are the revenue results – in net sales (i.e., gaming revenue) – for the three retail gaming programs operated by state lotteries:

Figure 26: Oregon, South Dakota and West Virginia lottery retail gaming revenue, 2003-2012

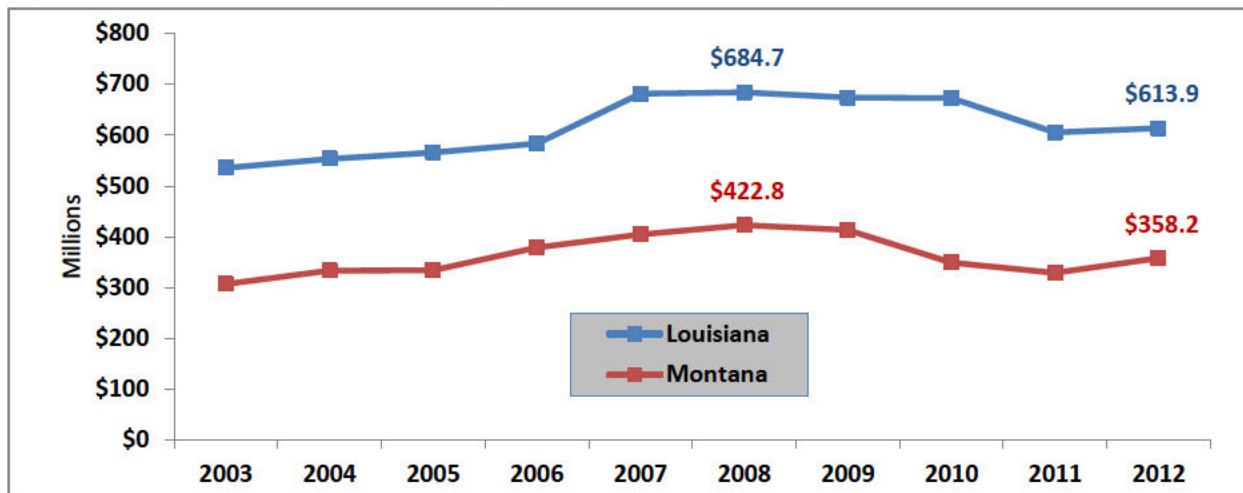

Sources: Oregon, South Dakota and West Virginia lotteries; for fiscal years

Retail gaming is a crucial part of the three lotteries' total revenue: In FY 2012, Oregon Video Lottery net sales accounted for 69 percent of total lottery sales; the Video Lottery accounted for 88 percent of sales in South Dakota; and the Limited Video Lottery ("LVL") net sales accounted for 26 percent of total lottery sales – but 52 percent when excluding the racetrack casinos, which are also overseen by the Lottery.

The Oregon Video Lottery permits six EGDs in authorized liquor-licensed establishments and 10 at racetracks. The South Dakota Lottery permits 10 EGDs in liquor-licensed establishments. The West Virginia LVL permits six EGDs in liquor-licensed establishments and 10 in fraternal organizations.

As noted, four states authorize retail gaming that is independent of the lottery. Nevada does not report retail gaming revenue, and Illinois, which launched its program in September 2012, has yet to report a full year of results. The following chart provides the retail gaming revenue for Louisiana and Montana:

Figure 27: Louisiana and Montana retail gaming revenue, 2003-2012

Source: Louisiana and Montana gaming control boards/agencies; for fiscal years

In some states, enterprising businesses have attempted to create a casino-like environment by putting multiple authorized EGD locations side by side. In Oregon, residents and legislators have become concerned about a concentration of 12 such establishments that form “lottery row” on Hayden Island, near Portland. “For years they’ve watched a group of legitimate restaurants morph into ‘lottery row,’ a strip of 12, gaming-focused establishments where food takes a back seat to lottery games and cigarette and alcohol sales.”²³² Oregon House Speaker Tina Kotek this year sponsored bills “that would give state and local governments dramatic new powers to shut down lottery outlets and bars that either gain most of their profits from video machines or become known for violent crime, drug dealing and excess noise.”²³³

Other states have considered retail gaming programs over the years, and Spectrum believes that states will continue to consider implementing retail gaming as other forms of gambling within their borders become saturated or difficult to legalize.

Key issues in considering the authorization of retail gaming include:

- Whether the easy accessibility could exacerbate problem gambling.
- Whether the devices would be in sight of minors who patronize a host establishment.
- Whether the EGDs would cannibalize existing casino or lottery play.
- The types of EGDs that would be allowed.
- The tax scheme/distribution of revenue.
- Which state agency would be responsible for directing and/or regulating the program.

²³² Casey Parks, “Jantzen Beach’s ‘Lottery Row’ will remain after Oregon lottery commission pulls proposed limits,” *The Oregonian*, August 5, 2012 http://www.oregonlive.com/portland/index.ssf/2012/08/jantzen_beachs_lottery_row_wil.html.

19. Sports Betting

The 1992 federal Professional and Amateur Sports Protection Act (“PASPA”) outlawed sports betting while grandfathering the four states that already had authorized it in some form. The four states are Delaware, Montana, Nevada and Oregon.

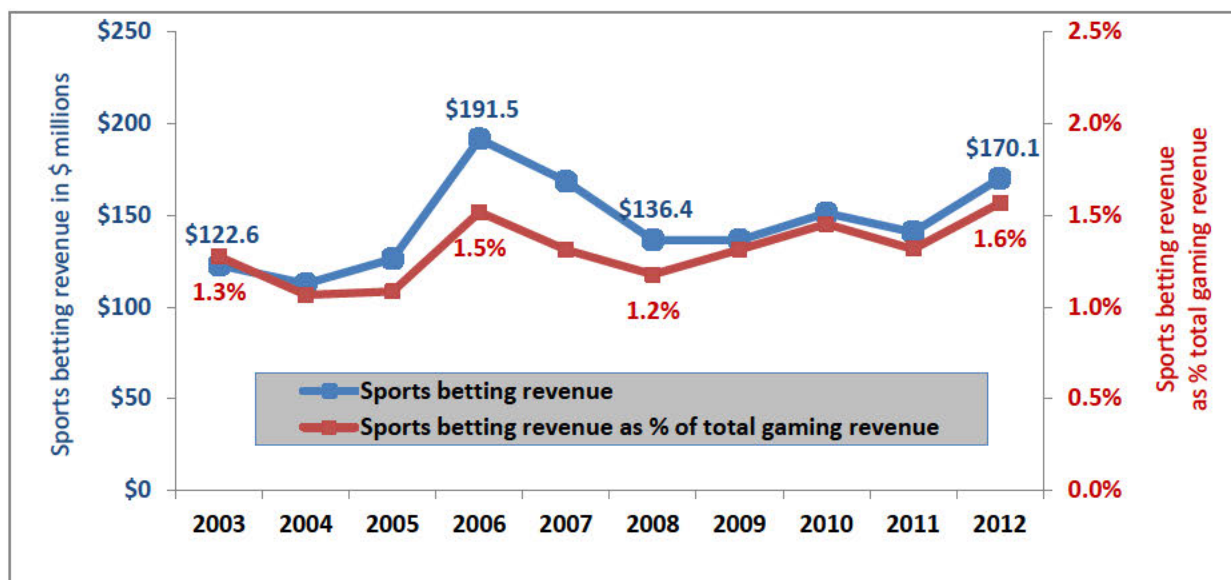

Only Nevada offers traditional sports betting; i.e., the opportunity to wager on a single-event outcome, covering both professional and amateur sports, based on odds posted by the casino. A sports book operator sets the initial “line,” or odds of winning, and then typically adjusts the line based on wagering patterns and/or event information, with the goal of attracting the same amount wagered on both sides of the bet. The casino makes its money by effectively charging a commission on the bets, although it can incur a significant win or loss if a lopsided amount is wagered on the winning or losing team.

The Nevada Gaming Control Board regulates sports betting, as it does all casino games in the state.

Over the last 10 years, the Nevada casino industry has retained between 4 percent and 8 percent of sports betting wagers as net gaming revenue. Nevada casino operators generally describe their sports betting operations as “marginally profitable.” At large casino hotels, sports betting attracts many guests who otherwise might not visit the property – and who spend on food, beverage, lodging and other amenities. Further, sports bettors often are accompanied by a non-sports-betting partner who will play other casino games.

Over the last 10 years, Nevada sports betting revenue has accounted for between 1.1 percent and 1.6 percent of all gaming revenue. At the major casino hotels on the Las Vegas Strip over the same period, sports betting accounted for between 0.74 percent and 1.52 percent of all gaming revenue.

Figure 28: Nevada sports betting revenue performance, 2003-2012

SECOND DRAFT - CONFIDENTIAL

Source: Nevada Gaming Control Board data

In 2012, 45 percent of the \$3.4 billion wagers made in Nevada casinos were on football, followed by basketball at 28 percent, baseball at 20 percent and other sports at 6 percent, according to the Nevada Gaming Control Board. Nevada's sports books do a particularly brisk business leading up to the Super Bowl and NCAA basketball tournament. The Nevada Gaming Control Board reported that the state's sports books took 2013 Super Bowl wagers of \$98.9 million and won \$7.2 million.²³⁴

The Nevada legislature in May 2013 defeated two bills that would have expanded sports betting:

- One would have allowed “entities” – as opposed to individuals – to place wagers. Such entities could be investment funds or other groups so long as they were based in Nevada.
- Another would have allowed wagering on the outcome of federal elections.

In Delaware, sports betting is restricted to parlay bets on National Football League games only. The parlay requires a bettor to wager on three or more individual games in one wager. “To win the bet, the player must win all the wagers in the parlay. If the player loses one wager, he loses the entire bet. However, if the player wins all the wagers in the parlay, he wins a higher payoff than if he had placed the wagers separately.”²³⁵

Delaware in 2009 passed legislation allow sports betting on all major sports, but a federal appeals court ruled later that year that the activity is restricted to the state's pre-PASPA structure of allowing only NFL parlay bets. As such, the sports betting takes place only during the NFL season.

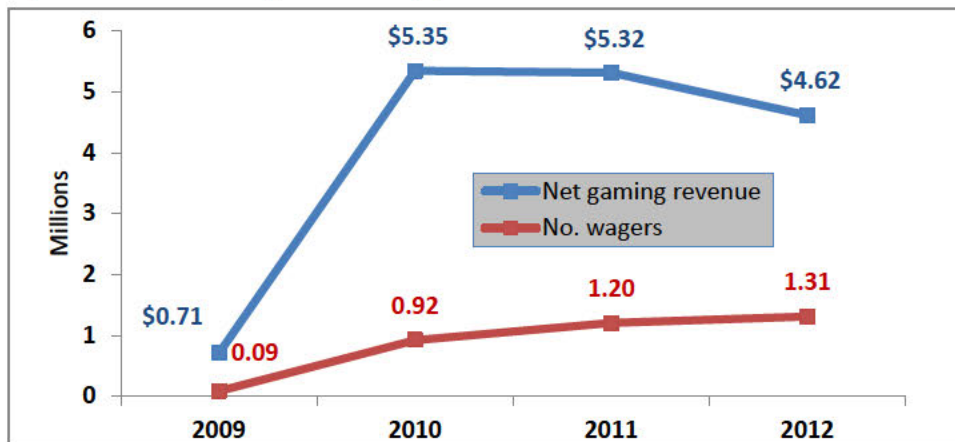

The Delaware Lottery is the state's regulator and provider of sports betting, which is offered at both the state's three racetrack casinos (also overseen by the Lottery) and, effective in 2012, at 31 authorized retail locations.

In 2012, Delaware reported \$19.7 million in sports betting wagers on 1.3 million wagers, resulting in net gaming revenue of \$4.6 million. Of the net gaming revenue, 86 percent was generated in the three racetrack casinos and 14 percent in the 31 retail locations. The following chart shows the Delaware sports betting results since its inception:

²³⁴ Nevada Gaming Control Board press release, February 4, 2013
<http://gaming.nv.gov/modules/showdocument.aspx?documentid=7577>.

²³⁵ Delaware Sports Lottery rules <http://www.delottery.com/games/sports/> (accessed May 3, 2013).

Figure 29: Delaware Sports Lottery performance, 2009-2012

Source: Delaware Lottery

Note in the chart above that revenue has declined despite an increase in wagers. This is because bettors were luckier/more skillful or, from the operator's perspective, the lines may have been poorly set. Delaware operators say their sports books are barely profitable or break-even enterprises. As in Nevada, the real value of the sports books is that they generate traffic for other, more profitable segments within the gaming complex.

In Oregon, the Lottery offered Sports Action from 1989-2006, in which bettors would wager on NFL parlays and, for a lesser time, National Basketball Association parlays. The state ended all sports betting games as a condition of hosting NCAA basketball tournament games.²³⁶

Montana does not offer traditional sports betting.

The federal ban on sports betting is currently being challenged by the State of New Jersey, whose voters in 2011 voted to authorize the activity. If New Jersey is ultimately successful, Spectrum believes other states would follow New Jersey in offering sports betting. Four states – Georgia, Kansas, Virginia and West Virginia – are supporting New Jersey's appeal, not necessarily out of support for the cause but because they see it as a violation of "equal sovereignty" among states.²³⁷

The four major professional sports leagues and the NCAA vigorously oppose sports betting, believing it undermines the integrity of sports in two ways: It encourages fans to root based on a team "covering" the point spread as opposed to the actual game outcome, and it could make players susceptible to accepting bribes in exchange for point-shaving; i.e., ensuring that a player's team covers or does not cover the point spread. Nevada regulators and sports book

operators argue that by regulating and tracking bets, they are able to spot suspicious betting patterns that could signify nefarious activity.

Illegal sports betting towers over legal sports betting in size and scope. The National Gambling Impact Study Commission in 1999 reported that the size of illegal sports betting nationwide ranges from \$80 billion to \$380 billion annually,²³⁸ vs. \$2.9 billion wagered in Nevada's sports books in 2011.²³⁹

Globally, sports betting is projected to represent 10 percent of all land-based gambling revenue in 2013, according to London-based H2 Gambling Capital. On the Internet, however, sports betting is by far the most popular form of gambling, projected to represent 45 percent of the 2013 global total.²⁴⁰

20. Illegal/Unregulated Gambling

Unsanctioned and unregulated gambling has long taken place in every state and, by its nature as an "underground" activity, can be difficult to assess. The Internet site Havocscope, which profiles illegal activity globally, estimates that illegal gambling in the US generates \$150 billion annually.²⁴¹ As in most states, illegal gambling has a long and storied history in Florida, beginning with the genesis of Florida's tourism economy. It has been said that for every hotel that Henry Flagler built, he also built a church and a gambling hall nearby.²⁴²

Unregulated gambling is the broader definition for these activities and it includes everything from slots and table games offered outside casinos, amusement or arcade machines, sports betting through bookies, privately-run sweepstakes and numbers games, cock or dog fighting, as well as private wagers between individuals. To catalogue and profile all forms of unregulated gambling is a large study in itself; for the purposes of this report we will provide an overview of the most prevalent types of non-sanctioned gambling and a brief description of the most prominent and widespread illegal or unregulated gambling activities in Florida.

SECOND DRAFT - CONFIDENTIAL

The participation rates of Florida residents in various forms of illegal or unregulated gambling activities are documented in the 2011 survey sponsored by the Florida Council on Compulsive Gambling Inc. for lifetime, past 12 months, and past 7 days, as follows:²⁴³

Figure 30: Illegal and unregulated gambling participation in Florida, 2011

Gambling Activity	Lifetime %	Past Year %	Past Week %
Poker	22.1	12.0	3.4
Sporting Events Through a Pool	19.9	11.1	0.9
Cards/Dice/Dominos Not at Casinos	19.4	11.9	2.2
Bingo	19.1	5.7	1.1
Slot/Poker Machines Not at Casinos	18.7	7.2	1.2
Playing Sports Games	13.1	7.3	2.0
Table Games Not at Casinos	9.9	5.0	0.2
Sporting Events Through a Bookie	8.2	5.0	1.0
Pull-Tabs	7.4	2.9	0.3
Arcade or Video Games	6.8	3.8	0.8
Fantasy Sports	5.0	3.6	1.5
Internet Gambling	4.8	3.3	0.8
Car Races	2.7	1.2	0.6
Mah Jong	1.5	0.8	0.4
Cock or Dog Fighting	1.1	0.4	0.0
Policy, Numbers, or Bolita	0.8	0.5	0.1
Other	0.7	0.0	0.0

Source: Florida Council on Compulsive Gambling

The above table does not include playing the stock market, which was also profiled as a gambling activity in the FCCG study, while it does include poker played privately and betting on sporting events through a pool, which are generally perceived to be acceptable forms of wagering even if they are not regulated. Bingo is another generally accepted form of gambling, but unregulated bingo wagering can compete with charitable and regulated bingo operations elsewhere in the state. Unregulated gambling activities of more immediate concern include playing casino style games outside the casinos, sports betting through bookies, and numbers games offered outside the Florida Lottery.

It should also be noted that the 2011 FCCG survey, while carefully weighted and designed to be representative of Florida's diversity, completed less than 3 percent of its interviews in Spanish or Creole,²⁴⁴ which indicates that illegal gambling prevalence among Latinos and other minority groups may be somewhat underrepresented in the above findings. In addition, any survey questions regarding illegal or unregulated activities such as gambling are less likely to be openly and honestly answered by respondents, so it is reasonable to assume that

²⁴³ Robert J. Rotunda, Terry L. Schell, *Gambling and Problem Gambling Prevalence Among Adults in Florida: A 2011 Replication*, University of West Florida, January, 2012.

²⁴⁴ Ibid.

the prevalence of illegal gambling activities may be higher than documented in self-reported surveys.

Until recently, Internet cafes offering sweepstakes games and arcades with gambling-style machines that offered cash-equivalent prizes operated through real or perceived loopholes in Florida law – in either case without regulation and enforcement; now they are explicitly illegal. Internet/sweepstakes parlors constitute a shadow gambling category which is now receiving increased attention across the country and has been banned in many states. Advocates contend that this is legal activity because players simply purchase Internet access time blocks and are not wagering money on the prospect of receiving a greater reward, which is the traditional definition of gambling. Critics argue that there is little difference between the electronic gambling devices employed and video slot machines, and those players are incited by the opportunity to win prizes with monetary value. In 2011 *Businessweek* estimated that there could be as many as 5,000 Internet cafes operating nationwide generating \$10 billion to \$15 billion dollars in revenue.²⁴⁵

On April 10, 2013, Florida Governor Rick Scott signed into law HB 155, which effectively proscribed sweepstakes gambling.²⁴⁶ This action followed the well-publicized Allied Veterans of the World prosecution which resulted in the arrest of 57 people in racketeering indictments for illegal gambling²⁴⁷ and eventually led to the resignation of former Lt. Gov. Jennifer Carroll.²⁴⁸ At the time of the bill's passage, the Internet/sweepstakes gaming industry was estimated to be operating 1,000 Internet cafes statewide throughout the state producing approximately \$1 billion in annual revenue, according to the Florida League of Cities.²⁴⁹ This legislation effectively banned Internet cafes and the “maquinitas” by included language which defines what constitutes illegal gambling and closing loopholes which have existed in Florida for decades and had allowed the earlier growth of unregulated wagering. Among other things HB 155 updates the definition of both illegal slot machines and legal arcade games, requiring that “amusement games or machines” must operate only “by means of the insertion of a coin” not swipe cards, and that, in order to be distinguished from “casino style games” they must be

²⁴⁹ “Florida Internet Cafes, Legislative Indecision Requires Local Governments to Make Tough Choices,” *Florida League of Cities* <http://www.floridaleagueofcities.com/Assets/Files/Pre-emptionThreatsInternetCafeDRussell.pdf>.

classified as games of “skill” rather than chance.²⁵⁰ Specifically, the new legislation stipulates that legal machines cannot be “casino-style games in which the outcome is determined by factors unpredictable by the player or games in which the player may not control the outcome of the game through skill.”²⁵¹

The stricter interpretation of gambling in the legislation cited above also potentially impacts the approximately 200 “adult arcades” that offer slot style gambling outside of state or tribal-regulated slot machines as well as hundreds of children’s arcades and arcade restaurants. These unregulated “amusement slots” represent a gray area of gambling activity and one which has been criticized both for taking advantage of seniors and for teaching minors and even children to gamble. Most adult arcades offer video gaming machines very much like the video devices found in Internet cafes but instead of buying time online players can win small prizes and gift cards. Adult arcades were specifically prohibited from dispensing gift cards as prizes in the recent legislation which also limits top prize values to no more than 75 cents.²⁵²

Unsurprisingly, Internet cafés, adult arcades, amusement arcades, and children’s restaurants have fought the legislation.²⁵³ Internet cafés alone have been estimated to employ as many as 14,000 people who will now be unemployed.²⁵⁴ The Florida Arcade & Bingo Association has appealed in Broward County, so far unsuccessfully, the inclusion of arcades in the HB 155 legislation.²⁵⁵ So have trade associations for the restaurants, bowling alleys, skating rinks, etc., which also operate arcade style machines, sometimes using swipe cards. Companies such as Dave and Buster’s and Chuck E. Cheese, which feature arcade-style games for youngsters, may also be affected under the new legislation by restrictions on prize value and requirements that arcade games not be games of chance.²⁵⁶

Internet café operators have previously sought injunctions to prevent local government bans prior to the enactment of HB 155, particularly the unsuccessful fight against the ban in

²⁵⁶ Erin Sullivan, “Internet Café Law May Have Unintended Targets,” *The Tampa Bay Times*, May 20, 2013 <http://www.tampabay.com/news/business/Internet-cafe-law-may-have-unintended-targets/2121416>.

Broward County. More recently, two arcade operators in Broward County, Boardwalk Brothers, Inc. and Play It Again Fla. LLC, filed for an injunction to HB 155, claiming that the law is “arbitrary, irrational, not reasonably related to a legitimate governmental purpose, and void for vagueness”. This suit, filed in US District Court and naming Michael Satz, state attorney for Florida's 17th Judicial Circuit as defendant, saw the Seminole Tribe of Florida intervene as a defendant before U.S. District Judge James I. Cohn refused to grant the arcade plaintiffs an injunction against the law.²⁵⁷ Additional legal action is expected to be filed in Tallahassee on behalf of Internet café owners, gaming machine manufacturers, and software companies, according to persons involved in the industry.²⁵⁸ In addition, grass roots seniors groups, such as Seniors 4 Justice, are organizing in support of their local pastime, as well as legal teams from commercial restaurants with amusement arcades.²⁵⁹

Amusement arcade slots have long been a feature of many East Coast beach resorts and can easily be found in states which already have legalized casino gambling, such as New Jersey, as well as those which currently have not, such as New Hampshire.²⁶⁰ One primary issue affecting whether these types of establishments catering to children remain open in Florida is whether they increase the chance for kids to become gamblers when they reach adulthood. Many gambling opponents view youth arcades as a “slippery slope” leading directly to full-blown adult gambling behavior.

The bill clarified the illegality of “*maquinitas*,” gray market video gaming machines similar to arcade slots but also housed in gas stations, convenience stores, restaurants, cafeterias, and bars throughout the state. The new law caused a reversal of Miami mayor Tomás Regalado’s attempted policy initiative to regulate the *maquinitas* through municipal licensing and permit fees.²⁶¹ Apparently, Mayor Regalado’s efforts to regulate the *maquinitas* were not successful. Since adopting an ordinance more than two years ago requiring each establishment to register for a \$500 permit fee, not a single *maquinita* operator has applied for the license.²⁶² The passage of HB155 has emboldened local law enforcement authorities to take action against small-scale *maquinita* operations, which are numerous in Florida. While no one knows exactly how many

actually exist and what revenue they produce, Miami Police Chief Manuel Orosa estimates that there are more than 1,000 maquinitas active in his city alone, and each is non-compliant with the city ordinance.²⁶³

On June 4, 2013, the US District Judge James I. Cohn for the Southern District of Florida denied a motion by Broward County adult arcades Boardwalk Brothers Inc. and Play It Again FLA LLC for an injunction against HB 155. The arcade owners argued that the law was unconstitutionally vague and violated their First Amendment right of association. Among Judge Cohn's conclusions was that because gambling is a vice activity and can be banned altogether, "the State has a significant interest in proscribing the behavior regulated in the statute." The judge further found that "it is doubtful that patrons who unable to frequent the Plaintiff's commercial establishments will suffer any First Amendment harm." The judge also noted that the statute is not forcing the arcades out of business, just limiting the types of games offered.²⁶⁴

Although bingo for money is legal in Florida if operated by charitable organizations and veterans groups which qualify for 501(c) or 528 status, instant bingo games in the form of pull tabs (except for those sanctioned organizations) or electronic bingo in all forms are not sanctioned under Florida law.

Another prominent illegal gambling activity in Florida is *bolita*, a numbers game imported from Cuba in the 1920s. The name "bolita" literally means "little ball" in Spanish and refers to a lottery drawing which first became popular among Cuban immigrants in Ybor City, where originally players tossed a sack filled with numbered balls back and forth between them until the round was called and the last person holding the bag withdrew a single ball with the winning number. Bolita's peak popularity occurred in the Great Depression during the 1930s when it spread throughout the state. In 1938, Tampa featured approximately 125 bolita operations grossing as much as \$20,000 per day.²⁶⁵ The game spread with Cuban immigration to the north into New York and New Jersey, where "Spanish Raymond" Marquez built a bolita empire in the 1960s.²⁶⁶ Like all privately run numbers games in the US, bolita gambling has been sidelined by the evolution of state sponsored lottery operations over the past 40 years. However, the prospect of superior relative odds, zero taxes, and cohesive immigrant community traditions have preserved bolita gambling, which still competes with the regulated Florida Lottery, and the game remains popular today across the straits in Havana.

Other forms of illicit and unregulated gambling in Florida include electronic bingo, cock fighting and dog fighting, betting on sporting events, and Internet gambling. Pitting animals

against each other and wagering upon the outcome is an ancient human activity that is now so unacceptable to mainstream society that the practice, while still occurring frequently, is deeply underground and receives little public attention except for law-enforcement actions.

21. Conclusion

Gambling has evolved to become a major US industry, largely because it is popular and profitable – both for operators and for the states that tax and regulate it. All but two states (Hawaii and Utah) have some form of legalized gambling, although the size, scope, types, tax rates, and regulatory schemes vary by state. For reasons discussed in following chapters, the combination of consumer acceptance, technological advances (such as the Internet) and government desire for revenue will continue to cause further expansion. We return to the observation put forth by John Sowiński of No Casinos: “The solution to having too much of it is to have more of it.”

Expansion comes at a cost, both internally to the industry and externally to society. Expansion runs the risk of cannibalizing certain types of gambling – notably the pari-mutuel industry, which has long been in decline both nationally and in Florida – and it will sharpen the debate about how much is too much. Importantly, expansion will further place a focus on assessing the societal and personal costs associated with gambling; we discuss this in general terms in Chapter II (G) below.

C. The New US Frontier: Internet Gambling

1. Nationally

Internet gambling has become a reality in the US only within the past year. On December 23, 2011, the Department of Justice issues an opinion in response to inquiries from the Illinois and New York lotteries reversing its long-held position and declaring that the 1961 Wire Act applies only to sports betting. This reversal opened the door to state by state legislation to regulate Internet gambling and online lottery sales.

Since the beginning of 2012 three states have passed such enabling legislation and each one follows a different model. Delaware was the first state to pass enabling laws and will roll out Internet wagering through a platform controlled and maintained by the Delaware Lottery. The state’s three licensed racetrack casinos will offer branded websites offering most casino games and the lottery will offer Internet lotto sales. Nevada is the first state to actually regulate gambling operations via the Internet on April 30, 2013, as Station Casinos opened online operations through its partner, Ultimate Poker. As of May 14, 2013, UltimatePoker.com had

surpassed 1 million hands of online poker.²⁶⁷ New Jersey quickly followed Nevada into legalized Internet gambling, with Governor Chris Christie signing legislation only five days after Governor Brian Sandoval did.

At this time state legalized Internet wagering is available only to residents or visitors currently located within a state's borders, as verified by geo-location software. Interstate compacting is expected to follow suit similar to US lotteries constructing interstate compacts for multi-state lottery games (such as Powerball and Mega Millions). A summary of US legal Internet gambling jurisdictions is found in the following table. At least 10 states are considering enabling legislation in a variety of forms, including California, Pennsylvania, Michigan, New York, Illinois and Iowa.

Figure 31: Legal US jurisdictions for Internet gambling

State	Legalization Date	Operator	Games Offered	Implementation Date
Delaware	July 23, 2012	Delaware Lottery	Lottery Casino (some games)	September 30, 2013
Nevada	February 21, 2013	Nevada casinos and partners	Poker only	April 30, 2013
New Jersey	February 26, 2013	Atlantic City casinos	Casino (all games)	November 26, 2013

Sources: Delaware Lottery, Nevada Gaming Control Board, New Jersey Division of Gaming Enforcement

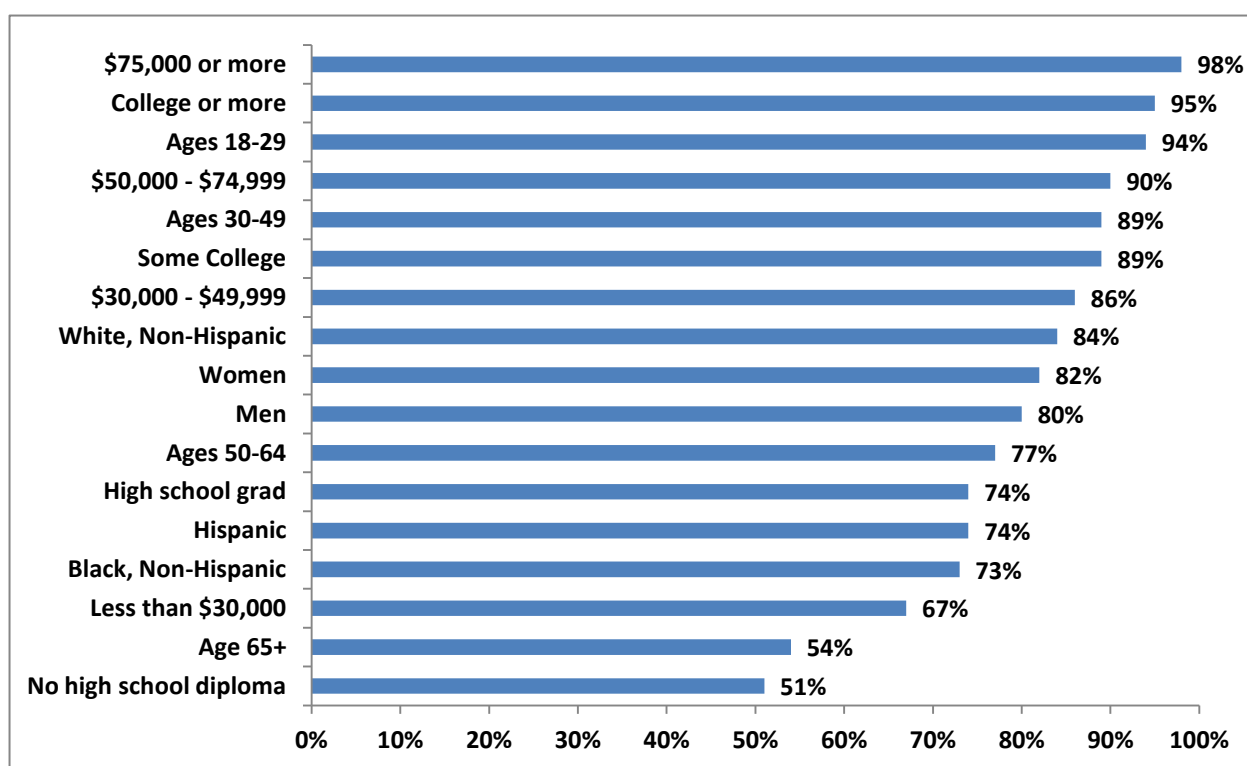

The Internet has revolutionized a wide variety of US economic sectors over the past decade and a half as e-commerce has become firmly established as a major sales channel. One segment of the domestic economy where the Internet and mobile connectivity have notably not been major factors is in the field of gambling. Both commercial and tribal casinos in the US, as well as domestic lotteries find themselves in the same situation demographically. Their core player base is aging and not being fully replaced by a younger generation. In casinos this is particularly true of slot machine patrons. For lotteries it is most prevalent among weekly instant ticket customers. Moreover, both casinos and lotteries frequently evidence the 80/20 rule, or the "Pareto Principle," that 80 percent of revenue often is derived from 20 percent of the customer base. For both of these gambling industries, the prevalent demographic of the Internet user is under-represented in their own player base, thus the Internet and mobile channels constitute an opportunity for engaging future customers. Also, with Internet distribution channels, the breadth and frequency of play will often increase, thereby spreading the generation of revenue across a broader spectrum of the player base.

A strong majority of Americans use the Internet regularly. According to the Pew Research Center, as of December 2012, 81 percent of US residents use the Internet and 65

²⁶⁷ Dan Wetzel, "Ultimate Poker's legal online betting foray could be a game changer in the U.S.," Yahoo Sports, May 15, 2013 <http://sports.yahoo.com/news/spt--ultimate-poker-s-legal-online-betting-foray-may-be-a-game-changer-in-the-u-s---010335301.html>.

percent have broadband access.²⁶⁸ Regular and frequent Internet users demonstrate the following demographic traits: they are usually younger, better educated, more affluent, more likely to be working full time, and more likely to be earning more income than the population as a whole. Frequency of Internet usage tends to be consistently higher among younger demographic ranges. A nationwide Gallup Poll conducted in December 2008 found that Americans below the age of 50 spend the most time online: 62 percent of those under 30 spend more than one hour online per day, as do 54 percent of those people 30 or older but under the age of 50.²⁶⁹ A more recent Pew Post Election survey confirmed these demographic statistics and indicated that Internet usage is broadening among gender and racial demographics while remaining upscale in relation to income and educational demographics.²⁷⁰

Figure 32: Internet usage frequency by demographic group, 2012

Source: Pew Internet Post Election Survey, November 14 – December 9, 2012

Internet gambling also opens the door to new kinds of games not currently considered gambling, such as monetized social games and betting on the outcomes of peer-to-peer and massive multiplayer online games. Social games are generally played with others via a social

²⁶⁸ Pew Internet & American Life Project, Pew Research Center, Internet Adoption 1995-2012 [http://pewInternet.org/Trend-Data-\(Adults\)/Internet-Adoption.aspx](http://pewInternet.org/Trend-Data-(Adults)/Internet-Adoption.aspx).

²⁷⁰ Pew Internet Post Election Survey, November 14 – December 9, 2012, Pew Internet & American Life Project, December 2012 [http://pewInternet.org/Trend-Data-\(Adults\)/Whos-Online.aspx](http://pewInternet.org/Trend-Data-(Adults)/Whos-Online.aspx).

network or on a social media platform. The potential size of this market is staggering. On October 4, 2012, Facebook reported that it had passed the 1 billion user threshold²⁷¹ and half of these users are estimated to play some type of social game.²⁷² The top five casino games played on Facebook are Double Down, Bingo Blitz, Best Casino, Slotomania, and Texas Hold'em. These five casino-style games on a single platform attract a total of 11,240,000 daily active users.²⁷³ Social casino sites throughout the United States attracted a total of 35.4 million monthly players in 2012.²⁷⁴

The proportion of people who play for money on a social gaming site is fractional, usually in the low single digits, but multiplied by the total number of players on the site, the revenue quickly adds up. Monetized social gaming is estimated to have produced \$1.6 billion in revenue globally with \$660 million being generated in North America.²⁷⁵

While leveraging the Internet can deliver a broader audience to commercial gambling operations, the 24/7 access from the comfort of one's own home clearly increases the opportunity for problem gambling issues. Multiple studies show a potentially higher rate of problem gambling incidence for Internet gambling compared to land-based gambling, while multiple competing studies show identical problem gambling rates for both online and "offline" gambling. The Florida Council on Compulsive Gambling survey conducted in 2011 documented problem gambling prevalence within the state's general population at 2.1 percent for lifetime occurrence and 1.2 percent for past-year occurrence.²⁷⁶ These rates are generally consistent with the prevalence of problem gambling within land based gambling, benchmarked at 2.3 percent in 2008 according to the American Gaming Association,²⁷⁷ but should be carefully monitored if Internet gambling ever becomes legal in Florida.

22. Internet Poker Evolution

Poker was first introduced to the US between 1810 and 1825 through New Orleans and originally developed from the German game *pochen* and its French derivative *poque*.²⁷⁸ This card game evolved to include draws and jackpots as it spread throughout the Mississippi valley and the American West during the second half of the 19th Century.²⁷⁹ By the middle of the 20th Century poker games had become part of American culture and a frequent feature in residences. Due to its long history and wide popularity poker had come to represent the quintessentially American monetized social game.²⁸⁰

While poker enjoyed tremendous popularity among casual and social gamblers in homes and social clubs, it was not a popular casino game. In 1970 there were less than 50 poker tables in the city of Las Vegas and less than 70 in the entire state of Nevada.²⁸¹ The reason for this low importance of poker as a casino game was its lack of profitability. Poker tables must be staffed with dealers and supplied with chips and amenities by the casino, rounds take a relatively long time but the game is played in competition with the other players and usually for small stakes with the casino only earning a rake of approximately one-tenth of the pot at the conclusion of each round. In 1970 it seemed certain that poker would remain a social game played for small stakes in private homes around den or basement card tables.

All that changed with the convergence of three sequential events: the establishment of the World Series of Poker, the advent of television coverage, and the development of the Internet. In 1970 the first official World Series of Poker (“WSOP”) was played at Binion’s Horseshoe in Las Vegas, a casino which at the time did not even have a poker room.²⁸² From humble beginnings this competition grew to include the most well-known poker players of the time and eventually featured a million dollar prize for the winner, prominently displayed in a glass case at Binion’s. In its second year the WSOP Jack Binion changed the tournament format from an election to a freeze-out competition²⁸³ where participants post an entry fee and losing players are eliminated until the winner takes all. As interest in the tournament grew, television coverage was initiated in 1973 by CBS Sports and commentary was provided by Jimmie “The Greek” Snyder, himself a participant in the 1969 forerunner of the WSOP. The game which was favored in this tournament was no-limit Texas hold’em, where the audience could watch the first three community cards dealt to the center of the table – the flop – and suspense would build along with the betting as the

²⁸³ Schwartz, p. 413.

fourth card – the turn – and the last community card – the river – were dealt. This format was much more attractive for television audiences than draw games where inscrutable “poker faces” were the only indicators as to what was going on in the player’s heads. As TV technology continued to evolve, by 2000 the television audience could also view players’ two hole cards via miniature cameras in the table surface which added even more suspense to the televised games.

The advent of Internet technology revolutionized poker tournaments by allowing huge numbers of players to qualify for tournaments through the Internet via satellite rounds. The initial WSOP competitions involved a dozen players in total. In 1982 the tournament drew 52 players and by 2000 there were 450 players.²⁸⁴ In 2003, the worldwide popularity of poker in general and the WSOP in particular exploded when an unknown amateur with a suitably relevant moniker, Chris Moneymaker, won a seat at the tournament through a \$40 satellite round on PokerStars and went on to beat out 838 other contestants and win \$2.5 million in the final round.²⁸⁵ One year later a total of 2,576 players contested for a \$5 million first prize. In 2006, the pinnacle of WSOP popularity, a total of 8,773 players participated,²⁸⁶ the vast majority entering the tournament through Internet satellite rounds.

This timely convergence of television and Internet technology had caused online poker to skyrocket in popularity over the early portion of the last decade. However, in 2006 Congress passed the Unlawful Internet Gambling Enforcement Act (“UIGEA”), which suppressed Internet wagering by making it illegal for payment processors to handle gaming transactions. Internet poker participation in the US crashed after passage of this legislation and many of the more reputable offshore operators, including Party Poker and 888.com, voluntarily withdrew from the US market. Despite UIGEA, a number of offshore sites continued to take bets from US players until April 15, 2011, now known in the industry as “Black Friday,” when the US Department of Justice entered indictments against Full Tilt, Absolute Poker, and Poker Stars and seized their assets and domain names.²⁸⁷ The indictments alleged fraud and in the case of Full Tilt the creation of a Ponzi scheme where player deposits were used to fund operations and salaries paid to celebrity player spokespersons. After the Black Friday indictments, US Internet poker participation truly plunged as players lost confidence in many offshore sites and withdrew their deposits. Some committed or professional players even established foreign residences in order to continue playing poker online.²⁸⁸

SECOND DRAFT - CONFIDENTIAL

After UIGEA, most major Internet poker operators turned their sights away from the US, a trend which accelerated after Black Friday, resulting in the development of a flourishing Internet poker in Europe. This market is dominated by Internet only operators based in offshore jurisdictions. It is also characterized by high volumes of players (liquidity), and intense competition among the top tier poker sites which results in low player retention, lucrative free play bonuses, celebrity player-sponsors, and due to all of the above, low operating profit margins. Since Black Friday, global Internet poker revenues have declined worldwide as the former boom continues to recede.

Figure 33: Internet poker revenues globally, Europe and US

Source: H2 Gambling Capital

However, this decline in the popularity of poker is expected to reverse dramatically in the next few years as Internet gambling becomes legal on a state by state basis in the US. On December 23, 2011, the US Department of Justice issued an opinion in response to a request by the New York and Illinois state lotteries, reversing their previous position held for more than a decade that the 1961 Wire Act prohibited Internet wagering. Since then three states have passed enabling legislation for Internet gambling in the US and all three follow different models. Nevada will offer poker only gambling through commercial providers licensed by the state. Delaware will offer most games currently featured at the three racetrack casinos licensed by the state through a central platform controlled by the lottery. New Jersey will allow Atlantic City's commercial casino operators to offer all games currently approved by the Division of Gaming Enforcement over the Internet utilizing licensed providers. In addition, at the time of this writing, California has multiple bills legalizing Internet poker before the legislature and other states, including Illinois, Pennsylvania, Mississippi, Iowa, and New York have considered various bills to legalize Internet wagering.

23. Lotteries Online

Following the Department of Justice opinion of December 23, 2011, reversing its long held position that the 1961 Wire Act barred state lotteries from participating in online gambling, 13 states have introduced legislation regarding some form of Internet gambling. Illinois and Georgia quickly implemented legislation permitting online lottery ticket sales and are the only two US state lotteries currently leveraging the Internet sales channel.

Currently, lotteries in New York, Minnesota, New Hampshire, North Dakota, and Virginia offer some form of online subscription for lotto tickets. The Delaware State Lottery will begin selling tickets online as well as offering most casino games through a lottery controlled platform in September, 2013. Massachusetts, the most successful lottery in the nation, commissioned a study last year to examine the issue of Internet sales and develop a strategy for implementation. Early this year Massachusetts introduced legislation authorizing tickets sales via the Internet. Maine has altered its gaming statute in response to the federal ruling, and Vermont has commissioned a study of the potential impact if Internet ticket sales were implemented.²⁸⁹

Florida has also introduced enabling legislation for Internet lottery sales. Senate Bill 266, sponsored by State Senator Gwen Margolis (D-Miami) and co-sponsored by Representative Joe Gibbons (D-Hallandale Beach) through HB 275, was filed on January 17, 2013, but never advanced and has since died.²⁹⁰ If passed, this bill would have authorized ticket sales over the Internet “via a subscription mechanism.”²⁹¹ In May 2013, Michigan, after defeating prohibitory legislation in 2012, announced that the Michigan Lottery will be offering online sales through a system titled “iLottery” as early as spring, 2014.²⁹²

24. Conclusion

The Internet offers great opportunities nationally and internationally for all gambling providers, be they commercial, tribal, state lottery, or illegal/non-regulated, to expand their reach to a new audience that is often younger and more affluent than their current customers. Internet access promises to take gambling beyond the casino floor and into the living rooms and bedrooms of Americans which opens a whole new range of opportunities as well as potential problems. For both the casino industry and state lotteries, Internet gambling and ticket sales represent the future of gaming, offering the means to broaden their appeal, widen their marketing

²⁹² “Michigan Lottery Eyeing Internet Sales Launch in 2014,” *The Inquisitor*, April 30, 2013 <http://www.inquisitr.com/654782/michigan-lottery-eyeing-Internet-sales-launch-in-2014>.

footprint and engage the next generation of players in order to replace aging player bases. At the same time, the increased convenience of Internet play also poses the issue of cannibalization of brick and mortar sales for all gambling providers, while 24/7 access to gambling in the privacy of one's home raises the specter of increased problem gambling.

The inability of the US Congress to debate and resolve the legality of Internet gambling left a vacuum over the past decade which was filled by offshore operators which now dominate a vibrant European Internet gambling market generating \$15 billion in 2012 and an expanding global industry estimated at \$34 billion last year.²⁹³ By 2015, Internet gambling is expected to represent 10 percent of all gambling revenue globally.²⁹⁴ Internet will likely continue to expand beyond the three states currently permitting the practice, absent passage of any federal legislation. A completely legalized US Internet gambling market would be estimated to generate \$7.1 billion after five years of operation. New York would be the largest market (\$1.02 billion), followed by California (\$984 million), Florida (\$786 million), Illinois (\$652 million), and New Jersey (\$570 million).²⁹⁵ Ranking as the third largest potential market in the US, Florida would need to carefully consider the pros and cons of Internet wagering and develop an effective strategy for addressing the issue as more and more states can be expected to pass enabling legislation in the future

D. Overview of Gambling Regulatory Schemes

A general description of gambling regulatory schemes, including: State-operated, consolidated agency oversight, multi-agency oversight, and the use of local and state commissions; authorizing and revocation mechanisms; taxation schemes.

In this section we review the structure of the Florida gaming regulatory agencies as well as those of a number of other states and also address how each state addresses the most critical points of regulation.

1. Overview of Florida's Regulatory Structures

Preliminarily, we observe that each state has its own "personality" with regard to gaming venue, laws, history of gaming, priorities, etc., but there are also common themes that often, but not always, shine through regardless of differences. It is these themes of regulation that can be very instructive. Practices repeated are often in place for a good reason – because they have been considered important in many locations over long periods. This is not to say that they should not

²⁹³ H2 Global Summary, H2 Gambling Capital, April 9, 2013.

²⁹⁴ Ibid.

²⁹⁵ US Regulated Internet Gaming Forecast, H2 Gambling Capital, April 9, 2013.

SECOND DRAFT - CONFIDENTIAL

change if circumstances warrant, but it is important to understand the primary principles of gaming regulation.

The overriding regulatory interest that permeates all effective legislative schemes is the recognized need to engender public confidence and trust in the integrity of the regulatory process and gambling operations. To this end, regulatory agencies are charged with the responsibility of ensuring that unsavory and nefarious influences are prohibited from infiltrating the authorized gambling industry. This mandate is especially important for an industry that historically has been susceptible to corrupt influences. In Spectrum's experience, the linchpin of effective regulation is a comprehensive licensing process designed to ferret out unsuitable persons and entities from participating in this highly lucrative industry. In order for the regulatory apparatus to succeed, it is imperative that licensure be limited to those persons and entities that are able to demonstrate their good character, honesty and integrity.

There are also significant differences in the regulatory structures formulated to accomplish this laudatory objective of effective oversight. Of course, states have regulatory structures that are designed to account for their particular population, location and statutory requirements. For example, in Ohio the location and even the owners of the casino locations were part of the referendum initiative that was approved by the voters in 2010.²⁹⁶ Thus, the regulatory structure did not have a component for *selecting* an applicant, like Massachusetts, Maryland or Kansas. But the referendum did have a component for *evaluating* an applicant like virtually all states, which was tied to an affirmative showing of integrity and financial suitability.

In another example, many states, such as Pennsylvania, Kansas and Maryland, have a requirement for renewal of licenses, including the licenses of owners of casinos. Other states, such as Nevada and (at this time) New Jersey, have no such requirement, though both have a "call forward" provision which requires companies to provide additional information under certain conditions, with some discretion allowed by the persons in authority.

Many regulatory structures have been created and are almost unchanged from the original enabling legislation, some have had minor changes, and others have been radically altered since first implemented. Sometimes the length of time that a regulatory structure has been in existence has made a significant difference as to whether there have been changes. For example, one might expect New Jersey and Nevada to have made some changes to their regulatory structures because of how long the gaming industry has been operating in those states. Indeed, New Jersey has experienced radical changes just in the last few years to their regulatory agencies: the Casino Control Commission and the Division of Gaming Enforcement.²⁹⁷ On the other hand, Nevada has not had significant regulatory changes in many years.

²⁹⁷ New Jersey Senate Bill S12, signed into law on February 1, 2011,
<http://openstates.org/nj/bills/214/S12/documents/NJD00021986/> (accessed May 26, 2013).

Other regulatory structures have changed a moderate amount to accommodate the growth of their gaming industry but much of the regulatory apparatus has remained. For example, Iowa has changed primarily from a riverboat gambling state with considerable pari-mutuel gaming to a state that has mostly land-based casinos. Their regulatory structure has primarily expanded but not changed in form to take these changes into account.²⁹⁸ Maryland has reconstituted its Maryland Lottery to what is now the Maryland Lottery and Gaming Control Commission and Maryland Lottery and Gaming Control Agency and it now regulates casinos with slots and table games. Kansas at one time had a Racing Commission but now that agency has evolved into the Racing and Gaming Commission. Pari-mutuel gaming in Kansas has, at least for now, ceased.

a. Florida Regulation of Pari-Mutuel and Slot Machine Facilities

Chapter 849, Florida Statutes, generally prohibits the conduct of commercial gambling, unless expressly authorized by law. As an exception to the prohibitions in Chapter 849, gaming is permitted at licensed pari-mutuel wagering tracks and frontons, pursuant to Chapter 550, F.S., and also by the state operated lottery, pursuant to Chapter 24, F.S. There are also Native American casinos in Florida and charitable bingo games. Free-standing, commercial casinos and slot parlors are not authorized in the state. The state earlier this year enacted amendments to Chapter 849 that prohibit the operation of Internet/sweepstakes cafes.

Pari-mutuel wagering is authorized for horse racing, harness horse racing, quarter horse racing, greyhound racing, jai alai games and cardroom poker games. These forms of gaming activity are permissible only at a licensed pari-mutuel facility. In addition, slot machine gaming at pari-mutuel facilities is authorized in Broward and Miami-Dade counties. There are 28 pari-mutuel facilities located in Florida (plus inter-track at Ocala).

Chapter 550, F.S., provides for a comprehensive regulatory system with specific licensing and other regulatory requirements for the pari-mutuel industry. The Division of Pari-Mutuel Wagering (“PMW”) is the regulatory agency exclusively entrusted with oversight responsibility for these various authorized forms of gaming activity at pari-mutuel facilities. The PMW is a program area of the Department of Business and Professional Regulation within the Executive Branch of Florida’s government. (Annual Report of Division, 2011-2012) As detailed below, the Florida regulatory design empowers the regulatory agency with broad oversight and licensing responsibilities over all participants in the pari-mutuel gaming industry.

The Division has also been designated by the Florida Legislature as the State Compliance Agency with the authority to fulfill the state’s oversight responsibilities in accordance with the Gaming Compact between the Seminole Tribe of Florida and the State. (Section 285.710, Florida Statutes.) The Seminole Tribe operates seven casinos in Broward, Hillsborough, Collier, Glades, and Hendry counties.

²⁹⁸ See further discussion of Iowa’s regulatory structure below.

SECOND DRAFT - CONFIDENTIAL

Notably, PMW has no authority to regulate other forms of gaming activity such as lottery, bingo or so-called cruises to nowhere. The Florida Lottery regulates lottery operations. Counties that permit bingo have their own individual ordinances which govern their operation. We also note that the Miccosukee Tribe does not have a gaming compact with the State and therefore operates exclusively under federal jurisdiction as a Class II gaming entity.

The Director of PMW is Leon M. Biegalski. The Office of the Director is responsible for such areas as budget planning; rule promulgation; policy development; legislative analysis of proposed legislation; strategic planning; and enforcement of administrative actions. There are six functional units which operate under the management of the Office of the Director: Auditing; Investigations; Operations; Slot Operations; Revenue and Financial Analysis; and State Compliance Agency.

The Office of Investigations is responsible for conducting background investigations of applicants for permits and occupational licenses and the enforcement and investigation of suspected violations that occur in pari-mutuel wagering, cardroom and slot machine gaming facilities. PMW says typical investigative cases include falsified license applications, criminal history checks, animal cruelty, and the use of performance altering medications and/or illegal substances during races. The Office of Investigations also conducts inspections of all new pari-mutuel, cardroom and slot machine facilities prior to opening and all facilities are routinely monitored by investigators to ensure compliance with the gaming statute and applicable regulations.

The Office of Auditing performs annual compliance audits to verify that statutory accounting procedures are utilized and to identify any fraudulent activity. The auditors reconcile pari-mutuel wagering pools for more than 80,000 races and games annually to ensure integrity in the wagering activity.

The Office of Operations is responsible for ensuring that the day-to-day operation of races and games are conducted appropriately, consistent with the statute and regulations. It is also responsible for administering the licensing process. All individuals and businesses who work or conduct business at a racetrack, fronton, cardroom or slot machine facility or who have access to money wagered, restricted areas and/or racing animals, are required to obtain an occupational license issued by PMW. Slot facility occupations requiring a license include, but are not limited to: slot operations managers; slot shift managers; floor supervisors; slot tech supervisors; slot technicians; slot attendants; security and surveillance personnel; count room and cage personnel; information systems managers; systems analyst supervisors; operations analyst supervisors; and revenue audit managers and supervisors.

Every racing and cardroom occupational license applicant is fingerprinted, and then re-fingerprinted at the time of license renewal five years after initial licensure. Every slot machine occupational license applicant is fingerprinted and then again every three years at renewal. Slot machine licensees pay an annual license fee of \$2 million and a regulator fee of \$250,000.

SECOND DRAFT - CONFIDENTIAL

A slot machine business entity occupational license for slot machine management companies, service companies, manufacturers, vendors, distributors and testing laboratories is \$1,000 for a one-year license and \$2,000 for a three-year license. All officers, directors and shareholders with 5 percent or more interest in the business entity are required to be fingerprinted. Those persons who need to have access to the slot machine facility are also required to obtain a Slot Machine Business Employee Occupational License.

Annual cardroom operator licenses are issued to permit holders who operate cardrooms, with a fee of \$1,000 per table. Cardroom business licenses are issued to any cardroom distributor, management company, supplier or vendor conducting business with a cardroom. In addition, cardroom employee occupational licenses are required for all cardroom employees except food service, security, maintenance and mutuel teller employees. Possession of this license does not allow access to any restricted area other than the cardroom. A pari-mutuel/cardroom supervisor license is necessary for supervisors of food service, security, maintenance and mutuel teller employees who require access to restricted areas of the track as well as the cardroom. Finally, a pari-mutuel/cardroom employee license is needed for food service, security, maintenance and mutuel teller employees who require access to restricted areas of the track as well as the cardroom.

The Office of Slot Operations oversees the pari-mutuel facilities that have slot machine gaming. A key element of that regulatory oversight is to ensure that every slot machine has been certified by an independent testing laboratory. The Office of Revenue and Financial Analysis is responsible for safeguarding and accounting for state revenues derived from authorized pari-mutuel gaming activity.

The State Compliance Agency conducts inspections of Indian gaming facilities.

Though it appears PMW addresses most areas of the regulatory process we note that full commercial casinos are not yet present in Florida, and the state's law and policy has not, as of yet, been designed to encompass all regulatory aspects of a casino gaming regulatory agency. Additional or more in-depth regulatory processes may be needed when and if commercial casinos are implemented.

Division Application Requirements

The following are the filing requirements of the Division:²⁹⁹

- **LICENSE TERM:** Florida Slot Machine Business Licenses are valid for the fiscal year (three-year licenses are also available). The application fee is \$1,000 for a one-year license, \$2,000 for a three-year license.
- **OFFICERS AND DIRECTORS:** No license is issued. All Officers, Directors, and Shareholders of 5 percent or more interest in the business entity who do not need

²⁹⁹ Filing requirements provided by PMW.

SECOND DRAFT - CONFIDENTIAL

access to a slot machine facility in Florida, must submit a fingerprint card and the \$40.50 fingerprint processing fee upon submission of the Slot Machine Business Entity Occupational License Application, and an Authorization for Release of Information form must be completed. Any Officer, Director, or Shareholder of five percent or more interest of a business entity who needs access to a slot machine facility in Florida, must obtain a Slot Machine Business Employee Occupational License. Officer/director/ shareholder(s) must submit fingerprint cards and pay \$40.50 fingerprint fee the first year and \$16.50 every three years thereafter.

- An Authorization for Release of Information form must be completed for the business.

NOTE: Any business employee who needs access to a slot machine facility in Florida must obtain a Slot Machine Business Employee Occupational License.

The following is a detailed list of application requirements for a Slot Machine Business Employee license:

- An Individual Slot Machine Occupational License Application form must be completed.
- LICENSE TERM: Florida Slot Machine Business Licenses are valid for the fiscal year. The application fee is \$50 for a one-year license, \$100 for a three-year license, plus a \$40.50 fingerprint processing fee. An Authorization for Release of Information form must be completed for each employee. Applicants for Slot Machine licensing must be 21 years of age or older. Applicants must submit his/her fingerprints for a criminal history background check and pay the \$40.50 fingerprint processing fee when submitting an initial application. Every three years after the initial fingerprint submission, upon renewal, the applicant must pay \$16.50,

The disclosure forms required for natural persons require disclosure of prior license and criminal history information among other things. Though the disclosure requirements are substantial the forms that are used by PMW do not include a document on the order of the multi-jurisdictional disclosure form provided by the International Association of Gaming Regulators,³⁰⁰ which is utilized by many casino gaming regulatory agencies. While this specific form is not essential to the process the disclosure of information that is required on that form is critical to the process of investigations.

Some specific information such as a financial net worth statement for natural person qualifiers is not required by the forms now utilized by PMW.

³⁰⁰ The multi-jurisdictional form is available online at several locations, including: <http://iagr.org/wp-content/uploads/Multi-Jurisdictional-Application.pdf> (accessed May 28, 2013).

Additional Functions of PMW

In addition to these functions of a typical gaming regulatory agency for slot machine facilities, PMW also has comparable responsibilities for pari-mutuel wagering. The regulation of pari-mutuel wagering also includes many other functions such as the collection of urine and blood samples. PMW utilizes a racing laboratory under contract that collected over 86,000 samples in FY 2012.

Florida thus has already adopted a “consolidated regulatory agency” model in which one agency addresses almost all the regulatory functions, including pari-mutuel wagering. (Later in this report we will review a number of other states’ regulatory agencies and address the best practices of regulatory models.)

Changes to the Division because of Slot Machine Licensing

The absorption by PMW of the licensing function has significantly added to its staff. Before the implementation of slot machine licensing the agency had 62 full-time employees. In FY 2013 there were 115 appropriated employees, 50 of which were dedicated to slot machine licensing. Four full-time-equivalent positions were added for oversight of the compact between the State and the Seminole Tribe. There would be significantly more staff added if full casinos were implemented.

Even with this increase in the PMW budget it is apparent that the agency is still heavily dedicated, in staff, to the regulation of pari-mutuel operations rather than slot operations, even though the State’s revenue comes by this time primarily from the operation of the slot machine operations. This is due to the numbers of facilities – 28 pari-mutuel operations vs. six slot operations.

b. Lottery

The Florida Lottery requires submission of a company application form and a host of other requirements for approval to be a lottery retailer.³⁰¹ The application requires identification of the persons associated with the company who have a 10 percent holding and the identification of any criminal record for those persons. The disclosure form also requires a short explanation of the business operation.

Retailers must agree to a seven-page contract that addresses Public Entity Crime and the maintaining of certain bank accounts. Record-keeping and access to records by the Lottery is also required. The following is a description of the vendor registration process provided by the Lottery:

“The Florida Lottery uses MyFloridaMarketPlace (the State of Florida's eProcurement system) which includes a statewide enterprise on-line vendor registration process. This

³⁰¹Florida Lottery <http://flalottery.com/howToApply.do> (accessed May 24, 2013).

system is designed to streamline interactions between vendors and state government entities that purchase goods and services, and provides a user-friendly Internet portal where vendors can register, receive information on upcoming bids, post information on products and services, and receive purchase orders electronically.

“Section 24.103(6), Florida Statutes defines a “Vendor” as “a person who provides or proposes to provide goods or services to the department, but does not include an employee of the department, a retailer, or a state agency.”³⁰²

c. Charitable Bingo

Section 849.0931 of the Florida Statutes authorizes the conduct, permitted uses of proceeds and limitations of bingo games by “charitable organizations.” These are defined as charitable, non-profit and veterans' organizations engaged in charitable, civic, community, benevolent, efforts or scholastic works and other similar activities. All charitable organizations must be qualified for exemption from federal income tax as an exempt organization under the provisions of section 501(c) of the Internal Revenue Code.

The statute mandates that all proceeds resulting from the conduct of the bingo games are donated to charitable organizations, less actual business expenses for the operation, conduct and playing of bingo. The statute strictly prohibits the net proceeds from bingo games from being used for any other purpose.

Section 849.0931, Florida Statutes (1993), contains various other provisions intended to assure that the primary benefactors of the authorized bingo games are actually the charitable, non-profit and veterans' organizations, and not private persons. These include requirements that the operators must be bona fide members of the organization conducting the bingo game, must not be compensated for the operation of the bingo game, and must be residents of the community where the organization is located. The protective statutory provisions also include requirements that the property upon which the bingo games are held must either be owned by the worthy organizations or leased by worthy organizations for not less than one year, provided that the rent is not unreasonable for the location.³⁰³

Bingo is not regulated by the State. However, municipalities and/or counties that permit bingo have their own local ordinances that govern its operation. Most municipalities require a business tax license, or occupational license, to conduct bingo. Some require a special exemption waiver for that activity (bingo) in order to qualify for a business tax license. The licenses are issued annually and require copies of IRS financial statements.

³⁰³ Report of the Twelfth Statewide Grand Jury: The Operation of Commercial Bingo Halls in the State of Florida; October 25, 1995.

d. Native American Casinos

The gaming compact between the Seminole Tribe and the State (“Seminole Compact” or “Compact”) was executed by the Governor on April 27, 2010 and ratified by the US Department of the Interior on July 7, 2010.³⁰⁴ The Seminole Compact has a term of 20 years, expiring on July 31, 2030,³⁰⁵ although the expiration for house-banked card games (including blackjack, chemin de fer and baccarat) expires July 31, 2015, unless renewed.

The Seminole Compact authorized covers games at seven locations and also requires the tribe to regulate its casinos under specific internal control requirements.³⁰⁶ The Compact names the Seminole Tribal Gaming Commission (“Gaming Commission”) as the tribal governmental agency that has the authority to carry out the Tribe’s regulatory and oversight responsibilities.³⁰⁷ The Compact also provides for the monitoring of the tribal casinos by the State.³⁰⁸ Licensing is also addressed in the Compact.³⁰⁹

The Gaming Commission has established a regulatory structure that Spectrum believes is thorough and substantial. Ed Jenkins is Director of Compliance and Regulations for Gaming and has significant experience with the FBI and with the gaming industry. He indicates he has worked for the tribe since 2001 and has established a regulatory agency which he indicates is independent and capable. Perhaps an example of this independence is the requirement that surveillance departments within the casinos are required to report to the Gaming Commission and not to operations.

The surveillance department is critical to internal controls because it is designed to be the eyes and ears to any crime that may be occurring at the casino floor. It is the last line of defense against crimes committed by any patron or employee, including management. In Spectrum’s experience, often casino management will balk at providing sufficient staff to the department and argue against creating a reporting line which establishes a point of view which is free from influence by casino management. Spectrum believes a reporting line that goes to casino operations leaves a casino vulnerable to a host of crimes, including collusion at the highest levels.

The fact that the Gaming Commission requires this independence is one sign that regulatory requirements are being taken seriously. There are other signs as well. Gaming Commission staff is present at the casinos 24 hours a day, seven days a week. The license

³⁰⁴ Department of the Interior News Release July 7, 2010.

³⁰⁶ Ibid., p. 13 and 14.

³⁰⁷ Ibid., p. 3 and 23.

³⁰⁸ Ibid., p. 25.

³⁰⁹ Ibid., p. 31.

process, including the licensing or registration of all employees, seems significant (though Spectrum notes there is no renewal to a license).³¹⁰ The fact that someone of significant experience such as Ed Jenkins was hired is another indication of the significance that the Seminole Tribe has placed on regulation. It is also important that Jenkins's reporting line appears also to be independent from casino management influence.

25.Regulation in Other States

Spectrum reviewed and analyzed gaming laws and interviewed representatives from several other states. In addition, we reviewed the Florida Senate interim report of October 2010, *Review of Casino Gaming in Other States*.³¹¹ Based on our experience working for, with, and studying, state regulatory agencies across the country, we selected several gaming commissions for discussion in this report that we believe would be insightful into various regulatory models.

a. Introduction: Establishment of Standards

All states and many foreign jurisdictions require companies to apply to be a casino operator, and require companies to show qualification in such areas as good character, honesty, integrity, the absence of a criminal record, and financial stability. There are variations in the extent to which persons associated with the company and associated companies must file and establish these standards. Most, if not all, states that have implemented casino gaming, or are in the process of doing so, such as Massachusetts, Maryland, Kansas and Ohio, require that parent companies as well as all those natural persons with an ownership interest beyond a certain percent (5 percent is often used) to file and establish these qualifications. In addition, those officers, board members and executives deemed to be qualifiers due to their prominence in the company must demonstrate these qualifications. Since these associated companies and natural persons can have an influence over the casino operator it is incumbent upon a state to require the establishment of such standards.

The selection of casino operators is the starting point of establishing public trust in the casino industry as one of integrity. It is critical that this step be completed carefully and thoroughly. Through this process the state is not only establishing that the gaming industry is one of integrity, but that the selection of who will be a casino operator has been done with integrity by the state. In cases where the selection process was called into question (the Pennsylvania grand jury investigation has been addressed in the section of this report on Effective Regulation: Trends and Best Practices in the Governance and Regulation of Gambling and is an example of a

³¹⁰ Phone interview with Ed Jenkins May 17, 2013. Mr. Jenkins did note, however that if an employee changes positions there is an additional investigation.

³¹¹ Florida Senate, *Review of Casino Gaming in Other States*, October 2010.
<http://www.flsenate.gov/Committees/InterimReports/2011/2011-133ri.pdf>.

selection process called into question), the expense to the state of re-establishing that trust can be enormous.

b. Bid Process or Non-Competitive Application

Beyond requiring of the qualification standards noted above, licensing decisions depend on basic policy: The state must decide how and in what way it wishes to limit the numbers of operating casinos, or whether unlimited numbers of casinos may be issued. There are two primary methods for awarding licenses: competitive bidding and non-competitive applications. The former process occurs in situations where there are a finite number of licenses permitted in a particular region, while the latter method is utilized in instances where an infinite number of licensees are permitted by law. For both methods, there are still essential qualification requirements relating to a person's and an entity's showing of good character, honesty and integrity.

If a state determines the demand is great enough, an unlimited numbers of casinos may be appropriate, but the state must address if that level of competition would potentially saturate the market and negatively affect the financial viability of the businesses involved. Nevada allows unlimited numbers of casinos in unlimited locations; all other states have some limitations.

Limitation to a specific area of the state can create a destination area. For example, New Jersey's requirement that casinos be located in Atlantic City was intended to create just such an area. States such as Pennsylvania, Maryland, Kansas and Massachusetts limit the number and types of casinos that are permitted and their location. Within those limits these states required a competitive bid process that required applicants to show the value of their application in such areas as economic development and job creation in the area.

c. Regulatory Structures Consolidated or Separated Oversight

Though generalizations can be made about regulatory models there are no two states that have regulatory agencies which are truly comparable in all respects. There are simply too many unique forums, too many different types of gaming venues, and too many unique legal structures in every state. The states which are addressed below, while not intended to be a complete survey of every state, are very illustrative of both the uniqueness of different states' regulatory structures and their similarities:

Massachusetts

The Massachusetts Gaming Commission ("MGC"), which has begun the process of awarding four casino licenses, was created by law in November 2011. That law provided for

commercial casinos in the state, created a provision which could allow for an Indian casino, and brought the pari-mutuel industry under the auspices of the MGC.³¹²

This law also created one agency, whose five members serve full-time, and which consolidated responsibilities and authorities for investigations, prosecution of violations, policy formulation and decision making. With the exception of the Massachusetts Lottery, the MGC has wide reaching purview over gaming matters.

Thus the MGC is an example of an agency which has consolidated oversight. An important part of this consolidation is the Investigation and Enforcement Bureau (“IEB”), the “primary enforcement agent for regulatory matters.”³¹³ The IEB has numerous responsibilities, including the authority to conduct or limit investigations,³¹⁴ the decision on certain license matters and the holding of relevant hearings.³¹⁵ The IEB is a law enforcement agency and works directly with and will include members of the Massachusetts State Police. Because of its designation as a law enforcement agency it can request fingerprint criminal records checks directly from the FBI. The Massachusetts Expanded Gaming Act takes measures to assure the independence of the IEB’s investigations, specifying that the commission “shall not place any restriction upon the bureau’s ability to investigate or prosecute violations of this chapter or the regulations adopted by the commission.”³¹⁶

In many states, there are agencies or bureaus that have the responsibilities of the IEB but which are separate from the gaming commission/decision-making authority. As will be discussed later, some of these agencies are part of or connected to the State Police and many times they report to the Attorney General of the state. In Massachusetts the IEB reports to the MGC, which has ultimate authority over license decisions and policy matters. And the IEB is only one of a wide range of consolidated responsibilities under the auspices of the MGC.

Another consolidation that has taken place in Massachusetts is the fiscal authority and responsibility which has been given to the MGC. The MGC is the trustee for the many funds created by the Expanded Gaming Act and for all revenue collected by from the commercial casinos.³¹⁷ In many other states trustee responsibilities are under the authority of the State Treasurer.

Still another responsibility under the MGC is that of the Racing Commission. The Racing Commission was a separate agency until passage of the Expanded Gaming Act, but now is under

³¹² Massachusetts Expanded Gaming Act, Chapter 194 of the Acts of 2011
<http://massgaming.com/about/expanded-gaming-act/> (accessed May 28, 2013).

³¹³ Ibid, Section 6. Although the IEB is part of the MGC it is also required to work in conjunction with the Attorney General’s Office on criminal matters, pursuant to Section 6.

³¹⁴ Ibid., Section 12 b.

³¹⁵ Ibid., Sections 30 and 31.

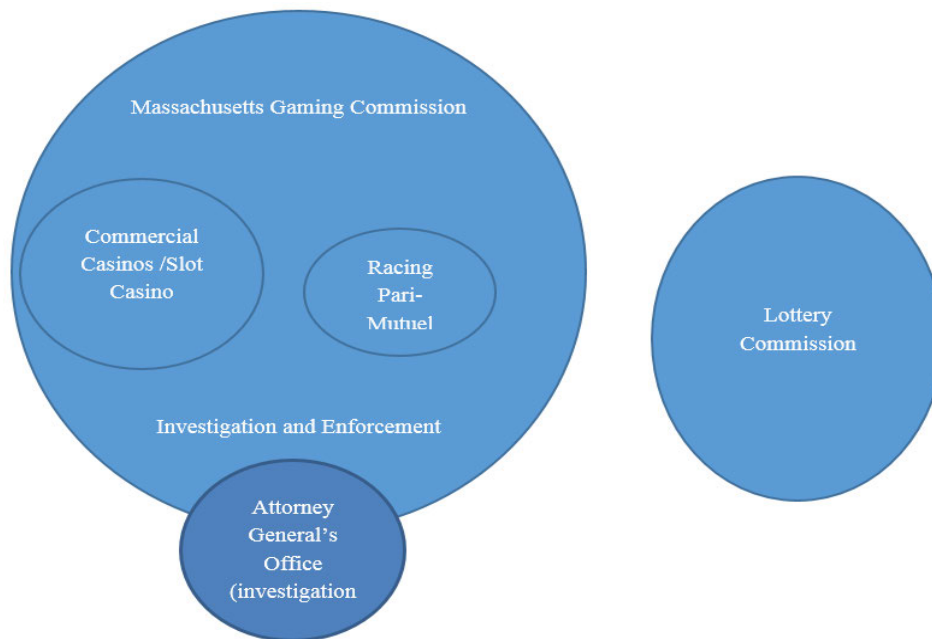

³¹⁶ Ibid., Section 34.

³¹⁷ Ibid., Section 4

the authority of the MGC. Thus the MGC is a host racing commission and an off-track betting commission and also has responsibilities over simulcasting.³¹⁸ Despite this, the MGC is primarily a gaming commission, with the majority of its resources and staff devoted to casino gaming.

In Massachusetts, the extensive responsibilities of the MGC can be represented in chart form, as indicated below. All functions, relating to gaming, with the exception of the lottery, are encompassed under the purview of the MGC, although the Attorney General also will have investigative authority into casino criminal activities.

Figure 34: Massachusetts gaming regulatory structure

Source: Massachusetts state agencies, Spectrum Gaming Group

Ohio

The State of Ohio is a contrast to Massachusetts in that there are several agencies involved in the regulation of gaming. The Ohio Casino Control Commission (“OCCC”) has the primary responsibility for regulating the four commercial casinos but other agencies are involved as well. The OCCC is comprised of seven members who serve as part-time officials.³¹⁹ The Ohio Bureau of Criminal Identification is involved in the license application process as the agency responsible for receiving reports from the FBI.³²⁰ The Division of Taxation is responsible for

³¹⁸ Ibid., Section 7

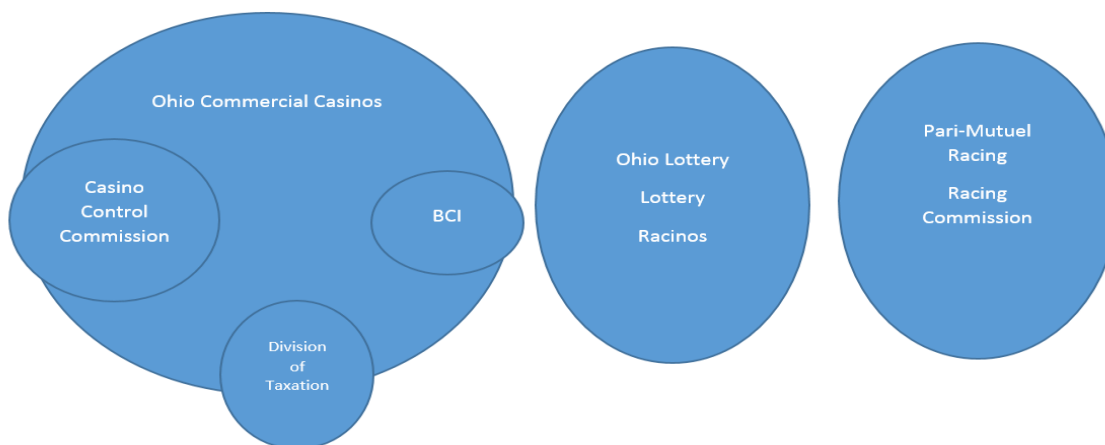

³¹⁹ Ohio Revised Codes Chapter 3772 <http://codes.ohio.gov/orc/3772.02> (accessed May 25, 2013).

³²⁰ Ibid., section 3772.07.

collection of the gaming revenue.³²¹ The Ohio Lottery is a separate agency that oversees the traditional lottery as well as racetrack VLTs. The Ohio State Racing Commission oversees Pari-mutuel gaming and Racing.

This separation of responsibilities is depicted in the following diagram:

Figure 35: Ohio gaming regulatory structure

Source: Ohio state agencies, Spectrum Gaming Group

Maryland

In Maryland a 2012 referendum approved table games at the existing slots casinos.³²² The change re-constituted the State Lottery as the State Lottery and Gaming Control Agency (“LGCA”).³²³ This agency now has regulatory responsibility and authority over the commercial casino industry as well as the Lottery. The change resulted in the addition, at one time, of 44 employees for the agency to handle the added responsibilities of table games.³²⁴ Maryland’s gaming industry evolved from the lottery and the regulatory agency has evolved to handle the significantly greater responsibilities of a gaming agency as well as the lottery program.

SECOND DRAFT - CONFIDENTIAL

There is also a separate Racing Commission in Maryland within the Department of Labor, Licensing and Regulation which oversees the pari-mutuel industry. Maryland's gaming structure is depicted below.

Figure 36: Maryland gaming regulatory structure

Source: Maryland state agencies, Spectrum Gaming Group

New Jersey

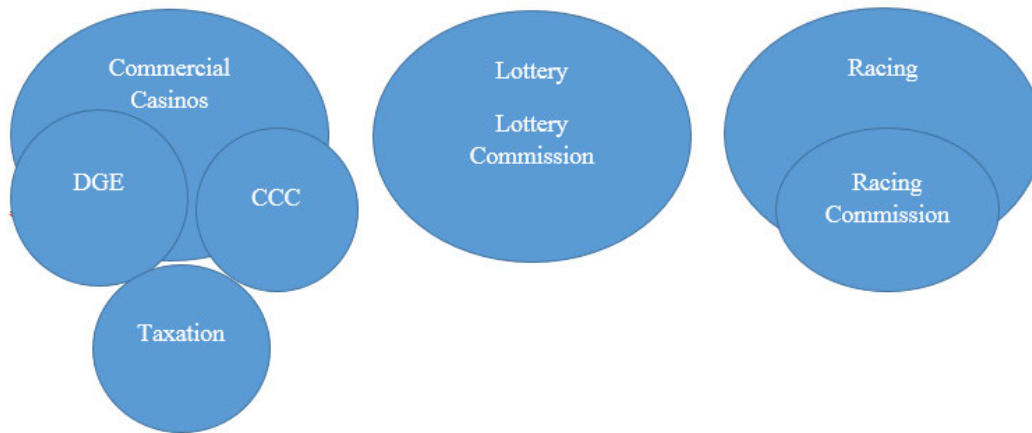

Until recently, the New Jersey Casino Control Commission was the agency responsible for the day-to-day oversight of operations, internal controls, regulations, licensing, financial analysis and auditing. The Division of Gaming Enforcement was responsible for investigations and enforcement. Those responsibilities have shifted and now the Division of Gaming Enforcement has more responsibilities in auditing, licensing and financial analysis. Much of the day-to-day oversight of operations and licensing requirements has been eliminated.³²⁵ The Division of Taxation took responsibility for the collection of several taxes previously collected by the Casino Control Commission, including the gross revenue tax.³²⁶

In New Jersey, the Lottery is regulated by a separate Lottery Commission and Racing is regulated by a separate Racing Commission.

³²⁵ Senate Bill S12 and New Jersey Casino Control Act.

Figure 37: New Jersey gaming regulatory structure

Source: New Jersey state agencies, Spectrum Gaming Group

Pennsylvania

Pennsylvania's dominant regulatory agency is the Pennsylvania Gaming Control Board ("PGCB"). The state has confronted issues regarding its regulatory structure, as a grand jury investigation and report cited initial structural weaknesses, which are useful for instructional purposes.³²⁷ That grand jury report is dealt with in significant detail later in this report.

Some of the changes that were implemented by the PGCB, such as the creation of an independent reporting line for the Bureau of Investigations and Enforcement ("BIE"), are valuable in illustrating the priorities that should exist for any regulatory agency. These points are further discussed in our summary portion below. Since the grand jury report there have been changes to the PGCB and the only link between the BIE and the PGCB now is for administrative functions.

Although the Pennsylvania statutes require approval by one of the two racing commissions (Horse or Harness) for a Category 1 (racino) license, as a practical matter the PGCB oversees and takes major responsibility for the regulation of gaming operations at racinos. The PGCB is fully responsible for the non-racino casinos in the state.

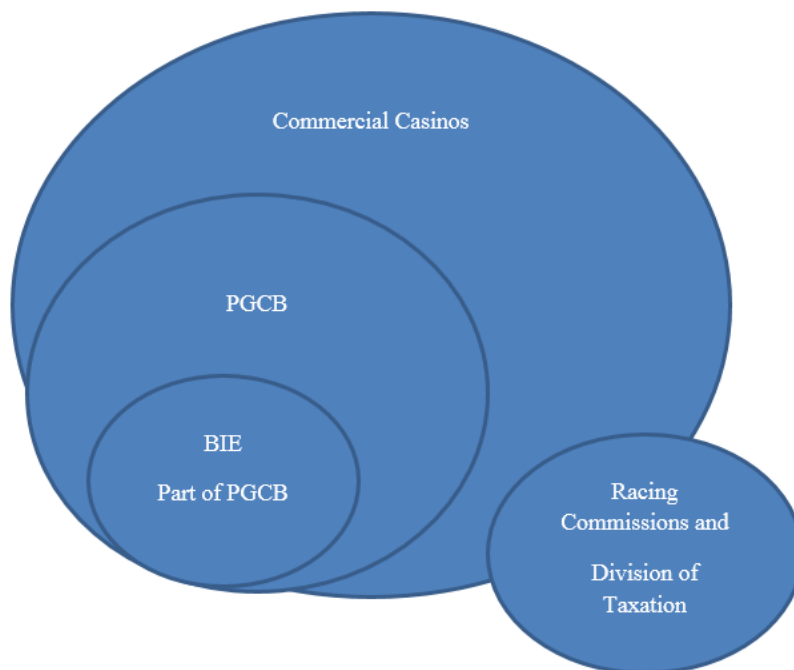

The PGCB is not a law enforcement agency but it works closely with the State Police in its investigations. The Department of Revenue is the trustee for the gaming revenue³²⁸ but the

³²⁷ Donald Gilliland, "Pennsylvania Gaming Control Board riddled with culture of 'noncriminal misconduct,' grand jury report says," *The Patriot-News*, June 12, 2011
http://www.pennlive.com/midstate/index.ssf/2011/06/grand_jury_report_describes_cu.html.

³²⁸ Pennsylvania Statutes Title 4 Chapter 14.

PGCB oversees the internal controls and the day-to-day operations of the casinos. The Pennsylvania model is illustrated below.

Figure 38: Pennsylvania gaming regulatory structure

Source: Pennsylvania state agencies, Spectrum Gaming Group

Kansas

Kansas has a unique organizational structure which involves two primary agencies. The Kansas Lottery technically owns the games in the casinos and the revenue that comes from those games.³²⁹ The managers of the casino operations own the facilities and are “paid a fee.”³³⁰ Though this is the legal wording in the Kansas Expanded Lottery Act, for practical purposes there are mainly only subtle differences in the collection of taxes from other states.

The Kansas Lottery, however, is responsible for the gaming revenue and conducts a regular reconciliation. A daily reconciliation through electronic means is done on slot revenue and a monthly reconciliation is done of the table game revenue.³³¹ The Kansas Lottery is also responsible for the lottery program in the state.

³²⁹ Kansas Expanded Lottery Act, for example New Sec. 3(a) indicates: “The Kansas Lottery may operate one lottery gaming facility in each gaming zone.”
http://krgc.ks.gov/images/stories/pdf/Statutes_and_Regulations/kansas_expanded_lottery_act.pdf (accessed May 25, 2013).

³³⁰ Ibid., New Sec. 35.

³³¹ Ibid.

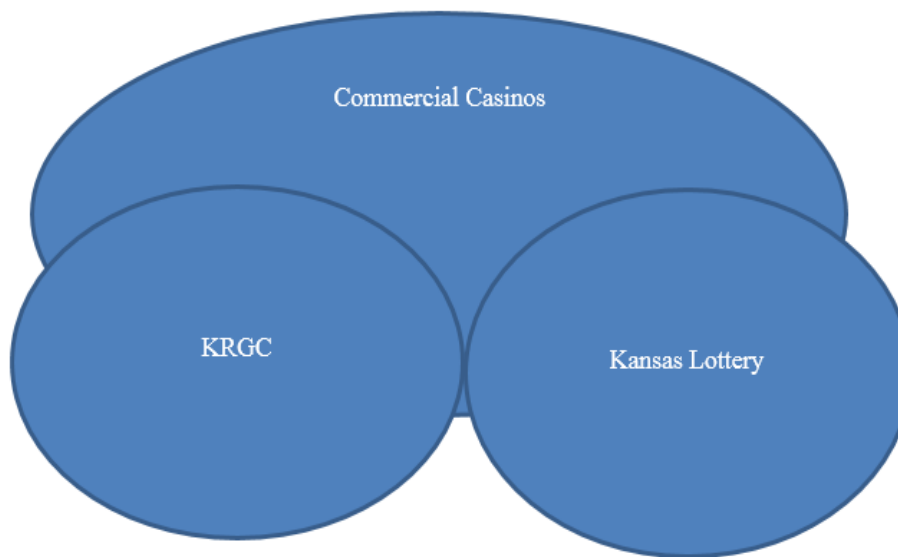

SECOND DRAFT - CONFIDENTIAL

It is the Kansas Racing and Gaming Commission (“KRGC”) that performs the bulk of the typical regulatory functions over the casinos, including oversight of casino operations, investigations and licensing. The KRGC also performs audits on casino revenue. This is an acknowledged though minor overlap of functions between the two agencies, but this redundancy is not considered a bad thing. According to representatives from both agencies, the system works well and helps to create a needed assurance of integrity.

Pari-mutuel gaming has become inactive in Kansas, without any performances since 2008.³³² Thus the KRGC’s focus is on casino gaming.

The Kansas model is depicted below:

Figure 39: Kansas gaming regulatory structure

Source: Kansas state agencies, Spectrum Gaming Group

Iowa

Iowa has a primary agency that regulates the 18 commercial casinos in the state but other agencies are utilized in more minor roles. The Iowa Racing and Gaming Commission (“IRGC”) performs most typical functions including licensing and the oversight of daily operations. Employees and gaming related companies are licensed. Investigations, however, are primarily carried out by the Department of Criminal Investigations (“DCI”). The DCI is also present at each casino and play a major role in investigations of criminal activities and enforcement.³³³

³³² Interview with representative of the KRGC.

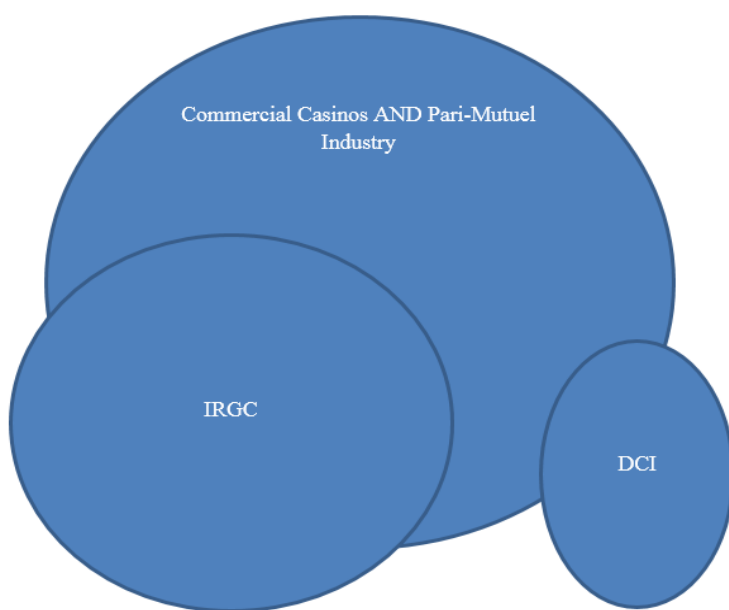

³³³ Gathered from Interview with representative of the Iowa Racing and Gaming Commission 5-20-2013.

The Department of Revenue is the trustee for the gaming revenue though the IRGC and takes responsibility for assuring the internal controls are followed and for auditing.³³⁴

The IRGC has a parallel with the Florida PMW in that it is also responsible for pari-mutuel wagering in the state. The IRGC is responsible for the presently operating pari-mutuel facilities of one horse track and two dog tracks in the state. Though this agency does have pari-mutuel wagering regulatory responsibilities there are also considerable differences with the Florida PMW. The Iowa pari-mutuel industry has significantly fewer facilities than Florida and there is no requirement to limit casino gaming in pari-mutuel facilities.

The organization of the agencies involved in Iowa is depicted below:

Figure 40: Iowa gaming regulatory structure

Source: Iowa state agencies, Spectrum Gaming Group

d. Regulatory Oversight Critical Functions

Regulatory agencies that oversee commercial casinos have a number of typical functions. While there are variations in the details as to the depth of regulation and the specifics of procedures, the *types* of functions have become standard in almost all states.

Some of the most critical of those functions include licensing, ongoing review of daily operations, internal control requirements and auditing. Each of these is addressed below:

- **Licensing:** All regulatory agencies investigate and make a determination regarding the qualifications of companies and natural persons that apply to operate, work in or

³³⁴ Ibid.

service casinos. Some states have more extensive requirements than others. All states require casino operators and companies that supply gaming related equipment or services, such as slot machines, to file for a license. Some states, such as Pennsylvania and Massachusetts, require companies that supply non-gaming goods or services to file for a license under certain conditions (in Pennsylvania a certification, which is similar to a license, is required). In Massachusetts, the MGC may require any vendor regularly conducting over \$250,000 of business with a gaming licensee within a 12-month period or \$100,000 of business in a three-year period to be licensed as a gaming vendor.³³⁵ The Pennsylvania Gaming Control Board requires companies that conduct over \$500,000 worth of business to be certified.³³⁶

Without having some mechanism for a regulatory agency to review all contracts with a casino operator, even those that relate to non-gaming companies, the regulatory agency may be unaware of the movement of large amounts of money or the infiltration of organized criminal elements. The need for close examination of non-gaming enterprises such as construction companies became evident in New Jersey in the Bayshore Rebar matter, among others.³³⁷

Similarly, almost all states require either licensing or registration of employees that work in the gaming areas. Some states, such as Massachusetts, also require employees that work in non-gaming positions to be registered.³³⁸ Spectrum has found that it is good policy to require licensing or registration of such persons because of the potential for such individuals to be involved directly or through collusion in theft or other crimes in a casino operation.

The attention to detail of this process is critical as it is the first step in assuring integrity of the casino industry in that state.

- **Ongoing Review of Daily Operations:** Virtually all states also maintain a presence in the casino. The extent of this presence varies from a 24/7 inspector or agent publicly visible level, such as exists in Pennsylvania, Massachusetts and Ohio, to a limited law enforcement presence such as what now exists in New Jersey. The inspector or agent presence includes greater scrutiny of ongoing gaming operations and transactions. As

³³⁵ Massachusetts Expanded Gaming Act, section 31 (d).

³³⁶ Pennsylvania Gaming Control Board <http://gamingcontrolboard.pa.gov/?p=75> (accessed May 29, 2013).

³³⁷ As indicated in the following article, which is a report of the final Bayshore Rebar hearing, the company was denied a license in 1989 and 1997. George Anastasia, "'The other Joey Merlino' gets casino service license," *Philadelphia Inquirer*, May 6, 2010 http://articles.philly.com/2010-05-06/news/24958581_1_hearing-examiner-mob-ties-joey-merlino.

³³⁸ Massachusetts Expanded Gaming Act, section 30 (c).

happened in New Jersey, such requirements may be stringent in the early years and then relaxed somewhat as the both the industry and regulatory system mature.³³⁹

- **Internal control requirements:** Virtually all states have requirements that require the casino operation to address internal controls within their operations. Internal control requirements may mandate that certain departments such as surveillance and internal audit are created, separation of such duties such as income control and table games to prevent incompatible functions, and document controls.
- **Auditing:** Regulatory agencies have an audit function over the casino operations, though the extent and frequency of such audits may vary. At a minimum, best practices demonstrate that the casino regulatory agency must conduct random unscheduled audits relating to the collection of gaming revenue.
- **Underage gambling and problem gambling:** All jurisdictions are justifiably concerned with the problems associated with underage gambling and problem/compulsive gambling. Statutory schemes attempt to cope with such important public policy concerns. One such endeavor entails the formation of a self-exclusion list whereby self-proclaimed problem gamblers can voluntarily decide to be excluded from gambling activity. Once a person is placed on the self-exclusion list, the casino operator is obligated to take appropriate measures to enforce the exclusion from gaming activity, including a cessation of direct marketing to the individual. With respect to underage gambling, such activity is generally harshly punished, both as to the underage patron and the casino operator.

e. Table of Organization of Regulatory Agencies

Organizations of regulatory agencies are largely divided by the functions detailed above and by functions that allow for these actions, with some additional functions that are needed in most government agencies. In 2010, Spectrum did a review of gaming agencies that address the types of tables of organization. This report will borrow from that earlier research.³⁴⁰

The following are departments or offices that are typical in casino regulatory agencies:

- **Investigations.** Casino regulatory agencies have staff devoted to investigations, though as detailed on the section regarding regulatory structures, investigatory functions are often separated from those functions that decide licensing.
- **Licensing:** The license function often has its own staff because the specific activities of licensing are often most efficiently accomplished by those familiar with

³³⁹ Spectrum Gaming Group, "Gaming Regulation: Overview, Primer," prepared for the State of New Hampshire, January 26, 2010 http://www.nh.gov/gsc/calendar/documents/20100216spectrum_regulatory.pdf.

³⁴⁰ Ibid.

applications, the review of investigatory reports and data collection relevant to the process.

- **Operational Review of Casinos:** Casino regulatory agencies often have an inspection or agent staff that is devoted to the operations of casinos. In some cases there is both a law enforcement and civilian presence. A civilian presence in a casino operation can assist in the oversight of internal controls and is less expensive than a law enforcement presence. A law enforcement presence is necessary also for criminal purposes.
- **Internal Controls:** There is typically a group of staff devoted to the review of the casino's internal controls. Typically, especially in jurisdictions that involve larger casinos, the internal control plans of a casino are submitted for review and approval by this group
- **Financial Analysis:** Casino regulatory agencies are responsible for the collection of revenue, thus the analysis of trends in incoming revenue is useful and possibly critical.
- **Auditing:** Auditing of the considerable sums of revenue in a casino industry by the regulatory agency is especially critical. Nearly all agencies employ staff devoted to such functions.
- **Other functions:** Casino regulatory agencies are in great need of services in Information Technology since the management of revenue and license data is an ongoing, regular and challenging process. There is also a need for the accounting for and transfer of funds, as many regulatory agencies are the trustee of funds. There is also a need for typical services such as administration, human resources, and public information dissemination.

Regardless of the regulatory scheme employed, Spectrum has found that regulation is most effective when it provides the following, as noted in the aforementioned 2010 report:³⁴¹

- Provides for sufficient regulatory oversight by creating a unit or team that is frequently on the casino floor, accessible to the public and visible to casino employees
- Creates a license structure that addresses all those that participate in the gaming industry, including the casino licensees, the companies that service those licensees and the employees. It is only by examining the background of all those who seek to participate in the industry that integrity can be assured.
- Creates a decision-making structure that allows for independence from the investigatory branch of the regulatory structure. In addition, sufficiently staff the decision-making agency to ensure it has adequate resources to carry out its duties.

³⁴¹ Ibid., p. 19.

f. Full- and Part-Time Decision-Making Authorities

Agencies in all casino gaming states have full-time staff.³⁴² However, as documented in the section of this report on regulatory structures, no two states are the same in the composition of the staff or even in the number of agencies that employ them. There is also a mixed bag regarding the decision making authorities (often called commissions) in each state.

The argument for a full time gaming commission can go back to the time of Abscam at the start of the New Jersey Casino Control Commission (Commission).³⁴³ At that time the Commission was part-time (except for the Chairman who was full-time). After Abscam, the law in New Jersey was changed to require full time commissioners. A full time commissioner, which is allowed no other occupation, is likely to be more focused on their positions. The tradeoff may be that full time commissioners should be paid a full time salary.

Two of the most recently formed commissions, the Ohio Casino Control Commission and the Massachusetts Gaming Commission, went in different directions when they formed their agencies.³⁴⁴ As is also documented in the aforementioned Spectrum report of 2010, there is no specific trend on this issue.³⁴⁵ The appropriate answer for a state forming a new gaming commission would depend in the size and complexity of the gaming industry. Surely the larger gaming industries would require more license making decisions and a full-time position may be more appropriate.

26.Application Forms

a. Form of Application and Background Investigations

The basic application form that is used by many casino regulatory agencies for natural persons is the multi-jurisdictional personal history disclosure form.³⁴⁶ This form is often supplemented with an additional form that is designed to take into account a state's specific requirements. The multi-jurisdictional form requires disclosure of information on family background, offices and positions, employment and licensing data, testimony before a license agency, company ownership information, civil and criminal arrest history, financial data, and a net worth statement.

³⁴² In addition to the information in this report also see Ibid., p. 17.

³⁴³ The following is an article provides a summary of the Abscam sting: <http://socyberty.com/government/abscam-operation/> (accessed May 29, 2013).

³⁴⁴ Ohio's Commission is part time, see 3772.02. Massachusetts' commissioners are full-time, see the Massachusetts Expanded Gaming Act, Section 3.

³⁴⁵ Spectrum New Hampshire report, p 17.

³⁴⁶ The multi-jurisdictional form is available on the web on several locations, such as at: <http://iagr.org/wp-content/uploads/Multi-Jurisdictional-Application.pdf>.

SECOND DRAFT - CONFIDENTIAL

Gaming agencies also often require a Business Entity Disclosure Form³⁴⁷ which typically requires information about the business, the directors and trustees, officers, voting owners, compensation, contracts, transactions, testimony, violations, bankruptcy proceedings and licenses,

Other forms are often used by casino regulatory agencies for other types of applications including for employees in lower level positions and companies that are not gaming related. Pari-mutuel agencies commonly use a smaller form than the multi-jurisdictional form.

It is a universally accepted practice for casino gaming regulatory agencies to conduct background investigations, either by its internal staff or by retaining the services of a third-party investigative firm, to evaluate an applicant's suitability for licensure. The licensing process for authorization to operate a casino facility or to be employed in a gambling establishment, commences with the filing of a license application by the applicant, to be followed by the requisite suitability background investigation.

The costs of the investigation are usually paid by the applicant. An application for a casino license will necessarily include individual applications filed by the company's owners, managers, officers, directors, parent companies and shareholders owning at least 5 percent of the company's equity securities.

b. Confidentiality of Information

When crafting a specific license application that requires certain background information to be provided by the applicant, in advance of the requisite suitability background investigation, an important consideration for any regulatory agency involves a determination of whether material provided in an application is to be treated as confidential or whether it would be made available upon request to the public. Generally, most gaming jurisdictions consider personal information contained in an application, especially financial data, to be confidential. Some jurisdictions, most notably Ohio and Massachusetts, which have broad right-to-know laws, have narrowly drawn rules governing confidentiality of material received. By contrast, New Jersey affords broad confidentiality protections for information submitted as part of the application process. The procedures that govern confidentiality usually coincide with the particular state's rules for public access to government agency documents.

27. Enforcement Proceedings

Casino regulatory agencies are empowered to oversee all aspects of the licensed entity's gaming operations. This regulatory oversight includes periodic on-site inspections, investigations of suspected wrongdoing, examination of internal control procedures to ensure compliance, and

³⁴⁷ An example are the Massachusetts forms listed on this website <http://massgaming.com/licensing-regulations/applications/>.

the imposition of disciplinary action for violations of applicable regulatory requirements. Sanctions vary from stern warning letters to the imposition of fines, to suspension of licenses for a finite term, and in the most egregious cases, to the revocation of licenses. Depending on the gravity of the accusation, there may be a disciplinary adjudicatory hearing to resolve the matter.

It is noteworthy that a gaming license is considered to be a revocable privilege, rather than a right of entitlement. Common violations applicable to the operating entity include the following:

- Impermissibly permitting underage gambling
- Failing to properly exclude a person who is on the agency's exclusion list
- Failing to adhere to internal control procedures governing the operations of the games and the movement of money
- Failing to notify the regulators about operational or organizational changes
- Failing to detect criminal conduct or to take appropriate action when learning of criminal activity on the casino premises
- Failing to provide adequate surveillance or security for casino operations.

a. Enforcement of Illegal Gambling

We spoke to officials in Florida, Iowa, Kansas, Maryland, Massachusetts, New Jersey and Pennsylvania and found that the investigation of illegal gambling is handled by law enforcement officers (as opposed to regulators). Whether the state gaming regulatory agency regulates illegal gambling or not depends primarily on whether they are authorized to do so based on whether they have law enforcement authority, in most cases. Even when the state gaming regulatory agency has such authority, the actual prosecution of such matters is normally referred to the county or local prosecuting authority.

Ohio is one such example. The Ohio Casino Control Commission has authority under the casino control act³⁴⁸ to levy and collect penalties for some noncriminal violations. Criminal violations are referred to the Attorney General's office or local prosecuting office. As a practical matter the casino control act is a fairly new law and the actual prosecution of criminal matters depends on the circumstances. Internet cafes have been of major concern in Ohio. The addressing of the legality of these cafes has been taken up by the General Assembly,³⁴⁹ however we were informed that there was recently a further complication: Some Internet cafes, in addition to using the normal internet machines in the cafes, were employing the equivalent of slot machines. The Attorney General's office and the Ohio Casino Control Commission staff

³⁴⁸ The Ohio Casino Control Act, 3772. 99 (e) (12)

³⁴⁹ See for example this article addressing the matter <http://www.wkbn.com/2013/06/04/ohio-governor-signs-internet-cafe-crackdown/>

cooperated in the matter – which we found to be a common theme among states. Illegal gambling often comes in forms that are not completely anticipated. In this case, the Casino Control Commission staff was used to help determine the nature of the machines and whether they met the definition of slot machines.³⁵⁰ There are law enforcement agents with the Casino Commission, but prosecution for criminal illegal gambling would come from other state offices. Internet cafes are a subject unto themselves.³⁵¹

In Massachusetts the State Police handle illegal gambling investigations, but it is important to note that the Massachusetts Gaming Commission has a State Police unit assigned to it. Either the Gaming Commission unit of the State Police or another branch of the State takes responsibility for the matter, dependent on exact nature of the type of illegal gambling.

New Jersey's model is somewhat different. There are two primary agencies in New Jersey: the Casino Control Commission and the Division of Gaming Enforcement. Gaming Enforcement is the prosecutorial arm for civil matters, and also has State Police assigned to it, under the purview of the Attorney General's Office. The State Police in Gaming Enforcement would be involved in investigating illegal gambling.

In Pennsylvania, the Gaming Control Board has no authority over illegal gambling. The State Police would take the lead on those matters and likely would work with local law enforcement and prosecuting authorities, depending on the nature of the illegal gambling.

In Maryland the Lottery and Gaming Control Agency has no authority over illegal gaming. Matters are turned over to the State's Attorneys. In Iowa, illegal gaming matters are not addressed by the Iowa Racing Commission. Instead such matters are turned over to the Division of Criminal Investigation.

In Kansas, however, the Racing and Gaming Commission does take the lead on such matters. There are enforcement agents at the Racing and Gaming Commission that can make arrests on such issues. Prosecution, as is the case in many states, rests with the local prosecutors. Also in Kansas there is controversy and court challenges surrounding "gray machines," which further complicates matters.³⁵²

In Florida, the Department of Law Enforcement advised us that local or county law enforcement and prosecutors are assigned such matters. The Division of Pari-Mutuel Wagering does not have authority over illegal gaming, though as in other states it may obtain information on such matters. If such information is obtained, the Division of Pari-Mutuel Wagering would

³⁵⁰ See this article on the involvement of different offices <http://www.ohioattorneygeneral.gov/Media/News-Releases/June-2013/Search-Warrants-Served-at-Illegal-Casino-Locations>

³⁵¹ From the American Gaming Association Website <http://www.americangaming.org/government-affairs/priority-issues/internet-sweepstakes-cafes>

³⁵² See this article summarizing the gray machine issue: http://cjonline.com/news/local/2010-10-25/gray_machine_clarity_sought and also the supreme court ruling <http://www.kscourts.org/cases-and-opinions/opinions/SupCt/2011/20110408/102786.pdf>

work with local officials and follow up as needed, though they would act more in an information sharing role than investigatory.

28.Costs: How Regulators are Addressing Expansion of Gaming

The regulatory model that has been accepted in many jurisdictions is that the cost of investigations should be paid for by applicants. As Spectrum noted in its 2010 report for the State of New Hampshire, “A subcomponent of this category is that those companies and individuals applying for a casino or vendor license should be required to pay for all costs associated with the conduct of their background investigations. This requirement allows the regulatory agency to undertake what are often complex and multi-faceted entity and other investigations without having the taxpayers of the state pay for these types of investigations.”³⁵³

29.Gaining an Expertise in Casino Gaming

The regulation of casino gambling is unique from other types of business activity because of the speed of the transactions, the amount of money that changes hands and the way in which transactions are completed. Unlike any other type of business money changes hands in some cases with no documentation. For example at table games the allocation of chips by the dealer to the customer after the playing of a hand, (or the throwing of dice, or the spinning of a wheel, etc.) permits no documentation.

The types of transactions at slot machines are comparable in some respects to transactions in other businesses but it too is challenging in a regulatory sense. There can be multiple transactions over short periods between a machine and a patron involving what might be a great deal of money. Jackpots worth seven figures can originate from the risking of a very small amount from the patron.

Because of the nature of the business there are unique types of crimes that will be attempted in the gaming industry. Criminals can be attracted simply because of the large amounts of money involved, but there are also ample unique ways to commit crimes in casinos. Two examples, of many, are card cheats at table games and attempts at altering the computer chips in the slot machines.

The regulatory structure that a state adopts, and all the functions involved in that structure, including investigations, audits, licensing, etc., are all ultimately designed with one purpose in mind: to create an appropriate gaming and business activity and to minimize any criminal activity. The states’ collection of gaming revenue depends on the fulfillment of this purpose, but just as important is the public’s perception of the integrity and fairness of the gaming industry.

³⁵³ Spectrum New Hampshire report, p. 4.

While gaining an expertise in the types of transactions in casino gaming is critical to regulation of the gaming industry, so too is gaining an expertise in the types of investigations necessary in the examination of applicants for casino operators and the transparency of the licensing process. Casino gaming operators are sometimes parts of multinational companies. The awarding of a license to operate a casino can be lucrative for a company. Thus the investigation, the consideration of the investigatory findings by the licensing authority and the awarding of the license are regulatory matters that must be addressed with thorough understanding and considerable deliberation.

While it may be argued that there are many advantages and disadvantages to expanding gaming, we believe there is no valid argument for the expansion of gaming without taking the proper regulatory measures. While a strong regulatory structure may be expensive to implement, this expense is typically borne by the gaming industry and not taxpayers.³⁵⁴ On the other hand, a weak or flawed regulatory system will invite nefarious and criminal activity, will fail to assure integrity of operations, and will not maintain the public trust and confidence in the regulatory system. Weak or flawed regulations is neither a model which is acceptable to the state nor a model which is an acceptable business practice to the casino industry that is regulated.

30. Other Critical Factors in the Regulatory Structure

There are advantages to creating a consolidated gaming agency, such as the maximum use of resources and the prioritization of functions. The danger in a consolidated agency is illustrated in the early Pennsylvania model. As explained in the grand jury findings, there was a bias created in the agency toward the awarding of licenses and the minimizing of investigative findings that could delay such licenses. The present Pennsylvania model incorporates a more independent reporting line for the investigative functions.

Spectrum has found there can be advantages in separate agencies which have some built-in and intentional overlap of functions. In the Kansas model, for example, there is little if any expense in any overlapping functions, but there is a greater assurance of integrity in having more than one agency involved in the oversight of the state's revenue. Of course, any overlap should be clearly defined and be designed to complement the functions of each agency.

31. Conclusion

Regulatory structures are almost impossible to place into a few models, as each state has unique features relating to its gaming industry. Spectrum believes that a consolidated regulatory agency or a group of agencies which share responsibility can both complete their functions in a competent manner. However there are a number of important considerations. There are a number

³⁵⁴ The norm in the regulation of casino gaming is to require the payment for investigations and other regulatory functions through fees and billings paid by casino applicants and operators

of themes of regulation which almost always shine through regardless of the state, the gaming venues, or the number of casinos or where they are located in the state. These are not themes of a consolidated model of all regulatory issues or a model that is divided between numerous agencies. The themes of regulatory models over casino gaming have to do with the types of regulation that casino gaming demands.

E. Trends and Best Practices in Governance and Regulation

A general description of trends and best practices in governance and regulation of gambling activities.

“Effective regulation” can be defined as regulation that advances a variety of public policies while protecting the overall public interest. While the entire scope of policies to be advanced will – and arguably should – vary from jurisdiction to jurisdiction, certain goals would be considered universal. Such goals would include:

- Promoting public confidence in gaming as both a leisure activity for the public, and as an investment opportunity that would generate interest from casino operators seeking an attractive return on invested capital.
- Fostering public confidence and trust in the integrity of the regulatory process and gaming operations
- Ensuring that individuals and business entities involved in gaming meet universally accepted standards of good character, honesty and integrity.
- Ensuring the prohibition of unsuitable persons and entities from participating in the gaming industry.
- Developing, overseeing and monitoring programs to address problem gambling, including reviewing responsible-gaming policies and practices, while maintaining and enforcing exclusion lists, including self-exclusion.
- Addressing other critical public policy concerns, such as underage gambling, or casino-related demands on law enforcement and other public services.
- Optimizing financial benefit to the jurisdiction from multiple revenue streams, including gaming taxes, employment taxes and tax revenue generated from other sources, such as expanded tourism and purchases of goods and services.
- Maintaining flexibility in writing the rules that govern gaming to make sure that regulators are able to adapt to changes in technology and to revise and reform regulations as circumstances change, and as regulators become more familiar and comfortable with evolving industry practices.

Individual states, as they develop and customize their own statutory and regulatory governing structures, can layer on additional goals that are specific to their own economic,

SECOND DRAFT - CONFIDENTIAL

political, demographic and competitive landscapes. Such ancillary goals can vary, but often include the following:

- Promoting tourism
- Reviving or improving urban areas
- Creating employment opportunities
- Enhancing the conventions and meetings business
- Creating opportunities for other businesses within the jurisdiction
- Attracting additional capital investment

Establishing such goals is relatively straightforward. Achieving them is often difficult for the following reasons:

- Once a license is issued, the power of regulators and lawmakers to effect change diminishes.
- Sometimes, goals can conflict with each other. For example, a goal of maximizing license fees can conflict with a goal of maximizing capital investment.
- The market does not always cooperate.

Still, jurisdictions that have the ability to establish a competitive bidding process would, with all else being equal, be more likely to achieve goals, since applicants for licensure have more incentive to establish ambitious plans to achieve goals.

We have witnessed that in various states with competitive processes, including Pennsylvania and Massachusetts. At this writing, Massachusetts is pursuing a competitive bidding process, and various applicants have made it clear that they are developing robust policies to achieve goals that range from promoting tourism to training existing Massachusetts adults for the jobs that will be created.

Absent a competitive bidding process, gaming tends to evolve either as a system in which pari-mutuel facilities are grandfathered in, sometimes with requirements for significant capital investment, or with no statutory limit on the number of licenses in specific geographic regions such as the Gulf Coast of Mississippi, Las Vegas or Atlantic City.

Whether a licensing process is competitive or not, however, the ability of regulators to take action after a license is issued diminishes quickly and dramatically. Absent specific violations that would warrant fines or either the revocation or non-renewal of a license, regulators have a limited ability to prod operating licensees in specific policy directions. The larger goal then in the effective regulation of gaming is to align the goals of the public and private sectors.

SECOND DRAFT - CONFIDENTIAL

Some of these goals noted above may seem to be contradictory. For example, a single licensing jurisdiction would be tasked with developing a positive investment climate while addressing serious policy issues, such as crime and problem gambling. Such seeming contradictions can be best addressed by adhering to what economists refer to as “goal congruence,” a system in which the interests of all stakeholders are parallel.

Such a system is quite achievable in gaming, but is by no means assured in all instances. For example, both the state and the casino operator have a stake in realizing an attractive return on investment. The state receives tax revenue, among other benefits, while investors are rewarded for the risks they have undertaken. Similarly, both the public and private sectors have an abiding interest in promoting public confidence, and in maintaining high standards for integrity. Operators, who are often licensed in multiple jurisdictions, would not want to risk their gaming license in *any* jurisdiction as that would put their licensure at risk in *every* jurisdiction.

Where goals are not congruent, legislators and regulators would have an obligation to ensure that the public’s goals are dominant. If handled effectively, such situations can turn disparate interests into parallel goals. The most illustrative example of this phenomenon can be traced back to 1982, when a bank clerk from Toronto, Brian Molony, was regularly embezzling funds from his employer and gambling with those dollars at Caesars in Atlantic City.

The Molony case – which was widely publicized and became the subject of both a 2002 book, *Stung: The Incredible Obsession of Brian Molony*, by Gary Ross, and a 2003 movie that was inspired by the events but changed the name of the chief subject, *Owning Mahowny* – was viewed by many, including regulators, as a story of greed run amok. Gaming operators were willing to bend rules and not ask questions about a bank clerk clearly gambling over his head, and without paying any heed to issues ranging from the potential of pathological gambling to the issue of gambling with stolen funds.

The New Jersey Division of Gaming Enforcement, the prosecutorial arm of the dual-agency regulatory structure in the state, negotiated a settlement with Caesars for various violations of regulations in the Molony matter, with the casino being required to close its doors – while still paying its staff – on the traditionally busy Friday following Thanksgiving, on November 30, 1985.³⁵⁵ The matter was summarized in *The New York Times* following a decision by the quasi-judicial agency of the state to approve the settlement:

“The Casino Control Commission today ordered Caesars to close its Atlantic City casino for a day as a penalty for violating credit, deposit and reporting regulations to cater to a heavy gambler. The closing, the first ordered by the commission, could cost Caesars nearly \$1 million in lost revenues. Thomas R. O’Brien, director of the New Jersey

³⁵⁵ Present-day Spectrum Gaming Group Managing Director Fredric Gushin, then Assistant Attorney General and Deputy Director of the Division of Gaming Enforcement, participated in the settlement negotiations with Caesars.

SECOND DRAFT - CONFIDENTIAL

Division of Gaming Enforcement, said it was the harshest penalty to be imposed in the seven-year history of the Atlantic City gaming industry.”³⁵⁶

Nearly 30 years later, that penalty of shutting the casino down for a busy day remains as one of the harshest penalties imposed by regulators in that state (short of an outright license denial), and we are unaware of a similarly harsh penalty imposed in any other gaming jurisdiction.

Six months after that unprecedented closing, Caesars reached a settlement with Canadian bankers, who were the victims of Molony’s crimes. That settlement prompted the following summary in the *Philadelphia Inquirer*:

“Molony was arrested April 27, 1982, a day after he lost \$1 million gambling at Caesars. He got the gambling money by writing loans in the names of both real and fictitious companies.

“In court papers filed in Canada, Caesars said it never asked Molony for credit information and had never asked what he did for a living. The papers said Caesars supplied Molony with tens of thousands of dollars in hotel rooms and airfare by private Lear jet.

“Although he plunked down thousands at the gaming tables, Molony led a modest lifestyle in Toronto, where he wore inexpensive, ill-fitting clothes and left carefully calculated 7 percent tips in restaurants.

“Court documents also show that Molony was able to transfer millions of dollars out of the Imperial Bank of Commerce through a company called California Clearing Corp., a wholly owned subsidiary of Desert Palace, a Las Vegas casino. The corporation's only purpose, according to records, was to let people deposit sums of money into a casino without detection.

“As a result of Molony's activities at the casino, Caesars was forced to close for the day Nov. 30, the (Friday) after Thanksgiving, as a disciplinary measure for gambling-law violations. The closing was part of an agreement worked out between Caesars and the state Division of Gaming Enforcement.

“The Casino Control Commission approved the agreement and \$36,500 in fines against six Caesar's employees.

“Industry analysts estimated that the casino stood to lose between \$700,000 and \$800,000 because of the shutdown.”³⁵⁷

³⁵⁶ Donald Janson, “Caesars Ordered To Close For Day For Violation Of Gambling Rules,” *New York Times*, October 10, 1985. <http://www.nytimes.com/1985/10/10/nyregion/caesars-ordered-to-close-for-day-for-violations-of-gambling-rules.html?n=Top%2fReference%2fTimes%20Topics%2fSubjects%2fG%2fGambling>.

The Molony case offers the highest profile, but was hardly alone, as an example of casinos having goals that were not parallel with the goals of the state in which they operated. In Atlantic City alone, the record includes numerous matters in which casinos ignored policies ranging from preventing underage gambling to minimizing problem gambling. Notably, such violations have declined in recent years. While it may very well be that regulatory oversight has diminished, thus leading to fewer violations being revealed, our experience suggests that much of the decline in violations can be attributed to goal congruence: Casinos are increasingly adapting their policies to be more fully aligned with the goals of the states in which they operate.

1. Best Practices and the Political Process

The term “effective” is not synonymous with strict, but it should be synonymous with “understandable,” “comprehensive,” and “defensible.” In other words, every rule to be found in gaming statutes, regulations or policies should have a clear and legitimate purpose that can be readily communicated and understood. Indeed, while the perception of “strictness” will vary, depending on the vantage point, “strictness” is a relative term.

Typically, gaming regulation starts out strict and then allows for reforms as circumstances change, and as regulators become more comfortable with the processes involved in the governance of gaming. To move in the opposite direction – moving from a relatively relaxed regulatory regimen to a more restrictive one – would be difficult to implement practically and politically. In large measure, the inherent difficulty in moving toward a more strict regulatory system if one is needed can be attributed to the relationship between gaming and politics. By its nature, gaming is inextricably intertwined with the political process – a reiteration of one of this report’s core themes. Gaming’s very existence – as well as its ability to generate profits – depends on its ability to be in the good graces of elected and appointed officials, and to remain there.

In understanding and in governing the relationship between the gaming industry and politics, certain trends and observations should be considered, based on our experience in other markets:

- The ability of elected and appointed officials to shape and guide the policies that govern gaming, and that are designed to marshal the economic and social benefits of gaming, are at their zenith prior to the issuance of gaming licenses.
- To whatever extent is reasonable and appropriate, steps should be taken to insulate gaming from politics, and to limit the ability of the gaming industry to directly influence the political process.

³⁵⁷ Jane M. Von Bergen, “Caesars Reaches Accord with Bank In Molony Case,” *Philadelphia Inquirer*, May 15, 1986. http://articles.philly.com/1986-05-15/news/26048451_1_gaming-tables-gaming-enforcement-caesars-officials.

SECOND DRAFT - CONFIDENTIAL

- Over time, regulators and the regulated are likely to grow closer to each other. Left unchecked, a real risk exists that regulators can become cheerleaders for the industry they govern.

Much of this can be described as common sense, and as recognition of reality. While public confidence in gaming demands that controls be put in place to restrict the ability of the industry to influence the political process, such controls are clearly limited, and gaming can never be fully insulated from politics, or vice versa.

Starting with New Jersey's enactment of the Casino Control Act in 1977, certain steps have been identified that establish some level of insulation. These include:

- Limiting, or eliminating, the ability of gaming licensees and their key employees and qualifiers³⁵⁸ from making political contributions at the state and/or local levels.
- Appointing regulators to fixed terms that are not tied to the terms of the elected officials who make such appointments.
- Establishing guidelines for regulators that limit their ability to participate in the political process.
- Limiting the ability of regulators to secure outside income.
- Establishing strict post-employment restrictions for regulators and top staff that limit their ability to work for the industry they govern once they leave public employment.

The presence of any or all of such policies can help establish and maintain public confidence and provide some level of independence for regulators, but true independence is clearly chimerical in established gaming jurisdictions.

While we can identify benefits for the public and private sectors to share common goals, the shared goal of a successful gaming industry can turn regulators into cheerleaders. This risk was identified quite early in modern gaming regulation by the late Martin Danziger, one of the first appointed full-time members of the New Jersey Casino Control Commission. In an interview conducted in 1982,³⁵⁹ Danziger observed a number of industries that had been regulated in the 1970s, from securities to air transportation, and suggested that it is quite risky – and that public policy might suffer as a result – if regulators get to the point where they are willing to overlook transgressions or endorse shortcuts as a means of advancing success.

³⁵⁸ “Qualifier” is a widely used term in gaming regulation that refers to individuals with the ability to influence a licensee’s policies, such as owners, officers and directors. Typically, an entity cannot secure a gaming license unless all of its qualifiers are deemed to be licensable as well.

³⁵⁹ That interview was conducted by Michael Pollock, researching his book, *Hostage to Fortune: Atlantic City and Casino Gambling*, 1987. That portion of the interview was not directly cited in the book but is relevant for purposes of this analysis.

SECOND DRAFT - CONFIDENTIAL

In 1987, Spectrum Managing Director Michael Pollock wrote: “The problem, it should be noted, is not confined to the regulation of casinos. In the October 15, 1982 issue of *The New Yorker*, Daniel Ford wrote ... ‘Thus, the agency was to play the incompatible roles of coach and umpire, of partisan and judge – was supposed somehow to be both the champion and the disciplinarian of the industry. This dual mandate led to a continuing, unacknowledged conflict within the agency.’ Ford was not writing about the New Jersey Casino Control Commission. He was writing about the Atomic Energy Commission in the 1950s.”³⁶⁰

The problem of balancing dual roles remains, and is arguably a permanent concern that will require a permanent balancing act. In gaming, the issue of dual mandates specifically translates into a risk of sending a message to licensees that revenue maximization is a primary goal, often at the expense of such other policies as addressing problem gambling, or of maintaining standards of character, honesty and integrity.

This risk is exacerbated and enhanced by another very real phenomenon in gaming regulation: Once a casino is licensed and operating, the ability of regulators to change its course or, in the most extreme instance, remove its operating license is dramatically diminished. An operating casino is employing hundreds or, in many instances, thousands of employees and generating significant revenues for the state. This means that, on the very day it opens, a casino gains political stature, while the political will of regulators to enforce the rules declines.

This phenomenon is not uniform across states, and states have taken steps to address it. In states in which the number of licenses is not fixed – such as New Jersey, Mississippi or Nevada (which were the three earliest adopters of commercial gaming in the United States) – the risk is less severe, as other gaming properties can open, or expand, to address any unmet market demand and increase employment.

New Jersey law allows for “interim casino authorization” (“ICA”) in which an entity can purchase a casino prior to a full investigation and determination of suitability, based on the approval of regulators, by appointing a trustee entrusted with the preservation of the assets of the gaming operator. Such trustees – often retired judges, former casino gaming regulators, or other individuals who have the clear appearance of independence and integrity – have no responsibilities or role in the operation of the casino whatsoever, unless the New Jersey Casino Control Commission determines that the operator is not suitable for licensure.

At that point, a conservator is appointed, again usually a retired judge or government official, who assumes full control of the operation, including managing the property, with the goal of preparing the casino for sale to a third party. In the aforementioned case involving the license denial of the Tropicana, the trustee of the ICA was appointed to be the conservator. The conservator has a fiduciary responsibility to obtain the highest and best price for the property, although the original owner – the entity deemed not suitable for licensure – cannot be allowed to

³⁶⁰ *Hostage to Fortune*, p. 196.

profit from such a sale. Any money paid for the property over and above the level of original investment goes to the state.

That process is far superior to one in which the state has limited abilities to fully distance an unsuitable owner from the operation. However, experience has shown that the concept of conservatorship can be less than perfect in practice.

A rare use of the conservatorship provision occurred in New Jersey in 2009, when the Commission determined that the new owner of the Tropicana was not fit for licensure. A pre-approved conservator immediately took control of the property with the intent of readying it for sale, as required by the ICA regulations. The conservator, however, raised questions and criticism by the fees he charged for his services. As the *Associated Press* reported at the time:

“As many gamblers know, things can get expensive in a hurry in Atlantic City.

“The latest proof is the Tropicana Casino and Resort, where the 20-month effort to sell the business has racked up nearly \$7.7 million in legal and consulting fees, with still more to come.

“On Wednesday, the state Casino Control Commission will consider additional bills totaling nearly \$50,000.

“Those fees, some billed at \$970 an hour, are paid by the casino. They represent more than nine full days' winnings for the Tropicana, which is struggling to regain market share while threatening to lay off employees because of economic pressures.

“The Tropicana was sold last month for \$200 million to a group of investors led by billionaire Carl Icahn; the deal could close by year's end. When the casino-hotel first went on the market over a year and a half ago, it was expected to fetch about \$1 billion.

“The mounting fees have prompted casino regulators and state lawmakers to consider limiting the time and cost of similar efforts in the future. And with several distressed casinos struggling to survive, one or more additional gambling houses could find themselves going the way of the Tropicana.”³⁶¹

The lesson here is that the best designed and crafted laws and regulations can still fail to meet expectations in practice. Perfection in gaming regulation will remain elusive, and no regulatory agency is immune from negative publicity, a decline in public confidence or, at worst, a scandal. The New Jersey Casino Control Commission endured a severe scandal of national proportions in its earliest years, when one of its first appointees was embroiled in the Abscam scandal, as noted earlier, in which FBI agents established an elaborate scheme – including a

³⁶¹ Wayne Parry, “\$7.6 Million Later, Tropicana Casino Fees Still Rolling in,” *Associated Press*, July 15, 2009 <http://www.law.com/jsp/article.jsp?id=1202432256844&pos=atag glance&slreturn=20130409215343>.

SECOND DRAFT - CONFIDENTIAL

phony Arab “sheik” – in a corruption investigation that snared a US senator, six members of Congress, several state and local officials and a gaming regulator.³⁶²

The most immediate result of that scandal was a decision by then-Gov. Brendan Byrne of New Jersey to dismiss the four part-time commissioners (including the indicted commissioner) and replace them with four full-time commissioners who joined the full-time chair, who had survived the scandal.³⁶³ That move proved to be an important means of saving – and ultimately restoring – public confidence and trust in the regulatory process.

As noted in the previous section, the Pennsylvania Gaming Control Board endured a scathing State Grand Jury report in 2011.³⁶⁴ Spectrum, which had been a consultant to the board, held a critical vantage point in observing that agency in action.

The essence of that report, and its implications, were summarized in a column in the *Patriot-News* of Harrisburg:

“A recent grand jury investigation into the creation and early decisions of the state’s Gaming Control Board ... details a culture of ‘noncriminal misconduct’ in which officials not only turned a blind eye to potentially criminal activity, but commanded investigators to do the same.

“When they didn’t, administrators ‘scrubbed’ the negative information out of official reports before handing them to the board, the grand jury report states. The grand jury suggests the game was fixed before the gambling law was passed.

“According to the 102-page report, ‘Even prior to the passage of the act, legislators began considering candidates’ to sit on the powerful board. ...

“The grand jury’s report vividly illustrates how the public’s interest took a backseat to political considerations. . . .

“There was the sense inside the agency that every legislator was pushing to have someone hired. Lists of applicants, with the names of their sponsoring legislators, were compiled and passed around.

“One Gaming Control Board administrator testified that ‘more times than not,’ these political favorites ‘fell on their face during the interview.’ But if they didn’t, they were given preference over qualified people who didn’t have a patron in the Legislature.

SECOND DRAFT - CONFIDENTIAL

“According to the grand jury, the hiring by patronage resulted in an inept administrative staff, lacking the qualifications to supervise a multibillion-dollar industry.³⁶⁵”

The history of scandal and controversy in gaming regulation shows that agencies can survive, sometimes following dramatic steps, and sometimes simply by appointing new people over time who fully understand the delicate relationship between maintaining public confidence and advancing public policy.

Gaming, and its regulatory oversight, has been guided by certain principles and realities that we have observed in our work over the past several decades. In 2008, Spectrum wrote the following in a report for the Commonwealth of Massachusetts:

“Our experience over the past decades has led us to develop certain cautionary notes to help ensure that expectations are realistic. While no two gaming markets can be precisely alike, there are some commonalities, including:

- Gaming should never be viewed as a panacea to cure social ills or solve fiscal problems. It is a tool that, if effectively managed, can generate capital investment, employment and visitation that in turn would provide resources that can help address a variety of other issues.
- Casinos, by themselves, cannot turn unattractive or unappealing neighborhoods or communities into attractive magnets. To effect such a potential change often requires significant amounts of planning, financial capital and political capital.
- Casinos, by themselves, cannot turn former industrial areas or other non-tourist sites into tourist attractions. That requires a concomitant investment in developing a necessary tourism infrastructure.
- Neither the challenges nor the opportunities created by a casino industry stop at municipal or even state boundaries.
- The heart of the competitive bidding process will be the establishment of guidelines that delineate the criteria for evaluating bids. (The state) needs to be as expansive and comprehensive as possible in its guidelines.

“In our experience in various markets, including as participants and close observers in the 30-year history of casino regulation in New Jersey, we note the following:

- A regulatory system should start out strictly, and then be modified as circumstances change, and as the regulators become more comfortable and gain confidence that the process is moving in the right direction. In most cases,

³⁶⁵ Donald Gilliland “Pennsylvania Gaming Control Board riddled with culture of 'noncriminal misconduct,' grand jury report says,” *The Patriot-News*, June 12, 2011.
http://www.pennlive.com/midstate/index.ssf/2011/06/grand_jury_report_describes_cu.html.

political and economic realities will be quickly established, making it difficult to move in the opposite direction, toward a system of stricter regulation and tighter controls. This would be particularly true in this instance, where the legislation contemplates a competitive bidding process. In such instances, the most important rules are the ones established at the outset to determine the successful bidders. Once those criteria have been established and a successful bidder has been named, the system would not allow lawmakers or regulators to go back and alter those initial criteria.

- (Once) a casino is established and is generating tax revenue, employing people and attracting visitors, it cannot be easily undone in any practical sense.
- The public sector ... has broad discretion and powerful leverage at the outset to ensure that the successful bidder takes whatever steps are necessary to advance the public interest on a wide variety of fronts. Such leverage would be at its zenith during the pre-licensing phase, in which applicants would recognize that they must compete against each other in their zeal and in their creativity in developing strategies to advance the public interest. Once licenses are issued, and casinos are operational, we caution that such leverage would largely disappear.
- Using that leverage to require that all bidders submit comprehensive, credible plans that are in congruence with public policies can be justified by the proposed legislation, which essentially creates ... regional monopolies. No other private businesses that targets consumer discretionary spending, from hotels to restaurants, could reasonably expect that (the state) would protect them from potential in-state competition. We suggest that such protection requires a corresponding commitment to ensure that marketing, human resources and other policies put forth are designed to promote the public interest.”³⁶⁶

32. Conclusion

The modern history of efforts to establish effective gaming regulation – beginning with the adoption of the New Jersey Casino Control Act in 1977 – parallels the interest of Wall Street in gaming as an investment opportunity. In our experience, that is no coincidence. An absence of effective, stable regulation adds risk to investments, and risk translates into a higher cost of

³⁶⁶ Spectrum Gaming Group, *Comprehensive Analysis: Projecting and Preparing for Potential Impact of Expanded Gaming on Commonwealth of Massachusetts*, August 1, 2008, p. 21 <http://www.mass.gov/hed/docs/eohed/ma-gaming-analysis-final.pdf>.

capital. The reverse is also true. Confidence lowers risk, which lowers the cost of capital – a necessary ingredient for the development of a successful gaming industry.

The ability of policymakers to push through changes and establish policies declines over time. With that in mind, policies can be established from the outset that are designed to ensure that both the state and the licensees share common goals.

F. Gambling as Public Funding Source

A general description of gambling as a public funding source, including: Comparison of states' reliance on and uses of gambling as a public funding source; reliability and predictability of gambling revenues; direct and indirect costs to the state.

1. States' Receipts from Gambling Revenue

States choose to legalize gambling to raise revenue for public programs or for economic development, or for both. The amount the states collect from gambling revenues is a function of several factors, including:

- The revenue performance of a state's various gambling sectors.
- The types of gambling allowed and their availability to key population centers.
- The tax rate on gambling revenue, or other fees and obligations.
- The public policy – or underlying purpose of why gambling was established. In Nevada, for example, the low casino-revenue tax rate has spawned the development of multibillion-dollar resorts, which in turn collect sales and lodging taxes that do not show up in gambling-specific revenue reports.

For data in this section, Spectrum relies on (and has the permission to use) reports by The Nelson A. Rockefeller Institute of Government at the University at Albany (NY), which annually tracks state receipts from gambling. Its most such recent report, *Back in the Black: States' Gambling Revenues Rose in 2010*,³⁶⁷ by Lucy Dadayan and Robert B. Ward, provides comprehensive data and analysis on this important subject.

For some states, gambling is an integral part of their fiscal health and hence their governments closely monitor the performance of their various gambling sectors – and may help explain the economic need by some states to expand to either sustain or grow revenues. As noted

³⁶⁷ Lucy Dadayan and Robert B. Ward, *Back in the Black: States' Gambling Revenues Rose in 2010*, June 23, 2011; http://www.rockinst.org/pdf/government_finance/2011-06-23-Back_in_the_Black.pdf. The authors expect to release their updated version in mid-2013.

SECOND DRAFT - CONFIDENTIAL

later in this section, gambling receipts accounted for more than 5 percent of own-source general revenue for five states in FY 2009.³⁶⁸

First, we present the dollar amounts that gambling in four primary sectors – casinos (commercial; i.e., non-Native American), racinos (racetrack casinos), lotteries and pari-mutuel – generated for its host states (table on two pages):

Figure 41: States' gambling revenue from lotteries, casinos, racinos and pari-mutuels, FY 2010

In \$ millions	Lottery	Casino	Racino	Pari-mutuel	Total
Alabama				2.1	2.1

Source: The Nelson A. Rockefeller Institute of Government. Racino VLT revenues are included in Lottery.

Next, we rank the states by total gambling receipts for FY 2010. The states with the highest gambling revenues do not necessarily generate the highest state tax receipts because their tax rates may be lower and/or they may have fewer types of legalized gambling. Nevada generates more than three times the casino revenue than any other state, yet that state's receipts from gambling ranked only 10th best – because it has the lowest casino-revenue tax in the country (6.75 percent) and because it has no lottery and no pari-mutuel. Note that Florida ranked third, behind New York and Pennsylvania.

Figure 42: States' FY 2010 overall gambling revenue, by rank

Source: The Nelson A. Rockefeller Institute of Government

Comprehensive data for state receipts from Native American gaming operations are not available, either because they are not taxed or the data are proprietary. The Rockefeller Institute did collect data from nine states that have the largest collections of Indian gaming receipts:

Figure 43: State receipts from largest Native American casino states

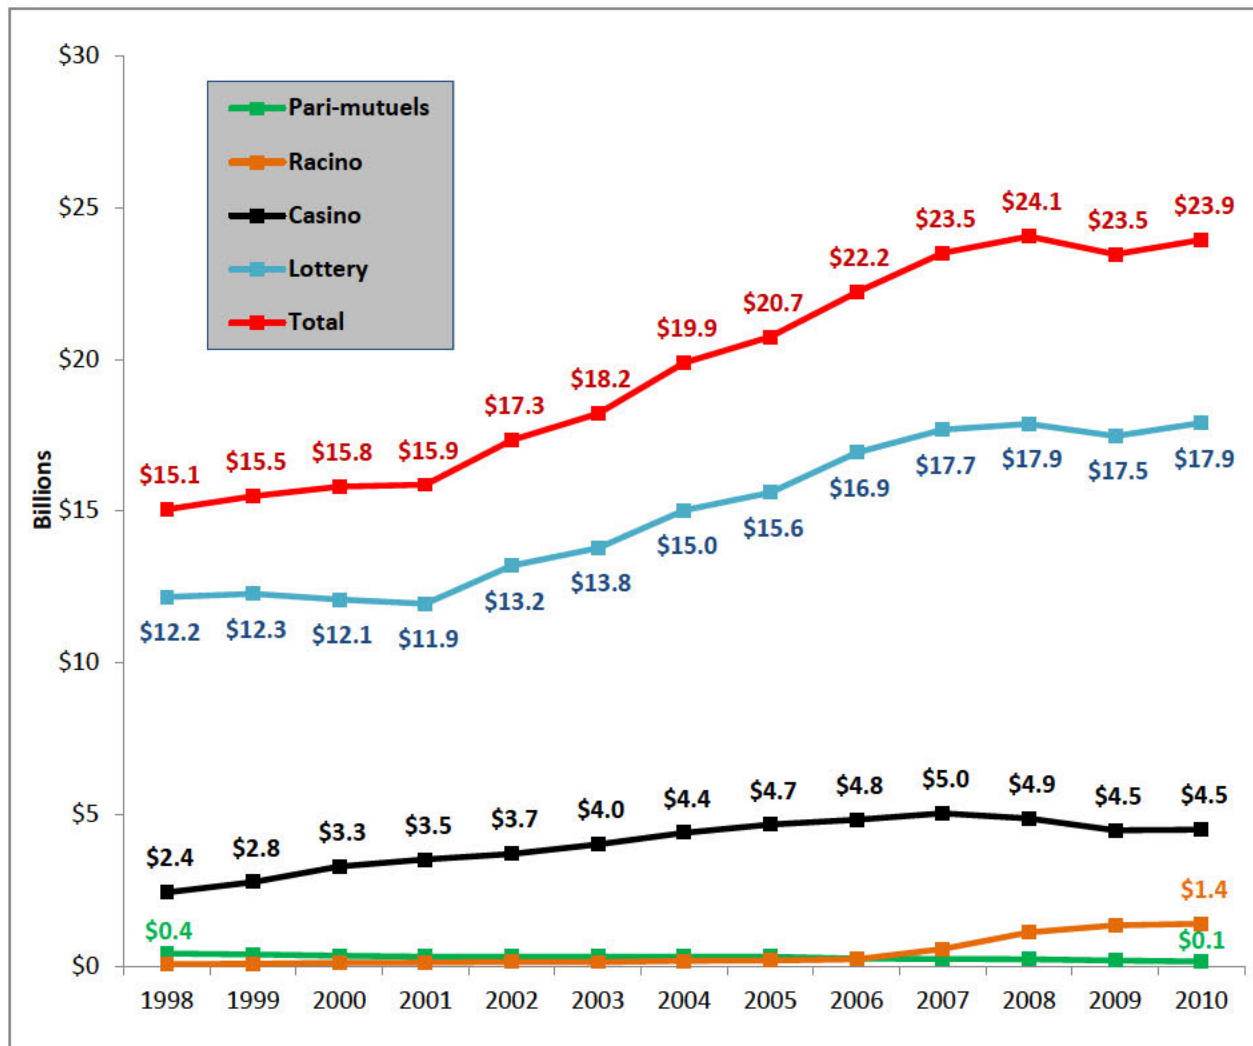

\$ millions	FY 2008	FY 2009	FY 2010
Arizona	111.2	97.5	89.0

Subtotal	1,151.3	1,288.7	1,444.2

Source: The Nelson A. Rockefeller Institute of Government

Now we look at the US trend in state receipts from gambling, by sector, from FY 1998 through 2010. Note in the following chart that receipts declined after the Great Recession began in 2007. The gambling industry had until that time proven to be resistant to economic downturns, but the two largest sectors – casinos and lotteries – experienced revenue declines coinciding with the recession. The racino industry was still very much undergoing widespread expansion and thus remained in a growth mode. Regarding racino revenue, it is important to note that The Rockefeller Institute groups VLT revenue from racetracks with lottery revenues, impacting the classification of racino receipts from Delaware, New York, Rhode Island and West Virginia (and, going forward, Ohio). The pari-mutuel industry continued its long, steady decline, with state revenues plunging from \$554 million in 1993 to \$150 million in 2010.

SECOND DRAFT - CONFIDENTIAL

Figure 44: Trends in state gambling revenue, FY 1998-2010

Source: The Nelson A. Rockefeller Institute of Government, citing Census Bureau (lottery & pari-mutuels), Rockefeller Institute review of state gaming regulatory agencies' financial reports. Lottery data for FYs 2008-10 is based on Rockefeller Institute survey of state lotteries.

As noted previously, some states are more reliant on gambling receipts than others. Nevada, which has 265 casinos and in 2012 reported gross gaming revenue of \$10.9 billion, in FY 2009 relied on gambling receipts for 12.5 percent of its own-source general revenue. Rhode Island and West Virginia, whose lotteries operate racetrack casinos (with video lottery terminals in lieu of bona fide slot machines), each relied on gambling receipts for 8.4 percent of their FY 2009 own-source general revenue, as shown in the following chart (on two pages). The total for all states was 2.4 percent.

33. Reliability of Gambling Revenues

As shown in Figure 43, legalized gambling generally provides a reliable revenue stream for governments, on a holistic level, except in times of severe recession. At the individual state level, however, gambling-revenue receipts are subject to rapid – and sometimes dramatic – declines when a neighboring state introduces a competing product that is within easy reach. This is most notable in Delaware and New Jersey, where the introduction of competing casinos in neighboring states has caused casino-tax receipts to decline 6 percent and 45 percent, respectively, from their peak collection years of 2011 and 2006, respectively.

Nationally, in 2011 (the most recent period available for both sectors), commercial and Native American casinos (including VLT racinos, which in Figure 40 are instead grouped as Lottery revenue) throughout the US generated \$63.1 billion of gross gaming revenue. This is depicted in the following chart (the dotted line indicates overall linear trend in US gross gaming revenue).

Figure 46: US GGR trend, 2002-2011

Source: American Gaming Association, Casino City's Indian Gaming Industry Report, 2013 Edition. Newton: Casino City Press.

In total, over the 10-year period (ended 2011), year-over-year growth occurred in eight of the 10 years, with the Great Recession causing revenue declines in 2008 and 2009. The breadth and depth of the recession effectively shattered the truism that casino gambling was recession-resistant. Total growth in US gross gaming revenue (from 2002 to 2011) was 46 percent, or average annual growth of 4.3 percent. This growth was considerably greater than overall growth in the Consumer Price Index³⁶⁹ – which grew by 25 percent over the entire period, or average annual growth of 2.5 percent.³⁷⁰

For 2012, commercial casinos had gross gaming revenue of \$37.34 billion, a 4.8 percent increase over 2011 figures.³⁷¹ Comparable data for Native American casinos will not be available until later this year; however, assuming there is no decrease in Native American gaming revenue (i.e., 2012 vs. 2011) will equate to total US gross gaming revenue posting at least a 2.7 percent year-over-year increase – marking the third consecutive year of revenue growth.

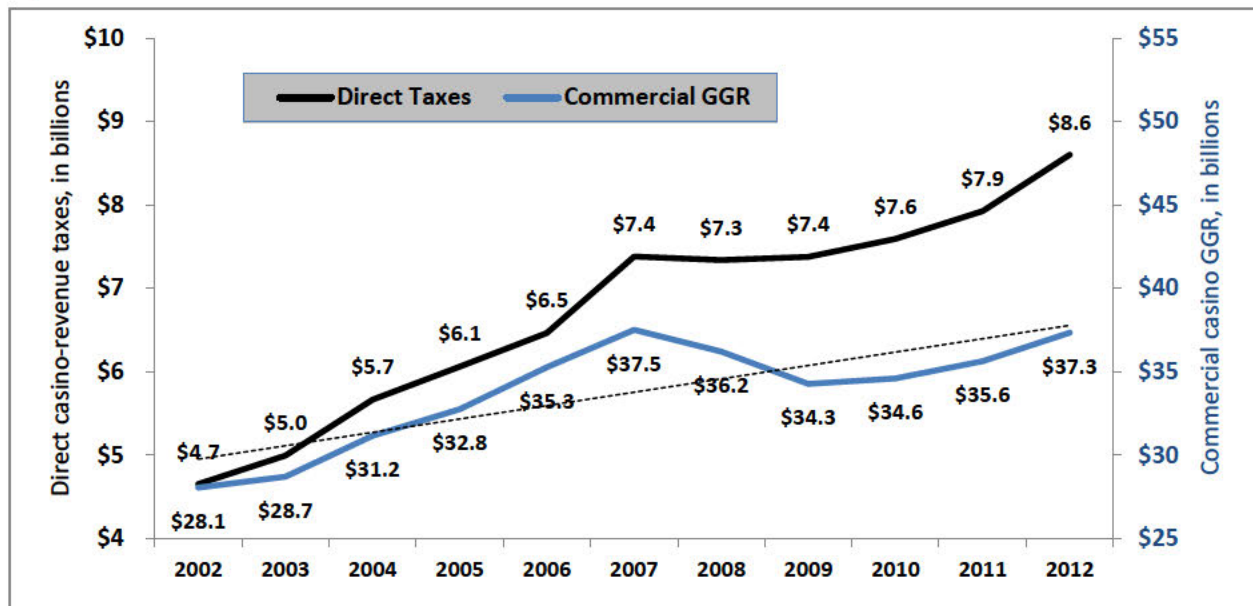

The following chart shows gross gaming revenue (and a dotted line indicating overall linear trend) from US casinos juxtaposed with the direct casino-revenue taxes paid from calendar year ended 2002 through 2012.

³⁶⁹ These data represent changes in prices of all goods and services purchased for consumption by all US urban households.

³⁷⁰ US Department of Labor, Bureau of Labor Statistics; http://www.bls.gov/data/inflation_calculator.htm.

³⁷¹ *State of the States 2013*, p. 5.

Figure 47: US GGR and direct taxes trend, 2002-2011

Source: American Gaming Association, UNLV Center for Gaming Research³⁷²

In total, over this 11-year period, year-over-year growth in direct taxes stemming from casino revenue occurred in 10 of the 11 years (as 2008 was down 0.6 percent versus prior year). Total growth in direct taxes stemming from US commercial gaming revenue (from 2002 to 2012) was 84.7 percent, or average annual growth of 6.3 percent. This growth was considerably greater than overall growth in the Consumer Price Index³⁷³ – which grew by 25 percent over the entire period, or average annual growth of 2.5 percent.³⁷⁴

The aforementioned direct taxes reflect results of commercial casino operations in 23 states. Importantly, netting out new casinos and/or jurisdictions (i.e., those not having casinos at start of the aforementioned period), of the 15 states that had casinos (and direct taxes) in both 2002 and 2011 the direct taxes stemming from casino revenue were up 19.9 percent, or average annual growth of 2 percent.

34. Direct and Indirect Costs to the State

The costs that legalized gambling may impose on state and local governments are both direct and indirect. Direct costs, such as specific transportation infrastructure improvements or the costs of additional law enforcement officers, are easy to identify and quantify. Indirect costs

³⁷² See http://gaming.unlv.edu/reports/direct_taxes_casino.pdf

³⁷³ These data represent changes in prices of all goods and services purchased for consumption by all US urban households.

SECOND DRAFT - CONFIDENTIAL

are not. These costs may be somewhat removed and tangential to the precipitating cause. For example, consider an individual who loses his job due to problem-gambling-related behavior and goes on unemployment. The connection between this person's unemployment and problem gambling may not be readily established. It may remain "hidden" and simply be attributed to downsizing. Ascribing indirect costs to legalized gambling also presents another challenge. Where do you draw the line? Can anything that can even be remotely linked to gambling be considered an indirect cost?³⁷⁵

The proliferation of legalized gambling and the apparent strong public support for it may understandably lead one to believe that the social costs of gambling exist within an acceptable range or are sufficiently offset by its benefits. As recently as March 5, 2013, nearly 62 percent of the voters in Linn County, IA, an economically vibrant and white collar area, approved a new casino despite a strong opposition movement that emphasized the negative costs of gambling.³⁷⁶ Currently, all but two states, Hawaii and Utah, have some form of legalized gambling. However, opponents might argue that the proliferation of gambling is attributable to financially powerful, politically influential pro-gambling forces that have successfully defined and manipulated public understanding of the issue.

According to the American Gaming Association, a 2013 poll found public acceptance of gambling to be at the highest level of the past decade. Some 85 percent of Americans view casino gambling as an acceptable activity for themselves or others. Overall acceptability is above 80 percent for all age groups and is highest among younger individuals, those age 21 to 39, and lowest, 82 percent, among those age 60 and over.³⁷⁷

The national experience seems to indicate that while more accepting of legalized gambling, the public wants it to be contained within a strict regulatory framework. As the 1999 National Gambling Impact Study noted, "Governments determine which kinds of gambling will be permitted and which will not; the number, location, and size of establishments allowed; the condition under which they operate; who may utilize them and under what conditions; who may work for them; even who may own them. And because governments determine the level and type of competition to be permitted...they are also a key determinant of the industries' potential profit and losses."³⁷⁸

Many state and local governments are in a conflicted position when it comes to legalized gambling. They are often the beneficiaries of increased tax revenues, but they must also bear the

³⁷⁸ NGISC, p. 1-4.

financial burden of any social dysfunction caused by gambling. States that operate lotteries are actually gambling providers and maintain an exclusive monopoly on that service.

No responsible public official wants to harm his community. The challenge public officials confront is knowing what gambling-related course of action will produce desired results given strong and conflicting public opinion and data.

Debate over the benefits and costs of legalized gambling starts with the definition of exactly what is a social “cost” and a “benefit.” Economist Douglas Walker³⁷⁹ notes that researchers fail to agree on the appropriate way to conceptualize and quantify how gambling may affect society. He identified the need for a standardized methodology for measuring the costs and benefits of legalized gambling and believes that public policy debate is hampered by the lack of such a model.³⁸⁰ Measuring and comparing “social costs” across governmental jurisdictions can also present challenges. For example, if one community elects to commit considerable funds to battle problem gambling and another similar community does not, is it reasonable to assume that problem gambling is greater in the former community?³⁸¹

According to Walker, it is important to understand this distinction because the level of government expenditures may not necessarily reflect the magnitude of a social problem. Another aspect of this is that a well-funded, effective public program located in one community, may attract clients from outside that community and thereby inflate the local extent of the problem. A good example of this is services provided to homeless persons.

Economist Earl Grinols has written extensively on the benefits and costs of legalized gambling. According to Grinols, the social costs of gambling mainly fall into nine categories: crime costs, business and employment costs, bankruptcy, suicide, illness related to pathological gambling, social service costs, direct regulatory costs, family costs, and abused dollars.³⁸²

a. Crime

Of the costs associated with legalized gambling, crime is usually a foremost governmental concern. It has a direct impact on a community’s resources and quality of life. Any increase may require the allocation of additional resources that could offset the potential revenue benefits of legalized gambling. Crime may also lower the quality of life in a given area, causing residents and businesses to leave and result in urban blight. Of all the arguments against legalized casino gambling, the concern that casinos will bring more crime into a community is

³⁷⁹ Walker has worked on various Spectrum projects, and is a key member of the team that authored this report. Walker is referenced as a third-party in this report in areas where we are citing his work that was performed independently of Spectrum.

among the most common. On the other hand, casino gambling is believed by some advocates to help reduce crime by providing good employment opportunities and reducing poverty.

In 2005, Maryland Attorney General J. Joseph Curran Jr. issued a report to a legislative committee on the potential impact of casino gambling in his state. He concluded, “It is simply a fiction to delude ourselves that it is possible to have casinos without more crime. Casinos would bring increases in every area of criminal activity.”³⁸³ The types of crime he cited included violent crimes, crimes against property, insurance fraud, juvenile crime, drug and alcohol related crime, domestic violence and child abuse. These crimes are driven by pathological gambling and organized crime elements.³⁸⁴ According to Curran, this increased crime would impose “tremendous costs on Marylanders.”³⁸⁵ He warned legislators that if they allowed themselves to become dependent on what he described as “a small percentage of casino profits,” they would become “trapped.”³⁸⁶

When the Massachusetts legislature was considering a casino proposal in 2008, the Massachusetts District Attorneys Association was more reserved and less strident. The group took no official position on the issue but made available a fact sheet that quoted a state legislative commission report. That report found that “... gambling expansion is likely to bring an attendant increase in crime volume, as is consistent with increases in visiting populations seen in other large developments across the country. There is no evidence conclusively pointing to an increase in crime rates from expanded gambling.”³⁸⁷

The 1999 National Gambling Impact Study Commission took a similar position when examining the relationship between crime and gambling. Due to inconsistencies in the types of crimes studied, the Commission noted that it was not surprising that the proponents of both views are able to advance research to support their views. Therefore, the Commission found the reliability of such studies questionable. The Commission concluded, “Taken as a whole the literature shows that communities with casinos are just as safe as communities that do not have casinos.”³⁸⁸

In a 2005 study published in *The Review of Economics and Statistics*, Grinols and Mustard examined the relationship between casinos and crime using county-level data for the

³⁸⁸ NGISC, p. 7-14.

United States between 1977 and 1996. Their sample covered all 3,165 US counties and focused on the seven FBI indexed crimes: aggravated assault, rape, robbery, murder, larceny, burglary, and auto theft. They found that most factors that reduce crime occur before or shortly after a casino opens. Those that increase crime, such as problem and pathological gambling, occur over time. The concluded that the effect on crime is low shortly after a casino opens and escalates over time.³⁸⁹ Although Grinols and Mustard considered their study to be one of the most comprehensive in terms of the counties covered and the variables used, it was not without its critics.

Walker faulted the Grinols and Mustard study for not adequately addressing the issue of causation: “Their results are invalid because of a variety of serious problems in their data and analysis. The authors simply compared casino to non-casino counties. But they did not control for the volume of tourists, so the crime effect they found may have been caused by tourism generally rather than casino tourism specifically. To show a valid link between crime and casinos, the authors would have needed to compare casino counties to other counties with non-casino tourism.”³⁹⁰ Walker believes that since few, if any, of the researchers Grinols and Mustard cite acknowledge this issue or account for it, the result is an overstatement of the social costs of casino gambling on government and society.³⁹¹

In a 2011 study, Grinols, Mustard and Staha studied the issue of how the type of visitors may affect crime. In an exhaustive study that analyzed data on National Park visitors between 1979 and 1998 in every county in the US, they concluded that the type of visitor and the nature of the attraction have significantly different effects on crime rates.³⁹²

Obviously, conflicting studies and interpretations of data present a huge challenge to state and local policy makers attempting to accurately gauge how casino gambling related crime might affect their communities. Another complication in analyzing the crime related costs of legalized gambling is that costs are often dispersed among various levels of government – federal, state, county and municipal. For example, the costs of criminal investigations and prosecution may be borne by county government and the costs of imprisonment by the state.

b. Public Health

Public health is another area in which state and local governments are both directly and indirectly impacted by legalized gambling. The World Health Organization, which established standardized definitions for community health care, broadly defines “health” as “The state of complete physical, mental, and social well-being and *not merely the absence of disease or infirmity*.”³⁹³ Advocates of casino gambling often cite its potential to improve the overall wellness of the community in many ways. Chief among these is the potential to create employment with tangible benefits such as good incomes, adequate health insurance, and access to quality health care. Such positive outcomes would improve the quality of life, vitality and overall well-being of a community.

Opponents are quick to point out that negative community health impacts may also accompany the advent of legalized gambling. Many of these would be related to pathological and problem gambling, which have been associated with unhealthful behaviors and outcomes such as drug and alcohol abuse, nicotine dependence, depression and insomnia. It has also been associated with higher rates of child abuse and neglect, domestic violence, unsafe sex and family break up. Such adverse outcomes weaken a community’s vitality and diminish its quality of life.

How effective the response to a public problem will be depends on how accurately the problem is understood. Addressing the challenge of problem and pathological gambling is difficult since an individual may be plagued by other pre-existing disorders such as drug and alcohol abuse or mental illness. Again, the question of causation must be addressed. Simply because certain types of behaviors are associated with gambling does not necessarily mean that gambling caused them. This condition is known as co-morbidity.

Co-morbidity was cited as a consideration by the 1999 National Gambling Impact study Commission. It noted: “Pathological gambling often occurs in conjunction with other psychological problems, including substance abuse, mood disorders, and personality disorders. The joint occurrence of two or more problems - termed co-morbidity- is an important, though complicating factor in studying this disorder. Is problem or pathological gambling a unique pathology that exists on its own or is it merely a symptom of a common predisposition, genetic or otherwise, that underlies all addictions?”³⁹⁴

Walker picks up on this point. “If gambling were not an option, a person who is predisposed to a pathological disorder may manifest his disorder in other unhealthy ways. Many pathological gamblers have other behavioral disorders. ... If pathological gambling is simply a symptom of some more basic disorder, then, it is the more basic disorder rather than gambling

³⁹³ “A Glossary of Terms for Community Health Care and Services for older Persons,” WHO Centre for Health Development Ageing and Health Technical Report Volume 5, 2004, http://www.who.int/kobe_centre/ageing/ahp_vol5_glossary.pdf. (Emphasis not in original.)

³⁹⁴ NGISC, p. 4-3.

itself that is the underlying cause of the adverse consequences and social costs of the pathological gambling.”³⁹⁵ He notes that according to the DSM-IV criteria, a person coping with bipolar disorder, who may meet all of the criteria for pathological gambling, is not considered a pathological gambler if the individual also meets the criteria for a Manic Episode, and the Manic Episode is responsible for excessive gambling.³⁹⁶

Similar questions arise if an individual is both an alcoholic and a compulsive gambler who abuses and neglects his family. To what extent is his alcoholism responsible for the harm and distress he causes his wife and children as opposed to his compulsive gambling?

The data do suggest that individuals who are afflicted with these sorts of behavioral disorders may be more inclined to problem gambling. However, even if opportunities to gamble were not readily available, government would still need to cope with the various manifestations of these other problems. The failure of policy makers to take co-morbidity into account may lead one to overstate the negative impacts of legalized gambling and lead to sub optimal government policies and programs designed to respond to those impacts.

How to manage any negative health impacts of gambling is clearly a concern to many state and local officials. As with crime, they will find little definitive guidance in the literature, which is often conflicting and ambiguous. Framing the problem with adequate precision to shape and enable an effective public policy response may be difficult.

A further complication is that what is often perceived as benefit of casino gambling may have some inherent negative health aspects as well. For instance, family sustainable employment is good, but employment in a casino can expose workers to long periods of second-hand smoke, of which the adverse health effects are well known.³⁹⁷ Shift workers and those required to work long hours can experience considerable disruptions of family and social activities since many of these are day oriented. Weekend work schedules can impede involvement in family sporting events or religious activities and diminish supportive social connections with those whose daily schedules are no longer similar. Family relationship strain can occur when one can no longer adequately assist with child care, shopping and housework. Many of these negative aspects may be ameliorated by a better understanding of them and adaptations and accommodations in the workplace.³⁹⁸

It is critical that state and local governments considering or already affected by legalized gambling evaluate and understand all its potential aspects. Many communities impacted by

³⁹⁵ Walker, “Challenges that Confront Researchers on Estimating the Social Costs of Gambling,” p. 2.

legalized gambling respond to public health concerns by conducting a community health impact assessment (“HIA”). An HIA is an informational tool designed and implemented by the local community to enable decision-makers to consider the health implications of proposed policies, especially policies that do not appear to have a direct health connection. It has three core functions: assessment, policy development and assurance.³⁹⁹

An excellent example of a HIA for a community considering legalized gambling is the Kansas HIA Project.⁴⁰⁰ It was conducted by the Kansas Health Institute, and funded in part with grants from the Health Impact Project, a collaborative effort by the Robert Wood Johnson Foundation and the Pew Charitable Trusts. The Kansas HIA Project thoroughly examined how the presence of a local casino could affect health, both positively and negatively. It examined potential risks, such as second-hand smoke exposure, traffic accidents, problem and pathological gambling, divorce and suicide. It also analyzed potential community benefits, such as job creation, increased tourism, increased state and local revenues, and health insurance. The goal of the assessment was to bring all health implications up for informed consideration and debate. The Kansas HIA believe they succeeded in that goal.⁴⁰¹

c. Traffic and Transportation Infrastructure

There are several pathways through which casino gambling may impact the state and local government transportation infrastructure. The roadway system needed to support increased levels of traffic may already be old, at capacity, or inadequately designed to accommodate new traffic patterns. The cost to bring the infrastructure up to requisite standards can be hundreds of millions of dollars. Impacts may also extend to public transportation. State and local governments may see train, bus or subway traffic increase to uncomfortable levels on certain routes requiring that they increase service levels. They may also feel pressure to establish unprofitable routes in order to transport workers who might otherwise be unable to get to work.

In many cases, a casino developer may agree to share some of the estimated costs of improvement or public transportation service as part of his approval process. In other cases, government may assume a portion of these costs in order to get a casino project going to enjoy other economic benefits.

In New Jersey in the mid-1990s, under Governor Christie Whitman, the state agreed to fund \$275 million in major roadway improvements to facilitate the development of a new casino resort proposed by Mirage Resorts and its CEO, Steve Wynn. It is currently the site of the Borgata Casino Hotel & Spa in Atlantic City. Donald Trump, who owned a casino on an adjacent

⁴⁰¹ *Ibid.*, p. 100.

property, strongly fought against the proposal.⁴⁰² He withdrew his opposition after the state included in the plan an access improvement to one of the casinos his company operated at the time.

One of the more immediate impacts state and local government may feel upon opening a new gaming facility is an increase in traffic on local roadways. The degree of the impact is subject to many of the aforementioned variables as well as the scale and location of the new facility. Sometimes, the impacts of traffic are felt regionally, in nearby communities that may have had no say in the development process. Connecticut was one of the first states to have Indian gaming, as it was forced upon it by a federal court decision. It can serve as an important example for two reasons. It demonstrates how the impact of a casino can transcend municipal boundaries and it shows how the lack of good regional planning can exacerbate their more challenging impacts.

Concerns regarding the impact of traffic were substantiated in an impact study Spectrum did for the State of Connecticut in 2009.⁴⁰³ Foxwoods opened its resort-casino in Ledyard in 1992 on Mashantucket Pequot Indian tribal land. According to Mayor John Rodolico, “The most immediate effect was the increase of traffic on roads,” Rodolico stated. “They’ve had tens of thousands of people going there from the day they opened.”⁴⁰⁴ Increased traffic volumes caused serious deterioration on old farm roads that were not up to handling the heavier traffic.

d. Law Enforcement and Emergency Services

Emergency services are those services provided by various levels of government such as police, fire and emergency medical responders that protect citizen lives and ensure public safety. Collectively, they are often referred to as “first responders” since they are usually among the first to arrive at the scene of a crime, emergency or disaster.

The impact of *non-criminal* demands on local law enforcement and other first responders is often overlooked or given secondary consideration in gambling impact studies. What impact will an attraction that operates on a 24-hour basis, seven days a week have in terms of additional service calls to the local police department for 911 emergencies, motor vehicle breakdowns, traffic accidents, disorderly persons, lost or missing property, missing and dispute resolutions?

Within the first year after the Horseshoe Casino Cleveland opened in Ohio, the city incurred \$3.1 million in additional expenses related to the police department largely due to

increased visitors and activity in its downtown area.⁴⁰⁵ According to the *Maryland Gazette*, the creation of a special county police unit for the area was necessary to keep a lid on problems in the vicinity of the new Maryland Live Casino in Hanover.

Spectrum's Connecticut gambling impact study found that the City of Norwich felt significant impacts from Indian gaming casinos eight miles away. City officials estimated casino-related costs to be anywhere from \$1 million to \$2.5 million a year. They include: A 27 percent increase in motor vehicle accidents from 1991 to 2004. An increase in police overtime from \$85,000 in 1991 to more than \$280,000 in 2008. A 76 percent increase in calls for service from people needing police from 1992 to 2004.⁴⁰⁶

In some communities, local police and fire departments may be required to purchase additional equipment and provide specialized training for their workers. Government may reduce these costs by requiring gambling establishments to share the costs. To minimize the impact on local police, gambling establishments may be required to maintain certain levels of in house security personnel or establish a fee for service arrangement to cover when additional police service may be desired or required. Governments may impose additional tax assessments on gambling establishments to offset additional law enforcement costs.

e. Driving Under the Influence

Do casinos increase the number of drunk drivers on local roads? Earlier in this report, we noted that destination resorts can increase demands on law enforcement, a subject we will explore in more detail here. Casinos are known for their fast-paced environments where customers are encouraged to let loose and have a good time. This often means enjoying alcoholic beverages that may be provided complementarily to the customer while gambling or enjoyed at a casino lounge or restaurant. The anecdotal evidence would indicate a connection between an increase in drunk drivers and casinos. Drunken driving arrests were reported to have nearly doubled in Bethlehem, PA, after the Sands Casino Resort opened in 2009 while they have remained consistent in a nearby non-casino county.⁴⁰⁷

In 2009, Norwich, CT, located near two Indian gambling casinos, reported that DUI arrests had more than doubled since 1992. The towns of Montville and Ledyard also experienced significant increases. Roughly 20 percent of the motorists in Montville, Ledyard and North Stonington arrested for DUI acknowledged to police that their last drink was at a casino. One

⁴⁰⁵ Thomas Ott, "Cleveland casino short of revenue projections but draws praise," *The Plain Dealer*, May 12, 2013 http://www.cleveland.com/metro/index.ssf/2013/05/cleveland_casino_short_of_reve.html.

such motorist was charged with manslaughter in March 2009 for allegedly causing a fatal accident by driving the wrong way on I-395.⁴⁰⁸

In what is considered one of the first empirical studies on the subject, Chad D. Cotti and Douglas M. Walker explored whether there is a link between casino expansion and alcohol-related fatal traffic accidents. They found that in urban areas, casinos actually reduce the rate of DUIs, while the rate for suburban and rural areas increases. They believe the difference may be that in urban areas the shorter driving distances, availability of public transportation, and substitution of gambling for bar-hopping might account for the decreased rate, while the rate increase in less populated areas is caused by the increase in distance driven by alcohol-impaired drivers.⁴⁰⁹

There are several ways in which governments respond to the problem of intoxicated driving. Public education campaigns can make people more aware of the dangers of drunk driving and the severe penalties for it. Strict enforcement and police tactics such as drunk driving check points are also effective. Ensuring that the proprietors of establishments that serve alcoholic beverage properly train their staff on how to detect and handle intoxicated patrons is also necessary to reduce the problem.

f. Social Service Costs

Legalized gambling is believed to impose higher costs on governments by attracting more people to the area who may sooner or later need assistance from government programs. These individuals may have come as patrons of the gaming facility or in search of work. The energy and 24-hour activity attendant with casino is a special attraction for the homeless or otherwise financially destitute. It offers opportunities to panhandle and to seek temporary respite and accommodation in the public areas of facilities that may be open 24 hours daily.

A survey conducted by the International Union of Gospel Missions found what they called “compelling evidence of a link between gambling and homelessness.” According to their survey, nearly 1 in 5 homeless men and women cited gambling as a cause of their condition.⁴¹⁰ A 2005 study found clear links between gambling and homelessness but acknowledged that other factors such as mental illness and drug and alcohol abuse may also be factors.⁴¹¹

SECOND DRAFT - CONFIDENTIAL

The 1999 National Gambling Impact Study Commission found that individuals with gambling problems appeared to account for a higher percentage of the homeless population. The commission noted the Atlantic City Rescue Mission reported that 22 percent of its clients are homeless due to a gambling problem.⁴¹² The Atlantic City Rescue Mission says that half the state's homeless population turns to it for services. The homeless problem in Atlantic City, received widespread attention recently when a mentally ill homeless woman randomly killed two Canadian tourists in the city's shopping district.⁴¹³

The presence of a greater number of homeless individuals who are either attracted by, or adversely impacted by, a gambling facility may impose additional public costs for psychiatric and mental health counseling, public welfare, food stamps, emergency shelter operations, traveler assistance and indigent medical care. These costs would be in addition to any increase in any related law enforcement costs. The impact on the quality of life in a given area caused by vagrancy and aggressive panhandling is not readily quantifiable.

Atlantic City has begun to address its substantial homeless problems by adopting a "Single Point of Entry" model. All agencies that serve the homeless population collaborate and refer new clients to a single point of entry where they are evaluated, assigned a case manager and if appropriate, returned to their point of origin.

g. Schools

To the extent that legalized gambling and related economic development attracts more workers with families to an area, an impact on local schools is to be expected. Casinos will mostly hire service workers who will be lower paid and ethnically diverse.

In its Connecticut study, Spectrum found that in Norwich, CT, public school administrators identified annual cost of nearly \$2 million related to casinos. In order to handle the influx of immigrant workers attracted to casino jobs, the district had to create an "English for Speakers of Other Languages" program because students speak nearly 30 different languages. Students originated from Haiti, Peru, the Dominican Republic and Eastern Europe. In addition, thousands of Chinese-speaking workers were recruited from New York City in late 2001 to work at the casinos. Norwich Public Schools reported to Spectrum that in 1999 it enrolled 40 ESOL students.

Some jurisdictions address the impact on schools by requiring that a portion of casino revenues be dedicated to education. In 2009, Ohio voters amended the state constitution to allow casinos in Cleveland, Toledo, Columbus and Cincinnati. The state levies a 33 percent tax on

⁴¹² NGISC, p. 7-27.

adjusted gross gambling revenue. School districts in Ohio will share 34 percent of that tax revenue.⁴¹⁴ However, some Ohio education officials think that any casino related funding, while still desirable, would be too small to have any meaningful impact.⁴¹⁵

h. Workforce Training

The workforce required by a new gambling establishment may vary depending on its size, nature and amenities. Casino development may spur other nearby development and create even more employment opportunities. To the extent that the local latent workforce may adequately possess the skills and training necessary meet the new demand, the project can be easily assimilated into the community with little or no governmental assistance. If the local workforce is inadequate, then training and importation of workers may be necessary.

A report to the Massachusetts Gaming Commission estimates the cost of developing and training a workforce for its new casino industry at \$9 million dollars.⁴¹⁶ Responsibility for workforce training usually comes under the local Workforce Investment Board. These entities were established throughout the United States by the Workforce Investment Act of 1998. Their role is to coordinate and direct state, local and federal funding into appropriate employment training programs.

35. Conclusion

Gambling is a reliable and predictable funding source for governments, except in times of pronounced recession and when competition arises in neighboring states. Five states in FY 2010 relied on gambling receipts for more than 5 percent of their own-source state budget revenue.

Gambling, however, costs governments in both direct and indirect ways in such areas as crime, public health, infrastructure, law enforcement and emergency services, social services, schools (in those areas with large, high-employment casinos) and workforce training. Whether the economic benefits brought by gambling receipts outweigh its economic and social costs has been the subject of considerable research – and considerable debate.

G. Impacts of Gambling: Social, Criminal, Personal, Fiscal

A general description of gambling impacts, including: Social, criminal, and personal; short- and long-term fiscal.

Legalized gambling can affect society in a variety of different ways, positive and negative. Among the most common forms of legalized gambling, including lottery, pari-mutuels such as horse and greyhound racing, and casinos, the spread of legal commercial casinos has generated the most interest, concern, and debate during the past two decades. Indeed, the introduction of casinos has been a controversial subject in Florida for years; as a result, the State endeavored to study casinos back in 1995.⁴¹⁷

In this section, we provide a general description of impacts from gambling, including moral/ethical concerns; social, criminal, and personal impacts; as well as long- and short-term effects of casinos development. As commercial casinos are the most controversial form of gambling expansion currently being considered in Florida, our analysis focuses on the literature and evidence on the impacts of casinos.

The economic and social impacts of legalized gambling have been widely written about and studied. Studies generally focus on the effects of gambling as they relate to quantifiable metrics such as employment, crime, tax revenues, and problem gambling. Analyzed less are impacts that are somewhat subjective and not readily quantifiable.

1. Moral and Ethical Issues

Some people oppose gambling in all its forms, such as lotteries, race tracks, and casinos. According to a May 2013 Gallop Poll survey, 64 percent of Americans find gambling morally acceptable.⁴¹⁸ From these results one may infer that 36 percent of Americans do not. Those morally opposed cite its negative impacts on a person's character and values. In their view, to the extent that more people gamble more readily, society's strength and vitality are undermined and weakened.

Irving Kristol, a Professor of Urban Values at New York University, articulated this point of view at a time when legalized gambling was just beginning its national proliferation in America. In 1974, he wrote an op-ed piece for *The Wall Street Journal* opposing the spread of legalized gambling. At the time, a movement to legalize gambling was underway in New Jersey. Kristol wrote that in a gambling environment, a person often succumbs to "fantasies of getting something for nothing." He felt that gambling undermined classical social virtues such as moderation, self-reliance, self-discipline, thrift, and diligence. At the same time, it encouraged

⁴¹⁷ "Casinos in Florida" (Tallahassee, FL: Office of Planning and Budgeting), 1995.

⁴¹⁸ Frank Newport and Igor Himelfarb, "In U.S., Record-High Say Gay, Lesbian Relations Morally," Gallup, May 20, 2013 <http://www.gallup.com/poll/162689/record-high-say-gay-lesbian-relations-morally.aspx>.

classical vices such as extravagance, avarice and the lack of social responsibility.⁴¹⁹ Kristol believed that state supported gambling was antithetical to a capitalist society. It subverted the values capitalism needed to thrive.

The same year that Kristol wrote his op-ed, Congress established the first Commission on the Review of National Policy Toward Gambling. The purpose of the Commission was to study all aspects of gambling that existed in America at the time and to develop recommendations for the states to follow when establishing policies. In its final report, the Commission began with a direct, straightforward observation: “Gambling is inevitable.”⁴²⁰ Inevitability, however, did not mean that the Commission was insensitive to what it called the “invidious and emotional aspects” of the moral debate. The Commission acknowledged that to a significant number of Americans, “gambling ... is absolutely wrong on both religious and secular moral grounds.” They warned that in sanctioning gambling, “states may be intruding into areas of sincerely held theological and ethical convictions.”⁴²¹ However, moral concerns were “largely unsusceptible to objective analysis.” Therefore, the Commission, while recognizing religious perspectives, considered such issues somewhat beyond their purview.⁴²²

Kristol expressed the secular moral arguments against gambling. In testimony submitted to the Commission, clerical leaders expressed the religious arguments.⁴²³ They held gambling was wrong because it encouraged sloth and an obsession with money over one’s fellow man. It also fostered a desire to achieve wealth without work. It distracted one from pursuing activities that brought one closer to God.

As public acceptance of gambling as a leisure activity increased, arguments based on its moral costs lost ground. According to Rev. Tom Grey, spokesman for the National Coalition Against Legalized Gambling, church opposition to gambling has not been widely effective. Grey, who railed against gambling for years as a United Methodist pastor, said the argument that gambling is sinful does not adequately counter strong public unwillingness to restrict certain personal freedoms. Consequently, Grey’s anti-gambling coalition now avoids explicit mentions of religion, and presents more economically based arguments that focus on addiction, bankruptcy and crime.^{424,425}

SECOND DRAFT - CONFIDENTIAL

Focus on the Family, a politically influential Christian organization dedicated to protecting and strengthening families, strongly opposes all forms of legalized gambling. In their official position statement they write: “Gambling is driven by and subsists on greed. For this reason, the activity is morally bankrupt from its very foundation. Gambling is also an activity which exploits the vulnerable – the young, the old and those susceptible to addictive behaviors. Further, gambling entices the financially disadvantaged classes with the unrealistic hope of escape from poverty through instant riches...gambling undermines the work ethic. It is based on the premise of ‘something for nothing,’ a concept that sanctions idleness rather than industriousness, slothfulness instead of initiative.”⁴²⁶

In Florida, the Ethics and Religious Liberty Commission of the Southern Baptist Convention has been a leading voice in warning about the effects of widespread gambling. The commission notes on its website:

“Among the arguments advanced to justify gambling is the one which says that all of life is a gamble or a risk. But risk-taking in gambling is different from the risks involved in the normal routine of life. The risks in gambling are artificially created. In other ventures, the risk is part of the creative process. For example, the contractor risks labor and capital to build a house and make a profit. Unlike the gambler, he assumes a risk that is necessary to society’s economic life, and he relies on more than chance in seeking to make a profit.

“It is also argued that some people like to spend their recreation money betting on horses or playing slot machines, just as others prefer to spend theirs for a round of golf or a movie. Gambling obviously provides a kind of recreational excitement for some, but the cost to individuals, families, the economy, and society is too high to justify it.

“Seen in this light, gambling is personally selfish, morally irresponsible, and socially destructive. Therefore, gambling must be vigorously resisted. Such resistance requires an understanding of the problem, a workable plan of attack, and a personal commitment to work against gambling.

“The gambling problem results from two interrelated factors: (1) Many people have a desire, often a compulsion, to gamble. (2) Most of these people have access to gambling opportunities. The ultimate goal of a plan of action is to control the desire to gamble and eliminate the access to gambling opportunities.

“When the desire to get something for nothing and the opportunity to gamble go hand in hand, resistance to one requires resistance to the other. To attempt to eliminate the desire

⁴²⁵ The National Coalition Against Legalized Gambling is now called Stop Predatory Gambling (<http://stoppredatorygambling.org/>).

SECOND DRAFT - CONFIDENTIAL

without abolishing the opportunity is to invite failure. It is a matter of record that as gambling becomes more accessible, more people gamble. Thus, legalization is not the answer to the gambling problem. Instead, it is one primary cause of the gambling problem.

“Any adequate plan to deal with gambling must be both extensive and comprehensive. It must be extensive enough to include the spiritual, educational, and legal approaches. It must be comprehensive enough to incorporate the family, the world of work, community clubs and organizations, the church, and government.”⁴²⁷

Moral opposition against gambling is not limited to the Christian community. In Maryland, both the Baltimore Jewish Council and the Baltimore Board of Rabbis officially came out against expanded gambling. Rabbi Gila Ruskin of the Harford Jewish Center and first vice president of the Baltimore Board of Rabbis stated she believes expanded gambling preys on the weak and encourages addiction. “You are exploiting people who don’t have expendable income all in the name of raising money for causes like education. But what do you tell those kids about where the money for their school came from? That we raised the funds by preying on people’s weaknesses and temptations.”⁴²⁸

The late William Eadington, who wrote extensively on the costs and benefits of gambling, noted that some opposition to legalized gambling is based on “straightforward moral disapproval” but does not examine that aspect further.⁴²⁹

Notably, the successful 1976 campaign to legalize casinos in Atlantic City, NJ included religious leaders in its army of proponents. A local rabbi and the monsignor of a parochial high school in the Atlantic City region were used in radio advertisements that claimed morality was on the side of increasing employment, reducing hunger and getting families off welfare. “Many religious leaders believe this is the real moral issue,” the two clergy leaders said in the radio ads.⁴³⁰

In sum, morality has historically been a factor in shaping public policy. Capital punishment, pornography and gay marriage are some examples where much weight is placed on moral perceptions and concerns when shaping policy. It is a challenging factor since it may be

difficult to reach an agreement on what is “moral” and concepts of acceptable morality may change from one community to another, as well as over time.

36.Opportunity Costs

In economics, an opportunity cost is defined as the cost incurred in forgoing the benefits of one course of action while pursuing the benefits of another. For example, one might decide to take a job right out of high school rather than go to college. In the short term, one reaps the benefits of not paying tuition costs and losing four years’ worth of salary, but in the long term, one might pay the cost of earning less income over a period of many working years.

Those opposed to legalized gambling sometimes argue that it is pursued as an economic development policy because it is easier and its financial benefits are more immediate. However, they argue that those benefits are offset by its social costs and may not be sustainable in the long term. According to opponents, while casino gambling might make local sense, especially in financially distressed communities that have few, if any, viable alternatives, the collective long term costs of its proliferation are significant and have a national impact. Thousands of workers and billions of dollars in capital are directed into investments that, they argue, do little to increase America’s overall economic strength and competitiveness in a global economy. Casino opponents argue that casinos invest little, if anything, to improve worker skills and training and capital could arguably be better invested in more productive industries.

The problem with assessing opportunity costs is that knowing the outcome of any course of action with any degree of certainty is not possible. A high-tech startup company may fail and leave a community less well off than if it had a stable, profitable casino. Ironically, choosing the best path to achieve desired economic goals is itself basically a gamble.

37.Social, Criminal, Personal Impacts

a. Negative Impacts

We now turn to a discussion of specific negative impacts that are often thought to accompany legalized gambling. The goal in this section is to provide a brief review of those impacts that have been studied and quantified in the academic literature.

Disordered Gamblers

Most of the negative socioeconomic impacts often associated with gambling, and casino gambling in particular, are the result of problematic behaviors by “disordered gamblers.” These are people who gamble to an extent beyond recreational gambling such that it disrupts their

career and/or personal/professional relationships.⁴³¹ Psychologists estimate the prevalence rate of disordered gamblers to be between 0.4 percent and 2.0 percent of the general population.^{432,433}

However, prevalence rates may be greater or lower in areas. In discussing this issue with representatives from the Florida Council on Compulsive Gambling (“FCCG”), it appears that the prevalence rate could be significantly higher, depending on where one attempts to identify problem gamblers. The 0.4 percent – 2.0 percent rate is based on the psychology literature, much of which is based on clinical diagnoses of problem gamblers. However, as noted by Laura Letson at the FCCG, “These questions should be asked at places other than the psychologist’s office.” One may see a much higher prevalence rate if the diagnosis was attempted at non-clinical settings, such as in homeless shelters, in social service environments, or at correctional facilities. Letson suggests that under the FCCG’s analysis, based on a preliminary, two-question problem gambling screen of the arrestee population, the prevalence rate may be over 15 percent. Other FCCG data indicate that prevalence rates for adults and adolescents may be in the same range (15 percent to 18 percent).⁴³⁴

Disordered gambling is a condition which is usually diagnosed in a clinical setting. The *Diagnostic and Statistical Manual* (“DSM”), published by the American Psychiatric Association, is the standard for the diagnosis of problem/disordered gambling. The DSM-IV (1994; 2000) lists a set of 10 criteria that are indicators of disordered gambling. A person may be diagnosed as a pathological gambler if they endorse at least five of the following indicators:⁴³⁵

1. Is preoccupied with gambling (e.g., preoccupied with reliving past gambling experiences, handicapping or planning the next venture, or thinking of ways to get money with which to gamble)
2. Needs to gamble with increasing amounts of money in order to achieve the desired excitement
3. Has repeated unsuccessful efforts to control, cut back, or stop gambling
4. Is restless or irritable when attempting to cut down or stop gambling
5. Gambles as a way of escaping from problems or of relieving a dysphoric mood (e.g., feelings of helplessness, guilt, anxiety, depression)

⁴³¹ Walker, *Casinonomics*, 2013, p. 111.

⁴³² Ibid, p. 112.

⁴³³ Psychologists classify gambling problems into different categories, including problem gamblers, pathological gamblers, and the newest term, disordered gamblers. We do not differentiate among these different levels of severity in this overview of the impacts of gambling.

⁴³⁴ Laura Letson, Florida Council on Compulsive Gambling, phone interview, May 24, 2013.

⁴³⁵ American Psychiatric Association, *Diagnostic and Statistical Manual*, 4th edition, 2000.

6. After losing money gambling, often returns another day to get even (“chasing” one’s losses)
7. Lies to family members, therapist, or others to conceal the extent of involvement with gambling
8. Has committed illegal acts such as forgery, fraud, theft, or embezzlement to finance gambling
9. Has jeopardized or lost a significant relationship, job, or educational or career opportunity because of gambling
10. Relies on others to provide money to relieve a desperate financial situation caused by gambling

In the new edition of the DSM (“DSM-5”), to be published in summer 2013, the terminology changes from “pathological gambler” to “disordered gambler,” and the eighth criterion – related to illegal acts to finance gambling – has been dropped. The diagnosis will require at least four of the nine remaining indicators.⁴³⁶

Disordered Gambling and the Proximity of Casinos

One important question for any government jurisdiction considering the expansion of legalized casinos is whether the prevalence of disordered gambling is related to the proximity of casinos. In other words, is the introduction of casinos to an area likely to increase the prevalence of disordered gambling? Several studies have examined this issue. While the odds of a person being a disordered gambler are about 1 percent, for people within 10 miles of a casino the odds increase by 90 percent (to 1.9 percent), according to one study.⁴³⁷ However, it is unclear whether an increase in this risk is the result of new people in that area developing gambling problems, or whether a casino attracts existing disordered gamblers to the area. Another study on adolescents found that the number of different forms of legal gambling in a state is related to an increase in the proportion of problem gamblers in the state.⁴³⁸

Hence, the evidence suggests that the negative impacts from casinos that are associated with disordered gambling would likely be worse in Florida if casino gambling is expanded there. Indeed, representatives from the FCCG indicate that, since 2005, help-line calls in the state have increased over 50 percent. This is during a time period in which the amount and types of legalized gambling increased dramatically in the state – namely with the introduction of racetrack casinos in South Florida and the development of two Seminole Hard Rock destination

⁴³⁸ John W. Welte, et al., “Legal Gambling Availability and Problem Gambling Among Adolescents and Young Adults,” *International Gambling Studies*, Volume 9, 2009, p. 94.

resort casinos. FCCG Executive Director Pat Fowler notes, “More than 50 percent of help-line callers identify slot machines as their primary problem.” Another 30 percent identified cards as their main problem; this has increased as no-limit poker has increased in availability.⁴³⁹

At the same time, however, psychologists have not found significant differences in prevalence rates across jurisdictions or across time. So, even though casinos have spread across the United States, the prevalence of disordered gambling has not increased at the same rate. Since Florida already has several legal types of gambling, including tribal casinos, it is unclear how the introduction of commercial casinos would affect the prevalence of problem gambling. But if help-line call data are an indication, gambling problems would likely increase with expanded gambling in Florida.

Negative Social Impacts Associated with Casinos (and Gambling)

Social scientists have been studying the economic and social impacts of legalized gambling, particularly casino gambling, since the early 1990s. Such research was frequently cited in debate over the expansion of casinos into new states, especially when the research offered a monetary estimate of the “social costs of gambling.” As an example of the importance of this area of research, the National Gambling Impact Study Commission discussed the various social costs of gambling, and the National Research Council’s *Pathological Gambling* discusses the academic research in detail, although these resources are somewhat dated now.⁴⁴⁰

Among the many studies that examine the negative social impacts that are often associated with gambling in general, and casino gambling in particular, the paper by Thompson, Gazel, and Rickman represents one of the most careful analyses.⁴⁴¹ These authors surveyed Gamblers Anonymous members, people who might be expected to be more likely than the general public to be diagnosed as disordered gamblers. Based on the survey responses, Thompson et al. estimate the annual social costs per disordered gambler to be around \$9,500. This amount includes the following types of social cost: employment (including lost work hours, unemployment compensation, and lost productivity and unemployment; \$2,941), bad debts (\$1,487), civil court (\$848), criminal justice (including thefts, arrests and trials, and incarceration; \$3,498), therapy (\$361), and welfare (\$334).

There is no doubt that disordered gamblers sometimes engage in socially costly behaviors. However, such monetary social cost estimates have been criticized in the literature.⁴⁴² One of the key problems with estimating the monetary value of social costs is that most

⁴³⁹ Pat Fowler, Florida Council on Compulsive Gambling, phone interview, May 24, 2013.

⁴⁴⁰ National Research Council, *Pathological Gambling*, 1999.

⁴⁴¹ William N. Thompson, Ricardo C. Gazel, and Dan Rickman, “The Social Costs of Gambling,” *Gaming Law Review*, Volume 1, p. 81-89.

⁴⁴² See, for example, Douglas M. Walker and A. H. Barnett, “The Social Costs of Gambling: An Economic Perspective,” *Journal of Gambling Studies*, Volume 15, 1999, p. 181-212.

disordered gamblers also have other behavioral problems, such as alcohol or drug use problems.⁴⁴³ Yet, most social cost studies simply attribute all of the social costs created by these individuals to the gambling problem. There is no research that successfully partitions the costs among the various behavior problems experienced by the individual.⁴⁴⁴

While it is not possible to offer an objective social cost monetary estimate without making a variety of arbitrary assumptions, it is informative to discuss the different types of problems that are most commonly associated with disordered gambling. In other words, a qualitative, rather than quantitative, discussion of social costs is more useful.

Casinos and Crime Rates

One of the most common concerns people have with the expansion of gambling is that it may cause an increase in crime rates. Such concerns are often voiced by members of the law enforcement community. For example, Sarrah Carroll of the Florida Sheriff's Association indicates that she believes there is a link between gambling and crime. Her organization is opposed to any expansion of gambling in Florida because of concerns that crime problems would be exacerbated.⁴⁴⁵ Certainly each community may have different experiences with gambling-related crime, depending on the types of gambling available and other characteristics of the community in question.

Over the past three decades numerous researchers have examined the relationship between casino gambling and crime rates. One of the most commonly cited studies is the 2006 study by Grinols and Mustard.⁴⁴⁶ These authors examined county-level crime data from 1977 through 1996. As do most studies on the subject, Grinols and Mustard focus on the FBI's *Uniform Crime Reports* Index I crimes, which include "street crimes": aggravated assault, rape, robbery, murder, larceny, burglary, and auto theft. They argue that approximately 8 percent of casino county crime can be attributed to the existence of casinos. Several studies confirm the Grinols and Mustard results; yet others find no relationship between casinos and crime rates.

Although the Grinols and Mustard paper received a lot of attention, it has also received a significant amount of criticism because the authors calculated the crime rate in a way which overstates the impact of casinos. Crime rates should reflect the risk of an individual being victimized by crime.⁴⁴⁷ In a county with no tourism, for example, calculating the crime rate is

⁴⁴³ James R. Westphal and Lera Joyce Johnson, "Multiple Co-occurring Behaviours Among Gamblers in Treatment: Implications and Assessment," *International Gambling Studies*, Volume 7, 2007, p. 73-99.

⁴⁴⁷ Jay S. Albanese, "Casino Gambling and Crime," testimony before the NGISC, September 10, 1998, p. 191-198. <http://govinfo.library.unt.edu/ngisc/meetings/10sept98/p230910.pdf>.

simple; it is the number of crimes committed divided by the population at risk (or county residents). But if there is significant tourism in a county, then the crime rate should be calculated as the total number of crimes committed divided by county residents plus tourists. Since Grinols and Mustard divided crimes by county population only – and excluded tourists from their population measure – their calculations almost certainly overstate the effect of casinos on crime.

The 2010 study by Reece⁴⁴⁸ significantly improved on the Grinols and Mustard study, as Reece controlled for the number of tourists and also the number of casino customers – two critical adjustments absent in the Grinols and Mustard study. Although Reece's analysis is much more thorough than the Grinols and Mustard analysis, he examined only Indiana. Nevertheless, his findings are an important contribution to the overall understanding of casinos and crime. In summary, Reece finds that burglaries increase in a county a few years after a casino opens. However, car thefts and aggravated assaults decreased. Increased casino volume reduces larceny, car theft, aggravated assault, and robbery.⁴⁴⁹

A recent, fairly comprehensive review of the casino-crime literature shows that almost all studies that find a relationship between casinos and crime calculate the crime rate by excluding the tourists from the population at risk. Those studies that do include the tourists in the population measure find no casino effect on crime rates.⁴⁵⁰ Given the best available evidence, it seems unlikely that the existence of casinos causes an increase in crime rates, properly calculated. There *may be* a relationship between casinos and crime, but there is no good evidence, as yet, to support such claims.

Problem Gambling and Crime

There is solid evidence that disordered gamblers are more likely than non-gamblers to engage in crime. This connection makes intuitive sense. For example, a person who has difficulty controlling his gambling may have to take drastic actions to obtain money to satisfy a gambling habit. A variety of studies that rely on Gamblers Anonymous members confirm that these individuals are more likely to commit crimes. For example, the study by Meyer and Stadler finds that 89 percent of their sample of pathological gamblers admitted to having committed at least one crime in their lifetime.⁴⁵¹ This rate is much higher than for the general population.

Even when analyzing a sample of people from the general population, the link between gambling behaviors and crime seems to exist. In one study of adolescents, researchers found that individuals who indicated gambling behaviors consistent with those from the DSM were

⁴⁴⁸ William S. Reece, "Casinos, Hotels, and Crime," *Contemporary Economic Policy*, Volume 28, 2010, p. 145-161.

⁴⁴⁹ Reece (2010), quoted in Douglas M. Walker, *Casinonomics*, 2013, p. 212.

⁴⁵¹ Gerhard Meyer and Michael A. Stadler, "Criminal Behaviour Associated With Pathological Gambling," *Journal of Gambling Studies*, Volume 15, 1999, p. 29-43.

significantly more likely to indicate that they had also engaged in crime, compared to individuals who did not exhibit disordered gambling behaviors.⁴⁵² However, the study also found that it was not casino gambling that is most linked to crime – rather, it was gambling on horse racing, sporting events, and card games that were found to have the link to crime.

It is difficult to predict whether or not the increased crime committed by disordered gamblers has a meaningful impact on overall crime rates, since disordered gamblers make up such a small portion of the population. Aside from that, as noted above, results from crime rate studies are inconclusive as a group. Nevertheless, the literature seems to confirm that problem gamblers are more likely to engage in crimes than non-problem gamblers.

Casinos and White-Collar Crime

Over the past two decades, there have been numerous suggestions in the academic literature and in political debate that gambling is associated with white-collar crimes, such as embezzlement, forgery and fraud. The motivation for such crimes, especially on the part of disordered gamblers, seems obvious. If one is accumulating significant losses at a casino, one way to finance such losses would be to use one's position of trust to commit a financial crime.

A link between casinos and gambling and white-collar crime has been cited in countless reports, newspaper articles, and even in the Congressional Record. A typical quotation is: "The American Insurance Institute estimates that 40 percent of white-collar crime has its root in gambling."⁴⁵³ The problem is, as explained by Joseph Kelly, the American Insurance Institute does not exist. The citation to this statistic often appears in anti-casino writings, some dating back to 1980, even though no one has apparently ever seen the report from which this statistic is said to come.⁴⁵⁴ Nevertheless, there is likely a motivation for individuals, particularly with gambling problems, to engage in white-collar crime to finance their gambling. The FCCG's Fowler suggests that white-collar crime is a problem associated with gambling in Florida, although it has not received adequate research attention to date.⁴⁵⁵

Indeed, there has been very limited research on a link between white-collar crime and casinos (or gambling, generally). A review of the literature finds one recent study. The 2008 study by Jay Albanese specifically examines the impact of the introduction of casinos on certain white-collar crime arrests. Albanese provides national arrest data for embezzlement, forgery, and fraud, between 1988 and 2005. (He excluded juvenile arrests from his data.) Embezzlement

⁴⁵² Christopher Clark and Douglas M. Walker, "Are Gamblers More Likely to Commit Crimes? Evidence From a Nationally Representative Survey of U.S. Young Adults," *International Gambling Studies*, Volume 9, 2009, p. 119-134.

⁴⁵³ Joseph M. Kelly, "The American Insurance Institute, Like THAT Bunny, Keeps Going and Going and Going ...," *Gaming Law Review*, Volume 1, 1997, p. 209-212.

⁴⁵⁴ Ibid.

⁴⁵⁵ Pat Fowler, Florida Council on Compulsive Gambling, phone interview, May 24, 2013.

arrests increased by about 20 percent over the period, forgery arrests increased by 19 percent, and fraud arrests decreased by about 11 percent.⁴⁵⁶

Since casino gambling, particularly by disordered gamblers, may be a motivation to engage in white-collar crimes (for example, in order to gain money with which to gamble), Albanese also examines arrest rates before and after the introduction of casinos in several markets: Atlantic City, NJ; Connecticut; Detroit, MI, and St. Louis, MO. Albanese also considers Las Vegas; even though casino gambling has existed there since the 1930s, Las Vegas grew dramatically during the 1990s. Albanese summarizes his findings on these markets:

“The pre- and post-casino arrest trends in these large casino jurisdictions were remarkably consistent, but unexpected. Embezzlement arrests increased in Connecticut (and nationwide), but declined in the other casino jurisdictions. Forgery arrests dropped in the casino jurisdictions despite a general increase in forgery arrests nationwide. Fraud arrests also dropped in casino jurisdictions, reflecting nationwide trends. These results indicate that there have been mostly net decreases in average annual arrests for these white collar offenses in these large casino jurisdictions.”⁴⁵⁷

There are limitations to Albanese’s data. For example, his data are presented as absolute arrest counts, not arrest rates (i.e., they are not per capita arrest rates). However, given the large number of tourists that visit casinos, this omission is likely to cause an overstatement of the crime rates in casino jurisdictions. In addition the picture may look different if convictions, rather than arrests, were considered. Finally, as Albanese notes (p. 342), it is impossible to determine whether gambling was the motivation for these crimes.

Albanese focuses his discussion of the causes of white-collar crime on embezzlement, since those arrest numbers increased nationwide during the period he studied. He cites evidence from interviews of prisoners who were convicted of embezzlement. Although there is a variety of stated causes for embezzlement, gambling is not one of the more common suggested causes. Rather, Albanese summarizes, “...females appear to embezzle primarily to keep a family or relationship together when threatened with financial problems, whereas men engage in status-seeking or status-maintaining behavior resulting in financial problems that they do not feel they can share with others.”⁴⁵⁸

Although evidence from prisoner interviews may not seem entirely convincing, evidence that supports Albanese’s doubt of a link between white-collar crime and casinos can be found in the fact that the DSM has dropped the diagnostic criterion that the person “has committed illegal

⁴⁵⁶ Jay S. Albanese, “White Collar Crimes and Casino Gambling: Looking for Empirical Links to Forgery, Embezzlement, and Fraud,” *Crime, Law and Social Change*, Volume 49, 2008, p. 339.

⁴⁵⁸ Ibid., p. 344.

acts such as forgery, fraud, theft, or embezzlement to finance gambling.” This criterion is “rarely endorsed” in attempts to diagnose disordered gambling.⁴⁵⁹

Political Corruption

Aside from crimes that may be committed by disordered gamblers, or others who may be seeking money to fund their gambling, historically there has been a concern about gambling and political corruption. The late US Senator Paul Simon wrote of gambling, “We have an industry ... that is growing rapidly. It is an industry...that [I think] has more of a history of involvement in corruption than any other industry.”⁴⁶⁰ Casinos may have a reputation for being “mob-run” because of Las Vegas in the early days. However, as most casinos in Las Vegas and elsewhere are now corporate owned and rigorously regulated at the state level, it raises doubt as to whether the mob has any involvement in the industry, and whether politicians systematically engage in corrupt activities with respect to the casino industry.

As with white-collar crime and street crime, there may seem to be an obvious motivation for corruption related to the gambling industry, and casinos in particular. First, the casino industry is growing very rapidly and is largely a cash business. Perhaps this would make it easier for the industry to corrupt the casino industry. More importantly, the casino industry needs politicians’ consent to exist. Since state governments control almost every aspect of the casino industry perhaps the spread of casinos across the United States is due, in part, to corrupt politicians. Alternatively, there could be a link whereby, once casinos are legal and operating, they contribute to the corruption of politicians in an attempt to win favorable regulatory changes.

Spectrum has significant experience in New Jersey, where the possibility of political corruption was first addressed in the Casino Control Act of 1977, in which Sec. 138 includes the following language: “No applicant for or holder of a casino license, nor any holding, intermediary or subsidiary company thereof, nor any officer, director, casino key employee or principal employee of an applicant for or holder of a casino license or of any holding, intermediary or subsidiary company thereof nor any person or agent on behalf of any such applicant, holder, company or person, shall directly or indirectly, pay or contribute any money or thing of value to any candidate for nomination or election to any public office in this State, or to any committee of any political party in this State, or to any group, committee or association organized in support of any such candidate or political party.”⁴⁶¹

In our experience, that provision was designed to help ensure public confidence in the governance of gaming, and was not – nor could it have been – expected to hermetically seal the

⁴⁶¹ New Jersey Casino Control Act <http://www.state.nj.us/casinos/actreg/act/>.

industry from politics, or vice versa. Indeed, as noted earlier, the provision did not prevent corruption, but it might have reduced it, and arguably achieved its principal goal of fostering confidence in the governance of gaming.

Since 2006, the casino/gambling industry has spent roughly \$30 million per year on lobbying federal politicians; it employs over 400 lobbyists.⁴⁶² Of course, it is legal for individuals or groups to make contributions to politicians, but such figures raise questions about the industry's influence on the government that regulates it.

It would be incredibly time-consuming to analyze individual corruption arrests to determine whether they are directly linked to casinos. However, there have been some high-profile arrests that were linked to gambling. Former Illinois governor Rod Blagojevich was convicted for a variety of crimes; one was for wire fraud in an attempt to shake-down a racetrack owner in return for the governor's support of a 2008 law that taxes casinos 3 percent to subsidize the racetracks.⁴⁶³ The paper by Martz provides a description of the anecdotal evidence that purports to show a link between casinos and corruption.⁴⁶⁴

We are aware of only one empirical analysis of the link between casinos and political corruption in the United States. The recent paper by Walker and Calcagno analyzes federal corruption convictions and casino adoptions/revenues using data from 1985 to 2000. Their statistical analysis focuses on whether changes in one variable (e.g., corruption convictions) improve the prediction of the other variable (e.g., casino revenues), and vice versa. If there is such a relationship, it is called "Granger causality" in the economics literature.⁴⁶⁵

The authors explain that their analysis lends little evidence to support a "culture of corruption" explanation whereby corruption leads to the introduction of casinos. Rather, they find evidence that predicted casino adoptions lead to corruption convictions. This suggests that casinos may be complicit in "regulatory capture" during the period studied. The implication is that regulators are "captured" by the industry they are supposed to regulate. Anecdotal evidence of regulatory capture by the casino industry can be seen in a variety of states. For example, several states that initially had casino loss limits (for example, \$500 per casino cruise) have since eliminated those limits. Some states which used to require casinos to be on boats no longer do.⁴⁶⁶

⁴⁶⁵ Douglas M. Walker and Peter T. Calcagno, "Casinos and Political Corruption in the United States: A Granger Causality Analysis, *Applied Economics*, in press.

⁴⁶⁶ *Ibid*, p. 25-26.

While such examples of regulatory changes favorable to the casino industry may be examples of regulatory capture, it should also be noted that the regulators themselves may benefit when regulations benefit the industry, as many state casino regulatory agencies are funded directly from taxes on casinos' operations. Although the study by Walker and Calcagno is the first empirical analysis to suggest a statistical link between casinos and corruption, one could criticize the study because it does not directly link casinos or the gambling industry to particular corruption convictions. In any case, a carefully designed regulatory framework for the casino industry can be the best way of preventing any corruption associated with casinos.

Bankruptcy

Non-business bankruptcy filings increased dramatically during the 1990s, doubling between 1990 and 1998.⁴⁶⁷ Yet, the US economy did relatively well throughout this period. The trend in bankruptcies coincided with the expansion of commercial casinos outside of Nevada and New Jersey during the early 1990s, so the increased availability of casinos and spike in bankruptcies could be related. Several studies have been published that examine this relationship. Key findings of these studies are described.

Nichols et al. studied bankruptcies from 1989 through 1998 in eight casino jurisdictions and control jurisdictions without casinos. They found that personal bankruptcy rates increased in seven of the eight casino communities they studied.⁴⁶⁸ The study by de la Viña and Bernstein examined 100 counties in 36 states, from 1989 through 1994; they did not find a relationship between the introduction of casinos and county bankruptcy rates.⁴⁶⁹ However, their lack of results may be because their study only went to 1994, only five years after casinos began to spread outside of Nevada and New Jersey. A more recent study found that bankruptcy rates in casino counties are initially higher than non-casino counties, but then casino-county rates actually fall below non-casino counties four to eight years after casinos are introduced. But rates again start to rise, and thirteen years after the introduction of casinos, bankruptcy rates in casino counties are 15 percent higher than in non-casino counties.⁴⁷⁰

Barron et al. examined data for over 3,000 US counties. Their results suggest that bankruptcy rates are higher closer to casinos, and that if casinos were eliminated there would be

a 5 percent decline in 1998 filing rates in casino counties.⁴⁷¹ Finally, the study by Garrett and Nichols indicates that individuals who visit out-of-state casinos have a 10 percent higher chance of filing for bankruptcy back in their home states, compared to individuals who did not visit out-of-state casinos.⁴⁷²

There have been several other journal articles that examine bankruptcy rates and their relationship to casinos. Considering those studies discussed above and the others in the literature, the majority of the evidence suggests that the existence of casinos does cause an increase in personal bankruptcy rates, especially in close proximity to casinos. It is likely that disordered gamblers are disproportionately responsible for the bankruptcy effect, as they are more likely than others to experience financial problems because of their gambling.

Drunk Driving Fatalities

Many casinos provide their patrons with free alcoholic beverages as long as they are gambling. Indeed, like bars, casinos represent an increasingly popular form of nighttime entertainment. To the extent that alcohol is relatively cheap at many casinos, then one might expect there to be a link between casinos and drunk driving.

There has not been published work that has studied the relationship between casinos and DUI arrests in the United States. However, one study examined casinos and alcohol-related traffic fatalities (“ARFAs”). The 2010 study by Cotti and Walker examined data from 1990 to 2000, a period that covers much of the recent US commercial casino expansion outside of Nevada and New Jersey. Their findings indicate that there is indeed a relationship between the existence of casinos and ARFAs.⁴⁷³ However, the relationship appears to be related to miles driven. In short, the study finds that ARFAs increase by 9.2 percent for casino counties with average population. However, the effect declines as county population increases. Specifically, they write:

“[R]ural or moderately sized counties will likely see an increase in alcohol-related fatal traffic accidents when casinos are present, but urban or greater-than-average populous counties may be expected to see a decrease in alcohol-related fatal traffic accidents when casinos are present.”

This relationship is explained to be the result of “miles driven.” That is, the reason drunk driving fatalities are likely to increase in rural casino counties is that the average patron must drive more miles to get to and from the casino. This increases the likelihood that an individual

will be in a traffic accident. At the same time, in urban or more populated casino counties, patrons do not have to drive as far, and they often have alternatives to driving, such as taking a cab, bus, or other public transportation. In addition, the authors suggest that urban casinos may serve as a substitute for bars and nightclubs, at which the average patron may consume more alcohol than at casinos.⁴⁷⁴

Negative Personal/Professional Impacts from Gambling

Much of the discussion in this section thus far has focused on potential negative impacts associated with gambling for which there are solid, publicly available data. Such data facilitate academic studies on the effects. Yet, a variety of negative social impacts from problem gambling are not easily quantifiable as they often occur in a person's career or personal life. Recall that the definition provided earlier of "disordered gambling" focuses on gambling having a negative impact on a person's career, professional relationships, and/or personal relationships. Then there are a variety of potential professional and personal problems that may result from a gambling disorder which are not well-documented in public statistics.

Nevertheless, there is solid anecdotal evidence that such problems exist. For example, the National Gambling Impact Study Commission discusses suicide, divorce, and homelessness rates, among other social problems often attributed to gambling.⁴⁷⁵ The NGISC describes a variety of individuals who testified that their lives had been shattered because of their own gambling problem or because of a family member's or spouse's gambling problem. Earl Grinols dedicates 21 pages in his book to reproducing newspaper headlines and quotations that provide anecdotal evidence of social problems and gambling.⁴⁷⁶ However, such cases may grab the attention of newspaper reporters and readers precisely because they are unusual or extraordinary cases.

One must look at academic research to determine whether a statistical link between gambling problems and these other problems exists. The National Research Council provides a review of research, prior to 1999, on many of the social impacts of gambling.⁴⁷⁷ Even then, however, the research on these issues was still relatively sparse.

As with the crime discussion from above, there is quite likely to be a distinction between the results from research that examines individuals (such as through survey research on Gamblers Anonymous members) and research that examines aggregates (such as studies on divorce or crime rates at the county- or state-level). We review some of the evidence from each of these types of studies.

SECOND DRAFT - CONFIDENTIAL

The study by Thompson et al. (1997) examined data collected from a survey of 98 Gamblers Anonymous members in Wisconsin.⁴⁷⁸ They report that 21 of their respondents indicated they had lost or quit their jobs, and attributed it to gambling. Of this group, 18 reported being unemployed for an average of over 12 months. Sixty-four of the respondents indicated missing work because of gambling. Thirty-eight of the respondents had been arrested, only 14 of which were attributed directly to gambling. Among the 98 respondents, 57 had sought professional help for their gambling problem; 15 had been hospitalized. Many of the survey respondents had other behavioral problems: 30 were alcoholics; 25 were compulsive shoppers; 22 compulsive overeaters; and 14 drug addicts.

Twelve of the respondents indicated they had marriage and family problems. Among the 30 respondents who were separated or divorced, 70 percent indicated that gambling was a cause. These effects of gambling are likely to have a significant impact on children. Problem gamblers are also probably more likely than the general population to consider or commit suicide. The survey of Gamblers Anonymous members indicated that 69 respondents had thought about suicide, 59 indicated they planned how they would commit suicide, and 23 had actually attempted suicide.

The survey statistics reported by Thompson et al. are indeed startling. However, as they represent GA members, they perhaps represent the extreme end of the distribution of individuals in society with the most serious gambling problems. A variety of other studies reports on similar social impacts of disordered gambling. The National Gambling Impact Study Commission and the National Research Council⁴⁷⁹ provide comprehensive discussions of many of these social impacts. The following table illustrates some problems commonly associated with disordered gambling. The table indicates the percentage of individuals among those surveyed who experience such issues, sorted by their gambling classification.

Other studies confirm the variety of personal, family, and career problems that often accompany a gambling problem. For example, the study by Shaw et al. (2007) discusses “collateral effects” of pathological gambling, including “divorce, domestic abuse, financial instability, friendship/ family loss, and the psychological and educational development of the children included in those families.”⁴⁸⁰

Studies that focus on disordered gamblers find that such individuals often have other behavioral problems and issues. Similar results have been found with respect to crime, although there is not clear evidence that casinos affect crime rates. There is an important distinction between “micro” studies which examine problem gamblers specifically, and “macro” studies which look at aggregate statistics. Although the studies cited above point to a variety of problems experienced by disordered gamblers and their surrounding society, these results do not always hold at an aggregate level. For example, one study examined county-level rates of suicide and divorce in eight new casino jurisdictions, comparing them to similar non-casino control jurisdictions.⁴⁸¹ The results are summarized:

“Suicide rates are not statistically different between casino and control communities. Divorce rates are lower in three casino counties, higher in one, and not statistically

SECOND DRAFT - CONFIDENTIAL

different in four. Overall, the results suggest no widespread, statistically significant increase in either suicide or divorce.”⁴⁸²

These results could be interpreted as meaning that casinos do not contribute to suicide and divorce. However, since the study relies on county-level data, one may not expect statistically significant results, especially since only about 1 percent of the population is likely to have a gambling disorder.⁴⁸³

Despite the lack of results in macro studies of the negative impacts of gambling, jurisdictions should be aware that such problems are likely to occur, even if they affect a relatively small number of people.

NIMBY

One final general concern that many people have with respect to legal gambling (and expanded gambling) is that it changes a community’s “feel.” Many times a person’s opposition to gambling can simply be summarized as NIMBY (“not in my back yard”). For example, a casino brings with it more traffic, perhaps more crime, and a variety of other changes that may fundamentally change a community. A person may not necessarily be opposed to the activity of gambling, but they would prefer that it not be located near their home.

More generally, and with respect to Florida, as Bill Lupfer of the Florida Attractions Association noted earlier in the report, expanded gambling would damage “the Florida brand” of wholesome, family-oriented tourism.

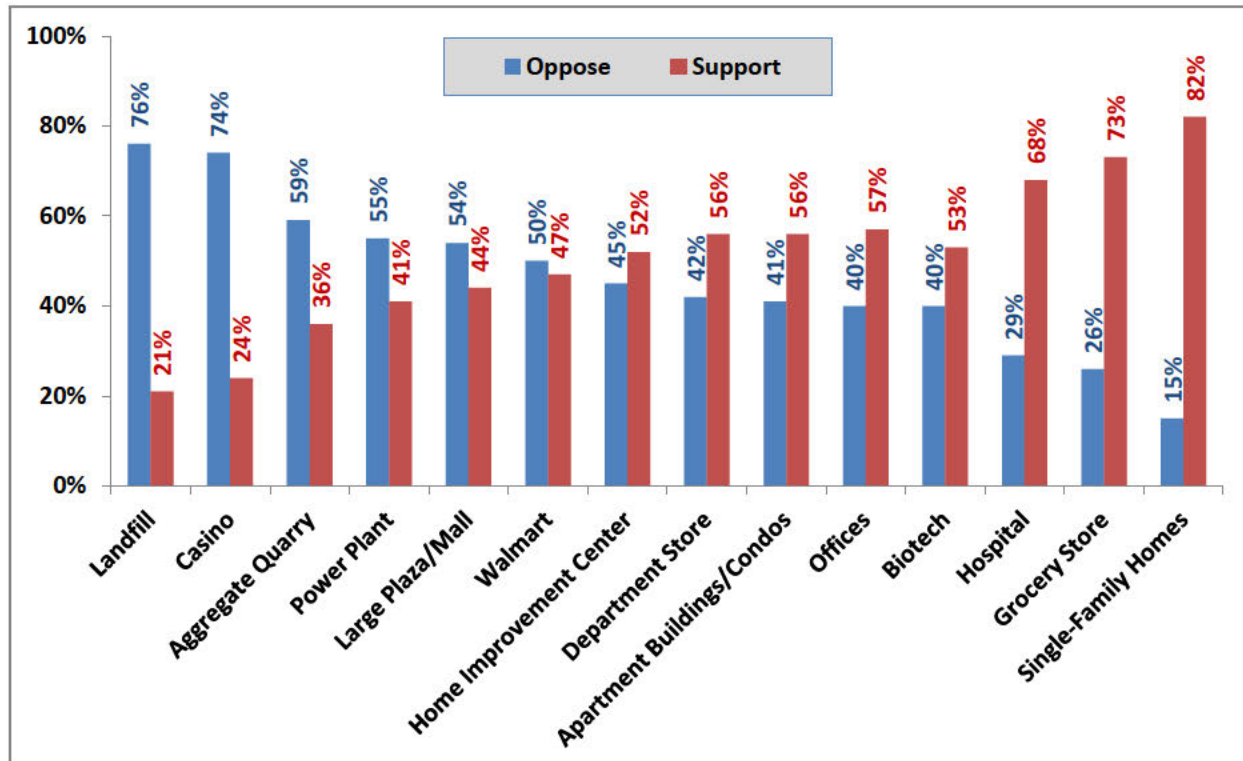

According to one poll, most Americans do not support having a casino in their own community. The Saint Consulting Group, a Hingham, MA, consultancy that specializes in land-use politics, every year or two conducts a nationwide poll (“The Saint Index”) asking Americans whether they would support a certain type of facility or land use in their community. “Casino” routinely ranks among the second- or third-most opposed category. This stands in contrast to the American Gaming Association’s annual poll, which in 2012 showed that 85 percent of Americans say that casino gambling is acceptable for themselves or others⁴⁸⁴ – demonstrating the NIMBY factor. The following chart shows the results of the most recent Saint Index:

⁴⁸² Ibid, p. 391.

⁴⁸³ However, this is not necessarily to say that divorce and suicide only happen among the population of disordered gamblers.

⁴⁸⁴ *State of the States* 2013, p. 32.

b. Positive Impacts

Legalized gambling has expanded in the United States quite dramatically since the 1960s. The lottery was introduced in New Hampshire in 1964, and now 43 states have a state-operated lottery. Horse and greyhound racing are also very common. Casinos, which began to spread outside of Nevada and New Jersey in the late 1980s, are now legal in 42 states.

State governments and voters tend to approve the legalization of commercial casinos for economic reasons. That is they expect significant economic benefits from the introduction of casinos. These benefits may include increased employment and an increase in average wages, economic growth (i.e., increases in per capita income), and increased tax revenues. These effects are discussed in much more detail in other parts of this report; here we provide a brief introduction to the literature on these economic benefits, particularly from casinos.

Employment and Wages

The casino industry promotes itself by publicizing employment data. Casinos can generate employment through the construction of their facilities and then through their day-to-day operations. The casino industry is very labor-intensive. As an example of this, the American Gaming Association's *State of the State* annual report lists the number of casino employees in

each state with commercial casinos.⁴⁸⁵ The report also lists “casino employee wages” as a state-level aggregate. There is certainly an effect on local labor markets when a new casino is built and operating. In general, one can think of the new casino as causing an increase in the demand for labor. As a result average wages should increase as employment increases.

However, casino critics often argue that casino jobs are low-quality, low-paying jobs. There are no academic studies of which we are aware that confirm this contention. Perhaps the most comprehensive, best analysis of the labor market effects of casinos was written by Chad Cotti in 2008.⁴⁸⁶ Cotti analyzes US county-level data, comparing counties with and without a casino. He finds that casino counties see an increase in employment after a casino opens. Further, his analysis shows that casinos create modest benefits to both employment and wages, but that the employment growth is negatively related to county population. (That is, there is a smaller impact on employment growth in more populous casino counties.)

Since Cotti’s analysis compares all casino counties to all non-casino counties, and because he controls for other economic variables in his analysis, we can be confident that his analysis isolates the impact of casinos. What his analysis does not show is the net effect of casinos compared to some other specific non-casino industry. In order to analyze the effects of gambling in Florida, jurisdictions in which casinos or pari-mutuels are operating should be compared to other non-gaming jurisdictions, while controlling for other economic variables.

These results should not be surprising, as a casino represents new economic activity in a local economy. As with other new businesses, one should expect that a new casino will create jobs. However, measuring the impact of casinos on employment requires a consideration of the *net impact*. That is, simply because a casino employs 1,000 workers does not necessarily mean that the casino created 1,000 new jobs. Some jobs may have been lost in other competing industries. Nevertheless, the available empirical evidence suggests that casinos have a positive impact on the labor markets in which they operate.

Economic Growth⁴⁸⁷

The casino industry does not typically promote itself as generating economic growth. This is probably because, as a political matter, how a casino would generate economic growth is a more abstract concept than, say, the creation of jobs. However, politicians often claim that casinos can be used as a tool for redevelopment. (See the discussion later in this section of the report.)

Casinos can lead to economic growth simply because they represent new economic activity in a region. Joseph Schumpeter discussed “the introduction of a new good” as one

⁴⁸⁵ 2013 *State of the States*, p. 12-22.

⁴⁸⁶ Chad D. Cotti, “The Effect of Casinos on Local Labor Markets: A County Level Analysis,” *Journal of Gambling Business and Economics*, Volume 2, 2008, p. 17-41.

⁴⁸⁷ This section draws from Douglas M. Walker, *Casinonomics*, 2013, chapters 2-6.

possible source of economic development.⁴⁸⁸ This proposition has been tested with respect to casinos.

The most recent evidence on the issue uses Granger causality analysis. Basically, what this statistical test does is determine whether the use of one variable (casino revenues) can improve the prediction of another variable (per capita income). If it can, then it is said to “Granger cause” the other variable. This is as close as economics can come to showing “causality” among two variables. The Granger causality analysis uses data from US states with commercial casinos, from 1990 through 2010. The analysis indicates strong statistical evidence that casino revenues do Granger cause economic growth.⁴⁸⁹

If we step back and consider what causes economic growth (increases in per capita income) to occur, it boils down to mutually beneficial transactions. That is, whenever a market transaction occurs between buyer and seller, both parties are expecting to benefit as a result of the transaction; otherwise they would not agree to trade.

The benefits of such transactions can be easily seen, especially for the sellers. Profit is simply the difference between the selling price and cost of production. This is the net benefit to the seller, which is the amount of money that remains after paying for the inputs to production. On the buyer’s side of the market, there is a similar benefit from the transaction, but it is a little more abstract. Consumers typically receive more in benefits from consumption than they had to pay for it. For example, if a person is so thirsty that he would be willing to pay \$5 for a soda, but he has to pay only \$2 at the neighborhood grocery, he receives a \$3 net benefit from the transaction. In a sense, the consumer has a “profit” analogous to the seller’s profit.

Any business that provides a good or service for which people are willing to pay helps to foster this process of mutually beneficial exchange. This is simply economic activity, which is the basis of economic growth. It matters little what type of business it is, as long as the customers receive benefits from the product at least as great as the amount they must pay.

As new businesses are formed, workers must be hired to produce the goods and services. This creates increased competition for workers; that is, there is greater demand for workers, and wages are likely to be pushed up as a result. The new firm must offer a salary and/or benefits in excess of workers’ next-best option; otherwise the new firm will not be able to find suitable employees. It is possible that the new firm would simply hire individuals who are currently unemployed. In this case, the new job still presumably represents an improvement over the unemployed worker’s current situation.

⁴⁸⁸ Joseph A. Schumpeter, *The Theory of Economic Development*, 1993, p. 66.

⁴⁸⁹ Walker, *Casinonomics*, 2013), p. 54-56. It should be noted that a similar study performed in 2007 did not find a Granger causal relationship between casinos and economic growth. However, as noted above, the most recent evidence suggests there is such a relationship.

Tax Revenues

Legalized gambling, in general, and casinos, in particular, can have a significant impact on state government budgets. Yet, the effect is not as large as many observers believe. In 2004, legalized gambling accounted for less than 2 percent of state revenues in most states. In Nevada, casino taxes represented 10.4 percent of state revenues. In Florida, the lottery represented about 1.7 percent of state government revenues during 2004.⁴⁹⁰ (We discuss this in more detail in Chapter III.)

Although legalized gambling is usually taxed at relatively high rates, this does not necessarily mean that the existence of a gambling industry necessarily results in a net increase of state tax revenues. For example, if there is a large “substitution effect”⁴⁹¹ away from other consumption, legalized gambling could actually result in a decrease in tax revenues. This result is unlikely in most jurisdictions, however, since tax rates on gambling are typically much higher than tax rates on other goods and services. For example, the “lottery tax” is about 40 percent. The effective tax rate on gross casino revenue ranges from 7 percent in Nevada to over 50 percent in several states.

Several researchers have examined the impact of legalized casinos and lotteries on state government revenues. For example, Siegel and Anders (1999) examine how Missouri county sales tax revenues were affected by the introduction of riverboat casinos.⁴⁹² They studied 1994-96 data, and found that a 10 percent increase in gambling tax revenue leads to about a 4 percent decrease in taxes from other amusement and recreation sources. The study by Borg et al. (1993) found that \$1 in lottery revenue has a cost of 15-23 cents in other types of government revenue.⁴⁹³ However, the lottery still leads to a net increase in state tax receipts; the “substitution effect” from the lottery is not very great.

The study by Walker and Jackson (2011) is probably the most comprehensive tax study in the United States, to date.⁴⁹⁴ They found statistical evidence that lotteries do lead to an increase in state net tax receipts, but that the positive effect diminishes as sales increase. Their casino result was interesting, that casinos have a mildly negative impact on state tax receipts. However, their analysis also finds a positive impact on state tax revenues from increases in per capita income (i.e., economic growth) and hotel employees (as a proxy for tourism). If casinos generate economic growth and are a significant component of a state’s tourism sector, then

⁴⁹⁰ Ibid, p. 68.

⁴⁹¹ This effect is discussed in more detail in Section IV of the report.

⁴⁹² Donald Siegel and Gary Anders, “Public Policy and the Displacement Effects of Casinos: A Case Study of Riverboat Gambling in Missouri, *Journal of Gambling Studies*, Volume 15, 1999, p. 105-121.

⁴⁹³ Mary Borg, Paul Mason, and Stephen Shapiro, “The Cross Effects of Lottery Taxes on Alternative State Tax Revenue,” *Public Finance Quarterly*, Volume 21, 1993, p. 123-140.

⁴⁹⁴ Douglas M. Walker and John D. Jackson, “The Effect of Legalized Gambling on State Government Revenue,” *Contemporary Economic Policy*, Volume 29, 2011, p. 101-114.

casinos may still have a positive impact on state-level tax receipts. So, although their analysis suggests that the direct effect of casinos on taxes is probably not positive, the overall impact of casinos may be positive when the economic growth and tourism effects of casinos are accounted for.⁴⁹⁵

38. Gambling-Specific vs. Non-Gambling Impacts (Job Creation and Wage Changes)

For any of the impacts discussed in the previous section, understanding the specific effects of gambling is more complicated than it may initially seem. This is because the relevant comparison for understanding the changes in society caused by gambling is not just between the situations before and after gambling is introduced. Rather, the relevant comparison is between the situation with gambling and *what otherwise would have happened*, called the “counterfactual.”

Consider an example in which there is a single plot of vacant land in a city, and the land owner is deciding whether to allow a casino or a shopping mall to be built. Let’s suppose the casino is eventually built. Then there will be employment and wage effects, for example, resulting from the building and opening of the casino. The jobs created by the casino, the wages paid, and taxes paid will likely be reported as the effect of the casino on the local/regional economy. The reported benefits of the casino are those compared to the situation prior to the casino being built. But this assumes that if the casino had not been built, nothing else would have been. But in our scenario, a shopping mall would have been built. Then to determine the net impact of a new casino, the effects of the casino should be compared to what would have likely happened had the shopping mall been built instead.

For the practical analysis of the impacts of casinos, it is difficult to always know what would have otherwise happened. One way of isolating the impact of casinos is to compare the situation in casino communities with those in non-casino communities. As an analysis of aggregates, this type of analysis can isolate the marginal impact of casinos, as long as other variables are controlled for in the analysis.

Perhaps more importantly, in considering the impacts of casinos, it is important to distinguish those effects that are specific to the nature of gambling (such as crime committed by problem gamblers), and those that also result from a casino, but are simply economic impacts caused by a new firm/industry entering a local economy.

By way of example, if wages increase in a community because some of its previously unemployed and under-employed adults are working at a casino, that would increase spending power in that region. That increased spending power could potentially result in increased investment by non-gaming businesses.

⁴⁹⁵ Walker, *Casinonomics*, p. 84.

SECOND DRAFT - CONFIDENTIAL

Hypothetically, such investments could include, say, a regional supermarket chain or a national pharmacy outlet in an area that previously did not warrant such investments. This economic growth would be casino-related, but it is not the result of gaming, in particular. Alternatively, consider if a local food store or local pharmacy is adversely impacted and hypothetically goes out of business, it is clearly an impact of the casino. But it is not necessarily gaming-related, but is rather related to general economic growth. Moreover, such an impact is adverse to that pharmacy owner, but may not be adverse to the community.

Similarly, if a casino raises the prevailing wage in an area, particularly for unskilled or semi-skilled work, that could have an adverse impact on a number of small businesses, such as small hotels, restaurants or fast-food franchises. Some may find that they cannot afford to pay the prevailing wage rate and still be profitable. That is an impact of casinos, but is not related to the specific nature of gambling, nor is it clear whether that is adverse or beneficial to the larger community.

Historically, Atlantic City and the Miami region, particularly Miami Beach, have had much in common, starting with their histories as East Coast tourist destinations. At various times, both endured economic downturns and experienced rebounds – sometimes with the same results – but clearly the catalysts were different. Atlantic City’s economic catalyst was the legalization of casinos, while Miami’s rebound has had multiple catalysts. Still, some of the same effects can be detected, as noted in a 2012 blog:

“There is a flip-side to Miami's rebound. While the super-rich are buying, locals continue to suffer. Wages and income levels are low, and the metro has a high level of income inequality. Miami's housing market and broader economy remains highly uneven and divided. While South Beach and the downtown corridor may be booming, the area inland is rife with housing misery, foreclosures and homelessness. The economic and social distance between the global super-rich and suffering locals is substantial and growing.”⁴⁹⁶

Atlantic City clearly offers parallels, as noted in this excerpt from “Hostage to Fortune: Atlantic City and Casino Gambling”:

“In the pre-casino world, Atlantic Avenue was Main Street USA, where the appliance dealer knew the insurance broker and both knew the barber and the shoe salesman. George Babbitt would have been quite at home in that Atlantic City.

“What casino gambling did to that world was turn it upside down by injecting the world of Wharton econometrics and advanced marketing techniques into its major arteries.

“Prior to casinos, the hotels and utilities, along with a few other companies ... were the only employers of more than a handful of people.

⁴⁹⁶ Richard Florida, “Why Miami’s Real Estate is Booming Again,” *The Atlantic Cities*, March 6, 2012
<http://www.theatlanticcities.com/jobs-and-economy/2012/03/why-miamis-real-estate-booming-again/1396/>

“Before gambling became a component in the economy, all the workers in the region who bore the title of vice president could have squeezed into the laundry room of the Marlborough-Blenheim hotel.

“Now, the Marlborough-Blenheim is gone, and Atlantic City has a banquet room full of vice presidents – real vice presidents who grew up in a world of competition. Now, they manage big banks and casino firms and national drug store chains, and they often outclass and outdistance their local counterparts.

“Most of the fast-food outlets and the new drug stores and appliance dealers opened in the suburbs. To the city came new law offices and new bank branches and other businesses that would likely not have considered Atlantic City as an ideal location in its pre-casino days have opened up. ...

“There are only so many ways to spend or save a single dollar, and the brokerage firms and the banks, and the haberdasheries, and the restaurants are in competition with each other for that dollar.

“The available outlets for the dollars, it seems, expanded as rapidly as the supply of dollars.”⁴⁹⁷

The economic patterns are the same, but the causes – and arguably any potential solutions – would be different, yet it must be noted that, while the presence of casinos was the proximate cause of Atlantic City’s disruption, the nature of this industry has no particular relevance to that disruption.

39.Short- and Long-Term Fiscal Impacts of Government Policies

In an increasingly competitive global economy, casino gambling is seen as a quick and easy way to create jobs, increase convention and tourism business and stimulate development of additional visitor attractions and amenities. However, to maximize the economic benefits of casino development and to minimize any potential negative impacts, it is vital that state and local policy makers have a clear understanding of how different implementation scenarios and community variables may affect short and long term outcomes.

Land-use planning and zoning power is the most effective tool that state and local governments have to plan for and control development related impacts. Casinos are unlike other types of development projects such as an office park or a shopping center. Casino development may potentially have a greater impact on traffic, housing stock, the labor force and municipal services. Newer, more sophisticated planning tools such as geographic information systems and economic modeling enable government planning to have a better understanding of the potential impacts of projects and thereby plan more appropriately.

⁴⁹⁷ Michael Pollock, *Hostage to Fortune: Atlantic City and Casino Gambling*, 1987, p. 160-161.

SECOND DRAFT - CONFIDENTIAL

A study of the impact of casino gambling in Connecticut by Spectrum found that the absence of regional planning had significantly impeded state and local officials in their efforts to address the impact of two Indian casinos on traffic, public safety and education.⁴⁹⁸

Atlantic City is a classic example of how poor land use planning, particularly in the formative period immediately following the passage of casino gaming, greatly impeded orderly development and the city's potential.⁴⁹⁹ Rampant, unchecked real estate speculation became an immediate and enduring problem for the city. The phenomenal success of Atlantic City's first casino made potential casino developers willing to pay almost any price to get their projects started. Slum neighborhoods suddenly took on new value. To real estate speculators, only the land had value. Buildings and businesses did not. Thousands of lives were disrupted when buildings were sold and tenants evicted. Once-stable neighborhoods suddenly became vacant and desolate.

Atlantic City government did little to tame speculation and in many ways encouraged it. Its master plan was deemed unrealistic and local officials did little to adhere to whatever guidelines it did offer. Nearly everyone who applied for a variance got one. In effect, everywhere in the city was a potential casino site.⁵⁰⁰

The national experience with legalized gaming has matured to the point where policy makers have a much better idea of what may or may not work effectively in a particular community.

Prior to 1978, casino gambling was only legal in Nevada, where it was implemented in 1931. In 1976, New Jersey became the nation's second state to approve legalized gambling. In New Jersey, legalized gambling was specifically intended to be "a unique tool of urban redevelopment."⁵⁰¹ According to its enabling legislation, "a limited number of casino rooms in major hotel convention complexes, permitted as an additional element in the hospitality industry of Atlantic City, will facilitate the redevelopment of existing blighted areas and the refurbishing and expansion of existing hotel, convention, tourist, and entertainment facilities."⁵⁰² The state constitution limited casino gambling solely to Atlantic City, one of the state's most economically distressed communities.

For a number of years, Atlantic City was the only legal casino gaming venue in the eastern United States during a period when the public's interest in casino gambling was

⁴⁹⁸ "Gambling in Connecticut: Analyzing the Economic and Social Impacts," *Spectrum Gaming Group*, June 22, 2009.

⁴⁹⁹ By D.W. Nauss, "Atlantic City Planning Does Not Pass Go," *New Jersey Reporter*, Volume 9, No. 10, 1981, p. 6-13.

⁵⁰⁰ *Ibid.*

⁵⁰¹ New Jersey Casino Control Act, N.J.S.A. 5:12-1.

⁵⁰² *Ibid.*

heightening. The spectacular profitability of Atlantic City's first casinos, their initial success in creating construction and permanent jobs that paid good salaries and provided good benefits, fostered widespread interest in casino gambling as an economic development tool. Although the urban redevelopment aspects of New Jersey's casino experiment were debatable, other states took note of casino gambling's economic impact and wanted to get in the game. In 1989, South Dakota and Iowa approved legalized gambling, initiating a new era of casino expansion. Currently, commercial casinos (non-Indian gaming) operate in 23 states.⁵⁰³

By 2008, Atlantic City's remarkable financial performance began to slip, due largely to the national recession and, more ominously, to growing competition from nearby states with new casinos. In 2012, among all states with casino gaming, New Jersey experienced the largest drop in both gross gaming win and gaming tax revenue.⁵⁰⁴ One of its newest and largest casinos, the \$2.4 billion resort, Revel, which opened in May 2012, filed for bankruptcy less than a year later.⁵⁰⁵ As one recent observer noted, "The Revel is a hulking reminder of big dreams going wrong and gambles not paying out. ... City planners and state legislators looking to casinos as sure ways of generating revenue should take note of this cautionary tale."⁵⁰⁶

The financially ailing Revel is not alone. The \$2.3 billion Foxwoods Casino Resort, owned by Mashantucket Pequot Tribal Nation in Connecticut, is also struggling financially.⁵⁰⁷ Like Atlantic City, with new competition coming on line in Massachusetts, Connecticut too can expect to see declining revenues and a more competitive gaming environment.

The dramatic rise and fall of Atlantic City's casino industry holds important lessons for other jurisdictions considering casino gambling. Casinos must be right sized and properly integrated into their host communities. Neither exists in a vacuum and both must be able to respond quickly to changing consumer tastes and market conditions. By establishing itself largely as a convenience destination, failing to plan for gaming competition elsewhere, and failing to responsibly incorporate casinos into the social and economic fabric of the city, the prognosis for both Atlantic City and its casino industry is an open question.

Workforce development is another area where proper planning can have positive short- and long-term impacts. Casino resorts are labor intensive and require a variety of skill levels to operate efficiently and meet the expectations of their patrons. Depending on the magnitude of

their workforce demands, a new casino could cause a major disruption in the regional labor market. Getting unskilled and low skilled workers into the workplace can be a challenge.

In Massachusetts, where casino development was recently enacted, it is anticipated that over 30,000 individuals will need to be considered for employment in order to fill the 10,000 jobs that are expected. To meet this objective, the state recently ramped up its workforce recruitment process and employment infrastructure. To accomplish this, a collaboration of workforce stakeholders joined together. These include one-stop career centers, community based organizations, organized labor, community colleges and other public and private educational entities.⁵⁰⁸

The past three decades provide policy makers with an abundance of data and first-hand examples of how casino gambling impacted a community and what the role of policy makers should be. However, a clear, compelling understanding of the costs and benefits remains elusive and the academic literature is contradictory.

The 1999 National Gambling Impact Study Commission Report noted that social and economic impacts are not as easily severable as those responsible for policy making would prefer.⁵⁰⁹ Quantifying gambling related social costs and benefits can be extremely difficult. The Commission went on to note that the economic benefits of casino gambling appeared most powerful in more financially distressed communities where economic development opportunities were fewer.

In a 2005 study, Phineas Baxandall and Bruce Sacerdote compared the experience of counties in the United States that have casinos with counties that do not. They found that casino development appears to produce both modest positive effects as well a modest negative effects as well no statistically significant effects at all in some areas. They analyze the effects of casinos at the county level rather than the state level because entire states are simply too large to discern a casino's influences on outcomes such as employment or crime.⁵¹⁰ In *Gambling in America: Costs and Benefits*, Earl Grinols found that when all relevant factors were considered, the social benefits of casino gambling were outweighed by the social costs.⁵¹¹

The national experience with casino gambling has led policy makers, urban planners, social scientists and casino developers to recognize that a casino's chance of success increases if

⁵¹¹ Earl L. Grinols, *Gambling in America: Costs and Benefits*, 2004.

it is properly sized and blended into the host community. The type, scale and format of a casino will inevitably be a factor in what impact it has upon the community.

Iowa was an early adopter of casino gambling and Dubuque is often cited as a community where casino gambling has been a successful component of an overall economic development strategy. A 2011 report noted that one would be hard pressed to find someone opposed to casinos among local residents.⁵¹² Dubuque Assistant Chief of Police Terry Tobin noted that his department does not have any concerns about organized crime, prostitution, robbery or other predatory crimes. City Manager Michael Milligen stated that poverty was not a problem and that local wages have increased.⁵¹³ Iowa is unique among states with casino gambling. In every county that has a casino, voters must pass a referendum approving casino gambling to continue.⁵¹⁴ In Dubuque, the last such referendum passed four years ago with 70 percent of county voters approving.⁵¹⁵

David G. Schwartz, Director of the Center for Gaming Research at the University of Nevada, Las Vegas, notes how casino resorts have undergone significant transformations since they first appeared in Nevada in 1931. In their early form, they consisted of low-rise motel buildings with 200 to 800 rooms centered around a casino/theater/restaurant area. Other design elements included spacious grounds and swimming pools. Beginning in the mid-1950s, casino operators developed larger, thousand-plus room hotel towers atop vast, low-rise buildings containing the casino, lounges, theaters, convention facilities and restaurants. All the amenities were integrated into a casino resort complex. In the 1990s, casino operators took these design elements further by developing elegantly appointed 3,000-room plus hotel complexes. These facilities, often costing \$1 billion or more, had distinctive architectural designs, elegant spas and pool areas, gourmet restaurants associated with world recognized chefs and high-end retail. They also placed a greater emphasis on the non-gaming aspects of the facility.⁵¹⁶

Eadington of University of Nevada, Reno wrote extensively on the social and economic impacts of casinos and is credited for almost singlehandedly establishing the economics of gambling as a field of study.⁵¹⁷ He noted that it is commonplace in a community considering casino gambling that the forces for and against actively debate the pros and cons of the proposal

by focusing on the impacts they believe it will have on the community. Such debates are usually extremely emotional and contentious. However, according to Eadington, such debates too often reflect little or no understanding of the different types of casinos models and legislative frameworks and how these factors may affect desired community outcomes.⁵¹⁸

a. Different Casino Models

Eadington believed that in terms of increasing the economic potential of casino gaming while minimizing the costs, the modern integrated resort casino (another term for a destination casino resort) model offers the greatest potential. Many jurisdictions have “gaming centric” casinos. These are places where one mostly goes to play slot machines and table games. This type of facility generally will provide limited food and beverage options along with limited hotel accommodations, or none at all. Usually, 80 percent or more of their revenues come from gaming activities.⁵¹⁹

Conversely, integrated resort casinos offer a wide variety of leisure and entertainment options other than just gambling. They all have iconic architecture and require significant capital investment. By offering superior dining, entertainment and shopping, they often become popular attractions that appeal to both domestic and international tourists. They appeal to a broader market and compete more effectively for the high-end visitor dollar than gambling-centric casinos. The employment potential of integrated resort casinos is also greater. Their 24-hour operations, diversity of offerings and specialized services, require that they employ substantially more highly skilled and professionally trained employees than gaming-centric casinos.⁵²⁰

Integrated resort casinos pose more potential for convention related growth. Convention and conference organizers prefer to have their event in a venue that attendees will find attractive and appealing in order to achieve maximum attendance. Convention goers often want adult forms of entertainment. Integrated casino resorts with their vibrant nightlife, ample room supply, conference facilities and host of amenities can help fulfill that need.

Gary Loveman, Caesars Chairman and CEO, identified a hybrid model, discussed earlier in this report. He contends that the conventional view of casinos being either convenient neighborhood based slot parlors or as integrated resort casino destinations is incomplete. He states that over the past decade another model has emerged for policy makers to consider which he calls “the city integrated model.”⁵²¹ According to Loveman, its defining feature is integration with its community’s pre-existing businesses and attractions. In this model, the casino serves as a

⁵¹⁸ William R. Eadington and Meighan R. Doyle, “Everything to Everyone,” *Global Gaming Business Magazine*, February 3, 2010. <http://ggbmagazine.com/issue/vol-9-no-2-february-2010/article/everything-to-everyone>.

hub whose spokes extend out beyond its own amenities to established restaurants, shops, hotels and cultural organizations in the adjoining area. Its outward, rather than inward, focus renders it distinct from the integrated resort casino model while capturing many of that model's benefits.

In May 2012, a city integrated-style casino, Horseshoe Casino Cleveland, opened in Cleveland, OH, and may offer helpful insights to policy makers. Financially, its first year has produced mixed results. Profits have been lower than anticipated and the city will only receive \$13.4 million in gaming taxes, well below earlier estimates that assumed additional construction and ranged as high as \$29 million. However, the city's share is offset by the \$3.1 million in additional expenses related to the police department, which had to triple staffing in its downtown unit. Overall the casino's impact on the downtown area is considered positive with business owners saying the area is far more active and livelier. Crime did not soar as some predicted and the casino did not cause any adverse impact on local bars and restaurants. The casino employs 1,600 locals.⁵²²

The new Horseshoe Casino in downtown Cincinnati, OH, is following the same model. The casino, which does not have its own hotel, has entered into partnership agreements with several nearby hotels and restaurants.⁵²³

40. Conclusion

The academic research reviewed here suggests that casinos can have a variety of significant social and economic impacts, both positive and negative. Perhaps the most important question is whether casinos generate more benefits than costs. Unfortunately, the answer to this question is not obvious, and probably depends on the jurisdiction under consideration. Certainly in some jurisdictions, casinos have had a large positive impact, such as in Las Vegas and in the Gulf Coast of Mississippi. But casinos may bring their own problems. Most of the negative social impacts studied in the literature come from "disordered gamblers," who psychologists estimate represent about 1 percent of the general population. These individuals experience a variety of problems, including marital and career problems. They also sometimes engage in crime in order to deal with the financial problems caused by their excessive gambling.

It is important that any jurisdiction carefully consider these possible impacts prior to introducing or expanding legalized gambling. Although there may be obvious benefits from casinos, such as job creation and a new source of tax revenues, research confirms that there are some social harms that accompany the economic benefits of casinos.

⁵²² Thomas Ott, "Cleveland casino short of revenue projections but draws praise," *The Plain Dealer*, May 12, 2013, http://www.cleveland.com/metro/index.ssf/2013/05/cleveland_casino_short_of_reve.html

SECOND DRAFT - CONFIDENTIAL

When considering the economic and social impacts of a casino, we must consider the effects of the casino relative to what otherwise would have happened (or what business might have otherwise opened). In addition, we must consider whether the observed effects are related to economic changes, in general, or are due to the nature of gaming specifically.

The experiences in a variety of casino jurisdictions confirm that careful planning is important for the success of the casino industry. Casinos should be integrated with their surrounding communities; they should be introduced in appropriate sizes and numbers for the current and potential future markets. The benefits of introducing casinos can be maximized, and the negative impacts minimized, if their development and regulation is carefully considered.

III. Economic Assessment of Florida's Existing Gambling Industry

As discussed throughout this report, Florida has an extensive gambling industry, principally through its state lottery, Native American casinos and pari-mutuel facilities. Each of these gambling sectors generates revenue that contribute to the Florida economy through tax payments, direct employment, indirect employment and induced employment. This chapter of the report quantifies the economic impact of the industry.

A. Gambling Sectors: Size and Importance

An analysis of gaming subsectors and their size and economic importance.

In Chapter II(B) we discuss the size and extent of Florida's primary gambling sectors, including the revenues. Here we provide more detail as to the revenue performance of each sector and, where available, the annual employment and wages, as well as purse, handle and attendance data for the pari-mutuel sectors. Spectrum endeavored to obtain, on a sector basis the desired data going back to 1990, but only the pari-mutuel performance data were available going back that far.

1. Pari-Mutuel

The Division of Pari-Mutuel Wagering does not collect the number of people employed at pari-mutuel facilities but upon request we did receive 2012 data showing that the industry's wages, exclusive of payroll taxes and benefits and compensation paid to directors, were \$148.8 million. Following are analyses of key performance and economic indicators for each pari-mutuel sector. It is important to note that wages and jobs for the racing sectors represent direct facility employment only; they do not account for the jockeys, trainers and others who provide economic impact but are not track employees.

a. Racetrack Slots

As of 2012, the six Florida racinos collectively had 3,319 employees – or an average of 553 employees per racino in both gaming-related and non-gaming capacities.⁵²⁴ The following table shows slot-machine-related operating results for the six racinos for year ended 2012.

⁵²⁴ 2013 State of the States.

SECOND DRAFT - CONFIDENTIAL

Figure 50: Florida racino slot performance (2012)

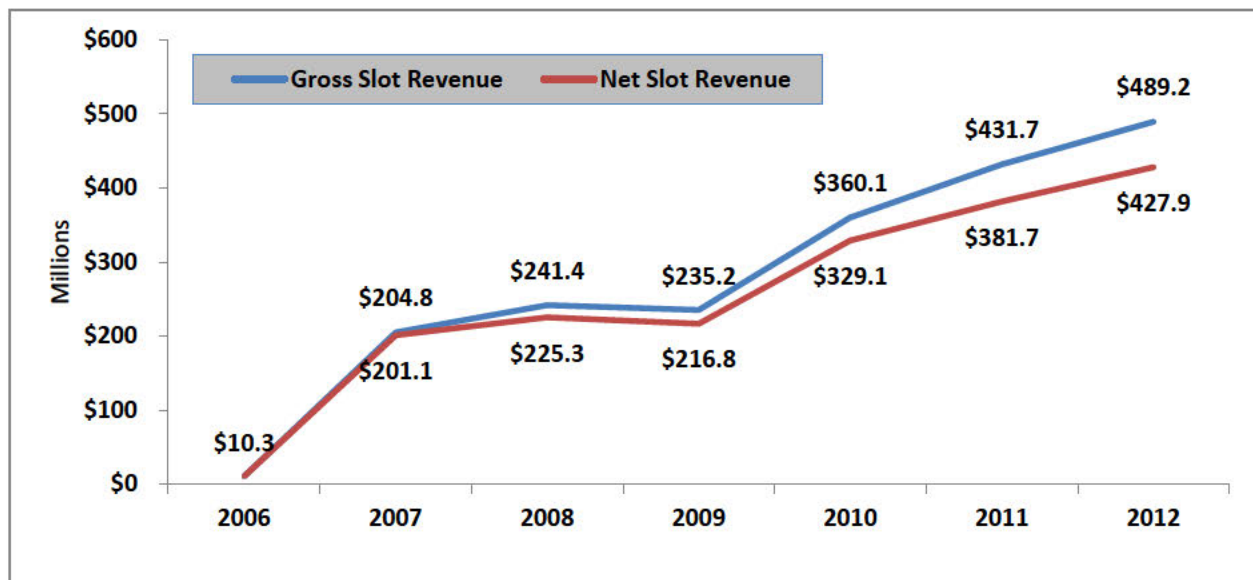

Racino	Casino Miami	Magic City	Calder	Gulfstream Park	Mardi Gras	Pompano Park	FL TOTAL
Slot Revenue	\$59.3	\$79.0	\$90.2	\$59.9	\$61.9	\$138.9	\$489.2
Promo Credits	<u>(\$6.4)</u>	<u>(\$2.2)</u>	<u>(\$17.8)</u>	<u>(\$9.0)</u>	<u>(\$8.8)</u>	<u>(\$17.2)</u>	<u>(\$61.4)</u>

Slot Rev. Unit / Day	\$165	\$273	\$204	\$194	\$161	\$261	\$211
Net Slot Rev. Unit / Day	\$147	\$266	\$164	\$165	\$138	\$229	\$185

Source: Florida Department of Business and Professional Regulation

As illustrated, Florida's six racinos generated slot revenue of \$489.2 million in 2012. Net slot revenue for Florida's six racinos was \$427.9 million in 2012, as \$61.4 million of revenue was in form of promotional credits. Promotional credits averaged 12.5 percent of slot revenue for the six racinos. The average daily win per slot was \$211; however, netting promotional credits reduced this average to \$185 over the annual period.

The following chart shows annual slot revenue (both gross and net) from inception through calendar year ended 2012.

Figure 51: Florida racino slot performance, 2006-2012

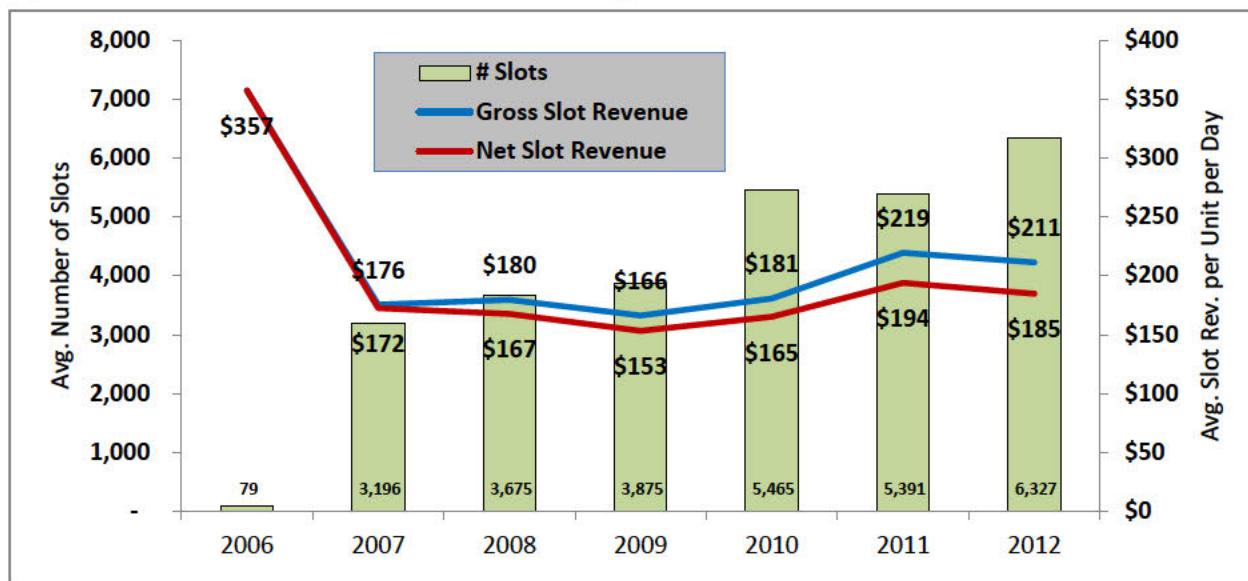

Source: Florida Department of Business and Professional Regulation

From inception through 2012, Florida's racinos have generated \$1.97 billion in gross slot revenue and \$1.79 billion in net slot revenue. The following chart shows annual average slot revenue per slot machine per day (both gross and net) through 2012, along with average number of slots in operation annually.

SECOND DRAFT - CONFIDENTIAL

Figure 52: Florida racino slot revenue/machine/day and counts, 2006-2012

Source: Florida Department of Business and Professional Regulation

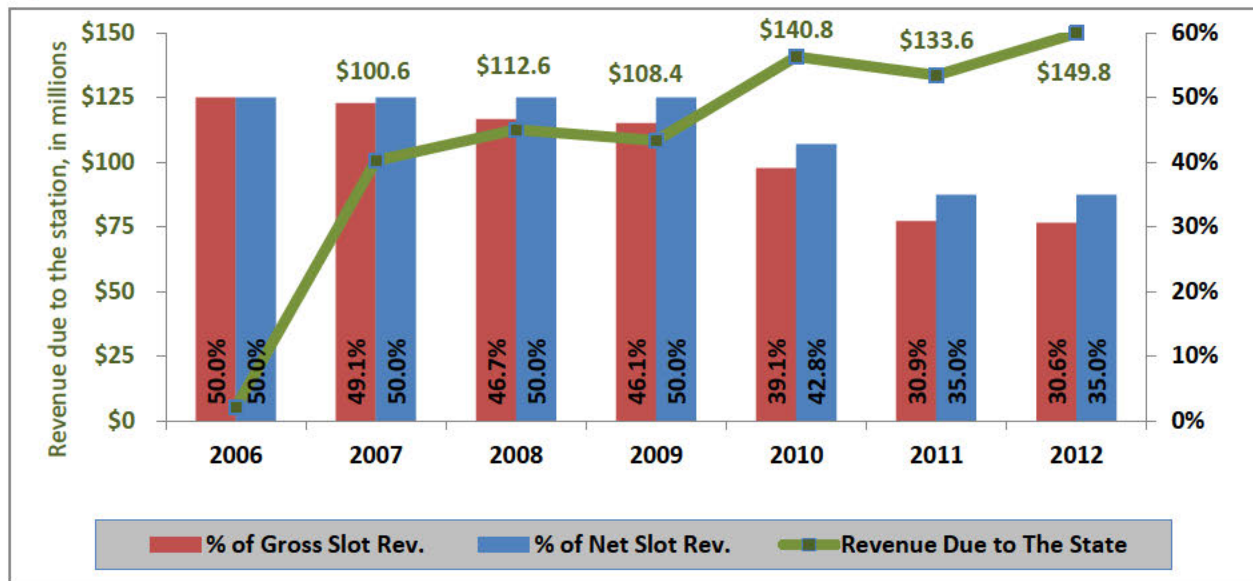

The current tax on slot revenue is 35 percent (or “revenue due to the state”), while this is imposed on net slot revenue (i.e., net of promotional credits and unclaimed tickets).⁵²⁵ However, at inception the applicable tax rate was 50 percent and has since been reduced. In addition to the tax on slot revenue, each pari-mutuel location having slot machines is subject to \$2 million annual Slot License Fee, along with an annual \$250,000 Compulsive or Addictive Gambling Prevention Program Fee.⁵²⁶

The following chart shows annual revenue due to the state from inception through calendar year ended 2012, along with effective tax rate by year (expressed as a percentage of gross and net slot revenue).

⁵²⁶ Ibid.

Figure 53: Florida racino direct tax on slots, 2006-2012

Source: Florida Department of Business and Professional Regulation

From inception through calendar year ended 2012 Florida's racinos have generated \$750.9 million in revenue due to the state, from the direct tax on slot revenue.

b. Greyhound

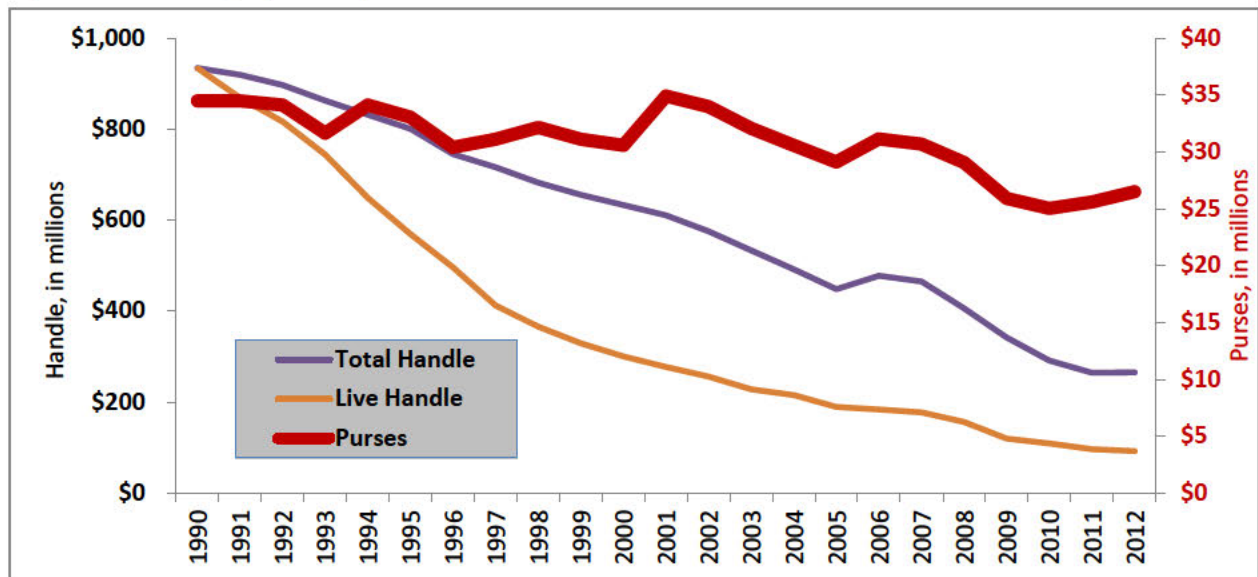

Greyhound racing, which is Florida's most widespread form of pari-mutuel racing, is clearly in serious decline. In the following two charts, note that the numbers of performances and purses have held relatively steady despite dramatic decreases in handle and attendance. Also note that most tracks no longer charge for admission.

Nonetheless, the greyhound tracks spent more than \$70 million in 2009 on goods and services purchased and had more than 5,400 employees on their payroll that was in excess of \$98 million. They paid direct state taxes of more than \$26 million.⁵²⁷

Jack Cory, a lobbyist for the greyhound owners, told Spectrum that the greyhound industry has an estimated overall economic impact of more than \$50 million when the spinoff costs of caring for the dogs is included, a claim that Spectrum could not independently verify. Those spinoff costs would include veterinary care, transportation, and feeding the dogs.

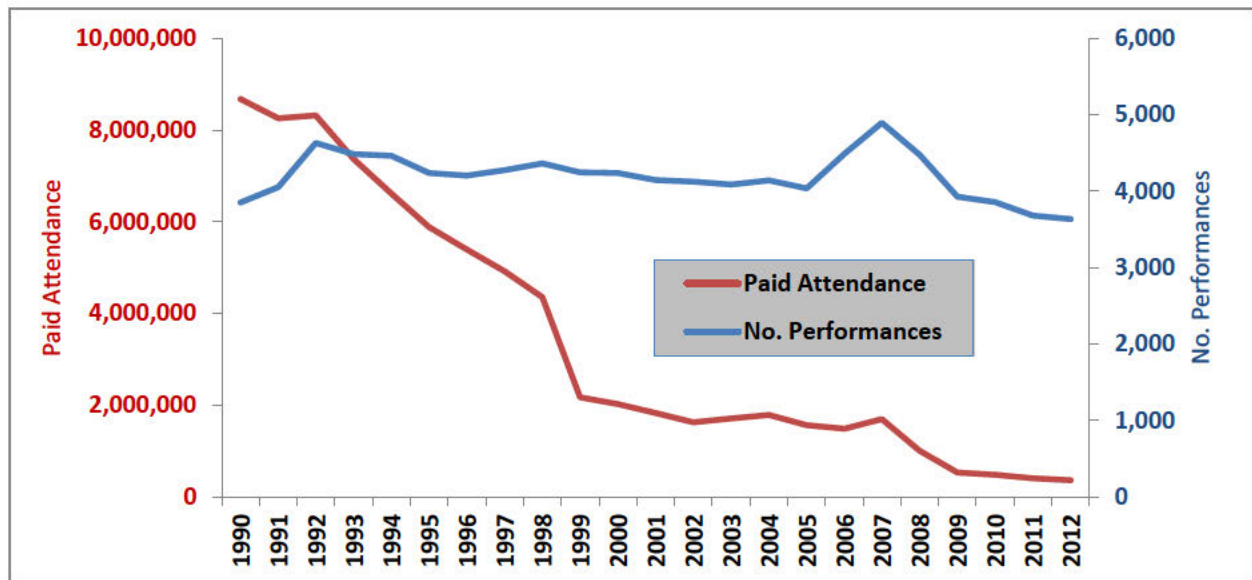

⁵²⁷ Innovation Group, "Florida Pari-mutuel Gaming Venues Market Assessment," p. 8, October 2009.

Figure 54: Florida greyhound purses and handle, 1990-2012

Source: Division of Pari-Mutuel Wagering **Note:** Total handle numbers are understated as PMW does not collect data on out-of-state generated handle, which is the single largest component of handle.

Figure 55: Florida greyhound paid attendance and performances, 1990-2012

Source: Division of Pari-Mutuel Wagering. Note: Most tracks no longer charge for admission.

c. Thoroughbred

There were 6,487 Florida-licensed thoroughbred owners from 1,352 Florida-licensed stables that participated in Florida racing during 2012-2013. These owners employed more than 1,467 thoroughbred trainers at Florida's three thoroughbred tracks. In turn, these trainers employed about 4,000 backside (stable) employees consisting of foremen, exercise people,

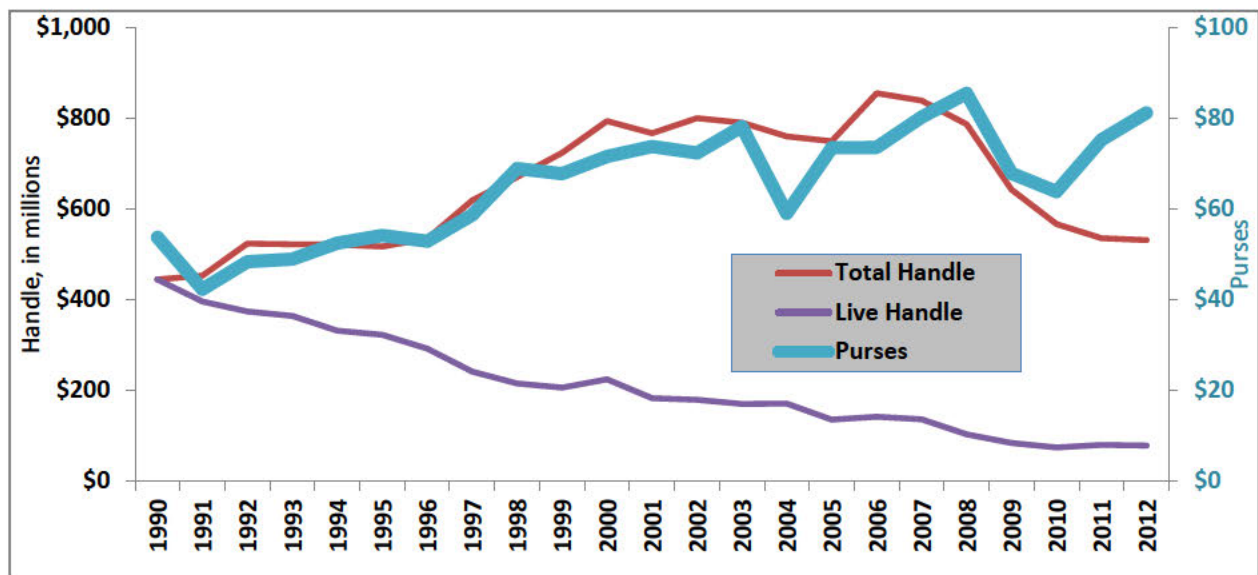

grooms, hot walkers and others. It is estimated that the equivalent of about 3,000 thoroughbred horses reside full-time in Florida and that each horse generates about \$25,000 in expenditures, resulting in an economic impact of \$75 million. Some of those costs include money spent on horse transport, stall bedding, grooming, and vet services.⁵²⁸

Florida is home to more than 600 thoroughbred farms and training centers covering 70,000 acres of land. More than 75 percent of the horse farms are located near Ocala in Marion County. Ocala is also home to the Ocala Breeders' Sales Company, which stages major bloodstock auctions for thoroughbreds throughout the year. It operates a training facility that includes a one-mile racetrack. It had net sales of \$14.8 million and a payroll of \$2.3 million in FY 2012.⁵²⁹ Ocala Breeders' also operates a simulcast parlor where patrons wager on horse and dog races.

The economic impact of the thoroughbred industry in Marion County is more than \$1.3 billion. Investment in operations is \$3.5 billion.⁵³⁰

For thoroughbred racing, note in the following charts that the numbers of performances and purses have held relatively steady despite dramatic decreases in handle and attendance.

Figure 56: Florida thoroughbred racing handle and purses, 1990-2012

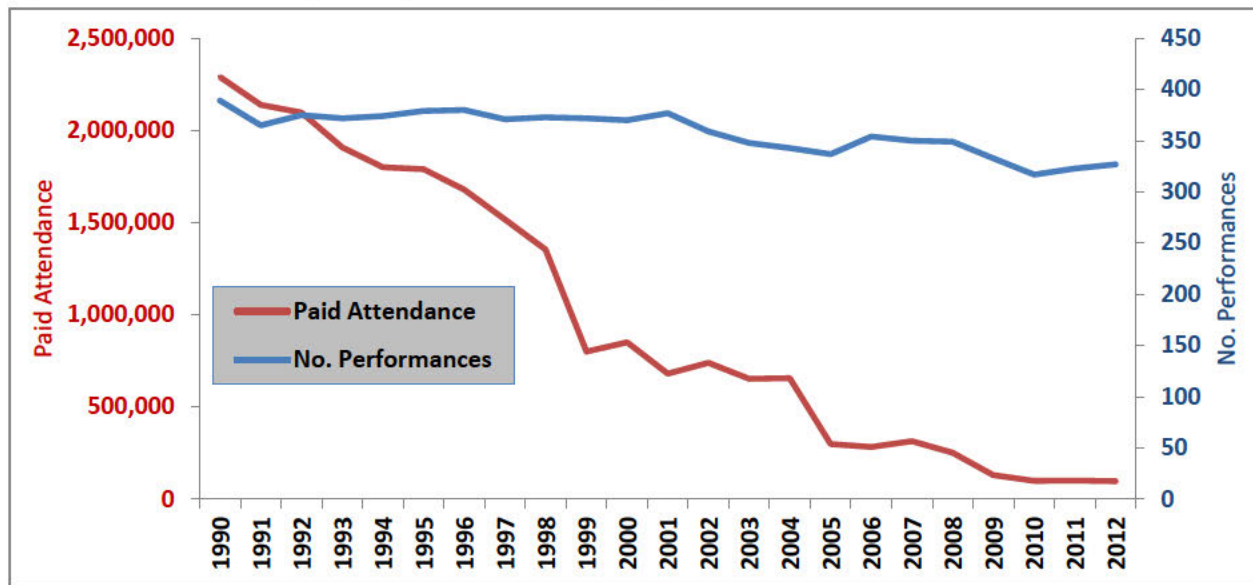

Source: Division of Pari-Mutuel Wagering. **Note:** Total handle may be understated as PMW does not collect data on out-of-track generated handle, the single largest component of handle.

Figure 57: Florida thoroughbred paid attendance and performances, 1990-2012

Source: Division of Pari-Mutuel Wagering

d. Harness

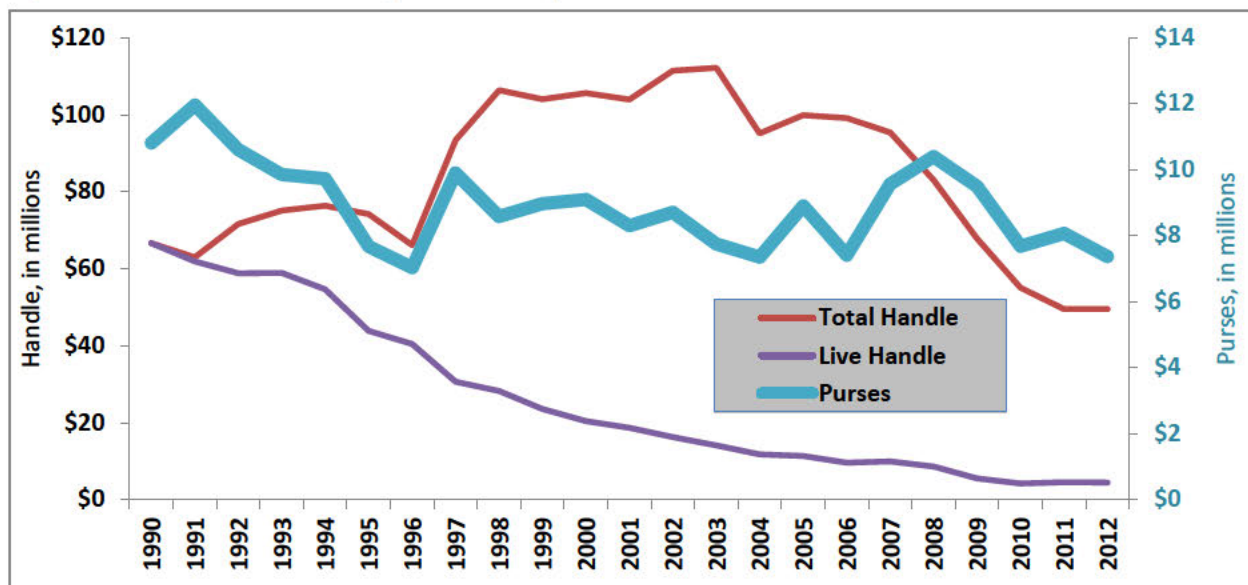

In harness (or standardbred) racing, as seen in the following charts, the purses and number of performances have been relatively steady while the live handle has declined. Isle Casino at Pompano Park, the only track where harness racing takes place, has stopped charging for admission. Its 2012 payroll was \$19.1 million. Pompano had a payroll of \$19.1 million in FY 2012. It had an operating profit of \$1.9 million but sustained a loss of \$2.4 million from its pari-mutuel operations while it had an operating profit of \$4.3 million from slot machines and \$90,000 from cardroom operations.⁵³¹

Purses have declined slightly, by 0.5 percent, from FY 2006 (the last full fiscal year that Pompano did not have a casino) to FY 2012. The failure to increase purses has put Pompano in a position where it is not competitive with other racino states, Pennachio said, noting that breeding has seen a significant reduction in activity. In 2011, there were 40 foals. In 2006, there were 163, according to Joseph Pennachio, president of the Standardbred Breeders and Owners Association.

Source: Division of Pari-Mutuel Wagering. Note: Pompano has not charged an admission fee since 2002.

e. Quarter Horse

Steve Fisch, president of the Florida Quarter Horse Racing Association, reported that more than 2,300 horses have raced at Hialeah since it reopened as a quarter horse track in 1992. Fisch's organization has set up an accredited breeding program with the state Department of

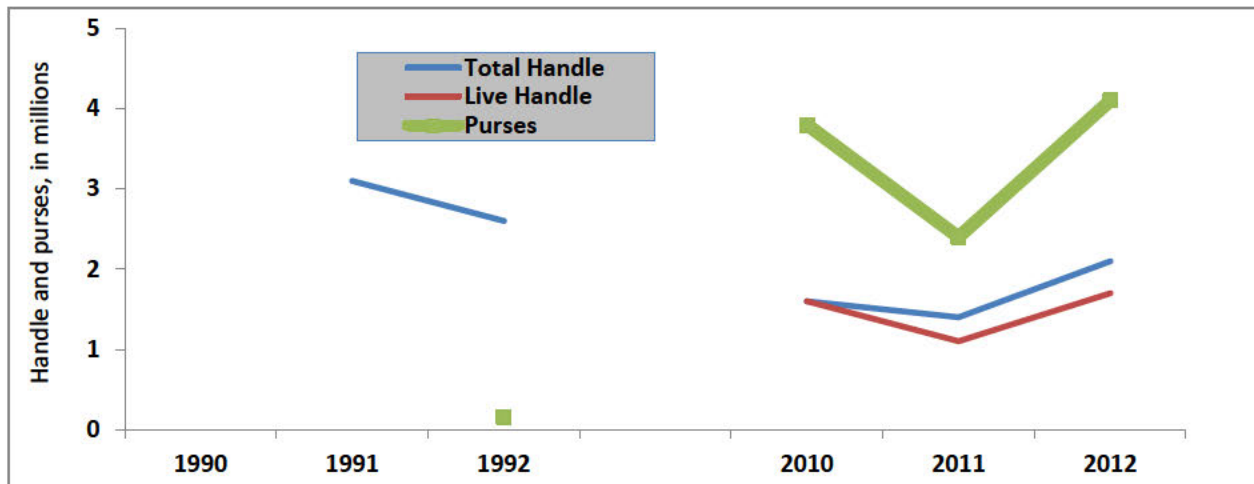

Agriculture, which rewards Florida-bred quarter horses with additional purse awards for finishing anywhere from first through fourth in races.

Already, Florida has seen some significant impact in breeding activity from the return of quarter horse racing. The number of starters foaled in the state in 2008 was 24. In 2012, the number increased to 96. During the same period, the number of owners of starters who reside in Florida increased from 68 to 247.⁵³² Each horse contributes nearly \$35,000 to the GDP in Florida, according to Fisch. Eventually, Fisch expects quarter horse racing to expand to other tracks. The result would be year-round racing. When and if that happens, he envisions a significant increase in breeding activity, handle and purses. Florida, he said, will become one of the top breeding states of quarter horses in the country. The number of starters foaled could exceed more than 2,000, he said.

Fisch noted that in just a few years, the Florida quarter horse industry has gained a reputation for quality race horses and breeding stock, so much so that owners have begun to export mares and stallions to Brazil and Australia. He expects that with the expansion of quarter horse racing to other tracks, the export of quarter horses to foreign countries will become a major industry.

Quarter horse racing returned to Florida in 2010 after a 17-year absence. There are limited data points from 1991-92, as seen in the following chart:

Figure 60: Florida quarter horse racing handle and purses, 1990-2012

Source: Division of Pari-Mutuel Wagering. Note: Quarter horse racing was halted in 1992 and returned to Hialeah in 2009 after it received permission to open a slot machine casino.

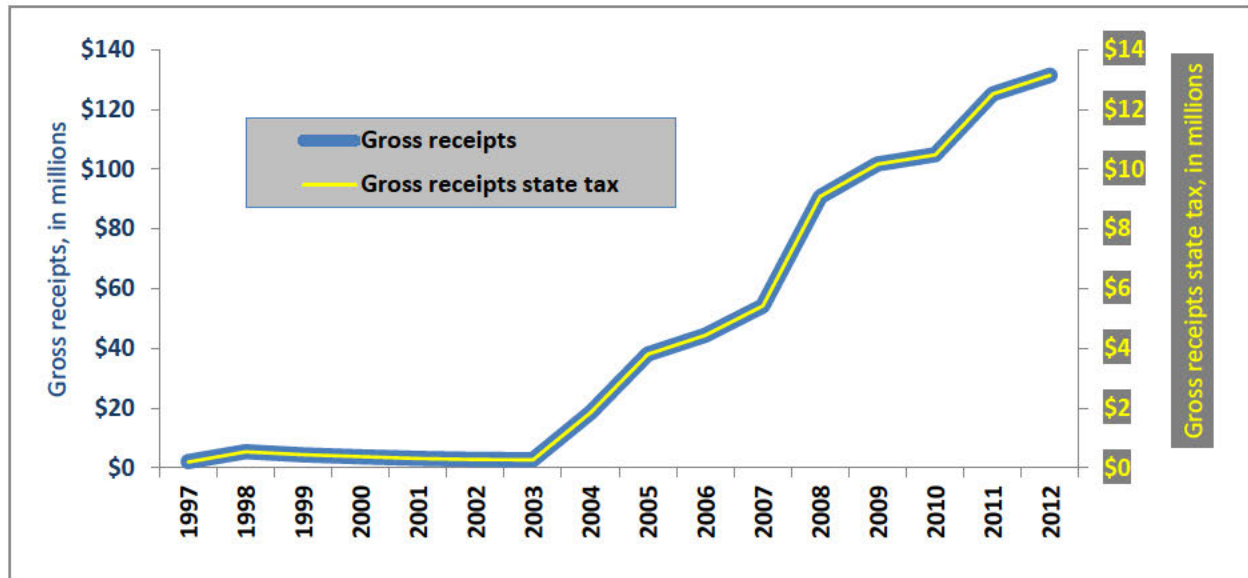

Quarter horse racing attracted paid attendance of nearly 36,000 in each of 1991 and 1992, but upon its return in 2010 did not charge for admission. The number of performances statewide for the last three years were 40 in 2010, 24 in 2011, and 76 in 2012.

⁵³² American Quarter Horse Association, custom report, May 21, 2013.

f. Cardrooms

The following chart shows cardroom receipts, along with the state's share from the 10 percent tax. Cardroom laws were changed in 2003 and then again in 2010 that encouraged professional poker players to play in Florida. The result, as the table shows, was a significant increase in gross receipts and tax revenue. Note that the revenue and tax lines follow identical paths, as the tax rate has stayed the same since inception.

Figure 61: Florida cardroom receipts and state tax, 1997-2012

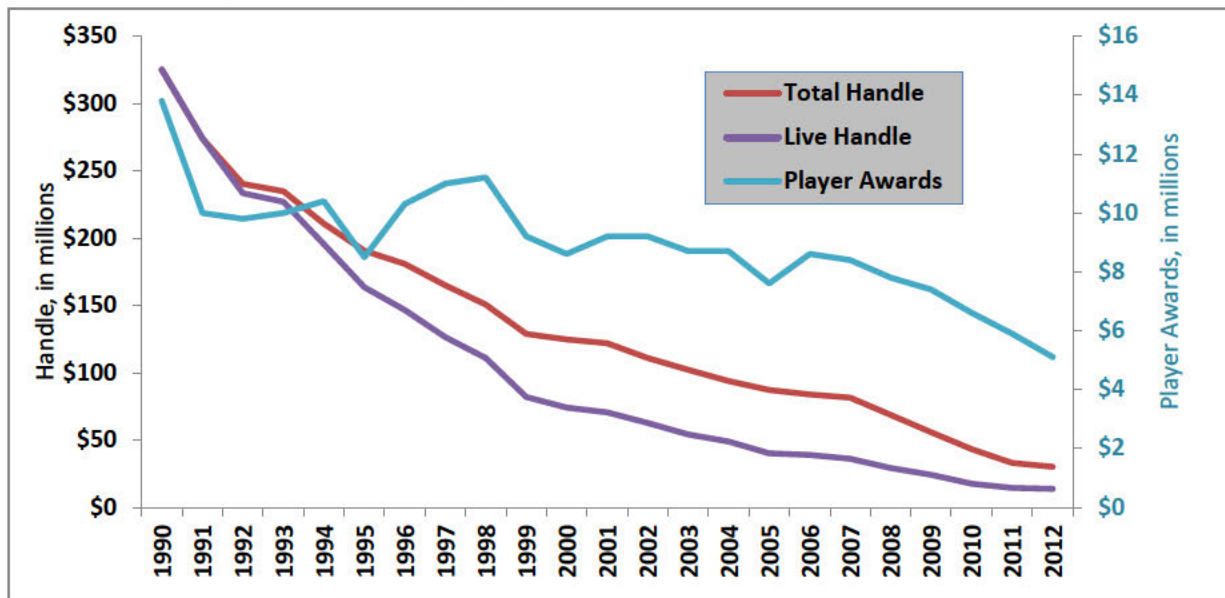

Source: Division of Pari-Mutuel Wagering

g. Jai Alai

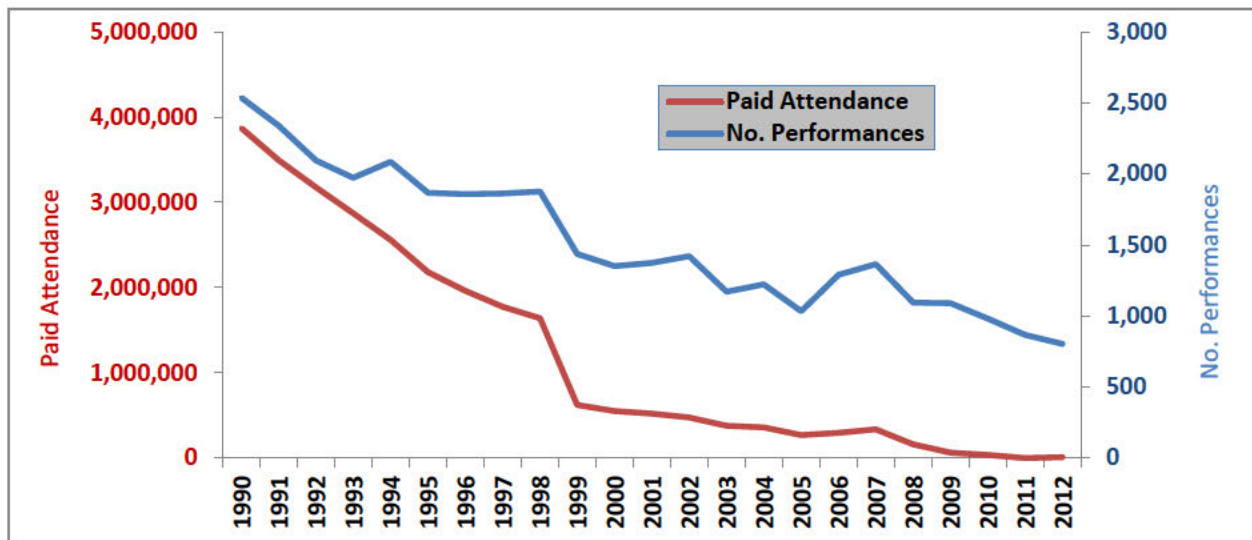

Jai alai is in rapid decline and, effective in 2012, stopped counting admissions. Its 2012 payroll was \$14.2 million, with 70 percent of it at two frontons, Fort Pierce and Miami.

Figure 62: Florida jai alai handle and player awards, 1990-2012

Source: Division of Pari-Mutuel Wagering

Source: Division of Pari-Mutuel Wagering

41. Indian Casinos

Through 2011, the Native American casinos collectively had approximately 8,358 employees in both gaming-related and non-gaming capacities – or an average of nearly 1,200 employees per location.⁵³³ This estimate was reported by a third party, although we know this figure may be considerably greater today due to various facility-related expansion activities that

⁵³³ Alan Meister, *Casino City's Indian Gaming Industry Report*, 2012 Edition.

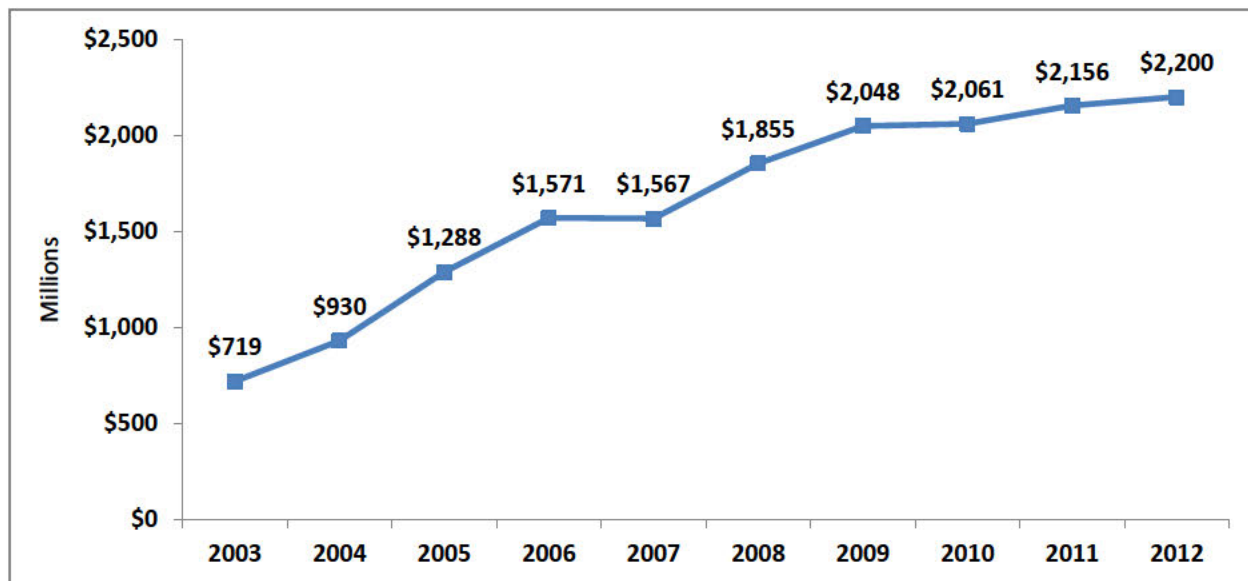

have occurred since 2011. In fact, the Seminole Tribe of Florida advised Spectrum that in 2012 its gaming facilities employed 9,562, or 7,725 full-time-equivalent employees. Another 4,000 are employed by Seminole casino tenants, such as retailers who operate on-site outlets.⁵³⁴ The operator of Florida's other Native American casino, the Miccosukee Tribe, declined to participate in this study, though an employee there advised us that the Miccosukee casino resort employs "over 800."

We estimate that Native American casinos in Florida had \$2.2 billion of GGR in calendar year ended 2012. We estimate GGR comprised approximately 94.8 percent of total revenue; therefore, we estimate total non-gaming revenue of \$120 million in 2012.⁵³⁵

We note that the Seminole Gaming enterprise, which operates six Florida casinos, generated \$1.96 billion in GGR⁵³⁶ and, based on Spectrum's estimates, more than \$1.1 billion in EBITDA annually, an estimate that was confirmed in our interviews with management.

The following table shows estimated GGR results for Native American casinos in Florida over the last 10 calendar years, through 2012.

Figure 64: Florida Native American casino GGR, 2003-2012

Source: Casino City's *Indian Gaming Industry Report*, 2013 Edition. Newton: Casino City Press.

Over this 10-year span, Native American casinos in Florida have generated nearly \$16.4 billion of GGR.⁵³⁷ Additionally, and even with the emergence of racinos in South Florida, year-

⁵³⁴ Interview with Seminole Gaming CEO James Allen, May 1, 2013.

⁵³⁵ The average from 2009-2011 as reported in *Casino City's Indian Gaming Industry Report*, 2013 Edition.

⁵³⁷ Alan Meister, *Casino City's Indian Gaming Industry Report*, 2012 Edition.

over-year GGR growth occurred in nine of the 10 periods illustrated (with exception of 2007 when GGR was down 0.3 percent).

The following chart shows annual average GGR per gaming position per day (estimated) from calendar year ended 2003 through calendar year ended 2012, along with an estimated average number of gaming positions in operation annually.

Figure 65: Florida Native American casino GGR/position/day and counts, 2003-2012

Source: Casino City's *Indian Gaming Industry Report*, 2013 Edition.

The following is excerpted from Casino City's *Indian Gaming Industry Report*, 2013 Edition, and provides an explanation of the taxes and/or payments associated with Native American casinos in Florida:

"In November 2007, the Seminole Tribe and the Governor of Florida entered into a tribal-state gaming compact. Upon federal approval in January 2008, the Tribe began making required compact payment to the State. However, the compact was challenged by the State Legislature, and in July 2008, the Florida Supreme Court ruled that the Governor did not have the authority to enter into the Seminole gaming compact without the ratification of the State. Following this ruling, the Tribe entered into a new gaming compact with the State on April 7, 2010. This compact was ratified by the State Legislature, and became effective when published in the Federal Register on July 6, 2010. The 2010 compact calls for several types of payments by the Tribe to the State (note that the State also kept all payments the Tribe made under the original 2007 compact). The new payments consist of (i) annual revenue sharing payments, 97 percent of which goes to the State and 3 percent goes to local governments; (ii) an annual oversight assessment not to exceed \$250,000 per year (indexed for inflation); and (iii) an annual donation to the Florida Council on Compulsive Gambling in the amount of not less than \$250,000 for each of its seven gaming facilities. The revenue sharing payments,

which are made in exchange for exclusivity within the local region, are as follows in the first five years: Years 1 and 2 – \$150 million per year; Years 3 and 4 – the greater of \$233 million per year or a percentage payment based on Class III net win (i.e., amounts wagered minus prizes/payouts and free play/promotional credits); and Year 5 – \$234 million or a percentage payment based on Class III net win. Percentage payments are based on a sliding scale: 12 percent on net win up to \$2 billion; 15 percent on net win over \$2 billion and up to \$3 billion; 17.5 percent on net win over \$3 billion and up to \$3.5 billion; 20 percent on net win over \$3.5 billion and up to \$4 billion; 22.5 percent on net win over \$4 billion and up to \$4.5 billion; and 25 percent on net win over \$4.5 billion. The Seminole Tribe also makes fixed annual local revenue sharing payments to the City of Coconut Creek.”

The same report indicated total direct payments in 2011 (from the Seminole Tribe) were \$154.4 million, of which \$147.3 million (or 95.4 percent) was for state revenue sharing.⁵³⁸ We note for the most recent fiscal year (ended June 2012) the state collected \$150 million in revenue sharing from the Seminole Tribe, of which \$3.75 million was distributed to local governments, including both counties and municipalities.⁵³⁹ The State subsequently collected \$163.8 million from the Seminole Tribe in FY 2012 and for FY 2013 through June 15, 2013, collected \$174.8 million.

Any assessment of the economic impact of Indian gaming should also consider the alternative: In the absence of this revenue stream, how would tribes such as the Seminoles be able to provide necessary services and funding for their families? Seminole General Counsel Jim Shore told Spectrum that the 3,800 members of his tribe would be living in abject poverty with little hope of escape.⁵⁴⁰

42.Lottery

The Florida Lottery supplies substantial economic benefits and is dedicated to providing assistance to education throughout Florida. The Lottery’s mission, as defined in the 2012 annual report, is “To maximize funding for the Educational Enhancement Trust Fund by responsibly providing innovative and entertaining Lottery products and promotions to Florida’s citizens and visitors.” The Florida Lottery has also been remarkably successful as a gambling business. In 2012 the Lottery’s sales totaled \$4.45 billion, surpassing the previous year by 11 percent,⁵⁴¹ and

⁵⁴⁰ Interview with Jim Shore, May 1, 2013

⁵⁴¹ Florida Lottery, “Brighter Than Ever,” Annual Report, 2011-2012 <http://www.flalottery.com/exptkt/annualreport11-12.pdf>.

ranking the Florida Lottery third in the nation in total sales revenue (FY 2011), behind New York and Massachusetts.⁵⁴² This record beating performance enabled the Lottery to transfer \$1.32 billion to the Educational Enhancement Trust Fund (“EETF”). The Florida Lottery is also one of the more efficient state lotteries in the US, ranking consistently in the top quartile by the measurement ratio of administration as a percentage of ticket sales.⁵⁴³

The Florida Lottery’s contributions to education are considerable. Since its inception, the Lottery has provided a total of \$24 billion to the EETF.⁵⁴⁴ In the past fiscal year the EETF has allocated \$317 million for construction bonds, provided \$271 million for public school finding, \$130 million for state colleges, and \$254 million for state universities.⁵⁴⁵ Since 1997 the Florida Lottery has also provided scholarships to more than 600,000 students through the Bright Futures Scholarship Program, funded primarily through Lottery financial transfers. These contributions yield subsequent results, tangible and intangible, in the quality of Floridian’s lives which are impossible to fully quantify yet undeniable nonetheless.

Beyond sales revenue, and transfers to educational assistance the economic impact of the Lottery within the state of Florida is substantial. The Florida Lottery directly employs 420 full-time-equivalent employees. The Lottery is a critical partner to the widespread sales network of 13,300 lottery retailers. Most of these retailers are small independent businesses employing thousands of Florida citizens and providing essential goods and services to local communities. As part of its recent work with the Massachusetts State Lottery, Spectrum conducted a survey among lottery retailers which showed that, on average, each of the 7,400 retailers in the Commonwealth employs two or three people, often at the entry level, in a very wide range of small business enterprises.⁵⁴⁶ From an economic perspective, lottery revenue was estimated by retail sales agents to account for a median 25 percent of total business revenues.⁵⁴⁷ In Florida, retail lottery sales are generated primarily from convenience stores with gas pumps (48 percent), supermarkets (27 percent), convenience stores without gas pumps (17 percent), package liquor stores (3 percent), small grocery markets (1.5 percent), dollar/discount stores (1 percent), and newsstand/ tobacconist/sundries (1 percent).⁵⁴⁸ With the exception of supermarkets, the great majority of these establishments are local small business enterprises.

43.Charitable Bingo

As discussed in Chapter II (B)(9), bingo conducted for charitable purposes is regulated at the county or municipal level and no state agency or organization aggregates the gross or net bingo revenue. Spectrum is unaware of even credible estimates as to the dollar size of the Florida charitable bingo market. As noted, there is no direct employment associated with charitable bingo, as the activity is operated by volunteers who are members of the recipient charity. In the bingo halls we observed, the facility's owner/operator and any other compensated employees are paid by revenues derived from facility's food concessions. Thus charitable bingo is captured in the fundraising and grant-making activities of the recipient charities, which is outside of our gaming-impact analysis model.

IV. The "Substitution" Effect

The introduction or expansion of legalized gambling, in particular casino gambling, raises a variety of concerns. Although casinos are often introduced in order to raise tax revenues, create jobs, and spur economic development, many observers have a concern for the potential "substitution effect" of casinos. That is, they are concerned that the expenditures at the new casino(s) will be redirected from other local or regional businesses, with the end result that the casinos have no real net benefit on the local economy. As an example, a quick review of "Stop Predatory Gambling" shows a variety of concerns about the casino industry's impacts on other industries.⁵⁴⁹

Fundamentally, the substitution effect is not unique to the casino industry. Indeed, anytime any new business opens, there is the potential that an addition to the local economy will be harmful to incumbent firms and industries. This is because the substitution effect is essentially synonymous with market competition. As such, from an economic perspective, the substitution effect is not necessarily a cause for concern. Casinos compete for a share of discretionary incomes within their respective markets, as would be expected from any segment of the entertainment or leisure industries. When adults elect to visit a casino, rather than the theater or a museum, the casino wins and the alternative loses. Quite often, however, the reverse is true – and the number of precise alternatives competing for a share of discretionary spending is so vast, even in smaller markets, that it would defy any efforts to track precise winners and losers.

Such efforts are further complicated because, not only are there many options for discretionary dollars, we point out that overall discretionary spending also competes against savings. A dollar saved is a dollar not spent, and vice versa.

Notably, Spectrum suggests there is a potential negative correlation between the savings rate and gaming spending. For example, in 2006, a pre-recession period that was at or near the

⁵⁴⁹ <http://stoppredatorygambling.org/blog/category/research-center/economic-impacts/> (accessed June 13, 2013)

SECOND DRAFT - CONFIDENTIAL

high-water mark for gaming revenue in both Atlantic City and Nevada, the national savings rate had sunk to a seven-decade low, as reported in early 2007 in *The New York Times*:

“Americans once again spent everything they made and then some last year, pushing the personal savings rate to the lowest level since the Great Depression more than seven decades ago.

“The Commerce Department reported ... that the savings rate for all of 2006 was a negative 1 percent, meaning that not only did people spend all the money they earned but they also dipped into savings or increased borrowing to pay for purchases.

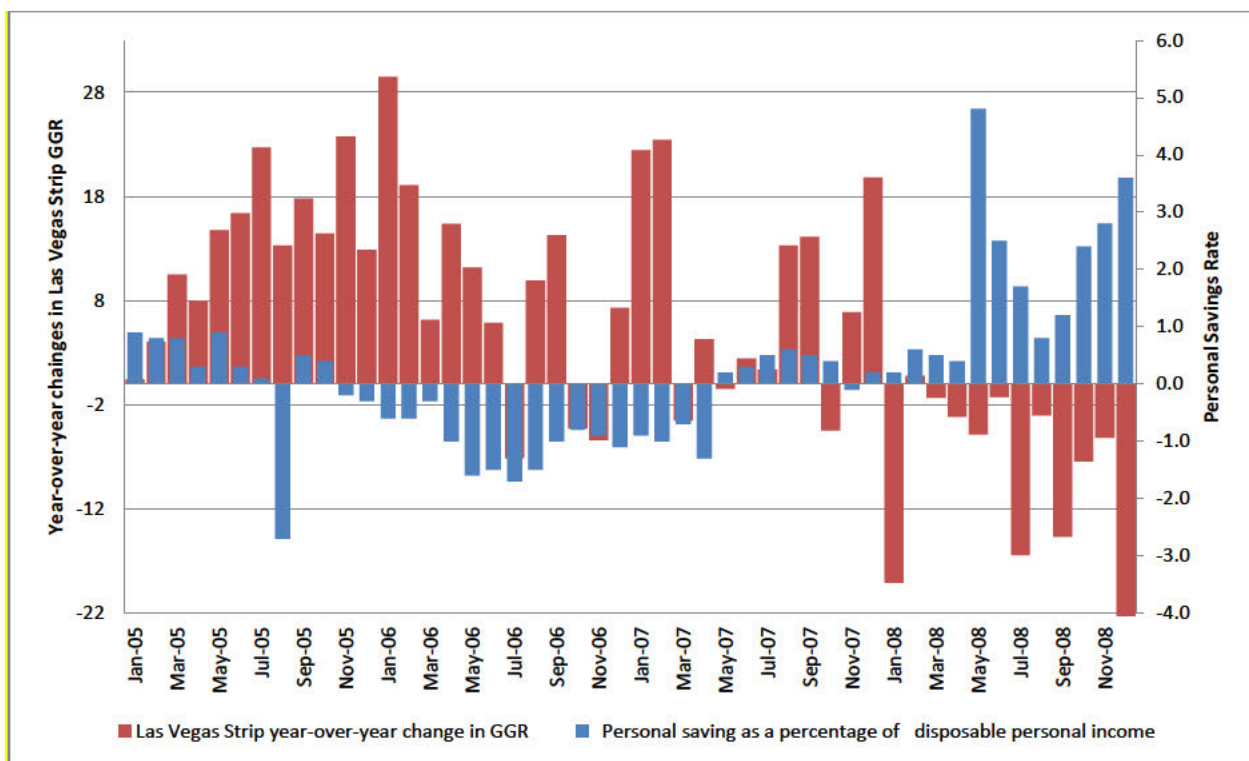

“The 2006 figure was lower than a negative 0.4 percent in 2005 and was the poorest showing since a negative 1.5 percent savings rate in 1933 during the Great Depression.”⁵⁵⁰

Our analysis and experience suggests that the success of gaming in destination markets such as Las Vegas during periods of low savings is not coincidental. This was generally a period in which both the stock and housing markets were robust, creating a general feeling of well-being in which household net worth was increasing by itself, without the need for additional savings, and much of that increased spending – the flip side of decreased savings – benefited the casino industry, as evidenced in the following chart, which tracks data in Las Vegas through the period of low savings, right through the first, most traumatic months of the Great Recession:

Figure 66: Personal saving as a percentage of disposable personal income vs. Las Vegas Strip Revenue

⁵⁵⁰ “U.S. savings rate sinks to lowest since Great Depression,” *New York Times*, Feb. 1, 2007
<http://www.nytimes.com/2007/02/01/business/worldbusiness/01iht-save.4436274.html>

SECOND DRAFT - CONFIDENTIAL

Source: Nevada Gaming Control Board, U.S. Department of Commerce

As the chart shows, an increase in the savings rate shrinks the pie of discretionary dollars, which affects the gaming industry and, presumably, other leisure industries as well, further complicating any analysis regarding substitution.

Spectrum's 2008 report for Massachusetts noted the following:

"We note a very important point that was articulated rather well by Michael E. Porter who makes the point that substitution is an omnipresent issue that must be viewed in a much larger context:

" 'Substitutes are always present, but they are easy to overlook because they may appear to very different from the industry's product: To someone searching for a Father's Day gift, neckties and power tools may be substitutes. It is a substitute to do without, to purchase a used product rather than a new one, or to do it yourself (bring the service or product in-house).' " ⁵⁵¹

"With that in mind, we caution that any analysis of the substitution effect defies simplification. If a casual dining establishment loses customers to casino restaurants, it is easy to identify a competitive culprit. But what if patrons of high-end restaurants decide

⁵⁵¹ "The Five Competitive Forces that Shape Strategy," by Michael E. Porter, *Harvard Business Review*, January 2008, p. 84.

SECOND DRAFT - CONFIDENTIAL

to alter their spending patterns, and shift more dollars to casual restaurants to free up more discretionary income to visit a spa at a destination casino. Who benefits? Who suffers? What if income levels rise in a community, thus allowing more households to spend less money at supermarkets to prepare home-cooked meals while they increase spending at area restaurants? Again, in such situations, it is difficult to identify the competition.”⁵⁵²

Casino advocates might argue that casinos should not be treated differently than other businesses; as long as they generate a profit, it implies the casino is satisfying the wants of consumers and is a “productive” industry. Indeed, to the extent to which consumers redirect their expenditures away from other industries to casinos, this is an indication that the casino’s product is of higher value than alternative products; otherwise – according to such economic logic – consumers would not have changed their spending patterns. Two exceptions to this may be argued:

- To some extent, casinos derive a portion of their revenues from problem or disordered gamblers, who do not really exercise free choice if they have a gambling problem.
- Casino licensure is largely viewed as a privilege that often comes with some level of exclusivity. As such, casinos have a concomitant obligation to act in the public interest, which can translate into policies that minimize substitution and focus more on attracting business from outside the region or state.

There have been a few academic papers that have addressed the substitution effect, either directly or in a round-about way. Figure 2 summarizes some of these studies. Most of the studies examine data from the 1990s.

Source: Douglas M. Walker, *Casinonomics* (New York: Springer, 2013), p. 236.

The 2008 paper by Walker and Jackson is the most comprehensive study to date on gambling inter-industry relationships.⁵⁶² They studied data on all states for 1985-2000. Their results indicate that casinos and lotteries are substitutes, that lotteries complement pari-mutuel racing (and vice-versa), and that horse racing and casinos are complementary. Their inter-industry (intra-state) results are summarized in Figure 3.

For example, the "Casino" row indicates that increases in casino revenues within a state have a negative impact on dog racing and lottery revenues/handle within a state, but a positive impact on horse racing handle within the state. Since Indian casino revenue data are generally not public, Walker and Jackson instead use the square footage of Indian casinos in a state as a proxy for Indian casino revenues.

Walker and Jackson also examined the relationship between an industry in one state and the availability of gambling in neighboring states. Figure 4 illustrates these relationships. Figure 4 shows that, for example, the greater the availability of casinos in neighboring states, the lower the casino revenue and lottery revenue in the particular state.⁵⁶³

Jackson, "Do US Gambling Industries Cannibalize Each Other?" *Public Finance Review*, Volume 36, 2008, p. 322; Spectrum Gaming Group, "New York Gaming Analysis: Potential Impact of Commercial Casinos on New York Lottery Ticket Sales and Video Gaming Machine Revenues (Linwood, NJ, June 2013), p. 16.

As shown in the above table, not all industries appear to act as substitutes across state lines. However, the availability of casinos tends to harm casinos and lotteries in neighboring states. Lotteries also harm lotteries in neighboring states.

Three other studies offer some insight into the substitution effect. One is a county-level study that examines the labor market effects (employment and wages) of casinos. The 2008 study by Cotti analyzes the effects on labor of counties that have a casino (or casinos), relative to

⁵⁶³ "Availability of casinos" is measured as the percentage of neighboring states that allow casinos in a particular year. Hence, this measures the ease of access to casinos in nearby states, rather than the casino revenues in neighboring states.

SECOND DRAFT - CONFIDENTIAL

those that do not.⁵⁶⁴ Cotti finds that, generally, casino counties fare better, in terms of employment and wages, relative to non-casino counties. Cotti summarizes his results, “On average, casinos play a significant role in increasing both employment, earnings, and promoting economic development in a county” (p. 15). The results are more significant in rural casinos, relative to urban ones, since a casino represents a relatively large business in a smaller community. The evidence suggests that, on net, there is no net negative impact of casinos on employment or wages. This is not to say, however, that some industries may not see a negative impact from the introduction of casinos.

Another study examines the effect of casinos on retail property values. In their 2011 paper, Wiley and Walker examine how casinos in Detroit have affected property values, based on commercial property sales data.⁵⁶⁵ Their results suggest that the casinos tend to have a positive impact on property values, particularly for some sectors related to tourism (e.g., service stations, restaurants) and on “general freestanding” retail properties. This evidence from Detroit is one of the only published papers to directly examine the effect of casinos on other non-casino businesses. Of course, not every community will see the same relationship to casinos that Detroit does.

Finally, the 2007 paper by Wenz examined the impact of casinos on residential property values.⁵⁶⁶ Wenz found that casinos have a net positive impact on housing prices, of about 2 percent, in the same geographic area as a casino. At the same time, property values in bordering areas see an even greater effect, of about 6 percent. Notably, most of the casino areas analyzed are tribal casinos, so Wenz’s results may be due partially to the fact that tribal casinos may be more likely to be located in relatively depressed local economies. Indeed, Wenz finds that the positive impacts of casinos decline as population density increases.⁵⁶⁷ Several other studies (one on Atlantic City, and one on Windsor, Ontario) suggest, when the effect of crime is considered, the net impact of casinos on property values may be negative.⁵⁶⁸

We caution that such studies, no matter how rigorous they may be in developing their models or assumptions, should never be taken at face value, particularly as authors rarely take into account the full complexity of issues. In Atlantic City, the notion that casinos had a negative

⁵⁶⁷ Douglas M. Walker, *Casinomics* (New York: Springer, 2013), p. 219. This discussion of Wenz’s study is based on Walker’s discussion.

⁵⁶⁸ Andrew J. Buck, et al., “A Von Thünen Model of Crime, Casinos and Property Values in New Jersey,” *Urban Studies*, Volume 28, p. 673-683. Alan G. Phipps, “Crime and Disorder, and House Sales and Prices Around the Casino Sties in Windsor, Ontario, Canada,” *The Canadian Geographer*, Volume 48, 2004, p. 403-432.

effect on property values might comport within the parameters of a specific model, but we would respectfully point out that, in 1978 when the first casino opened, the entire assessed valuation of all property in Atlantic City was \$308 million, a number that actually been declining in tandem with Atlantic City's downward spiral in the years preceding gambling.⁵⁶⁹ Within two years, the assessed valuation grew by more than 182 percent,⁵⁷⁰ a phenomenon that we would attribute almost entirely to the presence of this new industry. That growth, of course, did not dispel concerns about the impact of casinos, and created new sets of problems for those property owners that faced steeper tax bills.

When dealing with complex issues such as substitution, both facts and perceptions must be considered and addressed. In the case of casino gambling, it becomes an understandable concern for business owners, voters, politicians, and others because the introduction of casinos requires a positive act by government. Therefore, while there may be relatively little interest in, say, the economic impacts of opening a new restaurant in a particular neighborhood, that would not be the case with casinos.

Nevertheless, we can begin to identify the impacts of a new casino in Florida by considering the possible sources of spending at the new casino. Those revenues would come from a combination of these sources:

(1) New spending from Floridians

(2) New spending from out-of-state tourists

(3) Existing spending on other Florida non-gambling industries (by Floridians and tourists)

(4) Existing spending on other Florida gambling industries (by Floridians and tourists)

(5) Existing spending by Floridians on out-of-state purchases, including gambling

The evidence suggests that casinos are likely to have negative impact on lotteries, and some other businesses may see decreased revenue as a result of a casino's opening. But this is no different from what happens when any other business opens. Certainly some of the revenues for a new casino would come at the expense of other, existing gambling firms in Florida. Revenues are likely to come from all five of the sources identified above, but it is very difficult to predict the exact percentage from each source. In any case, the substitution effect is relevant for any new business that opens.

⁵⁶⁹ George Sternlieb and James W. Hughes, *The Atlantic City Gamble*, Twentieth Century Fund, 1983, p. 97

⁵⁷⁰ Ibid.

B. Conclusion

To be sure, new casinos create a substitution effect, but it is much less clear what the significance of it will be and which industries would be most affected by it. The academic studies that have been performed suggest that, at least for non-gambling industries, casinos are more likely to act as complements than substitutes. This suggests that the concern over the substitution effect may be greater than is justified. After all, the casino industry has expanded across the United States over the past two decades, and there is no evidence to suggest that this expansion has led to any long-term negative economic impacts for casino-hosting regional economies.

Still, we do not discount the importance of concerns regarding substitution, nor do we dismiss the notion that casinos compete. Indeed, they compete against any other option that seeks a share of discretionary income. While it is difficult to determine with any level of precision which businesses will win and which will lose in such competitive battles, there is one overarching certainty with respect to substitution, and that holds true for tourism in general, as well as for gaming: The dollar-for-dollar substitution with local businesses will be less pronounced and less impactful if new businesses – be they casinos or other attractions – help attract visitors and dollars from outside Florida.

V. Assessing Florida's Existing Economic Base, Now and Future

As noted in the Introduction, Spectrum is working with Regional Economic Models Inc. ("REMI") to calculate the economic impacts of Florida's gambling industry. The existing gambling industry spans across three sectors within the REMI model: Amusement, Gambling, Recreation Industries (North American Industry Classification System ["NAICS"] 713), Accommodation (NAICS 721), and Retail Trade (NAICS 44-45). The following tables show five main economic indicators of these three aggregate sectors between calendar year 2000 and 2060, in five-year increments.

Figure 67: Past, present, future economic indicators of Amusement, Gambling, Recreation Industries (including racinos, pari-mutuel, lottery)

Combined with data from the County Business Patterns (“CBP”) by the US Census Bureau and an assessment of the gambling industry in Florida by Spectrum Gaming Group, REMI was able to estimate the historical and current share of gambling industry within the three aggregate sectors. The CBP publishes paid employees and payroll data for both Gambling Industries (NAICS 7132), Casino Hotels (NAICS 72112), Food and Beverage Stores and Convenience Stores (NAICS 445 and NAICS 445120, respectively), which we categorized as

SECOND DRAFT - CONFIDENTIAL

subsectors of Amusement, Gambling, Recreation Industries, Accommodation, and Retail Trade, respectively. REMI and Spectrum divided the casino gaming industry into four main groups: racinos/pari-mutuels, lottery, retail lottery, and Native American casinos. *The racinos/pari-mutuels and lottery⁵⁷¹ have been assigned to the Amusement, Gambling, Recreation Industries, the Native American casinos to Accommodation, and retail lottery⁵⁷² to Retail Trade, based on the nature of the subsectors.*

The Census Bureau withholds data for certain industries to avoid disclosing data for individual companies and casino hotels in Florida is one of the industries heavily affected by nondisclosure. The following tables show historical data for the gaming industries.

The Spectrum casino gaming assessment provides payroll data and gross gaming revenues at racinos/pari-mutuels in 2012; payroll data, gross gaming revenues and employees are available for Native American casinos in 2012; payroll, revenue, and employee data the lottery in 2012; as well as estimated employment and revenue data for retail lottery in 2012. The Florida Department of Business Professional Regulation also provided the FY 2012 regulatory costs for pari-mutuels (includes pari-mutuels, slots, and gaming compact oversight expenditures).

We estimated the number of employee in racinos/pari-mutuels through dividing the total payroll amount by the average annual wage and salary in the Amusement, Gambling, Recreation Industries. Having both the gross gaming revenue and employee number allows us to calculate a baseline for the labor productivity (output per employee) for racinos, lottery, retail lottery, and Native American casinos. The following tables show the various data collected and estimated for the gaming industry in 2012.

Figure 73: Racino employees, gross gaming revenue, wage and salary, and regulatory costs 2012

With this information, we were able to establish the gambling industry's share within the three aggregate sectors. This information is essential to the following section as we carry out a counterfactual analysis that involves removing the employment and its associated wages and output to determine the total economic and fiscal contribution of the gambling industry. The gambling industry is unique because it typically has higher labor productivity than its aggregate sector. This is evident in the following table, showing the Racinos/Pari-mutuels employment is approximately 2.8 percent of the total employment and wage and salary in the Amusement, Gambling, Recreation Industries. However, the Racinos/Pari-mutuels output is 4.4 percent of the total Amusement, Gambling, Recreation Industries output. We had to take into account this higher labor productivity of the gaming subsectors when we do the counterfactual analysis.

The Casino Hotels shows a similar pattern where the employment and associated compensation make up about 5.5 percent of the Accommodation sector, but its output is over 10 percent of the Accommodation output.

The Lottery sector (excluding retailers) has uniquely high labor productivity due to its operation design. The total Lottery output makes up nearly 38 percent of the total output but less than 1 percent of employment and compensation of the Amusement, Gambling, Recreation Industries. Typically a lottery control board oversees the operation and sells lottery tickets through sales agents (retailers). Once the lottery operation is established, the administrative cost remains largely the same. The marginal cost for producing an additional dollar of lottery sale is very low compare to other goods and services, hence the high productivity.

The Retail Lottery sector, on the other hand, behaves differently than the Lottery sector. According to *La Fleur's 2012 Lottery Almanac*,⁵⁷³ over 95 percent of the lottery sales occur at gas stations with convenience stores, convenience stores, supermarkets, and liquor stores. These businesses primarily engage in providing other goods and services aside from the lottery. Lottery sales are a supplement to these businesses and commission on lottery ticket sales makes up only a fraction of their total revenue, which would explain why the lottery sale is makes up just 0.3 percent of the output of the Retail Trade industry.

Note: The Lottery Total excludes lottery prizes, which is consistent with the calibrated budget used within Tax-PI.

I. Floridian Out-of-State Gaming Spending

Spectrum estimates the GGR currently exported from Florida. We believe it is reasonable that casinos along the Gulf Coast of Mississippi and in Alabama, as well as those in Las Vegas and Atlantic City, are generating at least \$411-plus million of GGR from Florida residents annually. Aside from the three aforementioned destinations there are hundreds of other casinos in the US and a short distance away in the Bahamas and/or various Caribbean islands that Florida residents are visiting (and exporting GGR to). Therefore, we believe it is well within reason that at least \$500 billion of GGR annually is being generated at casinos outside of Florida and is attributable to permanent Florida residents.

B. Discussion of Components of Economic and Fiscal Impacts

A description of the direct, indirect, and induced components of the economic and fiscal impact of each of the subsectors. Impacts associated with facility construction should be distinguished from impacts associated with ongoing operation of a facility.

Using the employment, output, wage & salary, tax revenue, and regulatory costs data from Chapter III(A) above, we performed a counterfactual analysis using the REMI Tax-PI model to evaluate the contribution of the gambling industry as it existed in Florida in 2012. For this modeling effort, the EDR of the Florida Legislature provided REMI with the latest tax and budget information, national benchmark based upon Global Insight June 2013 Control Forecast, and state benchmark based upon population estimates from Florida's February 2013 Economic Estimating Conference and employment estimate from September 2012 US BEA historical ES-202 data in order to correctly calibrate the Tax-PI model baseline. For further information about Tax-PI and how the EDR budget information is used in the model, please see Section E Appendix.

The REMI model forecasts the economy out to 2060 to allow analyst to evaluate any changes to the baseline. The gambling industry is already presented in the baseline forecast because it is a component in the current Florida economy. In this study we are not trying to measure the contribution of the gambling industry *on top of* the existing gambling activities in the Florida baseline. The objective is to understand the impacts of the gambling *as it exists currently*. In other words, what are the impacts to Florida if the gambling industry did not exist? Employing the counterfactual means we *remove the employment, associated output, wage & salary, tax revenue, as well as Floridian out-of-state gaming spending* to simulate the loss of the gambling industry in Florida. This approach allows us to measure the direct, indirect, and induced contribution of the existing gambling industry to the overall economy in 2012.

It is also important to consider the substitution effect of gaming spending in this counterfactual analysis. If households did not spend on gaming-related expenses, those spending do not simply disappear in the economy. Rather, we assume they would have spent it on other goods and services. In this analysis we assume 95 percent of the GGR to the pari-mutuel casinos was from Florida residents, 85 percent of GGR to Native American casinos was from Florida resident, and 98 percent of total lottery sales was from Florida residents. The full amount of GGR attributable to Florida residents are redistributed to various consumption categories via a policy variable within Tax-PI.

We selected five policy variables for this particular simulation: Industry Employment, Industry Sales without Employment, Investment, and Compensation, Wage Bill, Compensation, and Consumption Reallocation. The Industry Employment variable allows us to remove the total number of direct jobs in the gambling industry (recall that this is a *counterfactual* analysis, so we reduce the number of employment instead of adding to it); the Industry Sales without Employment, Investment, and Compensation variable is used to account for the higher labor

SECOND DRAFT - CONFIDENTIAL

productivity in the gambling industry in comparison to the Amusement, Gambling, Recreation Industries and Accommodation sectors; the Wage Bill variable is used to adjust the wage & salary differences between the gambling industry and its aggregate sectors; and the Compensation variable is used to adjust the compensation differences between the gambling industry and its aggregate sectors; the Consumption Reallocation variable is used to capture the spending of Floridians on gaming outside of Florida and to capture the substitution effect of gaming spending within Florida. The tax revenue of each gaming subsector is taken out directly through the revenue module in Tax-PI. Regulatory costs for pari-mutuels are not explicitly modeled in Tax-PI because the fees paid by pari-mutuels funds the costs. When we eliminate the direct tax revenue and fees collected from pari-mutuels, we also eliminate the expenditure (e.g., regulatory costs) associated with the revenue.

Note in the following tables that the values for employment, wage, compensation, and productivity adjustments are *negative* because this is what we are removing from the economy; the reallocation amount is positive because it represents the substitution effect of money spent on other goods and services if it were not spent on gambling:

Each gambling subsector was modeled as a discrete simulation to determine the economic and fiscal impact of each subsector. The inputs from Figure 12 to Figure 15 provided the following results:

Figure 82: Economic and fiscal impacts of Florida pari-mutuel sector in 2012

Summary	Units	2012
Total Employment	Thousands (Jobs)	5.942
Population	Thousands	1.746
Gross Domestic Product (GDP)	Billions of Fixed (2012) Dollars	0.413
Personal Income	Billions of Fixed (2012) Dollars	0.241
State Tax Revenues (fiscal year 2013)	Billions of Fixed (2012) Dollars	0.194

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 16 exhibits the total economic and fiscal impacts generated from the existence of the pari-mutuel sector in 2012. The pari-mutuel sector supports a total of 5,942 jobs in Florida. The associated gross state product (“GSP”) is \$413 million and it generated \$241 million in personal income. The tax revenue generated from the direct, indirect, and induced impacts of the pari-mutuel industry in FY 2013 is \$194 million.

Figure 83: Top 12 Florida industries with largest employment impact from pari-mutuels in 2012

Industry category, with NAICS code	Units	2012
Amusement, gambling, and recreation industries (713)	Thousands (Jobs)	4.952
Construction (23)	Thousands (Jobs)	0.217
Services to buildings and dwellings (5617)	Thousands (Jobs)	0.112
Business support services; Investigation and security services; Other support services (5614, 5616, 5619)	Thousands (Jobs)	0.049
Real estate (531)	Thousands (Jobs)	0.048
Accounting, tax preparation, bookkeeping, and payroll services (5412)	Thousands (Jobs)	0.042
Employment services (5613)	Thousands (Jobs)	0.04
Legal services (5411)	Thousands (Jobs)	0.033
Independent artists, writers, and performers (7115)	Thousands (Jobs)	0.033
Management, scientific, and technical consulting services (5416)	Thousands (Jobs)	0.033
Architectural, engineering, and related services (5413)	Thousands (Jobs)	0.029

Source: Regional Economic Models Inc.

Figure 17 shows the private non-farm industries that are dependent on the pari-mutuel sector (Accommodation and Amusement, Gambling, Recreation Industries). Many of these industries, such as Services to Buildings and Dwellings, Business Support Services, and Legal services, are intermediate input suppliers to the gaming industry.

Figure 84: Employment by demand source from pari-mutuels in 2012

Breakdown of Direct, Indirect, and Induced Employment	Units	2012
---	-------	------

SECOND DRAFT - CONFIDENTIAL

Breakdown of Direct, Indirect, and Induced Employment	Units	2012
Private Non-Farm Employment	Thousands (Jobs)	4.616
Intermediate Demand Employment	Thousands (Jobs)	1.062
Local Consumption Demand Employment	Thousands (Jobs)	-1.734
Government Demand Employment	Thousands (Jobs)	0.152
Investment Activity Demand Employment	Thousands (Jobs)	0.042
Exports Employment	Thousands (Jobs)	0.141
Exogenous Industry Sales Employment	Thousands (Jobs)	4.953

Source: Regional Economic Models Inc.

Notes: Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 18 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel employment. It can also be interpreted as the direct input we entered into the model. The direct pari-mutuel employment impact is 4,953 jobs in 2012 and the indirect employment (Intermediate Demand Employment) supported by the pari-mutuel sector is 1,062. The induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the pari-mutuel industry is minus-1,399. The Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector. The sum of the direct, indirect, and induced employment is 4,616.

Figure 85: Economic and fiscal impacts of Florida lottery sector in 2012

Summary	Units	2012
Total Employment	Thousands (Jobs)	5.570
Population	Thousands	1.258
Gross Domestic Product (GDP)	Billions of Fixed (2012) Dollars	3.100
Personal Income	Billions of Fixed (2012) Dollars	0.459
State Tax Revenues (fiscal year 2013)	Billions of Fixed (2012) Dollars	1.884
Government Employment	Thousands (Jobs)	11.860

Source: Regional Economic Models Inc., Spectrum Gaming Group.

Note: Total Employment includes private non-farm, government, and farm employment.

Figure 19 exhibits the total economic and fiscal impacts generated from the existence of the lottery sector in 2012. The lottery supports a total of 5,570 jobs in Florida. The associated gross state product ("GSP") is \$3.1 billion and it generated \$459 million in personal income. The tax revenue generated from the direct, indirect, and induced impacts of the lottery in FY 2013 is \$1.88 billion. The lottery sector also supports 11,860 government employments in 2012.

Figure 20 shows the private non-farm industries that are dependent on the lottery sector (Accommodation and Amusement, Gambling, Recreation Industries). Many of these industries, such as Services to Buildings and Dwellings, Business Support Services, and Legal services, are intermediate input suppliers to the gaming industry.

Figure 87: Employment by demand source from lottery in 2012

Breakdown of Direct, Indirect, and Induced Employment	Units	2012
Private Non-Farm Employment	Thousands (Jobs)	-6.290
Intermediate Demand (indirect) Employment	Thousands (Jobs)	8.277
Local Consumption Demand (induced) Employment	Thousands (Jobs)	-18.751
Government Demand (induced) Employment	Thousands (Jobs)	1.372
Investment Activity Demand (induced) Employment	Thousands (Jobs)	-0.456
Exports Demand (induced) Employment	Thousands (Jobs)	2.875
Exogenous Industry Sales (direct) Employment	Thousands (Jobs)	0.394

Source: Regional Economic Models Inc.

Notes: Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 21 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct lottery employment. It can also be interpreted as the direct input we entered into the model. The direct lottery employment impact is 394 jobs in 2012 and the indirect employment (Intermediate Demand Employment) supported by the lottery is 8,277. The induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the lottery is minus-14,960. The Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar

SECOND DRAFT - CONFIDENTIAL

Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery. The sum of the direct, indirect, and induced employment is minus-6,290. The negative induced employment (driven mainly by Local Consumption Demand employment) dominate the total, consequently the sum of direct, indirect, and induced employment is also negative.

Figure 88: Economic and fiscal impacts of Florida retail lottery sector in 2012

Summary	Units	2012
Total Employment	Thousands (Jobs)	59.959
Population	Thousands	15.875

Figure 29 shows the private non-farm industries that would have been impacted if Floridian's out-of-state gaming spending were brought back to Florida. Many of these industries, such as Retail Trade, Food Services and Drinking Places, and Private Households, are supported by local spending.

Figure 96: Employment by demand source from Floridian out-of-state gaming spending in 2012

Breakdown of Direct, Indirect, and Induced Employment	Units	2012
Private Non-Farm Employment	Thousands (Jobs)	3.836
Intermediate Demand (indirect) Employment	Thousands (Jobs)	0.693
Local Consumption Demand (induced) Employment	Thousands (Jobs)	3.033

SECOND DRAFT - CONFIDENTIAL

Government Demand (induced) Employment	Thousands (Jobs)	0.031
Investment Activity Demand (induced) Employment	Thousands (Jobs)	0.193
Exports Demand (induced) Employment	Thousands (Jobs)	-0.114
Exogenous Industry Sales (direct) Employment	Thousands (Jobs)	0.000

Source: Regional Economic Models Inc.

Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 30 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct employment. It can also be interpreted as the direct input we entered into the model. The direct employment impact is 0 in 2012 because we did not use any employment policy variables to model this consumption reallocation of Floridian's out-of-state gaming spending. The indirect employment (Intermediate Demand Employment) is 693. The induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact is 3,143. The sum of the direct, indirect, and induced employment is 3,836.

1. Impact of Hialeah Park Construction (2012)

Construction of Hialeah Park in 2012 was modeled separately from all of the gambling subsector economic impact assessments. The total cost of construction for Hialeah Park is \$63.36 million, with an annual average construction employment of 210. The construction duration was estimated to be 24 months starting in summer of 2011.

Figure 97: Economic and fiscal impacts of Hialeah Park construction in 2012

Summary	Units	2012
Total Employment	Jobs	364
Population	Individuals	125
Gross Domestic Product (GDP)	Millions of Fixed (2012) Dollars	29.602
Personal Income	Millions of Fixed (2012) Dollars	18.311
State Tax Revenues (fiscal year 2013)	Millions of Fixed (2012) Dollars	0.9219

Source: Regional Economic Models Inc., Spectrum Gaming Group

The construction activity in 2012 generates a total 364 jobs, \$29.6 million in GSP, and \$18.3 million in personal income. It also induces \$0.92 million in state tax revenue for FY 2013.

C. Assessment of Economic, Fiscal Impacts Over Time

An assessment of the changes in those impacts over time until the present day, historically, and projections for the future.

For this section, we employed the same policy variables as the Chapter III(B) above and ran a counterfactual analysis for years 2012 through 2060 to observe the impacts of the gambling industry over time. In addition, we established two alternative national forecasts representing a future with slower economic growth and the other projecting a stronger economic growth, relative to the state benchmark baseline in the model. The new national forecasts generated new regional forecasts for Florida. We then ran the same set of inputs against the three regional forecasts to quantify the impacts of the gambling industry under different economic trajectories.

REMI and Spectrum assume that over time, the employment in the overall gambling industry will expand at half the growth rate of its aggregate sectors in the REMI model. Given the regulations and restrictions imposed on the gambling industry, it is difficult to justify that the industry can expand at the same rate as a typical entertainment/recreation, retail trade, or accommodation industry. On the other hand, assuming no growth in the next 50 years is an excessively conservative assumption. We believe it is reasonable to choose a growth rate in between the two extremes. We assume wages and labor productivity will both grow at the same rate as the respective aggregate sector.

The following are tables showing the forecasted employment, output, wage & salary/compensation, and consumption reallocation for each of the gambling subsectors.

Figure 98: Racinos, pari-mutuels forecast

1. Results – Normal Economic Growth (2012-2060)

Figure 103: Economic and fiscal impacts of pari-mutuel sector, 2012-2060, normal growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	6.763
Average Annual Population	Thousands	7.422
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	33.326
Cumulative Personal Income	Billions of Fixed (2012) Dollars	35.154
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Billions of Fixed (2012) Dollars	0.561

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, the pari-mutuel sector is projected to support an annual average of 6,763 jobs⁵⁷⁸ in Florida under normal economic growth assumptions. The cumulative GSP is \$33.3 billion and \$35.2 billion in personal income. The average annual tax revenues generated from the direct, indirect, and induced impacts of the pari-mutuel industry between FY 2013 and FY 2060 is \$561 million.

Figure 104: Top 12 Florida industries with largest average employment impact from pari-mutuel, 2012-2060, normal growth

Industry category, with NAICS code	Units	2012-2060
Amusement, gambling, and recreation industries (713)	Thousands (Jobs)	2.549
Construction (23)	Thousands (Jobs)	0.465
Nursing and residential care facilities (623)	Thousands (Jobs)	0.103
Services to buildings and dwellings (5617)	Thousands (Jobs)	0.090

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 38 shows the private non-farm industries with largest average annual employment impact. Aside from the Amusement, Gambling, and Recreation Industries, which is the direct impact for this subsector, the rest are the top industries that are reliant on the pari-mutuel industry in Florida. Many of these industries, such as Services to Buildings and Dwellings, Business Support Services, and Management Consulting, are intermediate input suppliers to the pari-mutuel industry.

⁵⁷⁸ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impacts. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

Figure 105: Average annual employment by demand source from pari-mutuel, 2012-2060, normal growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	3.106
Intermediate Demand Employment	Thousands (Jobs)	1.268
Local Consumption Demand Employment	Thousands (Jobs)	-1.406
Government Demand Employment	Thousands (Jobs)	0.397
Investment Activity Demand Employment	Thousands (Jobs)	0.073
Exports Employment	Thousands (Jobs)	-2.675
Exogenous Industry Sales Employment	Thousands (Jobs)	5.449

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 39 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel employment. It can also be interpreted as the direct input we entered into the model. The average annual direct pari-mutuel employment impact is 5,449 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the pari-mutuel sector is 1,268. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the pari-mutuel industry is minus-3,611. The average annual Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector. The sum of the average annual direct, indirect, and induced employment is 3,106.

Figure 106: Economic and fiscal impacts of lottery industry, 2012-2060, normal growth

Summary	Units	2012-2060

Exogenous Industry Sales (direct) Employment	Thousands (Jobs)	10.993

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 48 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The average annual direct Native American casinos employment impact is 10,993 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the gaming sector is 3,952. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the Native American casinos industry is minus-8,852. The Local Consumption Demand

SECOND DRAFT - CONFIDENTIAL

Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos. The sum of the average annual direct, indirect, and induced employment is 6,092.

Figure 115: Economic and fiscal impacts of Floridian out-of-state gaming spending, 2012-2060, normal growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	2.764
Average Annual Population	Thousands	4.563
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	14.813
Cumulative Personal Income	Billions of Fixed (2012) Dollars	13.792
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Millions of Fixed (2012) Dollars	27.060

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, if out-of-state gambling dollars by Florida residents were to instead remain in Florida, this spending will support an annual average of 2,764 jobs⁵⁸² in Florida under normal economic growth assumption. The cumulative GSP is \$14.8 billion and \$13.8 billion in personal income. The average annual tax revenues generated from the indirect and induced impacts of the out-of-state gaming spending between FY 2013 and FY 2060 is \$27.1 million.

⁵⁸² The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impact. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

Figure 50 shows the private non-farm industries that would have been impacted if Floridian's out-of-state gaming spending were brought back to Florida. Many of these industries, such as Retail Trade, Food Services and Drinking Places, and Private Households, are commonly supported by local spending.

Figure 117: Average annual employment by demand source from Floridian out-of-state gaming spending, 2012-2060, normal growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	2.695
Intermediate Demand (indirect) Employment	Thousands (Jobs)	0.455
Local Consumption Demand (induced) Employment	Thousands (Jobs)	2.261
Government Demand (induced) Employment	Thousands (Jobs)	0.011
Investment Activity Demand (induced) Employment	Thousands (Jobs)	0.238
Exports Demand (induced) Employment	Thousands (Jobs)	-0.271
Exogenous Industry Sales (direct) Employment	Thousands (Jobs)	0.000

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 51 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents direct employment. It can also be interpreted as the direct input we entered into the model. The average annual direct employment impact is 0 jobs because we did not use any employment policy variables to model this consumption reallocation of Floridian's out-of-state gaming spending. The average annual indirect employment (Intermediate Demand Employment) is 455. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact is 2,239. The sum of the average annual direct, indirect, and induced employment is 2,695.

2. Results – Slow Economic Growth (2012-2060)

Figure 118: Economic and fiscal impacts of pari-mutuel sector, 2012-2060, slow growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	7.468
Average Annual Population	Thousands	9.096

Figure 68 shows the private non-farm industries with largest average annual employment impact. Aside from the Amusement, Gambling, and Recreation Industries, which is the direct impact for this subsector, the rest are the top industries that are reliant on the pari-mutuel industry in Florida. Many of these industries, such as Services to Buildings and Dwellings, Business Support Services, and Management Consulting, are intermediate input suppliers to the pari-mutuel industry.

Figure 135: Average annual employment by demand source from pari-mutuel, 2012-2060, strong growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	2.489
Intermediate Demand Employment	Thousands (Jobs)	1.159
Local Consumption Demand Employment	Thousands (Jobs)	-1.519
Government Demand Employment	Thousands (Jobs)	0.402
Investment Activity Demand Employment	Thousands (Jobs)	0.046
Exports Employment	Thousands (Jobs)	-3.048
Exogenous Industry Sales Employment	Thousands (Jobs)	5.449

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 69 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel employment. It can also be interpreted as the direct input we entered into the model. The average annual direct pari-mutuel employment impact is 5,449 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the pari-mutuel sector is 1,159. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the pari-mutuel industry is minus-4,119. The average annual Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has

a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector. The sum of the average annual direct, indirect, and induced employment is 2,489.

Figure 136: Economic and fiscal impacts of lottery industry, 2012-2060, strong growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	30.207

Figure 77 shows the private non-farm industries with largest average annual employment impact. Aside from Accommodation, which is the direct impact for this analysis, the rest are the top industries that are reliant on the Native American casinos industry in Florida. Some of these, such as Services to Buildings and Dwellings and Business Support Services, are intermediate input suppliers to the gaming industry. Others, such as Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (Native American casinos) or indirect jobs.

⁵⁹¹ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impacts. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

Figure 144: Average annual employment by demand source from Native American casinos, 2012-2060, strong growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	4.875
Intermediate Demand Employment	Thousands (Jobs)	3.542
Local Consumption Demand Employment	Thousands (Jobs)	-7.146
Government Demand Employment	Thousands (Jobs)	0.260
Investment Activity Demand Employment	Thousands (Jobs)	-0.177
Exports Employment	Thousands (Jobs)	-2.596
Exogenous Industry Sales Employment	Thousands (Jobs)	10.993

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 78 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The average annual direct Native American casinos employment impact is 10,993 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the gaming sector is 3,542. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the Native American casinos industry is minus-9,660. The Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos. The sum of the average annual direct, indirect, and induced employment is 4,875.

Figure 145: Economic and fiscal impacts of Floridian out-of-state gaming spending, 2012-2060, strong growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	2.655
Average Annual Population	Thousands	4.263
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	14.138
Cumulative Personal Income	Billions of Fixed (2012) Dollars	13.334
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Millions of Fixed (2012) Dollars	24.474

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, if out-of-state gambling dollars by Florida residents were to instead remain in Florida, this spending would support an annual average of 2,655 jobs⁵⁹² in Florida under normal economic growth assumption. The cumulative GSP is \$14.1 billion and

⁵⁹² The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impact. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

\$13.3 billion in personal income. The average annual tax revenues generated from the indirect and induced impacts of the out-of-state gaming spending between FY 2013 and FY 2060 is \$24.5 million.

Figure 146: Top 12 Florida industries with largest average employment impact from Floridian out-of-state gaming spending, 2012-2060, strong growth

Industry category, with NAICS code	Units	2012-2060
Retail trade (44-45)	Thousands (Jobs)	0.467
Offices of health practitioners (6211-6213)	Thousands (Jobs)	0.383

Figure 80 shows the private non-farm industries that would have been impacted if Floridian's out-of-state gaming spending were brought back to Florida. Many of these industries, such as Retail Trade, Food Services and Drinking Places, and Private Households, are commonly supported by local spending.

Figure 147: Average annual employment by demand source from Floridian out-of-state gaming spending, 2012-2060, strong growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	2.585
Intermediate Demand Employment	Thousands (Jobs)	0.428
Local Consumption Demand Employment	Thousands (Jobs)	2.185
Government Demand Employment	Thousands (Jobs)	0.011
Investment Activity Demand Employment	Thousands (Jobs)	0.224
Exports Employment	Thousands (Jobs)	-0.262
Exogenous Industry Sales Employment	Thousands (Jobs)	0.000

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 81 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents direct employment. It can also be interpreted as the direct input we entered into the model. The average annual direct employment impact is 0 jobs because we did not use any employment policy variables to model this consumption reallocation of Floridian's out-of-state gaming spending. The average annual indirect employment (Intermediate Demand Employment) is 428. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact is 2,157. The sum of the average annual direct, indirect, and induced employment is 2,585.

4. Out-of-State Gambling Spending Contribution

While the previous section evaluates the impacts of total Florida gaming sector as well as the substitution effects of Floridian gambling spending, we carried out another simulation to specifically assess at the contribution of gambling spending from out-of-state (non-Florida residents). For this simulation, we assume 5% of the GGR to the pari-mutuel was from out-of-state, 2% of the GGR to the lottery (excluding retailers) was from out-of-state, and 15% of the GGR to Native American casinos as from out-of-state.

Figure 82: Economic and fiscal impacts from non-resident gambling spending in 2012

Summary	Units	2012
Total Employment	Thousands (Jobs)	4.289
Population	Thousands	1.053
Gross Domestic Product (GDP)	Billions of Fixed (2012) Dollars	0.404
Personal Income	Billions of Fixed (2012) Dollars	0.191
State Tax Revenues (fiscal year 2013)	Millions of Fixed (2012) Dollars	90.063

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 82 exhibits the total economic and fiscal impacts generated from non-Florida residents gambling spending in 2012. The total non-resident gambling spending supports a total of 4,289 jobs⁵⁹³ in Florida. The associated gross state product (“GSP”) is \$404 million and it generated \$191 million in personal income. The tax revenue generated from the direct, indirect, and induced impacts of the non-resident gambling spending in FY 2013 is \$90.1 million.

Figure83: Top 12 Florida industries with largest employment impact from non-resident gambling spending in 2012

Industry category, with NAICS code	Units	2012
Accommodation (721)	Thousands (Jobs)	1.212
Amusement, gambling, and recreation industries (713)	Thousands (Jobs)	0.279
Retail trade (44-45)	Thousands (Jobs)	0.243
Construction (23)	Thousands (Jobs)	0.228
Services to buildings and dwellings (5617)	Thousands (Jobs)	0.162
Food services and drinking places (722)	Thousands (Jobs)	0.152
Offices of health practitioners (6211-6213)	Thousands (Jobs)	0.098
Real estate (531)	Thousands (Jobs)	0.087
Wholesale trade (42)	Thousands (Jobs)	0.073
Business support services; Investigation and security services; Other support services (5614, 5616, 5619)	Thousands (Jobs)	0.068
Employment services (5613)	Thousands (Jobs)	0.047
Private households (814)	Thousands (Jobs)	0.046

⁵⁹³ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impact. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

Figure 83 shows the private non-farm industries that are dependent on the gaming industry (Accommodation and Amusement, Gambling, Recreation Industries). Some of these, such as Services to Buildings and Dwellings and Business Support Services, are intermediate input suppliers to the gaming industry. Others, such as Retail Trade and Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (gaming) or indirect jobs.

Figure 84: Employment by demand source from non-resident gambling spending in 2012

Breakdown of Direct, Indirect, and Induced Employment	Units	2012
Private Non-Farm Employment	Thousands (Jobs)	3.468
Intermediate Demand Employment	Thousands (Jobs)	1.128
Local Consumption Demand Employment	Thousands (Jobs)	0.704
Government Demand Employment	Thousands (Jobs)	0.093
Investment Activity Demand Employment	Thousands (Jobs)	0.120
Exports Employment	Thousands (Jobs)	-0.070
Exogenous Industry Sales Employment	Thousands (Jobs)	1.492

Source: Regional Economic Models Inc.

Notes: Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 84 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel, lottery, and Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The direct employment impact is 1,492 jobs in 2012, and the indirect employment (Intermediate Demand Employment) supported by non-resident gambling spending is 1,128. The induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the non-resident gambling spending is 847. The sum of the direct, indirect, and induced employment is 3,468.

Figure 85: Economic and fiscal impacts from non-resident gambling spending, 2012-2060

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	5.288

Exogenous Industry Sales Employment	Thousands (Jobs)	1.893

Source: Regional Economic Models Inc.

Notes: Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 87 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel, lottery, and Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The average annual direct employment impact is 1,893 job, and the average annual indirect employment (Intermediate Demand Employment) supported by non-resident gambling

spending is 1,395. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the non-resident gambling spending is 876. The sum of the direct, indirect, and induced employment is 4,164.

5. Hialeah Park Construction Impacts, 2011-2013

Similar to the previous section, we modeled the construction of Hialeah Park separately from the gambling industry assessment. Instead of modeling the impact of construction for only 2012, however, we modeled the construction activity in its entirety, starting in 2011 and ending in 2013, under the assumption that the construction duration is 24 months starting in summer of 2011. The total cost of construction for Hialeah Park is \$63,360,000 with an annual employment of 210.

Figure 148: Economic and fiscal impacts of Hialeah Park construction, 2011-2013

Summary	Units	2011-2013
Average Annual Employment	Jobs	248
Average Annual Population	Individuals	107
Cumulative Gross State Product	Millions of Fixed (2012) Dollars	60.730
Cumulative Personal Income	Millions of Fixed (2012) Dollars	38.513
Cumulative State Tax Revenues (fiscal year 2013 to 2014)	Millions of Fixed (2012) Dollars	1.445

Source: Regional Economic Models Inc., Spectrum Gaming Group

The construction activity from 2011 to 2013 generates an annual average of 248 jobs, a total of \$60.7 million in GSP, and \$38.5 million in personal income in Florida. It also induces \$1.45 million in state tax revenue from FY 2013 to FY 2014.

D. Conclusion

This analysis examines the gambling industry and its economic and fiscal contribution to Florida. The first part of the REMI economic impact analysis (“Assessing the Florida’s Existing Economic Base, Now and Future”) illustrates that although the various gambling subsectors (racinos/pari-mutuels, lottery, and Native American casinos) account for only a fraction of employment and wages within its respective aggregate sector, they are highly productive industries and generate a considerable amount of direct economic output to Florida.

In addition, the gaming industry has consistently brought it revenue for the state of Florida historically, below is tax collection information from FY 2000:

Figure 83: FY 2000 to FY 2012 tax revenue by gaming sectors

	Units	FY 00	FY 01	FY 02	FY 03	FY 04	FY 05	FY 06

The second section (“Discussion of Components of Economic and Fiscal Impacts”) examines the total economic and fiscal impacts of the gambling industry by subsectors in 2012. The results show that there are, or would be:

- Racinos/Pari-mutuels:
 - 4,953 direct racinos/pari-mutuels jobs in 2012.
 - These direct jobs support an additional 1,062 indirect jobs.
 - The induced jobs impact is minus-1,399; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities from racinos/pari-mutuels generated \$194 million in tax revenue for Florida.
- Lottery:
 - 394 direct lottery jobs in 2012.
 - These direct jobs support an additional 8,277 indirect jobs.
 - The induced jobs impact is minus-14,960; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Households have a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery.
 - The total economic activities from the lottery generated \$1.9 billion in tax revenue for Florida.
- Retail Lottery:
 - 39,900 direct retail lottery jobs in 2012.

SECOND DRAFT - CONFIDENTIAL

- These direct jobs support an additional 4,206 indirect jobs and 14,042 induced jobs
- The total economic activities from the retail lottery generated \$124 million in tax revenue for Florida.
- Native American Casinos:
 - 10,387 direct Native American casinos jobs in 2012.
 - These direct jobs support an additional 3,646 indirect jobs.
 - The induced jobs impact is minus-7,506; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos.
 - The total economic activities from the Native American casinos generated \$238 million in tax revenue for Florida.
- Floridian Out-of-State Gaming
 - No direct employment because we did not use an employment variable to model the reallocation of the gaming spending.
 - 693 indirect jobs and 3,143 induced jobs.
 - The total economic activities from the out-of-state gaming spending generated \$15.4 million in tax revenue for Florida.

The third section (“Assessment of Economic, Fiscal Impacts Over Time”) evaluates the total economic and fiscal impacts of the gambling industry by subsectors over between 2012 and 2060 under three different economic growth assumptions. Under normal economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,268 indirect jobs.
 - The average annual induced jobs impact is minus-3,611; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities generated an annual average \$561 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 12,510 indirect jobs.
 - The average annual induced jobs impact is minus-4,151; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.
 - The total economic activities generated \$3.7 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,775 indirect jobs and 27,674 induced jobs.
 - The total economic activities generated an annual average \$590 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,952 indirect jobs.
 - The average annual induced jobs impact is minus-8,852; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$280 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:

SECOND DRAFT - CONFIDENTIAL

- No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
- An average annual of 455 indirect jobs and 2,239 induced jobs.
- The total economic activities generated an annual average \$27.1 million in tax revenue for Florida between 2012 and 2060.

Under slower economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,397 indirect jobs.
 - The average annual induced jobs impact is minus-3,030; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$544 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 13,645 indirect jobs and 147 induced jobs.
 - The total economic activities generated an annual average \$3.5 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 10,148 indirect jobs and 29,918 induced jobs.
 - The total economic activities generated an annual average \$581 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.

SECOND DRAFT - CONFIDENTIAL

- The direct jobs support an additional average annual of 4,429 indirect jobs.
- The average annual induced jobs impact is minus-7,918; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
- The total economic activities generated an annual average \$283 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 488 indirect jobs and 2,334 induced jobs.
 - The total economic activities generated \$28.6 billion in tax revenue for Florida between 2012 and 2060.

Under stronger economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,159 indirect jobs.
 - The average annual induced jobs impact is minus-4,119; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$534 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 11,525 indirect jobs.

SECOND DRAFT - CONFIDENTIAL

- The average annual induced jobs impact is minus-7,778; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.
- The total economic activities generated an annual average \$3.6 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,418 indirect jobs and 26,330 induced jobs.
 - The total economic activities generated an annual average \$551 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,542 indirect jobs.
 - The average annual induced jobs impact is minus-9,660; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$257 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 428 indirect jobs and 2,157 induced jobs.
 - The total economic activities generated \$24.5 million in tax revenue for Florida between 2012 and 2060.
 -

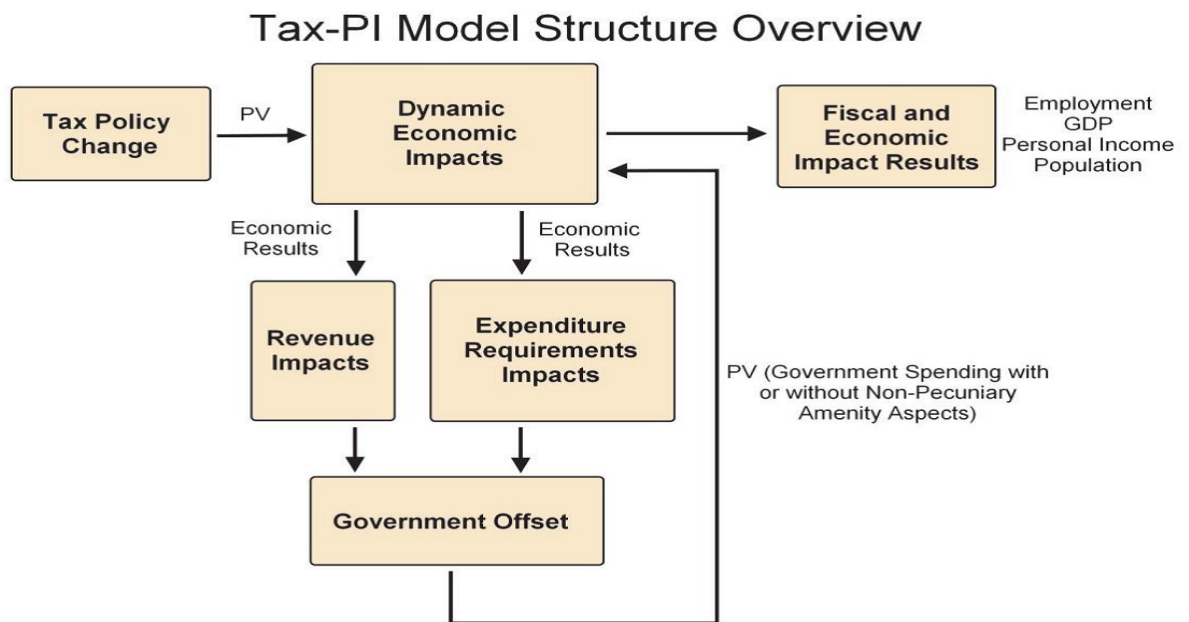

E. Appendix

Tax-PI is a new tool for evaluating the total fiscal and economic effects of tax policy changes. Tax-PI is based on over 30 years of experience in modeling the economic effects of tax policy changes. As states begin to demand better methods for estimating the economic and fiscal impacts of alternative tax scenarios, they look to experts to respond with sophisticated, flexible and relevant tools that can meet their needs.

Tax-PI is a dynamic fiscal and economic impact model that captures the direct, indirect and induced fiscal and economic effects of taxation and other policy changes over multiple years (up to 2060). It can model the complete dynamic economic and demographic impacts of any manner of tax policy change. States need to thoroughly evaluate both the short- and long-term effects of any tax changes in order to best serve the needs of the people. Tax-PI allows state agencies to do this with a model backed by years of dependability and experience. Highlights include

- Budget Editor: Customizable table that users calibrate to reflect actual or projected revenue and expenditure details for the current, past or future fiscal years.
- Taxes: Dynamic capability to adjust state-specific tax revenues. Users assign tax-specific variables to each of the custom revenue categories in order to track the fiscal effects of policy changes along with the economic effects. There is also a built-in feedback mechanism that automatically feeds revenue impacts back into the model to account for price and disposable income changes, therefore adjusting government spending accordingly.

Figure 149: Tax-PI Structure

SECOND DRAFT - CONFIDENTIAL

As Figure 1 shows, the methodology of Tax-PI revolves around the estimation of dynamic economic impacts. These impacts serve as the basis for the estimation of budgetary changes through the calibration done by REMI's economists and clients. For this analysis, REMI used a budget calibrated by Tax-PI users at the Office of Economic and Demographic Research. Prior to running simulations, the newest available year of revenue data is used to calibrate the budget. Each category is individually entered into Tax-PI. Then each revenue source is assigned an economic driver from the dynamic impact model that will form the basis of future estimates of the amount of revenue gained from that particular source. For example, the amount of sales tax revenue collected is connected to the amount of consumption in taxable categories in the state in that year as given by Tax-PI's baseline economic and demographic forecast. Using these two pieces of information (collections and driver), Tax-PI creates a quantified relationship between the two that can then predict changes in the future. A similar process is carried out for each revenue source. In Florida, the expenditures are mapped to specific revenue categories so the amount of government spending is tied to the availability of applicable revenues.

1. Detailed Model Methodology

Tax-PI is a structural economic forecasting and policy analysis model. It integrates input-output, computable general equilibrium, econometric and economic geography methodologies. The model is dynamic, with forecasts and simulations generated on an annual basis and behavioral responses to compensation, price, and other economic factors.

The model consists of thousands of simultaneous equations with a structure that is relatively straightforward. The exact number of equations used varies depending on the extent of industry, demographic, demand, and other detail in the specific model being used. The overall structure of the model can be summarized in five major blocks: (1) Output and Demand, (2) Labor and Capital Demand, (3) Population and Labor Supply, (4) Compensation, Prices, and Costs, and (5) Market Shares. The blocks and their key interactions are shown in Figures 2 and 3.

Figure 150: Model Linkages

REMI Model Linkages (Excluding Economic Geography Linkages)

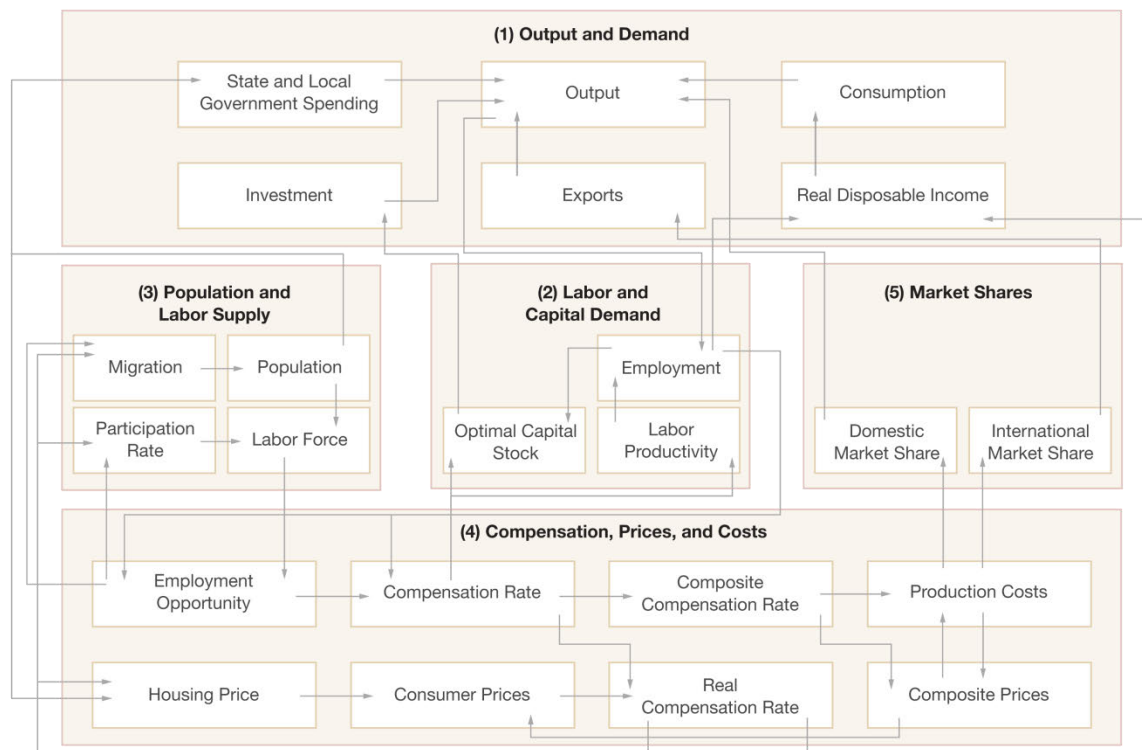

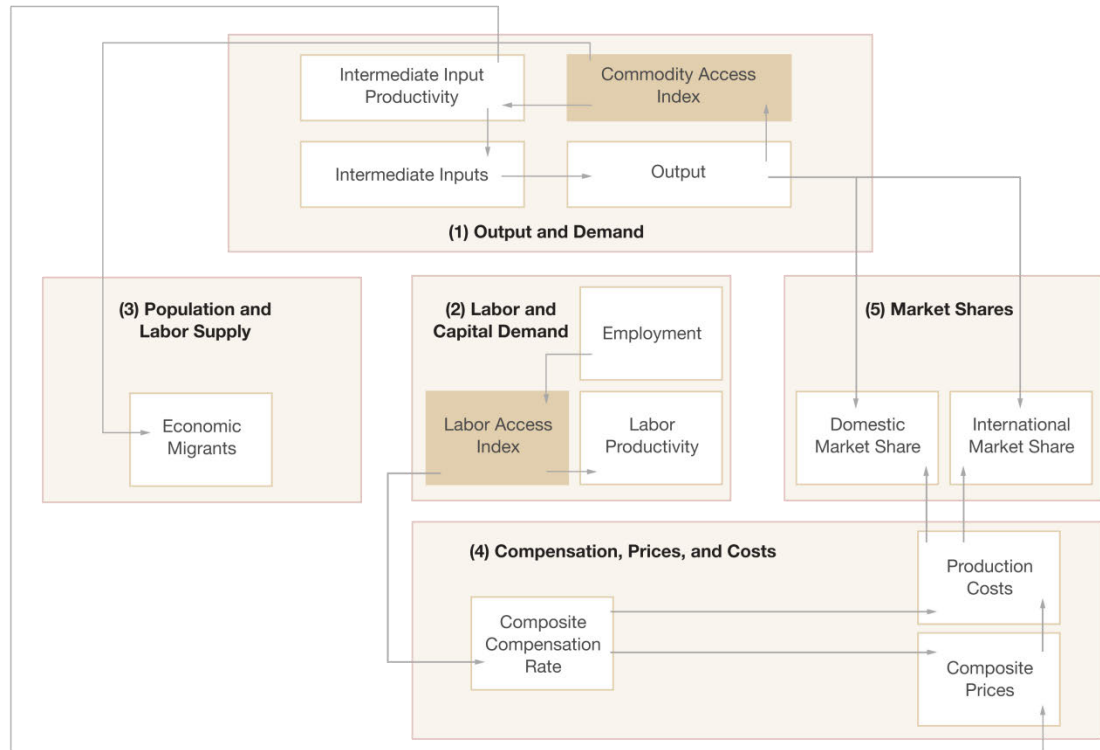

Figure 151: Economic Geography Linkages

Economic Geography Linkages

The Output and Demand block consists of output, demand, consumption, investment, government spending, exports, and imports, as well as feedback from output change due to the change in the productivity of intermediate inputs. The Labor and Capital Demand block includes labor intensity and productivity as well as demand for labor and capital. Labor force participation rate and migration equations are in the Population and Labor Supply block. The Compensation, Prices, and Costs block includes composite prices, determinants of production costs, the consumption price deflator, housing prices, and the compensation equations. The proportion of local, inter-regional, and export markets captured by each region is included in the Market Shares block.

Single-region models consist of an individual region, called the home region. The rest of the nation is also represented in the model. However, since the home region is only a small part of the total nation, the changes in the region do not have an endogenous effect on the variables in the rest of the nation.

A. Block 1. Output and Demand

This block includes output, demand, consumption, investment, government spending, import, commodity access, and export concepts. Output for each industry in the home region is determined by industry demand in all regions in the nation, the home region's share of each market, and international exports from the region.

For each industry, demand is determined by the amount of output, consumption, investment, and capital demand on that industry. Consumption depends on real disposable income per capita, relative prices, differential income elasticities, and population. Input productivity depends on access to inputs because a larger choice set of inputs means it is more likely that the input with the specific characteristics required for the job will be found. In the capital stock adjustment process, investment occurs to fill the difference between optimal and actual capital stock for residential, non-residential, and equipment investment. Government spending changes are determined by changes in the population.

B. Block 2. Labor and Capital Demand

The Labor and Capital Demand block includes the determination of labor productivity, labor intensity, and the optimal capital stocks. Industry-specific labor productivity depends on the availability of workers with differentiated skills for the occupations used in each industry. The occupational labor supply and commuting costs determine firms' access to a specialized labor force.

Labor intensity is determined by the cost of labor relative to the other factor inputs, capital and fuel. Demand for capital is driven by the optimal capital stock equation for both non-residential capital and equipment. Optimal capital stock for each industry depends on the relative cost of labor and capital, and the employment weighted by capital use for each industry. Employment in private industries is determined by the value added and employment per unit of value added in each industry.

C. Block 3. Population and Labor Supply

The Population and Labor Supply block includes detailed demographic information about the region. Population data is given for age, gender, and race, with birth and survival rates for each group. The size and labor force participation rate of each group determines the labor supply. These participation rates respond to changes in employment relative to the potential labor force and to changes in the real after-tax compensation rate. Migration includes retirement, military, international, and economic migration. Economic migration is determined by the relative real after-tax compensation rate, relative employment opportunity, and consumer access to variety.

D. Block 4. Compensation, Prices and Costs

This block includes delivered prices, production costs, equipment cost, the consumption deflator, consumer prices, the price of housing, and the compensation equation. Economic geography concepts account for the productivity and price effects of access to specialized labor, goods, and services.

These prices measure the price of the industry output, taking into account the access to production locations. This access is important due to the specialization of production that takes place within each industry, and because transportation and transaction costs of distance are significant. Composite prices for each industry are then calculated based on the production costs of supplying regions, the effective distance to these regions, and the index of access to the variety of outputs in the industry relative to the access by other uses of the product.

The cost of production for each industry is determined by the cost of labor, capital, fuel, and intermediate inputs. Labor costs reflect a productivity adjustment to account for access to specialized labor, as well as underlying compensation rates. Capital costs include costs of non-residential structures and equipment, while fuel costs incorporate electricity, natural gas, and residual fuels.

The consumption deflator converts industry prices to prices for consumption commodities. For potential migrants, the consumer price is additionally calculated to include housing prices. Housing prices change from their initial level depending on changes in income and population density.

Compensation changes are due to changes in labor demand and supply conditions and changes in the national compensation rate. Changes in employment opportunities relative to the labor force and occupational demand change determine compensation rates by industry.

E. Block 5. Market Shares

The market shares equations measure the proportion of local and export markets that are captured by each industry. These depend on relative production costs, the estimated price elasticity of demand, and the effective distance between the home region and each of the other regions. The change in share of a specific area in any region depends on changes in its delivered price and the quantity it produces compared with the same factors for competitors in that market. The share of local and external markets then drives the exports from and imports to the home economy.

About This Report

This report was prepared by Spectrum Gaming Group, an independent research and professional services firm founded in 1993 that serves private- and public-sector clients worldwide. Our professionals have backgrounds regulation, economic and financial analysis, law enforcement, gaming operations, market research and journalism.

Spectrum neither supports nor opposes legalized gambling or the expansion of it. Neither the company nor its employees hold a beneficial interest in any casino operating companies or gaming equipment manufacturers or suppliers. We employ only senior-level executives and associates who have earned reputations for honesty, integrity and the highest standards of professional conduct. Our work is never influenced by the interests of past or potentially future clients.

Each Spectrum project is customized to our client's specific requirements and developed from the ground up. Our findings and conclusions are based solely on our research, analysis and experience. Our mandate is not to tell clients what they want to hear; we tell them what they need to know. We will not accept, and have never accepted, engagements that seek a preferred result.

Spectrum's public-sector clients have included agencies or branches for 14 US state or territory governments and several international government agencies. Our private-sector clients have included most major casino companies, as well as investment firms, developers, law firms and architects. Our past clients in Florida, which have been disclosed to the Legislature in connection with this engagement, include Genting, Hialeah Park, the Seminole Tribe of Florida, and Sunrise Sports & Entertainment.

Spectrum executives have testified before the following government bodies:

- Georgia Joint Committee on Economic Development and Tourism
- Illinois Gaming Board
- Indiana Horse Racing Commission
- Indiana Gaming Study Commission
- International Tribunal, The Hague
- Massachusetts Gaming Commission
- Massachusetts Joint Committee on Bonding, Capital Expenditures, and State Assets
- New Hampshire Gaming Study Commission
- National Gambling Impact Study Commission
- New Jersey Assembly Tourism and Gaming Committee
- New Jersey Senate Legislative Oversight Committee
- New Jersey Senate Wagering, Tourism & Historic Preservation Committee
- Ohio Casino Control Commission

SECOND DRAFT - CONFIDENTIAL

- Ohio House Economic Development Committee
- Ohio Senate Oversight Committee
- Pennsylvania Gaming Control Board
- US House Congressional Gaming Caucus
- US Senate Indian Affairs Committee
- US Senate Select Committee on Indian Gaming
- US Senate Subcommittee on Organized Crime

Disclaimer

Spectrum has made every reasonable effort to ensure that the data and information in this study reflect the most accurate and timely information possible. The data are believed to be generally reliable. This study is based on estimates, assumptions, and other information developed by Spectrum from its independent research efforts, general knowledge of the gaming industry, and secondary research. Spectrum shall not be responsible for any inaccuracies in reporting by the Client or its agents and representatives, or any other data source used in preparing or presenting this study. The data presented in this study were collected through the cover date of this report. Spectrum has not undertaken any effort to update this information since this time.

Some significant factors that are unquantifiable and unpredictable – including, but not limited to, economic, governmental, managerial and regulatory changes; and acts of nature – are qualitative by nature, and cannot be readily used in any quantitative projections.

No warranty or representation is made by Spectrum that any of the projected values or results contained in this study will actually be achieved. We shall not be responsible for any deviations in the project's actual performance from any predictions, estimates, or conclusions contained in this study.

This study is qualified in its entirety by, and should be considered in light of, these limitations, conditions and considerations.

Appendix: Research Interviews

Spectrum Gaming Group staff and associates have interviewed the following through June 28, 2013, as part of our research for the Florida Gaming Study. The interviews were conducted in person, by telephone and/or by email. The purpose of some of the interviews may have been primarily for Part 1-B or Part II, which are being submitted to the State on or before October 1, 2013.

Katie, Ryan and LaQuisha --

Please provide me with an electronic copy of the draft report to the Legislature from Spectrum

Gaming Group related to the following: [Part I.A. Assessment of the Florida gaming industry and its economic effects](#)

Since your staff is in receipt of this draft, it should be possible to forward me a copy by the end of the day today. I do not plan to post or publish the report, but will refer to it generally for a story on the gaming industry for the weekend. I plan to write about the report only when the final draft is submitted on July 1.

Thank you,

~ Mary Ellen

Executive Summary

Introduction

The Florida Legislature commissioned Spectrum Gaming Group to undertake a three-party study of legalized gambling, focusing on its economic effects (including the social costs). This report, the first in the series, is divided into two primary parts:

- The first provides overviews of many aspects of gambling generally, both nationally and as they pertain to Florida (as relevant). Because this part consists of summaries existing data and research, we have not attempted to summarize the content in this Executive Summary.
- The second provides the economic impacts of Florida's existing gambling industry as it stands now – including the Florida Lottery, the pari-mutuel industry including slot machines and cardrooms, and Indian casinos. We provide the key performance data by sector and, working in concert with project partner Regional Economic Models Inc. ("REMI"), we provide the economic and fiscal impacts of these gambling sectors. The key findings are provided below in this Executive Summary.

This report is the product of a far-reaching scope of research and analysis. In many respects, it is a collection of several reports. We have provided a detailed Table of Contents that allows readers to easily find the topics of greatest interest to them.

While reading this report, it is important that readers understand the Legislature's instructions:

- Spectrum will not make recommendations in any of its reports. The Legislature commissioned Spectrum to undertake an economic and academic study for the purpose of educating the state's policymakers and other stakeholders so that they may make enlightened decisions regarding the future of gambling in their state.
- This is the first of three reports due to the Legislature. The two additional reports will be delivered by Spectrum on or before October 1, 2013, are as follows: Part 1, Section B: *Assessment of potential changes and economic effects*; and Part 2: *Statistical relationships between gaming and economic variables for communities*.
- It is also important to note that Spectrum was tasked with analyzing the social costs of associated with gambling in the second report. While this initial report provides a discussion of the many social costs of gambling, in Part 1B, as part of our next report, we will determine the costs as they relate to expanded gambling in Florida.

Key Gambling Sector Findings

First, we review the key performance data for each of Florida's three primary gambling sectors – pari-mutuel (including the subsectors of slots, cardrooms and pari-mutuel wagering) lottery, and Indian casinos.

Pari-Mutuel

Three distinct types of gambling take place under the umbrella of Florida's pari-mutuel industry, only one of which actually involves pari-mutuel wagering. Because state-regulated slot machines and cardrooms must be coupled with a pari-mutuel license, these activities are offered only at racetracks and jai alai frontons. All three types of gambling are regulated by the Department of Pari-Mutuel Wagering, a unit of the Business & Professional Regulation.

Racetrack Slots

- The racetrack slot industry, which is legally restricted to Broward and Miami-Dade counties, has steadily grown since inception in 2006. The six racinos in 2012 reported gross slot revenue of \$489.2 million and are set for continued growth with the opening of slots at Hialeah Park in summer 2013.
- The racinos in 2012 had 3,319 employees and generated \$149.8 million in taxes directly from slot revenue. Gross slot revenue is taxed at 35 percent.

Cardrooms

- Twenty-four pari-mutuel facilities operate cardrooms, which are restricted to poker and dominoes (which is rarely offered or played). Cardrooms last year generated \$131 million gross receipts and paid a tax of \$13.1 million.
- Cardrooms pay a state tax of 10 percent on gross receipts. Additionally, at jai alai and greyhound facilities 4 percent of cardroom gross receipts are used to fund purses and player awards; the figure is 50 percent at horse race facilities.

Pari-Mutuel Wagering

Most pari-mutuel facilities lose money on their pari-mutuel operations and need cardroom and/or casino revenue to subsidize those losses.

It is important to note that the total handle numbers cited below are understated because the Department of Pari-Mutuel Wagering does not collect data on out-of-state generated handle, which is the single largest component of handle.

- *Greyhound racing:* Total handle for the 13 facilities that ran greyhound racing fell from \$933.8 million in FY 1990 to \$265.4 million in FY 2012, a decline of 67 percent – mirroring the decline nationally. The number of Florida greyhound performances (a racing card of at least eight races) fell from 3,853 to 3,636, a decline of only 6

SECOND DRAFT - CONFIDENTIAL

percent. One of the reasons for the relatively small decline is because of the 90 percent rule: Operators with cardrooms are required to conduct at least 90 percent of the live performances that were held the year before their cardrooms opened, which for many of them was 1996. Although attendance has declined precipitously since 1990, reliable figures are unavailable because most tracks no longer charge for admission.

- *Thoroughbred racing:* Thoroughbred racing is the dominant pari-mutuel sector in Florida, with the three tracks accounting for 61 percent of total Florida handle in FY 2012. A Florida thoroughbred operator must run a minimum of 40 performances a year. From FY 1990 to FY 2012, Florida thoroughbred performances fell from 348 to 327, a decline of 6 percent; paid attendance fell from 653,206 to 97,738, a decline of 85 percent. Total handle in FY 2012 was \$530.7 million and live handle was \$78.6 million; both figures are in decline, although they have somewhat stabilized since slots were introduced at two of the tracks. Purses increased from \$78.1 million to \$81.1 million, a rise of 16 percent. The three tracks generated a combined operating profit of \$13 million for FY 2012. Much of the profit, \$10.6 million, came from pari-mutuel operations, with the rest from slots and/or cardrooms.
- *Harness racing:* Florida's sole harness track, Isle Casino and Racing at Pompano, accounted for 5 percent of total Florida handle in FY 2012. The Pompano track must run at least 140 performances a year but it can seek a one-time, 10 percent reduction from the 140-performance minimum. Attendance has declined such that Isle Pompano no longer charges admission and attendance figures are not kept. Total handle in FY 2012 was \$49.5 million and live handle was \$4.4 million; both figures are about the same as the year earlier.
- *Quarter horse racing:* Quarter horse racing returned to Florida in November 2009 at Hialeah Park after an 18-year absence. Quarter horse racing accounted for less than 1 percent of total Florida handle in FY 2012. Quarter horse racing had 76 performances in FY 2012. It generated a live handle of \$1.7 million, total handle of \$2.1 million and purses of \$3.8 million. Almost all of the traditional quarter horse activity was at Hialeah, where the operator subsidized purses as part of its contract with horsemen.
- *Jai alai:* Of all the pari-mutuel sectors, jai alai has sustained the steepest cuts in attendance and popularity. Since 1990, total handle has fallen 91 percent, live handle 96 percent, player awards 63 percent and performances, 63 percent. In 1990, 3.9 million people paid to watch the sport. In 2012, total paid attendance was 9,068. From pari-mutuel operations, the jai alai sector sustained an operating loss of \$14 million. Their cardrooms were able to generate an operating profit of \$1 million. Miami Jai Alai had the highest handle at \$6.6 million in FY 2012.

Lottery

SECOND DRAFT - CONFIDENTIAL

The Florida Lottery reported FY 2012 sales of a record \$4.45 billion, up 11 percent over the previous year, ranking third in the nation in total sales revenue (FY 2011), behind New York and Massachusetts. On a per-capital basis, Lottery sales were \$233, also a state record.

Since its inception in 1988, the Lottery has provided a total of \$24 billion to the Educational Enhancement Trust Fund (“EETF”). In the past fiscal year the EETF has allocated \$317 million for construction bonds, provided \$271 million for public school finding, \$130 million for state colleges, and \$254 million for state universities. Since 1997 the Florida Lottery has also provided scholarships to more than 600,000 students through the Bright Futures Scholarship Program, funded primarily through Lottery financial transfers. Lottery tickets are sold at 13,300 retail locations throughout the state.

Indian Casinos

The Seminole Tribe of Florida operates six casinos and the Miccosukee Tribe operates one casino. The Seminole Tribe advised Spectrum that in 2012 its gaming facilities employed 9,562 total employees, or 7,725 full-time-equivalent employees. Another 4,000 are employed by Seminole casino tenants, such as retailers who operate on-site outlets. The Miccosukee Tribe, declined to participate in this study, though a Miccosukee Gaming & Resort employee advised Spectrum that its gaming property employs “over 800.”

The Seminole Gaming enterprise generated \$1.96 billion in GGR in 2012 at its six properties, and we estimate statewide GGR at Indian casinos \$2.2 billion.

At least two other Indian tribes/nations are trying to operate casinos:

- The Poarch Band of Creek Indians, based in Atmore, AL, has land in Escambia County, which is held in trust by the US government, and also owns, or has options to own, or agreements to control 10 pari-mutuel permits along the Interstate 10 corridor between Pensacola and Jacksonville. It is seeking to negotiate an agreement, which could include revenue-sharing, with the State to operate Class II gaming.
- For the past decade the Muscogee Nation of Florida has been pursuing federal recognition by act of Congress in order to initiate gaming operations as a means of economic development. Tribal landholdings are well positioned to offer casino gaming in the Florida panhandle.

Fiscal Impacts

Our analysis examines the total economic and fiscal impacts of the gambling industry by subsectors in 2012. The results show that there are, or would be:

- Racinos/Pari-mutuels:
 - 4,953 direct racinos/pari-mutuels jobs in 2012.

SECOND DRAFT - CONFIDENTIAL

- These direct jobs support an additional 1,062 indirect jobs.
- The induced jobs impact is minus-1,399; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
- The total economic activities from racinos/pari-mutuels generated \$194 million in tax revenue for Florida.
- Lottery:
 - 394 direct lottery jobs in 2012.
 - These direct jobs support an additional 8,277 indirect jobs.
 - The induced jobs impact is minus-14,960; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Households have a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery.
 - The total economic activities from the lottery generated \$1.9 billion in tax revenue for Florida.
- Retail Lottery:
 - 39,900 direct retail lottery jobs in 2012.
 - These direct jobs support an additional 4,206 indirect jobs and 14,042 induced jobs
 - The total economic activities from the retail lottery generated \$124 million in tax revenue for Florida.
- Native American Casinos:
 - 10,387 direct Native American casinos jobs in 2012.
 - These direct jobs support an additional 3,646 indirect jobs.
 - The induced jobs impact is minus-7,506; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities from the Native American casinos generated \$238 million in tax revenue for Florida.
- Floridian Out-of-State Gaming
 - No direct employment because we did not use an employment variable to model the reallocation of the gaming spending.
 - 693 indirect jobs and 3,143 induced jobs.
 - The total economic activities from the out-of-state gaming spending generated \$15.4 million in tax revenue for Florida.

The third section (“Assessment of Economic, Fiscal Impacts Over Time”) evaluates the total economic and fiscal impacts of the gambling industry by subsectors over between 2012 and 2060 under three different economic growth assumptions. Under normal economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,268 indirect jobs.
 - The average annual induced jobs impact is minus-3,611; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$561 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 12,510 indirect jobs.
 - The average annual induced jobs impact is minus-4,151; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities generated \$3.7 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,775 indirect jobs and 27,674 induced jobs.
 - The total economic activities generated an annual average \$590 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,952 indirect jobs.
 - The average annual induced jobs impact is minus-8,852; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$280 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 455 indirect jobs and 2,239 induced jobs.
 - The total economic activities generated an annual average \$27.1 million in tax revenue for Florida between 2012 and 2060.

Under slower economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,397 indirect jobs.
 - The average annual induced jobs impact is minus-3,030; There is a negative change in induced jobs primarily because for every dollar

SECOND DRAFT - CONFIDENTIAL

Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.

- The total economic activities generated an annual average \$544 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 13,645 indirect jobs and 147 induced jobs.
 - The total economic activities generated an annual average \$3.5 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 10,148 indirect jobs and 29,918 induced jobs.
 - The total economic activities generated an annual average \$581 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 4,429 indirect jobs.
 - The average annual induced jobs impact is minus-7,918; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$283 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 488 indirect jobs and 2,334 induced jobs.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities generated \$28.6 billion in tax revenue for Florida between 2012 and 2060.

Under stronger economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,159 indirect jobs.
 - The average annual induced jobs impact is minus-4,119; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$534 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 11,525 indirect jobs.
 - The average annual induced jobs impact is minus-7,778; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.
 - The total economic activities generated an annual average \$3.6 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,418 indirect jobs and 26,330 induced jobs.
 - The total economic activities generated an annual average \$551 million in tax revenue for Florida between 2012 and 2060.

SECOND DRAFT - CONFIDENTIAL

- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,542 indirect jobs.
 - The average annual induced jobs impact is minus-9,660; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$257 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 428 indirect jobs and 2,157 induced jobs.
 - The total economic activities generated \$24.5 million in tax revenue for Florida between 2012 and 2060.

I. Introduction

The study of gambling's economic and social impacts is a never-ending process that will only grow more critical over time: Some form of gambling is legal in 48 states, and debates over gambling expansion seem to be an annual event at statehouses across the country. Moreover, the effective legalization of Internet gambling at the state level has magnified such debates. At the same time, illegal and/or unregulated gambling is proliferating through such channels as so-called Internet cafes, gray-market electronic gaming devices, skill games, amusement games, and online games.

There is no debating that most Americans like to gamble. Some 53 percent of American adults played the lottery last year and 32 percent gambled in a casino.¹ As gambling historian David G. Schwartz notes, the activity is nearly as old as civilization itself. In America, colonial legislatures authorized 157 lotteries from the 1740s through 1776 to assist governments and other institutions.²

Legalized gambling as we know it today is relatively young. The first legal casinos of the modern era opened in Nevada in 1931. The country's first lottery, in New Hampshire, began in 1964. Betting on horse races has a longer history, dating to colonial days in the US but grew rapidly after the Civil War.³

Although popular in one form or another with most Americans, gambling remains controversial. On the one hand, regulated gambling can provide substantial revenues to governments and, in many markets, a substantial number of direct, indirect and inducted jobs; on the other hand, it can lead to compulsions that result in financial, familial and mental-health costs, as well as governmental costs ranging from gambling-addiction treatment centers to additional law enforcement. The arguments on both sides are strong – and usually impassioned.

This report will not resolve the debate over the merits of legalized gambling, nor is it the assignment of Spectrum Gaming Group to attempt to do so (nor has the Florida Legislature tasked Spectrum with recommending any course of action). Rather, the Legislature commissioned an economic and academic study for the purpose of educating the state's policymakers and other stakeholders so that they may make enlightened decisions regarding the future of gambling in their state.

This analysis relies on the experience of Spectrum professionals in various disciplines, many of whom have studied this issue for decades, and is supported by additional research and interviews with numerous stakeholders in Florida who care deeply about this issue, and about the

³ *Ibid.*, p. 332.

future of their state. Our experience is tempered and governed by certain observations and principles:

- The gaming industry is uniquely intertwined with government, arguably as much as any other industry, particularly any industry that is dependent on discretionary spending. Government can legislate gaming into – or out of – existence, which underscores this relationship.
- Gaming is a privilege granted to those who meet affirmative obligations for demonstrating their good character, honesty and integrity. That principle is largely universal, and is shared by federal, state and tribal governments.
- Governments not only authorize legalized gambling, but often grant regional monopolies for operators. The corollary to that is that operators have a responsibility to operate in the public interest.
- With proper planning and coordination, the public and private sectors are more likely to identify common goals, and to achieve those goals.

Methodology

The State of Florida on April 16, 2013, retained Spectrum Gaming Group (“Spectrum,” “we” or “our”) to complete a two-party study of the state’s gambling industry, pursuant to Invitation to Negotiate #859 (“the ITN”).⁴ This report is Part 1, Section A: *Assessment of the Florida gaming industry and its economic effects*. Two additional reports as part of this engagement will be delivered by Spectrum to the Legislature on or before October 1, 2013: Part 1, Section B: *Assessment of potential changes and economic effects*; and Part 2: *Statistical relationships between gaming and economic variables for communities*.

Following is the assigned scope of this report, as published in the ITN:

A. Assessment of the Florida gaming industry and its economic effects.

1. An assessment of gambling generally, including:
 - a. A general description of gambling in terms of popularity, profitability, regulatory considerations, and cost mitigation, including not only industries currently operating in Florida but also other gambling activities such as table games, Internet poker, destination resort casinos, and sports betting.
 - b. A general description of gambling regulatory schemes, including: State-operated, consolidated agency oversight, multi-agency oversight, and the use of local and state commissions; Authorizing and revocation mechanisms; Taxation schemes.
 - c. A general description of trends and best practices in governance and regulation of gambling activities.

SECOND DRAFT - CONFIDENTIAL

- d. A general description of gambling as a public funding source, including: Comparison of states' reliance on and uses of gambling as a public funding source; Reliability and predictability of gambling revenues; Direct and indirect costs to the state.
 - e. A general description of gambling impacts, including: Social, criminal, and personal; Short- and long-term fiscal.
2. An economic assessment of the structure and performance of Florida's existing gaming industry, including:
 - a. An analysis of gaming subsectors and their size and economic importance.
 - b. A description of the direct, indirect, and induced components of the economic and fiscal impact of each of the subsectors. Impacts associated with facility construction should be distinguished from impacts associated with ongoing operation of a facility.
 - c. An assessment of the changes in those impacts over time until the present day, historically, and projections for the future.

In each section of the report, we provide the relevant ITN language (highlighted in gray) to provide an understanding of the scope of research with which Spectrum was tasked for this first report.

Our task was to study the impacts of legalized gambling. Like many other states, Florida had (and perhaps still has) illegal and/or unregulated gaming in the form of Internet cafes and slot-like arcade games. While we discuss the nature and issues involving such gambling, it is beyond the scope of this study to examine its performance and impacts.

Many of the topics covered herein are worthy of their own reports, but the broad, multi-subject scope of this report – and the directive of providing “an assessment of gambling generally” – limits the extent to which we could reasonably treat such topics. It is important to note, however, that in-depth analysis of several topics will be provided in the second and third reports of Spectrum's engagement. Further, our footnotes herein provide dozens of excellent document references – many available online, with the URLs included – where readers can find more information about these important topics.

Spectrum employed 16 project professionals for this report, all of whom are staff experts or associates, assisted by support staff as needed. We relied on publicly available data, as well as data requested from gambling operators and government sources, interviews with various Florida stakeholders (both in person, by telephone and by email), site visits, existing documents and research reports, and our own expertise in having studied gambling for more than three decades.

For the second part of this report, which assesses the economic structure of Florida's existing gaming industry, we teamed with Regional Economic Models Inc., a globally respected economic modeling firm based in Amherst, MA, that works with numerous state governments, including the State of Florida. REMI's goal in this report was to establish, as best the data would allow, a baseline of the economic contributions of the existing gaming industry in Florida. To this end, REMI relied on its Tax-PI model, data from the US Census Bureau, and data from the

SECOND DRAFT - CONFIDENTIAL

other project team members. REMI used each source of data to compliment the others in order to produce the best picture the data would support. Once a base year was established, REMI used an index of the growth in the relevant industry sectors in Tax-PI to forecast growth for the gaming industry into the future. With this baseline established, REMI then conducted a counterfactual study that removed the existing gaming industry from the economy in order to calculate its contribution.

II. General Assessment of Gambling

A general description of gambling in terms of popularity, profitability, regulatory considerations, and cost mitigation, including not only industries currently operating in Florida but also other gambling activities such as table games, Internet poker, destination resort casinos, and sports betting.

A. Growth and Evolution of Gambling in United States

Florida is not an emerging gambling state. In terms of revenue, employment, number of gaming locations and other important measures, it already is a major gambling state, with a wide array of options. Florida is arguably a microcosm of US gaming, with all of the forces that are shaping the industry in other states at play here. Absent a plan for growth, these forces will continue unabated in shaping the industry in both Florida and elsewhere. Moreover, the presence of such forces will also constrict the ability of lawmakers to chart the future of gaming. These forces can be segmented into the following broad areas:

- **Legal:** Within the bounds of the state Constitution and federal law, the Florida Legislature has significant ability to craft its own laws and policies in areas ranging from tax rates to governing Internet cafes, among many examples. The boundaries that limit legislative authority, however, are significant. Florida is bound by a compact with the Seminole Tribe of Florida, and that compact is, in turn, bound by federal laws and regulations, most notably by the Indian Gaming Regulatory Act (“IGRA”). Other states, such as Connecticut, have found themselves in a similar position, having learned that compacts can represent missed opportunities that are difficult to revise after the fact. The same holds true for constitutional amendments.
- **Market:** As with any gaming jurisdiction, the future size of the gaming industry will be partly dependent on the size of the resident population, as well as on the size of the existing and future tourism markets. Those markets will, in turn, be dependent on the number of gaming and other entertainment options, both inside and outside Florida. As gaming expands within the home markets of Florida visitors, as well as within markets that compete for those visits, it will impact the growth of gaming in Florida, as well as the ability of lawmakers to guide that growth.
- **Historic:** The two federally recognized tribes in Florida lay claim to a longstanding history of gaming in Florida, as well as other rights and privileges granted to sovereign governments. Historic claims to sovereignty are at the root of IGRA and various court decisions that have supported and bolstered the concept of sovereignty and gaming rights. At the same time, the pari-mutuel industry – in particular, horse racing – has a long history within the state as well, and extends into various geographic regions and

SECOND DRAFT - CONFIDENTIAL

economic interests, from breeding and training to racing. This factor is arguably more acute in Florida, but is not unprecedented.

- **Political:** Among various private industries, gaming is uniquely dependent on the political process for its success, and in many instances, for its very existence. In Florida, as in other states, this essential connection with government and the political process means that gaming operators and their allied interests have devoted – and will continue to devote – considerable resources toward influencing that process. At the same time, other interests that oppose the expansion of gaming, for reasons ranging from moral to economic, will play a role in that process.
- **Technological:** Gaming is hardly immune to changes in technology that are whipsawing many industries and changing business models around the world. The development of the Internet, and offshoots of that, including the expanded use of mobile technologies, have created new gaming opportunities, while presenting new challenges for lawmakers and regulators. In turn, as other states – and the federal government – adapt their own gaming laws, it will inevitably have an impact on the future of gaming in Florida.
- **Competitive:** While states compete against other states, in-state competition is also common. Lotteries and casinos can view each other as threats (even though arguably the experience is quite different, as is the demographics of the player base). Similarly, within the casino sub-sector itself, in-state competition can occur, and that can include competition for legislative and regulatory attention and resources. In Indiana, for example, the state's two racinos⁵ operate under different rules than the riverboats. For example, riverboats are allowed live table games, which are barred from racinos, while the tax rates also differ.

As these macro trends combine, a number of smaller yet still significant trends have emerged. For example, states that first legalized gaming with slots or video lottery terminals are evolving into full-service casinos, with both slots and table games. In part, this has been facilitated by political pressures for more gaming revenue and to create additional employment opportunities, but it has also been advanced through technology as well. Various companies, most notably Shuffle Master and International Game Technology, have developed popular electronic table games that mimic live table games, sometimes with virtual dealers, but can be governed like slot machines.

That is an example of how political and technological trends can combine to effect changes. The technology that created electronic table games was largely unanticipated when slots were initially authorized in many states, and as the technology developed, new questions arose, such as: Are the electronic games tables or slots?

⁵ "Racino" is a widely used portmanteau formed by the combination of two words, racing and casino. It is a synonymous term for racetrack casino.

SECOND DRAFT - CONFIDENTIAL

With that in mind, this interim step of electronic table games has made it easier from both a management and a government standpoint to take the next step of live table games. Moreover, in such instances, states are often responding to what other states are doing. This has clearly been the case with West Virginia first adding live tables to its slots-only mix, followed by Delaware and then by Pennsylvania.

Similarly, within the private sector, various operators are taking advantage of expansion by developing a “hub and spoke” business model, in which smaller properties that are generally in markets with a higher gaming tax can feed business to hub properties in destination markets where the tax rates are generally lower. This trend is explained in more detail later in the report.

With these factors combined, Florida is also emblematic of national trends. In-state competition is intense, not just on a geographic basis, but in terms of fighting for parity on issues ranging from the type of offerings allowed to the effective tax rate. Florida is arguably more heightened on the competitive front than other states.

As more than one stakeholder told us during the course of our research for this study, the pari-mutuel industry resembles a “circular firing squad.” Horse racing interests have little in common with their dog-racing counterparts, and both have little in common with jai alai. Even within horse racing, there are warring camps between those who favor racing as the principal line of business and those who favor the casino offerings.

The various parties that comprise the pari-mutuel industry have different agendas as well, with some favoring the addition of table games to pari-mutuels as the principal goal with others favoring a lower effective tax rate, for example. Pari-mutuels will generally find some common ground among themselves on the issue of a perceived “unlevel playing field” with the Indian gaming operations, as well as in opposition to Internet cafes. Going further, the pari-mutuels will also find common cause with the tribal operations in their shared opposition to proposals to authorize additional destination gaming resorts under a competitive bidding process.

On that latter issue, they all find common ground with business interests in the Orlando region and others, such as No Casinos, in their uniform opposition to the introduction of new destination resorts.

Such shifting alliances and differing agendas are not uncommon within gaming, and highlight two other truisms:

- The status quo always has its adherents, and can make for some unusual political bedfellows.
- Gaming will continue to evolve, with or without guidance or planning from public officials.

The former point is best exemplified by how gaming has evolved in different states. For example, Nevada – the state that is most dependent on gaming revenues for government operations – has no state lottery. At the same time, Internet gambling is just beginning to emerge

in the United States while it is a mature industry in Europe. In both instances, the same explanation applies: Those whose interests are tied to the status quo are more likely to resist.

That does not mean that the industry will stop changing and evolving. Change will continue, whether public officials play a lead role or not. The factors leading to change, as outlined in this section, will not render any effort to develop a gaming policy as moot. In fact, the presence of these critical factors heightens the need for a comprehensive policy. Based on our research and experience in Florida and elsewhere, gaming will evolve in Florida whether or not the Florida Legislature develops a plan and puts that plan into action. Absent any plan, however, that evolution would be haphazard and would be far less likely to address or advance any public-policy goals.

5. How Governments Respond to Gambling Expansion

Gaming has been expanding for decades and continues to do so. Even when limits are enshrined in the state Constitution, it does not preclude serious expansion efforts. Constitutional limitations, as well as tribal compacts, can be viewed as obstacles to expansion, but in a real-world sense, do not serve as permanent barriers. The best example of this can be found in New York, where the state constitution prohibits commercial gambling, yet it has a highly successful lottery, nine racinos and five Indian casinos – all operating through a variety of exemptions, rulings and legal interpretations. Today, New York Governor Andrew Cuomo is pushing to outright amend the state constitution to allow full-blown commercial casinos; i.e., those with true slot machines (as opposed to video lottery terminals) and live table games.

States place all sorts of limits on their gaming industry, from geographic locations (as with New Jersey, which restricts casinos to Atlantic City), to limits on the number of licenses (Pennsylvania, Illinois, Massachusetts and others), to limiting gaming to pari-mutuel facilities (as with many states, such as Delaware and New York), to limits on the number of gaming positions per property (Illinois, for example), to requirements that casinos be on riverboats (several Midwest states).

The following macro factors are driving the expansion of gaming:

- As states need more revenue, particularly in periods of economic recession, gaming bills and referenda are more likely to be introduced, and to be viewed favorably. This trend hails back to 1931, when Nevada introduced gambling in the midst of the Great Depression. In 1976, New Jersey voters approved casinos in large measure to assist economically depressed Atlantic City. Economic downturns in the 1990s prompted a number of Midwestern states, from Illinois down to Mississippi, to create riverboat casino industries.
- As related industries such as pari-mutuels see their own revenues and profitability decline, this prompts calls for subsidies, usually in the form of adding slot machines (often followed by table games) to pari-mutuel operations. Consequently, as racetracks

SECOND DRAFT - CONFIDENTIAL

use some of this additional funding to increase purses, that trend is further fueled as tracks that compete for horses and export signals are pressured to increase their purses in response.

- States respond to what occurs in other states. One political argument that often gains traction with legislatures and the general public is the notion that one state's residents are spending their dollars in neighboring states rather than at home. This argument has been used in a variety of states in the last decade including Kentucky, Massachusetts, Ohio and Pennsylvania.
- In the battles between pro-gaming and anti-gaming political campaigns, the playing field is not level in one important sense: Those who oppose gaming's expansion often succeed, but in many instances they have to continue doing battle in subsequent years. They have to win every time. Those who favor the expansion of gaming need to win only once.

That latter point can be illustrated in various states. For example, Ohio voters turned down four referenda between 1990 and 2008 that would have legalized casinos in various locations.⁶ In only one of those votes – a 2006 measure to approve two casinos in Cuyahoga County, plus slot machines at seven racetracks – did the measure gain support from more than 40 percent of the voters. Yet, a fifth ballot measure in 2009 to authorize one casino in each of four Ohio cities – Cleveland, Cincinnati, Columbus and Toledo -- was supported by 53 percent of Ohio voters.⁷ Consequently, despite four successful efforts to defeat casinos, Ohio is now a gaming state.

The most notable example of this phenomenon can be found in Florida itself, starting with a failed measure in 1978. The following account summarizes that effort:

“On November 4, 1978, Florida voters overwhelmingly rejected a proposal to legalize casinos along the Gold Coast – and in Miami Beach in particular. By a lopsided 73 to 27 margin, opponents of the casino legalization measure, led by two-term governor Reubin Askew, carried every county in Florida and beat back a referendum similar in style and substance to the successful 1976 New Jersey initiative.

“There were many obvious differences between the two states, which might account for the disparity in the vote. Of these, two are particularly notable: Florida has a large Baptist population and is generally regarded as a politically conservative state; and Florida's economy, including its tourism, was strong. ... As late as August 1978, polls conducted for the casino opposition had concluded that, while the November gambling contest

⁶ Rich Exner, “Ohio Casino vote passes on strength near would-be casinos; a look at the vote,” *The Plain Dealer*, November 4, 2009; http://www.cleveland.com/datacentral/index.ssf/2009/11/ohio_casino_vote_passes_on_str.html.

⁷ Ibid.

SECOND DRAFT - CONFIDENTIAL

would be close, the momentum of the election appeared to be with the gambling proponents. In the few months between those polls and the November election, a spirited campaign against casinos led by influential south Florida commercial interests appeared and turned a once close contest into a one-sided race.”⁸

That unsuccessful campaign – which relied on the same campaign manager who conducted the successful 1976 campaign in New Jersey⁹ – did not end such efforts in Florida.

Spectrum professionals, in previous careers, have been close observers of various gaming efforts in Florida. Indeed, working as a journalist for *The Press of Atlantic City* in 1986, Spectrum Managing Director Michael Pollock witnessed the first in-person meeting between the political directors of two referenda on the ballot that year: an effort to legalize land-based casinos in hotels with at least 500 rooms (subject to local approval), and another to legalize a state lottery. At an impromptu meeting at Tampa International Airport, the head of Citizens for Jobs and Tourism, the pro-casino lobby, suggested to his counterpart heading the lottery effort that they coordinate their campaigns to mutual benefit. The offer was politely but firmly rejected and, as it turned out, for good reason: The lottery referendum was approved by a 2-1 margin, while the casino effort lost by the same ratio.¹⁰

That 1986 Florida referendum, however, proved to be a harbinger as to how gaming issues would evolve throughout the United States, both in terms of public perception and in how pro- and anti-casino campaigns would be funded and operated. This was captured well in a prescient column in the *Sun-Sentinel*, “Money Shouts in Gambling Referendum,” that appeared about eight months prior to the November 1986 Florida vote:

“A few rich individuals and corporations have the potential of influencing - some even say buying - the result of the November 1986 referendum on legalizing casinos in Florida.

“In this state, no limits exist on what one can contribute to a referendum campaign. As gamblers say, the sky’s the limit. ...

“... Millions of dollars will be spent this year to debate casino gambling. Those who want legalized casinos ‘will have a more sophisticated campaign than in 1978,’ casino foe (former Gov. Reubin) Askew said. ‘I think they’ll run a political campaign as opposed to a PR campaign. It’s going to be a tough fight.’ ...

SECOND DRAFT - CONFIDENTIAL

“Pro-casino forces are sensitive about the big-spender image. Therefore they will seek their donations from within the state. And the staff of Citizens for County Choice is all from Florida.

“ ‘It shouldn’t be a carpetbagger image. It should be a Florida-supported effort and Florida-controlled effort,’ said Andrew Rubin, who led Citizens for Jobs and Tourism.

“Those favoring legalized casinos like to promote this referendum as democracy at its best, giving people a right to choose. (The proposed constitutional amendment that will appear on the ballot says if casinos are legalized by statewide vote, there still must be a local referendum to decide whether to permit casinos in a particular county.)

“ ‘This campaign is a more of a personal rights referendum as against a gambling referendum,’ said pro-casino leader Kennedy. ‘You are asking people to allow those people who may want casinos to have a right to vote on them.’ ¹¹”

Like the 1978 referendum, the 1986 referendum failed, albeit by a smaller margin of only 2-1 (while voters approved the lottery by about the same margin).¹² In between those two failed casino referenda, however, gambling was still emerging and evolving in Florida in the form of “cruises to nowhere,” simulcasting of races and high-stakes bingo.¹³ While another proposed constitutional amendment failed in 1994 by a 62-38 percent margin, gaming proponents eventually seized a narrow victory in 2004 when a constitutional amendment was approved with less than 51 percent of the vote to allow racinos to open in Miami-Dade and Broward counties.¹⁴

As noted in the previous section, these trends do not evolve in isolation, and the factors that are driving expansion can feed off each other. For example, as states respond to actions taken in neighboring states, gaming is more likely to expand. This has the impact of making states more dependent on gaming revenue for growing portions of their budgets. At the same time, political forces that are pushing for expansion are learning from previous efforts in their own and in other states as to how campaigns could be shaped more effectively with messages that resonate.

Consequently, as more states authorize and expand gaming, bringing it closer to more population centers, participation and familiarity with gaming will inevitably increase. As an industry, gaming is uniquely dependent on – and uniquely intertwined with – the political process, and this relationship largely guides the industry’s growth. John Sowinski, president of

¹¹ Diane Firth, “Money Shouts in Gambling Referendum, *Sun-Sentinel*, March 23, 1986 http://articles.sun-sentinel.com/1986-03-23/news/8601180125_1_pro-casino-forces-casino-referendum-casino-question.

¹² Mary Ellen Klas, “A Timeline of Gambling in Florida,” *Tampa Bay Tribune*, November 25, 2009 <http://www.tampabay.com/news/perspective/a-timeline-of-gambling-in-florida/1054345>.

¹³ Klas, “A Timeline of Gambling in Florida.”

¹⁴ Ibid.

No Casinos in Florida, observed a phenomenon that governs how elected officials largely view gaming: “The solution to having too much of it is to have more of it.”¹⁵

Indeed, that wry observation can be supported through various examples throughout the country. From New England to the Mid-Atlantic region and to the Midwest and beyond, states respond to the expansion of gaming in other states by expanding gaming within their states. As explained in more detail later in the report, the catalysts for such expansion include:

- A state’s residents are spending dollars elsewhere, and those dollars are best kept at home.
- The pari-mutuel industry is hurting, and needs expanded gaming in order to survive and to compete against larger purses available at competing tracks in other states.
- Gaming is viewed as a fiscal solution when states feel the pinch of an economic recession.

Gaming has been expanding for decades, and continues to do so. Even when limits are enshrined in the state Constitution, it does not preclude serious expansion efforts. Constitutional limitations, as well as tribal compacts, can be viewed as temporary.

Florida offers another telling example of that, in the 2004 constitutional amendment that led to the approval of racinos in Miami-Dade and Broward counties. That amendment initially limited that privilege to operating pari-mutuels, which would have excluded Hialeah. That was changed through 2010 legislation, which survived subsequent legal challenges, but created some new consequences. Veteran gaming reporter Nick Sortal identified those consequences in a report for the *Sun-Sentinel*:

“Hialeah Park is reveling in its rebirth, but the racetrack with the pink flamingos has caused a mess across the state.

“When its quarter-horse season ends ..., the track that first opened in 1921 will be eligible to house slot machines, thanks to a provision in a 2010 state law. But slot-machine proponents contend that law also applies to other venues, creating a flood of county referendums -- which legislators say illustrate how gambling in Florida has run amok.

“Last month, Gadsden and Washington counties approved slot machines via referendum. Palm Beach, Hamilton and St. Johns counties also expect to vote on slots in November, citing the 2010 law.

“ ‘Opening the way to Hialeah opened the way to everything,’ said Ron Book, a lobbyist whose clients include Hialeah’s rival, Magic City Casino. ‘It created a slippery slope.’ ”¹⁶

¹⁵ Interview with John Sowinski, May 29, 2013.

a. States Endeavor to Realize Value from Gaming via License Fees

One important theme that resonates throughout this report is that no other private industry – and certainly none in the entertainment or hospitality fields – is as dependent as remaining in the good graces of public officials for its ability to earn a profit, or even for its very existence. The flip side of that is that no other private industry has the ability to secure such local or regional monopolies. Sometimes, these local monopolies are granted to private interests simply because those interests own a particular piece of land, such as a racetrack.

In Florida, the holder of a slot machine license must pay an annual license fee of \$2 million, which is due when the application is filed or with the renewal date. There is no fee to obtain an annual pari-mutuel operating license. But in conjunction with its monthly tax payment, each permitholder pays a daily license fee. For jai alai, it is \$40 per game. For greyhound permitholders, it is \$80 per race that may be offset with eligible tax credits under (550.0951(1), F.S.) For horse racing, the fee is \$100 per race. For cardroom operators, the state charges annually a fee of \$1,000 for each table when the application is submitted.¹⁷

In recent years, a number of states have endeavored to realize value from the issuance of such licenses by requiring license fees or some equivalent in exchange for the rights and privileges of operating a gaming facility. The core rationale in requiring such one-time fees is that licenses have value, and states should not give away something that could command significant dollars in the open market. Veteran investment banker Jeff Hooke, managing director of Focus Investment Bank, has been a longstanding advocate for the principle of states realizing the full value of such licenses. More than a decade ago, he noted the following regarding states that had authorized gaming in preceding years: “Illinois, Indiana and Michigan awarded the gaming licenses for free to politically connected groups, under the guise of aiding economically depressed areas or failing racetracks. Even after the impact of betting taxes were included, the awardees turned around and made vast profits.”¹⁸

Hooke collected the data for the following table:

¹⁶ Nick Sortal, “Hialeah Park: Flash Point for State’s Gambling Mess,” *Sun-Sentinel*, February 16, 2012. http://articles.sun-sentinel.com/2012-02-16/news/fl-hialeah-gambling-20120216_1_mutuels-pari-mutuels-slot.

SECOND DRAFT - CONFIDENTIAL

Figure 1: Gaming license transactions, values

Implied Value¹⁹ (Millions)	Date	Metro Location	Buyer/Seller	Transactions/ Offers
\$180	October 2011	New York City	Genting (Malaysia)/State of New York	Transaction ²⁰
\$435	December 2008	Chicago	Trilliant Gaming/State of Illinois	Offer/Transaction ²¹
\$407	August 2007	Indianapolis	LHT Capital/Oliver Racing (Indiana Downs)	Transaction ²²
\$250	April 2007	Indianapolis	Indiana Downs/State of Indiana, Hoosier Park/ State of Indiana	Two transactions at \$250 million each
\$160	December 2006	Pittsburgh	PITG Gaming/City of Pittsburgh	Transaction ²³
\$220	November 2006	Pittsburgh	Millennium/Magna	Transaction ²⁴
\$140	June 2006	Dania Beach	Dania Jai Alai/Boyd Gaming	Transaction ²⁵
\$340	April 2006	Pittsburgh	Isle of Capri City	Offer ²⁶
\$500	January 2005	Catskills	Seneca Ind./New York State	Offer
\$310	October 2004	Poconos	Mohegan/Penn National	Transaction ²⁷
\$442	July 2004	Philadelphia	Harrah's/Inv. Group	Transaction ²⁸
\$518	March 2004	Chicago	Isle of Capri/State of Illinois	Offer
\$750	January 2001	Cincinnati	Argosy/Inv. Group	Transaction ²⁹
\$663	November 2000	Detroit	Chippewa/Inv. Group	Transaction ³⁰

Source: Jeff Hooke

¹⁹ The value represents license value only. In several instances, the values of casino structure, horse racing track, jai alai track or relevant real estate were excluded from the transaction value in order to determine the license value. For Pennsylvania transactions/offers, the value includes the \$50 million license fee that is paid by the license holder. The Maryland 2009 license awards have been excluded since the sizable tax rate (67%) precluded high initial fees and the bidding process was not open, but rather skewed towards certain landowners.

²⁰ Aqueduct racetrack slots. The gross amount is \$380, minus \$200 for a state contribution to construction costs. The low price is partly due to New York's high gaming tax rate and high purse contributions. The slots operator may keep only 30% or 35% of the net revenue.

²¹ Trilliant Gaming offered \$435 million upfront for a Rosemont, IL location. The State, however, awarded the license to Midwest Gaming for a Des Plaines, IL location for \$125 million upfront and \$300 million to be paid at \$10 million per year for 30 years. The total NPV of the Midwest proposal is \$247 million at an 8% rate.

²² Oliver Racing paid \$53.5 million for a 34% interest, plus a \$250 million license fee.

²³ PITG agreed to pay a \$7.5 million annual fee to City of Pittsburgh to subsidize a new hockey arena. Hooke Associates estimated the "present value" of the annuity at \$110 million, plus the \$50 million license fee.

²⁴ \$30 million value of racetrack subtracted from \$200 million price (i.e., \$170 million, net) and \$50 million license fee added, in order to provide a \$200 million license value.

²⁵ \$13 million appraised value (tax records) of jai alai fronton excluded from \$153 million purchase price.

²⁶ Isle of Capri offered to build a \$290 million hockey arena and to pay \$50 million for the license.

²⁷ Mohegan Tribe paid \$290 million (after post purchase adjustment) for the license plus the track worth \$30 million. We add \$50 million license fee for a value of \$310 million (i.e., \$290 minus \$30 plus \$50).

²⁸ In exchange for 50% interest, Harrah's put up over \$400 million to construct casino and racetrack in Chester, PA.

²⁹ Excludes "brick and mortar" cost of the casino, as set forth in the SEC filings.

³⁰ Chippewa's buyout of a 40% interest, indicating a 100% interest at \$663 million.

SECOND DRAFT - CONFIDENTIAL

While Hooke is correct in that states can realize value in something that many states had given away, the more immediate incentive is that states can realize significant revenue quickly. That prospect has driven more states in recent years to seek license fees.

However, license fees do have a cost. From the standpoint of a potential developer, a license fee is part of the necessary investment in a potential project. It is the equivalent of the capital investment that would be made in various areas, ranging from site acquisition and improvement to architecture fees and construction costs. But, unlike the costs that are incurred to build a physical facility, the license fee does not add to the value of that facility. When calculating a return on investment (“ROI”), a license fee is part of the investment, which is the denominator in that ratio. But a license fee does nothing to increase the numerator, the profit. Consequently, the license fee is effectively a sunk cost that does not generate revenue, which would in turn fuel various public benefits from gaming taxes to employment.

An operator that does not have to carry that cost can invest more in the property to increase revenue and ROI. That is particularly important in a competitive bidding process. In 2008, Spectrum prepared a report for the Commonwealth of Massachusetts, in advance of gaming legislation that included a provision for a \$200 million initial licensing fee. That report noted the following:

“Initial license fees required of successful development bidders are generally viewed as part of their capital investments and therefore:

- Have a detractive effect on capital development spend, as the licensing expense competes internally for capital with construction spending.
- Pose a dampening effect on development interest among potential candidates, as the fees raise the cost of entry with no direct return on that expense, and thereby simultaneously reduce projected ROIC rates.

“This is not to say government entities should not impose substantial operator license fees, to both winnow out under-resourced bidders and help recoup the state’s own start-up and other infrastructure costs, but rather to make clear the underlying considerations.

“At a \$200 million minimum bid, the Massachusetts casino licensing fee, combined with the minimum development requirements, will ensure that only financially strong companies will apply. On the other hand, this is potentially \$200 million less in capital invested into each of the destination casinos. This fee could be viewed by both the state and license applicants as the price of operating in a closed, geographically protected environment.”³¹

³¹ Spectrum Gaming Group, “Comprehensive Analysis: Projecting and Preparing for Potential Impact of Expanded Gaming on Commonwealth of Massachusetts,” August 1, 2008. p. 119.

Three years later, the Expanded Gaming Act became law in Massachusetts, and included a minimum \$85 million licensing fee, significantly lower than what had been contemplated in the 2008 proposed legislation.³²

Between 2008 and 2011, a severe national recession struck, which certainly played a role in convincing lawmakers in Massachusetts to reduce the required minimum capital investment. At the same time, however, we suggest that lawmakers also recognized that a large license fee could also detract from capital investment and its subsequent economic benefits.

Based on the language within its statute³³ that governs the competitive bidding process, Massachusetts is a pioneer in the planning of gaming. The law requires bidders to put forth comprehensive proposals that address many areas that are often not addressed, or paid little heed, in other gaming statutes. Such areas range from impact on employment to impact on local arts, as well as on small businesses.

6. Racetrack Casinos Evolve, Table Games Arrive

In 1990, the concept of a racino was introduced to the US with the introduction of 165 video lottery terminals (“VLTs”)³⁴ at Mountaineer Park Racetrack in West Virginia. With the success of the West Virginia experiment, racinos soon spread to Rhode Island, Iowa and Delaware. Many states that introduce commercial casino gambling do so through the initial introduction of slots-only facilities. Examples of this include, among others, Pennsylvania, Delaware, West Virginia, Rhode Island, New York and Florida racinos – although poker at the Florida tracks is a notable exception. The logic behind such moves tends to include the following:

- Slots are viewed as more politically acceptable.
- Slots – because they lack live dealers, as well as necessary controls over dice and other gambling paraphernalia – are viewed as easier to regulate.

The latter point is particularly noteworthy for states in which the lottery is vested with the authority to oversee slots or VLTs such as Delaware, Maryland, New York, Rhode Island and West Virginia. However, even in lottery states, the natural evolution over the past decade has been to add live tables to slots-only facilities. We attribute that trend to two larger forces at play, which are dealt with in more detail elsewhere in this report:

³² Massachusetts Expanded Gaming Act <http://massgaming.com/about/expanded-gaming-act/> (accessed May 8, 2013).

³³ Massachusetts Expanded Gaming Act of 2011; see <http://massgaming.com/wp-content/uploads/Chapter-23K-2012.pdf>

³⁴ From the standpoint of a player, slots and VLTs are indistinguishable. The core difference is that slots can be standalone devices, while VLTs can be tied to a central system that monitors and/or controls all critical aspects of the games.

SECOND DRAFT - CONFIDENTIAL

- Fiscal pressures to generate additional revenue, as well as pressure to add jobs.
- The need to respond to actions in other, often neighboring states.

Within a span of about two years, West Virginia added live table games, followed by Delaware and then Pennsylvania – states that, to varying degrees, have overlapping markets. Maryland followed suit by adding tables to its slots facilities this year. The trend was captured in a quote by Mark Nichols, an economics professor with the Institute for the Study of Gambling and Commercial Gaming at the University of Nevada at Reno: “Maryland is getting what the other states already have, which is going to make it very difficult for casinos in West Virginia and Delaware. The only way they can keep those Maryland residents from staying in Maryland is offering incentives or differentiated products that somehow make it worthwhile to travel. But almost anything they try, Maryland can copy. I’m not sure there’s much they can do.”³⁵

If regulated properly, the addition of table games can be a smooth transition that can also encourage capital investment and expansion. The addition of house-banked table games such as blackjack to a slots-only casino can serve to increase slot revenue. This seems counter-intuitive (the natural assumption is that new table games would simply cannibalize existing slot play) but experience in markets that have added tables to casinos that previously offered only slot machines shows otherwise. This phenomenon can be attributed to two major factors:

- Some new table-game customers (who previously had no incentive to visit a slots-only casino) can be expected to apportion some of their own spending to slots.
- Some of these new customers would be accompanied by other guests – such as a spouse or a friend – who would play slots during these visits.

Spectrum’s research finds no compelling evidence that adding table games to a slots-only casino would reduce slot revenue. In fact, research shows that slots and table games in a casino are complementary assets.

The remainder of this section of report shows examples of states and/or casinos where table games were added to what were once slots-only casinos.

a. Mid-Atlantic – Pennsylvania and Delaware, Collective Example

By way of example, casinos in both Delaware and Pennsylvania had been limited to slots only prior to May 2010, but then table games were added to all 12 casinos in these states between May and July 2010.

Through the 12-month period ending April 2010 (pre-table games), the 12 casinos generated \$3.09 billion in slot revenue. Through the 12 months ending July 2011 (the first full

³⁵ J. Freedom Du Lac, “Maryland raising stakes in casino wars with Delaware and West Virginia,” *Washington Post*, March 31, 2013 http://articles.washingtonpost.com/2013-03-31/local/38170896_1_maryland-live-delaware-park-table-games.

SECOND DRAFT - CONFIDENTIAL

annualized period when all 12 casinos had table games for the full duration of period), the same 12 casinos generated \$3.26 billion in slot revenue (an increase of 5.6 percent over the period without having table games). Table games revenue at these 12 casinos amounted to \$508 million through 12-month period ending July 2011.

The overall increase in gross gaming revenue (“GGR”) for both tables and slots between the two periods was 22.1 percent, while table games revenue accounted for 74.5 percent of the GGR growth and slot revenue accounted for 25.5 percent of the GGR growth. Importantly, this growth occurred at a time when other casinos were opening in the region (SugarHouse in Philadelphia, PA, and Hollywood in Perryville, MD, in September 2010, along with Ocean Downs in Worcester, MD, in January 2011).

b. Delaware

Slots-only casino gambling commenced at Delaware’s three racinos in 1995, with table games operations commencing in 2010. Since table games effectively came online midway in 2010, we examined slot revenue variance data – comparing second half of year to first half of year – for 2008 through 2012 (two entire calendar years before and after table games). In the two years before table games, slot revenue was less in second half of year (July through December) than it was in first half of year (January through June), and for each casino.

To determine whether the implementation of table games had a material impact on slot revenue we examined the slot revenue variance in 2010 (when all Delaware casinos offered table games in second half of year). If the introduction of table games had a significant, negative impact on slot revenue we would expect to see the slot revenue variance to be inconsistent with 2008 and 2009 variance data (i.e., prior to table games). The following table illustrates this slot revenue variance data in Delaware from 2008 through 2012 – where 2010 (as highlighted) was the year when table games commenced operations midway through the year.

Figure 2: Delaware casinos, slot revenue variance – pre and post table games (2008-12)

Slot Revenue Variance	Delaware Park	Dover Downs	Harrington Raceway	DE TOTAL
2008 (2nd Half vs. 1st Half)	(12.6%)	(2.5%)	(14.2%)	(9.4%)
2009 (2nd Half vs. 1st Half)	(13.1%)	(5.5%)	(10.9%)	(9.9%)
2010 (2nd Half vs. 1st Half)	(12.1%)	(5.5%)	(9.0%)	(9.0%)
2011 (2nd Half vs. 1st Half)	(7.4%)	(3.9%)	(11.6%)	(6.9%)
2012 (2nd Half vs. 1st Half)	(14.1%)	(17.4%)	(18.7%)	(16.4%)

Source: Delaware Lottery, Spectrum Gaming Group

As illustrated, on a statewide basis (and consistent amongst casinos), the decline in slot revenue (second half of year compared to first half of year) was greater in the two years without Delaware having table games than it was in both the first and second years following the commencement of Delaware offering table games. Specifically, slot revenue only declined by 9 percent in 2010 from the first half of year to second half of year (when table games were fully

operational); this percentage decline was greater in 2008 and 2009, absent presence of table games (at 9.4 percent and 9.9 percent, respectively). We note that in 2011, the decline in slot revenue from the first half of the year to the second half of the year was even less pronounced than in prior years (at only 6.9 percent), which may suggest that table games were complimentary to slots and/or that table games enhanced overall appeal of Delaware's casinos.

We acknowledge that myriad other factors may impact these aforementioned growth rates, as illustrated in 2012, when growth rates plummeted from first half of year to second half of year (i.e., possibly due to opening of Maryland Live Casino located near Baltimore, MD, in June 2012 along with widespread impact of Superstorm Sandy hitting the region in October 2012).

c. West Virginia

There are four racinos in West Virginia, with all four racinos offering table games. Initially, all four racinos were limited to slots: The racinos offer VLTs that are operated by the West Virginia Lottery, while there is also a network of limited VLT operations at numerous, licensed locations statewide.

In mid-2007, voters (via referendum at the host county level) supported allowing table games at three of the four racinos (the referendum failed in Jefferson county, home to Charles Town – the state's largest racino). Consequently, two casinos (Mountaineer Park and Wheeling Island) began table game operation in late 2007 while Tri-State Park began table game operations in August 2008. A December 2009 referendum to add tables at Charles Town did pass and table game operations commenced in July 2010. (A fifth casino, the Greenbrier resort, began operations in West Virginia in October 2009. The Greenbrier, a resort hotel with no racetrack, offers both slots and table games.)

We examined slot revenue performance at Charles Town, since this racino generates more than half of the GGR in West Virginia, and is relatively isolated from any other racino in West Virginia or other states. Specifically, we examined slot revenue variance data – comparing second half of year to first half of year – for 2008 through 2012 (two years before and after table games – as table games became operational in July 2010 at Charles Town). In the two years before Charles Town having table games, slot revenue was lower in the second half of the year than it was in the first half of year.

To determine whether the implementation of table games had a material impact on slot revenue, we examined the slot revenue variance in 2010 (when Charles Town added table games in the second half of year). If the introduction of table games had a significant, negative impact on slot revenue, we would expect to see the slot revenue variance to be inconsistent with 2008 and 2009 variance data (prior to table games). The following table illustrates this slot revenue variance data at Charles Town from 2008 through 2012 – where 2010 (as highlighted) was the year when table games commenced operations midway through the year.

SECOND DRAFT - CONFIDENTIAL

Figure 3: Charles Town Races (WV), slot rev. variance – pre and post table games (2008-12)

Slot Revenue Variance	Charles Town Races
2008 (2nd Half vs. 1st Half)	(8.3%)
2009 (2nd Half vs. 1st Half)	(13.2%)
2010 (2nd Half vs. 1st Half)	(1.5%)
2011 (2nd Half vs. 1st Half)	3.2%
2012 (2nd Half vs. 1st Half)	(18.6%)

Source: West Virginia Lottery, Spectrum Gaming Group

As illustrated, the decline in slot revenue (second half of year compared to first half of year) was greater in the two years without Charles Town having table games than in the initial year of Charles Town offering table games. Specifically, slot revenue only declined by 1.5 percent in 2010 from first half of year to second half of year (when table games were fully operational) while this percentage decline was greater in 2008 and 2009, absent presence of table games (at 8.3 percent and 13.2 percent, respectively). We note that in 2011, there was an increase in slot revenue from first half of year to second half of year, which may suggest that table games were complimentary to slots and/or that table games enhanced overall appeal of Charles Town (i.e., translating into greater slot revenue levels than what would otherwise be, absent table games).

We acknowledge that myriad of other factors may impact these aforementioned growth rates, as illustrated in 2012, when growth rates plummeted from first half of year to second half of year (possibly due to the opening of Maryland Live Casino located near Baltimore, MD, in June 2012).

d. Pennsylvania

There are 11 casinos in Pennsylvania, all of which prior to mid-2010 were limited to slots. Table games operations commenced in July 2010.

In reviewing slot revenue results for the first full year that Pennsylvania's casinos offered table games (LTM June 2011) compared to the full year prior (LTM June 2010) we see inconclusive results on the collective impact of table games on slot revenue. Collectively, slot revenue grew by 10.7 percent when comparing the two periods; however, nearly all of this slot revenue growth occurred at two of the newer casinos (Sands Bethlehem and Rivers, opening in May 2009 and August 2009, respectively) and as a result of a new casino in Philadelphia (which opened in September 2010).

The seven Pennsylvania casinos that opened in 2007 and 2008 had a collective 0.1 percent increase in slot revenue when comparing LTM June 2011 to LTM June 2010 (i.e., post- vs. pre- table games). Four of the seven reported increased slot revenue, while three of the seven reported declines in slot revenue.

This was, of course, a period of significant change in Pennsylvania's gaming industry, with additional casinos opening in-state and in surrounding area. That makes it difficult to isolate any precise cause and effect on either table or slot revenue. Still, we note that any expected cannibalization of slot revenue by the addition of table games did not materialize in Pennsylvania.

7. Battle for Entertainment Dollars: Competition on a Broader Scale

Caesars Entertainment Chairman, President and CEO Gary Loveman recently offered criticism of how the casino industry tends to break down revenue into two categories: gaming and non-gaming. Loveman suggested there is a problem in the industry's mindset when other revenues are defined by what they are not, rather than what they are. He noted, for example, that we don't divide people into two genders: "women and non-women."³⁶ Rather, he characterized other revenues as "entertainment" dollars, forecasting an evolution at his company and other gaming providers in which they broadly compete for a share of all discretionary income.

That might be a welcome and necessary step in an industry that is increasingly facing saturation in its core business. But that evolution has implications for other businesses, industries and regions that already battle for that entertainment dollar, and that do not offer gaming – nor do they intend to offer gaming as an option.

From Florida's standpoint, this issue is most readily apparent in Orlando, a successful, world-class resort by any standard that has managed to achieve success in multiple categories, most notably for purposes of this discussion: families with children; and business travel, particularly in the MICE (meetings, incentives, conferences and exhibitions) segment.

Due to its abundance of theme parks, hotels and other assets and infrastructure, Orlando competes nationally and globally in various segments, and Las Vegas – a destination centered on gaming – is clearly a competitor. Interestingly, Las Vegas endeavored to leverage its brand into the family segment, but has more recently sharpened its focus on more adult segments, as noted here:

"By the late 1980's gaming revenue in Las Vegas was down as other areas in the country started to legalize gambling. In an attempt to stimulate visitor numbers the city was reinvented in the image of Disney. Themed hotels such as the Luxor and Excalibur emerged allowing Las Vegas to market itself as a place for adults to gamble while their children played at theme parks such as the one built by the MGM Grand. Circus Circus a kid's themed hotel that was built in 1976 was the only hotel that attended to the needs of children. With the development of these new hotels Circus Circus would now face competition for the younger demographic of customers and their families. Las Vegas in the 21st Century saw its second major change in visitor demographics. No longer the

³⁶ Gary Loveman, keynote speech at East Coast Gaming Congress, Atlantic City, NJ, May 22, 2013.

place for the family, Las Vegas has morphed into one of the top party cities in the world, ranking top ten in numerous different polls'. Attracting 21 – 34 years olds from all over the world, Las Vegas now ranks number one in categories such as, top destination for bachelor and bachelorette celebrations (www.AskMen.com 2009), top destination to celebrate a 21st birthday (www.ehow.com).

"The sudden influx of younger tourist[s] can be attributed to the erection of new nightclubs and pool parties in many of the Las Vegas Hotels. MTV's reality TV show "the real world" portrayal of Las Vegas as a party city has also been a catalyst for the younger crowd to Las Vegas."³⁷

Based on our experience, we concur with the observation that Las Vegas operators determined that Las Vegas would not succeed in rebranding itself as a family destination, and began targeting hedonistic adults (best evidenced by the "what happens in Vegas stays in Vegas" campaign) and business travelers.

While Orlando and Las Vegas do not share the same *raison d'être*, they do share one critical characteristic: Both destinations developed from scratch, in a relatively brief period, a massive infrastructure of hotel rooms, meeting and convention space, and entertainment attractions. Each destination has a critical mass of attractions, which helps fuel visitation. John McReynolds, Senior Vice President of External Affairs for Universal Parks & Resorts, noted, for example, that Universal does well when other attractions in Orlando prove to be popular, and the success of the Wizarding World of Harry Potter serves as a magnet that, in turn, increases overall attendance, which benefits other non-Universal attractions.³⁸

According to McReynolds, almost 85 percent of the Orlando market is represented by the leisure market, with the remaining 15 percent being made up by the MICE market.³⁹ Total business attendance in Orlando has more than doubled in the past 20 years through good economic times and bad.

In Orlando, the conventions and meetings business is anchored by the Orange County Convention Center, where convention business is on an upswing and is approaching its pre-recession peaks.

Notably, that center has been hailed by Business Review USA as the top major convention destination in the nation: "Central Florida's OCCC is a massive center, offering 2,100,000 square feet of exhibit space in its 7,000,000 square-foot complex. But it's not just size that brought OCCC to the top of our list. The OCCC provides Central Florida with a remarkable

SECOND DRAFT - CONFIDENTIAL

amount of economic benefits at no cost to the county's citizens and it is estimated that activity in the center yields an annual tax savings of \$87.50 per Orange County household. This self-proclaimed "Center of Hospitality" offers amenities to please (including massage services, three full-service restaurants, eight food courts and remote airline check-in) and was the staging area for relief operations for Hurricanes Charley, Frances and Jeanne."⁴⁰

On a national level, many of the major convention destinations in Orlando's competitive set are also hosting casinos. The number of major convention cities with casinos already includes Las Vegas, Philadelphia, New Orleans, Detroit and New York, and will soon include Boston, and the possibility of additional gambling venues in Chicago. Atlanta, another major convention destination in the Southeast, has been contemplating gaming for several years.

In 2007, PKF Consulting released a report on the potential economic impact of a casino in Atlanta, and its executive managing director Mark Woodworth made this statement: "We're seeing more and more destinations that have gambling, which functions as an important amenity, especially in attracting group meetings and conventions."⁴¹

In our view, Orlando's ability to grow its conventions and meetings business in the face of this national trend underscores an important asset in this market: Orlando's strength in attracting business travelers is growing without gaming, and that absence is to some degree fueling that growth. Orlando has carved out a significant, profitable niche in that national market, and gaming would clearly be antithetical to that image and its ability to dominate that important segment.

Interviews with various hotel operators in the Orlando area, which are members of the Central Florida Hotel & Lodging Association, have lent support to that view. The members interviewed for this report note, for example, that many of the meeting planners who book Orlando for their groups cite the absence of gambling as a plus, since that attraction might otherwise be viewed as a distraction. Thea J. Sargent, General Manager of Disney's Contemporary Resort in Orlando, expressed a view that was endorsed by many of her colleagues when she said the absence of gaming and the focus on other attractions "differentiates us (as a) family-friendly destination."⁴² The Orlando hotel owners interviewed for this report note that convention attendees and other business travelers who visit Orlando often extend their stays and bring their families with them.

A 2011 survey of Orlando visitors shows the various activities they participate in during their stay. The percentages listed here reflect the percentage of visitors who reported participating in each activity.

Notably, gambling is listed as an activity, and the Orlando hotel operators interviewed for this study note that the Seminole Hard Rock Tampa – about 60 miles from the Orlando area – is an available attraction, which the hotel operators view as far enough away to not detract from the Orlando brand, but close enough to satisfy visitors who want to visit a casino during their stay.⁴³

But while Orlando can differentiate itself from Las Vegas or other gaming destinations, such convention markets still compete, in general and in specific instances. A conference of Wendy’s franchisees recently selected the MGM Grand in Las Vegas over Orlando, based on a \$250,000 incentive that the MGM provided, which the Orlando competition could not match – although it did match other factors, such as the average daily room rate.⁴⁴

Orlando is able to compete on other levels as well, such as the absence of union-related rules in other states that often add to the cost of setting up conventions and other meetings, as Florida is a “right to work” state.⁴⁵

⁴³ Ibid.

⁴⁴ Ibid.

⁴⁵ Ibid.

SECOND DRAFT - CONFIDENTIAL

We also note, however, that Orlando competes on an in-state as well as a national level, and would not be immune to the impacts of any change in gaming policy elsewhere in Florida.

The table above shows that, in both domestic leisure and convention/group business, designated market areas – which are independent media markets – in other regions of Florida are critically important to Orlando. Daryl Cronk, Director of Research at Visit Orlando, described this phenomenon:

“Yes, proximity is a factor. Please keep in mind the data includes both overnight stays and day-visits. The proximity of Daytona to the east, and Tampa to the west, makes Orlando a popular destination for day-trips. It may be to attend a convention, to visit a theme park, a special event such as Halloween Horror Nights at Universal or Food & Wine at Epcot, or something as simple as a Magic game (just like I have friends to go to Tampa for Rays games). And of course lots of VFR travel (visiting friends and relatives).

“Origin markets take on a slightly different look if day-trips are excluded. Still a lot of in-state but not as much.”⁴⁶

Even when the origin markets are limited to overnight stays, local markets play less of a role, as Cronk noted, but are still important:

Figure 6: Market of origin share of overnight stays in Orlando

Taken together, these factors – the evolution of gaming into broader entertainment, the availability of gaming in convention destinations, and Orlando’s dependence on both local and national markets – support many of the concerns expressed by the Orlando business community as to the expansion of gaming throughout Florida, particularly the possibility of new destination resorts.

Clearly, the addition of such destinations – which would add new supply to the competitive conventions and meetings business, while adding additional amenities to competing facilities in South Florida – raises the possibility of an adverse impact on business in the Orlando area.

John Sowinski of No Casinos said the impact would not necessarily be limited to the larger players in Florida markets, but could have serious ramifications for the smaller attractions, many of which depend on in-state and out-of-state visitors who are looking for secondary and tertiary activities during their leisure time. Sowinski suggests that such attractions – which might include Gatorland in the Orlando region or Jungle Island in the Miami area – might be more likely to lose out if more discretionary dollars are targeted toward gambling.⁴⁷

Las Vegas’s failed foray into re-branding itself as a “family” destination underscores the success of the Orlando region, which can rightfully claim ownership to that brand. Anecdotal evidence suggests that the brand equity of Orlando has benefits for the entire state of Florida. In fact, much of the image of the state of Florida is centered on theme parks and families.

The risk that gambling poses for Florida’s existing tourism brand was also noted by William Bunkley of the Florida Ethics and Religious Liberty Commission, who testified before the Senate Gaming Committee meeting earlier this year, and noted: “We have a brand here in Florida. It is tourism. It is fishing. It is outdoor sports. And though we have had some expansion of gambling, I got to tell you that Las Vegas tried the family gambling routine. It did not work,” Bunkley said. “We have a lot of people coming, supporting our state in the area of tourism, and I am very concerned about the future.”⁴⁸

⁴⁷ Interview with John Sowinski, May 29, 2013.

⁴⁸ Florida Senate Gaming Committee, February 18, 2013
http://www.flsenate.gov/media/videoplayer.cfm?EventID=2443575804_2013021203.

More generally, and with respect to Florida, expanded gambling may fundamentally change the state of Florida as a place to live and visit. Bill Lupfer, of the Florida Attractions Association, suggests that the expansion of gambling, particularly casino gambling, will be damaging to “the Florida brand.” Lupfer argues that many states with casinos legalized them in order to attract tourists. This was certainly true in the 1990s when casinos first began to expand outside Nevada and New Jersey. Florida, however, already offers more attractions than any other state; it doesn’t need casinos to attract tourism, he notes.⁴⁹ Rather than benefitting the state, expanded gambling (especially casinos) could make Florida a less-attractive tourist destination.

The tourism industry leadership in Orlando, as interviewed for this analysis, appears unified in its view that any expansion of gaming in Florida would have several tremendous economic and social impacts to the State.

If gambling were to be expanded in Florida, tourism leaders cite a variety of potential implications, including the following:

- Economic costs
 - Impact to Orlando’s global brand position.
 - Change in target market of the destination and thus potential economic losses.
 - Potential cost of moving to the unionization of hotels.
 - Economic impact to small businesses.
 - Lost business because some meeting planners will not book business in gaming destinations.
- Social costs
 - Change in the brand position and potential loss of global goodwill.
 - Change in staffing at properties that might impact the friendliness of the destination, which in turn might damage Orlando’s reputation as a friendly destination.
 - Change in the perceptions of safety, as the leisure market will not choose destinations where safety may be compromised.

8. Conclusion

Intentionally or not, the policies established by lawmakers – or the lack thereof – play a critical role in the evolution and expansion of gaming. Indeed, in the views of many, the “evolution” and “expansion” of gaming are largely synonymous. The industry rarely shrinks, and

⁴⁹ Bill Lupfer, Florida Attractions Association, phone interview, May 23, 2013.

quite often, expands as a result of expansion. As demonstrated in this section, the notion expressed by John Sowinski of No Casinos that the answer to saturation is often more gaming can be borne out by examples. Even industry segments that have seen their customer base decline – such as jai alai or dog racing, as well as other segments of the pari-mutuel industry – are still in business. Rules that may seem fixed and immutable – such as constitutional amendments – often prove to be less than immutable. Policymakers need to be aware that every change in policy creates consequences that, in turn, create a demand for more policy changes. As demonstrated in the past, such changes often lead to an expansion of gaming, which creates a demand for more changes.

Such changes could have significant impacts that extend beyond gaming, as evidenced by the concerns expressed by the business community in Orlando.

B. Types of Gambling and Their Performance, Participation

Legalized gambling is seemingly everywhere in the United States:

- 43 states have a lottery, with a 44th – Wyoming – having enacted lottery legislation in March 2013.
- 42 states have casinos of some kind, whether Las Vegas-style, floating, Indian, racetrack, or slots-only. Even Arkansas and Kentucky – considered non-casino states by the American Gaming Association – each have two racetrack gaming facilities that offer hundreds of Instant Racing machines⁵⁰ and/or skill-based reel games in a casino-like setting (and thus are included in our casino count), indicative of the efforts by operators and/or states to capitalize on the popularity of casinos. In total, there are 984 casinos in the US.⁵¹
- 33 states have pari-mutuel racing, whether horse racing, dog racing or jai alai.
- 7 states have what Spectrum terms “retail gaming,” which is the widespread placement of a small quantity of slot machines (generally 5 to 10) inside retail businesses throughout a state (typically liquor-licensed establishments).
- 5 states have standalone cardrooms, which offer poker and, in some cases, casino card games. At the end of 2012, there were standalone 407 cardrooms in the US.
- 2 states have sports betting.

For better or for worse, legalized gambling is growing – in dollars, in locations and in options. Many states are clamoring to either legalize a new form of gambling or expand what

⁵⁰ See description of Instant Racing machines at the Ellis Park website: <http://www.ellisparkracing.com/news-and-events/instant-racing/>.

⁵¹ Based on American Gaming Association and Spectrum counts.

they already have – and these debates are a regular occurrence in statehouses across the country. The proponents in such states argue either that they need the additional tax receipts and/or jobs, or that they need to stem the flight of residents' gambling dollars to neighboring states. The nascent rollout of Internet gambling has begun changing how gambling will be delivered, played, taxed and accepted – in statehouses, among gambling operators, and among patrons. Opponents argue legalized gambling has spread too far, leading to negative impacts that include addiction, personal bankruptcy, crime and industry cannibalization of consumers' discretionary dollars.

Florida is among the more gambling-rich states, as measured by number and types of options:

- 7 Indian casinos (6 Seminole, 1 Miccosukee)
- 1 state lottery, the nation's second-largest as measured by FY 2011 sales excluding VLTs
- 28 pari-mutuel facilities (plus inter-track at Ocala),⁵² including:
 - 24 with active cardrooms
 - 14 with live greyhound racing
 - 9 with live horse racing (quarter horse, thoroughbred and standardbred)
 - 6 with active jai alai
 - 6 with slot machines (a seventh, at Hialeah Park, opens in summer 2013)
- Charitable bingo throughout the state, regulated at a local level.

In addition, day-cruise vessels and cruise ships that dock at various Florida ports offer unregulated (but not illegal) casino gambling once they reach international waters three miles offshore on the Atlantic side, but 10 miles on the Gulf side.

1. The Prevalence of Gambling

a. Nationally

To our knowledge, the most comprehensive gambling studies, both for the US nationally and for Florida on a statewide basis, were conducted more than a decade ago. The first authoritative national gambling research was conducted by the Commission on the Review of the National Policy Toward Gambling in 1976. The most extensive and authoritative nationwide study was published in 1999 by the National Opinion Research Center at the University of

⁵² Data from Florida Division of Pari-Mutuel Wagering; July 24, 2012, facilities map and fiscal year-to-date data through April 2013. <http://www.myfloridalicense.com/dbpr/pmw/documents/FACILITIESMAP--Internet-hyperlinks.pdf> and <http://www.myfloridalicense.com/dbpr/pmw/documents/Stats/HandleandCardroom2012-2013--2013-05-13--April--YTD.pdf>.

SECOND DRAFT - CONFIDENTIAL

Chicago in a 768-page report. This groundbreaking research compiled survey results from approximately 3,000 gamblers and non-gamblers and was conducted as part of the National Gambling Impact Study Commission for the federal government. The study documented gambling prevalence among US residents at a lifetime rate of 68 percent and a past-12-months rate of 61 percent for all forms of gambling.⁵³

Gambling has expanded greatly since 1999, when some form of legalized gambling was being offered or had been approved in a total of 25 states,⁵⁴ to the present where 42 states currently offer some form of legal gambling other than the lottery. The most recent information on national gambling prevalence comes from the American Gaming Association's ("AGA") 2013 *State of the States* survey. While this is not a rigorous academic study it does represent the most up to date data released, released in the first week of May, 2013. This latest update to the annual study documents gambling prevalence as follows among the general US population:

- Past 12 months participation in the following gambling activities:
 - Lottery 53 percent
 - Casino gambling 32 percent
 - Casual betting with friends 26 percent
 - Playing poker 12 percent
 - Wagering on a race 6 percent
 - Internet gambling 3 percent

From the above information we can extrapolate that almost one-third of the adult population over 21 in the US has gambled in a casino within the past year. Among young adults, aged 21 to 35, the proportions playing the lottery, betting casually with friends, playing poker, and gambling over the Internet are significantly greater.

Of course, gambling incidence varies considerably with access to local or regional gaming facilities. Various studies commissioned by individual states since 1976 have shown lifetime prevalence rates ranging from 64 percent to 96 percent, with past-12-month prevalence rates ranging even more broadly from between 49 percent to 89 percent.⁵⁵ A meta-analysis of

⁵³ "Gambling Impact and Behavior Study, Report to National Gambling Impact Study Commission," National Opinion Research Center at the University of Chicago, April 1, 1999.

⁵⁴ American Gaming Association, 1999 *State of the States*; the yearly reports are available at <http://www.americangaming.org/industry-resources/research/state-states>.

⁵⁵ Howard J. Shaffer, Matthew N. Hall, Joni Vander Bilt, *Estimating the Prevalence of Disordered Gambling Behavior in the United States and Canada: A Meta-analysis*, Division on Addictions, Harvard Medical School, December 15, 1997.

available research across the US and Canada conducted in 1997 estimated a lifetime gambling prevalence rate of 81 percent in the general population across the country as a whole.⁵⁶

b. Florida

The most comprehensive study of gambling behavior across the state of Florida was conducted for the Florida Council on Compulsive Gambling Inc. (“FCCG”) by the University of Florida in 2001. This ground-breaking study documented gambling prevalence and participation rates as follows:⁵⁷

- Lifetime gambling prevalence of approximately 90 percent among Florida residents, ages 18 and older:
 - 10 percent of Floridians surveyed report they have never gambled
 - 20 percent have not gambled in the past 12 months
 - 45 percent have gambled in the past 12 months
 - 25 percent gamble weekly
- Lifetime participation in the following gambling activities:

○ Lottery	73 percent
○ Raffles	63 percent
○ Casino gambling	60 percent
○ Pari-mutuels and OTB	30 percent
○ Bingo	24 percent
○ Stock Market	23 percent
○ Cards (not at casino)	20 percent
○ Slot machines (not at casino)	18 percent
○ Pool	18 percent
○ Sports	16 percent
○ Jai Alai	14 percent
- Lifetime prevalence was highest for lottery, raffles or sweepstakes, casino gambling, and pari-mutuels or off-track betting (“OTB”) with nearly one-third to almost two-

⁵⁶ Ibid.

⁵⁷ Nathan A. Shapira, Mary Ann Ferguson, Kimberly Frost-Pineda, Mark S. Gold, *Gambling and Problem Gambling Prevalence Among Adults in Florida*, University of Florida, October 2002.

SECOND DRAFT - CONFIDENTIAL

thirds of respondents acknowledging participation in these activities on a lifetime basis.

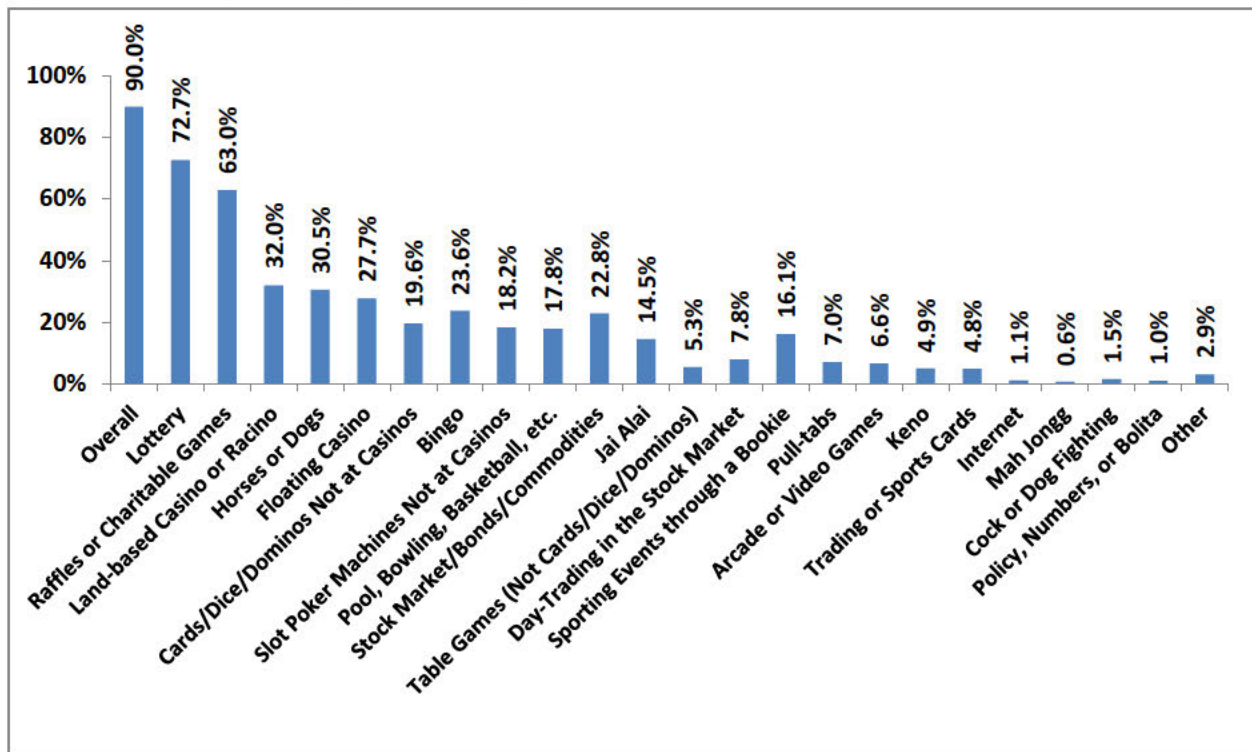

- Past-year participation rates were highest for lottery, raffle, casino and stock market gambling, followed distantly by bingo, cards outside a casino, day trading, horses, dogs or other animals and OTB, pool, sports and slot machines outside a casino.
- Respondents participating in one or more of these gambling activities did so by:
 - Gambling in a casino 32 percent
 - Gambled at a convenience store 16 percent
 - Gambling at the supermarket 13 percent
 - Gambled in their homes 8 percent
- Males are significantly more likely to be weekly gamblers than females (30.5 percent versus 20.2 percent)
- Florida residents in the 50 to 65 age range are most likely to be weekly gamblers
- Residents 18 through 29 are least likely to gamble weekly
- SOGS problem gambling⁵⁸ among adult Florida residents:
 - Past-year problem/pathological 2 percent
 - Lifetime problem/pathological 3.6 percent
- NORC DSM problem gambling⁵⁹ among adult Florida residents:
 - Past-year problem/pathological 0.8 percent
 - Lifetime problem/pathological 1.0 percent

Lifetime gambling participation among Floridians as documented in the 2001 study is illustrated in the following chart. Note that for land-based casino or racino gambling, in 2001 virtually all of this would have taken place outside of Florida, as the only casino open at the time was the original Seminole casino in Hollywood.

⁵⁸ Pathological and problem gambling based upon South Oaks Gambling Screen ("SOGS").

⁵⁹ Pathological and problem gambling based upon National Opinion Research Center's DSM Screen ("NORC DSM").

Figure 7: Lifetime gambling participation by Floridians, 2001

Source: Florida Council on Compulsive Gambling

The 2001 study was replicated 10 years later by the FCCG, with the University of West Florida collecting and analyzing the survey data. The 2011 replication survey published in January 2012, explored gambling behavior among a total of 2,500 Florida residents.⁶⁰ This update provides better granularity of data for gambling prevalence but in the process makes some direct comparisons more difficult. For instance, due to a stricter definition of gambling as “placing something of value at risk in hopes of gaining something of greater value”⁶¹ instead of simply “bet or spent money on” as gambling was defined in the 2001 study⁶² lifetime prevalence of gambling in the 2011 study benchmarks at only 60 percent as opposed to 90 percent in the earlier study.⁶³

Due to this difference in the broad definition of “gambling” it would not be appropriate to compare the two overall statistics, and the change from 90 percent to 60 percent lifetime gambling participation should in no way be construed as a decline in the overall prevalence of

⁶⁰ Robert J. Rotunda, Terry L. Schell, “Gambling and Problem Gambling Prevalence Among Adults in Florida: A 2011 Replication,” University of West Florida, January, 2012.

⁶¹ M.N. Potenza, T.R. Kosten, and B.J. Rounsaville, Pathological Gambling, *Journal of the American Medical Association*, 286, p.141-144, 2001.

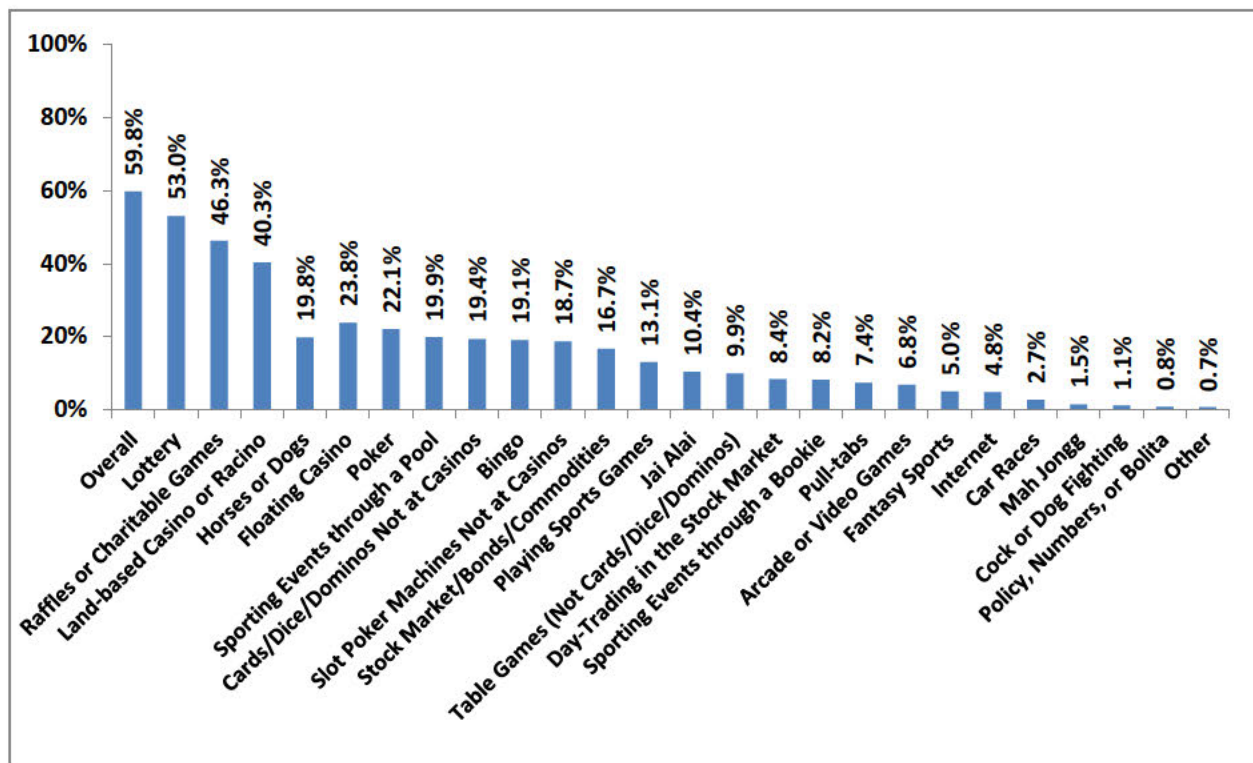

⁶² Nathan A. Shapira, Mary Ann Ferguson, Kimberly Frost-Pineda, Mark S. Gold, “Gambling and Problem Gambling Prevalence Among Adults in Florida,” University of Florida, October 2002.

⁶³ Ibid.

gambling in Florida but rather viewed as a refinement of the measurement criteria in the 2011 study and more consistent with the national rate of gambling participation.

Despite the difficulty in making overall gambling prevalence comparisons, the 2011 update agrees closely with the 2001 study in identifying lottery, raffles or charitable games, casinos, horse or dog racing, and bingo as the top five gambling activities among Florida residents. More than half of all survey respondents have played the lottery at least once in their lifetime, almost half have participated in a raffle, and 40 percent have gambled in a land-based casino.

Figure 8: Lifetime gambling participation by Floridians, 2011

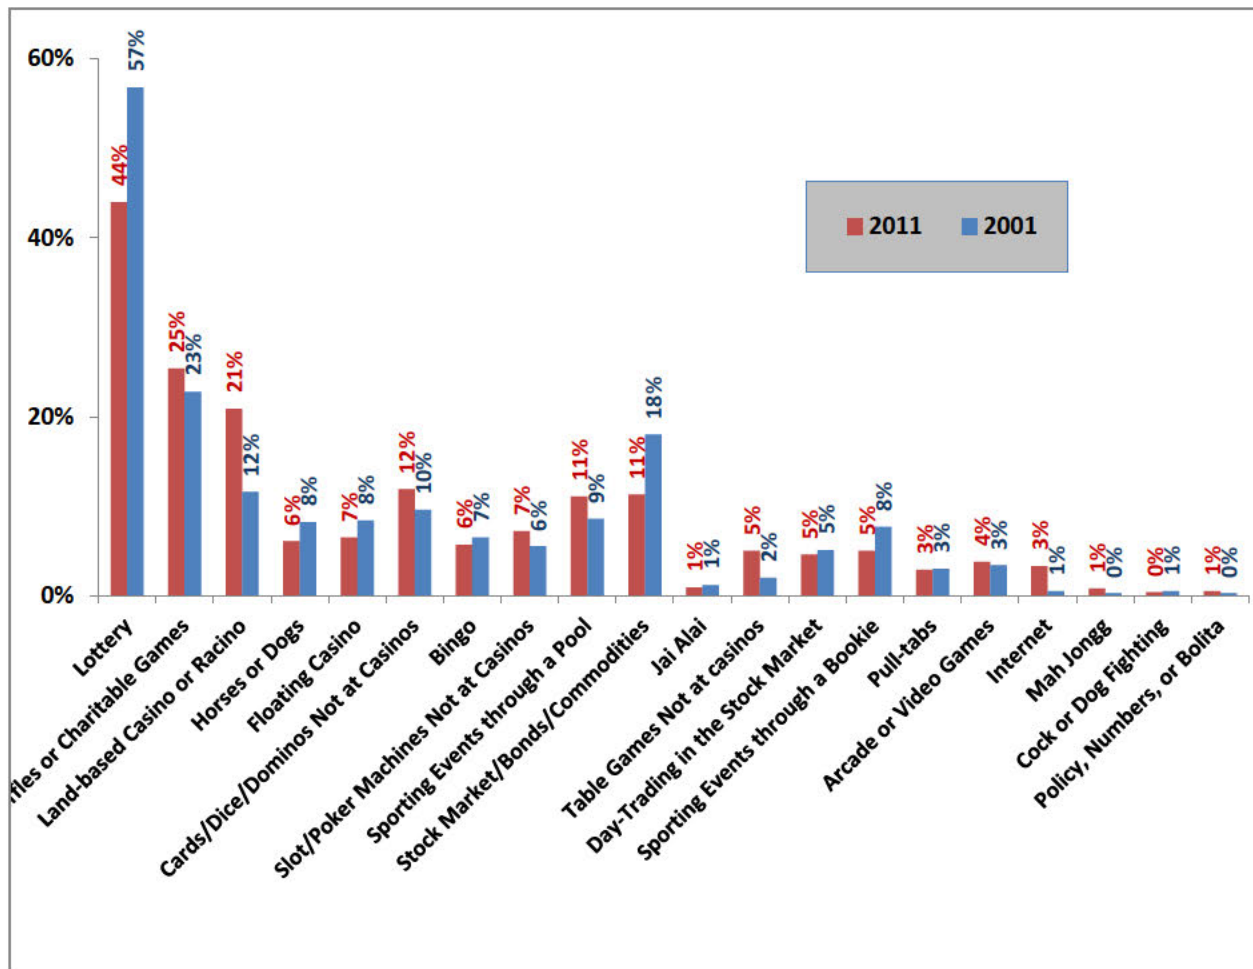

Source: Florida Council on Compulsive Gambling

Both gambling prevalence studies also break out past year gambling participation. Past-year gambling participation among Floridians is generally consistent with lifetime participation and similarly highest for the lottery, raffles or charitable games, and casinos (both floating and land-based), followed by cards/dice/dominos, horse or dog racing, and sporting events through a pool or between friends. What is most revealing about this behavioral comparison after a decade is that Florida residents report less past-year gambling participation for lottery, horse and dog racing, floating casino, the stock market, and sporting events through a bookie in 2011 than they did in 2001. Conversely, gambling participation has increased among Floridians since 2001 for

land-based casinos, cards, table games, and gaming machines found outside the casinos, sporting events through a pool, and gambling on the Internet.⁶⁴

Figure 9: Past-year gambling participation by Floridians, 2001 vs. 2011

Source: Florida Council on Compulsive Gambling

The statistics regarding prevalence have to be balanced and understood within the context of human stories, particularly among those with gambling problems. As Pat Fowler of the Florida Council on Compulsive Gambling noted in an op-ed article: “Every day we hear statistics about a variety of topics including dangerous activities, life style risk factors, and diseases of the world. Most of these statistics go in one ear and out the other. They are just numbers. But when a real story of hardship and devastation is tied to the numbers, it makes us think and consider the people behind the ratios and percentages.”⁶⁵

9. Competitive Issues

Florida's land-based casino industry competes within itself on two levels: for customers and gaming revenue, and for attention from the Florida Legislature.

Seminole Gaming – particularly its flagship Seminole Hard Rock in Hollywood – is a well-functioning, well-capitalized and well-managed operation that has succeeded in leveraging numerous assets, from its brand to its design to its tax structure and beyond, to the point where it essentially competes to varying degrees with all of the operating racinos in Miami-Dade and Broward counties.

The racinos themselves compete with each other and with the Seminole operations on the bases of their location, access, design, customer service, loyalty programs as well as their brands and racing operations. Various other rules they must operate under, from their hours of operation to their mandated no-smoking policies, also play a role. The most visible and impactful rules that limit their competitive abilities are the tax structure they operate under, as well as their inability to match the same array of offerings as their tribal competitors. The racinos, for example, are barred from offering house-banked card games, which are popular at the Seminole casinos.

While the racino operations share those concerns, they do not necessarily share the same priorities. Some put the need for table games as a top priority, while others would place tax parity higher on the list, or at least a reduced tax rate that would help justify additional capital investment.

This absence of a uniform agenda has made it difficult for the racinos to advance their cause(s), a situation that is exacerbated by a lack of understanding among the racinos themselves as to their individual challenges. While jai alai has little in common with dog racing, and neither has much in common with horse racing, there is little visible camaraderie between operators of thoroughbred and standardbred facilities, even the thoroughbred tracks themselves can find themselves at odds.

For example, Gulfstream announced its racing schedule this year and is breaking a longstanding tradition of cooperation with other thoroughbred tracks by extending its meet year-round, thus competing directly with Calder. This is one of several related issues regarding skirmishes between the tracks, which are about 10 miles apart.

Still, the issue of conflicting agendas – what was referred to earlier by some observers as a “circular firing squad” – has created a legislative stalemate, but has also led to other curious results, as exemplified by the situation in jai alai. That sport – which originated in Spain and first appeared in the United States in Miami nearly a century ago – enjoyed its heyday of popularity between the mid-1950s and 1970s, when nine jai alai frontons opened in Florida alone.⁶⁶ Starting

⁶⁶ Jai-Alai.info <http://www.jai-alai.info/history-of-jai-alai.html> .

SECOND DRAFT - CONFIDENTIAL

in the early 1990s, the sport endured a dramatic retreat in popularity, with many frontons closing.⁶⁷ Still, the sport survives, in large measure because it is tied to – and subsidized by – casino gaming and, to a lesser extent, by revenue from cardroom poker, which is roughly 4 percent of gross poker receipts.

Jai alai cannot make the same claims as the horse-racing industry that it supports numerous ancillary industries – such as racing’s ties to agriculture, as well as its span across multiple states and nations – yet its subsidies endure, with no visible efforts to eliminate, reduce or replace them.

With a jai alai fronton comes the ability to open a cardroom, a simulcasting parlor and/or a casino in Broward and Miami-Dade counties in South Florida. Those possibilities have been enough to entice investors to seek new jai alai permits even though investors realize that the jai alai portion of their investment will lose money. They hope to cover their losses with revenue from other forms of gambling. When Hamilton Jai Alai and Poker opened in December 2005, it was the first new fronton built in Florida in 22 years.⁶⁸ Its owner, Glenn Richards, told Spectrum in an interview that without the cardroom and simulcast parlor, he never would have built the fronton and it would have been closed long ago without the cardroom revenue.

Miami Jai Alai opened its slot facility on January 23, 2012. Its operator was hopeful that slot machine revenue would improve its fiscal situation. But the company has struggled to pay its debt service, resulting in a foreclosure action by its lenders. During its first six months of casino operation in 2012, it lost nearly \$7 million.⁶⁹

In addition to the prospects of cardroom and casino revenue, a jai alai license can be transferred or leased to another operator. The courts are currently reviewing whether a jai alai permit can be converted into a greyhound or racing permit. The bottom line is that jai alai permits are being issued and sought due to reasons that have nothing to do with the profitability of jai alai. Indeed, the jai alai sector as a whole sustained an operating loss of \$14 million in FY 2012.⁷⁰

So why do the subsidies for jai alai endure? The elimination or reduction of jai alai subsidies would give casinos tied to frontons an unfair advantage over casinos tied to other forms of pari-mutuel wagering. The same arguments could be made for dog racing as well. If dog-racing and jai alai were allowed to “decouple” their pari-mutuel operations from their gaming

⁶⁷ Ibid.

⁶⁸ “Hamilton Jai-Alai and Poker Opens Saturday,” *Suwannee Democrat*, December 21, 2005
<http://suwanneedemocrat.com/jasper/x66389098/Hamilton-Jai-Alai-and-Poker-opens-Saturday>

⁶⁹ Brian Bandell, “Miami Jai Alai in \$84 million foreclosure,” *South Florida Business Journal*,
<http://www.bizjournals.com/southflorida/news/2012/09/14/miami-jai-alai-and-casino-in-84m.html?page=all>

⁷⁰ Spectrum review of annual audited financial statements submitted by jai alai operators to PMW

operations, this would effectively lower their overall obligations, the effective tax rate they now pay. By having a lower effective tax rate, this would eliminate parity with the pari-mutuels that are not decoupled, and any potential for eliminating parity can be expected to generate opposition. So, the subsidies endure because their presence helps ensure that all pari-mutuels pay a similar effective tax rate.

As a result, the current stalemate is perpetuated and policymakers are not encouraged by the industry to address issues that could arguably advance public policies, such as the possibility of shifting some revenue-sharing that now goes to various forms of pari-mutuel wagering to general revenues.

So, while racinos do not agree amongst themselves, nor do they agree with Indian gaming operators, on most critical issues, there is largely a consensus on another aspect of gaming in Florida: opposition to gaming expansion by allowing new entrants to develop destination resort casinos.

Last year, legislation to authorize three casino resorts with capital investments of at least \$2 billion each was “killed by an unlikely coalition of opponents: Central Florida tourism interests led by Walt Disney World and the Florida Chamber of Commerce; social conservatives opposed to more gambling; and the state's pari-mutuel industry and the Seminole Tribe of Florida, whose gambling interests would have faced new competition.”⁷¹

The value of this “unlikely coalition” was affirmed in a recent press release by Fitch Ratings, in which it noted: “Fitch believes there is a low likelihood that the integrated resort legislation passes in the near term, since it faces heavy opposition from STOF [Seminole Tribe of Florida], the pari-mutuels, the Orlando theme-park companies and other interest groups. If it eventually passes, Fitch expects the impact on STOF’s financial profile will be manageable. Per the compact agreement, STOF would be able to stop making the compact fee payments from its Broward County casinos (Hollywood Hard Rock, Seminole Hollywood Classic and Seminole Coconut Creek) which account for about half of the gaming division's revenues. Other facilities in Immokalee, Tampa and Brighton would not be directly impacted.”⁷²

10. Identifying, Capturing Markets

Depending on their location, access, neighborhoods, amount and quality of capital investment and distance from competitors, each existing Florida operation has developed its own marketing strategy and customer base.

⁷¹ Kathleen Haughney, “Destination casino bill is dead for this year,” *Sun-Sentinel*, February 3, 2013. http://articles.sun-sentinel.com/2012-02-03/news/fl-gambling-dies-or-lives-another-day-20120203_1_destination-casino-bill-gambling-regulation-debate-gambling.

SECOND DRAFT - CONFIDENTIAL

For example, Isle Casino Racing Pompano Park competes against the Seminole Hard Rock for its higher-end play and against Seminole Coconut Creek casino for the day-tripper business. Yet, with 1,450 slots and 48 poker tables, Isle still managed to generate \$155 million in gross gaming revenue during the past 12 months.⁷³

Isle generally generates about 40 percent of its annual revenue during the January-April period, thanks to the lift created by the incoming snowbird population that fills the condominiums and other housing units near the beach. In that sense, Isle is typical of many of the racino operations in South Florida.

Isle is also typical in its marketing strategy, eschewing relatively expensive mass-media options in favor of more targeted approaches, such as direct-mail and billboards. According to General Manager Rob Wyre, customers respond to the nature of the offer, which casino is providing the best deal, but also to the perception as to the looseness of the slots. Isle reports that between 60 and 65 percent of its slot play is “rated,” a term referring to players who have signed up for the loyalty program and who identify themselves as players during their visit to earn rewards.

That percentage is about 10 points higher than what is reported at Miami Jai Alai, an older property in a more urban area.⁷⁴ Miami Jai Alai management views its location as an asset that can be exploited, with heavy population centers nearby, and easy access to South Beach in Miami Beach. The property enjoys a strong police presence and patrons feel safe, according to management, which also notes that while the median player in its database is likely to be a female between 50 and 55 years of age, age drops noticeably after 2 a.m. Its demographics are also skewed heavily to the Cuban/Latino population, and to a lesser degree the Haitian population. With that in mind, management views the televising of jai alai on Telemundo and Univision as part of its marketing strategy.

Calder Casino and Race Course is also typical of the racino market in drawing most of its customers from within a 10-mile radius, and also competes against both the Hard Rock and Coconut Creek casinos, with the former being only two exit stops away on the Florida Turnpike. Calder competes against Coconut Creek for the market in the Boca Raton area.⁷⁵

Calder management believes that its close proximity to Sun Life Stadium, its Turnpike access, its equidistance of 20 miles from both Miami and Fort Lauderdale airports and its 220-acre site are assets that could benefit from additional capital investment in more amenities, but that possibility is presently precluded by the tax structure, which would prevent such investments from generating a sufficiently attractive return on investment.

⁷³ Interview with Isle Casino Racing Pompano Park General Manager Rob Wyre, May 1, 2013.

⁷⁴ Interview with Miami Jai Alai management, May 2, 2013.

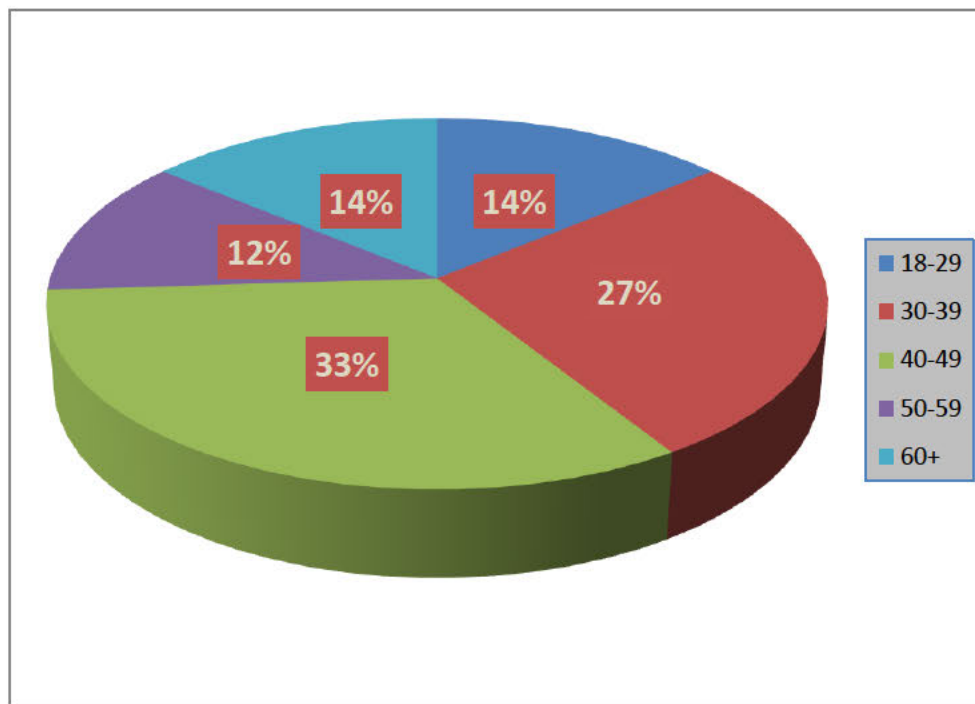

⁷⁵ Interview with Calder management, May 2, 2013.

SECOND DRAFT - CONFIDENTIAL

Calder competes with Gulfstream on multiple fronts, from geography to its thoroughbred racing meets, but the racinos clearly operate under different models. Gulfstream is being positioned as a racing destination and as a centerpiece for the Stronach Group, which is moving its racing operations to Florida, and which operates other tracks, including the signature Santa Anita in California. The core difference is that Gulfstream focuses more on racing, and views casino gaming primarily as a means of funding purses, which allows it to compete for top horses with tracks in northern states.⁷⁶

As noted earlier, Gulfstream is planning significant additional capital investment, undeterred by the tax rate. It has already managed to attract a younger demographic, in part because of its Village at Gulfstream investment, which opened in 2009. Gulfstream took a recent snapshot of its customer base to reveal the following about its customer base:

Figure 10: Gulfstream snapshot of customer demographics

Source: Gulfstream Park
