A number of the racino operators report that competition is fierce, a competition heightened by the restrictions under which they operate. Not all restrictions are gaming-related. Magic City Casino reports, for example, that any plans it might consider to add a hotel are limited by restrictions on high-rise development near the airport.⁷⁷ Managers there are also concerned about capital investment that might be impacted by future destination resort casinos, a risk factor that discourages capital investment as well. Along that same line of reasoning, Mardi

⁷⁶ Interview with Gulfstream management, May 2, 2013.

⁷⁷ Interview with Casino Magic management, May 8, 2013.

Gras management said it would consider capital investments in hotel rooms, meeting space and restaurant improvements, if it had assurances that destination resort casinos were no longer a possibility.⁷⁸

Hialeah Park is pursuing significant capital investment in its facility, in an effort to recapture much of the appeal from its 1930s heyday as a racing icon. The \$470 million project will ultimately include, in addition to the casino, a 750-room hotel, convention and entertainment and retail centers.⁷⁹ The concept was summarized in a brochure produced by Hialeah management:

“(Hialeah Chairman) John Brunetti Sr.’s vision for Hialeah’s rebirth is a comprehensive development that supports the rich tradition and revitalization of the entire 200-acre Hialeah Park property and to energize the hospitality industry in Florida - a place that would entertain families, adults young and old and once again become a tourist destination.

“John’s plan restored Hialeah’s historic buildings and verdant gardens, brought horse racing back to the region and created a new entertainment experience for Miami – Dade County. Soon will come a small museum exhibiting the history of racing and the history of South Florida; the creation of an urban entertainment district for those who live, work, shop and play in the region; an outlet shopping village with restaurants; a new boutique hotel and a metro rail station and business complex for the City of Hialeah and Miami Dade County.”⁸⁰

The property plans to take advantage of some inherent assets, ranging from its location in the midst of a large Cuban-American population to its proximity to a train station in front of its property. Hialeah management plans to aggressively market itself throughout Latin America and Europe.⁸¹

11.Profitability

Casino gambling is generally a profitable business. As service businesses without costs of raw materials and inventory or the need to invest in research and development, casino companies are efficient operations, generating high operating margins. As shown in the following table, in 2012 the four largest publicly owned casino companies generated an average margin of cash flow (as measured by the commonly used metric of EBITDA, or earnings before interest, taxes,

⁷⁸ Interview with Mardi Gras management, May 9, 2013.

depreciation and amortization) to revenues of 22.1 percent, driven in great part to their Asian operations.

The next five largest gaming companies, all US regional operators, generated an average margin of 22.7 percent in 2012. This compares favorably to a comparable average margin of 16.6 percent for the four largest US publicly owned hotel operating companies as well as to the three largest cruise companies, which have an average margin of 20.2 percent.

a. Reasons for Gaming Profitability

In terms of EBITDA return on total invested capital, a measure of profitability in relation to fixed plant, casino companies are very profitable. In 2012, the same four large gaming companies generated an average of 16.2 percent return on invested capital. The regional gaming companies generated a 13.6 percent return on the same measure. This compares to 18.8 percent for the hotel companies in this group and 2.1 percent for the three cruise companies.

Casinos tend to be profitable in great part due to the many barriers to entry that limit competition. First among these is the requirement for licensing. Many persons and companies will not want to get licensed due to the invasiveness of the process and its ongoing nature. Similarly, the transparency of the operations due to public reporting requirements is a deterrent to those not wanting to operate in a “fish bowl.” Possibly more importantly, most jurisdictions limit the number of gaming licenses or restrict the locales in which casinos can operate, thereby restricting the number of casinos that can open. Additionally, the capital-intensive nature of gaming, whether for the need for large and specialized physical plants or the high working capital needed to run the operations, result in a high capital cost, limiting participants only to those who can amass the great amount of capital needed. Lastly, gaming is a highly specialized cash-intensive operation requiring complex management controls regarding security, marketing and cost controls, which limits the number of capable operators.

b. Factors Affecting Profitability

Within the gaming industry, some properties are more profitable than others for a multitude of reasons:

- **Gaming tax rate** – The assessment made by the hosting jurisdictions is among the most significant determinants in casino profitability. Tax rates can range from 7 percent to 65 percent of house gaming win⁸², sometimes with additional up-front and ongoing payments to host communities, local public benefit organizations and the state or national government that is granting the gaming license. Higher rates are generally imposed in jurisdictions that limit competition, vesting greater value in the license rights. But obviously, the higher the tax rate, the lesser the ability of the gaming operator to absorb fluctuations in other elements of the business's operating results, jeopardizing profitability and the ability to withstand competition.

The absence of a gaming tax is a key element to the profitability of many Indian casinos. Without having to pay such a tax, the tribal gaming operation has substantially more flexibility to spend more on customer marketing including complimentary services such as rooms, food and beverage, giving them a potential competitive advantage against tax-paying commercial casinos. Additionally, non-tax-paying Indian casinos can return more to their owners or use the funds to pay down debt sooner, assuring them greater financial stability. The benefits of such a tax advantage are compounded by the tribe's exemption from corporate federal and state income taxes.

- **Cost of capital** – Gaming is a capital-intensive business, and getting more so as casinos get larger and incorporate ever more non-gaming amenities. The gaming company's ability to attract lower cost capital can make a huge difference in its profitability as measured by return to shareholders and its ability to pay down debt. Capital costs tend to be lower for larger projects, more diversified gaming companies, and companies with a longer track record.
- **Competition** – The level of competition in a market is a major determinant in any casino's profitability. This is best illustrated in operating margin performance, as a more competitive environment will force casinos to offer more incentives to customers to get them to play at any particular casino and reduce this margin. Return on investment will similarly be affected by greater competition as the operating profit declines in relation to the original capital cost.
- **Scope and diversity of offerings** – The efficacy of investment on the variety of amenities that can accompany a casino can have a dramatic impact on overall

⁸² "Win" and gross gaming revenue ("GGR") are effectively interchangeable terms, and both reflect the amount retained by the house after all winning bets are paid.

profitability. A hotel that was costly to build but unable to generate a sufficiently high average daily room rate due to the need to give away rooms can bring down a project's overall profitability. Similarly, restaurants and clubs that are overbuilt relative to their standalone profit-making capability can reduce the casino project's margins. Conversely, high volume turnover at any of these offerings can lead to highly efficient businesses that may generate profits beyond what similar operations not associated with a casino could generate, thereby enhancing the overall profitability of the project.

- **Accessibility** – Gaming is often convenience-driven, so accessibility, ease of parking, and matters of ingress and egress can have a major impact on profitability. Gaming customers are often repeat visitors and are attracted to facilities that make their arrival and departure easy. A casino in a competitive market with accessibility advantages will likely be more profitable by virtue of having more customers.
- **Management quality** – Operating efficiency is critical in gaming operations due to the high fixed cost nature of the business. Maximizing revenues is a key to successful operations of such businesses, so management skill in cost control and efficient marketing can make dramatic differences in operating margins and profitability.

Profitability within the Casino

Casinos are complex operations, in that there are many types of gaming and non-gaming operations occurring within the envelope of the casino development. This mix can vary significantly depending on the type of operation – destination vs. local, slots vs. tables vs. full service, standalone casino or a project with many amenities.

Generally, slots are the biggest contributor to profitability due to their low operating cost. There is little labor involved other than maintenance since the advent of ticket-in/ticket-out technology. Additionally, individual slot machines take up little room on the floor. Before considering gaming taxes, slots-only casino operations tend to generate among the highest returns on capital as they tend to have fewer amenities. The margins on net slot revenue can vary widely depending on the tax rate and regulatory requirements.

Tables generate higher individual bets than slots and the house retains a greater percentage in the individual gaming transaction, but table game transactions are much slower than the pull of a slot machine so calibrating the mix of tables and slots relative to demand is critical. Given the amount of labor required between dealers, supervisors, security personnel and cleaners, tables are generally less profitable than slots. An exception to this might be in extraordinarily high volume markets like Macau, where table games are the largest profit makers. The margins on net table games revenue can vary widely depending on the tax rate and regulatory requirements.

Hotel rooms may generate high operating margins in markets of ultra-high occupancy, but generally, due to the high labor, maintenance and utilities cost, their contribution is not as substantial as is gaming, especially after considering the development and recurring capital cost of building, maintaining and refurbishing hotel rooms. Similarly, casino food and beverage operations tend to run with little to no departmental profit with exception for certain “celebrity chef” restaurants in destination resorts.

As between destination resort casinos and local casinos, the profitability comparison cannot simply be made as so many of the elements affecting casino profitability, mentioned above, come into play. Destination casino project profitability is dependent on the efficacy of its design and appropriateness of the mix of demand generators – hotel, spa, restaurants, and clubs – and, management’s capability to get the various elements working together efficiently. Such projects’ successes are also dependent on being able to attract visitors from farther away and get them in and out of the project.

Internet gambling is just now being tested legally in the US, with the first Internet poker games just opening in Nevada in May. In Europe and other parts of the world, Internet gaming has proven very popular with the pure customer based gaming element generating cash flow margins of between 20 percent and 30 percent.⁸³ Capital cost in Internet gaming is based on technology investment or technology licensing fees (if using a third party online provider) and marketing to potential online gaming players.

12. Florida’s Competitive Landscape

Florida has an active land-based casino gaming industry, with seven Native American casino operations and six South Florida slots-only casinos at racetracks and jai alai frontons (collectively “racinos”). Three of the Native American casinos are located in Broward County and one each in Miami, Tampa, Immokalee and Okeechobee. The Seminole Tribe of Florida operates all of the Native American casinos except the Miami casino, which is owned and operated by the Miccosukee Tribe of Indians of Florida. Each of the South Florida racinos also offers poker, as do the majority of the pari-mutuel facilities elsewhere in the state. There is also one small Native American-owned slots facility in Clewiston on the southwest corner of Lake Okeechobee (a 5,600-square foot facility with a few slot machines), although we consider this to be too small to be truly defined as a casino.

Florida had a total population of 19 million in 2012, of which more than 14.6 million (77 percent) were adults (age 21+). Approximately 81 percent of the adult population (11.8 million adults) in Florida resides within a two-hour drive of an existing casino in Florida, excluding cruise ships, while 54.7 percent of the adult population (8 million adults) resides within a one-hour drive of an existing casino. The two-hour drive time figure comprises nearly all of the Florida population south of Gainesville. It should be noted that the drive-time population

⁸³ Thomas Allen, Morgan Stanley Report: Boyd Gaming Corporation; “Early to the Party,” April 11, 2013, page 7.

SECOND DRAFT - CONFIDENTIAL

projections presented in this report refer solely to permanent residents of Florida and do not include seasonal residents, either snowbirds or sunbirds.

Statewide, there are also a handful of casino cruises departing daily from ports throughout the state, some of which provide overnight cruises to the Bahamas and others which solely provide day-cruise excursions into international waters for gaming. The casino cruise industry in Florida is in a constant state of flux, generally downward. Ten years ago there were far more casino cruises in operation, but the industry niche has not fared well competing against land-based operations.

The racinos report their slot revenues to the State each month, which publishes the figures; Native American casino data are not published. The racinos also face a significant tax differential relative to the Native American casinos. Initially, racino slot revenue was taxed at 50 percent of net gaming revenues, excluding distributions to local governments. Effective July 1, 2011, the racino tax rate was lowered to 35 percent of GGR net of promotional credits and unclaimed tickets.

The Seminole Tribe historically (pre-2010) paid no gaming taxes, but was permitted to operate only slots and Class II table games (non-house-banked games). In 2010, the Seminole Tribe signed a 20-year compact with the State of Florida under which the Seminole Tribe agreed to pay the State an aggregate total of \$1 billion over the first five years of the compact (effectively less than 10 percent of gross gaming revenue), and potentially as much as \$1.5 billion based on an additional revenue-sharing component for the right to offer house-banked table games at its casinos in Hollywood, Immokalee and Tampa, with an option to add table games at its Coconut Creek casino. The compact also stipulated that all seven of the tribe's casinos could continue to operate Las Vegas-style slot machines for the next 20 years with no additional slot competition allowed outside of Broward and Miami-Dade counties, and that no Class III table games would be permitted anywhere else in the state.

Through 2012, we estimate that total GGR from the 13 racinos and Native American casinos in Florida was at least \$2.7 billion:

- The six racinos publicly reported GGR of \$527.6 million in 2012 (from an average of 6,327 slot machines over the course of the annual period and more than 140 poker tables). At year-end there were 6,393 slot machines and 147 poker tables operating.
 - Gross slot revenue was \$489.2 million (92.7 percent of GGR), while average slot win per unit per day was \$211;
 - Total cardroom revenue was \$38.3 million (7.3 percent of GGR), while average win per table per day was \$713;
 - Average GGR per gaming position per day was approximately \$198.
- We estimate the seven Native American casinos last year generated GGR of \$2.2 billion.

SECOND DRAFT - CONFIDENTIAL

- This estimate is based on two percent annual growth from the 2011 reported figure of \$2.16 billion (from 13,069 slots and 457 table games, or 15,811 gaming positions having \$374 in GGR per position per day).⁸⁴
- It should be noted that some expansion at Native American casinos has occurred since 2011, such that in aggregate, we estimate there are at least 14,500 slot machines and 450 table games (or 17,200 gaming positions) at Native American casinos in Florida in 2012.

The following table provides our estimated snapshot of the Florida casino industry for calendar year ended 2012 (based upon estimated results for Native American casinos, as applicable).

Figure 13: Florida casino supply and performance, 2012

	Racinos	Native American casinos	Statewide total
Estimated GGR (\$M)	\$527.6	\$2,200.0	\$2,727.6
No. Casinos	6	7	13
Slot Machines	6,393	14,500	20,893
Table Games	147	450	597
Est. Gaming Positions	7,275	17,200	24,475
Est. GGR/position/day	\$198	\$349	\$304

Source: Florida Department of Business and Professional Regulation; Spectrum Gaming Group estimates

We believe that the vast majority of GGR generated by Florida's casinos is generated by adults residing in close proximity to a casino (i.e., within a one-hour or two-hour drive).

13. Casinos (Commercial, Racetrack, Indian)

There are nearly 1,000 casinos in the United States, and in 2012 they generated an estimated \$66 billion⁸⁵ in gross gaming revenue ("GGR"). Put another way, gamblers experienced net losses of \$66 billion in US casinos last year. Casinos are the highest-grossing form of legal gambling in the country, having surpassed lottery sales.

In this section we provide an overview of various aspects and components of an industry that, from an economic perspective, has been highly successful.

a. National Overview

The modern casino industry began in Nevada, which was the first state to legalize casino gaming, when legislation was passed and signed into law by then-Governor Fred Balzar in 1931. While casinos grew in the state it was not until 1941 when the first casino El Rancho Vegas

⁸⁴ Alan Meister, *Casino City's Indian Gaming Industry Report*, 2013 Edition.

⁸⁵ Per American Gaming Association 2012 report of commercial casino revenue and 2012 4.7 percent commercial casino growth rate applied to National Indian Gaming Commission FY 2011 Indian casino revenue. Actual NIGC FY 2012 data are expected to be released later this year.

SECOND DRAFT - CONFIDENTIAL

Hotel-Casino – was built on Highway 91. This came to be known as the Las Vegas Strip and is now home to 41 casinos generating \$6.2 billion in gross gaming revenue (“GGR”), or roughly 57 percent of the total GGR in the state of Nevada. It then took until 1976 for another gaming jurisdiction to be legalized when New Jersey voters passed a voter referendum for a constitutional amendment to utilize privately owned casinos to revitalize Atlantic City – the former “Queen of Resorts” – that was in severe decline. This dynamic – economic recovery, urban renewal or Tribal self-sufficiency – has been one of the primary driving forces in the expansion of gaming throughout the US.

The following table provides a state-by-state breakout of the types of casino gambling. Of note, this review and analysis does not include a discussion of lotteries even though the proliferation of slot machines at racetracks is frequently operated under the auspices of the respective state lottery commissions. In the sections that follow we will provide a discussion of the various forms of casinos.

Florida does have “floating” casinos in that day-cruise vessels and cruise ships dock at state ports, but the gambling is unregulated and takes place in international waters.

SECOND DRAFT - CONFIDENTIAL

Note the second column in the above table, which indicates the year that commercial casinos were legalized in each state and note that most of the legislation was passed around the time of economic recessions in the US.⁸⁶ Of note, the legalization of casinos in Atlantic City followed the 16-month November 1973 recession, and the eight-month July 1990 to March 1991 recession can be considered as the impetus for the legalization of casinos in Colorado, Illinois, Louisiana and Mississippi. As previously indicated, economic recovery has been one of the leading reasons states and municipalities enact gaming legislation and casino gaming has become an economic mainstay in many communities.

The gaming industry is known for substantial capital investment in facilities, with the size and scale of the investment dependent upon potential returns that are, in turn, dependent upon population and visitation, regulations and proposed tax rate, to name a few factors that are considered in such investment decisions.

This investment creates construction jobs during the development phase of the project, followed by long-term job creation to staff the properties and service the customers. As an example, Tunica County, MS, was the poorest county in the country – 53 percent living below the poverty line and 15 percent unemployment – and was referred to as “America’s Ethiopia” by Jesse Jackson in 1985.⁸⁷ The first casinos opened in Tunica in 1992 and by 1994 when *U.S. News and World Report* revisited Tunica, 95 percent of all adults were working. The county budget, which was under \$3 million before the casinos commenced operations, is just under \$50 million for fiscal year 2013.⁸⁸ Farther south in Biloxi, MS, the experience was much the same. At the opening of the new Isle of Capri casino in Biloxi, MS, CEO Bernie Goldstein is quoted in his autobiography as, “We held a jobs fair, at which we were deluged with enthusiastic applicants. One in every 10 Mississippi workers was unemployed at the time, and we were offering outstanding salaries, benefits and promotion opportunities.”⁸⁹

The commercial casino industry⁹⁰ is large and growing. While this statement might seem counterintuitive given the challenges the industry faced during the economic recession and with certain companies still facing an uncertain future due to highly levered balance sheets, the fact remains that the gaming industry in the US has expanded to new jurisdictions, invested in new facilities and realized an almost 9 percent increase in GGR since the end of the Great Recession in June 2009.⁹¹ The commercial industry generated \$37.3 billion in GGR in 2012, just a slight

⁸⁶ Based on data provided by the National Bureau of Economic Research Business Cycle Dating Committee.

⁹⁰ We are defining commercial casinos as land-based, riverboat and racinos. This definition does not include Native American casinos or cardrooms.

⁹¹ National Bureau of Economic Research Business Cycle Dating Committee.

half percent below the 2007 peak revenue of \$37.5 billion. Much of this growth can be credited to the expansion of gaming to new jurisdictions – Pennsylvania, Ohio and Kansas are examples – or new properties opening in existing jurisdictions – Resorts World New York, Rivers Casino Des Plaines (Illinois) and SugarHouse (Philadelphia) – but some of it can also be ascribed to the improving economy and stabilizing housing sector providing consumers with the confidence to again visit and spend in casinos.

Figure 15: US commercial casino gross gaming revenue

Source: American Gaming Association; state regulatory agencies.

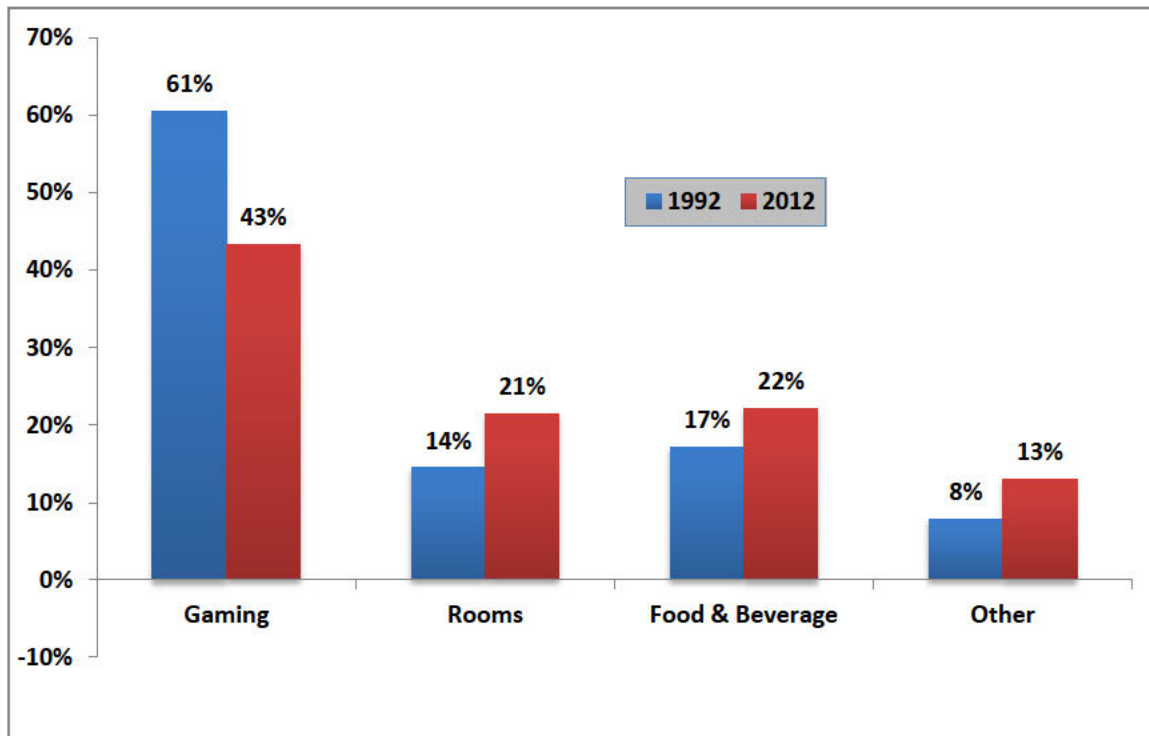

Today, 26 states have legalized commercial casinos of some type. As the casino industry expanded into other states and regions it has also evolved. To make casino gaming palatable to an electorate whose only exposure to the industry was from movies like *The Godfather* or *Bugsy*, states enacted legislation with certain requirements, such as limits on the number of gaming positions or the imposition of bet limits. In Colorado the casinos are only allowed in the former mining towns of Black Hawk, Central City and Cripple Creek and the casinos have architecture common to pre-World War I Colorado. Iowa riverboats must replicate 19th Century Mississippi steamships.

As the electorate became more comfortable with the industry and it contributed employment and raised revenue, many jurisdictions began to loosen regulations so that the in-state casino industry could continue to be competitive against the new casino jurisdictions being enacted throughout the country. The Iowa legislature voted in 1993 to remove bet and loss limits

and allow “as many gaming tables and slots as the boats could safely fit.”⁹² Missouri removed its loss limits in 2008. Colorado raised the maximum bet limit from \$5 to \$100 in 2009. Over the years, the requirement that riverboats cruise has been removed in all riverboat markets.

Because of the way regulations were written with riverboats enjoying monopoly-like status surrounded by other casinos throughout the state, most of the new jurisdictions became day-trip markets where customers drove from within a small radius, typically 50 to 75 miles, and stayed at each property for only a few hours. Properties located in Las Vegas, Atlantic City and Mississippi operated under different regulations that created a critical mass of properties and lower tax rates that incited the property owners to invest in larger facilities with hotels, more expansive food and beverage offerings, nightlife, entertainment and convention space. In the early part of the industry life cycle, the majority of the casino property’s revenue and earnings came from the gaming floor. Today, and especially for these larger properties, casino gambling now represents less than half of revenue.

Figure 16: Analysis of the shift in revenue contribution, Clark County, NV, casinos, 1992 vs. 2012

Note: Data from the Nevada Gaming Control Board all casino locations with Gaming revenue of \$1 million or larger. As such, the data reflect some casinos we would not consider “destination resorts.” For the destination resort casinos, the non-gaming portion of revenue in 2012 would be higher. Source: Nevada Gaming Control Board, Nevada Gaming Abstract 1992 and 2012.

⁹² Bernard Goldstein, *Navigating the Century; A Personal Account of Alter Company’s First Hundred Years*, p. 166.

b. Evolution of Destination Resort Casinos

As casinos expanded to other parts of the country they introduced the industry to new customers and drove increased visitation to Las Vegas and, to a lesser extent, Atlantic City. With the financial backing of the Wall Street high-yield bond markets, developers, particularly in Las Vegas, but also in Atlantic City and Mississippi, invested in larger and more luxurious properties. We classify these casino properties as destination resorts. The term “destination resort” is subject to interpretation, but Spectrum views it to be one with a critical mass of hotel rooms (typically 1,000 or more), restaurants, leisure activities and other resort features that has the ability to attract out-of-market patrons for a multiple-night stay. As an example, Bellagio in Las Vegas has 3,950 guest rooms, world-class architecture, a dancing-water show, a Dale Chihuly hand-blown glass lobby ceiling, and “O” Cirque du Soleil show to draw customers. Once the customer arrives Bellagio offers a spa, conservatory and botanical gardens, fine art gallery, nightclubs and several fine restaurants to keep the guest entertained outside of the casino.

Because there are more activities than gaming, the typical destination casino property employs a larger hotel with a higher ratio of rooms per gaming position⁹³ than regional or day-trip properties. Stated another way, at full occupancy there would be more people staying at a destination property than could be satisfied by the number of gaming positions. Thus, by design, there need to be more activities to keep the guests satisfied. The following table provides a snapshot of the ratio of rooms per gaming position for the destination, regional destination or day-trip property. The average number of rooms/gaming position for a destination casino is 1.75 rooms/gaming position, which is more than three times the ratio for a regional destination casino and a little over 10 times the ratio for the day-trip casino. This higher room count leads to more people in a property with a longer length of stay and higher spend/visit. Just adding hotel rooms will not ensure occupancy. It is the addition of other high-end amenities that draws the customers to the property with the demand justifying the larger hotel offering.

Figure 17: Analysis of select casino hotels ratio of hotel room count to gaming position

Property	Slot Machines	Table Games	Gaming Positions	Hotel rooms	Rooms/Gaming Position
<i>National Destination Resorts</i>					
Bellagio	2,111	146	2,987	3,933	1.32
Mandalay Bay	1,782	82	2,274	4,752	2.09
CityCenter	1,942	129	2,716	5,744	2.11

In addition to the luxury hotels and spas, destination resort casinos now boast high-end restaurants, along with the all-you-can-eat buffets for which Las Vegas was previously known. The *Forbes Travel Guide* (formerly *Mobil Travel Guide*) evaluates properties on over 500 service criteria and delivers comprehensive ratings and reviews, including the prestigious Five Star ratings. Today, there are more four- and five-star rated restaurants in Las Vegas than in any other US city, including New York, Los Angeles and Miami.

Figure 18: Four- and five-star restaurants for select cities

The amenities we cited within the control of the property developer. Despite a beachfront setting, Atlantic City and Biloxi have been unable to compete with Las Vegas for international visitors, because of factors outside the control of the developer. Of particular importance is accessibility to each respective market. Simply put, Atlantic City International Airport and the Gulfport-Biloxi International Airport do not – and cannot with their current infrastructure – provide the same airlift as McCarran International Airport in Las Vegas. In 2012, there were 41.7

million air passengers in Las Vegas,⁹⁴ while data from the Atlantic City Convention and Visitors Authority indicate that Atlantic City International Airport has more than 1 million annual passengers⁹⁵ and Gulfport-Biloxi air passengers were less than 1 million in 2012.⁹⁶ As such, we consider Las Vegas to be a national destination market, while both Atlantic City and Biloxi are regional destinations. Because of the critical mass of casino properties, combined with hotels and other amenities these two markets can draw from further away and for a longer stay duration than the primarily day-trip riverboats, but do not draw customers from as far or as long as Las Vegas.

c. Evolution to Hub and Spoke Business Model

The evolution of commercial casino gaming in the United States has evolved over a period of decades from a policy in which some states allowed casino licensees to cluster in a central location (Mississippi, Nevada, New Jersey) to one in which most states issue fewer licenses, giving some regional exclusivity, but balancing that with a relatively high tax rate. As the following table shows, the trend for higher tax rates has been rather strong, with few exceptions:

Figure 19: Changing tax rates over time

	Casino-revenue tax rate at adoption⁹⁷	Year gaming was established
Nevada	6.8%	1931
New Jersey	8.0%	1978

Source: State gaming commissions

In our experience and as detailed earlier, tax rates are often set on the basis of political considerations, rather than through an economic analysis. This is best illustrated through the anecdotal example of New Jersey, which today is viewed as a low-tax state, but did not start out that way.

In 2010, Spectrum authored a peer-reviewed white paper on tax policy⁹⁸ that included the following:

“New Jersey was the first state outside Nevada to legalize casinos, with voters approving a November 1976 referendum to authorize casinos in Atlantic City. The enabling legislation, the Casino Control Act, was approved eight months later, and the first casino opened in May 1978. The tax rate in New Jersey was set at 8 percent, which today is the second lowest in the nation (behind Nevada).⁹⁹

“In researching this paper, we asked Steven P. Perskie – who was a member of the state Assembly in 1976 and 1977, and is widely hailed as the architect of the Casino Control Act – to provide the thought processes that guided the decision to set the rate at 8 percent. He responded with the following written comment:

“ ‘In researching the drafting of the bill introduced in 1976, after the referendum passed, we found that the highest (combined) tax on gross revenues was 7.5 percent (in Nevada). For principally political reasons, we therefore set the initial rate for New Jersey at 8 percent. We assumed that this would inoculate us from any argument in either direction (that the tax was too high or too low), and indeed we never had to defend that decision. We didn't, at that time, make any effort to calculate the revenue estimates for the state, as

⁹⁸ Spectrum Gaming Group, *Casino Tax Policy: Identifying the Issues that Will Determine the Optimal Rate*, <http://www.spectrumgaming.com/dl/SpectrumNationalTaxAssociation.pdf>.

⁹⁹ New Jersey also imposes a 1.25 percent reinvestment obligation, which offers casinos a below-market return. We normally calculate the effective overall rate in New Jersey at 8.4 percent. That reinvestment obligation, however, was not imposed at the time of the statute's initial adoption.

SECOND DRAFT - CONFIDENTIAL

we had no idea (and, as experience would show, we had *no* idea) what we would be dealing with.”¹⁰⁰

That “inoculation” rationale could have been applied in many states, and demonstrates that gaming did not evolve based on market demand or player preferences. Still, the market did respond to these political arguments. In large measure, that evolution prompted the gaming industry to develop what has been termed the “hub and spoke” business model.

Under this model, one company would operate multiple properties. The higher-tax properties that are isolated in various regions would attract local business and develop databases of players within their respective regions. As these databases grow, players who earn loyalty points at these properties would be encouraged to redeem those points at “hub” properties where the tax rate is lower, and thus the profit margin is higher.

Caesars Entertainment embodies this model, and arguably pioneered the concept and developed it. Under this model, Caesars leverages its multiple locations, with spoke properties in feeder markets, and hub properties in markets such as Las Vegas and Atlantic City, as well as leveraging its loyalty program, known as Total Rewards.

In a recent column in *Global Gaming Business* magazine, Caesars Chairman, President and CEO Gary Loveman described the core of the program:

“Many commentators have identified Total Rewards as the leading loyalty program in the gaming industry. We agree that Total Rewards provides Caesars with some unique advantages. No other program allows patrons to earn reward credits or points at one property in Las Vegas, for example, and redeem them inside the casino in New Orleans or at a Harrah’s New Orleans strategic business partner’s restaurant in the French Quarter. No other gaming company comes close to matching Caesars’ distribution of 52 properties in the US and on four continents around the world, all of which create marketing opportunities for our home communities.

“Currently, there are more than 45 million customers in the Total Rewards database that have taken advantage of the program, 8 million of whom have been active in the past 12 months. The program provides for four tier cards or levels based on activity of the guest, with each card having a unique cadre of benefits. Patrons earn Reward Credits (points) while playing slots and table games, by making non-gaming purchases at our properties, or by using our Total Rewards-branded credit card to make purchases anywhere. These points accrue and can be redeemed across all Caesars Entertainment properties.”¹⁰¹

Others are moving in the same direction. The Mohegan Tribal Gaming Authority, which began with a hub property at its Connecticut casino, has since branched out to a spoke in

¹⁰⁰ Email from Steven Perskie, August 6, 2010.

¹⁰¹ Gary Loveman, “Heart of the City,” *Global Gaming Business*, April 30, 2013 <http://ggbmagazine.com/issue/vol-12-no-5-may-2013/article/heart-of-the-city1>.

Pennsylvania, is applying for a resort destination license in Massachusetts, is managing a casino in Atlantic City, and seeking to manage casinos elsewhere. A Florida example is the Seminole Hard Rock, which is developing plans to leverage its national brand in gaming markets such as Massachusetts and New Jersey, as well as in hotel markets. Hard Rock Chairman Jim Allen identified between eight and 15 markets that could potentially support a Hard Rock hotel casino, and as many as 50 markets that could support a Hard Rock hotel.¹⁰²

A recent article on HotelNewsNow.com noted:

“Hard Rock, which now has 18 properties in its portfolio, could triple that number over the next three to five years, Chairman Jim Allen told HotelNewsNow.com. ...

“Globally, Hard Rock has secured relationships with development partners in 58 countries, Allen said.¹⁰³”

Other operators, including those with properties in Florida, acknowledge the benefits of the model. Virginia McDowell, President & CEO of Isle of Capri Casinos Inc. said:

“If you look at the Caesars [Entertainment] business model, they benefited tremendously from stringing their regional operations together across the United States in their hub-and-spoke model, using that as drivers to their destination resorts. They built loyalty in the regional markets because people wanted to go to the destination markets. There’s enough independent operators in Las Vegas that, to the extent you want to partner with somebody, there are lots of opportunities for us to send our customers and the regional markets have changed enough that you don’t *have* to have a destination driver, although it’s nice to have.¹⁰⁴”

Notably, while the hub-and-spoke business is still evolving and has yet to reach its full potential, new models are emerging. Indeed, Caesars is pioneering a model that Loveman recently detailed:

“Policymakers and social scientists increasingly understand that casino development projects offer the most economic and social benefits when they are specifically tailored to the needs of their host communities. The long-held view that casinos exist across a spectrum anchored at one end by neighborhood slot parlors and other forms of convenience gaming and at the other end by integrated destination resort casinos has become incomplete.

“Over the past decade, a third dimension of casino gaming has emerged in North America that provides another option for urban policymakers to consider.

¹⁰² Shawn A. Turner, “Hard Rock Plans Global Hotel Push,” HotelNewsNow.com, February 1, 2013 <http://www.hotelnewsnow.com/articles.aspx/9822/Hard-Rock-plans-global-hotel-push>.

¹⁰³ Ibid.

¹⁰⁴ David McKee, “Meet Virginia McDowell,” Stiffs and Georges blog, January 18, 2012 <http://dmckee.lvablog.com/?p=8303>.

“I call this model the city-integrated or urban resort. Its defining feature is integration with its location’s pre-existing business community and attractions. In this model, the casino itself is both a physical and a metaphorical hub. Its spokes radiate not only to amenities in the casino complex itself, but also to established restaurants, shops, hotels and recreation offerings in the larger metropolitan area.¹⁰⁵”

This analysis should note that, while the hub-and-spoke model is still developing, a new business model may be forming in its wake. Whether the future includes new urban resorts or traditional destination resorts, the goals for policymakers remain unchanged: Capital investment remains the key target. Consider that a destination property – a “hub” in this model – will likely employ at least 3,000 full-time equivalents, and as many as 5,000. A typical “spoke” property, which focuses on its nearby adult population, will employ about 800, and possibly as many as 1,000.

All else being equal, a destination resort is more likely to:

- Promote tourism, as it has the ability to pull adults from more distant locations.
- Withstand competition, since it typically offers more amenities.
- Generate more revenue, since it will likely penetrate a greater percentage of the adult population.

One corollary to this trend is that properties that begin life as convenience-oriented facilities, which would include so-called “spokes,” are not necessarily destined to remain in that category in perpetuity.

For example, Dover Downs – a racino in southern Delaware – responded to the threat of competition from nearby Maryland, as well as from Pennsylvania and New Jersey, by adding a 232-room hotel and conference center, along with a combination ballroom/concert hall, a new fine-dining restaurant, pool and spa. The property also added a 425-seat buffet, among other investments. That investment helped the property weather competition, by becoming something closer to a destination. The expansion has continued, and the facility now has 500 rooms, and significantly more amenities.¹⁰⁶

In Florida, Gulfstream has significantly expanded over the year, starting with the addition of the 1-million-square-foot Village at Gulfstream, which includes 750,000 square feet of retail space. That property continues to expand, with plans now for a \$700 million expansion¹⁰⁷ that would include hotel rooms. As described by the *Sun-Sentinel*, “The development plan being formulated by The Stronach Group includes two hotels facing the track, greatly enlarged

¹⁰⁵ Loveman.

¹⁰⁷ Interview with Gulfstream executives, May 2, 2013.

grandstand seating, as well as a standalone casino and adjacent concert hall. A giant statue of Pegasus will adorn a 4D theater nearby in a park area. But here's the most surprising aspect of a project that will cost hundreds of millions of dollars to complete: Public money is not part of the equation.¹⁰⁸

In one sense, properties such as Dover Downs and Gulfstream are defying the basic economics of hubs vs. spokes in that such properties are burdened by relatively high tax rates, which tend to discourage such investments by reducing the potential returns on investment. Yet, in another sense, such properties recognize that such investments can protect – or even enhance – market share.

We do not suggest, however, that destination gaming resorts are panaceas, nor do we ignore the downside or the challenges they present to local communities. By definition, they increase traffic and create other demands on public services. The more successful they are in generating revenue, the more such demands increase.

In 2009, Spectrum studied in great detail the economic and social impacts of two destination resorts in Connecticut on their local communities. The two tribal properties – Foxwoods and Mohegan Sun – were responsible for \$1.2 billion worth of personal income in Connecticut, both directly and indirectly. Between 1992 and 2008, they accounted for about 12 percent of the net new job growth in Connecticut.¹⁰⁹

At the same time, however, DUI arrests were up significantly. One town reported that such arrests doubled since the first casino opened in 1992, and three local communities reported that 20 percent of those arrested for DUI – including one motorist arrested for manslaughter for causing a fatal accident by driving the wrong way on a highway – acknowledged that they had their last drink at one of the casinos.¹¹⁰

Spectrum also noted that “with many casino workers unable to afford housing in southeastern Connecticut, some landlords have converted single-family homes into boarding facilities. The practice is not only illegal, it is unsafe as well.”¹¹¹

Such examples demonstrate that destination resorts present both challenges and opportunities.

A seventh racino is scheduled to begin operating later this year at Hialeah Park.

e. Native American Casinos

Nationally

Congress passed the Indian Gaming Regulatory Act of 1988 (“IGRA”) because many Native American nations and tribes had established gaming activities but federal laws at the time did not establish a clear regulatory framework for the conduct of such games. IGRA was passed to fulfill certain goals, including promoting tribal economic development, self-sufficiency and strong tribal governments; maintaining the integrity of the Native American gaming industry; and ensuring that tribes are the primary beneficiaries of their gaming activities.¹¹³ Under IGRA, games are classified into three categories: Class I, Class II and Class III.

- Class I gaming includes social games solely for prizes of minimal value or traditional forms of Indian gaming engaged in by individuals as part of tribal ceremonies or celebrations.
- Class II gaming includes bingo, pull-tabs, lotto, punch boards, tip jars, certain non-banked card games (if such games are played legally elsewhere in the state), instant

¹¹² Florida Department of Business and Professional Regulation, Division of Pari-Mutuel Wagering <http://www.myfloridalicense.com/dbpr/pmw/fag-slots.html> (accessed April 29, 2013).

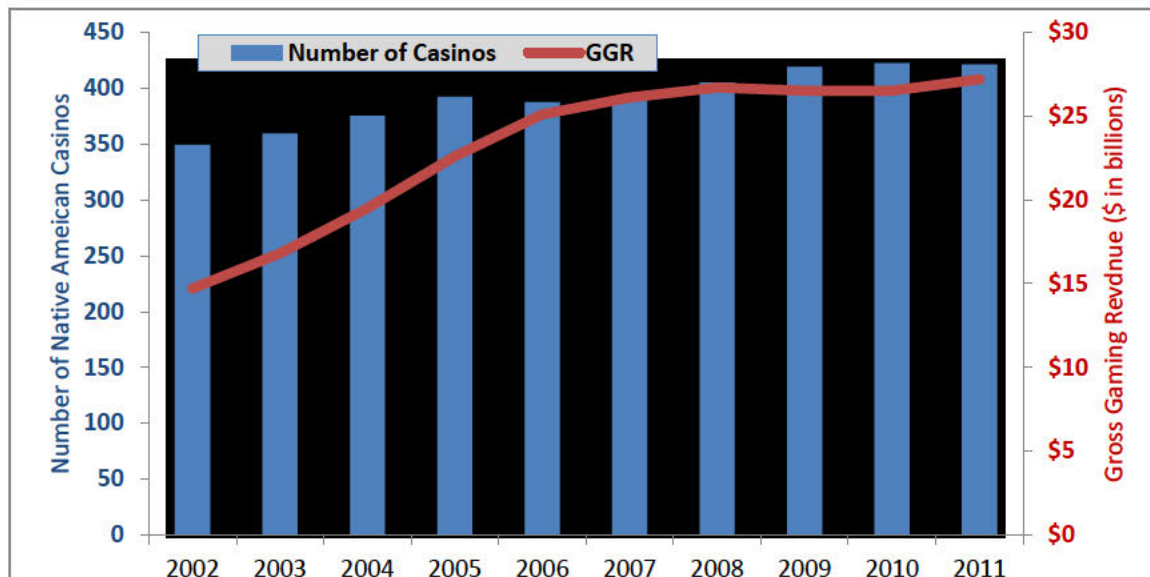

¹¹³ Indian Gaming Regulatory Act, National Indian Gaming Commission http://www.nigc.gov/Laws_Regulations/Indian_Gaming_Regulatory_Act.aspx.

bingo and other games similar to bingo, if those games are played at the same location where bingo is played.

- Class III gaming, meanwhile, includes all other forms of gaming, such as slot machines, video casino games (video blackjack and video poker), table games and other commercial gaming, such as sports betting and pari-mutuel wagering. To offer Class III games, federally recognized Indian tribes are required to negotiate a compact with the state in which they operate and attain approval of the compact by the US Department of the Interior.¹¹⁴

As in the commercial casino industry, the type of Native American casino is also varied, with the Seminole Hard Rock casinos, Foxwoods and Mohegan Sun being examples of national destination resorts. According to the National Indian Gaming Commission there were over 420 Native American casinos generating over \$27.2 billion in GGR in 2011.

Figure 21: Size of the Native American casino industry

Source: National Indian Gaming Commission.

Florida

Florida's seven Native American casinos are spread throughout five counties (Broward, Collier, Hillsborough, Glades, and Miami-Dade), while Broward is home to three of the seven Native American casinos.

Native American casinos in Florida, for the most part, provide a full-service gaming experience, although non-card games such as craps or roulette are not allowed. The Indian casinos, however, are not subject to state regulation and thus have substantial competitive

¹¹⁴ Adam Steinberg, "Know Your Odds: Gaming Industry Investment Primer," Morgan Joseph & Co. investment research report, p. 76, January 9, 2006.

SECOND DRAFT - CONFIDENTIAL

advantages over racinos including allowing patrons to smoke, offering live table games (except at Miccosukee, which is a Class II property) and paying no direct gaming tax.¹¹⁵

While there are two federally recognized tribes in Florida, the Seminole Tribe is dominant, and indeed Seminole Gaming is largely viewed as more than a Florida operation. As noted earlier, by virtue of its ownership of Hard Rock International, the Tribe is branching out with Hard Rock-branded casinos in other states. Notably, the Seminole Tribe has secured investment-grade rating for its debt, as noted by Fitch, a major rating agency:

“Fitch believes that STOF’s [Seminole Tribe of Florida] operating profile and credit metrics are consistent with 'BBB-' IDR (issuer default rating), and a further track record of fiscal prudence by the tribe may result in an upgrade of the IDR to 'BBB-' within the next 12-24 months. Specifically, an investment grade IDR can be supported by STOF’s ... solid competitive position ... (and) strong credit metrics.”¹¹⁶

At least two other Indian tribes are working through various legal channels to commence Florida gaming operations:

- The Poarch Band of Creek Indians, which is based in Atmore, AL, has land in Escambia County, which is held in trust by the US government, and also owns, or has options to own, or agreements to control 10 pari-mutuel permits along the Interstate 10 corridor between Pensacola and Jacksonville. The Poarch Band is seeking to negotiate an agreement, which could include revenue-sharing, with the State to operate Class II gaming (i.e., bingo-based slots and non-house-banked games) at the pari-mutuel facilities. “We believe that such an intergovernmental agreement between the Poarch Band and the State of Florida can be crafted in a legally viable manner that is allowable under State law, avoids the need for federal approvals and avoids violation [of] the Seminole Compact,” according to attorney Steven Paul McSloy.¹¹⁷ A market study showed that Poarch Band gaming at Pensacola Greyhound Track, Creek Entertainment Gretna, and Jacksonville Racing could generate \$1 billion in net revenue.¹¹⁸ The tribe currently operates three casinos (with electronic gaming machines only) in Alabama.
- For the past decade the Muscogee Nation of Florida has been pursuing federal recognition by act of Congress in order to initiate gaming operations as a means of economic development. Tribal landholdings are well positioned to offer casino gaming

¹¹⁵ As noted earlier, the Seminole Tribe of Florida compact with the State of Florida provides for payments of approximately \$1 billion over five years.

¹¹⁶ “Fitch Rates Seminole’s \$750MM Term Loan 'BBB-'; Affirms IDR at 'BB+'; Outlook to Positive,” April 1, 2013. <http://www.businesswire.com/news/home/20130401006002/en/Fitch-Rates-Seminole-750MM-Term-Loan-BBB->.

¹¹⁸ May 2013 Market Analysis prepared by Pro Forma Advisors LLC.

in an underserved tourism market close to Gulf beaches in the Florida panhandle, where the nearest competition are greyhound tracks in Pensacola and Ebro. In 2003 US Representative Jeff Miller, Republican from Florida, introduced House Resolution 323, The Muscogee Nation of Florida Federal Recognition Act (“H.R.323”).¹¹⁹ This bill, which has never been voted on, was assigned to the House Natural Resources, Indian and Alaskan Native Affairs Committee on January 13, 2013.¹²⁰ It has received repeated extensions over the past 10 years. The last extension was granted in December 2012, and expires in early June. It is our understanding that current prospects for recognition through Congress are not promising.

14.Pari-mutuel

a. National Trends

In pari-mutuel wagering, bettors bet against each other. The house has no stake in the outcome. The house takes out a portion of the amount wagered, which in racing is known as handle. Racetracks typically retain about 20 percent of handle.

National trends mirror that of Florida. Live handle in calendar year 2010 (the most recent year for which data are available) accounted for just 12 percent of total handle for horse racing, 29 percent for greyhound racing and 42 percent for jai-alai handle.¹²¹ For the 10-year period ending in 2010, pari-mutuel wagering fell from \$18.3 billion in 2000 to \$11.5 billion in 2010, a decline of 37 percent. States’ share of the revenue fell from \$470 million to \$191 million, a decline of 59 percent.¹²² The Association of Racing Commissioners International (“ACRI”) no longer reports attendance figures because it says the figures are no longer meaningful. Most jurisdictions no longer report them, and of those that do, they are “increasingly inaccurate,” according to ACRI. That comment made in the ACRI 2010 report offers a telling statement about the falling popularity of live pari-mutuel wagering.

Florida only reports paid attendance. Operators who choose to charge for admission must collect an admission tax for the state. There is no requirement that a facility charge for admission. And in Florida, admission is free at the state’s harness track at Pompano, at jai alai frontons and at most of the state’s 16 greyhound tracks.¹²³

¹¹⁹ Congress, Bill, HR 323, [www.govtrack.com http://www.govtrack.us/congress/bills/113/hr323](http://www.govtrack.us/congress/bills/113/hr323).

SECOND DRAFT - CONFIDENTIAL

The following table puts pari-mutuel attendance nationally in perspective. Note that attendance for horse racing – the largest component by far of pari-mutuel wagering – attracts fewer than 3 percent of adults, although that percentage actually rose by two-tenths of 1 percent over the past four years.¹²⁴ As a participatory activity, it is on a par with chess, and significantly less popular than birdwatching.

Figure 22: Participation by adults in selected activities

Activity	Participated in the last 12 months (in thousands)		Frequency of Participation							
			Two or more times a week		Once a week		Two to three times a month		Once a month

Source: Statistical Abstract of the United States

Certainly, the creation of new wagering opportunities over the last several decades has given more adults more options. The history is summarized well in this excerpt from a report by Cummings Associates:¹²⁵

¹²⁴ Statistical Abstract of the United States <http://www.census.gov/compendia/statab/2012/tables/12s1240.pdf>

¹²⁵ Cummings Associates, "Analysis of the Data and Fundamental Economics Behind Recent Trends in the Thoroughbred Racing Industry," July 17, 2004, p. 7-8.
http://www.nationalhbpa.com/resources/cummings_report7-17-04.pdf.

“When they were first authorized in some states in the 1930s, and for a long golden age thereafter, race tracks essentially had a monopoly on legal gambling on a commercial scale. They were legalized because states needed money. During the economic collapse of the Great Depression, a number of states turned to legal gambling as a source of revenue. Nevada legalized casinos (in 1931), but every other state chose pari-mutuel betting on horse racing, and in a few states, on greyhound racing as well. This occurred, moreover, in the context of relatively simple leisure economies which, aside from movies and major league baseball, offered few alternative forms of commercial entertainment. In these circumstances, race tracks were by and large highly profitable. As businesses, horse tracks had little trouble developing large numbers of customers and were able to pay high rates of gambling ‘privilege’ taxes. They lived in a sheltered world.

“Over the past thirty years, however, the economic environment has changed dramatically. Competing forms of legal gambling have proliferated, starting with state lotteries in the late 1960s. Ironically, the same force that legalized racing led to lotteries: states needed money. Thirty-nine states now have them, and all the provinces of Canada. ...

“Then came an explosion of full-scale casino resort hotels in Las Vegas, New Jersey, Mississippi, Canada and Connecticut. These now attract tens of billions of dollars in consumer spending each year, with large amounts also spent on ‘limited’ casino gaming on riverboats in the Midwest, small casinos in Colorado and South Dakota, VLTs (‘video lottery terminals’) or slot machines at race tracks in seven states, and on a widespread basis in several Western states and much of Canada, on cruise ships operating out of many states, and at casinos on Indian lands across wide stretches of North America. ...

“In the 1980s, racing’s legal gambling competition more than doubled in size; in the 1990s, it more than doubled again. Over the same period, the U.S. leisure economy grew enormously and became vastly more diversified. Many leisure and entertainment activities are available today that did not exist in the 1930s, or even in the 1960s. Cable television, VCRs, DVDs, inexpensive air travel and the related (but not-so-inexpensive) theme park resort industries, major-league football and basketball and a host of other diversions now compete much more intensely with horse racing for the leisure dollars available.”

b. Florida

Florida first authorized pari-mutuel wagering in 1932.¹²⁶ In 2010, it accounted for 59 percent of the nation’s pari-mutuel wagering.¹²⁷ The Department of Business and Professional

¹²⁶ Florida PMW, *Annual Report, FY 2012*, p. 2.

¹²⁷ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010*, p. 1.

SECOND DRAFT - CONFIDENTIAL

Regulation (“DBPR”), through its Division of Pari-Mutuel Wagering (“PMW”), oversees gaming in Florida.

Pari-mutuel activities in Florida include thoroughbred horse racing, harness horse racing, quarter horse racing, greyhound racing and jai-alai games. In addition, pari-mutuel facilities can operate cardrooms, which can only be operated by the holder of a pari-mutuel license (though card games do not involve pari-mutuel wagering). Cardrooms cannot open in a facility unless live racing or jai first takes place.¹²⁸ Events at racing and jai-alai facilities are simulcast to other pari-mutuel facilities in Florida and to out-of-state venues.

Florida is the only state with live jai alai games. It is one of seven states with greyhound racing. Florida accounted for 64 percent of the nation’s live greyhound races in 2010.¹²⁹ Since 1993, 10 states have outlawed greyhound racing.¹³⁰

Florida allows slot machine casinos, also known as racinos, at pari-mutuel facilities in Miami-Dade and Broward counties. Numerous pari-mutuel operators in other areas of the state told us that they too need slot machine casinos to “even the playing field,” as they are unable to compete with racinos in and outside of Florida that use slot revenue to enhance purses, which, in turn, allow racinos to attract higher quality racing animals and make significant capital expenditures to improve their facilities.

As of April 3, 2013, there were 28 pari-mutuel facilities in Florida (plus inter-track at Ocala) that accepted bets on live races or jai alai games. They included 14 greyhound tracks, six jai-alai frontons, three thoroughbred tracks, one harness track and five quarter horse tracks. Twenty-four of them had cardrooms. Six had casinos. Ocala Breeders’ Sales in Ocala and Bestbet in Jacksonville operate simulcast parlors without live pari-mutuel racing. The overall financial trend for Florida pari-mutuels has been on a steady downward spiral. Many operations have sustained steep operating income losses, and those losses would have been much greater if it were not for racino and cardroom revenue. The worst-performing sectors have been jai alai and greyhound.

In FY 2012, Florida’s pari-mutuel facilities had a combined overall operating profit of just \$1.9 million. Thirteen had losses, with the largest of \$21.6 million at the combined Fort Pierce/Miami Jai Alai operation. The biggest operating profit was \$16.4 million at Flagler Greyhound Track, which also operates slot machines.¹³¹

¹²⁸ Florida Statute, 849.086 (5a).

¹²⁹ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010*, p. 39.

¹³⁰ Danny Valentine, “Proposal could hasten decline of greyhound racing,” *Tampa Bay Times*, April 28, 2011 <http://www.tampabay.com/news/business/proposal-could-hasten-decline-of-greyhound-racing-in-florida-nation/1166550>.

¹³¹ Florida PMW, Independent Auditor’s Report for Pari-Mutuel Permitholders, FY 2012.

SECOND DRAFT - CONFIDENTIAL

Pari-mutuel operations involve wagering on pari-mutuel events. The wagers occur at the track on live events or at track simulcast rooms. Those operations by themselves sustained an operating loss of \$50 million. Only eight facilities were able to show an operating profit from their pari-mutuel operations.¹³² The largest loss of \$11.6 million was at Fort Pierce/Miami; the highest profit of \$6.3 million was at Gulfstream, a thoroughbred track with slot machines.

State tax revenue is fraction of what it once was. From FY 1985 to FY 2012, it fell from:

- \$29.7 million to \$378,000 for jai alai, a reduction of 99 percent¹³³
- \$77.2 million to \$3.7 million for greyhound racing, a reduction of 99 percent¹³⁴
- \$12.5 million to \$7.6 million for horse racing, a reduction of 39 percent¹³⁵

The overall reduction in state revenue went from \$119.4 million to \$11.8 million, decline of 91 percent.¹³⁶

Slot machine casinos accounted for 77 percent of state gaming revenue in FY 2012. All of that slot machine money, \$144 million, was given to the state Department of Education. Unclaimed jai alai and greyhound winning tickets totaling \$1 million was also given to that same state agency. State tax revenue from cardrooms was split between the Pari-Mutuel Wagering Trust Fund and the General Revenue Fund. In accordance with Section 849.086(13)(h), Florida Statutes, one quarter of the moneys deposited into the Pari-Mutuel Wagering Trust Fund must be distributed to counties and municipalities that approved the cardroom. In October 2012, the division distributed approximately \$1,643,208 to the counties/municipalities from cardroom gross receipts.¹³⁷

Issues with PMW Annual Reports

In the course of our research, we discovered that purse numbers for the Isle of Capri at Pompano harness track were grossly overstated in PMW annual reports for fiscal years 2009 through 2012. PMW stated to us by email that it will be revising annual reports for Pompano to reflect the accurate figures. The mistakes were discovered when we asked standardbred horsemen to review purse information. The horsemen claimed that the numbers were wrong, and PMW asked the Pompano's comptroller to review them. The Pompano comptroller then acknowledged that errors had been made, and PMW said that the annual reports will be

¹³² Ibid.

¹³³ Florida PMW, custom report, May 10, 2013.

¹³⁴ Ibid.

¹³⁵ Ibid.

¹³⁶ Ibid.

¹³⁷ Florida PMW, *Annual Report*, FY 2012, p. 18

amended. The agency makes no effort to independently verify the information. The errors for the Isle of Capri at Pompano data raise issues as to whether other mistakes could have occurred at other pari-mutuel facilities.

In an email to Spectrum on May 21, 2013, PMW officials acknowledged that annual PMW reports fail to include out-of-state generated simulcast revenue. Gulfstream, for example, might send its signal to Yonkers, and revenue from wagers bet on Gulfstream races at Yonkers would not appear in PMW annual reports. The result is a significant understatement of simulcast revenues. To illustrate the point, PMW's 2012 report lists simulcast and intertrack handle for Gulfstream at \$102 million. But missing was out-of-state generated simulcast handle of \$605,319,440, an amount that is nearly six times the reported simulcast handle in the PMW FY report of 2012.¹³⁸ Other racing jurisdictions, such as New Jersey, include out-of-state export handle in their annual reports. The failure of PMW to indicate in its annual report that handle figures fail to include this category results in an incomplete picture of racing wagering in Florida. In a May 23 email to Spectrum, PMW explained it does not do so because the wagers made outside of Florida are beyond its regulatory authority and ability to impose taxes. PMW officials also noted they are unable to verify the data. Also unreported in out-of-state generated simulcast revenue is the amount through the Oregon hubs, which are companies that allow gamblers to place bets on races through the Internet or a cell phone.

PMW includes a category in its annual report identifying the amount of purses accounted for through "pari-mutuel" operations. Our research indicates that the number also includes financial contributions made by the operator. For example, the Melbourne Greyhound track contributed \$185,463 from pari-mutuel operations toward purses, according to the FY 2012 report.¹³⁹ Yet the annual report shows that the entire handle was only \$162,138, and only half of that goes into purses.¹⁴⁰ If the operator is making a contribution toward purses, reports should indicate that the figure includes such contributions.

It is critical for policymakers to have information relating to regulatory costs for each pari-mutuel sector. PMW told us in emails it cannot break down costs by sector. We note that Rep. Dana Young, R-57, asked the state agency for regulatory financial data relating to greyhound racing. In a letter dated August 19, 2011, Ken Lawson, Secretary of the Department of Business and Professional Regulation, said the state could identify only costs "directly attributable to all live greyhound racing," which he said totaled \$1.88 million for FY 2011, which was slightly less than the revenues of \$1.85 million that live greyhound racing generated. But the expense figure did not include any allocation for salaries and benefits paid to 66 PMW employees or expenses they incurred. Those two categories alone totaled \$4.7 million. The

¹³⁸ Interview with Kent Stirling, Executive Director, Florida Horsemen's Benevolent and Protective Association, May 22, 2013.

¹³⁹ Florida PMW, *Annual Report*, FY 2012, p. 26

¹⁴⁰ *Ibid*, p. 13.

Legislature needs to have detailed information concerning regulatory costs by sector in order for it to make informed decisions concerning the pari-mutuel industry.

Cutting Costs

Some operators say they have been adversely affected by a requirement that forces them to run a minimum number of racing performances (eight races make up a performance). Two greyhound tracks are conducting more than 350 performances a year, close to what they ran nearly 20 years ago because of the 90 percent rule. This rule requires pari-mutuel operators with cardrooms to conduct at least 90 percent of the live performances that were held the year before their cardrooms opened.¹⁴¹ For many operators, that was 1996. Florida had 3,857 live greyhound performances in 2010; West Virginia, the next-highest state, had 552.¹⁴² The required minimum number of performances varies from sector to sector, and then within a specific sector depending on when a facility opened. This issue will be addressed in more detail later in the report.

Some operators have responded to the cost of doing business by reducing race cards and, in the case of jai alai, the number of players on a roster. Others have used quarter horse racing permits to run barrel racing, which prompted an administrative law judge to call the offering “a new species of racing.” The judge ruled that PMW had no authority to issue a permit for barrel racing. Other operators have proposed staging greyhound races with two dogs in each race¹⁴³ and jai alai games that involve two players playing over and over.¹⁴⁴

Barrel racing is being run at Gretna in Gadsden County. It involves rodeo-type racing in which horses are timed as they run around separate obstacle courses. The winner is the one with the fastest time.¹⁴⁵ It is much less expensive to build a barrel-racing track, and the costs of operating it are also much less expensive. At issue is whether it falls within the definition of a horse race. Critics call it a phony horse race. We discuss this issue in more detail later in the report.

c. Decline of Purses, Handle

Purses are awarded to dog and horse racing owners who win races. They have declined slightly in recent years but the decline would have been much greater if it were not for revenue

¹⁴¹ Florida Statute 849.086 (5 b).

¹⁴⁵ State of Florida Administrative Hearings, Case No. 11-5796RU.

from slot machine and cardroom operations. The recent return of traditional quarter-horse racing in November 2009 at Hialeah Park also boosted overall purse numbers.¹⁴⁶

Total Florida pari-mutuel handle fell from \$1.8 billion in FY 1990 to \$876 million in FY 2012, a decline of 51 percent; live handle (the amount wagered by patrons at a host track where live racing was held) fell from \$1.8 billion to \$190 million, a decline of 95 percent; performances fell from 6,931 to 4,904, a decline of 41 percent and paid attendance fell from 15.3 million to 381,000, a decline of 83 percent.¹⁴⁷

Simulcasting first came to Florida on August 17, 1990, when Daytona Beach Kennel Club transmitted races to the Sports Palace in Melbourne. Prior to then, Florida handle came exclusively from live handle.¹⁴⁸

Simulcast wagering in Florida involves patrons visiting a pari-mutuel facility and wagering on live races conducted at other racetracks in Florida or at out-of-state tracks. In other words, the racetrack signal is being sent or imported to a Florida track to let its patrons bet on races/games at other facilities.

PMW categorizes intertrack handle as handle generated as a result of a Florida track/fronton exporting its signal to other Florida tracks or frontons, which enables patrons at those other Florida facilities receiving the signal to bet on those Florida races or games. Gulfstream, for example, would send its signal to the Palm Beach Kennel Club and patrons at the Palm Beach Kennel Club could then bet on those Gulfstream races. Intertrack involves only Florida-to-Florida facilities.¹⁴⁹

There is another simulcast category that PMW calls “Intertrack Simulcast.” It involves the rebroadcasting of simulcast signals received by a Florida track/fronton, which then sends that signal to other Florida tracks/frontons. Gulfstream, for example, would receive a signal from Yonkers Raceway in New York, and then rebroadcast that signal to other Florida pari-mutuel facilities. Again, it involves only Florida-to-Florida facilities.¹⁵⁰

The largest single category of simulcasting involves the export of signals from Florida pari-mutuels to out-of-state facilities. Gulfstream, for example, would send its signal to Yonkers. No information is available from PMW for this category, which is often called out-of-state generated simulcast revenue. The reason is because PMW does not track it. We note that other racing jurisdictions, such as New Jersey, do so. Without these data, it is not possible to offer a complete picture of simulcasting in Florida.

¹⁴⁶ Florida PMW, review of Annual Reports.

¹⁴⁷ Ibid.

¹⁴⁸ Florida PMW, *Annual Report*, FY 1991, p. 3.

¹⁴⁹ PMW Annual Report, FY 2012, p. 2

¹⁵⁰ Ibid

With the advent of simulcasting, live handle in Florida has accounted for less and less of total handle. By FY 2000, it accounted for 37.4 percent of total handle. Three years later, the figure fell to 29.7 percent, and for FY 2012 it was down to 24.3 percent.¹⁵¹

d. Impact of Advance Deposit Wagering ('ADW')

Advance Deposit Wagering allows patrons to wager on racing (greyhound and horses) electronically. Patrons establish an account with an ADW company, and deposit money into the account prior to making any wagers. They can then place wagers from a computer, a home telephone or even a mobile phone.

ADW companies have flourished in recent years primarily due to convenience. A gambler never has to leave his or her house to make a bet, and can do so from just about anywhere. In addition, the low overhead associated with ADWs enables these companies to offer rebates to customers based on their betting volume. Since the ADWs command so much betting volume, they are able to negotiate take-out rates with host tracks that are quite favorable. The amount wagered through an ADW is funneled into the wagering pool of a host track, but Kent Stirling, executive director of the Florida Horsemen's Benevolent and Protective Association, said the track and horsemen are often forced to split between 6 cents and 9 cents of every dollar wagered through an ADW as opposed to 20 cents if the bet were made at a Florida racetrack on a live race.¹⁵²

Those ADW rebates can be as much as 12 percent of what a gambler wagers. Rob Wyre, general manager of the Isle of Capri at Pompano Park, told Spectrum racetracks cannot compete with the ADW rebates. "What's really frustrating is we see people come to the track and place their bets through ADW," he added.

The problem is exacerbated at the thoroughbred tracks in South Florida, as both Calder and Gulfstream are owned by companies that operate ADWs. According to Stirling, the television sets at Calder urge patrons to place their bets through an ADW.

Most of the ADW firms have established themselves in Oregon through a hub network. At a time when handle across the country and especially in Florida has been decimated, the ADWs have flourished. Greyhound racing lobbyist Jack Cory said that the greyhounds are hurt much more by the Oregon hubs than horse racing. He noted that at least with horse racing, some of that Oregon-hub money is split with the horsemen. The dog owners get nothing, he said. And, like the thoroughbreds, some greyhound racetracks operate their own ADWs. These greyhound facilities encourage their patrons to place bets on live races through their ADWs, depriving the dog owners of revenues if the bet had been made at the track.

¹⁵¹ Ibid.

¹⁵² Interview with Kent Stirling, executive director of the Florida Horsemen's Benevolent and Protective Association, May 17, 2013

Cory argues the handle is better than that painted by PMW annual reports as those reports fail to capture the Oregon-hub betting and the out-of-state generated handle, which is sizable.

The Oregon hub opened for business in 2000. Its total handle that year was just under \$2 million. In 2012, it had mushroomed to \$2.24 billion. From 2007 to 2012, handle increased 47 percent. During the same time period, total pari-mutuel handle in Florida fell 41 percent and simulcasting handle (where patrons came to a Florida track and wagered on races held at other Florida tracks) fell by 59 percent.¹⁵³ Other Florida handle sectors sustained significant declines as well. Live handle at Florida pari-mutuels fell 46 percent from 2007 to 2012.

Kentucky, another major racing state, is looking to tax the ADW companies on bets made in that state. A bill that passed a House subcommittee in February places a tax of 0.5 percent on Internet and telephone wagers made by Kentucky residents. The state will get 15 percent of the revenue, and racetracks and purse accounts would get the remaining 85 percent. Kentucky expects the tax to generate as much as \$400,000 a year.¹⁵⁴

Florida pari-mutuels have also been adversely impacted by wagering through offshore outlets or tribal hubs that are not captured by regulatory agencies at all. With the Oregon hubs, there is some revenue going back to the host thoroughbred and harness track and also to the state. But with the offshore hubs, the pari-mutuels and the state receive nothing. ACRI says there is good evidence that such handle amounted to more than \$1 billion in recent seasons.¹⁵⁵

e. Impact of Slot Machine Casinos, Cardrooms on Purses

Florida voters approved a statewide slots referendum in November 2004 that made it possible for slot machine casinos to come to Broward and Miami-Dade counties. Voters in Broward County then approved a slots referendum in 2005 and Miami-Dade voters approved one in 2008.

As with handle, the source of Florida purse revenue has dramatically changed over the years. Before cardrooms and casinos, purses were funded exclusively through handle, and before simulcasting, all purses were funded through live handle.

Purses have received a significant boost with the introduction of cardrooms and slot machine casinos. At jai alai and greyhound facilities, 4 percent of cardroom gross receipts must be used to fund purses; the figure is 50 percent at horse race facilities. Unlike other racino states, Florida statutes do not mandate that a certain percentage of gross gaming revenue or a dollar

¹⁵³ Oregon Racing Commission, http://www.oregon.gov/Racing/docs/Hub_Data/2013_quarterly_hub_handle_report.pdf (accessed May 17, 2013) and review of Florida PMW Annual Reports

¹⁵⁴ Tom Lamarra, "Kentucky ADW Bill Clears House Committee," Bloodhorse.com, February 14, 2013, <http://www.bloodhorse.com/horse-racing/articles/76198/kentucky-adw-tax-clears-house-committee>

¹⁵⁵ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010*, p.1.

amount from slot machines be used to fund purses and for breeding purposes. About the closest Florida comes is a requirement that a thoroughbred or quarter horse operator have a contract with horsemen before a casino can open. The horsemen at Pompano and greyhound owners say they need a similar-type law. Without one, they say the boost that casino revenue was supposed to generate for purses for greyhounds and harness will never be realized.¹⁵⁶

Spectrum's analysis shows that the percentage of GGR going into purses is much higher at thoroughbred than it is at harness and greyhound tracks. The two racino thoroughbred racetracks, Gulfstream and Calder, paid 14 percent and 12 percent, respectively, in FY 2012. The thoroughbred horsemen benefitted when the state's tax on GGR was lowered in FY 2010 from 50 percent to 35 percent, as the contract with the horsemen called for an increase if the tax rate was lowered. The GGR contribution nearly doubled. There was no such increase in GGR contribution at greyhound and harness racinos.¹⁵⁷ The two greyhound tracks and the one harness track put roughly 2 percent of GGR into purses in FY 2012.¹⁵⁸

Florida slot revenue accounts for much less on a percentage basis of total purse revenue than it does in other racino states. In Pennsylvania, for example, casino GGR accounted for anywhere from 75 percent to 91 percent of purses.¹⁵⁹ In Florida, our review of the FY 2012 PMW annual report showed that the figure ranged from 22 percent to 48 percent. In Iowa, the percentage figure of GGR for greyhound racing at Bluffs Run in Council Bluffs was 4.9 percent (\$10 million) in FY 2012 and 6.2 percent (\$3.7 million) at Dubuque Park.¹⁶⁰

FY 2006 was the last year in which Mardi Gras and Isle Pompano operated without a casino. Comparing FY 2012 with FY 2006, purses increased by 33 percent at Mardi Gras and decreased by one-half of 1 percent at Isle Pompano. The Flagler dog track significantly increased its purses after its casino opened. The year before, Flagler paid purses of \$1.7 million; in FY 2012, it paid \$3.6 million in purses, an increase of 119 percent.¹⁶¹

The percentage increases at racetracks in Pennsylvania ranged from 126 percent to more than 200 percent when we compared the increase from the year before a casino opened to the FY 2012 numbers.¹⁶²

Nonetheless, purse enhancements from Florida slot machines in FY 2012 totaled more than \$20 million. Overall purses increased slightly, from \$126.7 million in FY 2006 to \$129.5 million in FY 2012, an increase of 2.2 percent. The return of quarter horse racing generated \$4.1 million in purses during FY 2012.¹⁶³

f. Pari-Mutuels by Sector

Next, we discuss the pari-mutuel industry by sector. Two sets of reports were used for this analysis. One involved 2012 audited financial statements for each pari-mutuel license holder. They included detailed breakdowns of expenses and revenues. They are not normally available to the public. PMW agreed to make them available to us. Pari-mutuel operators are required to supply those audited financial reports on a yearly basis. We also reviewed annual reports from 1990 to 2012 that appear on the PMW website. These reports provide details as to purses paid, paid attendance, total handle and other items as well. The two reports cover different fiscal periods, and, as a result, the numbers sometimes do not match up.

Please note that Chapter III(A)(1) provides yearly performance and other key performance indicators for each sector.

Thoroughbred Racing

Thoroughbred racing is the dominant pari-mutuel sector in Florida, with the three tracks accounting for 61 percent of total Florida handle in FY 2012. Calder had the highest FY 2012 handle at \$207 million. Overall handle fell from \$789.2 million in FY 1990 to \$530.7 million in FY 2012, a decline of 33 percent while live handle fell even more, from \$170.5 million to \$78.6 million, a decline of 54 percent.¹⁶⁴

On a national level, handle losses were also significant. From CY 2001 to CY 2010, (CY 2010 was the most recent year data were available), total handle fell from \$10 billion to \$5.4 billion, a decline of 46 percent and live handle fell from \$1.8 billion to \$1 billion, a decline of 44 percent.¹⁶⁵

A Florida thoroughbred operator must run a minimum of 40 performances a year.¹⁶⁶ From FY 1990 to FY 2012, Florida thoroughbred performances fell from 348 to 327, a decline of 6 percent; paid attendance fell from 653,206 to 97,738, a decline of 85 percent. Purses increased from \$78.1 million to \$81.1 million, a rise of 16 percent.¹⁶⁷

¹⁶⁶ Chapter 550.002, Section 11.

¹⁶⁷ Florida PMW, review of *Annual Reports*.

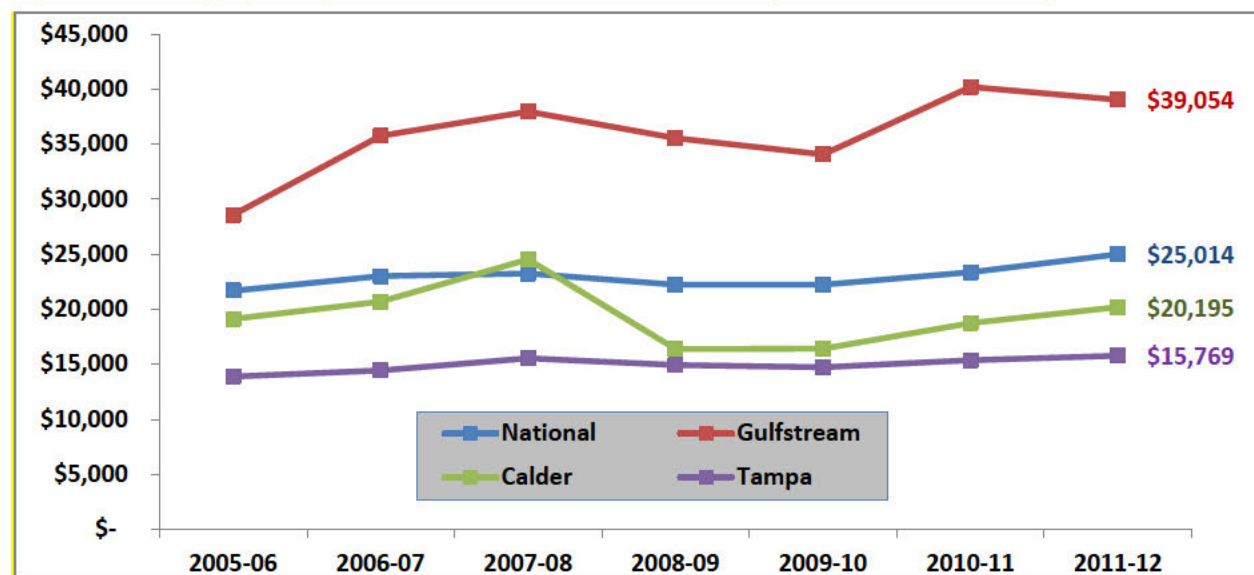

SECOND DRAFT - CONFIDENTIAL

The three thoroughbred tracks performed financially as a group much better than other sectors. They generated a combined operating profit of \$13 million for FY 2012. Much of the profit, \$10.6 million, came from pari-mutuel operations. Slot machines at Calder and at Gulfstream generated an operating profit of \$2.7 million. Cardrooms at the thoroughbred tracks had a gross operating profit of \$2.3 million.¹⁶⁸

Even Tampa Bay Downs, the one thoroughbred track in the state without a casino, generated operating income of nearly \$3 million. It currently ranks 12th out of 68 thoroughbred tracks in average daily handle although the figure has been declining in recent years. While its handle has held up well, its purses have not. It ranks 34th of 68 in average daily purses paid.¹⁶⁹ The Tampa Bay track is the only thoroughbred track in the country that competes with same-state racinos.

Average purses per race at Tampa Bay Downs in 2011-12 were \$15,769 – 42 percent below the combined Calder-Gulfstream average and 37 below the national average.¹⁷⁰ While Tampa Bay continues to be a top-tier thoroughbred track, officials are concerned how much longer that may be with purses declining.¹⁷¹ As General Manager Peter Berube put it, “Florida sunshine can go just so far.”

Figure 23: Average purse per race, Florida and national thoroughbred tracks, 2011-12

Source: Tampa Bay Downs

What has hurt Tampa Bay Downs is that it is unable to supplement its purses with casino revenue as other thoroughbred tracks in Florida and throughout the country have done. The

¹⁷⁰ Data from, and interviews with, with Peter Berube, Tampa Bay Downs general manager, June 2013.

¹⁷¹ Ibid

competition is fierce for quality horses as the nationwide breeding program has collapsed, resulting in 23 percent fewer race-ready horses being available to compete. Tampa Bay Downs has seen its field size shrink by 12 percent in the past three years. Horse owners are taking their horses to tracks that offer higher purses, and that invariably means tracks that supplement their purses with casino revenue. “We are under siege,” Berube said.¹⁷²

Horsemen at thoroughbred racinos have much more leverage with regard to labor contracts than do other pari-mutuel sectors due to the law that says a contract must be negotiated with horsemen before a casino can open. Mike Couch, director of gaming at Gulfstream, said in an interview with Spectrum on May 16 that the law is unfair and results in Gulfstream paying out much more in GGR toward purses than the other sectors pay.

More than \$6.2 million, or 88 percent of Gulfstream’s operating profit, came from pari-mutuel operations.¹⁷³ No other pari-mutuel facility in the state comes close to that figure. In fact, most pari-mutuel facilities lose money on their pari-mutuel operations, and need cardroom and/or casino revenue to subsidize those losses. Couch said the reason Gulfstream is successful with its pari-mutuel operation is because it considers itself first to be a racetrack and then a casino, as noted earlier in this report.

The thoroughbred horsemen say that Gulfstream is a pari-mutuel success story that other pari-mutuel entities would do well to emulate. Gulfstream Park completed the 2013 winter race meet with a 20 percent increase in on-track wagering over the 2011-2012 race meet. Purses paid during the 2013 Gulfstream Park meet averaged more than \$411,000 daily. And \$658,000,000 was wagered on the Gulfstream Park signal outside of the state of Florida, or an average of over \$733,000 per race. California’s Santa Anita, at \$622,000, was the next-highest in the country followed by New York’s Aqueduct at \$508,000.¹⁷⁴

Harness Racing

Florida’s sole harness track, Isle Casino and Racing at Pompano, accounted for 5 percent of total Florida handle in FY 2012. The Pompano track must run at least 140 performances a year but it can seek a one-time, 10 percent reduction from the 140-performance minimum. The harness track stopped charging an admission fee in 2002. In 2001, the last year it levied an admission fee, paid attendance was 9,908. In 1990, it was 565,216.¹⁷⁵

Harness handle fell from \$112.1 million in FY 1990 to \$48.1 million in FY 2012, a decline of 57 percent while live handle fell from \$14.1 million to \$4.4 million, a decline of 69 percent. On a national level, total harness handle from CY 2001 to CY 2010 fell from \$866

¹⁷⁵ Florida PMW, review of *Annual Reports*.

SECOND DRAFT - CONFIDENTIAL

million to \$453 million, a decline of 48 percent and live handle fell from \$452 million to \$162 million, a decline of 64 percent. (CY 2010 was the most recent year available.)¹⁷⁶

The harness track is not required to have a contract with horsemen as thoroughbred tracks are required to do before a casino can open. The percentage of GGR to purses is much less than it is at thoroughbred tracks. In FY 2012, \$2.6 million of \$121 million in GGR went toward purses at Pompano. Gulfstream with a GGR of \$54.5 million put \$7.5 million of GGR into purses.¹⁷⁷

Joe Pennachio, president of the Florida Standardbred Breeders & Owners Association, told us in an interview on May 20, 2013, that track owners promised that 8 percent of GGR would go into purses when his group and others worked to support the 2004 statewide referendum that resulted in Pompano getting its casino. “It obviously never happened,” he said. “We feel we were hoodwinked. And even worse, the track operator has done everything possible to discourage people from coming to the track. What’s important to remember here is that if it were not for the pari-mutuel facilities, casinos would not be here.”

Purses have actually declined slightly, one-half of 1 percent, from FY 2006 (the last full fiscal year that Pompano did not have a casino) to FY 2012.

We toured the Pompano facility on May 20, 2013. Only the ground floor of the racetrack was open. The facility is in a state of disrepair. According to Pennachio, management will close the grandstand area later this summer, which will force patrons to watch live races from a row of seats set up outside the casino. That places spectators by the turn as horses approach the finish line, making it difficult from that angle for them to see who wins.

Michael Tanner, executive director of the United States Trotting Association, said closing the grandstand will adversely affect live handle and give little incentive to patrons to go to the track to watch live racing. “Pompano could become the only track in the world where you watch the race 1/16 of a mile from the finish line,” Tanner said.

Pompano General Manager Rob Wyre said all options are being considered. He noted that the track was built in 1963, and it is too expensive to rehabilitate. In addition, there are safety issues relating to some of the windows on the upper floors, he noted.

The purse figures for Pompano that appear on the PMW website are inaccurate. Pennachio disputed the purse numbers that appear in the PMW annual reports. We relayed his concerns to PMW. We received an email from Leon M. Biegalski, Director of PMW, on May 16, 2013, in which the director acknowledged that the PMW purse amounts were overstated by several million dollars. PMW will be amending its annual report as it relates to Pompano for FY 2009-2012. Biegalski said in his email that PMW relies on figures provided to it by pari-mutuel

¹⁷⁶ Association of Racing Commissioners International, *Pari-Mutuel Racing 2010 and 2000*.

¹⁷⁷ Florida PMW, review of *Annual Reports*.

operators. We have made the adjustments to the data, and our analysis reflects the adjusted numbers.

Quarter Horse Racing

Quarter horse racing involves American Quarter Horses that run a quarter-mile at speeds as high as 55 miles per hour. Quarter horse racing returned to Florida in November 2009 at Hialeah Park after an 18-year absence. Quarter horse racing accounted for less than 1 percent of total Florida handle in FY 2012. Quarter horse racing had 76 performances in FY 2012. It generated a live handle of \$1.7 million, total handle of \$2.1 million and purses of \$3.8 million. Almost all of the traditional quarter horse activity was at Hialeah, where the operator subsidized purses as part of its contract with horsemen.

Hialeah has already begun negotiations with the state to offer live thoroughbred racing, in addition to the quarter horse racing.¹⁷⁸ Obtaining the quarter horse permit made it possible for Hialeah to open a casino (scheduled for summer 2013) but Hialeah representatives say they want to do far more than just build a casino. Hialeah owner John Brunetti acknowledged that he is not “a fan of slot machine casinos” but noted that it afforded him an opportunity to bring back racing to Hialeah.¹⁷⁹

Eventually, Hialeah Park expects to convert the 200-acre property into a destination resort that will feature a \$112.5 million casino hotel, a \$75 million casino hotel, a \$119 million entertainment and convention complex, a \$210 million town center and retail district and a \$61.3 million parking garage. The total cost of the project is estimated to be \$842.9 million. Brunetti noted that racing will be integrated into the complex so that it will never become an afterthought, which he believes is the case at too many Florida pari-mutuel facilities.¹⁸⁰

Steve Fisch, president of the Florida Quarter Horse Owners Association, said that Hialeah purses will total \$140,000 a day or \$5.6 million in FY 2013, 47 percent higher than it was in FY 2012, when Hialeah operated without a casino. Hialeah owner Brunetti explained in an interview with Spectrum on June 5, 2013, that live handle was so low the first three years that he had to pay almost the entire amount of purses himself from FY 2009 thru FY 2012. In FY 2012, Hialeah paid out purses of \$3.8 million. During the three-year period ending June 30, 2012, Brunetti said he lost nearly \$30 million as he had no cardroom or slot machine revenue to help him offset the loss.

Florida state law allows quarter horse racing to be imported only into Florida simulcast parlors while there is live racing at Hialeah. That is not an issue for the thoroughbreds since they race year-round. But it is a problem for the new quarter horse industry as the live meet is only 40

¹⁷⁸ Interview with Hialeah owner John Brunetti and other Hialeah representatives, June 4, 2013

¹⁷⁹ Ibid

¹⁸⁰ Ibid

days. The lack of year-round simulcasting of quarter horses in Florida makes it difficult to attract new customers.¹⁸¹

Barrel Racing

Another major issue for the quarter horse industry is PMW's racing permit granted to Gretna in Gadsden County for barrel racing. Fisch said the permit jeopardizes the future of legitimate quarter horse racing in Florida.

Barrel racing is conducted on an obstacle-type course that is often performed at rodeo and horse shows. Each horse is timed as it races around three barrels in separate, cloverleaf-type courses. The winner is the horse with the fastest time. No other racing jurisdiction has ever sanctioned such a pari-mutuel event. Gretna held its first race on December 1, 2011. Fisch's organization sued, arguing that the PMW decision made a mockery out of the state's pari-mutuel laws. An administrative law judge ruled on May 6, 2013, that PMW had no authority to issue a permit for barrel racing and that it had improperly created "a new species of horseracing."¹⁸²

With the permit, Gretna was able to establish a cardroom. And Gadsden County voters have approved a referendum that would allow it to have a casino. The state Constitution will have to be amended for that to happen, according to the Attorney General, as currently state law only permits racinos in Broward and Miami-Dade counties.

The Daily Racing Form reported that barrel racing represents an effort by permit holders to exploit the gambling opportunities in Florida presented by "a convoluted set of laws and regulations" in Florida.¹⁸³ Wesley Cox, a spokesman for the North Florida Horsemen's Association that represents the barrel riders, told us in an interview on May 14, 2013, that the administrative law judge decision will be appealed. He said the law is vague in its definition of a race. He acknowledged that the Gretna operator could not financially afford to build a traditional quarter horse race track so he turned to barrel racing.

Marc Dunbar, an attorney for Gretna, said his client would have had to have spent \$10 million to build a traditional 5/8 mile quarter horse track because of wetlands problems. It was prepared to build a \$3.5 million facility but the Florida Quarter Horse Racing Association refused to endorse the project so it then embraced barrel racing. "We believe that we will ultimately prevail," Dunbar said.

Fisch notes that barrel racing requires substantially fewer horses and personnel than traditional quarter horse racing as conducted at Hialeah Park. The cost of erecting a barrel race course is minimal when compared with the several million dollars that would have to be invested

¹⁸¹ Interview Steve Fisch, President, Florida Quarter Horse Owners Association.

¹⁸³ Matt Hegarty, "Ocala Breeders' Sales Company plans Quarter Horse race Dec. 11," *The Daily Racing Form*, October 25, 2012; <http://www.drf.com/news/ocala-breeders-sales-company-plans-quarter-horse-race-dec-11>.

to build a quarter horse track, he noted. Gretna offered purses of \$202,000 in FY 2012; Hialeah offered purses of \$3.8 million. Gretna had a live handle of \$31,000; Hialeah, \$1.6 million.¹⁸⁴ Another track, Hamilton Downs, has also received a license to operate barrel racing.

Greyhound Racing

Greyhound racing accounted for 30 percent of total handle in FY 2012. Total handle for the 13 facilities that ran greyhound racing fell from \$933.8 million in FY 1990 to \$265.4 million in FY 2012, a decline of 67 percent. Palm Beach Kennel Club had the highest handle at \$36.3 million; Melbourne Greyhound Park, the lowest at \$162,000. Live handle (live handle and total handle were the same in 1990) fell even more, from \$933.8 million to \$93 million, a decline of 90 percent. Purses fell from \$34.5 million to \$26.3 million, a decrease of 18 percent.¹⁸⁵

On a national level, from FY 2001 to FY 2010 (the most recent year for which data were available), total handle fell from \$2 billion to \$706 million, a decline of 65 percent and live handle fell from \$829 million to \$203 million, a decline of 76 percent. Performances fell from 4,242 to 3,336, a decline of 21 percent; paid attendance fell from 653,206 to 97,738, a decline of 85 percent.¹⁸⁶

Florida greyhound performances (a racing card of at least eight races) fell from 3,853 to 3,636, a decline of 6 percent. One of the reasons for the relatively small decline is because of the 90 percent rule. Pari-mutuel operators with cardrooms are required to conduct at least 90 percent of the live performances that were held the year before their cardrooms opened, which for many of them was 1996.¹⁸⁷

The Naples-Fort Myers greyhound track had to run 393 performances in FY 2012 to keep its cardroom license. Often, performances are run twice a day during the 190-day meet to comply with state law.¹⁸⁸ Track spokesman Isadore Havenick told us in an interview that his company does not want to eliminate racing but needs some relief from what he calls the “onerous” 90 percent rule. He noted that the situation was quite different in 1996 when greyhound racing was much more popular than it is today. Running so many races and performances results in the track sustaining a loss of more than \$2 million a year on its dog operations, he said, and forces it to offer lower purses, which adversely affects the amount of money wagered on simulcasting and the quality of dogs that race. Havenick said there is still a demand for greyhound racing in the Fort Myers-Naples region but not as “much as we are running.”

¹⁸⁷ Florida Statute 849.086 (5 b).

¹⁸⁸ Florida PMW, *Annual Report FY 2012*.

SECOND DRAFT - CONFIDENTIAL

Repealing the 90 percent rule, or “decoupling,” could result in the closure of five to six greyhound tracks, according to operators we interviewed. Those facilities would still like to operate cardrooms, as they are profitable, but they cannot as current law states that a cardroom can only be operated at a licensed pari-mutuel facility that offers live racing. Top-tier tracks such as Naples-Fort Myers and the Palm Beach Kennel Club will benefit through higher simulcast revenue if other tracks were to close.

It is clear that pari-mutuel operations at greyhound tracks are loss leaders as the tracks sustained a combined operating loss from wagering on greyhounds of \$35 million. Only three tracks made a profit. Greyhound track cardrooms offset the loss with an operating profit of \$39 million.¹⁸⁹

“It is a dying sport,” said Michael Glenn, general manager of the Palm Beach Kennel Club, one of the country’s premiere greyhound tracks. “Decoupling (removing the requirement for minimum performances) will help us in the short run as we would run fewer races which, in turn, will lower our operating costs. Our simulcast revenue will also increase, but there just are not enough folks out there to come to the track and wager on these races. There is not any interest.” PBKC would shut down the dog track if it could, Glenn said.

Jamie Shelton, CFO of Jacksonville Greyhound Racing, agrees with Glenn. He said that no matter what efforts are made to prop up the sport, interest is not there. “We can see it by our live handle. The older folks are not being replaced,” he said. “There are just too many other things to do out there today. Watching a greyhound race is not at the top of most people’s agenda.”

Jacksonville has consolidated its operations. It has three greyhound permits, and runs all of them out of Orange Park. It shuttered its Jacksonville facility in March 2012, and, as the result of a declaratory statement from PMW, it was able to move its cardroom to a Jacksonville shopping center.¹⁹⁰ The track operator requested a ruling from PMW before it built its new facility in Jacksonville. In effect, PMW sanctioned a form of decoupling, allowing a pari-mutuel facility to open without having to operate a track oval and offer live racing. PMW based its decision on the fact that Section 550.475, Florida Statutes, “makes no reference to the existence of an actual track at the permitted location.” The Jacksonville permit was leased to Orange Park.

With the three permits, Orange Park operates year-round: 340 days and 417 performances in FY 2012. Shelton said the facility just about breaks even but he noted that it is just a matter of time before the losses on racing will become so large that Orange Park will have to close. Even slot machines would not help, as they would not compel people to bet on the dog races, he noted. Slot machines would prop up the business for a while but eventually the sport will die, he said.

¹⁸⁹ Florida PMW, *Independent Auditor’s Report for Pari-Mutuel Permitholders*, FY 2012.

¹⁹⁰ Petition for Declaratory Statement, Jacksonville Kennel Club, DS-2008-38, November 21, 2008.

SECOND DRAFT - CONFIDENTIAL

Shelton said the facility just about breaks even but he noted that it is just a matter of time before the losses on racing will become so large that Orange Park will have to close. Even slot machines won't help as that won't force people to bet on the dog races, he noted. Slot machines would prop up the business for a time but eventually the sport will die, he said.

Jack Cory, a lobbyist for greyhound owners, said the sport wouldn't be dying if track operators would reinvest in their properties. He noted that some of them have let them deteriorate to the point where going to those tracks is unpleasant. He noted that the intent of the 90 percent rule was to preserve live racing by making sure that live racing had to be offered in exchange for the right to operate a cardroom or casino. "Let's go back to the voters and see if they want to cut back on live racing," Cory said in an interview with Spectrum on May 29, 2013. "We might even agree to reduce the numbers but there is no way we would agree to no live racing at all."

As we have noted throughout this report, operators are looking for ways to reduce the costs of operating pari-mutuel events. Melbourne Greyhound track proposed running two-dog races with a two-kennel roster under the same ownership for its 2013 meet. The American Greyhound Association called the proposal "an affront to the greyhound owners and kennel operators in America who've raised, trained and invested in the development of greyhounds with the intent of competing in full fields (most preferably, eight entries per race), and to those fans who enjoy watching and wagering on such races."¹⁹¹ In light of the opposition, Melbourne withdrew its petition for two-dog races.

Grey2K USA, an organization calling for the end of dog racing on humane grounds, frames the issue this way: Should the state "force a business to conduct one activity so that it may offer another?"¹⁹² According to Grey2K, nearly two-thirds of the 1,199 licensed greyhound owners live out of state. As for humane issues, the organization claims that 8,000 greyhounds are kept in kennel compounds in rows of small stacked cages. Dogs are kept in cages 20 to 23 hours a day. Nine cases of severe neglect have been documented at Florida dog tracks and kennels since 2004.¹⁹³ As of May 21, 2013, Florida greyhound tracks must report to the state the death of any racing greyhound that occurred at a track or kennel.¹⁹⁴

Jai Alai

The object of Jai-Alai is to hurl the ball (pelota) against the front wall with the goal being that an opponent will be unable to return it. The game can involve doubles or singles. Games are

¹⁹⁴ Florida state statute 61D-2.

7 to 9 points. It used to be that as many as eight different teams would play. A losing team would go to the end of the bench.¹⁹⁵ Florida is the only state that continues to offer jai alai, which accounted for 3 percent of the state's total pari-mutuel handle in FY 2012.

Of all the pari-mutuel sectors, jai alai has sustained the steepest cuts in attendance and popularity. Since 1990, total handle has fallen 91 percent, live handle 96 percent, player awards 63 percent and performances, 63 percent. In 1990, 3.9 million people paid to watch the sport. In 2012, total paid attendance was 9,068.¹⁹⁶

The six jai alai operators suffered an operating loss for FY 2012 of \$25.6 million; \$21.6 million came from Ft. Pierce-Miami Jai Alai, whose auditor expressed concern whether the frontons could continue to stay in business. The slots at Miami Jai Alai may improve its fiscal situation.¹⁹⁷ From pari-mutuel operations, the jai alai sector sustained an operating loss of \$14 million. Cardrooms were able to generate an operating profit of \$1 million. Miami Jai Alai had the highest handle at \$6.6 million in FY 2012; Hamilton Jai Alai, the lowest at \$2.00.¹⁹⁸

The Miami fronton opened in 1926. Through the 1980s, business was brisk. The fronton was renovated and seating expanded from 7,000 to well over 13,000. But things changed as new forms of gambling became legal in 1960s and 1970s.¹⁹⁹

Like other pari-mutuel sectors, jai alai is required to offer a minimum number of performances to keep its cardroom open. And the number depends on when the cardroom opened. As noted in other pari-mutuel sectors, the 90 percent rule requires that live performances be equal to at least 90 percent of what was conducted the year before the cardroom opened. Performances in FY 2012 ranged from a high of 214 at Dania to 24 at Hamilton. A performance consists of eight games.

Last year, Ocala stretched the letter of the law when it hired two locals who played each other over and over to comply with the minimum-performance law. The operation drew protests from jai alai players in South Florida who picketed the fronton. They argued that having the same two players play was a gimmick to comply with the law. General Manager Brian Matthews told us in an interview on May 21 that he had no choice but to run jai alai the way he did because it loses so much money, adding, "We can't get anyone to watch it." According to the financial audited report submitted to the state for FY 2012, Ocala lost \$453,000 on jai alai. Part of that included a \$22,000 tax because Matthews elected to run only 41 performances instead of the 100

required by the state. “It was cheaper for me to pay the tax than it was to stay open,” he noted. “If this was just jai alai, we would have been closed long ago.

Glenn Richards operates Hamilton Jai Alai and Poker. He operates pretty much the same way as Ocala, and acknowledged to us in an interview on May 8, 2013, that he is not happy about it. “People call it a joke, and I cannot disagree,” he said. “It is either do this or shut the door. We cannot get anyone to watch this anymore.” Hardly anyone is betting on it any more either. The total handle in FY 2012: \$2.²⁰⁰

Richards relies on a four-person Jai Alai roster. One is a father and his son, who both at one time played professionally at South Florida frontons. Richards must hold 100 performances over a FY year to retain his cardroom license, which opened in 2004. He is hopeful he can stay open until next year when the law will allow him to reduce his performances to 40.

For now, his four players play several times a day over a one-week period from March to June to meet the 100-performance requirement.

g. Critical Issues to Address

The thoroughbred sector is clearly the healthiest of the sectors but it too has sustained steep declines in live handle. What’s keeping many of the other pari-mutuel facilities open is cardroom and slot revenue but eventually, if the downward trend continues, it is likely that even those revenues will not be enough to keep some greyhound tracks and frontons open. Many operators acknowledged to us that the prospect of possibly operating slot machines was enough for them to continue to stay in business and sustain significant losses. In FY 2012, the pari-mutuel operations at the greyhound tracks sustained operating losses of \$35 million, Jai Alai, \$14 million and harness, \$2.4 million. Only the thoroughbred tracks were able to realize an operating profit, \$10.6 million, from their pari-mutuel operations.

One area that Spectrum’s research indicates is in need of review is the law requiring a minimum number of performances. When the law was adopted in 1996, the intent was to assist pari-mutuels by providing a funding stream for purses. But operators say times have changed, and the current law prevents them from reacting to today’s business climate. Many track operators across the country have reduced racing dates, which, in turn, lets them increase average purses and lower operating costs. In Florida, a number of operators are forced to run well over 300 performances a year.

At the same time, horsemen and dog owners stress that some operators have done all they can to destroy their pari-mutuel operations in an effort to convince the Legislature to adopt “decoupling,” which would remove the requirement that a minimum number of performances be held.

²⁰⁰ Florida PMW, Annual Report, FY 2012,

Pennsylvania relies on a racing advocate to ensure that its racino operators do not ignore racing interests. Each year, the Pennsylvania Gaming Control Board compiles an annual benchmark report to measure the impact that slot machine revenues have had on the horse racing industry. Florida has no such review mechanism. Purses at the harness track, even with a casino, have actually declined, and horsemen say that casino operations overshadow the track. The track is considering shutting down the grandstand, which would make it the only track in the country where patrons watch the finish of a race one-sixteenth of a mile away from the finish line.

With respect to casinos, as we noted in this report, the thoroughbred and quarter horse sectors are treated differently when it comes to pari-mutuel requirements. This is true even within the horse racing sector itself. Thoroughbred and quarter horse operators, for example, must have a contract in place with horsemen before they can open a casino. There is no such requirement for harness of the other pari-mutuel sectors. Almost all racino states require that a certain amount of gross gaming revenue be set aside to enhance purses. There is no such requirement in Florida.

Another contentious issue that may come before the Legislature is how to define a race or a game. Jai alai and dog track operators have argued that the current law is vague enough that it allows them to run just two dogs in a race or have just two jai alai players play over and over. There is the barrel-racing issue that has drawn national attention. An administrative law judge recently ruled that PMW had no right to issue a barrel-racing permit for quarter horse racing.²⁰¹

15. Cardrooms

a. Nationally

Five states including Florida allow cardrooms that are not inside a casino. Typically, cardroom games are restricted to poker and poker variants, although Washington began allowing cardrooms in 1997 to offer blackjack.

It is difficult to compare cardroom performance in Florida with cardrooms in other states because Florida is the only state that restricts its cardrooms to pari-mutuel facilities that, for the most part, are racing-only operations. Other states such as Washington and California allow their cardrooms in standalone facilities. Montana does not provide any data. Minnesota has only one cardroom.²⁰² Because of the differences from state-to-state in cardroom operations, the American Gaming Association stopped collecting revenue numbers for cardrooms effective with its 2009 annual *State of the States* report.

²⁰¹ State of Florida Administrative Hearings, Case No. 11-5796RU, Administrative Law Judge John Laningham.

²⁰² 2008 *State of the States* p. 35.

We tracked performance data for California, as its cardroom business model is the closest to Florida's. California had 119 cardrooms in FY 2002. In FY 2007, the number fell to 92.²⁰³ Despite the drop-off, its gross receipts increased from \$563 million to \$794 million, an increase of 46 percent. During the same time period, Florida's gross receipts increased from \$2.8 to \$54.2 million, a nearly 17-fold increase.

b. Florida

The first Florida cardrooms, which are restricted to poker and dominoes, opened on January 1, 1997. While dominoes is a permitted game, most facilities do not offer it. Palm Beach Kennel Club said it stopped offering it after months went by and no one played the game. By the end of the first fiscal year, nine cardrooms were operating.²⁰⁴ Gross receipts, or the amount received by the cardroom from players, totaled \$2.2 million that first year. At that time, the winnings of any player in a single round, hand or game could not exceed \$10. Players at a five-handed seven-card stud table would simply put in \$2 each and all betting and raising would cease. The dealer simply dealt the rest of the hand face up. A cardroom could only operate two hours prior to post time and up to two hours after the last pari-mutuel event. The state established a 10 percent tax on gross receipts, a rate that continues to this day. Additionally, each operator must pay cardroom table fees annually in the amount of \$1,000 for each table to be operated.²⁰⁵

Poker in Florida began to increase in popularity in 2003, when the Legislature amended the law to enable the poker pot to exceed \$10, but players could still not bet more than \$2 with any given action. Up until then, poker gross receipts had not increased much at all but they soared from \$2.8 million in 2003 to \$18.5 million in FY 2004. With more venues added, the figure continued to rise by double-digit percentages through 2009 when it totaled \$102 million. In FY 2012, it reached \$131.5 million. The change that made Florida a major poker playing state was the removal of all betting limits as of July 1, 2010. Today, there are 24 cardrooms. In 2003, there were only 10. Other cardroom rule changes that increased the profitability of cardrooms included a provision that also took effect July 1, 2010, that increased their hours of operation to 18 hours during the week and 24 hours on weekends.²⁰⁶

The cardroom law was created to boost operations at pari-mutuel facilities. They had to be at a track or jai alai fronton. At jai alai and greyhound facilities, 4 percent of cardroom gross receipts are used to fund purses and player awards; the figure is 50 percent at horse race facilities.

²⁰³ *State of the States, 2004-2008.*

²⁰⁵ Florida PMW, *Annual Report, FY 2012*.

²⁰⁶ *Ibid.*

SECOND DRAFT - CONFIDENTIAL

But with opening of Bestbet in Jacksonville in February 2012, Florida had its first off-track betting parlor. PMW made it possible for that to happen when it issued a declaratory statement to allow pari-mutuel businesses to operate a separate cardroom and simulcast parlor if the license holder closed an existing facility and opened a poker room in the same county and within 30 miles of the old one.²⁰⁷ Jacksonville Greyhound Racing Inc. closed its Jacksonville track in 2009 but retained its license and transferred its racing dates to nearby Orange Park, which it also owns. Jacksonville was then able to transfer its cardroom license to the off-site location in Jacksonville, and establish the biggest cardroom in the state of Florida, without having to build a track oval. Geographical constraints make it difficult for other such license transfers to occur.²⁰⁸ But we note that Palm Beach Kennel Club acquired an inactive jai alai permit and then converted it into a greyhound permit. At issue is whether it can now operate a cardroom from a remote location as Jacksonville Racing has done.²⁰⁹ The matter is currently before the courts.

Palm Beach Kennel Club had the highest cardroom receipts in FY 2012 at \$11.4 million; Hamilton Jai Alai and Poker the lowest at \$596,000.²¹⁰ Palm Beach Kennel Club Manager Noah Carbone, in a May 16, 2013, interview said the rule changes have made Florida one of the top poker venues in the country. He said before the rule changes, professional players from Florida would travel to Atlantic City and Nevada to play poker. Now, they stay here, he said. Further, many tourists are also playing now that the table limits have been removed.

Carbone said he would like to see the state remove the requirement that cash cannot be placed on a poker table. The law currently requires that players use only chips. He believes that relaxing the cash rule will increase profits for the cardrooms. The cardrooms have become so profitable that they have enticed new pari-mutuel operations to open and have resulted in still others continuing to remain open even though their pari-mutuel activity generate substantial losses, as we have noted throughout this report.

For example, the greyhound sector cardrooms generated an operating profit in FY 2012 of \$38.8 million while their pari-mutuel activities had an operating loss of \$35 million. Daytona Beach Kennel Club had the highest cardroom operating profit of \$6.4 million. All but one of the greyhound tracks had cardroom operating profits.²¹¹ The racing sector cardrooms also generated an operating profit of \$2.6 million.²¹²

²⁰⁸ Interview May 21 with Gene McGee, lobbyist for Jacksonville Racing Inc.

²⁰⁹ Interview May 18 with PBKC officials.

²¹⁰ Ibid.

²¹¹ Florida PMW, *Independent Auditor's Report for Pari-Mutuel Permitholders, FY 2012*.

²¹² Ibid.

Some operators, such as Jamie Shelton, the CFO of Jacksonville Greyhound Racing, noted though that cardroom revenues have begun to level off across the state. In an interview with Spectrum on May 30, 2013, Shelton said that it is unrealistic to expect cardroom revenue to continue to subsidize pari-mutuel operations. At some point, he noted that there will come a point where the cardroom profits cannot cover the pari-mutuel losses. “It is just a matter of time,” he said.

FY 2013 data show that cardroom revenue has begun to decline at many facilities. We compared the 10-month period ending April 30 with the previous year: Calder was off by 17 percent, Tampa Bay Downs, 14 percent and Pensacola Greyhound track, 10 percent. Thirteen of the 24 cardrooms associated with live racing sustained declines.²¹³ Should these downward trends continue, the ramifications for the pari-mutuel operations could be ominous.

16. Charitable Bingo

Florida’s bingo statute authorizes the conduct, handling of proceeds and limitations of bingo games by charitable organizations. All charitable organizations must meet the state’s statutory requirements as well as be qualified as an exempt 501(c.) organization under the federal Internal Revenue Code.

Florida’s bingo laws require that all proceeds from the conduct of the bingo games be donated to charitable organizations, less actual business expenses for the operation, conduct and playing of bingo. The statute strictly prohibits the net proceeds from bingo games from being used for any other purpose. For more detail on the regulatory aspects of bingo, see Chapter II (D)(1)(c).

Bingo is not regulated by the State of Florida. However, municipalities and/or counties that permit bingo have their own ordinances that govern its operation. Most municipalities require a business tax license, or occupational license, to conduct bingo. The licenses are issued annually and require copies of IRS financial statements.

Spectrum interviewed charitable bingo owners/operators, a bingo industry publisher as well as bingo equipment distributor executives in an effort to assess the size and state of charitable bingo in Florida.

In Florida, charitable bingo is conducted by charitable organizations on the premises of the qualified organization (such as a VFW hall, Elks Club, church, etc.) or at “bingo halls” that lease their premises to a charitable organization. The state statute also provides for a condominium association, a cooperative association, a homeowners’ association or a mobile home owners’ association to conduct bingo provided that any net proceeds after paying prizes and deducting operating expenses are donated to a qualified charitable organization.

²¹³ Review of PMW pari-mutuel wagering reports.

SECOND DRAFT - CONFIDENTIAL

Bingo halls and charitable organizations that utilize “hall-for-hire” arrangements must meet all state statutory requirements, including a minimum one-year lease agreement at a reasonable rental cost. Lease arrangements vary and often include “rent per session” or percentage of sales agreements.

Some bingo halls have lease arrangements with one “lead” charitable organization while others lease the premises to multiple qualified organizations. For example, Bingo Magic of Lake Worth, in Greenacres, has a “lead” charity lease arrangement with the Department of Florida Jewish War Veterans of the United States of America, and Bingo at Four Corners, in Pompano Beach, has lease agreements with 20 qualified charities with each charitable organization arranging to conduct a bingo session at the bingo hall on a scheduled day or night.

All charitable bingo conducted in Florida is run by volunteers who are members of the charitable organizations. In the bingo halls we observed, the facility’s owner/operator and any other compensated employees are paid by revenues derived from the facility’s food concessions.

Since bingo is not regulated by the State, the statewide total net proceeds from bingo games that is donated to charity is not quantifiable. Several bingo publications and/or websites list the available bingo games throughout the state; however, most of the published lists we researched were not inclusive or current. Spectrum estimates that there are currently between 300 to 400 bingo active operations in Florida.

Based on our interviews with bingo owner/operators as well as others associated with charitable bingo in Florida, it is apparent that statewide participation in charitable bingo is trending significantly downward. The number of available bingo locations is dwindling and participation is rapidly decreasing. For example, daily attendance at Bingo at Four Corners is down from a highpoint of over 400 bingo players per day in the 1990s to an average of approximately 100 players per day currently. Historically, the amount of revenues received by charities from this bingo hall has gone from \$30,000 to \$50,000 per month in 1995 to approximately \$10,000 a month currently. In Palm Beach County, the number of bingo halls in has decreased from six to two since over the past decade. Moreover, the general increase in rent and fixed operating expenses paid by bingo hall operators for their premises continues to rise and has had a negative effect on net proceeds.

Based on our research, the downward trend in bingo in Florida is attributable to several factors including:

- Overall downturn in the national economy
- Competition from other forms of gaming including casinos, racinos and lottery
- Competition from high-stakes bingo conducted at tribal gaming locations
- Statutory-limited jackpot prizes of \$250 maximum
- Aging demographic of bingo players

SECOND DRAFT - CONFIDENTIAL

- Statutory limitations preventing more progressive games
- Weather-related (hurricanes) events
- Proliferation of adult arcades and Internet cafes

Charitable bingo in Florida, as currently sanctioned, is increasingly less competitive. As each new form of gambling has been introduced – legal and otherwise – bingo revenues continue to decline. Those associated with bingo in Florida said the downward trend in bingo participation is multifaceted but pointed to the fact that bingo is unable to compete with the costly marketing efforts and giveaways of Indian casinos, pari-mutuel operators and high-stakes tribal bingo facilities. Most bingo players live fairly close to the bingo location, and in the regions with other forms of gaming located nearby, the revenue impact is most pronounced.

Bingo distributors we interviewed agreed with the observation that an overall downward trend due to competition from various other forms of gaming and the outdated \$250 statutory limit on jackpot prizes. They pointed to Miami-Dade and Broward counties as prime examples of where competition from the opening of racinos has substantially adversely affected bingo participation. For example, the number of bingo locations in Broward County has shrunk from eight to one since racinos have opened.

Florida's bingo operators indicated that the state's players tend to be older and are dying at a significant rate. Many are senior citizen who no longer drive or feel comfortable going out in the evening. These one-time regular bingo players now have expanded gaming options nearby and choose to frequent these facilities, which may offer bus transportation to casinos and/or racinos. However, the introduction in the 1990s of hand-held "card-minders" that automatically mark dozens of cards instantly has allowed older and/or handicapped bingo players to keep up and has leveled the playing field for many seniors and disabled patrons.

In Florida, the downward trend in net bingo proceeds directly impacts the charitable organizations intended to benefit from this activity. However, those associated with bingo interviewed by Spectrum all emphasized that bingo and expanded gaming can coexist if bingo is allowed to offer the right jackpot prizes and game content. Most agree that bingo, unlike other gaming options, is an "a social thing" that people play with friends and relatives. Bingo is considered "social or soft gaming" that distinguishes it from harder forms of gaming such as casinos or pari-mutuel gaming.

Indeed, numerous published reports, including a recent *Wall Street Journal* article,²¹⁴ point to a renewal of bingo in the United States. Progressive approaches that include new technological advances, coupling bingo with other entertainment amenities, linked jackpots and higher prize offerings have resulted in more bingo participation by younger players and college

²¹⁴ Julie Jargon, "How Do You Spell Hipster? It Could Be B-I-N-G-O," *The Wall Street Journal*, Page A1, April 10, 2013 <http://online.wsj.com/article/SB10001424127887324883604578398973682460716.html>.

SECOND DRAFT - CONFIDENTIAL

students. Some of these innovative practices range from bingo being offered in bowling alleys and in venues that offer alcoholic beverages to specialized offering such as “hip-hop” and “cosmic” bingo. These newer, “hip” versions of bingo have given rise to younger patrons, particularly among the Hispanic population in South Texas, Arizona and California. Also noteworthy is a new approach in Illinois, where legislation has been introduced to allow bingo on hand-held devices in bars and restaurants.

The bingo equipment distributors we interviewed indicated that bingo participation across North America has been trending downward but provided several particular examples of upward trends in states where recent progressive statutory reforms have been implemented. For example, in Virginia and Minnesota, electronic pull-tab bingo and other newer game offerings have resulted in an increase in participation rates. Other progressive reforms, such as in Ontario, Canada, where new regulations provide for splitting proceeds between the bingo owner/operators and charities has resulted in significant upward trends in overall proceeds.

In several other states, the proliferation of Internet/sweepstakes cafes has adversely affected traditional bingo participation. Tim Stewart, President and CEO of Bingo King, a worldwide bingo equipment distributor, estimates that gross sales in states such as Ohio and California where Internet cafes have spread have declined more than 20 percent.

In Florida, the recent enactment of legislation that bans Internet cafes and adult arcade has adversely affected some bingo operators in the state who also had adult arcade games on their premises. The bingo halls we visited that previously had operational adult arcade games took the games out of play in order to comply with the new law.

The bingo operators with arcade games had previously offered prizes that were essentially free credits for regular bingo play. Many traditional bingo players would arrive well before the scheduled start of regular bingo and play the arcade games hoping to win free credits (such as “bingo bucks”) toward the cost of bingo cards for that day. It was also pointed out the extra time spent in the bingo hall usually resulted in the patron purchasing food or beverages at the hall’s concession. Now, bingo players have little incentive to arrive early because there are no “gaming activities” until the traditional bingo game starts. The loss of the adult arcade games in bingo halls have driven many bingo players to casinos and racinos where gaming is basically around the clock.

The legal challenges to the new Florida Internet cafes and adult arcades prohibition are currently ongoing and the final remedy is unclear at this time. Local law enforcement authorities now have enhanced tools to enforce the new law and recent published reports have documented considerable law enforcement efforts throughout every part of the state.

Gale Fontaine, President of the Florida Arcade and Bingo Association, said her trade group currently has about 215 members and has been losing bingo members steadily over the past decade. With all the recent developments regarding arcade games, she said the organization has over 50 new arcade members that joined this year. The connection between bingo and adult

arcades is quite prominent with many bingo hall owners/operators also in the arcade business or having arcade games within the bingo hall itself.

Michael Wolf, the Bingo Association's legal counsel, said the group has filed a lawsuit seeking to halt enforcement of the new law in regard to adult arcades. He said the same types of games are in bowling alleys and children's arcades and the law is being enforced discriminatorily against the adult arcades.

In regard to the new law's effect on traditional bingo, Dennis Conroy of *Bingo Bugle*, a monthly publication distributed in metro markets throughout the United States (including several Florida editions), pointed out that the new law may be a positive development for bingo in Florida. He said he it is likely that there will be an increase in applications for traditional bingo game operations due to the new law and the end result would be an increase in overall bingo revenues.

Florida also has one of the nation's most prominent high-stakes Indian bingo markets. In fact, most point to Florida's Seminole Classic Casino in Hollywood to be the birthplace of high-stakes Indian bingo. The Seminole Classic Casino is located across the street from the Seminole Hard Rock Casino. The one-story building started as a high stakes bingo hall about 30 years ago; however, the facility has slowly been transformed mostly into a slots-heavy casino with only about 15 percent of the gaming floor still devoted to bingo. On a recent tour of the Seminole Classic Casino, Spectrum observed that the bingo parlor that once had over 1,500 seats is now down to about 400 seats. Seminole Gaming advised Spectrum that its bingo revenue for 2012 was \$4.1 million, continuing a steady decline from \$24.6 million in 2001.

The Miccosukee Tribe of Indians of Florida, located in Miami, operates a 1,000-plus seat High Stakes Bingo Hall within its Resort & Gaming complex. The facility operates daily bingo games from 9 a.m. to 11 p.m. and has extensive bus service to the facility from throughout the greater Miami-Dade area. The bingo hall advertises over \$35,000 in daily bingo jackpots and has a large email promotion system that caters to regular bingo players.

Most observers agree that Florida's state-sanctioned model of charitable bingo is good for Florida, in that it provides needed funding for the state's many charitable organizations. Many of the bingo hall owner/operators have a genuine connection to the charitable organizations they help support. As Chris Thomas, owner/operator of Bingo Magic in Lake Worth, said for the system to work you have to be "in your community" through the charitable organizations that bingo helps to support.

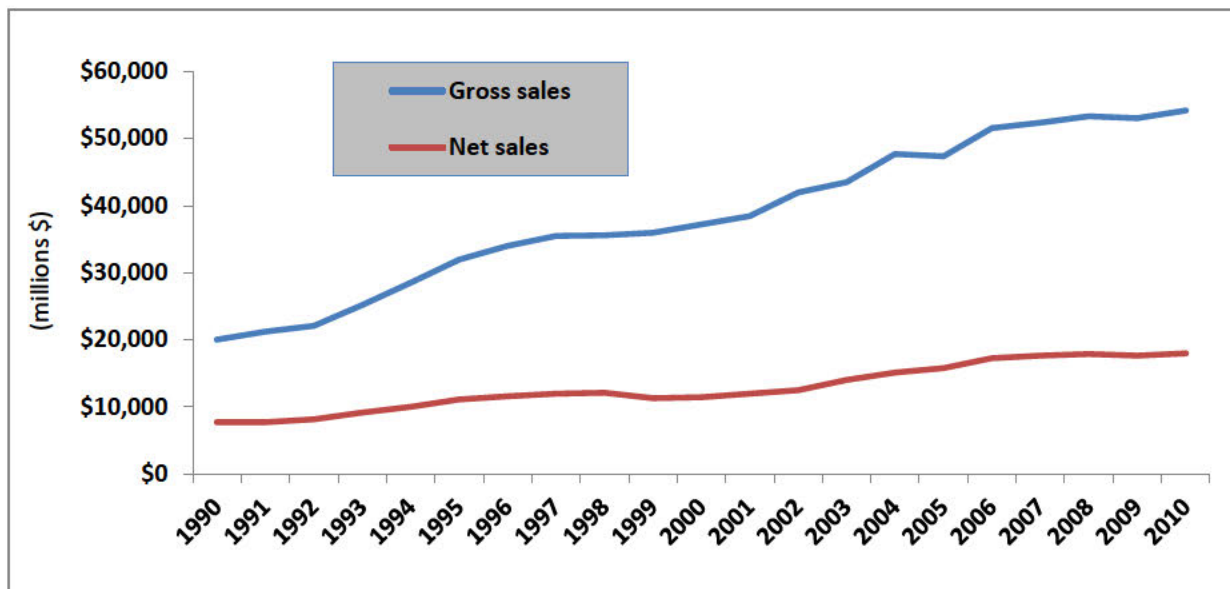

Unlike the other forms of gaming available in Florida, bingo is distinctive in that it is truly a "social thing" that players often enjoy with friends and relatives. Its traditional role in charitable organizations is well documented in the state. Policymakers and stakeholders need to closely exam the role bingo plays in Florida so it can fulfill the intent of the original enabling legislation.

17. Lottery

a. Nationally

The first modern state lottery began in New Hampshire in 1964.²¹⁵ A large number of states began introducing lotteries in the 1980s, and currently, the only states without a lottery are Alaska, Alabama, Hawaii, Mississippi, Nevada, Utah, and Wyoming (although Wyoming in March 2013 enacted lottery legislation). By 2012, the Florida Lottery ranked third in the nation, behind New York and Massachusetts, in total sales revenue (FY 2011).²¹⁶ Each of these states had net receipts (total sales minus prizes paid and administrative costs) of over \$1 billion.²¹⁷ The following chart shows the trend in US lottery sales between 1990 and 2010, in nominal dollars. Gross sales (handle) represents total lottery sales for all states; net sales represents gross sales minus prizes paid out and administrative costs, or the net amount of revenue for the states. As the chart shows, the net revenue to states has increased modestly over this period.

Figure 24: US lottery sales, 1990-2010

Source: US Census Bureau, *Statistical Abstract*, various years. For fiscal years.

As shown in the chart, lotteries raised almost \$2 billion for state governments in 2010. Lotteries are very popular among politicians because they are often viewed as a “voluntary tax.” That is, even though lotteries represent a relatively high tax rate on spending, citizens can easily avoid the tax simply by not purchasing lottery tickets.

²¹⁵ Charles T. Clotfelter and Philip J. Cook, “On the Economics of State Lotteries,” *Journal of Economic Perspectives*, vol. 4, 1990, p. 107.

²¹⁶ Teresa Markle La Fleur, Byron la Fleur, *La Fleur’s 2012 World Lottery Almanac*, p. 259.

²¹⁷ Douglas M. Walker, *Casinonomics*, 2013), p. 68.

Lotteries are, by far, the most profitable form of legalized gambling. For each \$1 ticket sold, the state keeps approximately 50 cents as “net revenue.”²¹⁸ Roughly 10 to 20 cents is directed to administrative costs, and the remainder is paid out in prizes. Based on the data in the chart above the proportion of net revenue to states was roughly 40 percent in 2010 (over \$5 billion in gross sales and about \$2 billion in net revenue).

Despite the benefits touted by the lottery’s proponents, the lottery – like other forms of gambling – has its critics. A long-running criticism of lotteries is that the revenues tend to come disproportionately from lower-income individuals. As such, the lottery is a “regressive tax.”²¹⁹ In addition, studies have found that the benefits from lottery funded educational initiatives tend to accrue to higher-income individuals.²²⁰ When combined with the tax effect, this compounds the regressivity of the lottery. While critics have termed state lotteries “a tax on the stupid”²²¹ due to their unfavorable odds, lottery play remains the most broadly popular and regionally widespread gambling activity both nationally, where 53 percent report playing the lottery within the past year,²²² and within Florida, where 60 percent of residents report having played the lottery at least once in their lifetimes and 44 percent say they have played within the past year.²²³

Another criticism of lotteries is that, despite the fact that they are often earmarked for programs such as education, it is not clear that the overall level of funding for such programs actually increases. For example, politicians could reduce other types of education funding as lottery contributions to education increase. Thus, the lottery may result in a net increase or decrease to educational funding in a state.

A variety of research has examined the demographics of lottery players. Clotfelter and Cook have provided what is regarded as the most important economic research on lotteries. They find that “the most active 10 percent of [lottery] players account for 50 percent of the total amount wagered, while the top 20 percent wager about 65% of the total.”²²⁴ In addition, Clotfelter and Cook (p. 112) summarize:

- Men play more than women

²²⁴ Charles T. Clotfelter and Philip J. Cook, “On the Economics of State Lotteries,” *Journal of Economic Perspectives*, vol. 4, 1990, p. 111.

SECOND DRAFT - CONFIDENTIAL

- Adults play more in their middle years than when young
- Catholics play more than Protestants
- Lottery play falls with formal education
- 46 percent of laborers play; 25 percent of advanced professionals play
- Retirees and students play least of all
- Hispanics in the west and blacks in the east play more than non-Hispanic whites

The Ipsos Reid study for the Florida Lottery discusses demographics specific to Florida lottery players. The study includes a variety of survey questions aimed at understanding people's opinions of the lottery and attitudes toward gambling in general. While 42 percent of respondents agreed that "lotteries are an innocent form of entertainment," 19 percent indicated that they were "morally opposed to gambling."²²⁵ This finding reflects the general differences in opinion that exist across the states.

Overall, state lotteries are the most common forms of legal gambling in the United States. In aggregate, lotteries generate far more income for states than any other form of gambling. Lotteries also provide employment and economic benefits, both from direct employment of approximately 440 employees²²⁶, as well as assistance to a large and diverse network of retailers throughout the state. The Florida Lottery provides local sales through a network of 13,138 retail agents who receive a 5 percent commission on ticket sales.²²⁷ This sales network operates through a wide variety of establishments including convenience stores, gas stations, bars, restaurants, grocery stores, drug stores, liquor stores, newsstands, etc. Spectrum research in Massachusetts demonstrates the importance of lottery sales to the continued operation of these many small businesses providing entry level employment throughout the state.²²⁸

b. Florida

Florida is one of many states that has adopted lotteries that earmark the revenues for special purposes, such as education. The Florida Lottery contributed over \$1.3 billion to the state's Educational Enhancement Trust Fund during the 2012 fiscal year and \$24 billion since the lottery's inception in Florida in 1988. Lottery revenues are used for scholarships for college

students, construction and renovation on college campuses and at K-12 schools in the state.²²⁹ Many states have similar programs that use earmarked lottery funds.

As noted above, the Florida Lottery is one of the highest selling in the country. The following chart illustrates Florida lottery gross sales and per capita sales from 1990 through 2012.

Figure 25: Florida lottery sales, 1990-2012

Data source: Florida Lottery, Florida Office of Economic & Demographic Research; for fiscal years

In Florida, as in other states, the lottery has been criticized as being a regressive form of raising government revenue, disproportionately targeting the poor. For example, a 2005 report from the Brookings Institution notes:

“A number of studies have investigated the demographic predictors of lottery gambling and have tended to find that, on average, state lottery products are disproportionately consumed by the poor. ... The data reveal the following general trends. First, lottery gambling extends across races, sexes, and income and education groups. Second, black respondents spend nearly twice as much on lottery tickets as do white or Hispanic respondents.

“The average reported expenditure among blacks is \$200 per year, \$476 among those who played the lottery last year. Black men have the highest average expenditures. Third, average annual lottery spending in dollar amounts is roughly equal across the lowest, middle, and highest income groups. This implies that on average, low-income households spend a larger percentage of their wealth on lottery tickets than other households. Interestingly, the regressivity of the state lottery appears to vary across lottery products.

²²⁹ Florida Lottery, “Dollars to Education” <http://www.flalottery.com/education.do> (accessed May 9, 2013).

SECOND DRAFT - CONFIDENTIAL

“Low-income lottery players are more likely than other lottery players to bet on instant games. Among NORC survey respondents who report playing the lottery, 38 percent of those in the lowest-income third report that they purchased an instant ticket the last time they played the lottery, compared to 27 and 19 percent of players in the middle and highest-income third. Higher-income players are more likely to have purchased a ticket on a jackpot lotto game - 56 percent of those in the highest-income third, 49 percent in the middle group, and 39 percent in the lowest-income third.

“The NORC survey also asks respondents about their favorite state lottery game. Instant games are the most common reported favorite among those in the lowest-income third, while jackpot lotto games are by far the most common stated favorite among those in the higher income categories.”²³⁰

Spectrum has asked the Florida Lottery for Zip Code and other information related to examining both the proportion of lottery purchases in poor neighborhoods, as well as the proportion of tickets sold to non-Florida residents. As of this writing, Spectrum has not received a response.

18. Retail Gaming

Seven states currently authorize what Spectrum terms “retail gaming,” which is the placement of a small number of electronic gaming devices (typically 5 to 10) in authorized retail locations – often liquor-licensed establishments. Electronic gaming device (“EGD”) is a catchall term for slot machines, video lottery terminals, video poker machines, electronic bingo game, or any other slot-like gambling machine. At year end 2012, EGDs operated in 12,042 locations in the seven states.²³¹ In the five states where full-year data were reported for fiscal year 2012, the retail EGDs generated \$2.3 billion in gross gaming revenue.

In Illinois, Louisiana, Montana and Nevada, the retail gaming programs are regulated by their respective gambling control boards/agencies. In Oregon, South Dakota and West Virginia, the respective state lottery operates the retail gaming programs. The states use a variety of taxes, revenue sharing, franchise fees and/or device fees to collect revenue from the EGDs. The host establishments receive a share of the revenue based on a formula established by the state.

Retail gaming programs are seen as successful from a revenue standpoint because of their wide geographic distribution and convenience. However, they are controversial because they

²³⁰ Melissa Schettini Kearney, “The Economic Winners and Losers of Legalized Gambling,” Brookings Institution, February 2005, p. 16 <https://www.documentcloud.org/documents/266971-the-economic-winners-and-losers-of-legalized.html>

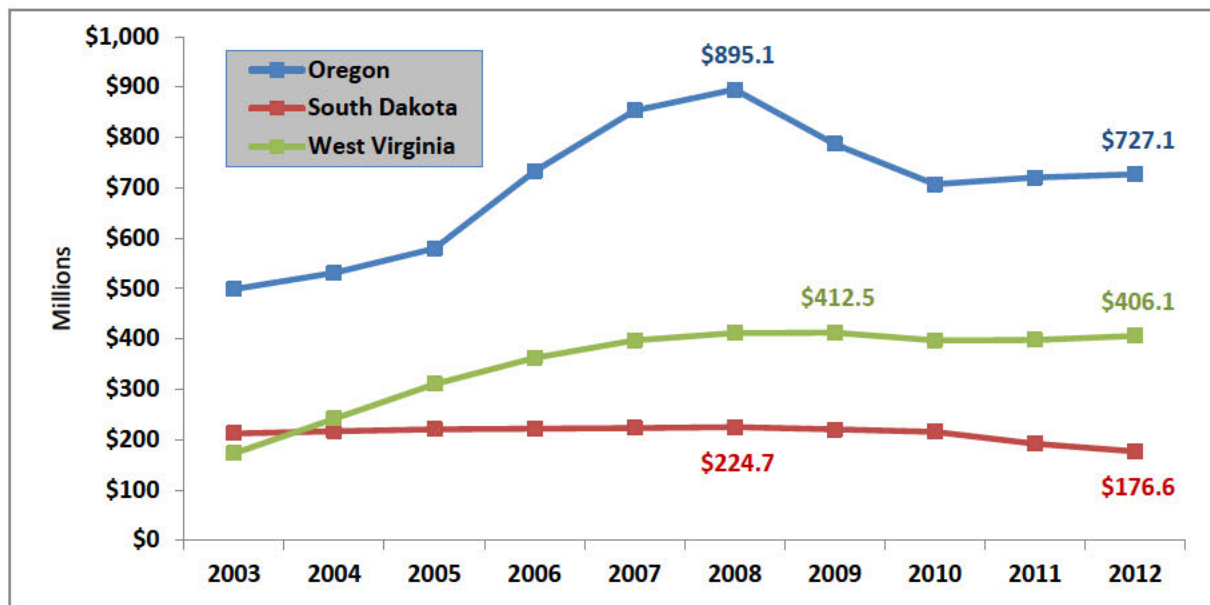

²³¹ 2013 *State of the States*, p. 4.

SECOND DRAFT - CONFIDENTIAL

EGDs may be too convenient for those with, or susceptible to, gambling problems and because they may be in plain view of children.

Following are the revenue results – in net sales (i.e., gaming revenue) – for the three retail gaming programs operated by state lotteries:

Figure 26: Oregon, South Dakota and West Virginia lottery retail gaming revenue, 2003-2012

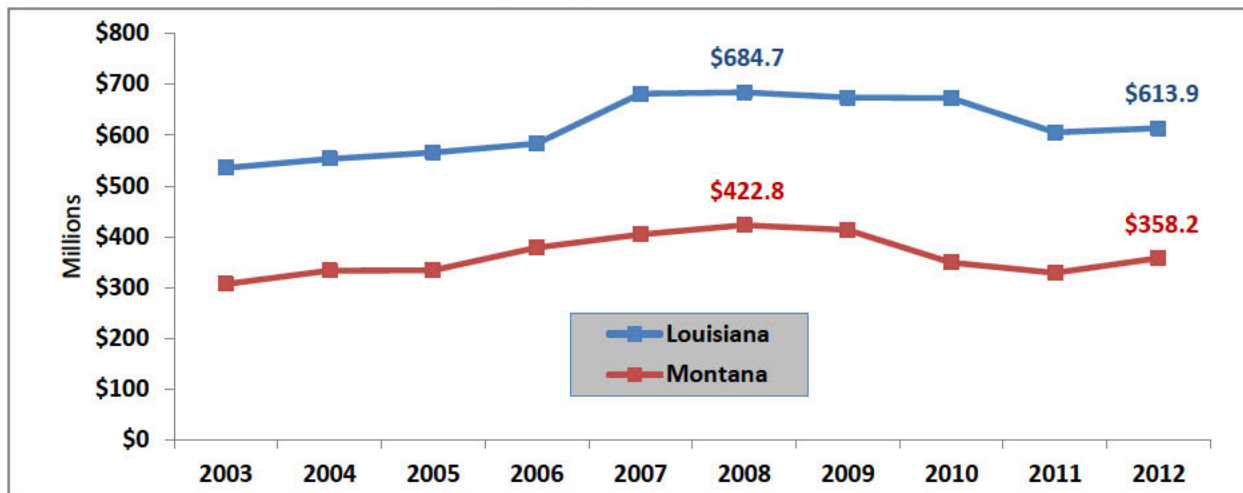

Sources: Oregon, South Dakota and West Virginia lotteries; for fiscal years

Retail gaming is a crucial part of the three lotteries' total revenue: In FY 2012, Oregon Video Lottery net sales accounted for 69 percent of total lottery sales; the Video Lottery accounted for 88 percent of sales in South Dakota; and the Limited Video Lottery ("LVL") net sales accounted for 26 percent of total lottery sales – but 52 percent when excluding the racetrack casinos, which are also overseen by the Lottery.

The Oregon Video Lottery permits six EGDs in authorized liquor-licensed establishments and 10 at racetracks. The South Dakota Lottery permits 10 EGDs in liquor-licensed establishments. The West Virginia LVL permits six EGDs in liquor-licensed establishments and 10 in fraternal organizations.

As noted, four states authorize retail gaming that is independent of the lottery. Nevada does not report retail gaming revenue, and Illinois, which launched its program in September 2012, has yet to report a full year of results. The following chart provides the retail gaming revenue for Louisiana and Montana:

Figure 27: Louisiana and Montana retail gaming revenue, 2003-2012

Source: Louisiana and Montana gaming control boards/agencies; for fiscal years

In some states, enterprising businesses have attempted to create a casino-like environment by putting multiple authorized EGD locations side by side. In Oregon, residents and legislators have become concerned about a concentration of 12 such establishments that form “lottery row” on Hayden Island, near Portland. “For years they’ve watched a group of legitimate restaurants morph into ‘lottery row,’ a strip of 12, gaming-focused establishments where food takes a back seat to lottery games and cigarette and alcohol sales.”²³² Oregon House Speaker Tina Kotek this year sponsored bills “that would give state and local governments dramatic new powers to shut down lottery outlets and bars that either gain most of their profits from video machines or become known for violent crime, drug dealing and excess noise.”²³³

Other states have considered retail gaming programs over the years, and Spectrum believes that states will continue to consider implementing retail gaming as other forms of gambling within their borders become saturated or difficult to legalize.

Key issues in considering the authorization of retail gaming include:

- Whether the easy accessibility could exacerbate problem gambling.
- Whether the devices would be in sight of minors who patronize a host establishment.
- Whether the EGDs would cannibalize existing casino or lottery play.
- The types of EGDs that would be allowed.
- The tax scheme/distribution of revenue.
- Which state agency would be responsible for directing and/or regulating the program.

²³² Casey Parks, “Jantzen Beach’s ‘Lottery Row’ will remain after Oregon lottery commission pulls proposed limits,” *The Oregonian*, August 5, 2012 http://www.oregonlive.com/portland/index.ssf/2012/08/jantzen_beachs_lottery_row_wil.html.

19. Sports Betting

The 1992 federal Professional and Amateur Sports Protection Act (“PASPA”) outlawed sports betting while grandfathering the four states that already had authorized it in some form. The four states are Delaware, Montana, Nevada and Oregon.

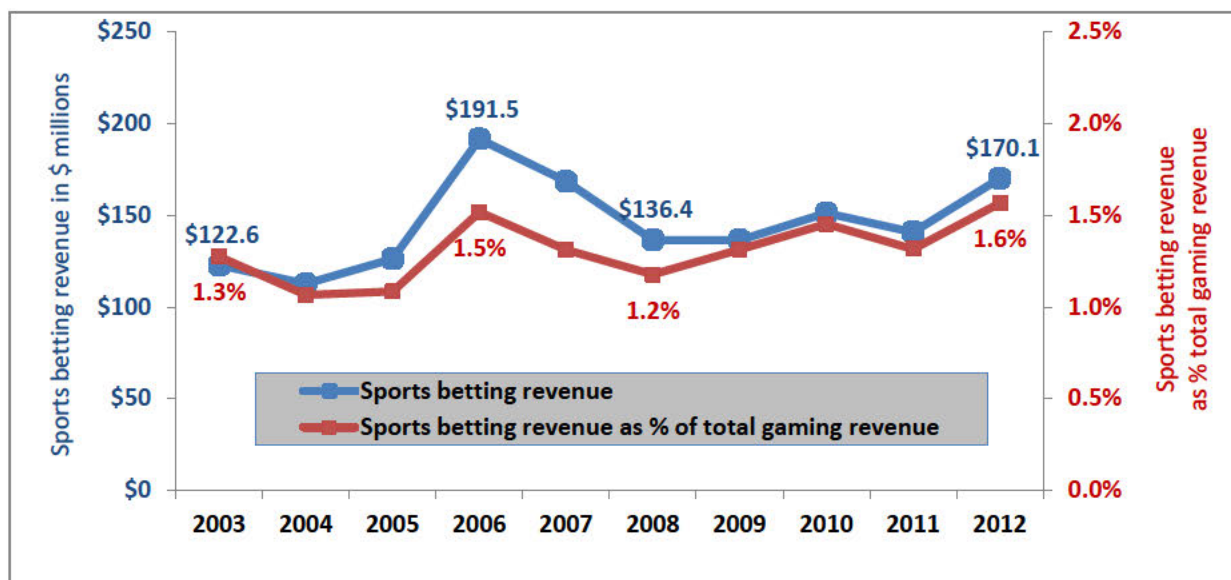

Only Nevada offers traditional sports betting; i.e., the opportunity to wager on a single-event outcome, covering both professional and amateur sports, based on odds posted by the casino. A sports book operator sets the initial “line,” or odds of winning, and then typically adjusts the line based on wagering patterns and/or event information, with the goal of attracting the same amount wagered on both sides of the bet. The casino makes its money by effectively charging a commission on the bets, although it can incur a significant win or loss if a lopsided amount is wagered on the winning or losing team.

The Nevada Gaming Control Board regulates sports betting, as it does all casino games in the state.

Over the last 10 years, the Nevada casino industry has retained between 4 percent and 8 percent of sports betting wagers as net gaming revenue. Nevada casino operators generally describe their sports betting operations as “marginally profitable.” At large casino hotels, sports betting attracts many guests who otherwise might not visit the property – and who spend on food, beverage, lodging and other amenities. Further, sports bettors often are accompanied by a non-sports-betting partner who will play other casino games.

Over the last 10 years, Nevada sports betting revenue has accounted for between 1.1 percent and 1.6 percent of all gaming revenue. At the major casino hotels on the Las Vegas Strip over the same period, sports betting accounted for between 0.74 percent and 1.52 percent of all gaming revenue.

Figure 28: Nevada sports betting revenue performance, 2003-2012

SECOND DRAFT - CONFIDENTIAL

Source: Nevada Gaming Control Board data

In 2012, 45 percent of the \$3.4 billion wagers made in Nevada casinos were on football, followed by basketball at 28 percent, baseball at 20 percent and other sports at 6 percent, according to the Nevada Gaming Control Board. Nevada's sports books do a particularly brisk business leading up to the Super Bowl and NCAA basketball tournament. The Nevada Gaming Control Board reported that the state's sports books took 2013 Super Bowl wagers of \$98.9 million and won \$7.2 million.²³⁴

The Nevada legislature in May 2013 defeated two bills that would have expanded sports betting:

- One would have allowed “entities” – as opposed to individuals – to place wagers. Such entities could be investment funds or other groups so long as they were based in Nevada.
- Another would have allowed wagering on the outcome of federal elections.

In Delaware, sports betting is restricted to parlay bets on National Football League games only. The parlay requires a bettor to wager on three or more individual games in one wager. “To win the bet, the player must win all the wagers in the parlay. If the player loses one wager, he loses the entire bet. However, if the player wins all the wagers in the parlay, he wins a higher payoff than if he had placed the wagers separately.”²³⁵

Delaware in 2009 passed legislation allow sports betting on all major sports, but a federal appeals court ruled later that year that the activity is restricted to the state's pre-PASPA structure of allowing only NFL parlay bets. As such, the sports betting takes place only during the NFL season.

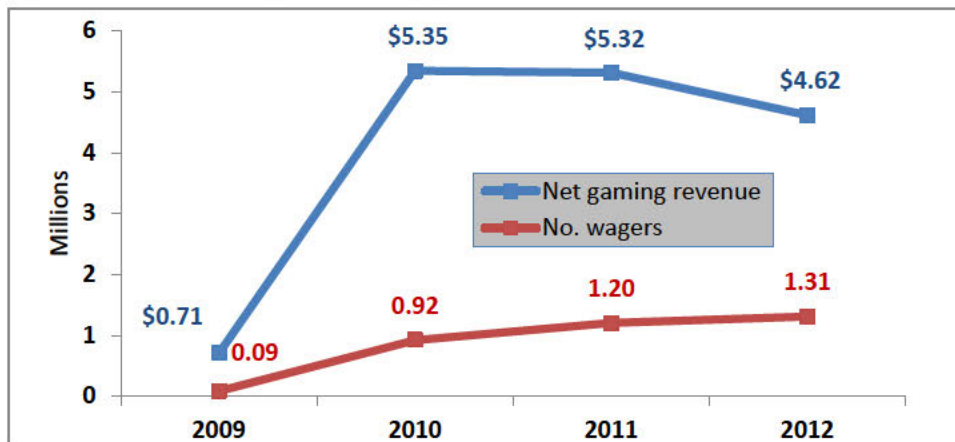

The Delaware Lottery is the state's regulator and provider of sports betting, which is offered at both the state's three racetrack casinos (also overseen by the Lottery) and, effective in 2012, at 31 authorized retail locations.

In 2012, Delaware reported \$19.7 million in sports betting wagers on 1.3 million wagers, resulting in net gaming revenue of \$4.6 million. Of the net gaming revenue, 86 percent was generated in the three racetrack casinos and 14 percent in the 31 retail locations. The following chart shows the Delaware sports betting results since its inception:

²³⁴ Nevada Gaming Control Board press release, February 4, 2013
<http://gaming.nv.gov/modules/showdocument.aspx?documentid=7577>.

²³⁵ Delaware Sports Lottery rules <http://www.delottery.com/games/sports/> (accessed May 3, 2013).

Figure 29: Delaware Sports Lottery performance, 2009-2012

Source: Delaware Lottery

Note in the chart above that revenue has declined despite an increase in wagers. This is because bettors were luckier/more skillful or, from the operator's perspective, the lines may have been poorly set. Delaware operators say their sports books are barely profitable or break-even enterprises. As in Nevada, the real value of the sports books is that they generate traffic for other, more profitable segments within the gaming complex.

In Oregon, the Lottery offered Sports Action from 1989-2006, in which bettors would wager on NFL parlays and, for a lesser time, National Basketball Association parlays. The state ended all sports betting games as a condition of hosting NCAA basketball tournament games.²³⁶

Montana does not offer traditional sports betting.

The federal ban on sports betting is currently being challenged by the State of New Jersey, whose voters in 2011 voted to authorize the activity. If New Jersey is ultimately successful, Spectrum believes other states would follow New Jersey in offering sports betting. Four states – Georgia, Kansas, Virginia and West Virginia – are supporting New Jersey's appeal, not necessarily out of support for the cause but because they see it as a violation of "equal sovereignty" among states.²³⁷

The four major professional sports leagues and the NCAA vigorously oppose sports betting, believing it undermines the integrity of sports in two ways: It encourages fans to root based on a team "covering" the point spread as opposed to the actual game outcome, and it could make players susceptible to accepting bribes in exchange for point-shaving; i.e., ensuring that a player's team covers or does not cover the point spread. Nevada regulators and sports book

operators argue that by regulating and tracking bets, they are able to spot suspicious betting patterns that could signify nefarious activity.

Illegal sports betting towers over legal sports betting in size and scope. The National Gambling Impact Study Commission in 1999 reported that the size of illegal sports betting nationwide ranges from \$80 billion to \$380 billion annually,²³⁸ vs. \$2.9 billion wagered in Nevada's sports books in 2011.²³⁹

Globally, sports betting is projected to represent 10 percent of all land-based gambling revenue in 2013, according to London-based H2 Gambling Capital. On the Internet, however, sports betting is by far the most popular form of gambling, projected to represent 45 percent of the 2013 global total.²⁴⁰

20. Illegal/Unregulated Gambling

Unsanctioned and unregulated gambling has long taken place in every state and, by its nature as an “underground” activity, can be difficult to assess. The Internet site Havocscope, which profiles illegal activity globally, estimates that illegal gambling in the US generates \$150 billion annually.²⁴¹ As in most states, illegal gambling has a long and storied history in Florida, beginning with the genesis of Florida's tourism economy. It has been said that for every hotel that Henry Flagler built, he also built a church and a gambling hall nearby.²⁴²

Unregulated gambling is the broader definition for these activities and it includes everything from slots and table games offered outside casinos, amusement or arcade machines, sports betting through bookies, privately-run sweepstakes and numbers games, cock or dog fighting, as well as private wagers between individuals. To catalogue and profile all forms of unregulated gambling is a large study in itself; for the purposes of this report we will provide an overview of the most prevalent types of non-sanctioned gambling and a brief description of the most prominent and widespread illegal or unregulated gambling activities in Florida.

SECOND DRAFT - CONFIDENTIAL

The participation rates of Florida residents in various forms of illegal or unregulated gambling activities are documented in the 2011 survey sponsored by the Florida Council on Compulsive Gambling Inc. for lifetime, past 12 months, and past 7 days, as follows:²⁴³

Figure 30: Illegal and unregulated gambling participation in Florida, 2011

Gambling Activity	Lifetime %	Past Year %	Past Week %
Poker	22.1	12.0	3.4
Sporting Events Through a Pool	19.9	11.1	0.9
Cards/Dice/Dominos Not at Casinos	19.4	11.9	2.2
Bingo	19.1	5.7	1.1
Slot/Poker Machines Not at Casinos	18.7	7.2	1.2
Playing Sports Games	13.1	7.3	2.0
Table Games Not at Casinos	9.9	5.0	0.2
Sporting Events Through a Bookie	8.2	5.0	1.0
Pull-Tabs	7.4	2.9	0.3
Arcade or Video Games	6.8	3.8	0.8
Fantasy Sports	5.0	3.6	1.5
Internet Gambling	4.8	3.3	0.8
Car Races	2.7	1.2	0.6
Mah Jong	1.5	0.8	0.4
Cock or Dog Fighting	1.1	0.4	0.0
Policy, Numbers, or Bolita	0.8	0.5	0.1
Other	0.7	0.0	0.0

Source: Florida Council on Compulsive Gambling

The above table does not include playing the stock market, which was also profiled as a gambling activity in the FCCG study, while it does include poker played privately and betting on sporting events through a pool, which are generally perceived to be acceptable forms of wagering even if they are not regulated. Bingo is another generally accepted form of gambling, but unregulated bingo wagering can compete with charitable and regulated bingo operations elsewhere in the state. Unregulated gambling activities of more immediate concern include playing casino style games outside the casinos, sports betting through bookies, and numbers games offered outside the Florida Lottery.

It should also be noted that the 2011 FCCG survey, while carefully weighted and designed to be representative of Florida's diversity, completed less than 3 percent of its interviews in Spanish or Creole,²⁴⁴ which indicates that illegal gambling prevalence among Latinos and other minority groups may be somewhat underrepresented in the above findings. In addition, any survey questions regarding illegal or unregulated activities such as gambling are less likely to be openly and honestly answered by respondents, so it is reasonable to assume that

²⁴³ Robert J. Rotunda, Terry L. Schell, *Gambling and Problem Gambling Prevalence Among Adults in Florida: A 2011 Replication*, University of West Florida, January, 2012.

²⁴⁴ Ibid.

the prevalence of illegal gambling activities may be higher than documented in self-reported surveys.

Until recently, Internet cafes offering sweepstakes games and arcades with gambling-style machines that offered cash-equivalent prizes operated through real or perceived loopholes in Florida law – in either case without regulation and enforcement; now they are explicitly illegal. Internet/sweepstakes parlors constitute a shadow gambling category which is now receiving increased attention across the country and has been banned in many states. Advocates contend that this is legal activity because players simply purchase Internet access time blocks and are not wagering money on the prospect of receiving a greater reward, which is the traditional definition of gambling. Critics argue that there is little difference between the electronic gambling devices employed and video slot machines, and those players are incited by the opportunity to win prizes with monetary value. In 2011 *Businessweek* estimated that there could be as many as 5,000 Internet cafes operating nationwide generating \$10 billion to \$15 billion dollars in revenue.²⁴⁵

On April 10, 2013, Florida Governor Rick Scott signed into law HB 155, which effectively proscribed sweepstakes gambling.²⁴⁶ This action followed the well-publicized Allied Veterans of the World prosecution which resulted in the arrest of 57 people in racketeering indictments for illegal gambling²⁴⁷ and eventually led to the resignation of former Lt. Gov. Jennifer Carroll.²⁴⁸ At the time of the bill's passage, the Internet/sweepstakes gaming industry was estimated to be operating 1,000 Internet cafes statewide throughout the state producing approximately \$1 billion in annual revenue, according to the Florida League of Cities.²⁴⁹ This legislation effectively banned Internet cafes and the “maquinitas” by included language which defines what constitutes illegal gambling and closing loopholes which have existed in Florida for decades and had allowed the earlier growth of unregulated wagering. Among other things HB 155 updates the definition of both illegal slot machines and legal arcade games, requiring that “amusement games or machines” must operate only “by means of the insertion of a coin” not swipe cards, and that, in order to be distinguished from “casino style games” they must be

classified as games of “skill” rather than chance.²⁵⁰ Specifically, the new legislation stipulates that legal machines cannot be “casino-style games in which the outcome is determined by factors unpredictable by the player or games in which the player may not control the outcome of the game through skill.”²⁵¹

The stricter interpretation of gambling in the legislation cited above also potentially impacts the approximately 200 “adult arcades” that offer slot style gambling outside of state or tribal-regulated slot machines as well as hundreds of children’s arcades and arcade restaurants. These unregulated “amusement slots” represent a gray area of gambling activity and one which has been criticized both for taking advantage of seniors and for teaching minors and even children to gamble. Most adult arcades offer video gaming machines very much like the video devices found in Internet cafes but instead of buying time online players can win small prizes and gift cards. Adult arcades were specifically prohibited from dispensing gift cards as prizes in the recent legislation which also limits top prize values to no more than 75 cents.²⁵²

Unsurprisingly, Internet cafés, adult arcades, amusement arcades, and children’s restaurants have fought the legislation.²⁵³ Internet cafés alone have been estimated to employ as many as 14,000 people who will now be unemployed.²⁵⁴ The Florida Arcade & Bingo Association has appealed in Broward County, so far unsuccessfully, the inclusion of arcades in the HB 155 legislation.²⁵⁵ So have trade associations for the restaurants, bowling alleys, skating rinks, etc., which also operate arcade style machines, sometimes using swipe cards. Companies such as Dave and Buster’s and Chuck E. Cheese, which feature arcade-style games for youngsters, may also be affected under the new legislation by restrictions on prize value and requirements that arcade games not be games of chance.²⁵⁶

Internet café operators have previously sought injunctions to prevent local government bans prior to the enactment of HB 155, particularly the unsuccessful fight against the ban in

²⁵⁶ Erin Sullivan, “Internet Café Law May Have Unintended Targets,” *The Tampa Bay Times*, May 20, 2013 <http://www.tampabay.com/news/business/Internet-cafe-law-may-have-unintended-targets/2121416>.

Broward County. More recently, two arcade operators in Broward County, Boardwalk Brothers, Inc. and Play It Again Fla. LLC, filed for an injunction to HB 155, claiming that the law is “arbitrary, irrational, not reasonably related to a legitimate governmental purpose, and void for vagueness”. This suit, filed in US District Court and naming Michael Satz, state attorney for Florida's 17th Judicial Circuit as defendant, saw the Seminole Tribe of Florida intervene as a defendant before U.S. District Judge James I. Cohn refused to grant the arcade plaintiffs an injunction against the law.²⁵⁷ Additional legal action is expected to be filed in Tallahassee on behalf of Internet café owners, gaming machine manufacturers, and software companies, according to persons involved in the industry.²⁵⁸ In addition, grass roots seniors groups, such as Seniors 4 Justice, are organizing in support of their local pastime, as well as legal teams from commercial restaurants with amusement arcades.²⁵⁹

Amusement arcade slots have long been a feature of many East Coast beach resorts and can easily be found in states which already have legalized casino gambling, such as New Jersey, as well as those which currently have not, such as New Hampshire.²⁶⁰ One primary issue affecting whether these types of establishments catering to children remain open in Florida is whether they increase the chance for kids to become gamblers when they reach adulthood. Many gambling opponents view youth arcades as a “slippery slope” leading directly to full-blown adult gambling behavior.

The bill clarified the illegality of “*maquinitas*,” gray market video gaming machines similar to arcade slots but also housed in gas stations, convenience stores, restaurants, cafeterias, and bars throughout the state. The new law caused a reversal of Miami mayor Tomás Regalado’s attempted policy initiative to regulate the *maquinitas* through municipal licensing and permit fees.²⁶¹ Apparently, Mayor Regalado’s efforts to regulate the *maquinitas* were not successful. Since adopting an ordinance more than two years ago requiring each establishment to register for a \$500 permit fee, not a single *maquinita* operator has applied for the license.²⁶² The passage of HB155 has emboldened local law enforcement authorities to take action against small-scale *maquinita* operations, which are numerous in Florida. While no one knows exactly how many

actually exist and what revenue they produce, Miami Police Chief Manuel Orosa estimates that there are more than 1,000 maquinitas active in his city alone, and each is non-compliant with the city ordinance.²⁶³

On June 4, 2013, the US District Judge James I. Cohn for the Southern District of Florida denied a motion by Broward County adult arcades Boardwalk Brothers Inc. and Play It Again FLA LLC for an injunction against HB 155. The arcade owners argued that the law was unconstitutionally vague and violated their First Amendment right of association. Among Judge Cohn's conclusions was that because gambling is a vice activity and can be banned altogether, "the State has a significant interest in proscribing the behavior regulated in the statute." The judge further found that "it is doubtful that patrons who unable to frequent the Plaintiff's commercial establishments will suffer any First Amendment harm." The judge also noted that the statute is not forcing the arcades out of business, just limiting the types of games offered.²⁶⁴

Although bingo for money is legal in Florida if operated by charitable organizations and veterans groups which qualify for 501(c) or 528 status, instant bingo games in the form of pull tabs (except for those sanctioned organizations) or electronic bingo in all forms are not sanctioned under Florida law.

Another prominent illegal gambling activity in Florida is *bolita*, a numbers game imported from Cuba in the 1920s. The name "bolita" literally means "little ball" in Spanish and refers to a lottery drawing which first became popular among Cuban immigrants in Ybor City, where originally players tossed a sack filled with numbered balls back and forth between them until the round was called and the last person holding the bag withdrew a single ball with the winning number. Bolita's peak popularity occurred in the Great Depression during the 1930s when it spread throughout the state. In 1938, Tampa featured approximately 125 bolita operations grossing as much as \$20,000 per day.²⁶⁵ The game spread with Cuban immigration to the north into New York and New Jersey, where "Spanish Raymond" Marquez built a bolita empire in the 1960s.²⁶⁶ Like all privately run numbers games in the US, bolita gambling has been sidelined by the evolution of state sponsored lottery operations over the past 40 years. However, the prospect of superior relative odds, zero taxes, and cohesive immigrant community traditions have preserved bolita gambling, which still competes with the regulated Florida Lottery, and the game remains popular today across the straits in Havana.

Other forms of illicit and unregulated gambling in Florida include electronic bingo, cock fighting and dog fighting, betting on sporting events, and Internet gambling. Pitting animals

²⁶⁶ Ibid.

against each other and wagering upon the outcome is an ancient human activity that is now so unacceptable to mainstream society that the practice, while still occurring frequently, is deeply underground and receives little public attention except for law-enforcement actions.

21. Conclusion

Gambling has evolved to become a major US industry, largely because it is popular and profitable – both for operators and for the states that tax and regulate it. All but two states (Hawaii and Utah) have some form of legalized gambling, although the size, scope, types, tax rates, and regulatory schemes vary by state. For reasons discussed in following chapters, the combination of consumer acceptance, technological advances (such as the Internet) and government desire for revenue will continue to cause further expansion. We return to the observation put forth by John Sowiński of No Casinos: “The solution to having too much of it is to have more of it.”

Expansion comes at a cost, both internally to the industry and externally to society. Expansion runs the risk of cannibalizing certain types of gambling – notably the pari-mutuel industry, which has long been in decline both nationally and in Florida – and it will sharpen the debate about how much is too much. Importantly, expansion will further place a focus on assessing the societal and personal costs associated with gambling; we discuss this in general terms in Chapter II (G) below.

C. The New US Frontier: Internet Gambling

1. Nationally

Internet gambling has become a reality in the US only within the past year. On December 23, 2011, the Department of Justice issues an opinion in response to inquiries from the Illinois and New York lotteries reversing its long-held position and declaring that the 1961 Wire Act applies only to sports betting. This reversal opened the door to state by state legislation to regulate Internet gambling and online lottery sales.

Since the beginning of 2012 three states have passed such enabling legislation and each one follows a different model. Delaware was the first state to pass enabling laws and will roll out Internet wagering through a platform controlled and maintained by the Delaware Lottery. The state’s three licensed racetrack casinos will offer branded websites offering most casino games and the lottery will offer Internet lotto sales. Nevada is the first state to actually regulate gambling operations via the Internet on April 30, 2013, as Station Casinos opened online operations through its partner, Ultimate Poker. As of May 14, 2013, UltimatePoker.com had

surpassed 1 million hands of online poker.²⁶⁷ New Jersey quickly followed Nevada into legalized Internet gambling, with Governor Chris Christie signing legislation only five days after Governor Brian Sandoval did.

At this time state legalized Internet wagering is available only to residents or visitors currently located within a state's borders, as verified by geo-location software. Interstate compacting is expected to follow suit similar to US lotteries constructing interstate compacts for multi-state lottery games (such as Powerball and Mega Millions). A summary of US legal Internet gambling jurisdictions is found in the following table. At least 10 states are considering enabling legislation in a variety of forms, including California, Pennsylvania, Michigan, New York, Illinois and Iowa.

Figure 31: Legal US jurisdictions for Internet gambling

State	Legalization Date	Operator	Games Offered	Implementation Date
Delaware	July 23, 2012	Delaware Lottery	Lottery Casino (some games)	September 30, 2013

The Internet has revolutionized a wide variety of US economic sectors over the past decade and a half as e-commerce has become firmly established as a major sales channel. One segment of the domestic economy where the Internet and mobile connectivity have notably not been major factors is in the field of gambling. Both commercial and tribal casinos in the US, as well as domestic lotteries find themselves in the same situation demographically. Their core player base is aging and not being fully replaced by a younger generation. In casinos this is particularly true of slot machine patrons. For lotteries it is most prevalent among weekly instant ticket customers. Moreover, both casinos and lotteries frequently evidence the 80/20 rule, or the "Pareto Principle," that 80 percent of revenue often is derived from 20 percent of the customer base. For both of these gambling industries, the prevalent demographic of the Internet user is under-represented in their own player base, thus the Internet and mobile channels constitute an opportunity for engaging future customers. Also, with Internet distribution channels, the breadth and frequency of play will often increase, thereby spreading the generation of revenue across a broader spectrum of the player base.

A strong majority of Americans use the Internet regularly. According to the Pew Research Center, as of December 2012, 81 percent of US residents use the Internet and 65

²⁶⁷ Dan Wetzel, "Ultimate Poker's legal online betting foray could be a game changer in the U.S.," Yahoo Sports, May 15, 2013 <http://sports.yahoo.com/news/spt--ultimate-poker-s-legal-online-betting-foray-may-be-a-game-changer-in-the-u-s---010335301.html>.

percent have broadband access.²⁶⁸ Regular and frequent Internet users demonstrate the following demographic traits: they are usually younger, better educated, more affluent, more likely to be working full time, and more likely to be earning more income than the population as a whole. Frequency of Internet usage tends to be consistently higher among younger demographic ranges. A nationwide Gallup Poll conducted in December 2008 found that Americans below the age of 50 spend the most time online: 62 percent of those under 30 spend more than one hour online per day, as do 54 percent of those people 30 or older but under the age of 50.²⁶⁹ A more recent Pew Post Election survey confirmed these demographic statistics and indicated that Internet usage is broadening among gender and racial demographics while remaining upscale in relation to income and educational demographics.²⁷⁰

Figure 32: Internet usage frequency by demographic group, 2012

Source: Pew Internet Post Election Survey, November 14 – December 9, 2012

Internet gambling also opens the door to new kinds of games not currently considered gambling, such as monetized social games and betting on the outcomes of peer-to-peer and massive multiplayer online games. Social games are generally played with others via a social

²⁷⁰ Pew Internet Post Election Survey, November 14 – December 9, 2012, Pew Internet & American Life Project, December 2012 [http://pewInternet.org/Trend-Data-\(Adults\)/Whos-Online.aspx](http://pewInternet.org/Trend-Data-(Adults)/Whos-Online.aspx).

network or on a social media platform. The potential size of this market is staggering. On October 4, 2012, Facebook reported that it had passed the 1 billion user threshold²⁷¹ and half of these users are estimated to play some type of social game.²⁷² The top five casino games played on Facebook are Double Down, Bingo Blitz, Best Casino, Slotomania, and Texas Hold'em. These five casino-style games on a single platform attract a total of 11,240,000 daily active users.²⁷³ Social casino sites throughout the United States attracted a total of 35.4 million monthly players in 2012.²⁷⁴

The proportion of people who play for money on a social gaming site is fractional, usually in the low single digits, but multiplied by the total number of players on the site, the revenue quickly adds up. Monetized social gaming is estimated to have produced \$1.6 billion in revenue globally with \$660 million being generated in North America.²⁷⁵

While leveraging the Internet can deliver a broader audience to commercial gambling operations, the 24/7 access from the comfort of one's own home clearly increases the opportunity for problem gambling issues. Multiple studies show a potentially higher rate of problem gambling incidence for Internet gambling compared to land-based gambling, while multiple competing studies show identical problem gambling rates for both online and "offline" gambling. The Florida Council on Compulsive Gambling survey conducted in 2011 documented problem gambling prevalence within the state's general population at 2.1 percent for lifetime occurrence and 1.2 percent for past-year occurrence.²⁷⁶ These rates are generally consistent with the prevalence of problem gambling within land based gambling, benchmarked at 2.3 percent in 2008 according to the American Gaming Association,²⁷⁷ but should be carefully monitored if Internet gambling ever becomes legal in Florida.

22. Internet Poker Evolution

Poker was first introduced to the US between 1810 and 1825 through New Orleans and originally developed from the German game *pochen* and its French derivative *poque*.²⁷⁸ This card game evolved to include draws and jackpots as it spread throughout the Mississippi valley and the American West during the second half of the 19th Century.²⁷⁹ By the middle of the 20th Century poker games had become part of American culture and a frequent feature in residences. Due to its long history and wide popularity poker had come to represent the quintessentially American monetized social game.²⁸⁰

While poker enjoyed tremendous popularity among casual and social gamblers in homes and social clubs, it was not a popular casino game. In 1970 there were less than 50 poker tables in the city of Las Vegas and less than 70 in the entire state of Nevada.²⁸¹ The reason for this low importance of poker as a casino game was its lack of profitability. Poker tables must be staffed with dealers and supplied with chips and amenities by the casino, rounds take a relatively long time but the game is played in competition with the other players and usually for small stakes with the casino only earning a rake of approximately one-tenth of the pot at the conclusion of each round. In 1970 it seemed certain that poker would remain a social game played for small stakes in private homes around den or basement card tables.

All that changed with the convergence of three sequential events: the establishment of the World Series of Poker, the advent of television coverage, and the development of the Internet. In 1970 the first official World Series of Poker (“WSOP”) was played at Binion’s Horseshoe in Las Vegas, a casino which at the time did not even have a poker room.²⁸² From humble beginnings this competition grew to include the most well-known poker players of the time and eventually featured a million dollar prize for the winner, prominently displayed in a glass case at Binion’s. In its second year the WSOP Jack Binion changed the tournament format from an election to a freeze-out competition²⁸³ where participants post an entry fee and losing players are eliminated until the winner takes all. As interest in the tournament grew, television coverage was initiated in 1973 by CBS Sports and commentary was provided by Jimmie “The Greek” Snyder, himself a participant in the 1969 forerunner of the WSOP. The game which was favored in this tournament was no-limit Texas hold’em, where the audience could watch the first three community cards dealt to the center of the table – the flop – and suspense would build along with the betting as the

²⁸³ Schwartz, p. 413.

fourth card – the turn – and the last community card – the river – were dealt. This format was much more attractive for television audiences than draw games where inscrutable “poker faces” were the only indicators as to what was going on in the player’s heads. As TV technology continued to evolve, by 2000 the television audience could also view players’ two hole cards via miniature cameras in the table surface which added even more suspense to the televised games.

The advent of Internet technology revolutionized poker tournaments by allowing huge numbers of players to qualify for tournaments through the Internet via satellite rounds. The initial WSOP competitions involved a dozen players in total. In 1982 the tournament drew 52 players and by 2000 there were 450 players.²⁸⁴ In 2003, the worldwide popularity of poker in general and the WSOP in particular exploded when an unknown amateur with a suitably relevant moniker, Chris Moneymaker, won a seat at the tournament through a \$40 satellite round on PokerStars and went on to beat out 838 other contestants and win \$2.5 million in the final round.²⁸⁵ One year later a total of 2,576 players contested for a \$5 million first prize. In 2006, the pinnacle of WSOP popularity, a total of 8,773 players participated,²⁸⁶ the vast majority entering the tournament through Internet satellite rounds.

This timely convergence of television and Internet technology had caused online poker to skyrocket in popularity over the early portion of the last decade. However, in 2006 Congress passed the Unlawful Internet Gambling Enforcement Act (“UIGEA”), which suppressed Internet wagering by making it illegal for payment processors to handle gaming transactions. Internet poker participation in the US crashed after passage of this legislation and many of the more reputable offshore operators, including Party Poker and 888.com, voluntarily withdrew from the US market. Despite UIGEA, a number of offshore sites continued to take bets from US players until April 15, 2011, now known in the industry as “Black Friday,” when the US Department of Justice entered indictments against Full Tilt, Absolute Poker, and Poker Stars and seized their assets and domain names.²⁸⁷ The indictments alleged fraud and in the case of Full Tilt the creation of a Ponzi scheme where player deposits were used to fund operations and salaries paid to celebrity player spokespersons. After the Black Friday indictments, US Internet poker participation truly plunged as players lost confidence in many offshore sites and withdrew their deposits. Some committed or professional players even established foreign residences in order to continue playing poker online.²⁸⁸

SECOND DRAFT - CONFIDENTIAL

After UIGEA, most major Internet poker operators turned their sights away from the US, a trend which accelerated after Black Friday, resulting in the development of a flourishing Internet poker in Europe. This market is dominated by Internet only operators based in offshore jurisdictions. It is also characterized by high volumes of players (liquidity), and intense competition among the top tier poker sites which results in low player retention, lucrative free play bonuses, celebrity player-sponsors, and due to all of the above, low operating profit margins. Since Black Friday, global Internet poker revenues have declined worldwide as the former boom continues to recede.

Figure 33: Internet poker revenues globally, Europe and US

Source: H2 Gambling Capital

However, this decline in the popularity of poker is expected to reverse dramatically in the next few years as Internet gambling becomes legal on a state by state basis in the US. On December 23, 2011, the US Department of Justice issued an opinion in response to a request by the New York and Illinois state lotteries, reversing their previous position held for more than a decade that the 1961 Wire Act prohibited Internet wagering. Since then three states have passed enabling legislation for Internet gambling in the US and all three follow different models. Nevada will offer poker only gambling through commercial providers licensed by the state. Delaware will offer most games currently featured at the three racetrack casinos licensed by the state through a central platform controlled by the lottery. New Jersey will allow Atlantic City's commercial casino operators to offer all games currently approved by the Division of Gaming Enforcement over the Internet utilizing licensed providers. In addition, at the time of this writing, California has multiple bills legalizing Internet poker before the legislature and other states, including Illinois, Pennsylvania, Mississippi, Iowa, and New York have considered various bills to legalize Internet wagering.

23. Lotteries Online

Following the Department of Justice opinion of December 23, 2011, reversing its long held position that the 1961 Wire Act barred state lotteries from participating in online gambling, 13 states have introduced legislation regarding some form of Internet gambling. Illinois and Georgia quickly implemented legislation permitting online lottery ticket sales and are the only two US state lotteries currently leveraging the Internet sales channel.

Currently, lotteries in New York, Minnesota, New Hampshire, North Dakota, and Virginia offer some form of online subscription for lotto tickets. The Delaware State Lottery will begin selling tickets online as well as offering most casino games through a lottery controlled platform in September, 2013. Massachusetts, the most successful lottery in the nation, commissioned a study last year to examine the issue of Internet sales and develop a strategy for implementation. Early this year Massachusetts introduced legislation authorizing tickets sales via the Internet. Maine has altered its gaming statute in response to the federal ruling, and Vermont has commissioned a study of the potential impact if Internet ticket sales were implemented.²⁸⁹

Florida has also introduced enabling legislation for Internet lottery sales. Senate Bill 266, sponsored by State Senator Gwen Margolis (D-Miami) and co-sponsored by Representative Joe Gibbons (D-Hallandale Beach) through HB 275, was filed on January 17, 2013, but never advanced and has since died.²⁹⁰ If passed, this bill would have authorized ticket sales over the Internet “via a subscription mechanism.”²⁹¹ In May 2013, Michigan, after defeating prohibitory legislation in 2012, announced that the Michigan Lottery will be offering online sales through a system titled “iLottery” as early as spring, 2014.²⁹²

24. Conclusion

The Internet offers great opportunities nationally and internationally for all gambling providers, be they commercial, tribal, state lottery, or illegal/non-regulated, to expand their reach to a new audience that is often younger and more affluent than their current customers. Internet access promises to take gambling beyond the casino floor and into the living rooms and bedrooms of Americans which opens a whole new range of opportunities as well as potential problems. For both the casino industry and state lotteries, Internet gambling and ticket sales represent the future of gaming, offering the means to broaden their appeal, widen their marketing

²⁹² “Michigan Lottery Eyeing Internet Sales Launch in 2014,” *The Inquisitor*, April 30, 2013 <http://www.inquisitr.com/654782/michigan-lottery-eyeing-Internet-sales-launch-in-2014>.

footprint and engage the next generation of players in order to replace aging player bases. At the same time, the increased convenience of Internet play also poses the issue of cannibalization of brick and mortar sales for all gambling providers, while 24/7 access to gambling in the privacy of one's home raises the specter of increased problem gambling.

The inability of the US Congress to debate and resolve the legality of Internet gambling left a vacuum over the past decade which was filled by offshore operators which now dominate a vibrant European Internet gambling market generating \$15 billion in 2012 and an expanding global industry estimated at \$34 billion last year.²⁹³ By 2015, Internet gambling is expected to represent 10 percent of all gambling revenue globally.²⁹⁴ Internet will likely continue to expand beyond the three states currently permitting the practice, absent passage of any federal legislation. A completely legalized US Internet gambling market would be estimated to generate \$7.1 billion after five years of operation. New York would be the largest market (\$1.02 billion), followed by California (\$984 million), Florida (\$786 million), Illinois (\$652 million), and New Jersey (\$570 million).²⁹⁵ Ranking as the third largest potential market in the US, Florida would need to carefully consider the pros and cons of Internet wagering and develop an effective strategy for addressing the issue as more and more states can be expected to pass enabling legislation in the future

D. Overview of Gambling Regulatory Schemes

A general description of gambling regulatory schemes, including: State-operated, consolidated agency oversight, multi-agency oversight, and the use of local and state commissions; authorizing and revocation mechanisms; taxation schemes.

In this section we review the structure of the Florida gaming regulatory agencies as well as those of a number of other states and also address how each state addresses the most critical points of regulation.

1. Overview of Florida's Regulatory Structures

Preliminarily, we observe that each state has its own "personality" with regard to gaming venue, laws, history of gaming, priorities, etc., but there are also common themes that often, but not always, shine through regardless of differences. It is these themes of regulation that can be very instructive. Practices repeated are often in place for a good reason – because they have been considered important in many locations over long periods. This is not to say that they should not

²⁹³ H2 Global Summary, H2 Gambling Capital, April 9, 2013.

²⁹⁴ Ibid.

²⁹⁵ US Regulated Internet Gaming Forecast, H2 Gambling Capital, April 9, 2013.

SECOND DRAFT - CONFIDENTIAL

change if circumstances warrant, but it is important to understand the primary principles of gaming regulation.

The overriding regulatory interest that permeates all effective legislative schemes is the recognized need to engender public confidence and trust in the integrity of the regulatory process and gambling operations. To this end, regulatory agencies are charged with the responsibility of ensuring that unsavory and nefarious influences are prohibited from infiltrating the authorized gambling industry. This mandate is especially important for an industry that historically has been susceptible to corrupt influences. In Spectrum's experience, the linchpin of effective regulation is a comprehensive licensing process designed to ferret out unsuitable persons and entities from participating in this highly lucrative industry. In order for the regulatory apparatus to succeed, it is imperative that licensure be limited to those persons and entities that are able to demonstrate their good character, honesty and integrity.

There are also significant differences in the regulatory structures formulated to accomplish this laudatory objective of effective oversight. Of course, states have regulatory structures that are designed to account for their particular population, location and statutory requirements. For example, in Ohio the location and even the owners of the casino locations were part of the referendum initiative that was approved by the voters in 2010.²⁹⁶ Thus, the regulatory structure did not have a component for *selecting* an applicant, like Massachusetts, Maryland or Kansas. But the referendum did have a component for *evaluating* an applicant like virtually all states, which was tied to an affirmative showing of integrity and financial suitability.

In another example, many states, such as Pennsylvania, Kansas and Maryland, have a requirement for renewal of licenses, including the licenses of owners of casinos. Other states, such as Nevada and (at this time) New Jersey, have no such requirement, though both have a "call forward" provision which requires companies to provide additional information under certain conditions, with some discretion allowed by the persons in authority.

Many regulatory structures have been created and are almost unchanged from the original enabling legislation, some have had minor changes, and others have been radically altered since first implemented. Sometimes the length of time that a regulatory structure has been in existence has made a significant difference as to whether there have been changes. For example, one might expect New Jersey and Nevada to have made some changes to their regulatory structures because of how long the gaming industry has been operating in those states. Indeed, New Jersey has experienced radical changes just in the last few years to their regulatory agencies: the Casino Control Commission and the Division of Gaming Enforcement.²⁹⁷ On the other hand, Nevada has not had significant regulatory changes in many years.

²⁹⁶ Ohio Ballot Board Final Language, Issue 3, 2009, p 9
http://www.sos.state.oh.us/sos/upload/publications/election/Issues_09.pdf (accessed May 27, 2013).

²⁹⁷ New Jersey Senate Bill S12, signed into law on February 1, 2011,
<http://openstates.org/nj/bills/214/S12/documents/NJD00021986/> (accessed May 26, 2013).

Other regulatory structures have changed a moderate amount to accommodate the growth of their gaming industry but much of the regulatory apparatus has remained. For example, Iowa has changed primarily from a riverboat gambling state with considerable pari-mutuel gaming to a state that has mostly land-based casinos. Their regulatory structure has primarily expanded but not changed in form to take these changes into account.²⁹⁸ Maryland has reconstituted its Maryland Lottery to what is now the Maryland Lottery and Gaming Control Commission and Maryland Lottery and Gaming Control Agency and it now regulates casinos with slots and table games. Kansas at one time had a Racing Commission but now that agency has evolved into the Racing and Gaming Commission. Pari-mutuel gaming in Kansas has, at least for now, ceased.

a. Florida Regulation of Pari-Mutuel and Slot Machine Facilities

Chapter 849, Florida Statutes, generally prohibits the conduct of commercial gambling, unless expressly authorized by law. As an exception to the prohibitions in Chapter 849, gaming is permitted at licensed pari-mutuel wagering tracks and frontons, pursuant to Chapter 550, F.S., and also by the state operated lottery, pursuant to Chapter 24, F.S. There are also Native American casinos in Florida and charitable bingo games. Free-standing, commercial casinos and slot parlors are not authorized in the state. The state earlier this year enacted amendments to Chapter 849 that prohibit the operation of Internet/sweepstakes cafes.

Pari-mutuel wagering is authorized for horse racing, harness horse racing, quarter horse racing, greyhound racing, jai alai games and cardroom poker games. These forms of gaming activity are permissible only at a licensed pari-mutuel facility. In addition, slot machine gaming at pari-mutuel facilities is authorized in Broward and Miami-Dade counties. There are 28 pari-mutuel facilities located in Florida (plus inter-track at Ocala).

Chapter 550, F.S., provides for a comprehensive regulatory system with specific licensing and other regulatory requirements for the pari-mutuel industry. The Division of Pari-Mutuel Wagering (“PMW”) is the regulatory agency exclusively entrusted with oversight responsibility for these various authorized forms of gaming activity at pari-mutuel facilities. The PMW is a program area of the Department of Business and Professional Regulation within the Executive Branch of Florida’s government. (Annual Report of Division, 2011-2012) As detailed below, the Florida regulatory design empowers the regulatory agency with broad oversight and licensing responsibilities over all participants in the pari-mutuel gaming industry.

The Division has also been designated by the Florida Legislature as the State Compliance Agency with the authority to fulfill the state’s oversight responsibilities in accordance with the Gaming Compact between the Seminole Tribe of Florida and the State. (Section 285.710, Florida Statutes.) The Seminole Tribe operates seven casinos in Broward, Hillsborough, Collier, Glades, and Hendry counties.

²⁹⁸ See further discussion of Iowa’s regulatory structure below.

SECOND DRAFT - CONFIDENTIAL

Notably, PMW has no authority to regulate other forms of gaming activity such as lottery, bingo or so-called cruises to nowhere. The Florida Lottery regulates lottery operations. Counties that permit bingo have their own individual ordinances which govern their operation. We also note that the Miccosukee Tribe does not have a gaming compact with the State and therefore operates exclusively under federal jurisdiction as a Class II gaming entity.

The Director of PMW is Leon M. Biegalski. The Office of the Director is responsible for such areas as budget planning; rule promulgation; policy development; legislative analysis of proposed legislation; strategic planning; and enforcement of administrative actions. There are six functional units which operate under the management of the Office of the Director: Auditing; Investigations; Operations; Slot Operations; Revenue and Financial Analysis; and State Compliance Agency.

The Office of Investigations is responsible for conducting background investigations of applicants for permits and occupational licenses and the enforcement and investigation of suspected violations that occur in pari-mutuel wagering, cardroom and slot machine gaming facilities. PMW says typical investigative cases include falsified license applications, criminal history checks, animal cruelty, and the use of performance altering medications and/or illegal substances during races. The Office of Investigations also conducts inspections of all new pari-mutuel, cardroom and slot machine facilities prior to opening and all facilities are routinely monitored by investigators to ensure compliance with the gaming statute and applicable regulations.

The Office of Auditing performs annual compliance audits to verify that statutory accounting procedures are utilized and to identify any fraudulent activity. The auditors reconcile pari-mutuel wagering pools for more than 80,000 races and games annually to ensure integrity in the wagering activity.

The Office of Operations is responsible for ensuring that the day-to-day operation of races and games are conducted appropriately, consistent with the statute and regulations. It is also responsible for administering the licensing process. All individuals and businesses who work or conduct business at a racetrack, fronton, cardroom or slot machine facility or who have access to money wagered, restricted areas and/or racing animals, are required to obtain an occupational license issued by PMW. Slot facility occupations requiring a license include, but are not limited to: slot operations managers; slot shift managers; floor supervisors; slot tech supervisors; slot technicians; slot attendants; security and surveillance personnel; count room and cage personnel; information systems managers; systems analyst supervisors; operations analyst supervisors; and revenue audit managers and supervisors.

Every racing and cardroom occupational license applicant is fingerprinted, and then re-fingerprinted at the time of license renewal five years after initial licensure. Every slot machine occupational license applicant is fingerprinted and then again every three years at renewal. Slot machine licensees pay an annual license fee of \$2 million and a regulator fee of \$250,000.

SECOND DRAFT - CONFIDENTIAL

A slot machine business entity occupational license for slot machine management companies, service companies, manufacturers, vendors, distributors and testing laboratories is \$1,000 for a one-year license and \$2,000 for a three-year license. All officers, directors and shareholders with 5 percent or more interest in the business entity are required to be fingerprinted. Those persons who need to have access to the slot machine facility are also required to obtain a Slot Machine Business Employee Occupational License.

Annual cardroom operator licenses are issued to permit holders who operate cardrooms, with a fee of \$1,000 per table. Cardroom business licenses are issued to any cardroom distributor, management company, supplier or vendor conducting business with a cardroom. In addition, cardroom employee occupational licenses are required for all cardroom employees except food service, security, maintenance and mutuel teller employees. Possession of this license does not allow access to any restricted area other than the cardroom. A pari-mutuel/cardroom supervisor license is necessary for supervisors of food service, security, maintenance and mutuel teller employees who require access to restricted areas of the track as well as the cardroom. Finally, a pari-mutuel/cardroom employee license is needed for food service, security, maintenance and mutuel teller employees who require access to restricted areas of the track as well as the cardroom.

The Office of Slot Operations oversees the pari-mutuel facilities that have slot machine gaming. A key element of that regulatory oversight is to ensure that every slot machine has been certified by an independent testing laboratory. The Office of Revenue and Financial Analysis is responsible for safeguarding and accounting for state revenues derived from authorized pari-mutuel gaming activity.

The State Compliance Agency conducts inspections of Indian gaming facilities.

Though it appears PMW addresses most areas of the regulatory process we note that full commercial casinos are not yet present in Florida, and the state's law and policy has not, as of yet, been designed to encompass all regulatory aspects of a casino gaming regulatory agency. Additional or more in-depth regulatory processes may be needed when and if commercial casinos are implemented.

Division Application Requirements

The following are the filing requirements of the Division:²⁹⁹

- **LICENSE TERM:** Florida Slot Machine Business Licenses are valid for the fiscal year (three-year licenses are also available). The application fee is \$1,000 for a one-year license, \$2,000 for a three-year license.
- **OFFICERS AND DIRECTORS:** No license is issued. All Officers, Directors, and Shareholders of 5 percent or more interest in the business entity who do not need

²⁹⁹ Filing requirements provided by PMW.

SECOND DRAFT - CONFIDENTIAL

access to a slot machine facility in Florida, must submit a fingerprint card and the \$40.50 fingerprint processing fee upon submission of the Slot Machine Business Entity Occupational License Application, and an Authorization for Release of Information form must be completed. Any Officer, Director, or Shareholder of five percent or more interest of a business entity who needs access to a slot machine facility in Florida, must obtain a Slot Machine Business Employee Occupational License. Officer/director/ shareholder(s) must submit fingerprint cards and pay \$40.50 fingerprint fee the first year and \$16.50 every three years thereafter.

- An Authorization for Release of Information form must be completed for the business.

NOTE: Any business employee who needs access to a slot machine facility in Florida must obtain a Slot Machine Business Employee Occupational License.

The following is a detailed list of application requirements for a Slot Machine Business Employee license:

- An Individual Slot Machine Occupational License Application form must be completed.
- LICENSE TERM: Florida Slot Machine Business Licenses are valid for the fiscal year. The application fee is \$50 for a one-year license, \$100 for a three-year license, plus a \$40.50 fingerprint processing fee. An Authorization for Release of Information form must be completed for each employee. Applicants for Slot Machine licensing must be 21 years of age or older. Applicants must submit his/her fingerprints for a criminal history background check and pay the \$40.50 fingerprint processing fee when submitting an initial application. Every three years after the initial fingerprint submission, upon renewal, the applicant must pay \$16.50,

The disclosure forms required for natural persons require disclosure of prior license and criminal history information among other things. Though the disclosure requirements are substantial the forms that are used by PMW do not include a document on the order of the multi-jurisdictional disclosure form provided by the International Association of Gaming Regulators,³⁰⁰ which is utilized by many casino gaming regulatory agencies. While this specific form is not essential to the process the disclosure of information that is required on that form is critical to the process of investigations.

Some specific information such as a financial net worth statement for natural person qualifiers is not required by the forms now utilized by PMW.

³⁰⁰ The multi-jurisdictional form is available online at several locations, including: <http://iagr.org/wp-content/uploads/Multi-Jurisdictional-Application.pdf> (accessed May 28, 2013).

Additional Functions of PMW

In addition to these functions of a typical gaming regulatory agency for slot machine facilities, PMW also has comparable responsibilities for pari-mutuel wagering. The regulation of pari-mutuel wagering also includes many other functions such as the collection of urine and blood samples. PMW utilizes a racing laboratory under contract that collected over 86,000 samples in FY 2012.

Florida thus has already adopted a “consolidated regulatory agency” model in which one agency addresses almost all the regulatory functions, including pari-mutuel wagering. (Later in this report we will review a number of other states’ regulatory agencies and address the best practices of regulatory models.)

Changes to the Division because of Slot Machine Licensing

The absorption by PMW of the licensing function has significantly added to its staff. Before the implementation of slot machine licensing the agency had 62 full-time employees. In FY 2013 there were 115 appropriated employees, 50 of which were dedicated to slot machine licensing. Four full-time-equivalent positions were added for oversight of the compact between the State and the Seminole Tribe. There would be significantly more staff added if full casinos were implemented.

Even with this increase in the PMW budget it is apparent that the agency is still heavily dedicated, in staff, to the regulation of pari-mutuel operations rather than slot operations, even though the State’s revenue comes by this time primarily from the operation of the slot machine operations. This is due to the numbers of facilities – 28 pari-mutuel operations vs. six slot operations.

b. Lottery

The Florida Lottery requires submission of a company application form and a host of other requirements for approval to be a lottery retailer.³⁰¹ The application requires identification of the persons associated with the company who have a 10 percent holding and the identification of any criminal record for those persons. The disclosure form also requires a short explanation of the business operation.

Retailers must agree to a seven-page contract that addresses Public Entity Crime and the maintaining of certain bank accounts. Record-keeping and access to records by the Lottery is also required. The following is a description of the vendor registration process provided by the Lottery:

“The Florida Lottery uses MyFloridaMarketPlace (the State of Florida's eProcurement system) which includes a statewide enterprise on-line vendor registration process. This

³⁰¹Florida Lottery <http://flalottery.com/howToApply.do> (accessed May 24, 2013).

system is designed to streamline interactions between vendors and state government entities that purchase goods and services, and provides a user-friendly Internet portal where vendors can register, receive information on upcoming bids, post information on products and services, and receive purchase orders electronically.

“Section 24.103(6), Florida Statutes defines a “Vendor” as “a person who provides or proposes to provide goods or services to the department, but does not include an employee of the department, a retailer, or a state agency.”³⁰²

c. Charitable Bingo

Section 849.0931 of the Florida Statutes authorizes the conduct, permitted uses of proceeds and limitations of bingo games by “charitable organizations.” These are defined as charitable, non-profit and veterans' organizations engaged in charitable, civic, community, benevolent, efforts or scholastic works and other similar activities. All charitable organizations must be qualified for exemption from federal income tax as an exempt organization under the provisions of section 501(c) of the Internal Revenue Code.

The statute mandates that all proceeds resulting from the conduct of the bingo games are donated to charitable organizations, less actual business expenses for the operation, conduct and playing of bingo. The statute strictly prohibits the net proceeds from bingo games from being used for any other purpose.

Section 849.0931, Florida Statutes (1993), contains various other provisions intended to assure that the primary benefactors of the authorized bingo games are actually the charitable, non-profit and veterans' organizations, and not private persons. These include requirements that the operators must be bona fide members of the organization conducting the bingo game, must not be compensated for the operation of the bingo game, and must be residents of the community where the organization is located. The protective statutory provisions also include requirements that the property upon which the bingo games are held must either be owned by the worthy organizations or leased by worthy organizations for not less than one year, provided that the rent is not unreasonable for the location.³⁰³

Bingo is not regulated by the State. However, municipalities and/or counties that permit bingo have their own local ordinances that govern its operation. Most municipalities require a business tax license, or occupational license, to conduct bingo. Some require a special exemption waiver for that activity (bingo) in order to qualify for a business tax license. The licenses are issued annually and require copies of IRS financial statements.

d. Native American Casinos

The gaming compact between the Seminole Tribe and the State (“Seminole Compact” or “Compact”) was executed by the Governor on April 27, 2010 and ratified by the US Department of the Interior on July 7, 2010.³⁰⁴ The Seminole Compact has a term of 20 years, expiring on July 31, 2030,³⁰⁵ although the expiration for house-banked card games (including blackjack, chemin de fer and baccarat) expires July 31, 2015, unless renewed.

The Seminole Compact authorized covers games at seven locations and also requires the tribe to regulate its casinos under specific internal control requirements.³⁰⁶ The Compact names the Seminole Tribal Gaming Commission (“Gaming Commission”) as the tribal governmental agency that has the authority to carry out the Tribe’s regulatory and oversight responsibilities.³⁰⁷ The Compact also provides for the monitoring of the tribal casinos by the State.³⁰⁸ Licensing is also addressed in the Compact.³⁰⁹

The Gaming Commission has established a regulatory structure that Spectrum believes is thorough and substantial. Ed Jenkins is Director of Compliance and Regulations for Gaming and has significant experience with the FBI and with the gaming industry. He indicates he has worked for the tribe since 2001 and has established a regulatory agency which he indicates is independent and capable. Perhaps an example of this independence is the requirement that surveillance departments within the casinos are required to report to the Gaming Commission and not to operations.

The surveillance department is critical to internal controls because it is designed to be the eyes and ears to any crime that may be occurring at the casino floor. It is the last line of defense against crimes committed by any patron or employee, including management. In Spectrum’s experience, often casino management will balk at providing sufficient staff to the department and argue against creating a reporting line which establishes a point of view which is free from influence by casino management. Spectrum believes a reporting line that goes to casino operations leaves a casino vulnerable to a host of crimes, including collusion at the highest levels.

The fact that the Gaming Commission requires this independence is one sign that regulatory requirements are being taken seriously. There are other signs as well. Gaming Commission staff is present at the casinos 24 hours a day, seven days a week. The license

³⁰⁴ Department of the Interior News Release July 7, 2010.

³⁰⁵ Seminole Compact, p 49

³⁰⁶ Ibid., p. 13 and 14.

³⁰⁷ Ibid., p. 3 and 23.

³⁰⁸ Ibid., p. 25.

³⁰⁹ Ibid., p. 31.

process, including the licensing or registration of all employees, seems significant (though Spectrum notes there is no renewal to a license).³¹⁰ The fact that someone of significant experience such as Ed Jenkins was hired is another indication of the significance that the Seminole Tribe has placed on regulation. It is also important that Jenkins's reporting line appears also to be independent from casino management influence.

25.Regulation in Other States

Spectrum reviewed and analyzed gaming laws and interviewed representatives from several other states. In addition, we reviewed the Florida Senate interim report of October 2010, *Review of Casino Gaming in Other States*.³¹¹ Based on our experience working for, with, and studying, state regulatory agencies across the country, we selected several gaming commissions for discussion in this report that we believe would be insightful into various regulatory models.

a. Introduction: Establishment of Standards

All states and many foreign jurisdictions require companies to apply to be a casino operator, and require companies to show qualification in such areas as good character, honesty, integrity, the absence of a criminal record, and financial stability. There are variations in the extent to which persons associated with the company and associated companies must file and establish these standards. Most, if not all, states that have implemented casino gaming, or are in the process of doing so, such as Massachusetts, Maryland, Kansas and Ohio, require that parent companies as well as all those natural persons with an ownership interest beyond a certain percent (5 percent is often used) to file and establish these qualifications. In addition, those officers, board members and executives deemed to be qualifiers due to their prominence in the company must demonstrate these qualifications. Since these associated companies and natural persons can have an influence over the casino operator it is incumbent upon a state to require the establishment of such standards.

The selection of casino operators is the starting point of establishing public trust in the casino industry as one of integrity. It is critical that this step be completed carefully and thoroughly. Through this process the state is not only establishing that the gaming industry is one of integrity, but that the selection of who will be a casino operator has been done with integrity by the state. In cases where the selection process was called into question (the Pennsylvania grand jury investigation has been addressed in the section of this report on Effective Regulation: Trends and Best Practices in the Governance and Regulation of Gambling and is an example of a

³¹⁰ Phone interview with Ed Jenkins May 17, 2013. Mr. Jenkins did note, however that if an employee changes positions there is an additional investigation.

³¹¹ Florida Senate, *Review of Casino Gaming in Other States*, October 2010.
<http://www.flsenate.gov/Committees/InterimReports/2011/2011-133ri.pdf>.

selection process called into question), the expense to the state of re-establishing that trust can be enormous.

b. Bid Process or Non-Competitive Application

Beyond requiring of the qualification standards noted above, licensing decisions depend on basic policy: The state must decide how and in what way it wishes to limit the numbers of operating casinos, or whether unlimited numbers of casinos may be issued. There are two primary methods for awarding licenses: competitive bidding and non-competitive applications. The former process occurs in situations where there are a finite number of licenses permitted in a particular region, while the latter method is utilized in instances where an infinite number of licensees are permitted by law. For both methods, there are still essential qualification requirements relating to a person's and an entity's showing of good character, honesty and integrity.

If a state determines the demand is great enough, an unlimited numbers of casinos may be appropriate, but the state must address if that level of competition would potentially saturate the market and negatively affect the financial viability of the businesses involved. Nevada allows unlimited numbers of casinos in unlimited locations; all other states have some limitations.

Limitation to a specific area of the state can create a destination area. For example, New Jersey's requirement that casinos be located in Atlantic City was intended to create just such an area. States such as Pennsylvania, Maryland, Kansas and Massachusetts limit the number and types of casinos that are permitted and their location. Within those limits these states required a competitive bid process that required applicants to show the value of their application in such areas as economic development and job creation in the area.

c. Regulatory Structures Consolidated or Separated Oversight

Though generalizations can be made about regulatory models there are no two states that have regulatory agencies which are truly comparable in all respects. There are simply too many unique forums, too many different types of gaming venues, and too many unique legal structures in every state. The states which are addressed below, while not intended to be a complete survey of every state, are very illustrative of both the uniqueness of different states' regulatory structures and their similarities:

Massachusetts

The Massachusetts Gaming Commission ("MGC"), which has begun the process of awarding four casino licenses, was created by law in November 2011. That law provided for

commercial casinos in the state, created a provision which could allow for an Indian casino, and brought the pari-mutuel industry under the auspices of the MGC.³¹²

This law also created one agency, whose five members serve full-time, and which consolidated responsibilities and authorities for investigations, prosecution of violations, policy formulation and decision making. With the exception of the Massachusetts Lottery, the MGC has wide reaching purview over gaming matters.

Thus the MGC is an example of an agency which has consolidated oversight. An important part of this consolidation is the Investigation and Enforcement Bureau (“IEB”), the “primary enforcement agent for regulatory matters.”³¹³ The IEB has numerous responsibilities, including the authority to conduct or limit investigations,³¹⁴ the decision on certain license matters and the holding of relevant hearings.³¹⁵ The IEB is a law enforcement agency and works directly with and will include members of the Massachusetts State Police. Because of its designation as a law enforcement agency it can request fingerprint criminal records checks directly from the FBI. The Massachusetts Expanded Gaming Act takes measures to assure the independence of the IEB’s investigations, specifying that the commission “shall not place any restriction upon the bureau’s ability to investigate or prosecute violations of this chapter or the regulations adopted by the commission.”³¹⁶

In many states, there are agencies or bureaus that have the responsibilities of the IEB but which are separate from the gaming commission/decision-making authority. As will be discussed later, some of these agencies are part of or connected to the State Police and many times they report to the Attorney General of the state. In Massachusetts the IEB reports to the MGC, which has ultimate authority over license decisions and policy matters. And the IEB is only one of a wide range of consolidated responsibilities under the auspices of the MGC.

Another consolidation that has taken place in Massachusetts is the fiscal authority and responsibility which has been given to the MGC. The MGC is the trustee for the many funds created by the Expanded Gaming Act and for all revenue collected by from the commercial casinos.³¹⁷ In many other states trustee responsibilities are under the authority of the State Treasurer.

Still another responsibility under the MGC is that of the Racing Commission. The Racing Commission was a separate agency until passage of the Expanded Gaming Act, but now is under

³¹² Massachusetts Expanded Gaming Act, Chapter 194 of the Acts of 2011
<http://massgaming.com/about/expanded-gaming-act/> (accessed May 28, 2013).

³¹³ Ibid, Section 6. Although the IEB is part of the MGC it is also required to work in conjunction with the Attorney General’s Office on criminal matters, pursuant to Section 6.

³¹⁴ Ibid., Section 12 b.

³¹⁵ Ibid., Sections 30 and 31.

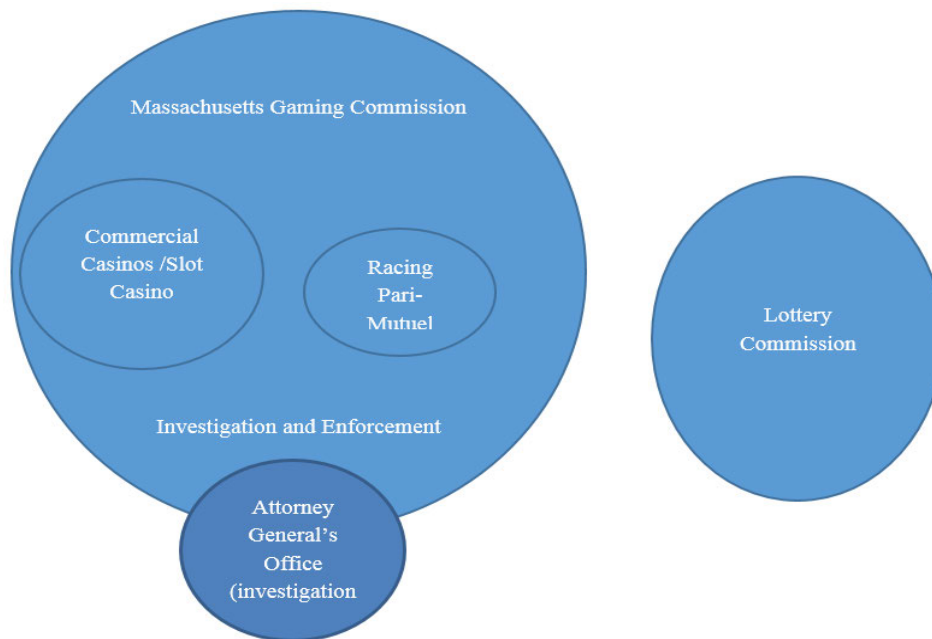

³¹⁶ Ibid., Section 34.

³¹⁷ Ibid., Section 4

the authority of the MGC. Thus the MGC is a host racing commission and an off-track betting commission and also has responsibilities over simulcasting.³¹⁸ Despite this, the MGC is primarily a gaming commission, with the majority of its resources and staff devoted to casino gaming.

In Massachusetts, the extensive responsibilities of the MGC can be represented in chart form, as indicated below. All functions, relating to gaming, with the exception of the lottery, are encompassed under the purview of the MGC, although the Attorney General also will have investigative authority into casino criminal activities.

Figure 34: Massachusetts gaming regulatory structure

Source: Massachusetts state agencies, Spectrum Gaming Group

Ohio

The State of Ohio is a contrast to Massachusetts in that there are several agencies involved in the regulation of gaming. The Ohio Casino Control Commission (“OCCC”) has the primary responsibility for regulating the four commercial casinos but other agencies are involved as well. The OCCC is comprised of seven members who serve as part-time officials.³¹⁹ The Ohio Bureau of Criminal Identification is involved in the license application process as the agency responsible for receiving reports from the FBI.³²⁰ The Division of Taxation is responsible for

³¹⁸ Ibid., Section 7

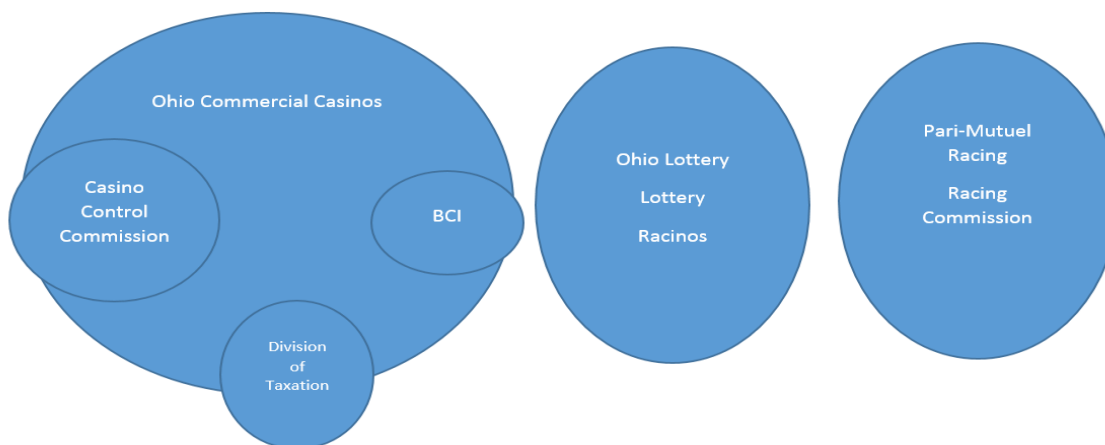

³¹⁹ Ohio Revised Codes Chapter 3772 <http://codes.ohio.gov/orc/3772.02> (accessed May 25, 2013).

³²⁰ Ibid., section 3772.07.

collection of the gaming revenue.³²¹ The Ohio Lottery is a separate agency that oversees the traditional lottery as well as racetrack VLTs. The Ohio State Racing Commission oversees Pari-mutuel gaming and Racing.

This separation of responsibilities is depicted in the following diagram:

Figure 35: Ohio gaming regulatory structure

Source: Ohio state agencies, Spectrum Gaming Group

Maryland

In Maryland a 2012 referendum approved table games at the existing slots casinos.³²² The change re-constituted the State Lottery as the State Lottery and Gaming Control Agency (“LGCA”).³²³ This agency now has regulatory responsibility and authority over the commercial casino industry as well as the Lottery. The change resulted in the addition, at one time, of 44 employees for the agency to handle the added responsibilities of table games.³²⁴ Maryland’s gaming industry evolved from the lottery and the regulatory agency has evolved to handle the significantly greater responsibilities of a gaming agency as well as the lottery program.

SECOND DRAFT - CONFIDENTIAL

There is also a separate Racing Commission in Maryland within the Department of Labor, Licensing and Regulation which oversees the pari-mutuel industry. Maryland's gaming structure is depicted below.

Figure 36: Maryland gaming regulatory structure

Source: Maryland state agencies, Spectrum Gaming Group

New Jersey

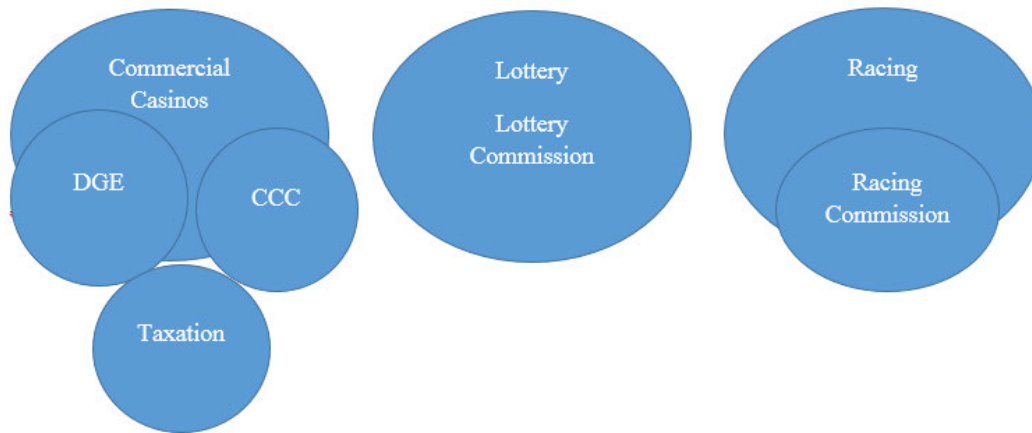

Until recently, the New Jersey Casino Control Commission was the agency responsible for the day-to-day oversight of operations, internal controls, regulations, licensing, financial analysis and auditing. The Division of Gaming Enforcement was responsible for investigations and enforcement. Those responsibilities have shifted and now the Division of Gaming Enforcement has more responsibilities in auditing, licensing and financial analysis. Much of the day-to-day oversight of operations and licensing requirements has been eliminated.³²⁵ The Division of Taxation took responsibility for the collection of several taxes previously collected by the Casino Control Commission, including the gross revenue tax.³²⁶

In New Jersey, the Lottery is regulated by a separate Lottery Commission and Racing is regulated by a separate Racing Commission.

Pennsylvania

Pennsylvania's dominant regulatory agency is the Pennsylvania Gaming Control Board ("PGCB"). The state has confronted issues regarding its regulatory structure, as a grand jury investigation and report cited initial structural weaknesses, which are useful for instructional purposes.³²⁷ That grand jury report is dealt with in significant detail later in this report.

Some of the changes that were implemented by the PGCB, such as the creation of an independent reporting line for the Bureau of Investigations and Enforcement ("BIE"), are valuable in illustrating the priorities that should exist for any regulatory agency. These points are further discussed in our summary portion below. Since the grand jury report there have been changes to the PGCB and the only link between the BIE and the PGCB now is for administrative functions.

Although the Pennsylvania statutes require approval by one of the two racing commissions (Horse or Harness) for a Category 1 (racino) license, as a practical matter the PGCB oversees and takes major responsibility for the regulation of gaming operations at racinos. The PGCB is fully responsible for the non-racino casinos in the state.

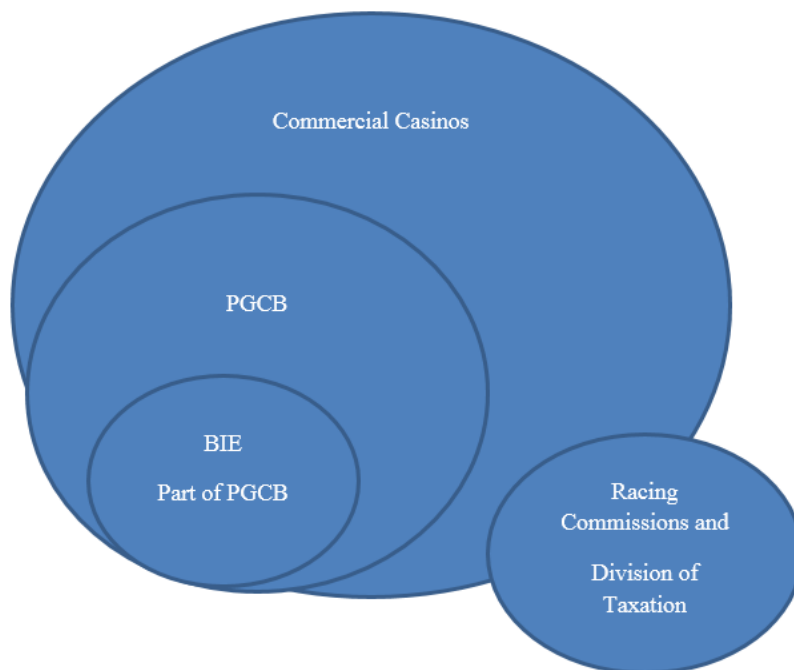

The PGCB is not a law enforcement agency but it works closely with the State Police in its investigations. The Department of Revenue is the trustee for the gaming revenue³²⁸ but the

³²⁷ Donald Gilliland, "Pennsylvania Gaming Control Board riddled with culture of 'noncriminal misconduct,' grand jury report says," *The Patriot-News*, June 12, 2011 http://www.pennlive.com/midstate/index.ssf/2011/06/grand_jury_report_describes_cu.html.

³²⁸ Pennsylvania Statutes Title 4 Chapter 14.

PGCB oversees the internal controls and the day-to-day operations of the casinos. The Pennsylvania model is illustrated below.

Figure 38: Pennsylvania gaming regulatory structure

Source: Pennsylvania state agencies, Spectrum Gaming Group

Kansas

Kansas has a unique organizational structure which involves two primary agencies. The Kansas Lottery technically owns the games in the casinos and the revenue that comes from those games.³²⁹ The managers of the casino operations own the facilities and are “paid a fee.”³³⁰ Though this is the legal wording in the Kansas Expanded Lottery Act, for practical purposes there are mainly only subtle differences in the collection of taxes from other states.

The Kansas Lottery, however, is responsible for the gaming revenue and conducts a regular reconciliation. A daily reconciliation through electronic means is done on slot revenue and a monthly reconciliation is done of the table game revenue.³³¹ The Kansas Lottery is also responsible for the lottery program in the state.

³²⁹ Kansas Expanded Lottery Act, for example New Sec. 3(a) indicates: “The Kansas Lottery may operate one lottery gaming facility in each gaming zone.”
http://krgc.ks.gov/images/stories/pdf/Statutes_and_Regulations/kansas_expanded_lottery_act.pdf (accessed May 25, 2013).

³³⁰ Ibid., New Sec. 35.

³³¹ Ibid.

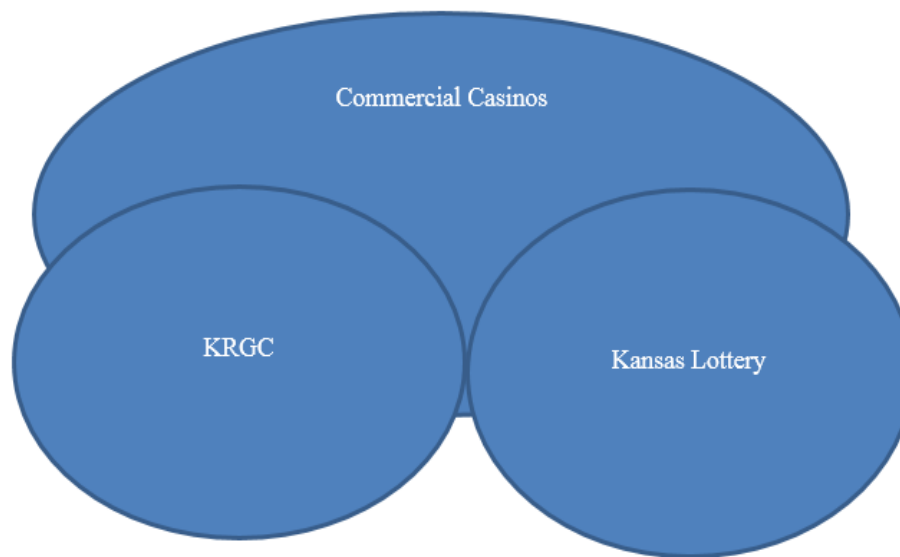

SECOND DRAFT - CONFIDENTIAL

It is the Kansas Racing and Gaming Commission (“KRGC”) that performs the bulk of the typical regulatory functions over the casinos, including oversight of casino operations, investigations and licensing. The KRGC also performs audits on casino revenue. This is an acknowledged though minor overlap of functions between the two agencies, but this redundancy is not considered a bad thing. According to representatives from both agencies, the system works well and helps to create a needed assurance of integrity.

Pari-mutuel gaming has become inactive in Kansas, without any performances since 2008.³³² Thus the KRGC’s focus is on casino gaming.

The Kansas model is depicted below:

Figure 39: Kansas gaming regulatory structure

Source: Kansas state agencies, Spectrum Gaming Group

Iowa

Iowa has a primary agency that regulates the 18 commercial casinos in the state but other agencies are utilized in more minor roles. The Iowa Racing and Gaming Commission (“IRGC”) performs most typical functions including licensing and the oversight of daily operations. Employees and gaming related companies are licensed. Investigations, however, are primarily carried out by the Department of Criminal Investigations (“DCI”). The DCI is also present at each casino and play a major role in investigations of criminal activities and enforcement.³³³

³³² Interview with representative of the KRGC.

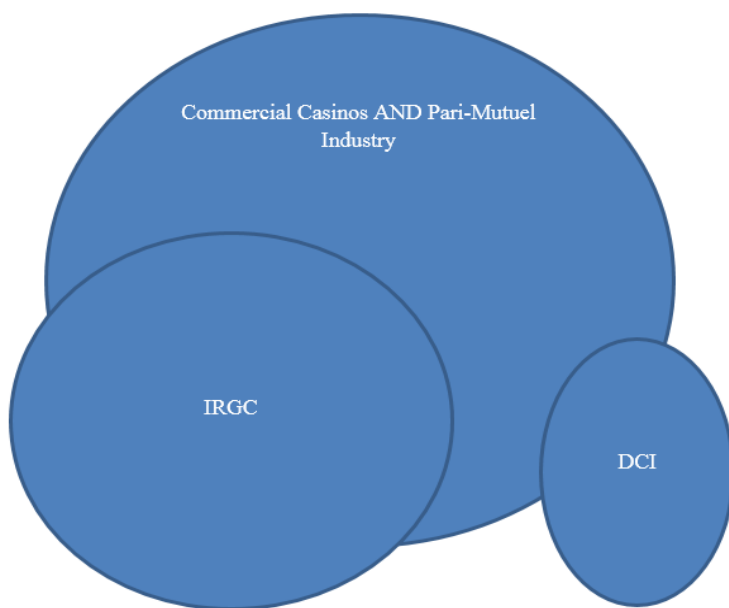

³³³ Gathered from Interview with representative of the Iowa Racing and Gaming Commission 5-20-2013.

The Department of Revenue is the trustee for the gaming revenue though the IRGC and takes responsibility for assuring the internal controls are followed and for auditing.³³⁴

The IRGC has a parallel with the Florida PMW in that it is also responsible for pari-mutuel wagering in the state. The IRGC is responsible for the presently operating pari-mutuel facilities of one horse track and two dog tracks in the state. Though this agency does have pari-mutuel wagering regulatory responsibilities there are also considerable differences with the Florida PMW. The Iowa pari-mutuel industry has significantly fewer facilities than Florida and there is no requirement to limit casino gaming in pari-mutuel facilities.

The organization of the agencies involved in Iowa is depicted below:

Figure 40: Iowa gaming regulatory structure

Source: Iowa state agencies, Spectrum Gaming Group

d. Regulatory Oversight Critical Functions

Regulatory agencies that oversee commercial casinos have a number of typical functions. While there are variations in the details as to the depth of regulation and the specifics of procedures, the *types* of functions have become standard in almost all states.

Some of the most critical of those functions include licensing, ongoing review of daily operations, internal control requirements and auditing. Each of these is addressed below:

- **Licensing:** All regulatory agencies investigate and make a determination regarding the qualifications of companies and natural persons that apply to operate, work in or

³³⁴ Ibid.

service casinos. Some states have more extensive requirements than others. All states require casino operators and companies that supply gaming related equipment or services, such as slot machines, to file for a license. Some states, such as Pennsylvania and Massachusetts, require companies that supply non-gaming goods or services to file for a license under certain conditions (in Pennsylvania a certification, which is similar to a license, is required). In Massachusetts, the MGC may require any vendor regularly conducting over \$250,000 of business with a gaming licensee within a 12-month period or \$100,000 of business in a three-year period to be licensed as a gaming vendor.³³⁵ The Pennsylvania Gaming Control Board requires companies that conduct over \$500,000 worth of business to be certified.³³⁶

Without having some mechanism for a regulatory agency to review all contracts with a casino operator, even those that relate to non-gaming companies, the regulatory agency may be unaware of the movement of large amounts of money or the infiltration of organized criminal elements. The need for close examination of non-gaming enterprises such as construction companies became evident in New Jersey in the Bayshore Rebar matter, among others.³³⁷

Similarly, almost all states require either licensing or registration of employees that work in the gaming areas. Some states, such as Massachusetts, also require employees that work in non-gaming positions to be registered.³³⁸ Spectrum has found that it is good policy to require licensing or registration of such persons because of the potential for such individuals to be involved directly or through collusion in theft or other crimes in a casino operation.

The attention to detail of this process is critical as it is the first step in assuring integrity of the casino industry in that state.

- **Ongoing Review of Daily Operations:** Virtually all states also maintain a presence in the casino. The extent of this presence varies from a 24/7 inspector or agent publicly visible level, such as exists in Pennsylvania, Massachusetts and Ohio, to a limited law enforcement presence such as what now exists in New Jersey. The inspector or agent presence includes greater scrutiny of ongoing gaming operations and transactions. As

³³⁵ Massachusetts Expanded Gaming Act, section 31 (d).

³³⁶ Pennsylvania Gaming Control Board <http://gamingcontrolboard.pa.gov/?p=75> (accessed May 29, 2013).

³³⁷ As indicated in the following article, which is a report of the final Bayshore Rebar hearing, the company was denied a license in 1989 and 1997. George Anastasia, "'The other Joey Merlino' gets casino service license," *Philadelphia Inquirer*, May 6, 2010 http://articles.philly.com/2010-05-06/news/24958581_1_hearing-examiner-mob-ties-joey-merlino.

³³⁸ Massachusetts Expanded Gaming Act, section 30 (c).

happened in New Jersey, such requirements may be stringent in the early years and then relaxed somewhat as the both the industry and regulatory system mature.³³⁹

- **Internal control requirements:** Virtually all states have requirements that require the casino operation to address internal controls within their operations. Internal control requirements may mandate that certain departments such as surveillance and internal audit are created, separation of such duties such as income control and table games to prevent incompatible functions, and document controls.
- **Auditing:** Regulatory agencies have an audit function over the casino operations, though the extent and frequency of such audits may vary. At a minimum, best practices demonstrate that the casino regulatory agency must conduct random unscheduled audits relating to the collection of gaming revenue.
- **Underage gambling and problem gambling:** All jurisdictions are justifiably concerned with the problems associated with underage gambling and problem/compulsive gambling. Statutory schemes attempt to cope with such important public policy concerns. One such endeavor entails the formation of a self-exclusion list whereby self-proclaimed problem gamblers can voluntarily decide to be excluded from gambling activity. Once a person is placed on the self-exclusion list, the casino operator is obligated to take appropriate measures to enforce the exclusion from gaming activity, including a cessation of direct marketing to the individual. With respect to underage gambling, such activity is generally harshly punished, both as to the underage patron and the casino operator.

e. Table of Organization of Regulatory Agencies

Organizations of regulatory agencies are largely divided by the functions detailed above and by functions that allow for these actions, with some additional functions that are needed in most government agencies. In 2010, Spectrum did a review of gaming agencies that address the types of tables of organization. This report will borrow from that earlier research.³⁴⁰

The following are departments or offices that are typical in casino regulatory agencies:

- **Investigations.** Casino regulatory agencies have staff devoted to investigations, though as detailed on the section regarding regulatory structures, investigatory functions are often separated from those functions that decide licensing.
- **Licensing:** The license function often has its own staff because the specific activities of licensing are often most efficiently accomplished by those familiar with

³³⁹ Spectrum Gaming Group, "Gaming Regulation: Overview, Primer," prepared for the State of New Hampshire, January 26, 2010 http://www.nh.gov/gsc/calendar/documents/20100216spectrum_regulatory.pdf.

³⁴⁰ Ibid.

applications, the review of investigatory reports and data collection relevant to the process.

- **Operational Review of Casinos:** Casino regulatory agencies often have an inspection or agent staff that is devoted to the operations of casinos. In some cases there is both a law enforcement and civilian presence. A civilian presence in a casino operation can assist in the oversight of internal controls and is less expensive than a law enforcement presence. A law enforcement presence is necessary also for criminal purposes.
- **Internal Controls:** There is typically a group of staff devoted to the review of the casino's internal controls. Typically, especially in jurisdictions that involve larger casinos, the internal control plans of a casino are submitted for review and approval by this group
- **Financial Analysis:** Casino regulatory agencies are responsible for the collection of revenue, thus the analysis of trends in incoming revenue is useful and possibly critical.
- **Auditing:** Auditing of the considerable sums of revenue in a casino industry by the regulatory agency is especially critical. Nearly all agencies employ staff devoted to such functions.
- **Other functions:** Casino regulatory agencies are in great need of services in Information Technology since the management of revenue and license data is an ongoing, regular and challenging process. There is also a need for the accounting for and transfer of funds, as many regulatory agencies are the trustee of funds. There is also a need for typical services such as administration, human resources, and public information dissemination.

Regardless of the regulatory scheme employed, Spectrum has found that regulation is most effective when it provides the following, as noted in the aforementioned 2010 report:³⁴¹

- Provides for sufficient regulatory oversight by creating a unit or team that is frequently on the casino floor, accessible to the public and visible to casino employees
- Creates a license structure that addresses all those that participate in the gaming industry, including the casino licensees, the companies that service those licensees and the employees. It is only by examining the background of all those who seek to participate in the industry that integrity can be assured.
- Creates a decision-making structure that allows for independence from the investigatory branch of the regulatory structure. In addition, sufficiently staff the decision-making agency to ensure it has adequate resources to carry out its duties.

³⁴¹ Ibid., p. 19.

f. Full- and Part-Time Decision-Making Authorities

Agencies in all casino gaming states have full-time staff.³⁴² However, as documented in the section of this report on regulatory structures, no two states are the same in the composition of the staff or even in the number of agencies that employ them. There is also a mixed bag regarding the decision making authorities (often called commissions) in each state.

The argument for a full time gaming commission can go back to the time of Abscam at the start of the New Jersey Casino Control Commission (Commission).³⁴³ At that time the Commission was part-time (except for the Chairman who was full-time). After Abscam, the law in New Jersey was changed to require full time commissioners. A full time commissioner, which is allowed no other occupation, is likely to be more focused on their positions. The tradeoff may be that full time commissioners should be paid a full time salary.

Two of the most recently formed commissions, the Ohio Casino Control Commission and the Massachusetts Gaming Commission, went in different directions when they formed their agencies.³⁴⁴ As is also documented in the aforementioned Spectrum report of 2010, there is no specific trend on this issue.³⁴⁵ The appropriate answer for a state forming a new gaming commission would depend in the size and complexity of the gaming industry. Surely the larger gaming industries would require more license making decisions and a full-time position may be more appropriate.

26.Application Forms

a. Form of Application and Background Investigations

The basic application form that is used by many casino regulatory agencies for natural persons is the multi-jurisdictional personal history disclosure form.³⁴⁶ This form is often supplemented with an additional form that is designed to take into account a state's specific requirements. The multi-jurisdictional form requires disclosure of information on family background, offices and positions, employment and licensing data, testimony before a license agency, company ownership information, civil and criminal arrest history, financial data, and a net worth statement.

³⁴² In addition to the information in this report also see Ibid., p. 17.

³⁴³ The following is an article provides a summary of the Abscam sting: <http://socyberty.com/government/abscam-operation/> (accessed May 29, 2013).

³⁴⁴ Ohio's Commission is part time, see 3772.02. Massachusetts' commissioners are full-time, see the Massachusetts Expanded Gaming Act, Section 3.

³⁴⁵ Spectrum New Hampshire report, p 17.

³⁴⁶ The multi-jurisdictional form is available on the web on several locations, such as at: <http://iagr.org/wp-content/uploads/Multi-Jurisdictional-Application.pdf>.

Gaming agencies also often require a Business Entity Disclosure Form³⁴⁷ which typically requires information about the business, the directors and trustees, officers, voting owners, compensation, contracts, transactions, testimony, violations, bankruptcy proceedings and licenses,

Other forms are often used by casino regulatory agencies for other types of applications including for employees in lower level positions and companies that are not gaming related. Pari-mutuel agencies commonly use a smaller form than the multi-jurisdictional form.

It is a universally accepted practice for casino gaming regulatory agencies to conduct background investigations, either by its internal staff or by retaining the services of a third-party investigative firm, to evaluate an applicant's suitability for licensure. The licensing process for authorization to operate a casino facility or to be employed in a gambling establishment, commences with the filing of a license application by the applicant, to be followed by the requisite suitability background investigation.

The costs of the investigation are usually paid by the applicant. An application for a casino license will necessarily include individual applications filed by the company's owners, managers, officers, directors, parent companies and shareholders owning at least 5 percent of the company's equity securities.

b. Confidentiality of Information

When crafting a specific license application that requires certain background information to be provided by the applicant, in advance of the requisite suitability background investigation, an important consideration for any regulatory agency involves a determination of whether material provided in an application is to be treated as confidential or whether it would be made available upon request to the public. Generally, most gaming jurisdictions consider personal information contained in an application, especially financial data, to be confidential. Some jurisdictions, most notably Ohio and Massachusetts, which have broad right-to-know laws, have narrowly drawn rules governing confidentiality of material received. By contrast, New Jersey affords broad confidentiality protections for information submitted as part of the application process. The procedures that govern confidentiality usually coincide with the particular state's rules for public access to government agency documents.

27.Enforcement Proceedings

Casino regulatory agencies are empowered to oversee all aspects of the licensed entity's gaming operations. This regulatory oversight includes periodic on-site inspections, investigations of suspected wrongdoing, examination of internal control procedures to ensure compliance, and

³⁴⁷ An example are the Massachusetts forms listed on this website <http://massgaming.com/licensing-regulations/applications/>.

the imposition of disciplinary action for violations of applicable regulatory requirements. Sanctions vary from stern warning letters to the imposition of fines, to suspension of licenses for a finite term, and in the most egregious cases, to the revocation of licenses. Depending on the gravity of the accusation, there may be a disciplinary adjudicatory hearing to resolve the matter.

It is noteworthy that a gaming license is considered to be a revocable privilege, rather than a right of entitlement. Common violations applicable to the operating entity include the following:

- Impermissibly permitting underage gambling
- Failing to properly exclude a person who is on the agency's exclusion list
- Failing to adhere to internal control procedures governing the operations of the games and the movement of money
- Failing to notify the regulators about operational or organizational changes
- Failing to detect criminal conduct or to take appropriate action when learning of criminal activity on the casino premises
- Failing to provide adequate surveillance or security for casino operations.

a. Enforcement of Illegal Gambling

We spoke to officials in Florida, Iowa, Kansas, Maryland, Massachusetts, New Jersey and Pennsylvania and found that the investigation of illegal gambling is handled by law enforcement officers (as opposed to regulators). Whether the state gaming regulatory agency regulates illegal gambling or not depends primarily on whether they are authorized to do so based on whether they have law enforcement authority, in most cases. Even when the state gaming regulatory agency has such authority, the actual prosecution of such matters is normally referred to the county or local prosecuting authority.

Ohio is one such example. The Ohio Casino Control Commission has authority under the casino control act³⁴⁸ to levy and collect penalties for some noncriminal violations. Criminal violations are referred to the Attorney General's office or local prosecuting office. As a practical matter the casino control act is a fairly new law and the actual prosecution of criminal matters depends on the circumstances. Internet cafes have been of major concern in Ohio. The addressing of the legality of these cafes has been taken up by the General Assembly,³⁴⁹ however we were informed that there was recently a further complication: Some Internet cafes, in addition to using the normal internet machines in the cafes, were employing the equivalent of slot machines. The Attorney General's office and the Ohio Casino Control Commission staff

³⁴⁸ The Ohio Casino Control Act, 3772. 99 (e) (12)

³⁴⁹ See for example this article addressing the matter <http://www.wkbn.com/2013/06/04/ohio-governor-signs-internet-cafe-crackdown/>

cooperated in the matter – which we found to be a common theme among states. Illegal gambling often comes in forms that are not completely anticipated. In this case, the Casino Control Commission staff was used to help determine the nature of the machines and whether they met the definition of slot machines.³⁵⁰ There are law enforcement agents with the Casino Commission, but prosecution for criminal illegal gambling would come from other state offices. Internet cafes are a subject unto themselves.³⁵¹

In Massachusetts the State Police handle illegal gambling investigations, but it is important to note that the Massachusetts Gaming Commission has a State Police unit assigned to it. Either the Gaming Commission unit of the State Police or another branch of the State takes responsibility for the matter, dependent on exact nature of the type of illegal gambling.

New Jersey's model is somewhat different. There are two primary agencies in New Jersey: the Casino Control Commission and the Division of Gaming Enforcement. Gaming Enforcement is the prosecutorial arm for civil matters, and also has State Police assigned to it, under the purview of the Attorney General's Office. The State Police in Gaming Enforcement would be involved in investigating illegal gambling.

In Pennsylvania, the Gaming Control Board has no authority over illegal gambling. The State Police would take the lead on those matters and likely would work with local law enforcement and prosecuting authorities, depending on the nature of the illegal gambling.

In Maryland the Lottery and Gaming Control Agency has no authority over illegal gaming. Matters are turned over to the State's Attorneys. In Iowa, illegal gaming matters are not addressed by the Iowa Racing Commission. Instead such matters are turned over to the Division of Criminal Investigation.

In Kansas, however, the Racing and Gaming Commission does take the lead on such matters. There are enforcement agents at the Racing and Gaming Commission that can make arrests on such issues. Prosecution, as is the case in many states, rests with the local prosecutors. Also in Kansas there is controversy and court challenges surrounding "gray machines," which further complicates matters.³⁵²

In Florida, the Department of Law Enforcement advised us that local or county law enforcement and prosecutors are assigned such matters. The Division of Pari-Mutuel Wagering does not have authority over illegal gaming, though as in other states it may obtain information on such matters. If such information is obtained, the Division of Pari-Mutuel Wagering would

³⁵⁰ See this article on the involvement of different offices <http://www.ohioattorneygeneral.gov/Media/News-Releases/June-2013/Search-Warrants-Served-at-Illegal-Casino-Locations>

³⁵¹ From the American Gaming Association Website <http://www.americangaming.org/government-affairs/priority-issues/internet-sweepstakes-cafes>

³⁵² See this article summarizing the gray machine issue: http://cjonline.com/news/local/2010-10-25/gray_machine_clarity_sought and also the supreme court ruling <http://www.kscourts.org/cases-and-opinions/opinions/SupCt/2011/20110408/102786.pdf>

work with local officials and follow up as needed, though they would act more in an information sharing role than investigatory.

28.Costs: How Regulators are Addressing Expansion of Gaming

The regulatory model that has been accepted in many jurisdictions is that the cost of investigations should be paid for by applicants. As Spectrum noted in its 2010 report for the State of New Hampshire, “A subcomponent of this category is that those companies and individuals applying for a casino or vendor license should be required to pay for all costs associated with the conduct of their background investigations. This requirement allows the regulatory agency to undertake what are often complex and multi-faceted entity and other investigations without having the taxpayers of the state pay for these types of investigations.”³⁵³

29.Gaining an Expertise in Casino Gaming

The regulation of casino gambling is unique from other types of business activity because of the speed of the transactions, the amount of money that changes hands and the way in which transactions are completed. Unlike any other type of business money changes hands in some cases with no documentation. For example at table games the allocation of chips by the dealer to the customer after the playing of a hand, (or the throwing of dice, or the spinning of a wheel, etc.) permits no documentation.

The types of transactions at slot machines are comparable in some respects to transactions in other businesses but it too is challenging in a regulatory sense. There can be multiple transactions over short periods between a machine and a patron involving what might be a great deal of money. Jackpots worth seven figures can originate from the risking of a very small amount from the patron.

Because of the nature of the business there are unique types of crimes that will be attempted in the gaming industry. Criminals can be attracted simply because of the large amounts of money involved, but there are also ample unique ways to commit crimes in casinos. Two examples, of many, are card cheats at table games and attempts at altering the computer chips in the slot machines.

The regulatory structure that a state adopts, and all the functions involved in that structure, including investigations, audits, licensing, etc., are all ultimately designed with one purpose in mind: to create an appropriate gaming and business activity and to minimize any criminal activity. The states’ collection of gaming revenue depends on the fulfillment of this purpose, but just as important is the public’s perception of the integrity and fairness of the gaming industry.

³⁵³ Spectrum New Hampshire report, p. 4.

While gaining an expertise in the types of transactions in casino gaming is critical to regulation of the gaming industry, so too is gaining an expertise in the types of investigations necessary in the examination of applicants for casino operators and the transparency of the licensing process. Casino gaming operators are sometimes parts of multinational companies. The awarding of a license to operate a casino can be lucrative for a company. Thus the investigation, the consideration of the investigatory findings by the licensing authority and the awarding of the license are regulatory matters that must be addressed with thorough understanding and considerable deliberation.

While it may be argued that there are many advantages and disadvantages to expanding gaming, we believe there is no valid argument for the expansion of gaming without taking the proper regulatory measures. While a strong regulatory structure may be expensive to implement, this expense is typically borne by the gaming industry and not taxpayers.³⁵⁴ On the other hand, a weak or flawed regulatory system will invite nefarious and criminal activity, will fail to assure integrity of operations, and will not maintain the public trust and confidence in the regulatory system. Weak or flawed regulations is neither a model which is acceptable to the state nor a model which is an acceptable business practice to the casino industry that is regulated.

30. Other Critical Factors in the Regulatory Structure

There are advantages to creating a consolidated gaming agency, such as the maximum use of resources and the prioritization of functions. The danger in a consolidated agency is illustrated in the early Pennsylvania model. As explained in the grand jury findings, there was a bias created in the agency toward the awarding of licenses and the minimizing of investigative findings that could delay such licenses. The present Pennsylvania model incorporates a more independent reporting line for the investigative functions.

Spectrum has found there can be advantages in separate agencies which have some built-in and intentional overlap of functions. In the Kansas model, for example, there is little if any expense in any overlapping functions, but there is a greater assurance of integrity in having more than one agency involved in the oversight of the state's revenue. Of course, any overlap should be clearly defined and be designed to complement the functions of each agency.

31. Conclusion

Regulatory structures are almost impossible to place into a few models, as each state has unique features relating to its gaming industry. Spectrum believes that a consolidated regulatory agency or a group of agencies which share responsibility can both complete their functions in a competent manner. However there are a number of important considerations. There are a number

³⁵⁴ The norm in the regulation of casino gaming is to require the payment for investigations and other regulatory functions through fees and billings paid by casino applicants and operators

of themes of regulation which almost always shine through regardless of the state, the gaming venues, or the number of casinos or where they are located in the state. These are not themes of a consolidated model of all regulatory issues or a model that is divided between numerous agencies. The themes of regulatory models over casino gaming have to do with the types of regulation that casino gaming demands.

E. Trends and Best Practices in Governance and Regulation

A general description of trends and best practices in governance and regulation of gambling activities.

“Effective regulation” can be defined as regulation that advances a variety of public policies while protecting the overall public interest. While the entire scope of policies to be advanced will – and arguably should – vary from jurisdiction to jurisdiction, certain goals would be considered universal. Such goals would include:

- Promoting public confidence in gaming as both a leisure activity for the public, and as an investment opportunity that would generate interest from casino operators seeking an attractive return on invested capital.
- Fostering public confidence and trust in the integrity of the regulatory process and gaming operations
- Ensuring that individuals and business entities involved in gaming meet universally accepted standards of good character, honesty and integrity.
- Ensuring the prohibition of unsuitable persons and entities from participating in the gaming industry.
- Developing, overseeing and monitoring programs to address problem gambling, including reviewing responsible-gaming policies and practices, while maintaining and enforcing exclusion lists, including self-exclusion.
- Addressing other critical public policy concerns, such as underage gambling, or casino-related demands on law enforcement and other public services.
- Optimizing financial benefit to the jurisdiction from multiple revenue streams, including gaming taxes, employment taxes and tax revenue generated from other sources, such as expanded tourism and purchases of goods and services.
- Maintaining flexibility in writing the rules that govern gaming to make sure that regulators are able to adapt to changes in technology and to revise and reform regulations as circumstances change, and as regulators become more familiar and comfortable with evolving industry practices.

Individual states, as they develop and customize their own statutory and regulatory governing structures, can layer on additional goals that are specific to their own economic,

SECOND DRAFT - CONFIDENTIAL

political, demographic and competitive landscapes. Such ancillary goals can vary, but often include the following:

- Promoting tourism
- Reviving or improving urban areas
- Creating employment opportunities
- Enhancing the conventions and meetings business
- Creating opportunities for other businesses within the jurisdiction
- Attracting additional capital investment

Establishing such goals is relatively straightforward. Achieving them is often difficult for the following reasons:

- Once a license is issued, the power of regulators and lawmakers to effect change diminishes.
- Sometimes, goals can conflict with each other. For example, a goal of maximizing license fees can conflict with a goal of maximizing capital investment.
- The market does not always cooperate.

Still, jurisdictions that have the ability to establish a competitive bidding process would, with all else being equal, be more likely to achieve goals, since applicants for licensure have more incentive to establish ambitious plans to achieve goals.

We have witnessed that in various states with competitive processes, including Pennsylvania and Massachusetts. At this writing, Massachusetts is pursuing a competitive bidding process, and various applicants have made it clear that they are developing robust policies to achieve goals that range from promoting tourism to training existing Massachusetts adults for the jobs that will be created.

Absent a competitive bidding process, gaming tends to evolve either as a system in which pari-mutuel facilities are grandfathered in, sometimes with requirements for significant capital investment, or with no statutory limit on the number of licenses in specific geographic regions such as the Gulf Coast of Mississippi, Las Vegas or Atlantic City.

Whether a licensing process is competitive or not, however, the ability of regulators to take action after a license is issued diminishes quickly and dramatically. Absent specific violations that would warrant fines or either the revocation or non-renewal of a license, regulators have a limited ability to prod operating licensees in specific policy directions. The larger goal then in the effective regulation of gaming is to align the goals of the public and private sectors.

Some of these goals noted above may seem to be contradictory. For example, a single licensing jurisdiction would be tasked with developing a positive investment climate while addressing serious policy issues, such as crime and problem gambling. Such seeming contradictions can be best addressed by adhering to what economists refer to as “goal congruence,” a system in which the interests of all stakeholders are parallel.

Such a system is quite achievable in gaming, but is by no means assured in all instances. For example, both the state and the casino operator have a stake in realizing an attractive return on investment. The state receives tax revenue, among other benefits, while investors are rewarded for the risks they have undertaken. Similarly, both the public and private sectors have an abiding interest in promoting public confidence, and in maintaining high standards for integrity. Operators, who are often licensed in multiple jurisdictions, would not want to risk their gaming license in *any* jurisdiction as that would put their licensure at risk in *every* jurisdiction.

Where goals are not congruent, legislators and regulators would have an obligation to ensure that the public’s goals are dominant. If handled effectively, such situations can turn disparate interests into parallel goals. The most illustrative example of this phenomenon can be traced back to 1982, when a bank clerk from Toronto, Brian Molony, was regularly embezzling funds from his employer and gambling with those dollars at Caesars in Atlantic City.

The Molony case – which was widely publicized and became the subject of both a 2002 book, *Stung: The Incredible Obsession of Brian Molony*, by Gary Ross, and a 2003 movie that was inspired by the events but changed the name of the chief subject, *Owning Mahowny* – was viewed by many, including regulators, as a story of greed run amok. Gaming operators were willing to bend rules and not ask questions about a bank clerk clearly gambling over his head, and without paying any heed to issues ranging from the potential of pathological gambling to the issue of gambling with stolen funds.

The New Jersey Division of Gaming Enforcement, the prosecutorial arm of the dual-agency regulatory structure in the state, negotiated a settlement with Caesars for various violations of regulations in the Molony matter, with the casino being required to close its doors – while still paying its staff – on the traditionally busy Friday following Thanksgiving, on November 30, 1985.³⁵⁵ The matter was summarized in *The New York Times* following a decision by the quasi-judicial agency of the state to approve the settlement:

“The Casino Control Commission today ordered Caesars to close its Atlantic City casino for a day as a penalty for violating credit, deposit and reporting regulations to cater to a heavy gambler. The closing, the first ordered by the commission, could cost Caesars nearly \$1 million in lost revenues. Thomas R. O’Brien, director of the New Jersey

³⁵⁵ Present-day Spectrum Gaming Group Managing Director Fredric Gushin, then Assistant Attorney General and Deputy Director of the Division of Gaming Enforcement, participated in the settlement negotiations with Caesars.

SECOND DRAFT - CONFIDENTIAL

Division of Gaming Enforcement, said it was the harshest penalty to be imposed in the seven-year history of the Atlantic City gaming industry.”³⁵⁶

Nearly 30 years later, that penalty of shutting the casino down for a busy day remains as one of the harshest penalties imposed by regulators in that state (short of an outright license denial), and we are unaware of a similarly harsh penalty imposed in any other gaming jurisdiction.

Six months after that unprecedented closing, Caesars reached a settlement with Canadian bankers, who were the victims of Molony’s crimes. That settlement prompted the following summary in the *Philadelphia Inquirer*:

“Molony was arrested April 27, 1982, a day after he lost \$1 million gambling at Caesars. He got the gambling money by writing loans in the names of both real and fictitious companies.

“In court papers filed in Canada, Caesars said it never asked Molony for credit information and had never asked what he did for a living. The papers said Caesars supplied Molony with tens of thousands of dollars in hotel rooms and airfare by private Lear jet.

“Although he plunked down thousands at the gaming tables, Molony led a modest lifestyle in Toronto, where he wore inexpensive, ill-fitting clothes and left carefully calculated 7 percent tips in restaurants.

“Court documents also show that Molony was able to transfer millions of dollars out of the Imperial Bank of Commerce through a company called California Clearing Corp., a wholly owned subsidiary of Desert Palace, a Las Vegas casino. The corporation's only purpose, according to records, was to let people deposit sums of money into a casino without detection.

“As a result of Molony's activities at the casino, Caesars was forced to close for the day Nov. 30, the (Friday) after Thanksgiving, as a disciplinary measure for gambling-law violations. The closing was part of an agreement worked out between Caesars and the state Division of Gaming Enforcement.

“The Casino Control Commission approved the agreement and \$36,500 in fines against six Caesar's employees.

“Industry analysts estimated that the casino stood to lose between \$700,000 and \$800,000 because of the shutdown.”³⁵⁷

³⁵⁶ Donald Janson, “Caesars Ordered To Close For Day For Violation Of Gambling Rules,” *New York Times*, October 10, 1985. <http://www.nytimes.com/1985/10/10/nyregion/caesars-ordered-to-close-for-day-for-violations-of-gambling-rules.html?n=Top%2fReference%2fTimes%20Topics%2fSubjects%2fG%2fGambling>.

The Molony case offers the highest profile, but was hardly alone, as an example of casinos having goals that were not parallel with the goals of the state in which they operated. In Atlantic City alone, the record includes numerous matters in which casinos ignored policies ranging from preventing underage gambling to minimizing problem gambling. Notably, such violations have declined in recent years. While it may very well be that regulatory oversight has diminished, thus leading to fewer violations being revealed, our experience suggests that much of the decline in violations can be attributed to goal congruence: Casinos are increasingly adapting their policies to be more fully aligned with the goals of the states in which they operate.

1. Best Practices and the Political Process

The term “effective” is not synonymous with strict, but it should be synonymous with “understandable,” “comprehensive,” and “defensible.” In other words, every rule to be found in gaming statutes, regulations or policies should have a clear and legitimate purpose that can be readily communicated and understood. Indeed, while the perception of “strictness” will vary, depending on the vantage point, “strictness” is a relative term.

Typically, gaming regulation starts out strict and then allows for reforms as circumstances change, and as regulators become more comfortable with the processes involved in the governance of gaming. To move in the opposite direction – moving from a relatively relaxed regulatory regimen to a more restrictive one – would be difficult to implement practically and politically. In large measure, the inherent difficulty in moving toward a more strict regulatory system if one is needed can be attributed to the relationship between gaming and politics. By its nature, gaming is inextricably intertwined with the political process – a reiteration of one of this report’s core themes. Gaming’s very existence – as well as its ability to generate profits – depends on its ability to be in the good graces of elected and appointed officials, and to remain there.

In understanding and in governing the relationship between the gaming industry and politics, certain trends and observations should be considered, based on our experience in other markets:

- The ability of elected and appointed officials to shape and guide the policies that govern gaming, and that are designed to marshal the economic and social benefits of gaming, are at their zenith prior to the issuance of gaming licenses.
- To whatever extent is reasonable and appropriate, steps should be taken to insulate gaming from politics, and to limit the ability of the gaming industry to directly influence the political process.

³⁵⁷ Jane M. Von Bergen, “Caesars Reaches Accord with Bank In Molony Case,” *Philadelphia Inquirer*, May 15, 1986. http://articles.philly.com/1986-05-15/news/26048451_1_gaming-tables-gaming-enforcement-caesars-officials.

SECOND DRAFT - CONFIDENTIAL

- Over time, regulators and the regulated are likely to grow closer to each other. Left unchecked, a real risk exists that regulators can become cheerleaders for the industry they govern.

Much of this can be described as common sense, and as recognition of reality. While public confidence in gaming demands that controls be put in place to restrict the ability of the industry to influence the political process, such controls are clearly limited, and gaming can never be fully insulated from politics, or vice versa.

Starting with New Jersey's enactment of the Casino Control Act in 1977, certain steps have been identified that establish some level of insulation. These include:

- Limiting, or eliminating, the ability of gaming licensees and their key employees and qualifiers³⁵⁸ from making political contributions at the state and/or local levels.
- Appointing regulators to fixed terms that are not tied to the terms of the elected officials who make such appointments.
- Establishing guidelines for regulators that limit their ability to participate in the political process.
- Limiting the ability of regulators to secure outside income.
- Establishing strict post-employment restrictions for regulators and top staff that limit their ability to work for the industry they govern once they leave public employment.

The presence of any or all of such policies can help establish and maintain public confidence and provide some level of independence for regulators, but true independence is clearly chimerical in established gaming jurisdictions.

While we can identify benefits for the public and private sectors to share common goals, the shared goal of a successful gaming industry can turn regulators into cheerleaders. This risk was identified quite early in modern gaming regulation by the late Martin Danziger, one of the first appointed full-time members of the New Jersey Casino Control Commission. In an interview conducted in 1982,³⁵⁹ Danziger observed a number of industries that had been regulated in the 1970s, from securities to air transportation, and suggested that it is quite risky – and that public policy might suffer as a result – if regulators get to the point where they are willing to overlook transgressions or endorse shortcuts as a means of advancing success.

³⁵⁸ “Qualifier” is a widely used term in gaming regulation that refers to individuals with the ability to influence a licensee’s policies, such as owners, officers and directors. Typically, an entity cannot secure a gaming license unless all of its qualifiers are deemed to be licensable as well.

³⁵⁹ That interview was conducted by Michael Pollock, researching his book, *Hostage to Fortune: Atlantic City and Casino Gambling*, 1987. That portion of the interview was not directly cited in the book but is relevant for purposes of this analysis.

SECOND DRAFT - CONFIDENTIAL

In 1987, Spectrum Managing Director Michael Pollock wrote: “The problem, it should be noted, is not confined to the regulation of casinos. In the October 15, 1982 issue of *The New Yorker*, Daniel Ford wrote ... ‘Thus, the agency was to play the incompatible roles of coach and umpire, of partisan and judge – was supposed somehow to be both the champion and the disciplinarian of the industry. This dual mandate led to a continuing, unacknowledged conflict within the agency.’ Ford was not writing about the New Jersey Casino Control Commission. He was writing about the Atomic Energy Commission in the 1950s.”³⁶⁰

The problem of balancing dual roles remains, and is arguably a permanent concern that will require a permanent balancing act. In gaming, the issue of dual mandates specifically translates into a risk of sending a message to licensees that revenue maximization is a primary goal, often at the expense of such other policies as addressing problem gambling, or of maintaining standards of character, honesty and integrity.

This risk is exacerbated and enhanced by another very real phenomenon in gaming regulation: Once a casino is licensed and operating, the ability of regulators to change its course or, in the most extreme instance, remove its operating license is dramatically diminished. An operating casino is employing hundreds or, in many instances, thousands of employees and generating significant revenues for the state. This means that, on the very day it opens, a casino gains political stature, while the political will of regulators to enforce the rules declines.

This phenomenon is not uniform across states, and states have taken steps to address it. In states in which the number of licenses is not fixed – such as New Jersey, Mississippi or Nevada (which were the three earliest adopters of commercial gaming in the United States) – the risk is less severe, as other gaming properties can open, or expand, to address any unmet market demand and increase employment.

New Jersey law allows for “interim casino authorization” (“ICA”) in which an entity can purchase a casino prior to a full investigation and determination of suitability, based on the approval of regulators, by appointing a trustee entrusted with the preservation of the assets of the gaming operator. Such trustees – often retired judges, former casino gaming regulators, or other individuals who have the clear appearance of independence and integrity – have no responsibilities or role in the operation of the casino whatsoever, unless the New Jersey Casino Control Commission determines that the operator is not suitable for licensure.

At that point, a conservator is appointed, again usually a retired judge or government official, who assumes full control of the operation, including managing the property, with the goal of preparing the casino for sale to a third party. In the aforementioned case involving the license denial of the Tropicana, the trustee of the ICA was appointed to be the conservator. The conservator has a fiduciary responsibility to obtain the highest and best price for the property, although the original owner – the entity deemed not suitable for licensure – cannot be allowed to

³⁶⁰ *Hostage to Fortune*, p. 196.

profit from such a sale. Any money paid for the property over and above the level of original investment goes to the state.

That process is far superior to one in which the state has limited abilities to fully distance an unsuitable owner from the operation. However, experience has shown that the concept of conservatorship can be less than perfect in practice.

A rare use of the conservatorship provision occurred in New Jersey in 2009, when the Commission determined that the new owner of the Tropicana was not fit for licensure. A pre-approved conservator immediately took control of the property with the intent of readying it for sale, as required by the ICA regulations. The conservator, however, raised questions and criticism by the fees he charged for his services. As the *Associated Press* reported at the time:

“As many gamblers know, things can get expensive in a hurry in Atlantic City.

“The latest proof is the Tropicana Casino and Resort, where the 20-month effort to sell the business has racked up nearly \$7.7 million in legal and consulting fees, with still more to come.

“On Wednesday, the state Casino Control Commission will consider additional bills totaling nearly \$50,000.

“Those fees, some billed at \$970 an hour, are paid by the casino. They represent more than nine full days' winnings for the Tropicana, which is struggling to regain market share while threatening to lay off employees because of economic pressures.

“The Tropicana was sold last month for \$200 million to a group of investors led by billionaire Carl Icahn; the deal could close by year's end. When the casino-hotel first went on the market over a year and a half ago, it was expected to fetch about \$1 billion.

“The mounting fees have prompted casino regulators and state lawmakers to consider limiting the time and cost of similar efforts in the future. And with several distressed casinos struggling to survive, one or more additional gambling houses could find themselves going the way of the Tropicana.”³⁶¹

The lesson here is that the best designed and crafted laws and regulations can still fail to meet expectations in practice. Perfection in gaming regulation will remain elusive, and no regulatory agency is immune from negative publicity, a decline in public confidence or, at worst, a scandal. The New Jersey Casino Control Commission endured a severe scandal of national proportions in its earliest years, when one of its first appointees was embroiled in the Abscam scandal, as noted earlier, in which FBI agents established an elaborate scheme – including a

³⁶¹ Wayne Parry, “\$7.6 Million Later, Tropicana Casino Fees Still Rolling in,” *Associated Press*, July 15, 2009 <http://www.law.com/jsp/article.jsp?id=1202432256844&pos=atag glance&slreturn=20130409215343>.

SECOND DRAFT - CONFIDENTIAL

phony Arab “sheik” – in a corruption investigation that snared a US senator, six members of Congress, several state and local officials and a gaming regulator.³⁶²

The most immediate result of that scandal was a decision by then-Gov. Brendan Byrne of New Jersey to dismiss the four part-time commissioners (including the indicted commissioner) and replace them with four full-time commissioners who joined the full-time chair, who had survived the scandal.³⁶³ That move proved to be an important means of saving – and ultimately restoring – public confidence and trust in the regulatory process.

As noted in the previous section, the Pennsylvania Gaming Control Board endured a scathing State Grand Jury report in 2011.³⁶⁴ Spectrum, which had been a consultant to the board, held a critical vantage point in observing that agency in action.

The essence of that report, and its implications, were summarized in a column in the *Patriot-News* of Harrisburg:

“A recent grand jury investigation into the creation and early decisions of the state’s Gaming Control Board ... details a culture of ‘noncriminal misconduct’ in which officials not only turned a blind eye to potentially criminal activity, but commanded investigators to do the same.

“When they didn’t, administrators ‘scrubbed’ the negative information out of official reports before handing them to the board, the grand jury report states. The grand jury suggests the game was fixed before the gambling law was passed.

“According to the 102-page report, ‘Even prior to the passage of the act, legislators began considering candidates’ to sit on the powerful board. ...

“The grand jury’s report vividly illustrates how the public’s interest took a backseat to political considerations. . . .

“There was the sense inside the agency that every legislator was pushing to have someone hired. Lists of applicants, with the names of their sponsoring legislators, were compiled and passed around.

“One Gaming Control Board administrator testified that ‘more times than not,’ these political favorites ‘fell on their face during the interview.’ But if they didn’t, they were given preference over qualified people who didn’t have a patron in the Legislature.

³⁶⁴ Pennsylvania grand jury report: <http://enews.attorneygeneral.gov/uploads/Gaming-Control-Board-Grand-Jury-Report.pdf>.

SECOND DRAFT - CONFIDENTIAL

“According to the grand jury, the hiring by patronage resulted in an inept administrative staff, lacking the qualifications to supervise a multibillion-dollar industry.³⁶⁵”

The history of scandal and controversy in gaming regulation shows that agencies can survive, sometimes following dramatic steps, and sometimes simply by appointing new people over time who fully understand the delicate relationship between maintaining public confidence and advancing public policy.

Gaming, and its regulatory oversight, has been guided by certain principles and realities that we have observed in our work over the past several decades. In 2008, Spectrum wrote the following in a report for the Commonwealth of Massachusetts:

“Our experience over the past decades has led us to develop certain cautionary notes to help ensure that expectations are realistic. While no two gaming markets can be precisely alike, there are some commonalities, including:

- Gaming should never be viewed as a panacea to cure social ills or solve fiscal problems. It is a tool that, if effectively managed, can generate capital investment, employment and visitation that in turn would provide resources that can help address a variety of other issues.
- Casinos, by themselves, cannot turn unattractive or unappealing neighborhoods or communities into attractive magnets. To effect such a potential change often requires significant amounts of planning, financial capital and political capital.
- Casinos, by themselves, cannot turn former industrial areas or other non-tourist sites into tourist attractions. That requires a concomitant investment in developing a necessary tourism infrastructure.
- Neither the challenges nor the opportunities created by a casino industry stop at municipal or even state boundaries.
- The heart of the competitive bidding process will be the establishment of guidelines that delineate the criteria for evaluating bids. (The state) needs to be as expansive and comprehensive as possible in its guidelines.

“In our experience in various markets, including as participants and close observers in the 30-year history of casino regulation in New Jersey, we note the following:

- A regulatory system should start out strictly, and then be modified as circumstances change, and as the regulators become more comfortable and gain confidence that the process is moving in the right direction. In most cases,

³⁶⁵ Donald Gilliland “Pennsylvania Gaming Control Board riddled with culture of 'noncriminal misconduct,' grand jury report says,” *The Patriot-News*, June 12, 2011.
http://www.pennlive.com/midstate/index.ssf/2011/06/grand_jury_report_describes_cu.html.

political and economic realities will be quickly established, making it difficult to move in the opposite direction, toward a system of stricter regulation and tighter controls. This would be particularly true in this instance, where the legislation contemplates a competitive bidding process. In such instances, the most important rules are the ones established at the outset to determine the successful bidders. Once those criteria have been established and a successful bidder has been named, the system would not allow lawmakers or regulators to go back and alter those initial criteria.

- (Once) a casino is established and is generating tax revenue, employing people and attracting visitors, it cannot be easily undone in any practical sense.
- The public sector ... has broad discretion and powerful leverage at the outset to ensure that the successful bidder takes whatever steps are necessary to advance the public interest on a wide variety of fronts. Such leverage would be at its zenith during the pre-licensing phase, in which applicants would recognize that they must compete against each other in their zeal and in their creativity in developing strategies to advance the public interest. Once licenses are issued, and casinos are operational, we caution that such leverage would largely disappear.
- Using that leverage to require that all bidders submit comprehensive, credible plans that are in congruence with public policies can be justified by the proposed legislation, which essentially creates ... regional monopolies. No other private businesses that targets consumer discretionary spending, from hotels to restaurants, could reasonably expect that (the state) would protect them from potential in-state competition. We suggest that such protection requires a corresponding commitment to ensure that marketing, human resources and other policies put forth are designed to promote the public interest.”³⁶⁶

32. Conclusion

The modern history of efforts to establish effective gaming regulation – beginning with the adoption of the New Jersey Casino Control Act in 1977 – parallels the interest of Wall Street in gaming as an investment opportunity. In our experience, that is no coincidence. An absence of effective, stable regulation adds risk to investments, and risk translates into a higher cost of

³⁶⁶ Spectrum Gaming Group, *Comprehensive Analysis: Projecting and Preparing for Potential Impact of Expanded Gaming on Commonwealth of Massachusetts*, August 1, 2008, p. 21 <http://www.mass.gov/hed/docs/eohed/ma-gaming-analysis-final.pdf>.

capital. The reverse is also true. Confidence lowers risk, which lowers the cost of capital – a necessary ingredient for the development of a successful gaming industry.

The ability of policymakers to push through changes and establish policies declines over time. With that in mind, policies can be established from the outset that are designed to ensure that both the state and the licensees share common goals.

F. Gambling as Public Funding Source

A general description of gambling as a public funding source, including: Comparison of states' reliance on and uses of gambling as a public funding source; reliability and predictability of gambling revenues; direct and indirect costs to the state.

1. States' Receipts from Gambling Revenue

States choose to legalize gambling to raise revenue for public programs or for economic development, or for both. The amount the states collect from gambling revenues is a function of several factors, including:

- The revenue performance of a state's various gambling sectors.
- The types of gambling allowed and their availability to key population centers.
- The tax rate on gambling revenue, or other fees and obligations.
- The public policy – or underlying purpose of why gambling was established. In Nevada, for example, the low casino-revenue tax rate has spawned the development of multibillion-dollar resorts, which in turn collect sales and lodging taxes that do not show up in gambling-specific revenue reports.

For data in this section, Spectrum relies on (and has the permission to use) reports by The Nelson A. Rockefeller Institute of Government at the University at Albany (NY), which annually tracks state receipts from gambling. Its most such recent report, *Back in the Black: States' Gambling Revenues Rose in 2010*,³⁶⁷ by Lucy Dadayan and Robert B. Ward, provides comprehensive data and analysis on this important subject.

For some states, gambling is an integral part of their fiscal health and hence their governments closely monitor the performance of their various gambling sectors – and may help explain the economic need by some states to expand to either sustain or grow revenues. As noted

³⁶⁷ Lucy Dadayan and Robert B. Ward, *Back in the Black: States' Gambling Revenues Rose in 2010*, June 23, 2011; http://www.rockinst.org/pdf/government_finance/2011-06-23-Back_in_the_Black.pdf. The authors expect to release their updated version in mid-2013.

SECOND DRAFT - CONFIDENTIAL

later in this section, gambling receipts accounted for more than 5 percent of own-source general revenue for five states in FY 2009.³⁶⁸

First, we present the dollar amounts that gambling in four primary sectors – casinos (commercial; i.e., non-Native American), racinos (racetrack casinos), lotteries and pari-mutuel – generated for its host states (table on two pages):

Figure 41: States' gambling revenue from lotteries, casinos, racinos and pari-mutuels, FY 2010

In \$ millions	Lottery	Casino	Racino	Pari-mutuel	Total
Alabama				2.1	2.1

Next, we rank the states by total gambling receipts for FY 2010. The states with the highest gambling revenues do not necessarily generate the highest state tax receipts because their tax rates may be lower and/or they may have fewer types of legalized gambling. Nevada generates more than three times the casino revenue than any other state, yet that state's receipts from gambling ranked only 10th best – because it has the lowest casino-revenue tax in the country (6.75 percent) and because it has no lottery and no pari-mutuel. Note that Florida ranked third, behind New York and Pennsylvania.

Figure 42: States' FY 2010 overall gambling revenue, by rank

Source: The Nelson A. Rockefeller Institute of Government

Now we look at the US trend in state receipts from gambling, by sector, from FY 1998 through 2010. Note in the following chart that receipts declined after the Great Recession began in 2007. The gambling industry had until that time proven to be resistant to economic downturns, but the two largest sectors – casinos and lotteries – experienced revenue declines coinciding with the recession. The racino industry was still very much undergoing widespread expansion and thus remained in a growth mode. Regarding racino revenue, it is important to note that The Rockefeller Institute groups VLT revenue from racetracks with lottery revenues, impacting the classification of racino receipts from Delaware, New York, Rhode Island and West Virginia (and, going forward, Ohio). The pari-mutuel industry continued its long, steady decline, with state revenues plunging from \$554 million in 1993 to \$150 million in 2010.

SECOND DRAFT - CONFIDENTIAL

Figure 44: Trends in state gambling revenue, FY 1998-2010

Source: The Nelson A. Rockefeller Institute of Government, citing Census Bureau (lottery & pari-mutuels), Rockefeller Institute review of state gaming regulatory agencies' financial reports. Lottery data for FYs 2008-10 is based on Rockefeller Institute survey of state lotteries.

As noted previously, some states are more reliant on gambling receipts than others. Nevada, which has 265 casinos and in 2012 reported gross gaming revenue of \$10.9 billion, in FY 2009 relied on gambling receipts for 12.5 percent of its own-source general revenue. Rhode Island and West Virginia, whose lotteries operate racetrack casinos (with video lottery terminals in lieu of bona fide slot machines), each relied on gambling receipts for 8.4 percent of their FY 2009 own-source general revenue, as shown in the following chart (on two pages). The total for all states was 2.4 percent.

Source: The Nelson A. Rockefeller Institute of Government. Three states not listed: Utah and Hawaii have no legalized gambling, Alaska has only Class II Indian gaming, which is not taxed.

33. Reliability of Gambling Revenues

As shown in Figure 43, legalized gambling generally provides a reliable revenue stream for governments, on a holistic level, except in times of severe recession. At the individual state level, however, gambling-revenue receipts are subject to rapid – and sometimes dramatic – declines when a neighboring state introduces a competing product that is within easy reach. This is most notable in Delaware and New Jersey, where the introduction of competing casinos in neighboring states has caused casino-tax receipts to decline 6 percent and 45 percent, respectively, from their peak collection years of 2011 and 2006, respectively.

Nationally, in 2011 (the most recent period available for both sectors), commercial and Native American casinos (including VLT racinos, which in Figure 40 are instead grouped as Lottery revenue) throughout the US generated \$63.1 billion of gross gaming revenue. This is depicted in the following chart (the dotted line indicates overall linear trend in US gross gaming revenue).

Figure 46: US GGR trend, 2002-2011

Source: American Gaming Association, Casino City's Indian Gaming Industry Report, 2013 Edition. Newton: Casino City Press.

In total, over the 10-year period (ended 2011), year-over-year growth occurred in eight of the 10 years, with the Great Recession causing revenue declines in 2008 and 2009. The breadth and depth of the recession effectively shattered the truism that casino gambling was recession-resistant. Total growth in US gross gaming revenue (from 2002 to 2011) was 46 percent, or average annual growth of 4.3 percent. This growth was considerably greater than overall growth in the Consumer Price Index³⁶⁹ – which grew by 25 percent over the entire period, or average annual growth of 2.5 percent.³⁷⁰

For 2012, commercial casinos had gross gaming revenue of \$37.34 billion, a 4.8 percent increase over 2011 figures.³⁷¹ Comparable data for Native American casinos will not be available until later this year; however, assuming there is no decrease in Native American gaming revenue (i.e., 2012 vs. 2011) will equate to total US gross gaming revenue posting at least a 2.7 percent year-over-year increase – marking the third consecutive year of revenue growth.

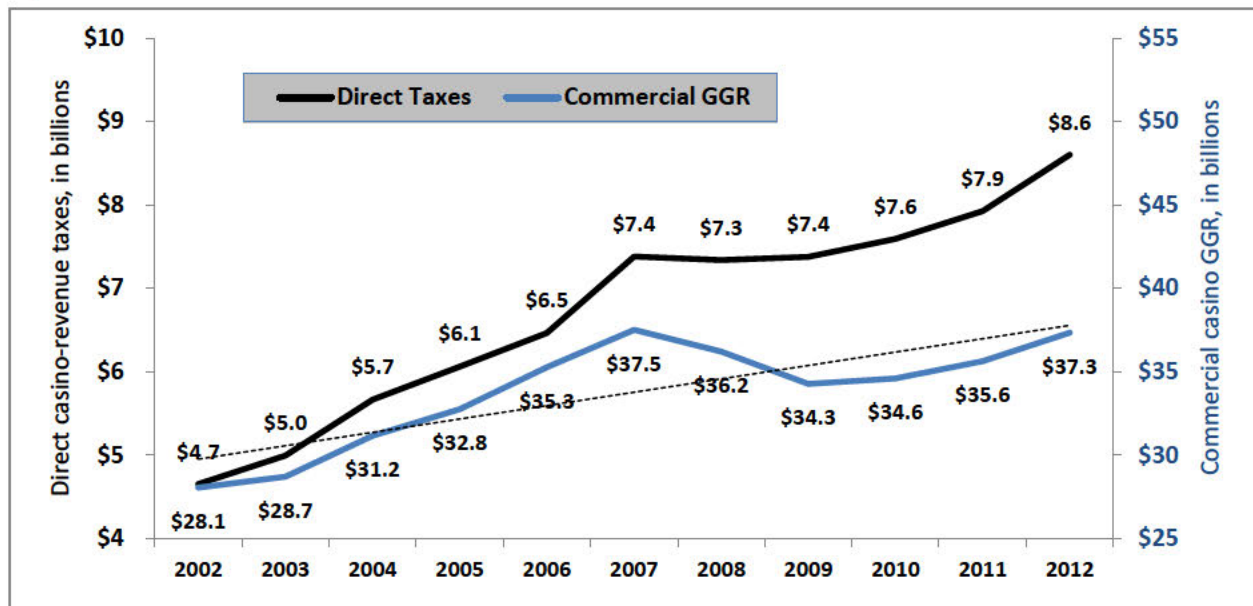

The following chart shows gross gaming revenue (and a dotted line indicating overall linear trend) from US casinos juxtaposed with the direct casino-revenue taxes paid from calendar year ended 2002 through 2012.

³⁶⁹ These data represent changes in prices of all goods and services purchased for consumption by all US urban households.

³⁷⁰ US Department of Labor, Bureau of Labor Statistics; http://www.bls.gov/data/inflation_calculator.htm.

³⁷¹ *State of the States 2013*, p. 5.

Figure 47: US GGR and direct taxes trend, 2002-2011

Source: American Gaming Association, UNLV Center for Gaming Research³⁷²

In total, over this 11-year period, year-over-year growth in direct taxes stemming from casino revenue occurred in 10 of the 11 years (as 2008 was down 0.6 percent versus prior year). Total growth in direct taxes stemming from US commercial gaming revenue (from 2002 to 2012) was 84.7 percent, or average annual growth of 6.3 percent. This growth was considerably greater than overall growth in the Consumer Price Index³⁷³ – which grew by 25 percent over the entire period, or average annual growth of 2.5 percent.³⁷⁴

The aforementioned direct taxes reflect results of commercial casino operations in 23 states. Importantly, netting out new casinos and/or jurisdictions (i.e., those not having casinos at start of the aforementioned period), of the 15 states that had casinos (and direct taxes) in both 2002 and 2011 the direct taxes stemming from casino revenue were up 19.9 percent, or average annual growth of 2 percent.

34. Direct and Indirect Costs to the State

The costs that legalized gambling may impose on state and local governments are both direct and indirect. Direct costs, such as specific transportation infrastructure improvements or the costs of additional law enforcement officers, are easy to identify and quantify. Indirect costs

³⁷² See http://gaming.unlv.edu/reports/direct_taxes_casino.pdf

³⁷³ These data represent changes in prices of all goods and services purchased for consumption by all US urban households.

³⁷⁴ United States Department of Labor, Bureau of Labor Statistics; http://www.bls.gov/data/inflation_calculator.htm

SECOND DRAFT - CONFIDENTIAL

are not. These costs may be somewhat removed and tangential to the precipitating cause. For example, consider an individual who loses his job due to problem-gambling-related behavior and goes on unemployment. The connection between this person's unemployment and problem gambling may not be readily established. It may remain "hidden" and simply be attributed to downsizing. Ascribing indirect costs to legalized gambling also presents another challenge. Where do you draw the line? Can anything that can even be remotely linked to gambling be considered an indirect cost?³⁷⁵

The proliferation of legalized gambling and the apparent strong public support for it may understandably lead one to believe that the social costs of gambling exist within an acceptable range or are sufficiently offset by its benefits. As recently as March 5, 2013, nearly 62 percent of the voters in Linn County, IA, an economically vibrant and white collar area, approved a new casino despite a strong opposition movement that emphasized the negative costs of gambling.³⁷⁶ Currently, all but two states, Hawaii and Utah, have some form of legalized gambling. However, opponents might argue that the proliferation of gambling is attributable to financially powerful, politically influential pro-gambling forces that have successfully defined and manipulated public understanding of the issue.

According to the American Gaming Association, a 2013 poll found public acceptance of gambling to be at the highest level of the past decade. Some 85 percent of Americans view casino gambling as an acceptable activity for themselves or others. Overall acceptability is above 80 percent for all age groups and is highest among younger individuals, those age 21 to 39, and lowest, 82 percent, among those age 60 and over.³⁷⁷

The national experience seems to indicate that while more accepting of legalized gambling, the public wants it to be contained within a strict regulatory framework. As the 1999 National Gambling Impact Study noted, "Governments determine which kinds of gambling will be permitted and which will not; the number, location, and size of establishments allowed; the condition under which they operate; who may utilize them and under what conditions; who may work for them; even who may own them. And because governments determine the level and type of competition to be permitted...they are also a key determinant of the industries' potential profit and losses."³⁷⁸

Many state and local governments are in a conflicted position when it comes to legalized gambling. They are often the beneficiaries of increased tax revenues, but they must also bear the

³⁷⁸ NGISC, p. 1-4.

financial burden of any social dysfunction caused by gambling. States that operate lotteries are actually gambling providers and maintain an exclusive monopoly on that service.

No responsible public official wants to harm his community. The challenge public officials confront is knowing what gambling-related course of action will produce desired results given strong and conflicting public opinion and data.

Debate over the benefits and costs of legalized gambling starts with the definition of exactly what is a social “cost” and a “benefit.” Economist Douglas Walker³⁷⁹ notes that researchers fail to agree on the appropriate way to conceptualize and quantify how gambling may affect society. He identified the need for a standardized methodology for measuring the costs and benefits of legalized gambling and believes that public policy debate is hampered by the lack of such a model.³⁸⁰ Measuring and comparing “social costs” across governmental jurisdictions can also present challenges. For example, if one community elects to commit considerable funds to battle problem gambling and another similar community does not, is it reasonable to assume that problem gambling is greater in the former community?³⁸¹

According to Walker, it is important to understand this distinction because the level of government expenditures may not necessarily reflect the magnitude of a social problem. Another aspect of this is that a well-funded, effective public program located in one community, may attract clients from outside that community and thereby inflate the local extent of the problem. A good example of this is services provided to homeless persons.

Economist Earl Grinols has written extensively on the benefits and costs of legalized gambling. According to Grinols, the social costs of gambling mainly fall into nine categories: crime costs, business and employment costs, bankruptcy, suicide, illness related to pathological gambling, social service costs, direct regulatory costs, family costs, and abused dollars.³⁸²

a. Crime

Of the costs associated with legalized gambling, crime is usually a foremost governmental concern. It has a direct impact on a community’s resources and quality of life. Any increase may require the allocation of additional resources that could offset the potential revenue benefits of legalized gambling. Crime may also lower the quality of life in a given area, causing residents and businesses to leave and result in urban blight. Of all the arguments against legalized casino gambling, the concern that casinos will bring more crime into a community is

³⁷⁹ Walker has worked on various Spectrum projects, and is a key member of the team that authored this report. Walker is referenced as a third-party in this report in areas where we are citing his work that was performed independently of Spectrum.

among the most common. On the other hand, casino gambling is believed by some advocates to help reduce crime by providing good employment opportunities and reducing poverty.

In 2005, Maryland Attorney General J. Joseph Curran Jr. issued a report to a legislative committee on the potential impact of casino gambling in his state. He concluded, “It is simply a fiction to delude ourselves that it is possible to have casinos without more crime. Casinos would bring increases in every area of criminal activity.”³⁸³ The types of crime he cited included violent crimes, crimes against property, insurance fraud, juvenile crime, drug and alcohol related crime, domestic violence and child abuse. These crimes are driven by pathological gambling and organized crime elements.³⁸⁴ According to Curran, this increased crime would impose “tremendous costs on Marylanders.”³⁸⁵ He warned legislators that if they allowed themselves to become dependent on what he described as “a small percentage of casino profits,” they would become “trapped.”³⁸⁶

When the Massachusetts legislature was considering a casino proposal in 2008, the Massachusetts District Attorneys Association was more reserved and less strident. The group took no official position on the issue but made available a fact sheet that quoted a state legislative commission report. That report found that “... gambling expansion is likely to bring an attendant increase in crime volume, as is consistent with increases in visiting populations seen in other large developments across the country. There is no evidence conclusively pointing to an increase in crime rates from expanded gambling.”³⁸⁷

The 1999 National Gambling Impact Study Commission took a similar position when examining the relationship between crime and gambling. Due to inconsistencies in the types of crimes studied, the Commission noted that it was not surprising that the proponents of both views are able to advance research to support their views. Therefore, the Commission found the reliability of such studies questionable. The Commission concluded, “Taken as a whole the literature shows that communities with casinos are just as safe as communities that do not have casinos.”³⁸⁸

In a 2005 study published in *The Review of Economics and Statistics*, Grinols and Mustard examined the relationship between casinos and crime using county-level data for the

³⁸⁷ Report of the Massachusetts Commission to Study the Potential Expansion of Legalized Gaming, Prepared for Governor Jane Swift, 2002. Quoted in “Casino Gambling and Crime,” Massachusetts District Attorney Association, March 12, 2008, p. 1.

³⁸⁸ NGISC, p. 7-14.

United States between 1977 and 1996. Their sample covered all 3,165 US counties and focused on the seven FBI indexed crimes: aggravated assault, rape, robbery, murder, larceny, burglary, and auto theft. They found that most factors that reduce crime occur before or shortly after a casino opens. Those that increase crime, such as problem and pathological gambling, occur over time. The concluded that the effect on crime is low shortly after a casino opens and escalates over time.³⁸⁹ Although Grinols and Mustard considered their study to be one of the most comprehensive in terms of the counties covered and the variables used, it was not without its critics.

Walker faulted the Grinols and Mustard study for not adequately addressing the issue of causation: “Their results are invalid because of a variety of serious problems in their data and analysis. The authors simply compared casino to non-casino counties. But they did not control for the volume of tourists, so the crime effect they found may have been caused by tourism generally rather than casino tourism specifically. To show a valid link between crime and casinos, the authors would have needed to compare casino counties to other counties with non-casino tourism.”³⁹⁰ Walker believes that since few, if any, of the researchers Grinols and Mustard cite acknowledge this issue or account for it, the result is an overstatement of the social costs of casino gambling on government and society.³⁹¹

In a 2011 study, Grinols, Mustard and Staha studied the issue of how the type of visitors may affect crime. In an exhaustive study that analyzed data on National Park visitors between 1979 and 1998 in every county in the US, they concluded that the type of visitor and the nature of the attraction have significantly different effects on crime rates.³⁹²

Obviously, conflicting studies and interpretations of data present a huge challenge to state and local policy makers attempting to accurately gauge how casino gambling related crime might affect their communities. Another complication in analyzing the crime related costs of legalized gambling is that costs are often dispersed among various levels of government – federal, state, county and municipal. For example, the costs of criminal investigations and prosecution may be borne by county government and the costs of imprisonment by the state.

b. Public Health

Public health is another area in which state and local governments are both directly and indirectly impacted by legalized gambling. The World Health Organization, which established standardized definitions for community health care, broadly defines “health” as “The state of complete physical, mental, and social well-being and *not merely the absence of disease or infirmity*.”³⁹³ Advocates of casino gambling often cite its potential to improve the overall wellness of the community in many ways. Chief among these is the potential to create employment with tangible benefits such as good incomes, adequate health insurance, and access to quality health care. Such positive outcomes would improve the quality of life, vitality and overall well-being of a community.

Opponents are quick to point out that negative community health impacts may also accompany the advent of legalized gambling. Many of these would be related to pathological and problem gambling, which have been associated with unhealthful behaviors and outcomes such as drug and alcohol abuse, nicotine dependence, depression and insomnia. It has also been associated with higher rates of child abuse and neglect, domestic violence, unsafe sex and family break up. Such adverse outcomes weaken a community’s vitality and diminish its quality of life.

How effective the response to a public problem will be depends on how accurately the problem is understood. Addressing the challenge of problem and pathological gambling is difficult since an individual may be plagued by other pre-existing disorders such as drug and alcohol abuse or mental illness. Again, the question of causation must be addressed. Simply because certain types of behaviors are associated with gambling does not necessarily mean that gambling caused them. This condition is known as co-morbidity.

Co-morbidity was cited as a consideration by the 1999 National Gambling Impact study Commission. It noted: “Pathological gambling often occurs in conjunction with other psychological problems, including substance abuse, mood disorders, and personality disorders. The joint occurrence of two or more problems - termed co-morbidity- is an important, though complicating factor in studying this disorder. Is problem or pathological gambling a unique pathology that exists on its own or is it merely a symptom of a common predisposition, genetic or otherwise, that underlies all addictions?”³⁹⁴

Walker picks up on this point. “If gambling were not an option, a person who is predisposed to a pathological disorder may manifest his disorder in other unhealthy ways. Many pathological gamblers have other behavioral disorders. ... If pathological gambling is simply a symptom of some more basic disorder, then, it is the more basic disorder rather than gambling

³⁹³ “A Glossary of Terms for Community Health Care and Services for older Persons,” WHO Centre for Health Development Ageing and Health Technical Report Volume 5, 2004, http://www.who.int/kobe_centre/ageing/ahp_vol5_glossary.pdf. (Emphasis not in original.)

³⁹⁴ NGISC, p. 4-3.

itself that is the underlying cause of the adverse consequences and social costs of the pathological gambling.”³⁹⁵ He notes that according to the DSM-IV criteria, a person coping with bipolar disorder, who may meet all of the criteria for pathological gambling, is not considered a pathological gambler if the individual also meets the criteria for a Manic Episode, and the Manic Episode is responsible for excessive gambling.³⁹⁶

Similar questions arise if an individual is both an alcoholic and a compulsive gambler who abuses and neglects his family. To what extent is his alcoholism responsible for the harm and distress he causes his wife and children as opposed to his compulsive gambling?

The data do suggest that individuals who are afflicted with these sorts of behavioral disorders may be more inclined to problem gambling. However, even if opportunities to gamble were not readily available, government would still need to cope with the various manifestations of these other problems. The failure of policy makers to take co-morbidity into account may lead one to overstate the negative impacts of legalized gambling and lead to sub optimal government policies and programs designed to respond to those impacts.

How to manage any negative health impacts of gambling is clearly a concern to many state and local officials. As with crime, they will find little definitive guidance in the literature, which is often conflicting and ambiguous. Framing the problem with adequate precision to shape and enable an effective public policy response may be difficult.

A further complication is that what is often perceived as benefit of casino gambling may have some inherent negative health aspects as well. For instance, family sustainable employment is good, but employment in a casino can expose workers to long periods of second-hand smoke, of which the adverse health effects are well known.³⁹⁷ Shift workers and those required to work long hours can experience considerable disruptions of family and social activities since many of these are day oriented. Weekend work schedules can impede involvement in family sporting events or religious activities and diminish supportive social connections with those whose daily schedules are no longer similar. Family relationship strain can occur when one can no longer adequately assist with child care, shopping and housework. Many of these negative aspects may be ameliorated by a better understanding of them and adaptations and accommodations in the workplace.³⁹⁸

It is critical that state and local governments considering or already affected by legalized gambling evaluate and understand all its potential aspects. Many communities impacted by

legalized gambling respond to public health concerns by conducting a community health impact assessment (“HIA”). An HIA is an informational tool designed and implemented by the local community to enable decision-makers to consider the health implications of proposed policies, especially policies that do not appear to have a direct health connection. It has three core functions: assessment, policy development and assurance.³⁹⁹

An excellent example of a HIA for a community considering legalized gambling is the Kansas HIA Project.⁴⁰⁰ It was conducted by the Kansas Health Institute, and funded in part with grants from the Health Impact Project, a collaborative effort by the Robert Wood Johnson Foundation and the Pew Charitable Trusts. The Kansas HIA Project thoroughly examined how the presence of a local casino could affect health, both positively and negatively. It examined potential risks, such as second-hand smoke exposure, traffic accidents, problem and pathological gambling, divorce and suicide. It also analyzed potential community benefits, such as job creation, increased tourism, increased state and local revenues, and health insurance. The goal of the assessment was to bring all health implications up for informed consideration and debate. The Kansas HIA believe they succeeded in that goal.⁴⁰¹

c. Traffic and Transportation Infrastructure

There are several pathways through which casino gambling may impact the state and local government transportation infrastructure. The roadway system needed to support increased levels of traffic may already be old, at capacity, or inadequately designed to accommodate new traffic patterns. The cost to bring the infrastructure up to requisite standards can be hundreds of millions of dollars. Impacts may also extend to public transportation. State and local governments may see train, bus or subway traffic increase to uncomfortable levels on certain routes requiring that they increase service levels. They may also feel pressure to establish unprofitable routes in order to transport workers who might otherwise be unable to get to work.

In many cases, a casino developer may agree to share some of the estimated costs of improvement or public transportation service as part of his approval process. In other cases, government may assume a portion of these costs in order to get a casino project going to enjoy other economic benefits.

In New Jersey in the mid-1990s, under Governor Christie Whitman, the state agreed to fund \$275 million in major roadway improvements to facilitate the development of a new casino resort proposed by Mirage Resorts and its CEO, Steve Wynn. It is currently the site of the Borgata Casino Hotel & Spa in Atlantic City. Donald Trump, who owned a casino on an adjacent

⁴⁰¹ *Ibid.*, p. 100.

property, strongly fought against the proposal.⁴⁰² He withdrew his opposition after the state included in the plan an access improvement to one of the casinos his company operated at the time.

One of the more immediate impacts state and local government may feel upon opening a new gaming facility is an increase in traffic on local roadways. The degree of the impact is subject to many of the aforementioned variables as well as the scale and location of the new facility. Sometimes, the impacts of traffic are felt regionally, in nearby communities that may have had no say in the development process. Connecticut was one of the first states to have Indian gaming, as it was forced upon it by a federal court decision. It can serve as an important example for two reasons. It demonstrates how the impact of a casino can transcend municipal boundaries and it shows how the lack of good regional planning can exacerbate their more challenging impacts.

Concerns regarding the impact of traffic were substantiated in an impact study Spectrum did for the State of Connecticut in 2009.⁴⁰³ Foxwoods opened its resort-casino in Ledyard in 1992 on Mashantucket Pequot Indian tribal land. According to Mayor John Rodolico, “The most immediate effect was the increase of traffic on roads,” Rodolico stated. “They’ve had tens of thousands of people going there from the day they opened.”⁴⁰⁴ Increased traffic volumes caused serious deterioration on old farm roads that were not up to handling the heavier traffic.

d. Law Enforcement and Emergency Services

Emergency services are those services provided by various levels of government such as police, fire and emergency medical responders that protect citizen lives and ensure public safety. Collectively, they are often referred to as “first responders” since they are usually among the first to arrive at the scene of a crime, emergency or disaster.

The impact of *non-criminal* demands on local law enforcement and other first responders is often overlooked or given secondary consideration in gambling impact studies. What impact will an attraction that operates on a 24-hour basis, seven days a week have in terms of additional service calls to the local police department for 911 emergencies, motor vehicle breakdowns, traffic accidents, disorderly persons, lost or missing property, missing and dispute resolutions?

Within the first year after the Horseshoe Casino Cleveland opened in Ohio, the city incurred \$3.1 million in additional expenses related to the police department largely due to

increased visitors and activity in its downtown area.⁴⁰⁵ According to the *Maryland Gazette*, the creation of a special county police unit for the area was necessary to keep a lid on problems in the vicinity of the new Maryland Live Casino in Hanover.

Spectrum's Connecticut gambling impact study found that the City of Norwich felt significant impacts from Indian gaming casinos eight miles away. City officials estimated casino-related costs to be anywhere from \$1 million to \$2.5 million a year. They include: A 27 percent increase in motor vehicle accidents from 1991 to 2004. An increase in police overtime from \$85,000 in 1991 to more than \$280,000 in 2008. A 76 percent increase in calls for service from people needing police from 1992 to 2004.⁴⁰⁶

In some communities, local police and fire departments may be required to purchase additional equipment and provide specialized training for their workers. Government may reduce these costs by requiring gambling establishments to share the costs. To minimize the impact on local police, gambling establishments may be required to maintain certain levels of in house security personnel or establish a fee for service arrangement to cover when additional police service may be desired or required. Governments may impose additional tax assessments on gambling establishments to offset additional law enforcement costs.

e. Driving Under the Influence

Do casinos increase the number of drunk drivers on local roads? Earlier in this report, we noted that destination resorts can increase demands on law enforcement, a subject we will explore in more detail here. Casinos are known for their fast-paced environments where customers are encouraged to let loose and have a good time. This often means enjoying alcoholic beverages that may be provided complementarily to the customer while gambling or enjoyed at a casino lounge or restaurant. The anecdotal evidence would indicate a connection between an increase in drunk drivers and casinos. Drunken driving arrests were reported to have nearly doubled in Bethlehem, PA, after the Sands Casino Resort opened in 2009 while they have remained consistent in a nearby non-casino county.⁴⁰⁷

In 2009, Norwich, CT, located near two Indian gambling casinos, reported that DUI arrests had more than doubled since 1992. The towns of Montville and Ledyard also experienced significant increases. Roughly 20 percent of the motorists in Montville, Ledyard and North Stonington arrested for DUI acknowledged to police that their last drink was at a casino. One

such motorist was charged with manslaughter in March 2009 for allegedly causing a fatal accident by driving the wrong way on I-395.⁴⁰⁸

In what is considered one of the first empirical studies on the subject, Chad D. Cotti and Douglas M. Walker explored whether there is a link between casino expansion and alcohol-related fatal traffic accidents. They found that in urban areas, casinos actually reduce the rate of DUIs, while the rate for suburban and rural areas increases. They believe the difference may be that in urban areas the shorter driving distances, availability of public transportation, and substitution of gambling for bar-hopping might account for the decreased rate, while the rate increase in less populated areas is caused by the increase in distance driven by alcohol-impaired drivers.⁴⁰⁹

There are several ways in which governments respond to the problem of intoxicated driving. Public education campaigns can make people more aware of the dangers of drunk driving and the severe penalties for it. Strict enforcement and police tactics such as drunk driving check points are also effective. Ensuring that the proprietors of establishments that serve alcoholic beverage properly train their staff on how to detect and handle intoxicated patrons is also necessary to reduce the problem.

f. Social Service Costs

Legalized gambling is believed to impose higher costs on governments by attracting more people to the area who may sooner or later need assistance from government programs. These individuals may have come as patrons of the gaming facility or in search of work. The energy and 24-hour activity attendant with casino is a special attraction for the homeless or otherwise financially destitute. It offers opportunities to panhandle and to seek temporary respite and accommodation in the public areas of facilities that may be open 24 hours daily.

A survey conducted by the International Union of Gospel Missions found what they called “compelling evidence of a link between gambling and homelessness.” According to their survey, nearly 1 in 5 homeless men and women cited gambling as a cause of their condition.⁴¹⁰ A 2005 study found clear links between gambling and homelessness but acknowledged that other factors such as mental illness and drug and alcohol abuse may also be factors.⁴¹¹

SECOND DRAFT - CONFIDENTIAL

The 1999 National Gambling Impact Study Commission found that individuals with gambling problems appeared to account for a higher percentage of the homeless population. The commission noted the Atlantic City Rescue Mission reported that 22 percent of its clients are homeless due to a gambling problem.⁴¹² The Atlantic City Rescue Mission says that half the state's homeless population turns to it for services. The homeless problem in Atlantic City, received widespread attention recently when a mentally ill homeless woman randomly killed two Canadian tourists in the city's shopping district.⁴¹³

The presence of a greater number of homeless individuals who are either attracted by, or adversely impacted by, a gambling facility may impose additional public costs for psychiatric and mental health counseling, public welfare, food stamps, emergency shelter operations, traveler assistance and indigent medical care. These costs would be in addition to any increase in any related law enforcement costs. The impact on the quality of life in a given area caused by vagrancy and aggressive panhandling is not readily quantifiable.

Atlantic City has begun to address its substantial homeless problems by adopting a "Single Point of Entry" model. All agencies that serve the homeless population collaborate and refer new clients to a single point of entry where they are evaluated, assigned a case manager and if appropriate, returned to their point of origin.

g. Schools

To the extent that legalized gambling and related economic development attracts more workers with families to an area, an impact on local schools is to be expected. Casinos will mostly hire service workers who will be lower paid and ethnically diverse.

In its Connecticut study, Spectrum found that in Norwich, CT, public school administrators identified annual cost of nearly \$2 million related to casinos. In order to handle the influx of immigrant workers attracted to casino jobs, the district had to create an "English for Speakers of Other Languages" program because students speak nearly 30 different languages. Students originated from Haiti, Peru, the Dominican Republic and Eastern Europe. In addition, thousands of Chinese-speaking workers were recruited from New York City in late 2001 to work at the casinos. Norwich Public Schools reported to Spectrum that in 1999 it enrolled 40 ESOL students.

Some jurisdictions address the impact on schools by requiring that a portion of casino revenues be dedicated to education. In 2009, Ohio voters amended the state constitution to allow casinos in Cleveland, Toledo, Columbus and Cincinnati. The state levies a 33 percent tax on

adjusted gross gambling revenue. School districts in Ohio will share 34 percent of that tax revenue.⁴¹⁴ However, some Ohio education officials think that any casino related funding, while still desirable, would be too small to have any meaningful impact.⁴¹⁵

h. Workforce Training

The workforce required by a new gambling establishment may vary depending on its size, nature and amenities. Casino development may spur other nearby development and create even more employment opportunities. To the extent that the local latent workforce may adequately possess the skills and training necessary meet the new demand, the project can be easily assimilated into the community with little or no governmental assistance. If the local workforce is inadequate, then training and importation of workers may be necessary.

A report to the Massachusetts Gaming Commission estimates the cost of developing and training a workforce for its new casino industry at \$9 million dollars.⁴¹⁶ Responsibility for workforce training usually comes under the local Workforce Investment Board. These entities were established throughout the United States by the Workforce Investment Act of 1998. Their role is to coordinate and direct state, local and federal funding into appropriate employment training programs.

35. Conclusion

Gambling is a reliable and predictable funding source for governments, except in times of pronounced recession and when competition arises in neighboring states. Five states in FY 2010 relied on gambling receipts for more than 5 percent of their own-source state budget revenue.

Gambling, however, costs governments in both direct and indirect ways in such areas as crime, public health, infrastructure, law enforcement and emergency services, social services, schools (in those areas with large, high-employment casinos) and workforce training. Whether the economic benefits brought by gambling receipts outweigh its economic and social costs has been the subject of considerable research – and considerable debate.

G. Impacts of Gambling: Social, Criminal, Personal, Fiscal

A general description of gambling impacts, including: Social, criminal, and personal; short- and long-term fiscal.

Legalized gambling can affect society in a variety of different ways, positive and negative. Among the most common forms of legalized gambling, including lottery, pari-mutuels such as horse and greyhound racing, and casinos, the spread of legal commercial casinos has generated the most interest, concern, and debate during the past two decades. Indeed, the introduction of casinos has been a controversial subject in Florida for years; as a result, the State endeavored to study casinos back in 1995.⁴¹⁷

In this section, we provide a general description of impacts from gambling, including moral/ethical concerns; social, criminal, and personal impacts; as well as long- and short-term effects of casinos development. As commercial casinos are the most controversial form of gambling expansion currently being considered in Florida, our analysis focuses on the literature and evidence on the impacts of casinos.

The economic and social impacts of legalized gambling have been widely written about and studied. Studies generally focus on the effects of gambling as they relate to quantifiable metrics such as employment, crime, tax revenues, and problem gambling. Analyzed less are impacts that are somewhat subjective and not readily quantifiable.

1. Moral and Ethical Issues

Some people oppose gambling in all its forms, such as lotteries, race tracks, and casinos. According to a May 2013 Gallop Poll survey, 64 percent of Americans find gambling morally acceptable.⁴¹⁸ From these results one may infer that 36 percent of Americans do not. Those morally opposed cite its negative impacts on a person's character and values. In their view, to the extent that more people gamble more readily, society's strength and vitality are undermined and weakened.

Irving Kristol, a Professor of Urban Values at New York University, articulated this point of view at a time when legalized gambling was just beginning its national proliferation in America. In 1974, he wrote an op-ed piece for *The Wall Street Journal* opposing the spread of legalized gambling. At the time, a movement to legalize gambling was underway in New Jersey. Kristol wrote that in a gambling environment, a person often succumbs to "fantasies of getting something for nothing." He felt that gambling undermined classical social virtues such as moderation, self-reliance, self-discipline, thrift, and diligence. At the same time, it encouraged

⁴¹⁷ "Casinos in Florida" (Tallahassee, FL: Office of Planning and Budgeting), 1995.

SECOND DRAFT - CONFIDENTIAL

classical vices such as extravagance, avarice and the lack of social responsibility.⁴¹⁹ Kristol believed that state supported gambling was antithetical to a capitalist society. It subverted the values capitalism needed to thrive.

The same year that Kristol wrote his op-ed, Congress established the first Commission on the Review of National Policy Toward Gambling. The purpose of the Commission was to study all aspects of gambling that existed in America at the time and to develop recommendations for the states to follow when establishing policies. In its final report, the Commission began with a direct, straightforward observation: “Gambling is inevitable.”⁴²⁰ Inevitability, however, did not mean that the Commission was insensitive to what it called the “invidious and emotional aspects” of the moral debate. The Commission acknowledged that to a significant number of Americans, “gambling ... is absolutely wrong on both religious and secular moral grounds.” They warned that in sanctioning gambling, “states may be intruding into areas of sincerely held theological and ethical convictions.”⁴²¹ However, moral concerns were “largely unsusceptible to objective analysis.” Therefore, the Commission, while recognizing religious perspectives, considered such issues somewhat beyond their purview.⁴²²

Kristol expressed the secular moral arguments against gambling. In testimony submitted to the Commission, clerical leaders expressed the religious arguments.⁴²³ They held gambling was wrong because it encouraged sloth and an obsession with money over one’s fellow man. It also fostered a desire to achieve wealth without work. It distracted one from pursuing activities that brought one closer to God.

As public acceptance of gambling as a leisure activity increased, arguments based on its moral costs lost ground. According to Rev. Tom Grey, spokesman for the National Coalition Against Legalized Gambling, church opposition to gambling has not been widely effective. Grey, who railed against gambling for years as a United Methodist pastor, said the argument that gambling is sinful does not adequately counter strong public unwillingness to restrict certain personal freedoms. Consequently, Grey’s anti-gambling coalition now avoids explicit mentions of religion, and presents more economically based arguments that focus on addiction, bankruptcy and crime.^{424,425}

⁴²⁴ Greg Trotter, “Gambling Opponents Say Moral Argument No Longer a Trump,” *Christianity Today*, March 18, 2008. <http://www.christianitytoday.com/ct/2008/marchweb-only/112-22.0.html>

SECOND DRAFT - CONFIDENTIAL

Focus on the Family, a politically influential Christian organization dedicated to protecting and strengthening families, strongly opposes all forms of legalized gambling. In their official position statement they write: “Gambling is driven by and subsists on greed. For this reason, the activity is morally bankrupt from its very foundation. Gambling is also an activity which exploits the vulnerable – the young, the old and those susceptible to addictive behaviors. Further, gambling entices the financially disadvantaged classes with the unrealistic hope of escape from poverty through instant riches...gambling undermines the work ethic. It is based on the premise of ‘something for nothing,’ a concept that sanctions idleness rather than industriousness, slothfulness instead of initiative.”⁴²⁶

In Florida, the Ethics and Religious Liberty Commission of the Southern Baptist Convention has been a leading voice in warning about the effects of widespread gambling. The commission notes on its website:

“Among the arguments advanced to justify gambling is the one which says that all of life is a gamble or a risk. But risk-taking in gambling is different from the risks involved in the normal routine of life. The risks in gambling are artificially created. In other ventures, the risk is part of the creative process. For example, the contractor risks labor and capital to build a house and make a profit. Unlike the gambler, he assumes a risk that is necessary to society’s economic life, and he relies on more than chance in seeking to make a profit.

“It is also argued that some people like to spend their recreation money betting on horses or playing slot machines, just as others prefer to spend theirs for a round of golf or a movie. Gambling obviously provides a kind of recreational excitement for some, but the cost to individuals, families, the economy, and society is too high to justify it.

“Seen in this light, gambling is personally selfish, morally irresponsible, and socially destructive. Therefore, gambling must be vigorously resisted. Such resistance requires an understanding of the problem, a workable plan of attack, and a personal commitment to work against gambling.

“The gambling problem results from two interrelated factors: (1) Many people have a desire, often a compulsion, to gamble. (2) Most of these people have access to gambling opportunities. The ultimate goal of a plan of action is to control the desire to gamble and eliminate the access to gambling opportunities.

“When the desire to get something for nothing and the opportunity to gamble go hand in hand, resistance to one requires resistance to the other. To attempt to eliminate the desire

⁴²⁵ The National Coalition Against Legalized Gambling is now called Stop Predatory Gambling (<http://stoppredatorygambling.org/>).

⁴²⁶ “Our Position (Gambling),” Focus on the Family, <http://www.focusonthefamily.com/socialissues/social-issues/gambling/our-position.aspx> (accessed May 23, 2013).

SECOND DRAFT - CONFIDENTIAL

without abolishing the opportunity is to invite failure. It is a matter of record that as gambling becomes more accessible, more people gamble. Thus, legalization is not the answer to the gambling problem. Instead, it is one primary cause of the gambling problem.

“Any adequate plan to deal with gambling must be both extensive and comprehensive. It must be extensive enough to include the spiritual, educational, and legal approaches. It must be comprehensive enough to incorporate the family, the world of work, community clubs and organizations, the church, and government.”⁴²⁷

Moral opposition against gambling is not limited to the Christian community. In Maryland, both the Baltimore Jewish Council and the Baltimore Board of Rabbis officially came out against expanded gambling. Rabbi Gila Ruskin of the Harford Jewish Center and first vice president of the Baltimore Board of Rabbis stated she believes expanded gambling preys on the weak and encourages addiction. “You are exploiting people who don’t have expendable income all in the name of raising money for causes like education. But what do you tell those kids about where the money for their school came from? That we raised the funds by preying on people’s weaknesses and temptations.”⁴²⁸

The late William Eadington, who wrote extensively on the costs and benefits of gambling, noted that some opposition to legalized gambling is based on “straightforward moral disapproval” but does not examine that aspect further.⁴²⁹

Notably, the successful 1976 campaign to legalize casinos in Atlantic City, NJ included religious leaders in its army of proponents. A local rabbi and the monsignor of a parochial high school in the Atlantic City region were used in radio advertisements that claimed morality was on the side of increasing employment, reducing hunger and getting families off welfare. “Many religious leaders believe this is the real moral issue,” the two clergy leaders said in the radio ads.⁴³⁰

In sum, morality has historically been a factor in shaping public policy. Capital punishment, pornography and gay marriage are some examples where much weight is placed on moral perceptions and concerns when shaping policy. It is a challenging factor since it may be

difficult to reach an agreement on what is “moral” and concepts of acceptable morality may change from one community to another, as well as over time.

36.Opportunity Costs

In economics, an opportunity cost is defined as the cost incurred in forgoing the benefits of one course of action while pursuing the benefits of another. For example, one might decide to take a job right out of high school rather than go to college. In the short term, one reaps the benefits of not paying tuition costs and losing four years’ worth of salary, but in the long term, one might pay the cost of earning less income over a period of many working years.

Those opposed to legalized gambling sometimes argue that it is pursued as an economic development policy because it is easier and its financial benefits are more immediate. However, they argue that those benefits are offset by its social costs and may not be sustainable in the long term. According to opponents, while casino gambling might make local sense, especially in financially distressed communities that have few, if any, viable alternatives, the collective long term costs of its proliferation are significant and have a national impact. Thousands of workers and billions of dollars in capital are directed into investments that, they argue, do little to increase America’s overall economic strength and competitiveness in a global economy. Casino opponents argue that casinos invest little, if anything, to improve worker skills and training and capital could arguably be better invested in more productive industries.

The problem with assessing opportunity costs is that knowing the outcome of any course of action with any degree of certainty is not possible. A high-tech startup company may fail and leave a community less well off than if it had a stable, profitable casino. Ironically, choosing the best path to achieve desired economic goals is itself basically a gamble.

37.Social, Criminal, Personal Impacts

a. Negative Impacts

We now turn to a discussion of specific negative impacts that are often thought to accompany legalized gambling. The goal in this section is to provide a brief review of those impacts that have been studied and quantified in the academic literature.

Disordered Gamblers

Most of the negative socioeconomic impacts often associated with gambling, and casino gambling in particular, are the result of problematic behaviors by “disordered gamblers.” These are people who gamble to an extent beyond recreational gambling such that it disrupts their

career and/or personal/professional relationships.⁴³¹ Psychologists estimate the prevalence rate of disordered gamblers to be between 0.4 percent and 2.0 percent of the general population.^{432,433}

However, prevalence rates may be greater or lower in areas. In discussing this issue with representatives from the Florida Council on Compulsive Gambling (“FCCG”), it appears that the prevalence rate could be significantly higher, depending on where one attempts to identify problem gamblers. The 0.4 percent – 2.0 percent rate is based on the psychology literature, much of which is based on clinical diagnoses of problem gamblers. However, as noted by Laura Letson at the FCCG, “These questions should be asked at places other than the psychologist’s office.” One may see a much higher prevalence rate if the diagnosis was attempted at non-clinical settings, such as in homeless shelters, in social service environments, or at correctional facilities. Letson suggests that under the FCCG’s analysis, based on a preliminary, two-question problem gambling screen of the arrestee population, the prevalence rate may be over 15 percent. Other FCCG data indicate that prevalence rates for adults and adolescents may be in the same range (15 percent to 18 percent).⁴³⁴

Disordered gambling is a condition which is usually diagnosed in a clinical setting. The *Diagnostic and Statistical Manual* (“DSM”), published by the American Psychiatric Association, is the standard for the diagnosis of problem/disordered gambling. The DSM-IV (1994; 2000) lists a set of 10 criteria that are indicators of disordered gambling. A person may be diagnosed as a pathological gambler if they endorse at least five of the following indicators:⁴³⁵

1. Is preoccupied with gambling (e.g., preoccupied with reliving past gambling experiences, handicapping or planning the next venture, or thinking of ways to get money with which to gamble)
2. Needs to gamble with increasing amounts of money in order to achieve the desired excitement
3. Has repeated unsuccessful efforts to control, cut back, or stop gambling
4. Is restless or irritable when attempting to cut down or stop gambling
5. Gambles as a way of escaping from problems or of relieving a dysphoric mood (e.g., feelings of helplessness, guilt, anxiety, depression)

⁴³¹ Walker, *Casinonomics*, 2013, p. 111.

⁴³² Ibid, p. 112.

⁴³³ Psychologists classify gambling problems into different categories, including problem gamblers, pathological gamblers, and the newest term, disordered gamblers. We do not differentiate among these different levels of severity in this overview of the impacts of gambling.

⁴³⁴ Laura Letson, Florida Council on Compulsive Gambling, phone interview, May 24, 2013.

⁴³⁵ American Psychiatric Association, *Diagnostic and Statistical Manual*, 4th edition, 2000.

6. After losing money gambling, often returns another day to get even (“chasing” one’s losses)
7. Lies to family members, therapist, or others to conceal the extent of involvement with gambling
8. Has committed illegal acts such as forgery, fraud, theft, or embezzlement to finance gambling
9. Has jeopardized or lost a significant relationship, job, or educational or career opportunity because of gambling
10. Relies on others to provide money to relieve a desperate financial situation caused by gambling

In the new edition of the DSM (“DSM-5”), to be published in summer 2013, the terminology changes from “pathological gambler” to “disordered gambler,” and the eighth criterion – related to illegal acts to finance gambling – has been dropped. The diagnosis will require at least four of the nine remaining indicators.⁴³⁶

Disordered Gambling and the Proximity of Casinos

One important question for any government jurisdiction considering the expansion of legalized casinos is whether the prevalence of disordered gambling is related to the proximity of casinos. In other words, is the introduction of casinos to an area likely to increase the prevalence of disordered gambling? Several studies have examined this issue. While the odds of a person being a disordered gambler are about 1 percent, for people within 10 miles of a casino the odds increase by 90 percent (to 1.9 percent), according to one study.⁴³⁷ However, it is unclear whether an increase in this risk is the result of new people in that area developing gambling problems, or whether a casino attracts existing disordered gamblers to the area. Another study on adolescents found that the number of different forms of legal gambling in a state is related to an increase in the proportion of problem gamblers in the state.⁴³⁸

Hence, the evidence suggests that the negative impacts from casinos that are associated with disordered gambling would likely be worse in Florida if casino gambling is expanded there. Indeed, representatives from the FCCG indicate that, since 2005, help-line calls in the state have increased over 50 percent. This is during a time period in which the amount and types of legalized gambling increased dramatically in the state – namely with the introduction of racetrack casinos in South Florida and the development of two Seminole Hard Rock destination

⁴³⁸ John W. Welte, et al., “Legal Gambling Availability and Problem Gambling Among Adolescents and Young Adults,” *International Gambling Studies*, Volume 9, 2009, p. 94.

resort casinos. FCCG Executive Director Pat Fowler notes, “More than 50 percent of help-line callers identify slot machines as their primary problem.” Another 30 percent identified cards as their main problem; this has increased as no-limit poker has increased in availability.⁴³⁹

At the same time, however, psychologists have not found significant differences in prevalence rates across jurisdictions or across time. So, even though casinos have spread across the United States, the prevalence of disordered gambling has not increased at the same rate. Since Florida already has several legal types of gambling, including tribal casinos, it is unclear how the introduction of commercial casinos would affect the prevalence of problem gambling. But if help-line call data are an indication, gambling problems would likely increase with expanded gambling in Florida.

Negative Social Impacts Associated with Casinos (and Gambling)

Social scientists have been studying the economic and social impacts of legalized gambling, particularly casino gambling, since the early 1990s. Such research was frequently cited in debate over the expansion of casinos into new states, especially when the research offered a monetary estimate of the “social costs of gambling.” As an example of the importance of this area of research, the National Gambling Impact Study Commission discussed the various social costs of gambling, and the National Research Council’s *Pathological Gambling* discusses the academic research in detail, although these resources are somewhat dated now.⁴⁴⁰

Among the many studies that examine the negative social impacts that are often associated with gambling in general, and casino gambling in particular, the paper by Thompson, Gazel, and Rickman represents one of the most careful analyses.⁴⁴¹ These authors surveyed Gamblers Anonymous members, people who might be expected to be more likely than the general public to be diagnosed as disordered gamblers. Based on the survey responses, Thompson et al. estimate the annual social costs per disordered gambler to be around \$9,500. This amount includes the following types of social cost: employment (including lost work hours, unemployment compensation, and lost productivity and unemployment; \$2,941), bad debts (\$1,487), civil court (\$848), criminal justice (including thefts, arrests and trials, and incarceration; \$3,498), therapy (\$361), and welfare (\$334).

There is no doubt that disordered gamblers sometimes engage in socially costly behaviors. However, such monetary social cost estimates have been criticized in the literature.⁴⁴² One of the key problems with estimating the monetary value of social costs is that most

⁴³⁹ Pat Fowler, Florida Council on Compulsive Gambling, phone interview, May 24, 2013.

⁴⁴⁰ National Research Council, *Pathological Gambling*, 1999.

disordered gamblers also have other behavioral problems, such as alcohol or drug use problems.⁴⁴³ Yet, most social cost studies simply attribute all of the social costs created by these individuals to the gambling problem. There is no research that successfully partitions the costs among the various behavior problems experienced by the individual.⁴⁴⁴

While it is not possible to offer an objective social cost monetary estimate without making a variety of arbitrary assumptions, it is informative to discuss the different types of problems that are most commonly associated with disordered gambling. In other words, a qualitative, rather than quantitative, discussion of social costs is more useful.

Casinos and Crime Rates

One of the most common concerns people have with the expansion of gambling is that it may cause an increase in crime rates. Such concerns are often voiced by members of the law enforcement community. For example, Sarrah Carroll of the Florida Sheriff's Association indicates that she believes there is a link between gambling and crime. Her organization is opposed to any expansion of gambling in Florida because of concerns that crime problems would be exacerbated.⁴⁴⁵ Certainly each community may have different experiences with gambling-related crime, depending on the types of gambling available and other characteristics of the community in question.

Over the past three decades numerous researchers have examined the relationship between casino gambling and crime rates. One of the most commonly cited studies is the 2006 study by Grinols and Mustard.⁴⁴⁶ These authors examined county-level crime data from 1977 through 1996. As do most studies on the subject, Grinols and Mustard focus on the FBI's *Uniform Crime Reports* Index I crimes, which include "street crimes": aggravated assault, rape, robbery, murder, larceny, burglary, and auto theft. They argue that approximately 8 percent of casino county crime can be attributed to the existence of casinos. Several studies confirm the Grinols and Mustard results; yet others find no relationship between casinos and crime rates.

Although the Grinols and Mustard paper received a lot of attention, it has also received a significant amount of criticism because the authors calculated the crime rate in a way which overstates the impact of casinos. Crime rates should reflect the risk of an individual being victimized by crime.⁴⁴⁷ In a county with no tourism, for example, calculating the crime rate is

⁴⁴³ James R. Westphal and Lera Joyce Johnson, "Multiple Co-occurring Behaviours Among Gamblers in Treatment: Implications and Assessment," *International Gambling Studies*, Volume 7, 2007, p. 73-99.

simple; it is the number of crimes committed divided by the population at risk (or county residents). But if there is significant tourism in a county, then the crime rate should be calculated as the total number of crimes committed divided by county residents plus tourists. Since Grinols and Mustard divided crimes by county population only – and excluded tourists from their population measure – their calculations almost certainly overstate the effect of casinos on crime.

The 2010 study by Reece⁴⁴⁸ significantly improved on the Grinols and Mustard study, as Reece controlled for the number of tourists and also the number of casino customers – two critical adjustments absent in the Grinols and Mustard study. Although Reece's analysis is much more thorough than the Grinols and Mustard analysis, he examined only Indiana. Nevertheless, his findings are an important contribution to the overall understanding of casinos and crime. In summary, Reece finds that burglaries increase in a county a few years after a casino opens. However, car thefts and aggravated assaults decreased. Increased casino volume reduces larceny, car theft, aggravated assault, and robbery.⁴⁴⁹

A recent, fairly comprehensive review of the casino-crime literature shows that almost all studies that find a relationship between casinos and crime calculate the crime rate by excluding the tourists from the population at risk. Those studies that do include the tourists in the population measure find no casino effect on crime rates.⁴⁵⁰ Given the best available evidence, it seems unlikely that the existence of casinos causes an increase in crime rates, properly calculated. There *may be* a relationship between casinos and crime, but there is no good evidence, as yet, to support such claims.

Problem Gambling and Crime

There is solid evidence that disordered gamblers are more likely than non-gamblers to engage in crime. This connection makes intuitive sense. For example, a person who has difficulty controlling his gambling may have to take drastic actions to obtain money to satisfy a gambling habit. A variety of studies that rely on Gamblers Anonymous members confirm that these individuals are more likely to commit crimes. For example, the study by Meyer and Stadler finds that 89 percent of their sample of pathological gamblers admitted to having committed at least one crime in their lifetime.⁴⁵¹ This rate is much higher than for the general population.

Even when analyzing a sample of people from the general population, the link between gambling behaviors and crime seems to exist. In one study of adolescents, researchers found that individuals who indicated gambling behaviors consistent with those from the DSM were

⁴⁴⁸ William S. Reece, "Casinos, Hotels, and Crime," *Contemporary Economic Policy*, Volume 28, 2010, p. 145-161.

⁴⁵¹ Gerhard Meyer and Michael A. Stadler, "Criminal Behaviour Associated With Pathological Gambling," *Journal of Gambling Studies*, Volume 15, 1999, p. 29-43.

significantly more likely to indicate that they had also engaged in crime, compared to individuals who did not exhibit disordered gambling behaviors.⁴⁵² However, the study also found that it was not casino gambling that is most linked to crime – rather, it was gambling on horse racing, sporting events, and card games that were found to have the link to crime.

It is difficult to predict whether or not the increased crime committed by disordered gamblers has a meaningful impact on overall crime rates, since disordered gamblers make up such a small portion of the population. Aside from that, as noted above, results from crime rate studies are inconclusive as a group. Nevertheless, the literature seems to confirm that problem gamblers are more likely to engage in crimes than non-problem gamblers.

Casinos and White-Collar Crime

Over the past two decades, there have been numerous suggestions in the academic literature and in political debate that gambling is associated with white-collar crimes, such as embezzlement, forgery and fraud. The motivation for such crimes, especially on the part of disordered gamblers, seems obvious. If one is accumulating significant losses at a casino, one way to finance such losses would be to use one's position of trust to commit a financial crime.

A link between casinos and gambling and white-collar crime has been cited in countless reports, newspaper articles, and even in the Congressional Record. A typical quotation is: "The American Insurance Institute estimates that 40 percent of white-collar crime has its root in gambling."⁴⁵³ The problem is, as explained by Joseph Kelly, the American Insurance Institute does not exist. The citation to this statistic often appears in anti-casino writings, some dating back to 1980, even though no one has apparently ever seen the report from which this statistic is said to come.⁴⁵⁴ Nevertheless, there is likely a motivation for individuals, particularly with gambling problems, to engage in white-collar crime to finance their gambling. The FCCG's Fowler suggests that white-collar crime is a problem associated with gambling in Florida, although it has not received adequate research attention to date.⁴⁵⁵

Indeed, there has been very limited research on a link between white-collar crime and casinos (or gambling, generally). A review of the literature finds one recent study. The 2008 study by Jay Albanese specifically examines the impact of the introduction of casinos on certain white-collar crime arrests. Albanese provides national arrest data for embezzlement, forgery, and fraud, between 1988 and 2005. (He excluded juvenile arrests from his data.) Embezzlement

⁴⁵² Christopher Clark and Douglas M. Walker, "Are Gamblers More Likely to Commit Crimes? Evidence From a Nationally Representative Survey of U.S. Young Adults," *International Gambling Studies*, Volume 9, 2009, p. 119-134.

⁴⁵³ Joseph M. Kelly, "The American Insurance Institute, Like THAT Bunny, Keeps Going and Going and Going ...," *Gaming Law Review*, Volume 1, 1997, p. 209-212.

⁴⁵⁴ Ibid.

⁴⁵⁵ Pat Fowler, Florida Council on Compulsive Gambling, phone interview, May 24, 2013.

arrests increased by about 20 percent over the period, forgery arrests increased by 19 percent, and fraud arrests decreased by about 11 percent.⁴⁵⁶

Since casino gambling, particularly by disordered gamblers, may be a motivation to engage in white-collar crimes (for example, in order to gain money with which to gamble), Albanese also examines arrest rates before and after the introduction of casinos in several markets: Atlantic City, NJ; Connecticut; Detroit, MI, and St. Louis, MO. Albanese also considers Las Vegas; even though casino gambling has existed there since the 1930s, Las Vegas grew dramatically during the 1990s. Albanese summarizes his findings on these markets:

“The pre- and post-casino arrest trends in these large casino jurisdictions were remarkably consistent, but unexpected. Embezzlement arrests increased in Connecticut (and nationwide), but declined in the other casino jurisdictions. Forgery arrests dropped in the casino jurisdictions despite a general increase in forgery arrests nationwide. Fraud arrests also dropped in casino jurisdictions, reflecting nationwide trends. These results indicate that there have been mostly net decreases in average annual arrests for these white collar offenses in these large casino jurisdictions.”⁴⁵⁷

There are limitations to Albanese’s data. For example, his data are presented as absolute arrest counts, not arrest rates (i.e., they are not per capita arrest rates). However, given the large number of tourists that visit casinos, this omission is likely to cause an overstatement of the crime rates in casino jurisdictions. In addition the picture may look different if convictions, rather than arrests, were considered. Finally, as Albanese notes (p. 342), it is impossible to determine whether gambling was the motivation for these crimes.

Albanese focuses his discussion of the causes of white-collar crime on embezzlement, since those arrest numbers increased nationwide during the period he studied. He cites evidence from interviews of prisoners who were convicted of embezzlement. Although there is a variety of stated causes for embezzlement, gambling is not one of the more common suggested causes. Rather, Albanese summarizes, “...females appear to embezzle primarily to keep a family or relationship together when threatened with financial problems, whereas men engage in status-seeking or status-maintaining behavior resulting in financial problems that they do not feel they can share with others.”⁴⁵⁸

Although evidence from prisoner interviews may not seem entirely convincing, evidence that supports Albanese’s doubt of a link between white-collar crime and casinos can be found in the fact that the DSM has dropped the diagnostic criterion that the person “has committed illegal

⁴⁵⁶ Jay S. Albanese, “White Collar Crimes and Casino Gambling: Looking for Empirical Links to Forgery, Embezzlement, and Fraud,” *Crime, Law and Social Change*, Volume 49, 2008, p. 339.

⁴⁵⁷ Ibid., p. 341-342.

⁴⁵⁸ Ibid., p. 344.

acts such as forgery, fraud, theft, or embezzlement to finance gambling.” This criterion is “rarely endorsed” in attempts to diagnose disordered gambling.⁴⁵⁹

Political Corruption

Aside from crimes that may be committed by disordered gamblers, or others who may be seeking money to fund their gambling, historically there has been a concern about gambling and political corruption. The late US Senator Paul Simon wrote of gambling, “We have an industry ... that is growing rapidly. It is an industry...that [I think] has more of a history of involvement in corruption than any other industry.”⁴⁶⁰ Casinos may have a reputation for being “mob-run” because of Las Vegas in the early days. However, as most casinos in Las Vegas and elsewhere are now corporate owned and rigorously regulated at the state level, it raises doubt as to whether the mob has any involvement in the industry, and whether politicians systematically engage in corrupt activities with respect to the casino industry.

As with white-collar crime and street crime, there may seem to be an obvious motivation for corruption related to the gambling industry, and casinos in particular. First, the casino industry is growing very rapidly and is largely a cash business. Perhaps this would make it easier for the industry to corrupt the casino industry. More importantly, the casino industry needs politicians’ consent to exist. Since state governments control almost every aspect of the casino industry perhaps the spread of casinos across the United States is due, in part, to corrupt politicians. Alternatively, there could be a link whereby, once casinos are legal and operating, they contribute to the corruption of politicians in an attempt to win favorable regulatory changes.

Spectrum has significant experience in New Jersey, where the possibility of political corruption was first addressed in the Casino Control Act of 1977, in which Sec. 138 includes the following language: “No applicant for or holder of a casino license, nor any holding, intermediary or subsidiary company thereof, nor any officer, director, casino key employee or principal employee of an applicant for or holder of a casino license or of any holding, intermediary or subsidiary company thereof nor any person or agent on behalf of any such applicant, holder, company or person, shall directly or indirectly, pay or contribute any money or thing of value to any candidate for nomination or election to any public office in this State, or to any committee of any political party in this State, or to any group, committee or association organized in support of any such candidate or political party.”⁴⁶¹

In our experience, that provision was designed to help ensure public confidence in the governance of gaming, and was not – nor could it have been – expected to hermetically seal the

⁴⁵⁹ Nancy N. Petry, “Editorial: Pathological gambling and the DSM-V,” *International Gambling Studies*, Volume 10, 2010, p. 113.

⁴⁶⁰ Paul Simon, testimony in “Charge to the Commission,” *National Gambling Impact Study Commission*, 1997, p. 31 <http://govinfo.library.unt.edu/ngisc/meetings/june2097/june20con.html>.

⁴⁶¹ New Jersey Casino Control Act <http://www.state.nj.us/casinos/actreg/act/>.

industry from politics, or vice versa. Indeed, as noted earlier, the provision did not prevent corruption, but it might have reduced it, and arguably achieved its principal goal of fostering confidence in the governance of gaming.

Since 2006, the casino/gambling industry has spent roughly \$30 million per year on lobbying federal politicians; it employs over 400 lobbyists.⁴⁶² Of course, it is legal for individuals or groups to make contributions to politicians, but such figures raise questions about the industry's influence on the government that regulates it.

It would be incredibly time-consuming to analyze individual corruption arrests to determine whether they are directly linked to casinos. However, there have been some high-profile arrests that were linked to gambling. Former Illinois governor Rod Blagojevich was convicted for a variety of crimes; one was for wire fraud in an attempt to shake-down a racetrack owner in return for the governor's support of a 2008 law that taxes casinos 3 percent to subsidize the racetracks.⁴⁶³ The paper by Martz provides a description of the anecdotal evidence that purports to show a link between casinos and corruption.⁴⁶⁴

We are aware of only one empirical analysis of the link between casinos and political corruption in the United States. The recent paper by Walker and Calcagno analyzes federal corruption convictions and casino adoptions/revenues using data from 1985 to 2000. Their statistical analysis focuses on whether changes in one variable (e.g., corruption convictions) improve the prediction of the other variable (e.g., casino revenues), and vice versa. If there is such a relationship, it is called "Granger causality" in the economics literature.⁴⁶⁵

The authors explain that their analysis lends little evidence to support a "culture of corruption" explanation whereby corruption leads to the introduction of casinos. Rather, they find evidence that predicted casino adoptions lead to corruption convictions. This suggests that casinos may be complicit in "regulatory capture" during the period studied. The implication is that regulators are "captured" by the industry they are supposed to regulate. Anecdotal evidence of regulatory capture by the casino industry can be seen in a variety of states. For example, several states that initially had casino loss limits (for example, \$500 per casino cruise) have since eliminated those limits. Some states which used to require casinos to be on boats no longer do.⁴⁶⁶

⁴⁶⁵ Douglas M. Walker and Peter T. Calcagno, "Casinos and Political Corruption in the United States: A Granger Causality Analysis, *Applied Economics*, in press.

⁴⁶⁶ *Ibid*, p. 25-26.

While such examples of regulatory changes favorable to the casino industry may be examples of regulatory capture, it should also be noted that the regulators themselves may benefit when regulations benefit the industry, as many state casino regulatory agencies are funded directly from taxes on casinos' operations. Although the study by Walker and Calcagno is the first empirical analysis to suggest a statistical link between casinos and corruption, one could criticize the study because it does not directly link casinos or the gambling industry to particular corruption convictions. In any case, a carefully designed regulatory framework for the casino industry can be the best way of preventing any corruption associated with casinos.

Bankruptcy

Non-business bankruptcy filings increased dramatically during the 1990s, doubling between 1990 and 1998.⁴⁶⁷ Yet, the US economy did relatively well throughout this period. The trend in bankruptcies coincided with the expansion of commercial casinos outside of Nevada and New Jersey during the early 1990s, so the increased availability of casinos and spike in bankruptcies could be related. Several studies have been published that examine this relationship. Key findings of these studies are described.

Nichols et al. studied bankruptcies from 1989 through 1998 in eight casino jurisdictions and control jurisdictions without casinos. They found that personal bankruptcy rates increased in seven of the eight casino communities they studied.⁴⁶⁸ The study by de la Viña and Bernstein examined 100 counties in 36 states, from 1989 through 1994; they did not find a relationship between the introduction of casinos and county bankruptcy rates.⁴⁶⁹ However, their lack of results may be because their study only went to 1994, only five years after casinos began to spread outside of Nevada and New Jersey. A more recent study found that bankruptcy rates in casino counties are initially higher than non-casino counties, but then casino-county rates actually fall below non-casino counties four to eight years after casinos are introduced. But rates again start to rise, and thirteen years after the introduction of casinos, bankruptcy rates in casino counties are 15 percent higher than in non-casino counties.⁴⁷⁰

Barron et al. examined data for over 3,000 US counties. Their results suggest that bankruptcy rates are higher closer to casinos, and that if casinos were eliminated there would be

a 5 percent decline in 1998 filing rates in casino counties.⁴⁷¹ Finally, the study by Garrett and Nichols indicates that individuals who visit out-of-state casinos have a 10 percent higher chance of filing for bankruptcy back in their home states, compared to individuals who did not visit out-of-state casinos.⁴⁷²

There have been several other journal articles that examine bankruptcy rates and their relationship to casinos. Considering those studies discussed above and the others in the literature, the majority of the evidence suggests that the existence of casinos does cause an increase in personal bankruptcy rates, especially in close proximity to casinos. It is likely that disordered gamblers are disproportionately responsible for the bankruptcy effect, as they are more likely than others to experience financial problems because of their gambling.

Drunk Driving Fatalities

Many casinos provide their patrons with free alcoholic beverages as long as they are gambling. Indeed, like bars, casinos represent an increasingly popular form of nighttime entertainment. To the extent that alcohol is relatively cheap at many casinos, then one might expect there to be a link between casinos and drunk driving.

There has not been published work that has studied the relationship between casinos and DUI arrests in the United States. However, one study examined casinos and alcohol-related traffic fatalities (“ARFAs”). The 2010 study by Cotti and Walker examined data from 1990 to 2000, a period that covers much of the recent US commercial casino expansion outside of Nevada and New Jersey. Their findings indicate that there is indeed a relationship between the existence of casinos and ARFAs.⁴⁷³ However, the relationship appears to be related to miles driven. In short, the study finds that ARFAs increase by 9.2 percent for casino counties with average population. However, the effect declines as county population increases. Specifically, they write:

“[R]ural or moderately sized counties will likely see an increase in alcohol-related fatal traffic accidents when casinos are present, but urban or greater-than-average populous counties may be expected to see a decrease in alcohol-related fatal traffic accidents when casinos are present.”

This relationship is explained to be the result of “miles driven.” That is, the reason drunk driving fatalities are likely to increase in rural casino counties is that the average patron must drive more miles to get to and from the casino. This increases the likelihood that an individual

will be in a traffic accident. At the same time, in urban or more populated casino counties, patrons do not have to drive as far, and they often have alternatives to driving, such as taking a cab, bus, or other public transportation. In addition, the authors suggest that urban casinos may serve as a substitute for bars and nightclubs, at which the average patron may consume more alcohol than at casinos.⁴⁷⁴

Negative Personal/Professional Impacts from Gambling

Much of the discussion in this section thus far has focused on potential negative impacts associated with gambling for which there are solid, publicly available data. Such data facilitate academic studies on the effects. Yet, a variety of negative social impacts from problem gambling are not easily quantifiable as they often occur in a person's career or personal life. Recall that the definition provided earlier of "disordered gambling" focuses on gambling having a negative impact on a person's career, professional relationships, and/or personal relationships. Then there are a variety of potential professional and personal problems that may result from a gambling disorder which are not well-documented in public statistics.

Nevertheless, there is solid anecdotal evidence that such problems exist. For example, the National Gambling Impact Study Commission discusses suicide, divorce, and homelessness rates, among other social problems often attributed to gambling.⁴⁷⁵ The NGISC describes a variety of individuals who testified that their lives had been shattered because of their own gambling problem or because of a family member's or spouse's gambling problem. Earl Grinols dedicates 21 pages in his book to reproducing newspaper headlines and quotations that provide anecdotal evidence of social problems and gambling.⁴⁷⁶ However, such cases may grab the attention of newspaper reporters and readers precisely because they are unusual or extraordinary cases.

One must look at academic research to determine whether a statistical link between gambling problems and these other problems exists. The National Research Council provides a review of research, prior to 1999, on many of the social impacts of gambling.⁴⁷⁷ Even then, however, the research on these issues was still relatively sparse.

As with the crime discussion from above, there is quite likely to be a distinction between the results from research that examines individuals (such as through survey research on Gamblers Anonymous members) and research that examines aggregates (such as studies on divorce or crime rates at the county- or state-level). We review some of the evidence from each of these types of studies.

⁴⁷⁴ Ibid, p. 795.

⁴⁷⁷ National Research Council, *Pathological Gambling: A Critical Review*, 1999.

The study by Thompson et al. (1997) examined data collected from a survey of 98 Gamblers Anonymous members in Wisconsin.⁴⁷⁸ They report that 21 of their respondents indicated they had lost or quit their jobs, and attributed it to gambling. Of this group, 18 reported being unemployed for an average of over 12 months. Sixty-four of the respondents indicated missing work because of gambling. Thirty-eight of the respondents had been arrested, only 14 of which were attributed directly to gambling. Among the 98 respondents, 57 had sought professional help for their gambling problem; 15 had been hospitalized. Many of the survey respondents had other behavioral problems: 30 were alcoholics; 25 were compulsive shoppers; 22 compulsive overeaters; and 14 drug addicts.

Twelve of the respondents indicated they had marriage and family problems. Among the 30 respondents who were separated or divorced, 70 percent indicated that gambling was a cause. These effects of gambling are likely to have a significant impact on children. Problem gamblers are also probably more likely than the general population to consider or commit suicide. The survey of Gamblers Anonymous members indicated that 69 respondents had thought about suicide, 59 indicated they planned how they would commit suicide, and 23 had actually attempted suicide.

The survey statistics reported by Thompson et al. are indeed startling. However, as they represent GA members, they perhaps represent the extreme end of the distribution of individuals in society with the most serious gambling problems. A variety of other studies reports on similar social impacts of disordered gambling. The National Gambling Impact Study Commission and the National Research Council⁴⁷⁹ provide comprehensive discussions of many of these social impacts. The following table illustrates some problems commonly associated with disordered gambling. The table indicates the percentage of individuals among those surveyed who experience such issues, sorted by their gambling classification.

Other studies confirm the variety of personal, family, and career problems that often accompany a gambling problem. For example, the study by Shaw et al. (2007) discusses “collateral effects” of pathological gambling, including “divorce, domestic abuse, financial instability, friendship/ family loss, and the psychological and educational development of the children included in those families.”⁴⁸⁰

Studies that focus on disordered gamblers find that such individuals often have other behavioral problems and issues. Similar results have been found with respect to crime, although there is not clear evidence that casinos affect crime rates. There is an important distinction between “micro” studies which examine problem gamblers specifically, and “macro” studies which look at aggregate statistics. Although the studies cited above point to a variety of problems experienced by disordered gamblers and their surrounding society, these results do not always hold at an aggregate level. For example, one study examined county-level rates of suicide and divorce in eight new casino jurisdictions, comparing them to similar non-casino control jurisdictions.⁴⁸¹ The results are summarized:

“Suicide rates are not statistically different between casino and control communities. Divorce rates are lower in three casino counties, higher in one, and not statistically

SECOND DRAFT - CONFIDENTIAL

different in four. Overall, the results suggest no widespread, statistically significant increase in either suicide or divorce.”⁴⁸²

These results could be interpreted as meaning that casinos do not contribute to suicide and divorce. However, since the study relies on county-level data, one may not expect statistically significant results, especially since only about 1 percent of the population is likely to have a gambling disorder.⁴⁸³

Despite the lack of results in macro studies of the negative impacts of gambling, jurisdictions should be aware that such problems are likely to occur, even if they affect a relatively small number of people.

NIMBY

One final general concern that many people have with respect to legal gambling (and expanded gambling) is that it changes a community’s “feel.” Many times a person’s opposition to gambling can simply be summarized as NIMBY (“not in my back yard”). For example, a casino brings with it more traffic, perhaps more crime, and a variety of other changes that may fundamentally change a community. A person may not necessarily be opposed to the activity of gambling, but they would prefer that it not be located near their home.

More generally, and with respect to Florida, as Bill Lupfer of the Florida Attractions Association noted earlier in the report, expanded gambling would damage “the Florida brand” of wholesome, family-oriented tourism.

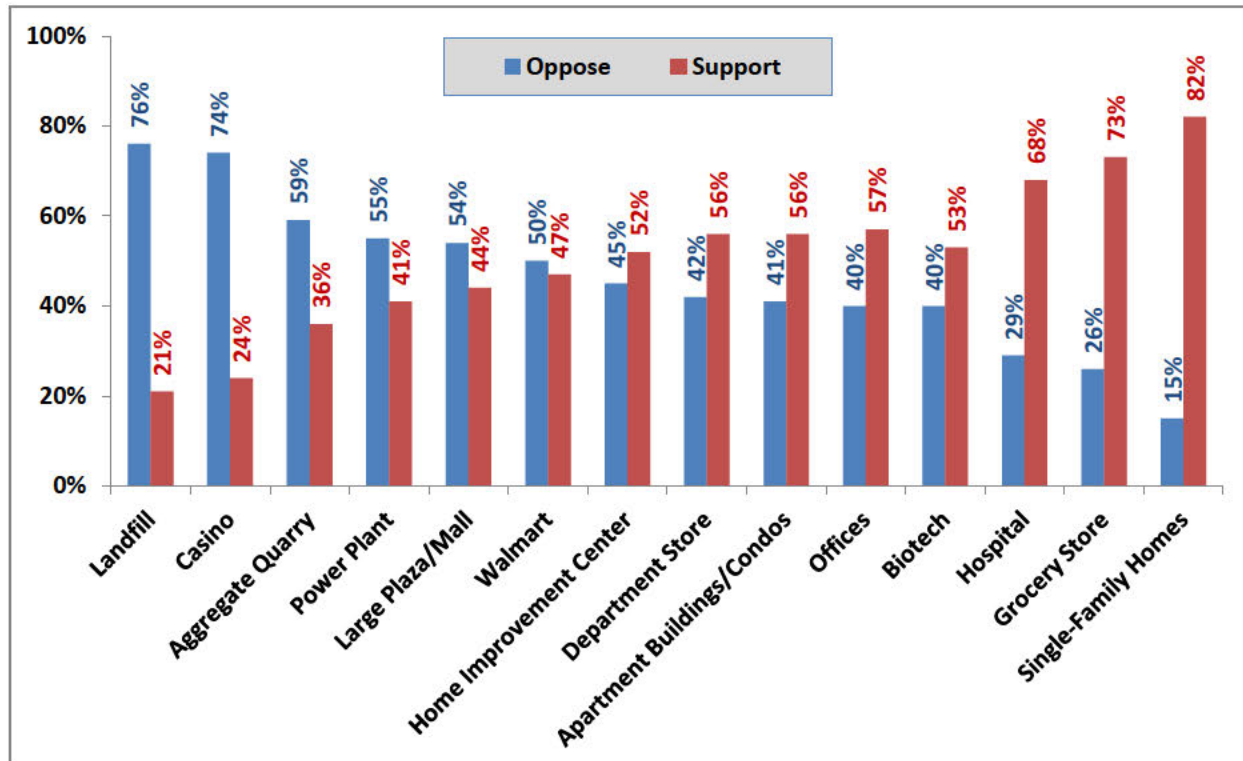

According to one poll, most Americans do not support having a casino in their own community. The Saint Consulting Group, a Hingham, MA, consultancy that specializes in land-use politics, every year or two conducts a nationwide poll (“The Saint Index”) asking Americans whether they would support a certain type of facility or land use in their community. “Casino” routinely ranks among the second- or third-most opposed category. This stands in contrast to the American Gaming Association’s annual poll, which in 2012 showed that 85 percent of Americans say that casino gambling is acceptable for themselves or others⁴⁸⁴ – demonstrating the NIMBY factor. The following chart shows the results of the most recent Saint Index:

⁴⁸² Ibid, p. 391.

⁴⁸³ However, this is not necessarily to say that divorce and suicide only happen among the population of disordered gamblers.

b. Positive Impacts

Legalized gambling has expanded in the United States quite dramatically since the 1960s. The lottery was introduced in New Hampshire in 1964, and now 43 states have a state-operated lottery. Horse and greyhound racing are also very common. Casinos, which began to spread outside of Nevada and New Jersey in the late 1980s, are now legal in 42 states.

State governments and voters tend to approve the legalization of commercial casinos for economic reasons. That is they expect significant economic benefits from the introduction of casinos. These benefits may include increased employment and an increase in average wages, economic growth (i.e., increases in per capita income), and increased tax revenues. These effects are discussed in much more detail in other parts of this report; here we provide a brief introduction to the literature on these economic benefits, particularly from casinos.

Employment and Wages

The casino industry promotes itself by publicizing employment data. Casinos can generate employment through the construction of their facilities and then through their day-to-day operations. The casino industry is very labor-intensive. As an example of this, the American Gaming Association's *State of the State* annual report lists the number of casino employees in

each state with commercial casinos.⁴⁸⁵ The report also lists “casino employee wages” as a state-level aggregate. There is certainly an effect on local labor markets when a new casino is built and operating. In general, one can think of the new casino as causing an increase in the demand for labor. As a result average wages should increase as employment increases.

However, casino critics often argue that casino jobs are low-quality, low-paying jobs. There are no academic studies of which we are aware that confirm this contention. Perhaps the most comprehensive, best analysis of the labor market effects of casinos was written by Chad Cotti in 2008.⁴⁸⁶ Cotti analyzes US county-level data, comparing counties with and without a casino. He finds that casino counties see an increase in employment after a casino opens. Further, his analysis shows that casinos create modest benefits to both employment and wages, but that the employment growth is negatively related to county population. (That is, there is a smaller impact on employment growth in more populous casino counties.)

Since Cotti’s analysis compares all casino counties to all non-casino counties, and because he controls for other economic variables in his analysis, we can be confident that his analysis isolates the impact of casinos. What his analysis does not show is the net effect of casinos compared to some other specific non-casino industry. In order to analyze the effects of gambling in Florida, jurisdictions in which casinos or pari-mutuels are operating should be compared to other non-gaming jurisdictions, while controlling for other economic variables.

These results should not be surprising, as a casino represents new economic activity in a local economy. As with other new businesses, one should expect that a new casino will create jobs. However, measuring the impact of casinos on employment requires a consideration of the *net impact*. That is, simply because a casino employs 1,000 workers does not necessarily mean that the casino created 1,000 new jobs. Some jobs may have been lost in other competing industries. Nevertheless, the available empirical evidence suggests that casinos have a positive impact on the labor markets in which they operate.

Economic Growth⁴⁸⁷

The casino industry does not typically promote itself as generating economic growth. This is probably because, as a political matter, how a casino would generate economic growth is a more abstract concept than, say, the creation of jobs. However, politicians often claim that casinos can be used as a tool for redevelopment. (See the discussion later in this section of the report.)

Casinos can lead to economic growth simply because they represent new economic activity in a region. Joseph Schumpeter discussed “the introduction of a new good” as one

⁴⁸⁵ 2013 *State of the States*, p. 12-22.

⁴⁸⁶ Chad D. Cotti, “The Effect of Casinos on Local Labor Markets: A County Level Analysis,” *Journal of Gambling Business and Economics*, Volume 2, 2008, p. 17-41.

⁴⁸⁷ This section draws from Douglas M. Walker, *Casinonomics*, 2013, chapters 2-6.

possible source of economic development.⁴⁸⁸ This proposition has been tested with respect to casinos.

The most recent evidence on the issue uses Granger causality analysis. Basically, what this statistical test does is determine whether the use of one variable (casino revenues) can improve the prediction of another variable (per capita income). If it can, then it is said to “Granger cause” the other variable. This is as close as economics can come to showing “causality” among two variables. The Granger causality analysis uses data from US states with commercial casinos, from 1990 through 2010. The analysis indicates strong statistical evidence that casino revenues do Granger cause economic growth.⁴⁸⁹

If we step back and consider what causes economic growth (increases in per capita income) to occur, it boils down to mutually beneficial transactions. That is, whenever a market transaction occurs between buyer and seller, both parties are expecting to benefit as a result of the transaction; otherwise they would not agree to trade.

The benefits of such transactions can be easily seen, especially for the sellers. Profit is simply the difference between the selling price and cost of production. This is the net benefit to the seller, which is the amount of money that remains after paying for the inputs to production. On the buyer’s side of the market, there is a similar benefit from the transaction, but it is a little more abstract. Consumers typically receive more in benefits from consumption than they had to pay for it. For example, if a person is so thirsty that he would be willing to pay \$5 for a soda, but he has to pay only \$2 at the neighborhood grocery, he receives a \$3 net benefit from the transaction. In a sense, the consumer has a “profit” analogous to the seller’s profit.

Any business that provides a good or service for which people are willing to pay helps to foster this process of mutually beneficial exchange. This is simply economic activity, which is the basis of economic growth. It matters little what type of business it is, as long as the customers receive benefits from the product at least as great as the amount they must pay.

As new businesses are formed, workers must be hired to produce the goods and services. This creates increased competition for workers; that is, there is greater demand for workers, and wages are likely to be pushed up as a result. The new firm must offer a salary and/or benefits in excess of workers’ next-best option; otherwise the new firm will not be able to find suitable employees. It is possible that the new firm would simply hire individuals who are currently unemployed. In this case, the new job still presumably represents an improvement over the unemployed worker’s current situation.

⁴⁸⁸ Joseph A. Schumpeter, *The Theory of Economic Development*, 1993, p. 66.

⁴⁸⁹ Walker, *Casinonomics*, 2013), p. 54-56. It should be noted that a similar study performed in 2007 did not find a Granger causal relationship between casinos and economic growth. However, as noted above, the most recent evidence suggests there is such a relationship.

Tax Revenues

Legalized gambling, in general, and casinos, in particular, can have a significant impact on state government budgets. Yet, the effect is not as large as many observers believe. In 2004, legalized gambling accounted for less than 2 percent of state revenues in most states. In Nevada, casino taxes represented 10.4 percent of state revenues. In Florida, the lottery represented about 1.7 percent of state government revenues during 2004.⁴⁹⁰ (We discuss this in more detail in Chapter III.)

Although legalized gambling is usually taxed at relatively high rates, this does not necessarily mean that the existence of a gambling industry necessarily results in a net increase of state tax revenues. For example, if there is a large “substitution effect”⁴⁹¹ away from other consumption, legalized gambling could actually result in a decrease in tax revenues. This result is unlikely in most jurisdictions, however, since tax rates on gambling are typically much higher than tax rates on other goods and services. For example, the “lottery tax” is about 40 percent. The effective tax rate on gross casino revenue ranges from 7 percent in Nevada to over 50 percent in several states.

Several researchers have examined the impact of legalized casinos and lotteries on state government revenues. For example, Siegel and Anders (1999) examine how Missouri county sales tax revenues were affected by the introduction of riverboat casinos.⁴⁹² They studied 1994-96 data, and found that a 10 percent increase in gambling tax revenue leads to about a 4 percent decrease in taxes from other amusement and recreation sources. The study by Borg et al. (1993) found that \$1 in lottery revenue has a cost of 15-23 cents in other types of government revenue.⁴⁹³ However, the lottery still leads to a net increase in state tax receipts; the “substitution effect” from the lottery is not very great.

The study by Walker and Jackson (2011) is probably the most comprehensive tax study in the United States, to date.⁴⁹⁴ They found statistical evidence that lotteries do lead to an increase in state net tax receipts, but that the positive effect diminishes as sales increase. Their casino result was interesting, that casinos have a mildly negative impact on state tax receipts. However, their analysis also finds a positive impact on state tax revenues from increases in per capita income (i.e., economic growth) and hotel employees (as a proxy for tourism). If casinos generate economic growth and are a significant component of a state’s tourism sector, then

⁴⁹⁰ Ibid, p. 68.

⁴⁹¹ This effect is discussed in more detail in Section IV of the report.

⁴⁹² Donald Siegel and Gary Anders, “Public Policy and the Displacement Effects of Casinos: A Case Study of Riverboat Gambling in Missouri, *Journal of Gambling Studies*, Volume 15, 1999, p. 105-121.

⁴⁹³ Mary Borg, Paul Mason, and Stephen Shapiro, “The Cross Effects of Lottery Taxes on Alternative State Tax Revenue,” *Public Finance Quarterly*, Volume 21, 1993, p. 123-140.

⁴⁹⁴ Douglas M. Walker and John D. Jackson, “The Effect of Legalized Gambling on State Government Revenue,” *Contemporary Economic Policy*, Volume 29, 2011, p. 101-114.

casinos may still have a positive impact on state-level tax receipts. So, although their analysis suggests that the direct effect of casinos on taxes is probably not positive, the overall impact of casinos may be positive when the economic growth and tourism effects of casinos are accounted for.⁴⁹⁵

38. Gambling-Specific vs. Non-Gambling Impacts (Job Creation and Wage Changes)

For any of the impacts discussed in the previous section, understanding the specific effects of gambling is more complicated than it may initially seem. This is because the relevant comparison for understanding the changes in society caused by gambling is not just between the situations before and after gambling is introduced. Rather, the relevant comparison is between the situation with gambling and *what otherwise would have happened*, called the “counterfactual.”

Consider an example in which there is a single plot of vacant land in a city, and the land owner is deciding whether to allow a casino or a shopping mall to be built. Let’s suppose the casino is eventually built. Then there will be employment and wage effects, for example, resulting from the building and opening of the casino. The jobs created by the casino, the wages paid, and taxes paid will likely be reported as the effect of the casino on the local/regional economy. The reported benefits of the casino are those compared to the situation prior to the casino being built. But this assumes that if the casino had not been built, nothing else would have been. But in our scenario, a shopping mall would have been built. Then to determine the net impact of a new casino, the effects of the casino should be compared to what would have likely happened had the shopping mall been built instead.

For the practical analysis of the impacts of casinos, it is difficult to always know what would have otherwise happened. One way of isolating the impact of casinos is to compare the situation in casino communities with those in non-casino communities. As an analysis of aggregates, this type of analysis can isolate the marginal impact of casinos, as long as other variables are controlled for in the analysis.

Perhaps more importantly, in considering the impacts of casinos, it is important to distinguish those effects that are specific to the nature of gambling (such as crime committed by problem gamblers), and those that also result from a casino, but are simply economic impacts caused by a new firm/industry entering a local economy.

By way of example, if wages increase in a community because some of its previously unemployed and under-employed adults are working at a casino, that would increase spending power in that region. That increased spending power could potentially result in increased investment by non-gaming businesses.

⁴⁹⁵ Walker, *Casinonomics*, p. 84.

SECOND DRAFT - CONFIDENTIAL

Hypothetically, such investments could include, say, a regional supermarket chain or a national pharmacy outlet in an area that previously did not warrant such investments. This economic growth would be casino-related, but it is not the result of gaming, in particular. Alternatively, consider if a local food store or local pharmacy is adversely impacted and hypothetically goes out of business, it is clearly an impact of the casino. But it is not necessarily gaming-related, but is rather related to general economic growth. Moreover, such an impact is adverse to that pharmacy owner, but may not be adverse to the community.

Similarly, if a casino raises the prevailing wage in an area, particularly for unskilled or semi-skilled work, that could have an adverse impact on a number of small businesses, such as small hotels, restaurants or fast-food franchises. Some may find that they cannot afford to pay the prevailing wage rate and still be profitable. That is an impact of casinos, but is not related to the specific nature of gambling, nor is it clear whether that is adverse or beneficial to the larger community.

Historically, Atlantic City and the Miami region, particularly Miami Beach, have had much in common, starting with their histories as East Coast tourist destinations. At various times, both endured economic downturns and experienced rebounds – sometimes with the same results – but clearly the catalysts were different. Atlantic City’s economic catalyst was the legalization of casinos, while Miami’s rebound has had multiple catalysts. Still, some of the same effects can be detected, as noted in a 2012 blog:

“There is a flip-side to Miami's rebound. While the super-rich are buying, locals continue to suffer. Wages and income levels are low, and the metro has a high level of income inequality. Miami's housing market and broader economy remains highly uneven and divided. While South Beach and the downtown corridor may be booming, the area inland is rife with housing misery, foreclosures and homelessness. The economic and social distance between the global super-rich and suffering locals is substantial and growing.”⁴⁹⁶

Atlantic City clearly offers parallels, as noted in this excerpt from “Hostage to Fortune: Atlantic City and Casino Gambling”:

“In the pre-casino world, Atlantic Avenue was Main Street USA, where the appliance dealer knew the insurance broker and both knew the barber and the shoe salesman. George Babbitt would have been quite at home in that Atlantic City.

“What casino gambling did to that world was turn it upside down by injecting the world of Wharton econometrics and advanced marketing techniques into its major arteries.

“Prior to casinos, the hotels and utilities, along with a few other companies ... were the only employers of more than a handful of people.

⁴⁹⁶ Richard Florida, “Why Miami’s Real Estate is Booming Again,” *The Atlantic Cities*, March 6, 2012
<http://www.theatlanticcities.com/jobs-and-economy/2012/03/why-miamis-real-estate-booming-again/1396/>

“Before gambling became a component in the economy, all the workers in the region who bore the title of vice president could have squeezed into the laundry room of the Marlborough-Blenheim hotel.

“Now, the Marlborough-Blenheim is gone, and Atlantic City has a banquet room full of vice presidents – real vice presidents who grew up in a world of competition. Now, they manage big banks and casino firms and national drug store chains, and they often outclass and outdistance their local counterparts.

“Most of the fast-food outlets and the new drug stores and appliance dealers opened in the suburbs. To the city came new law offices and new bank branches and other businesses that would likely not have considered Atlantic City as an ideal location in its pre-casino days have opened up. ...

“There are only so many ways to spend or save a single dollar, and the brokerage firms and the banks, and the haberdasheries, and the restaurants are in competition with each other for that dollar.

“The available outlets for the dollars, it seems, expanded as rapidly as the supply of dollars.”⁴⁹⁷

The economic patterns are the same, but the causes – and arguably any potential solutions – would be different, yet it must be noted that, while the presence of casinos was the proximate cause of Atlantic City’s disruption, the nature of this industry has no particular relevance to that disruption.

39.Short- and Long-Term Fiscal Impacts of Government Policies

In an increasingly competitive global economy, casino gambling is seen as a quick and easy way to create jobs, increase convention and tourism business and stimulate development of additional visitor attractions and amenities. However, to maximize the economic benefits of casino development and to minimize any potential negative impacts, it is vital that state and local policy makers have a clear understanding of how different implementation scenarios and community variables may affect short and long term outcomes.

Land-use planning and zoning power is the most effective tool that state and local governments have to plan for and control development related impacts. Casinos are unlike other types of development projects such as an office park or a shopping center. Casino development may potentially have a greater impact on traffic, housing stock, the labor force and municipal services. Newer, more sophisticated planning tools such as geographic information systems and economic modeling enable government planning to have a better understanding of the potential impacts of projects and thereby plan more appropriately.

⁴⁹⁷ Michael Pollock, *Hostage to Fortune: Atlantic City and Casino Gambling*, 1987, p. 160-161.

SECOND DRAFT - CONFIDENTIAL

A study of the impact of casino gambling in Connecticut by Spectrum found that the absence of regional planning had significantly impeded state and local officials in their efforts to address the impact of two Indian casinos on traffic, public safety and education.⁴⁹⁸

Atlantic City is a classic example of how poor land use planning, particularly in the formative period immediately following the passage of casino gaming, greatly impeded orderly development and the city's potential.⁴⁹⁹ Rampant, unchecked real estate speculation became an immediate and enduring problem for the city. The phenomenal success of Atlantic City's first casino made potential casino developers willing to pay almost any price to get their projects started. Slum neighborhoods suddenly took on new value. To real estate speculators, only the land had value. Buildings and businesses did not. Thousands of lives were disrupted when buildings were sold and tenants evicted. Once-stable neighborhoods suddenly became vacant and desolate.

Atlantic City government did little to tame speculation and in many ways encouraged it. Its master plan was deemed unrealistic and local officials did little to adhere to whatever guidelines it did offer. Nearly everyone who applied for a variance got one. In effect, everywhere in the city was a potential casino site.⁵⁰⁰

The national experience with legalized gaming has matured to the point where policy makers have a much better idea of what may or may not work effectively in a particular community.

Prior to 1978, casino gambling was only legal in Nevada, where it was implemented in 1931. In 1976, New Jersey became the nation's second state to approve legalized gambling. In New Jersey, legalized gambling was specifically intended to be "a unique tool of urban redevelopment."⁵⁰¹ According to its enabling legislation, "a limited number of casino rooms in major hotel convention complexes, permitted as an additional element in the hospitality industry of Atlantic City, will facilitate the redevelopment of existing blighted areas and the refurbishing and expansion of existing hotel, convention, tourist, and entertainment facilities."⁵⁰² The state constitution limited casino gambling solely to Atlantic City, one of the state's most economically distressed communities.

For a number of years, Atlantic City was the only legal casino gaming venue in the eastern United States during a period when the public's interest in casino gambling was

⁴⁹⁸ "Gambling in Connecticut: Analyzing the Economic and Social Impacts," *Spectrum Gaming Group*, June 22, 2009.

⁴⁹⁹ By D.W. Nauss, "Atlantic City Planning Does Not Pass Go," *New Jersey Reporter*, Volume 9, No. 10, 1981, p. 6-13.

⁵⁰⁰ *Ibid.*

⁵⁰¹ New Jersey Casino Control Act, N.J.S.A. 5:12-1.

⁵⁰² *Ibid.*

heightening. The spectacular profitability of Atlantic City's first casinos, their initial success in creating construction and permanent jobs that paid good salaries and provided good benefits, fostered widespread interest in casino gambling as an economic development tool. Although the urban redevelopment aspects of New Jersey's casino experiment were debatable, other states took note of casino gambling's economic impact and wanted to get in the game. In 1989, South Dakota and Iowa approved legalized gambling, initiating a new era of casino expansion. Currently, commercial casinos (non-Indian gaming) operate in 23 states.⁵⁰³

By 2008, Atlantic City's remarkable financial performance began to slip, due largely to the national recession and, more ominously, to growing competition from nearby states with new casinos. In 2012, among all states with casino gaming, New Jersey experienced the largest drop in both gross gaming win and gaming tax revenue.⁵⁰⁴ One of its newest and largest casinos, the \$2.4 billion resort, Revel, which opened in May 2012, filed for bankruptcy less than a year later.⁵⁰⁵ As one recent observer noted, "The Revel is a hulking reminder of big dreams going wrong and gambles not paying out. ... City planners and state legislators looking to casinos as sure ways of generating revenue should take note of this cautionary tale."⁵⁰⁶

The financially ailing Revel is not alone. The \$2.3 billion Foxwoods Casino Resort, owned by Mashantucket Pequot Tribal Nation in Connecticut, is also struggling financially.⁵⁰⁷ Like Atlantic City, with new competition coming on line in Massachusetts, Connecticut too can expect to see declining revenues and a more competitive gaming environment.

The dramatic rise and fall of Atlantic City's casino industry holds important lessons for other jurisdictions considering casino gambling. Casinos must be right sized and properly integrated into their host communities. Neither exists in a vacuum and both must be able to respond quickly to changing consumer tastes and market conditions. By establishing itself largely as a convenience destination, failing to plan for gaming competition elsewhere, and failing to responsibly incorporate casinos into the social and economic fabric of the city, the prognosis for both Atlantic City and its casino industry is an open question.

Workforce development is another area where proper planning can have positive short- and long-term impacts. Casino resorts are labor intensive and require a variety of skill levels to operate efficiently and meet the expectations of their patrons. Depending on the magnitude of

⁵⁰⁷ Michael Sokolove, "Foxwoods is fighting for its life," *New York Times Magazine*, March 14, 2012, http://www.nytimes.com/2012/03/18/magazine/mike-sokolove-foxwood-casinos.html?pagewanted=all&_r=1&.

their workforce demands, a new casino could cause a major disruption in the regional labor market. Getting unskilled and low skilled workers into the workplace can be a challenge.

In Massachusetts, where casino development was recently enacted, it is anticipated that over 30,000 individuals will need to be considered for employment in order to fill the 10,000 jobs that are expected. To meet this objective, the state recently ramped up its workforce recruitment process and employment infrastructure. To accomplish this, a collaboration of workforce stakeholders joined together. These include one-stop career centers, community based organizations, organized labor, community colleges and other public and private educational entities.⁵⁰⁸

The past three decades provide policy makers with an abundance of data and first-hand examples of how casino gambling impacted a community and what the role of policy makers should be. However, a clear, compelling understanding of the costs and benefits remains elusive and the academic literature is contradictory.

The 1999 National Gambling Impact Study Commission Report noted that social and economic impacts are not as easily severable as those responsible for policy making would prefer.⁵⁰⁹ Quantifying gambling related social costs and benefits can be extremely difficult. The Commission went on to note that the economic benefits of casino gambling appeared most powerful in more financially distressed communities where economic development opportunities were fewer.

In a 2005 study, Phineas Baxandall and Bruce Sacerdote compared the experience of counties in the United States that have casinos with counties that do not. They found that casino development appears to produce both modest positive effects as well a modest negative effects as well no statistically significant effects at all in some areas. They analyze the effects of casinos at the county level rather than the state level because entire states are simply too large to discern a casino's influences on outcomes such as employment or crime.⁵¹⁰ In *Gambling in America: Costs and Benefits*, Earl Grinols found that when all relevant factors were considered, the social benefits of casino gambling were outweighed by the social costs.⁵¹¹

The national experience with casino gambling has led policy makers, urban planners, social scientists and casino developers to recognize that a casino's chance of success increases if

⁵¹¹ Earl L. Grinols, *Gambling in America: Costs and Benefits*, 2004.

it is properly sized and blended into the host community. The type, scale and format of a casino will inevitably be a factor in what impact it has upon the community.

Iowa was an early adopter of casino gambling and Dubuque is often cited as a community where casino gambling has been a successful component of an overall economic development strategy. A 2011 report noted that one would be hard pressed to find someone opposed to casinos among local residents.⁵¹² Dubuque Assistant Chief of Police Terry Tobin noted that his department does not have any concerns about organized crime, prostitution, robbery or other predatory crimes. City Manager Michael Milligen stated that poverty was not a problem and that local wages have increased.⁵¹³ Iowa is unique among states with casino gambling. In every county that has a casino, voters must pass a referendum approving casino gambling to continue.⁵¹⁴ In Dubuque, the last such referendum passed four years ago with 70 percent of county voters approving.⁵¹⁵

David G. Schwartz, Director of the Center for Gaming Research at the University of Nevada, Las Vegas, notes how casino resorts have undergone significant transformations since they first appeared in Nevada in 1931. In their early form, they consisted of low-rise motel buildings with 200 to 800 rooms centered around a casino/theater/restaurant area. Other design elements included spacious grounds and swimming pools. Beginning in the mid-1950s, casino operators developed larger, thousand-plus room hotel towers atop vast, low-rise buildings containing the casino, lounges, theaters, convention facilities and restaurants. All the amenities were integrated into a casino resort complex. In the 1990s, casino operators took these design elements further by developing elegantly appointed 3,000-room plus hotel complexes. These facilities, often costing \$1 billion or more, had distinctive architectural designs, elegant spas and pool areas, gourmet restaurants associated with world recognized chefs and high-end retail. They also placed a greater emphasis on the non-gaming aspects of the facility.⁵¹⁶

Eadington of University of Nevada, Reno wrote extensively on the social and economic impacts of casinos and is credited for almost singlehandedly establishing the economics of gambling as a field of study.⁵¹⁷ He noted that it is commonplace in a community considering casino gambling that the forces for and against actively debate the pros and cons of the proposal

by focusing on the impacts they believe it will have on the community. Such debates are usually extremely emotional and contentious. However, according to Eadington, such debates too often reflect little or no understanding of the different types of casinos models and legislative frameworks and how these factors may affect desired community outcomes.⁵¹⁸

a. Different Casino Models

Eadington believed that in terms of increasing the economic potential of casino gaming while minimizing the costs, the modern integrated resort casino (another term for a destination casino resort) model offers the greatest potential. Many jurisdictions have “gaming centric” casinos. These are places where one mostly goes to play slot machines and table games. This type of facility generally will provide limited food and beverage options along with limited hotel accommodations, or none at all. Usually, 80 percent or more of their revenues come from gaming activities.⁵¹⁹

Conversely, integrated resort casinos offer a wide variety of leisure and entertainment options other than just gambling. They all have iconic architecture and require significant capital investment. By offering superior dining, entertainment and shopping, they often become popular attractions that appeal to both domestic and international tourists. They appeal to a broader market and compete more effectively for the high-end visitor dollar than gambling-centric casinos. The employment potential of integrated resort casinos is also greater. Their 24-hour operations, diversity of offerings and specialized services, require that they employ substantially more highly skilled and professionally trained employees than gaming-centric casinos.⁵²⁰

Integrated resort casinos pose more potential for convention related growth. Convention and conference organizers prefer to have their event in a venue that attendees will find attractive and appealing in order to achieve maximum attendance. Convention goers often want adult forms of entertainment. Integrated casino resorts with their vibrant nightlife, ample room supply, conference facilities and host of amenities can help fulfill that need.

Gary Loveman, Caesars Chairman and CEO, identified a hybrid model, discussed earlier in this report. He contends that the conventional view of casinos being either convenient neighborhood based slot parlors or as integrated resort casino destinations is incomplete. He states that over the past decade another model has emerged for policy makers to consider which he calls “the city integrated model.”⁵²¹ According to Loveman, its defining feature is integration with its community’s pre-existing businesses and attractions. In this model, the casino serves as a

⁵¹⁸ William R. Eadington and Meighan R. Doyle, “Everything to Everyone,” *Global Gaming Business Magazine*, February 3, 2010. <http://ggbmagazine.com/issue/vol-9-no-2-february-2010/article/everything-to-everyone>.

hub whose spokes extend out beyond its own amenities to established restaurants, shops, hotels and cultural organizations in the adjoining area. Its outward, rather than inward, focus renders it distinct from the integrated resort casino model while capturing many of that model's benefits.

In May 2012, a city integrated-style casino, Horseshoe Casino Cleveland, opened in Cleveland, OH, and may offer helpful insights to policy makers. Financially, its first year has produced mixed results. Profits have been lower than anticipated and the city will only receive \$13.4 million in gaming taxes, well below earlier estimates that assumed additional construction and ranged as high as \$29 million. However, the city's share is offset by the \$3.1 million in additional expenses related to the police department, which had to triple staffing in its downtown unit. Overall the casino's impact on the downtown area is considered positive with business owners saying the area is far more active and livelier. Crime did not soar as some predicted and the casino did not cause any adverse impact on local bars and restaurants. The casino employs 1,600 locals.⁵²²

The new Horseshoe Casino in downtown Cincinnati, OH, is following the same model. The casino, which does not have its own hotel, has entered into partnership agreements with several nearby hotels and restaurants.⁵²³

40. Conclusion

The academic research reviewed here suggests that casinos can have a variety of significant social and economic impacts, both positive and negative. Perhaps the most important question is whether casinos generate more benefits than costs. Unfortunately, the answer to this question is not obvious, and probably depends on the jurisdiction under consideration. Certainly in some jurisdictions, casinos have had a large positive impact, such as in Las Vegas and in the Gulf Coast of Mississippi. But casinos may bring their own problems. Most of the negative social impacts studied in the literature come from "disordered gamblers," who psychologists estimate represent about 1 percent of the general population. These individuals experience a variety of problems, including marital and career problems. They also sometimes engage in crime in order to deal with the financial problems caused by their excessive gambling.

It is important that any jurisdiction carefully consider these possible impacts prior to introducing or expanding legalized gambling. Although there may be obvious benefits from casinos, such as job creation and a new source of tax revenues, research confirms that there are some social harms that accompany the economic benefits of casinos.

SECOND DRAFT - CONFIDENTIAL

When considering the economic and social impacts of a casino, we must consider the effects of the casino relative to what otherwise would have happened (or what business might have otherwise opened). In addition, we must consider whether the observed effects are related to economic changes, in general, or are due to the nature of gaming specifically.

The experiences in a variety of casino jurisdictions confirm that careful planning is important for the success of the casino industry. Casinos should be integrated with their surrounding communities; they should be introduced in appropriate sizes and numbers for the current and potential future markets. The benefits of introducing casinos can be maximized, and the negative impacts minimized, if their development and regulation is carefully considered.

III. Economic Assessment of Florida's Existing Gambling Industry

As discussed throughout this report, Florida has an extensive gambling industry, principally through its state lottery, Native American casinos and pari-mutuel facilities. Each of these gambling sectors generates revenue that contribute to the Florida economy through tax payments, direct employment, indirect employment and induced employment. This chapter of the report quantifies the economic impact of the industry.

A. Gambling Sectors: Size and Importance

An analysis of gaming subsectors and their size and economic importance.

In Chapter II(B) we discuss the size and extent of Florida's primary gambling sectors, including the revenues. Here we provide more detail as to the revenue performance of each sector and, where available, the annual employment and wages, as well as purse, handle and attendance data for the pari-mutuel sectors. Spectrum endeavored to obtain, on a sector basis the desired data going back to 1990, but only the pari-mutuel performance data were available going back that far.

1. Pari-Mutuel

The Division of Pari-Mutuel Wagering does not collect the number of people employed at pari-mutuel facilities but upon request we did receive 2012 data showing that the industry's wages, exclusive of payroll taxes and benefits and compensation paid to directors, were \$148.8 million. Following are analyses of key performance and economic indicators for each pari-mutuel sector. It is important to note that wages and jobs for the racing sectors represent direct facility employment only; they do not account for the jockeys, trainers and others who provide economic impact but are not track employees.

a. Racetrack Slots

As of 2012, the six Florida racinos collectively had 3,319 employees – or an average of 553 employees per racino in both gaming-related and non-gaming capacities.⁵²⁴ The following table shows slot-machine-related operating results for the six racinos for year ended 2012.

⁵²⁴ 2013 State of the States.

SECOND DRAFT - CONFIDENTIAL

Figure 50: Florida racino slot performance (2012)

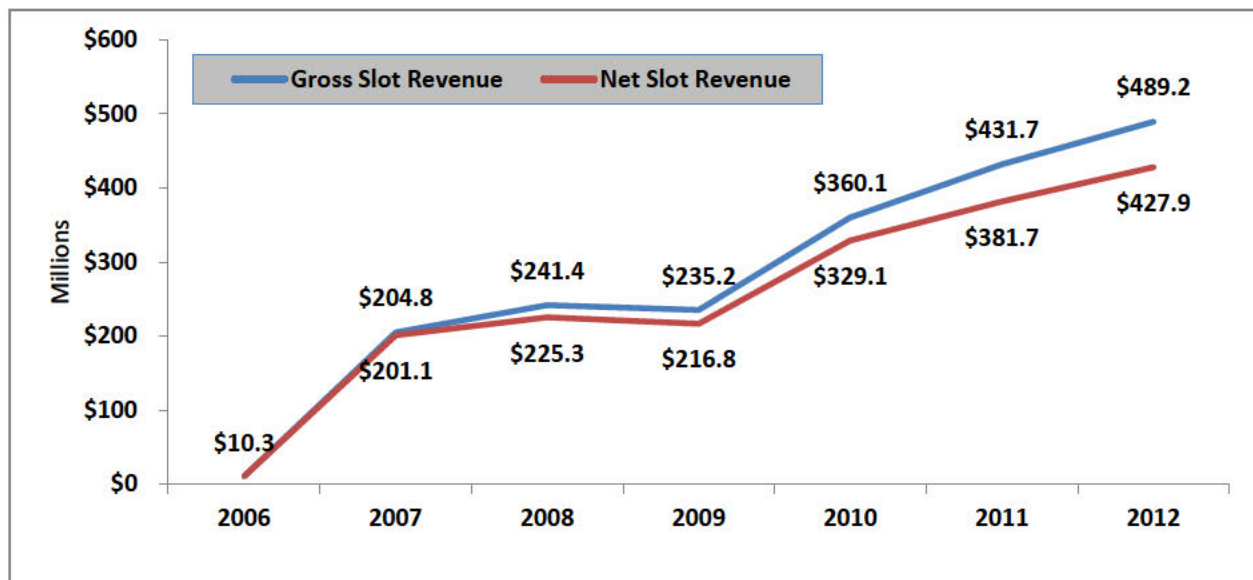

Racino	Casino Miami	Magic City	Calder	Gulfstream Park	Mardi Gras	Pompano Park	FL TOTAL
Slot Revenue	\$59.3	\$79.0	\$90.2	\$59.9	\$61.9	\$138.9	\$489.2
Promo Credits	(\$6.4)	(\$2.2)	(\$17.8)	(\$9.0)	(\$8.8)	(\$17.2)	(\$61.4)
Net Slot Revenue	\$53.0	\$76.8	\$72.4	\$50.9	\$53.1	\$121.7	\$427.9
Promo Credits, % of Slot Rev.	10.7%	2.7%	19.7%	15.0%	14.2%	12.4%	12.5%
Slot Rev. Unit / Day	\$165	\$273	\$204	\$194	\$161	\$261	\$211
Net Slot Rev. Unit / Day	\$147	\$266	\$164	\$165	\$138	\$229	\$185

Source: Florida Department of Business and Professional Regulation

As illustrated, Florida's six racinos generated slot revenue of \$489.2 million in 2012. Net slot revenue for Florida's six racinos was \$427.9 million in 2012, as \$61.4 million of revenue was in form of promotional credits. Promotional credits averaged 12.5 percent of slot revenue for the six racinos. The average daily win per slot was \$211; however, netting promotional credits reduced this average to \$185 over the annual period.

The following chart shows annual slot revenue (both gross and net) from inception through calendar year ended 2012.

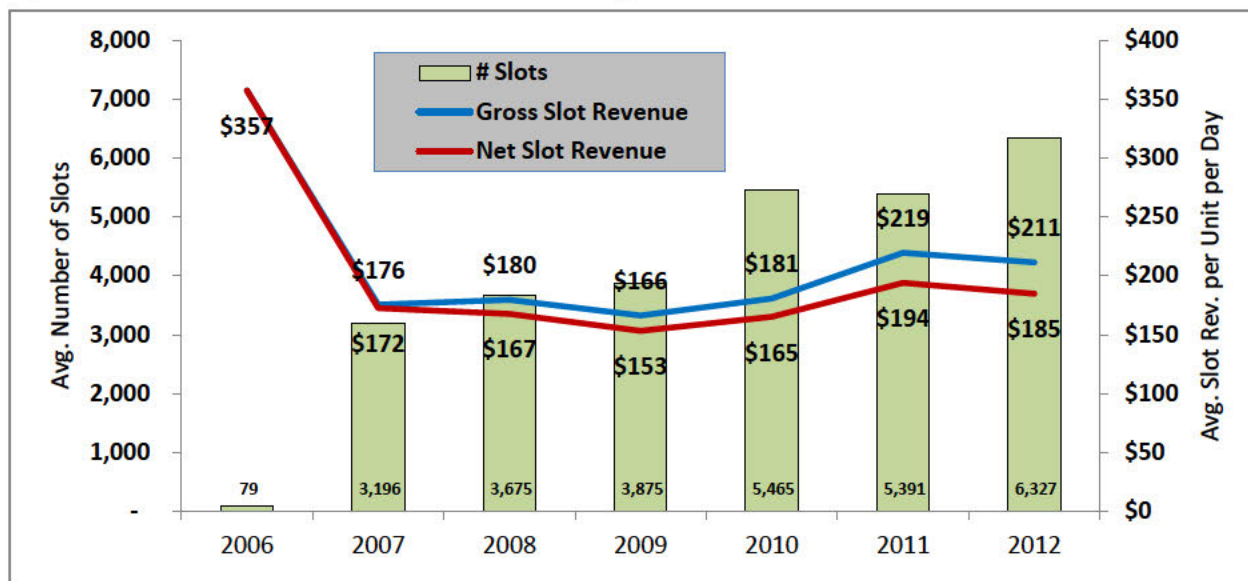

Figure 51: Florida racino slot performance, 2006-2012

Source: Florida Department of Business and Professional Regulation

From inception through 2012, Florida's racinos have generated \$1.97 billion in gross slot revenue and \$1.79 billion in net slot revenue. The following chart shows annual average slot revenue per slot machine per day (both gross and net) through 2012, along with average number of slots in operation annually.

Figure 52: Florida racino slot revenue/machine/day and counts, 2006-2012

Source: Florida Department of Business and Professional Regulation

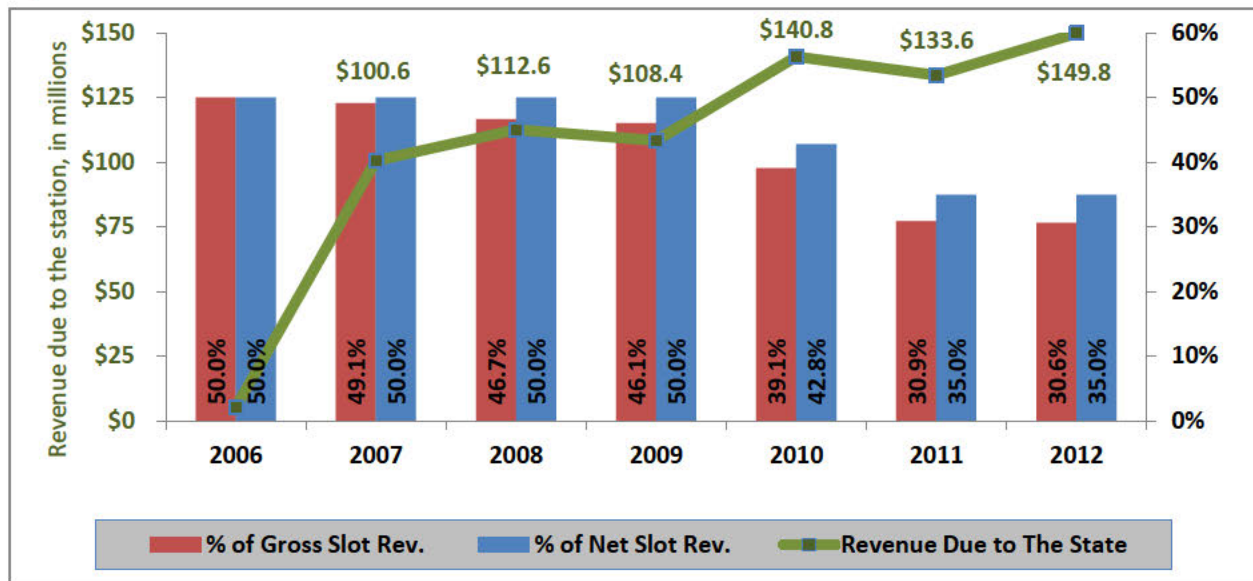

The current tax on slot revenue is 35 percent (or “revenue due to the state”), while this is imposed on net slot revenue (i.e., net of promotional credits and unclaimed tickets).⁵²⁵ However, at inception the applicable tax rate was 50 percent and has since been reduced. In addition to the tax on slot revenue, each pari-mutuel location having slot machines is subject to \$2 million annual Slot License Fee, along with an annual \$250,000 Compulsive or Addictive Gambling Prevention Program Fee.⁵²⁶

The following chart shows annual revenue due to the state from inception through calendar year ended 2012, along with effective tax rate by year (expressed as a percentage of gross and net slot revenue).

⁵²⁵ Florida Department of Business and Professional Regulation, Division of Pari-Mutuel Wagering, 81st Annual Report Fiscal Year 2011-2012.

⁵²⁶ Ibid.

Figure 53: Florida racino direct tax on slots, 2006-2012

Source: Florida Department of Business and Professional Regulation

From inception through calendar year ended 2012 Florida's racinos have generated \$750.9 million in revenue due to the state, from the direct tax on slot revenue.

b. Greyhound

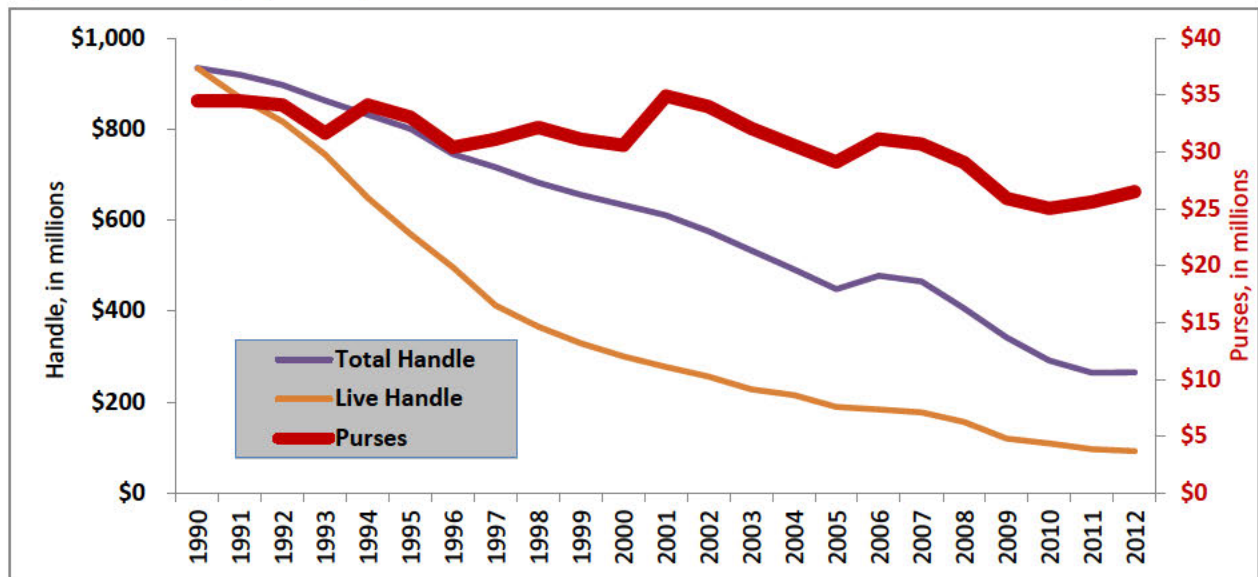

Greyhound racing, which is Florida's most widespread form of pari-mutuel racing, is clearly in serious decline. In the following two charts, note that the numbers of performances and purses have held relatively steady despite dramatic decreases in handle and attendance. Also note that most tracks no longer charge for admission.

Nonetheless, the greyhound tracks spent more than \$70 million in 2009 on goods and services purchased and had more than 5,400 employees on their payroll that was in excess of \$98 million. They paid direct state taxes of more than \$26 million.⁵²⁷

Jack Cory, a lobbyist for the greyhound owners, told Spectrum that the greyhound industry has an estimated overall economic impact of more than \$50 million when the spinoff costs of caring for the dogs is included, a claim that Spectrum could not independently verify. Those spinoff costs would include veterinary care, transportation, and feeding the dogs.

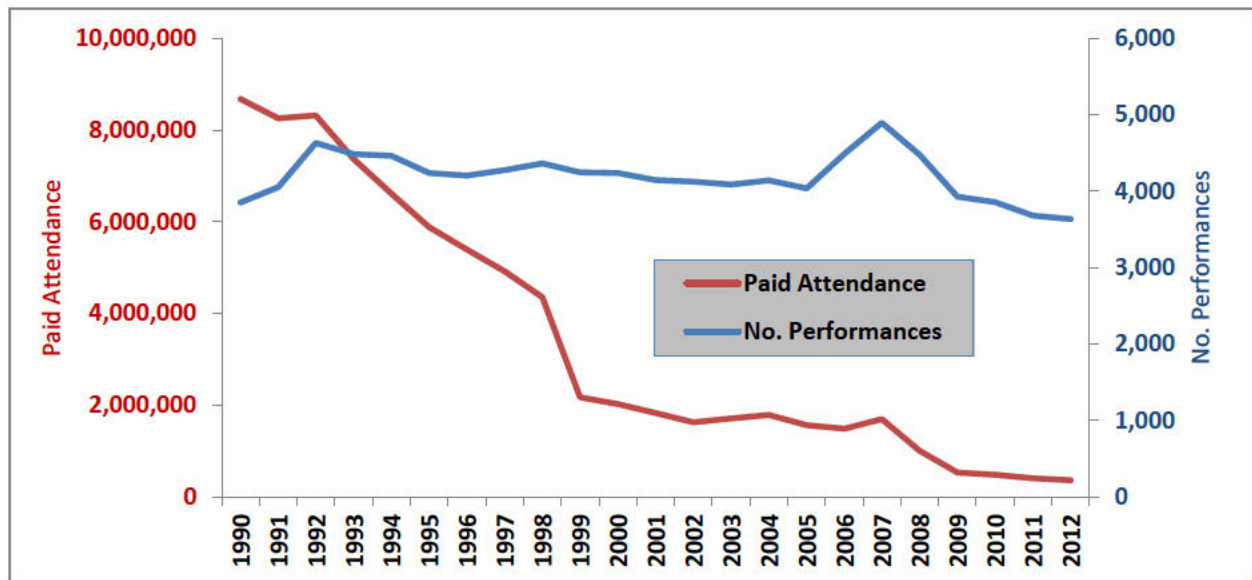

⁵²⁷ Innovation Group, "Florida Pari-mutuel Gaming Venues Market Assessment," p. 8, October 2009.

Figure 54: Florida greyhound purses and handle, 1990-2012

Source: Division of Pari-Mutuel Wagering **Note:** Total handle numbers are understated as PMW does not collect data on out-of-state generated handle, which is the single largest component of handle.

Figure 55: Florida greyhound paid attendance and performances, 1990-2012

Source: Division of Pari-Mutuel Wagering. Note: Most tracks no longer charge for admission.

c. Thoroughbred

There were 6,487 Florida-licensed thoroughbred owners from 1,352 Florida-licensed stables that participated in Florida racing during 2012-2013. These owners employed more than 1,467 thoroughbred trainers at Florida's three thoroughbred tracks. In turn, these trainers employed about 4,000 backside (stable) employees consisting of foremen, exercise people,

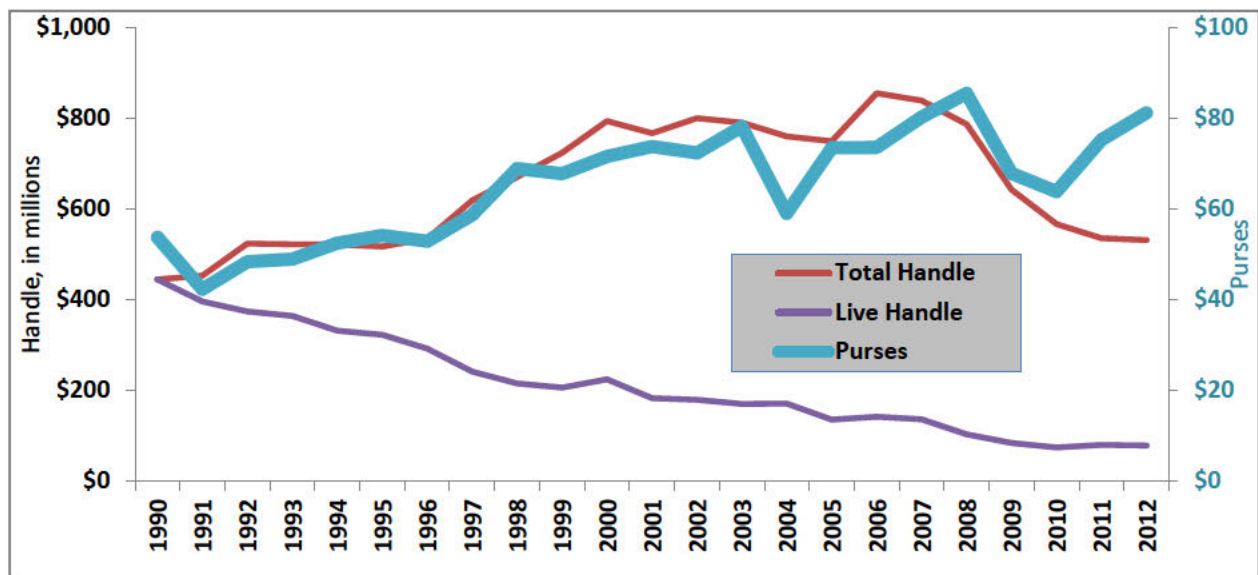

grooms, hot walkers and others. It is estimated that the equivalent of about 3,000 thoroughbred horses reside full-time in Florida and that each horse generates about \$25,000 in expenditures, resulting in an economic impact of \$75 million. Some of those costs include money spent on horse transport, stall bedding, grooming, and vet services.⁵²⁸

Florida is home to more than 600 thoroughbred farms and training centers covering 70,000 acres of land. More than 75 percent of the horse farms are located near Ocala in Marion County. Ocala is also home to the Ocala Breeders' Sales Company, which stages major bloodstock auctions for thoroughbreds throughout the year. It operates a training facility that includes a one-mile racetrack. It had net sales of \$14.8 million and a payroll of \$2.3 million in FY 2012.⁵²⁹ Ocala Breeders' also operates a simulcast parlor where patrons wager on horse and dog races.

The economic impact of the thoroughbred industry in Marion County is more than \$1.3 billion. Investment in operations is \$3.5 billion.⁵³⁰

For thoroughbred racing, note in the following charts that the numbers of performances and purses have held relatively steady despite dramatic decreases in handle and attendance.

Figure 56: Florida thoroughbred racing handle and purses, 1990-2012

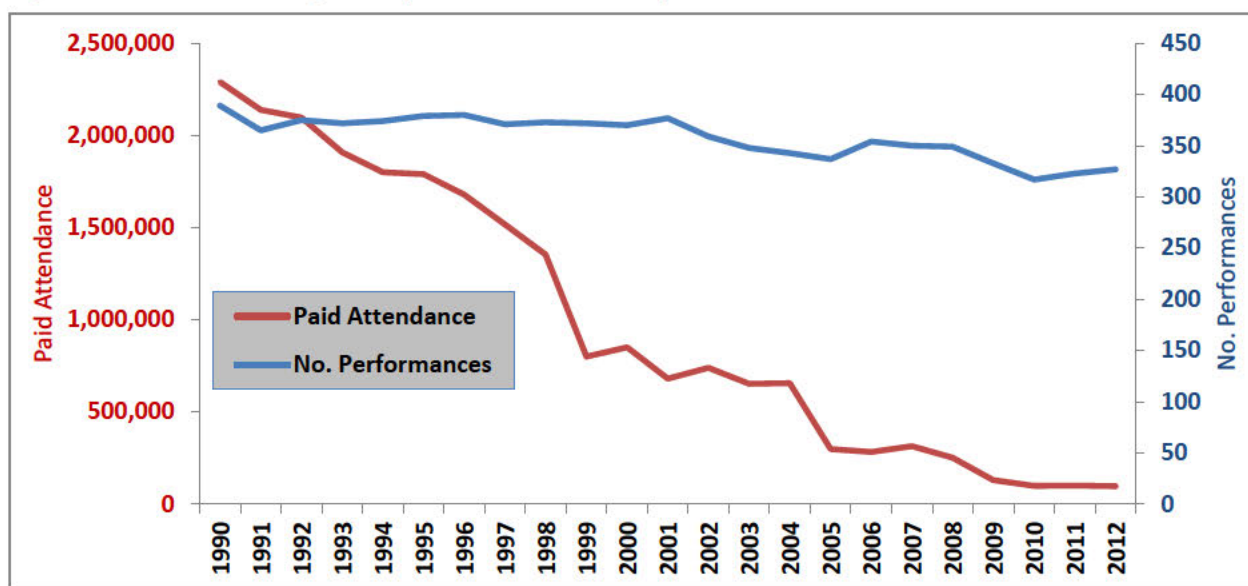

Source: Division of Pari-Mutuel Wagering. **Note:** Total handle may be understated as PMW does not collect data on out-of-track generated handle, the single largest component of handle.

Figure 57: Florida thoroughbred paid attendance and performances, 1990-2012

Source: Division of Pari-Mutuel Wagering

d. Harness

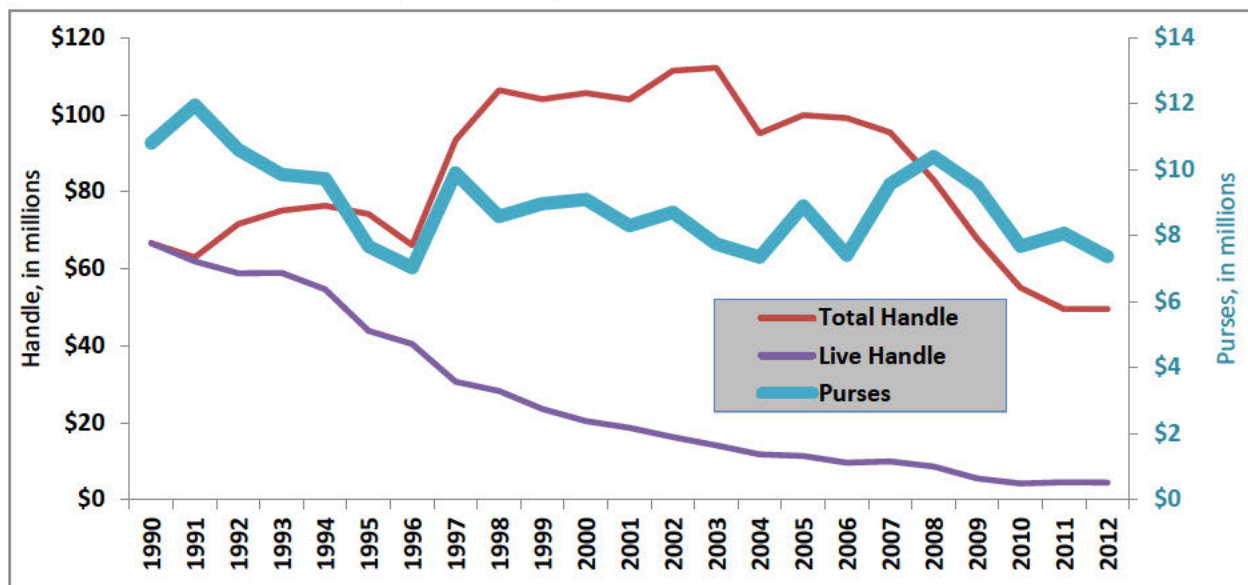

In harness (or standardbred) racing, as seen in the following charts, the purses and number of performances have been relatively steady while the live handle has declined. Isle Casino at Pompano Park, the only track where harness racing takes place, has stopped charging for admission. Its 2012 payroll was \$19.1 million. Pompano had a payroll of \$19.1 million in FY 2012. It had an operating profit of \$1.9 million but sustained a loss of \$2.4 million from its pari-mutuel operations while it had an operating profit of \$4.3 million from slot machines and \$90,000 from cardroom operations.⁵³¹

Purses have declined slightly, by 0.5 percent, from FY 2006 (the last full fiscal year that Pompano did not have a casino) to FY 2012. The failure to increase purses has put Pompano in a position where it is not competitive with other racino states, Pennachio said, noting that breeding has seen a significant reduction in activity. In 2011, there were 40 foals. In 2006, there were 163, according to Joseph Pennachio, president of the Standardbred Breeders and Owners Association.

⁵³¹ Florida PMW, *Independent Auditor's Report for Pari-Mutuel Permitholders, FY 2012*.

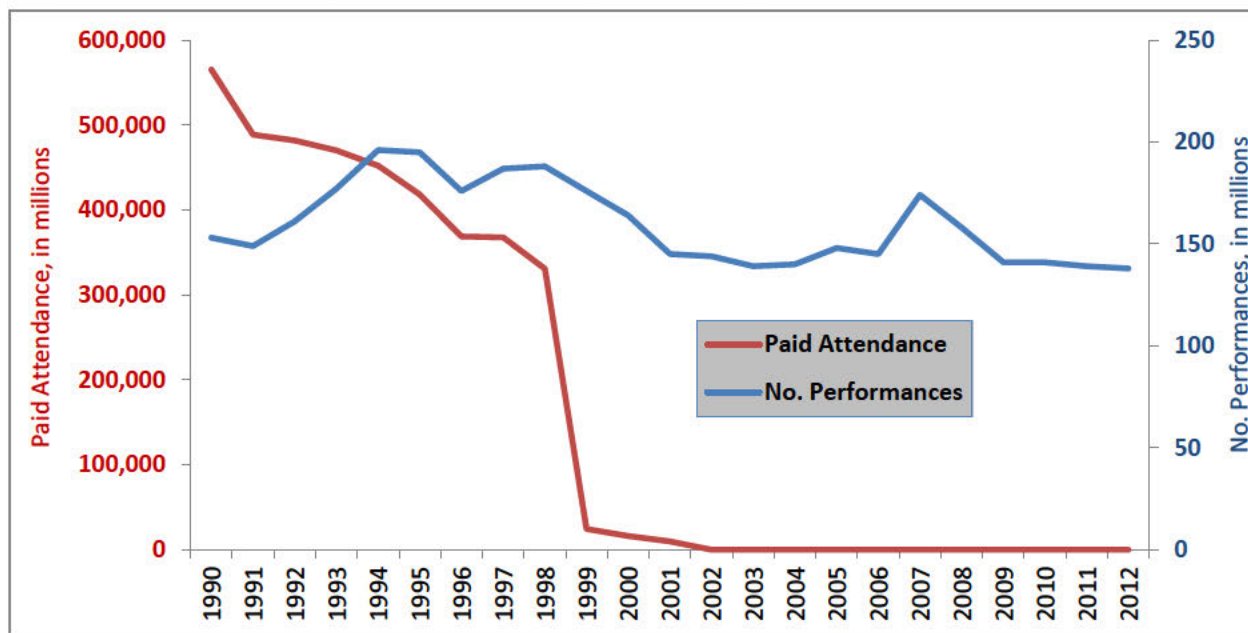

SECOND DRAFT - CONFIDENTIAL

Figure 58: Florida harness racing handle and purses, 1990-2012

Source: Division of Pari-Mutuel Wagering. Note: Total handle may be understated as PMW does not collect data on out-of-track generated handle, the single largest component of handle.

Figure 59: Florida harness paid attendance and performances, 1990-2012

Source: Division of Pari-Mutuel Wagering. Note: Pompano has not charged an admission fee since 2002.

e. Quarter Horse

Steve Fisch, president of the Florida Quarter Horse Racing Association, reported that more than 2,300 horses have raced at Hialeah since it reopened as a quarter horse track in 1992. Fisch's organization has set up an accredited breeding program with the state Department of

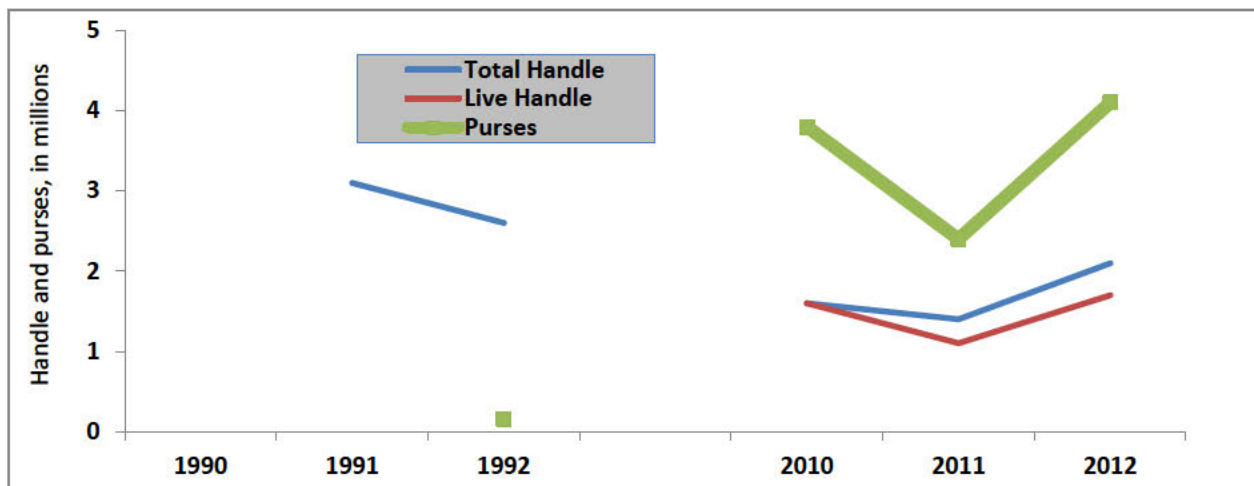

Agriculture, which rewards Florida-bred quarter horses with additional purse awards for finishing anywhere from first through fourth in races.

Already, Florida has seen some significant impact in breeding activity from the return of quarter horse racing. The number of starters foaled in the state in 2008 was 24. In 2012, the number increased to 96. During the same period, the number of owners of starters who reside in Florida increased from 68 to 247.⁵³² Each horse contributes nearly \$35,000 to the GDP in Florida, according to Fisch. Eventually, Fisch expects quarter horse racing to expand to other tracks. The result would be year-round racing. When and if that happens, he envisions a significant increase in breeding activity, handle and purses. Florida, he said, will become one of the top breeding states of quarter horses in the country. The number of starters foaled could exceed more than 2,000, he said.

Fisch noted that in just a few years, the Florida quarter horse industry has gained a reputation for quality race horses and breeding stock, so much so that owners have begun to export mares and stallions to Brazil and Australia. He expects that with the expansion of quarter horse racing to other tracks, the export of quarter horses to foreign countries will become a major industry.

Quarter horse racing returned to Florida in 2010 after a 17-year absence. There are limited data points from 1991-92, as seen in the following chart:

Figure 60: Florida quarter horse racing handle and purses, 1990-2012

Source: Division of Pari-Mutuel Wagering. Note: Quarter horse racing was halted in 1992 and returned to Hialeah in 2009 after it received permission to open a slot machine casino.

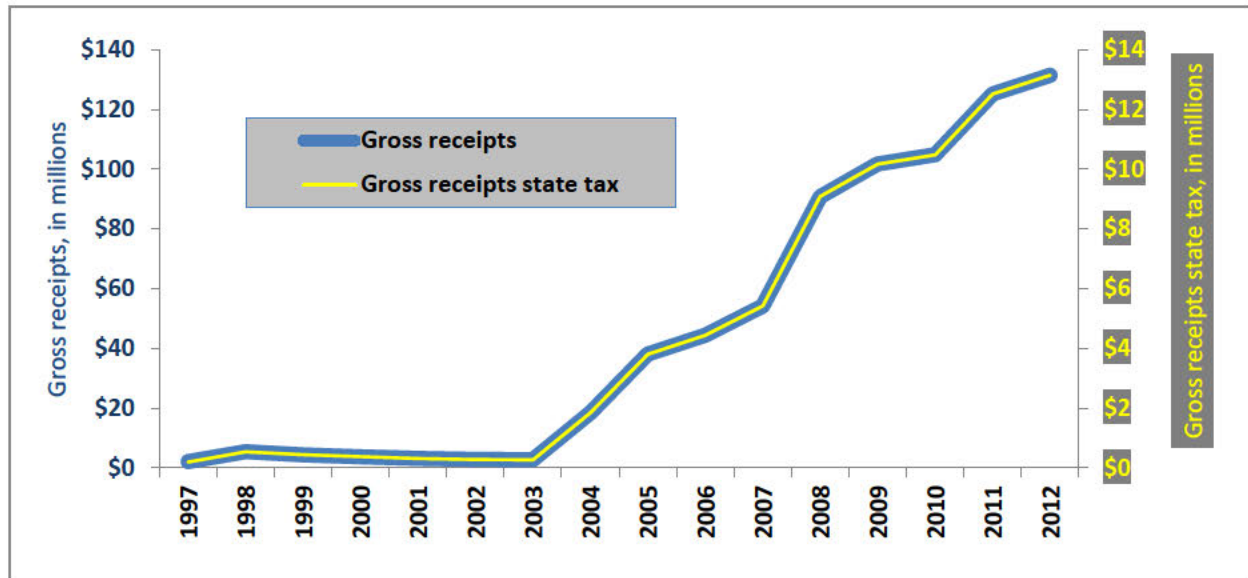

Quarter horse racing attracted paid attendance of nearly 36,000 in each of 1991 and 1992, but upon its return in 2010 did not charge for admission. The number of performances statewide for the last three years were 40 in 2010, 24 in 2011, and 76 in 2012.

⁵³² American Quarter Horse Association, custom report, May 21, 2013.

f. Cardrooms

The following chart shows cardroom receipts, along with the state's share from the 10 percent tax. Cardroom laws were changed in 2003 and then again in 2010 that encouraged professional poker players to play in Florida. The result, as the table shows, was a significant increase in gross receipts and tax revenue. Note that the revenue and tax lines follow identical paths, as the tax rate has stayed the same since inception.

Figure 61: Florida cardroom receipts and state tax, 1997-2012

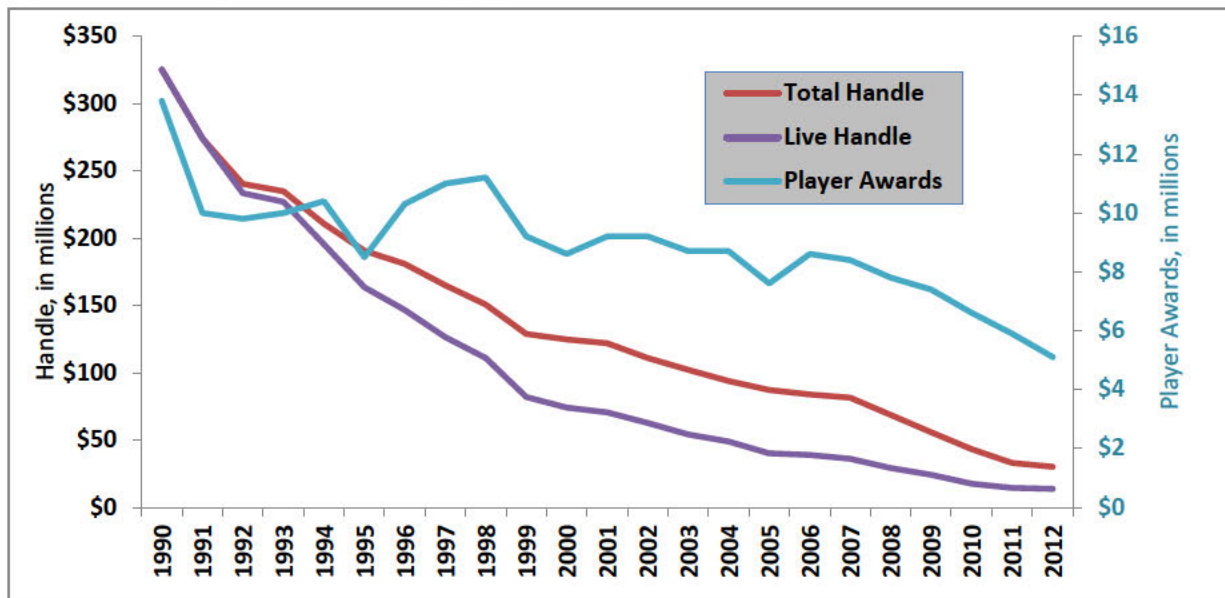

Source: Division of Pari-Mutuel Wagering

g. Jai Alai

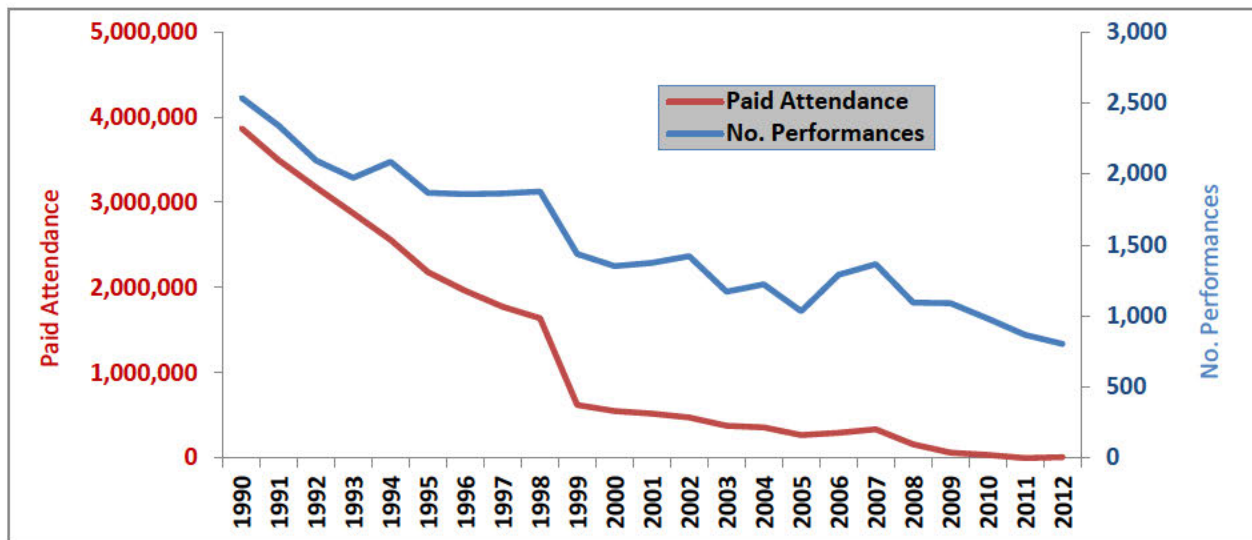

Jai alai is in rapid decline and, effective in 2012, stopped counting admissions. Its 2012 payroll was \$14.2 million, with 70 percent of it at two frontons, Fort Pierce and Miami.

Figure 62: Florida jai alai handle and player awards, 1990-2012

Source: Division of Pari-Mutuel Wagering

Figure 63: Florida jai alai paid attendance and performances, 1990-2012

Source: Division of Pari-Mutuel Wagering

41. Indian Casinos

Through 2011, the Native American casinos collectively had approximately 8,358 employees in both gaming-related and non-gaming capacities – or an average of nearly 1,200 employees per location.⁵³³ This estimate was reported by a third party, although we know this figure may be considerably greater today due to various facility-related expansion activities that

⁵³³ Alan Meister, *Casino City's Indian Gaming Industry Report*, 2012 Edition.

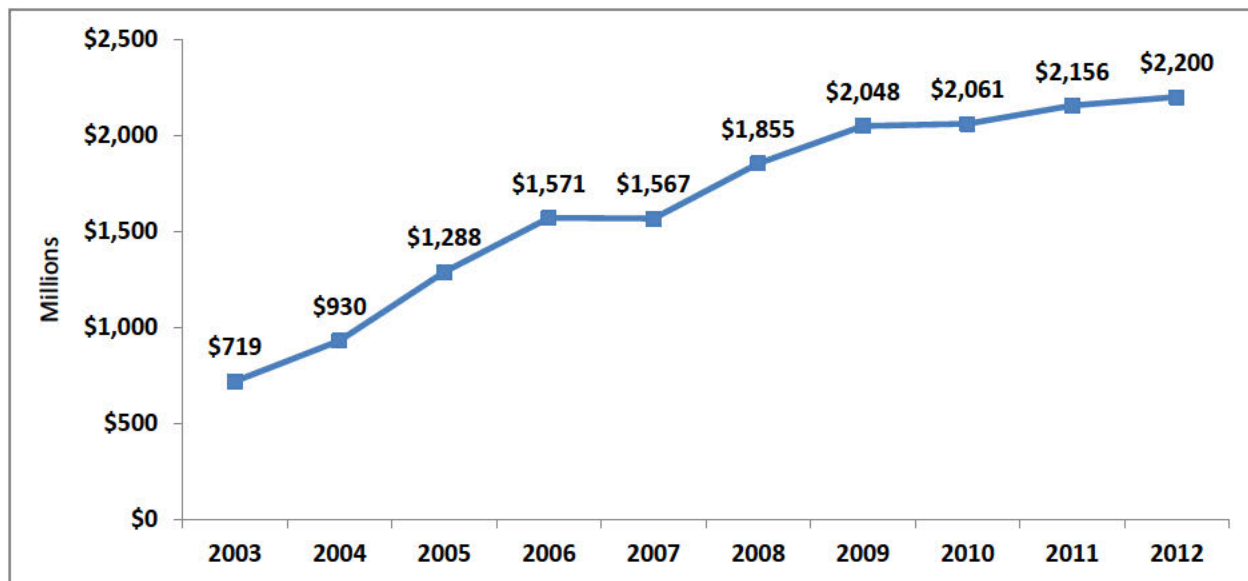

have occurred since 2011. In fact, the Seminole Tribe of Florida advised Spectrum that in 2012 its gaming facilities employed 9,562, or 7,725 full-time-equivalent employees. Another 4,000 are employed by Seminole casino tenants, such as retailers who operate on-site outlets.⁵³⁴ The operator of Florida's other Native American casino, the Miccosukee Tribe, declined to participate in this study, though an employee there advised us that the Miccosukee casino resort employs "over 800."

We estimate that Native American casinos in Florida had \$2.2 billion of GGR in calendar year ended 2012. We estimate GGR comprised approximately 94.8 percent of total revenue; therefore, we estimate total non-gaming revenue of \$120 million in 2012.⁵³⁵

We note that the Seminole Gaming enterprise, which operates six Florida casinos, generated \$1.96 billion in GGR⁵³⁶ and, based on Spectrum's estimates, more than \$1.1 billion in EBITDA annually, an estimate that was confirmed in our interviews with management.

The following table shows estimated GGR results for Native American casinos in Florida over the last 10 calendar years, through 2012.

Figure 64: Florida Native American casino GGR, 2003-2012

Source: Casino City's *Indian Gaming Industry Report*, 2013 Edition. Newton: Casino City Press.

Over this 10-year span, Native American casinos in Florida have generated nearly \$16.4 billion of GGR.⁵³⁷ Additionally, and even with the emergence of racinos in South Florida, year-

⁵³⁴ Interview with Seminole Gaming CEO James Allen, May 1, 2013.

⁵³⁵ The average from 2009-2011 as reported in *Casino City's Indian Gaming Industry Report*, 2013 Edition.

over-year GGR growth occurred in nine of the 10 periods illustrated (with exception of 2007 when GGR was down 0.3 percent).

The following chart shows annual average GGR per gaming position per day (estimated) from calendar year ended 2003 through calendar year ended 2012, along with an estimated average number of gaming positions in operation annually.

Figure 65: Florida Native American casino GGR/position/day and counts, 2003-2012

Source: Casino City's *Indian Gaming Industry Report*, 2013 Edition.

The following is excerpted from Casino City's *Indian Gaming Industry Report*, 2013 Edition, and provides an explanation of the taxes and/or payments associated with Native American casinos in Florida:

"In November 2007, the Seminole Tribe and the Governor of Florida entered into a tribal-state gaming compact. Upon federal approval in January 2008, the Tribe began making required compact payment to the State. However, the compact was challenged by the State Legislature, and in July 2008, the Florida Supreme Court ruled that the Governor did not have the authority to enter into the Seminole gaming compact without the ratification of the State. Following this ruling, the Tribe entered into a new gaming compact with the State on April 7, 2010. This compact was ratified by the State Legislature, and became effective when published in the Federal Register on July 6, 2010. The 2010 compact calls for several types of payments by the Tribe to the State (note that the State also kept all payments the Tribe made under the original 2007 compact). The new payments consist of (i) annual revenue sharing payments, 97 percent of which goes to the State and 3 percent goes to local governments; (ii) an annual oversight assessment not to exceed \$250,000 per year (indexed for inflation); and (iii) an annual donation to the Florida Council on Compulsive Gambling in the amount of not less than \$250,000 for each of its seven gaming facilities. The revenue sharing payments,

which are made in exchange for exclusivity within the local region, are as follows in the first five years: Years 1 and 2 – \$150 million per year; Years 3 and 4 – the greater of \$233 million per year or a percentage payment based on Class III net win (i.e., amounts wagered minus prizes/payouts and free play/promotional credits); and Year 5 – \$234 million or a percentage payment based on Class III net win. Percentage payments are based on a sliding scale: 12 percent on net win up to \$2 billion; 15 percent on net win over \$2 billion and up to \$3 billion; 17.5 percent on net win over \$3 billion and up to \$3.5 billion; 20 percent on net win over \$3.5 billion and up to \$4 billion; 22.5 percent on net win over \$4 billion and up to \$4.5 billion; and 25 percent on net win over \$4.5 billion. The Seminole Tribe also makes fixed annual local revenue sharing payments to the City of Coconut Creek.”

The same report indicated total direct payments in 2011 (from the Seminole Tribe) were \$154.4 million, of which \$147.3 million (or 95.4 percent) was for state revenue sharing.⁵³⁸ We note for the most recent fiscal year (ended June 2012) the state collected \$150 million in revenue sharing from the Seminole Tribe, of which \$3.75 million was distributed to local governments, including both counties and municipalities.⁵³⁹ The State subsequently collected \$163.8 million from the Seminole Tribe in FY 2012 and for FY 2013 through June 15, 2013, collected \$174.8 million.

Any assessment of the economic impact of Indian gaming should also consider the alternative: In the absence of this revenue stream, how would tribes such as the Seminoles be able to provide necessary services and funding for their families? Seminole General Counsel Jim Shore told Spectrum that the 3,800 members of his tribe would be living in abject poverty with little hope of escape.⁵⁴⁰

42.Lottery

The Florida Lottery supplies substantial economic benefits and is dedicated to providing assistance to education throughout Florida. The Lottery’s mission, as defined in the 2012 annual report, is “To maximize funding for the Educational Enhancement Trust Fund by responsibly providing innovative and entertaining Lottery products and promotions to Florida’s citizens and visitors.” The Florida Lottery has also been remarkably successful as a gambling business. In 2012 the Lottery’s sales totaled \$4.45 billion, surpassing the previous year by 11 percent,⁵⁴¹ and

⁵⁴⁰ Interview with Jim Shore, May 1, 2013

⁵⁴¹ Florida Lottery, “Brighter Than Ever,” Annual Report, 2011-2012 <http://www.flalottery.com/exptkt/annualreport11-12.pdf>.

ranking the Florida Lottery third in the nation in total sales revenue (FY 2011), behind New York and Massachusetts.⁵⁴² This record beating performance enabled the Lottery to transfer \$1.32 billion to the Educational Enhancement Trust Fund (“EETF”). The Florida Lottery is also one of the more efficient state lotteries in the US, ranking consistently in the top quartile by the measurement ratio of administration as a percentage of ticket sales.⁵⁴³

The Florida Lottery’s contributions to education are considerable. Since its inception, the Lottery has provided a total of \$24 billion to the EETF.⁵⁴⁴ In the past fiscal year the EETF has allocated \$317 million for construction bonds, provided \$271 million for public school finding, \$130 million for state colleges, and \$254 million for state universities.⁵⁴⁵ Since 1997 the Florida Lottery has also provided scholarships to more than 600,000 students through the Bright Futures Scholarship Program, funded primarily through Lottery financial transfers. These contributions yield subsequent results, tangible and intangible, in the quality of Floridian’s lives which are impossible to fully quantify yet undeniable nonetheless.

Beyond sales revenue, and transfers to educational assistance the economic impact of the Lottery within the state of Florida is substantial. The Florida Lottery directly employs 420 full-time-equivalent employees. The Lottery is a critical partner to the widespread sales network of 13,300 lottery retailers. Most of these retailers are small independent businesses employing thousands of Florida citizens and providing essential goods and services to local communities. As part of its recent work with the Massachusetts State Lottery, Spectrum conducted a survey among lottery retailers which showed that, on average, each of the 7,400 retailers in the Commonwealth employs two or three people, often at the entry level, in a very wide range of small business enterprises.⁵⁴⁶ From an economic perspective, lottery revenue was estimated by retail sales agents to account for a median 25 percent of total business revenues.⁵⁴⁷ In Florida, retail lottery sales are generated primarily from convenience stores with gas pumps (48 percent), supermarkets (27 percent), convenience stores without gas pumps (17 percent), package liquor stores (3 percent), small grocery markets (1.5 percent), dollar/discount stores (1 percent), and newsstand/ tobacconist/sundries (1 percent).⁵⁴⁸ With the exception of supermarkets, the great majority of these establishments are local small business enterprises.

43.Charitable Bingo

As discussed in Chapter II (B)(9), bingo conducted for charitable purposes is regulated at the county or municipal level and no state agency or organization aggregates the gross or net bingo revenue. Spectrum is unaware of even credible estimates as to the dollar size of the Florida charitable bingo market. As noted, there is no direct employment associated with charitable bingo, as the activity is operated by volunteers who are members of the recipient charity. In the bingo halls we observed, the facility's owner/operator and any other compensated employees are paid by revenues derived from facility's food concessions. Thus charitable bingo is captured in the fundraising and grant-making activities of the recipient charities, which is outside of our gaming-impact analysis model.

IV. The "Substitution" Effect

The introduction or expansion of legalized gambling, in particular casino gambling, raises a variety of concerns. Although casinos are often introduced in order to raise tax revenues, create jobs, and spur economic development, many observers have a concern for the potential "substitution effect" of casinos. That is, they are concerned that the expenditures at the new casino(s) will be redirected from other local or regional businesses, with the end result that the casinos have no real net benefit on the local economy. As an example, a quick review of "Stop Predatory Gambling" shows a variety of concerns about the casino industry's impacts on other industries.⁵⁴⁹

Fundamentally, the substitution effect is not unique to the casino industry. Indeed, anytime any new business opens, there is the potential that an addition to the local economy will be harmful to incumbent firms and industries. This is because the substitution effect is essentially synonymous with market competition. As such, from an economic perspective, the substitution effect is not necessarily a cause for concern. Casinos compete for a share of discretionary incomes within their respective markets, as would be expected from any segment of the entertainment or leisure industries. When adults elect to visit a casino, rather than the theater or a museum, the casino wins and the alternative loses. Quite often, however, the reverse is true – and the number of precise alternatives competing for a share of discretionary spending is so vast, even in smaller markets, that it would defy any efforts to track precise winners and losers.

Such efforts are further complicated because, not only are there many options for discretionary dollars, we point out that overall discretionary spending also competes against savings. A dollar saved is a dollar not spent, and vice versa.

Notably, Spectrum suggests there is a potential negative correlation between the savings rate and gaming spending. For example, in 2006, a pre-recession period that was at or near the

⁵⁴⁹ <http://stoppredatorygambling.org/blog/category/research-center/economic-impacts/> (accessed June 13, 2013)

SECOND DRAFT - CONFIDENTIAL

high-water mark for gaming revenue in both Atlantic City and Nevada, the national savings rate had sunk to a seven-decade low, as reported in early 2007 in *The New York Times*:

“Americans once again spent everything they made and then some last year, pushing the personal savings rate to the lowest level since the Great Depression more than seven decades ago.

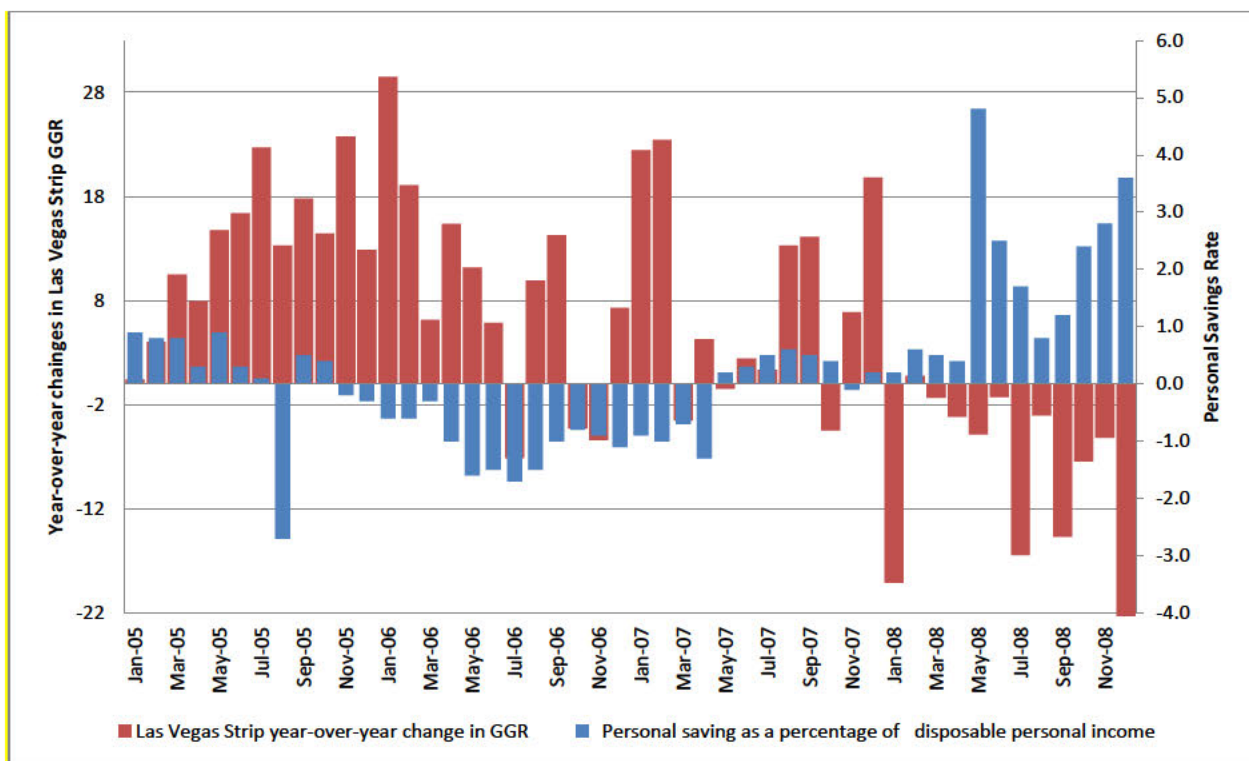

“The Commerce Department reported ... that the savings rate for all of 2006 was a negative 1 percent, meaning that not only did people spend all the money they earned but they also dipped into savings or increased borrowing to pay for purchases.

“The 2006 figure was lower than a negative 0.4 percent in 2005 and was the poorest showing since a negative 1.5 percent savings rate in 1933 during the Great Depression.”⁵⁵⁰

Our analysis and experience suggests that the success of gaming in destination markets such as Las Vegas during periods of low savings is not coincidental. This was generally a period in which both the stock and housing markets were robust, creating a general feeling of well-being in which household net worth was increasing by itself, without the need for additional savings, and much of that increased spending – the flip side of decreased savings – benefited the casino industry, as evidenced in the following chart, which tracks data in Las Vegas through the period of low savings, right through the first, most traumatic months of the Great Recession:

Figure 66: Personal saving as a percentage of disposable personal income vs. Las Vegas Strip Revenue

⁵⁵⁰ “U.S. savings rate sinks to lowest since Great Depression,” *New York Times*, Feb. 1, 2007
<http://www.nytimes.com/2007/02/01/business/worldbusiness/01iht-save.4436274.html>

Source: Nevada Gaming Control Board, U.S. Department of Commerce

As the chart shows, an increase in the savings rate shrinks the pie of discretionary dollars, which affects the gaming industry and, presumably, other leisure industries as well, further complicating any analysis regarding substitution.

Spectrum's 2008 report for Massachusetts noted the following:

"We note a very important point that was articulated rather well by Michael E. Porter who makes the point that substitution is an omnipresent issue that must be viewed in a much larger context:

" 'Substitutes are always present, but they are easy to overlook because they may appear to very different from the industry's product: To someone searching for a Father's Day gift, neckties and power tools may be substitutes. It is a substitute to do without, to purchase a used product rather than a new one, or to do it yourself (bring the service or product in-house).' " ⁵⁵¹

"With that in mind, we caution that any analysis of the substitution effect defies simplification. If a casual dining establishment loses customers to casino restaurants, it is easy to identify a competitive culprit. But what if patrons of high-end restaurants decide

⁵⁵¹ "The Five Competitive Forces that Shape Strategy," by Michael E. Porter, *Harvard Business Review*, January 2008, p. 84.

SECOND DRAFT - CONFIDENTIAL

to alter their spending patterns, and shift more dollars to casual restaurants to free up more discretionary income to visit a spa at a destination casino. Who benefits? Who suffers? What if income levels rise in a community, thus allowing more households to spend less money at supermarkets to prepare home-cooked meals while they increase spending at area restaurants? Again, in such situations, it is difficult to identify the competition.”⁵⁵²

Casino advocates might argue that casinos should not be treated differently than other businesses; as long as they generate a profit, it implies the casino is satisfying the wants of consumers and is a “productive” industry. Indeed, to the extent to which consumers redirect their expenditures away from other industries to casinos, this is an indication that the casino’s product is of higher value than alternative products; otherwise – according to such economic logic – consumers would not have changed their spending patterns. Two exceptions to this may be argued:

- To some extent, casinos derive a portion of their revenues from problem or disordered gamblers, who do not really exercise free choice if they have a gambling problem.
- Casino licensure is largely viewed as a privilege that often comes with some level of exclusivity. As such, casinos have a concomitant obligation to act in the public interest, which can translate into policies that minimize substitution and focus more on attracting business from outside the region or state.

There have been a few academic papers that have addressed the substitution effect, either directly or in a round-about way. Figure 2 summarizes some of these studies. Most of the studies examine data from the 1990s.

Source: Douglas M. Walker, *Casinonomics* (New York: Springer, 2013), p. 236.

The 2008 paper by Walker and Jackson is the most comprehensive study to date on gambling inter-industry relationships.⁵⁶² They studied data on all states for 1985-2000. Their results indicate that casinos and lotteries are substitutes, that lotteries complement pari-mutuel racing (and vice-versa), and that horse racing and casinos are complementary. Their inter-industry (intra-state) results are summarized in Figure 3.

For example, the “Casino” row indicates that increases in casino revenues within a state have a negative impact on dog racing and lottery revenues/handle within a state, but a positive impact on horse racing handle within the state. Since Indian casino revenue data are generally not public, Walker and Jackson instead use the square footage of Indian casinos in a state as a proxy for Indian casino revenues.

Walker and Jackson also examined the relationship between an industry in one state and the availability of gambling in neighboring states. Figure 4 illustrates these relationships. Figure 4 shows that, for example, the greater the availability of casinos in neighboring states, the lower the casino revenue and lottery revenue in the particular state.⁵⁶³

Figure 4: Summary of adjacent-state competition

Model Variable	Casino	Dog racing	Horse racing	Lottery
Adjacent Casinos	—	(+)	+	—
Adjacent Dog racing	(—)	+	+	—

Jackson, "Do US Gambling Industries Cannibalize Each Other?" *Public Finance Review*, Volume 36, 2008, p. 322; Spectrum Gaming Group, "New York Gaming Analysis: Potential Impact of Commercial Casinos on New York Lottery Ticket Sales and Video Gaming Machine Revenues (Linwood, NJ, June 2013), p. 16.

As shown in the above table, not all industries appear to act as substitutes across state lines. However, the availability of casinos tends to harm casinos and lotteries in neighboring states. Lotteries also harm lotteries in neighboring states.

Three other studies offer some insight into the substitution effect. One is a county-level study that examines the labor market effects (employment and wages) of casinos. The 2008 study by Cotti analyzes the effects on labor of counties that have a casino (or casinos), relative to

⁵⁶³ "Availability of casinos" is measured as the percentage of neighboring states that allow casinos in a particular year. Hence, this measures the ease of access to casinos in nearby states, rather than the casino revenues in neighboring states.

SECOND DRAFT - CONFIDENTIAL

those that do not.⁵⁶⁴ Cotti finds that, generally, casino counties fare better, in terms of employment and wages, relative to non-casino counties. Cotti summarizes his results, “On average, casinos play a significant role in increasing both employment, earnings, and promoting economic development in a county” (p. 15). The results are more significant in rural casinos, relative to urban ones, since a casino represents a relatively large business in a smaller community. The evidence suggests that, on net, there is no net negative impact of casinos on employment or wages. This is not to say, however, that some industries may not see a negative impact from the introduction of casinos.

Another study examines the effect of casinos on retail property values. In their 2011 paper, Wiley and Walker examine how casinos in Detroit have affected property values, based on commercial property sales data.⁵⁶⁵ Their results suggest that the casinos tend to have a positive impact on property values, particularly for some sectors related to tourism (e.g., service stations, restaurants) and on “general freestanding” retail properties. This evidence from Detroit is one of the only published papers to directly examine the effect of casinos on other non-casino businesses. Of course, not every community will see the same relationship to casinos that Detroit does.

Finally, the 2007 paper by Wenz examined the impact of casinos on residential property values.⁵⁶⁶ Wenz found that casinos have a net positive impact on housing prices, of about 2 percent, in the same geographic area as a casino. At the same time, property values in bordering areas see an even greater effect, of about 6 percent. Notably, most of the casino areas analyzed are tribal casinos, so Wenz’s results may be due partially to the fact that tribal casinos may be more likely to be located in relatively depressed local economies. Indeed, Wenz finds that the positive impacts of casinos decline as population density increases.⁵⁶⁷ Several other studies (one on Atlantic City, and one on Windsor, Ontario) suggest, when the effect of crime is considered, the net impact of casinos on property values may be negative.⁵⁶⁸

We caution that such studies, no matter how rigorous they may be in developing their models or assumptions, should never be taken at face value, particularly as authors rarely take into account the full complexity of issues. In Atlantic City, the notion that casinos had a negative

Phipps, “Crime and Disorder, and House Sales and Prices Around the Casino Sties in Windsor, Ontario, Canada,” *The Canadian Geographer*, Volume 48, 2004, p. 403-432.

SECOND DRAFT - CONFIDENTIAL

effect on property values might comport within the parameters of a specific model, but we would respectfully point out that, in 1978 when the first casino opened, the entire assessed valuation of all property in Atlantic City was \$308 million, a number that actually been declining in tandem with Atlantic City's downward spiral in the years preceding gambling.⁵⁶⁹ Within two years, the assessed valuation grew by more than 182 percent,⁵⁷⁰ a phenomenon that we would attribute almost entirely to the presence of this new industry. That growth, of course, did not dispel concerns about the impact of casinos, and created new sets of problems for those property owners that faced steeper tax bills.

When dealing with complex issues such as substitution, both facts and perceptions must be considered and addressed. In the case of casino gambling, it becomes an understandable concern for business owners, voters, politicians, and others because the introduction of casinos requires a positive act by government. Therefore, while there may be relatively little interest in, say, the economic impacts of opening a new restaurant in a particular neighborhood, that would not be the case with casinos.

Nevertheless, we can begin to identify the impacts of a new casino in Florida by considering the possible sources of spending at the new casino. Those revenues would come from a combination of these sources:

(1) New spending from Floridians

(2) New spending from out-of-state tourists

(3) Existing spending on other Florida non-gambling industries (by Floridians and tourists)

(4) Existing spending on other Florida gambling industries (by Floridians and tourists)

(5) Existing spending by Floridians on out-of-state purchases, including gambling

The evidence suggests that casinos are likely to have negative impact on lotteries, and some other businesses may see decreased revenue as a result of a casino's opening. But this is no different from what happens when any other business opens. Certainly some of the revenues for a new casino would come at the expense of other, existing gambling firms in Florida. Revenues are likely to come from all five of the sources identified above, but it is very difficult to predict the exact percentage from each source. In any case, the substitution effect is relevant for any new business that opens.

⁵⁶⁹ George Sternlieb and James W. Hughes, *The Atlantic City Gamble*, Twentieth Century Fund, 1983, p. 97

⁵⁷⁰ Ibid.

B. Conclusion

To be sure, new casinos create a substitution effect, but it is much less clear what the significance of it will be and which industries would be most affected by it. The academic studies that have been performed suggest that, at least for non-gambling industries, casinos are more likely to act as complements than substitutes. This suggests that the concern over the substitution effect may be greater than is justified. After all, the casino industry has expanded across the United States over the past two decades, and there is no evidence to suggest that this expansion has led to any long-term negative economic impacts for casino-hosting regional economies.

Still, we do not discount the importance of concerns regarding substitution, nor do we dismiss the notion that casinos compete. Indeed, they compete against any other option that seeks a share of discretionary income. While it is difficult to determine with any level of precision which businesses will win and which will lose in such competitive battles, there is one overarching certainty with respect to substitution, and that holds true for tourism in general, as well as for gaming: The dollar-for-dollar substitution with local businesses will be less pronounced and less impactful if new businesses – be they casinos or other attractions – help attract visitors and dollars from outside Florida.

V. Assessing Florida’s Existing Economic Base, Now and Future

As noted in the Introduction, Spectrum is working with Regional Economic Models Inc. (“REMI”) to calculate the economic impacts of Florida’s gambling industry. The existing gambling industry spans across three sectors within the REMI model: Amusement, Gambling, Recreation Industries (North American Industry Classification System [“NAICS”] 713), Accommodation (NAICS 721), and Retail Trade (NAICS 44-45). The following tables show five main economic indicators of these three aggregate sectors between calendar year 2000 and 2060, in five-year increments.

Figure 67: Past, present, future economic indicators of Amusement, Gambling, Recreation Industries (including racinos, pari-mutuel, lottery)

Combined with data from the County Business Patterns (“CBP”) by the US Census Bureau and an assessment of the gambling industry in Florida by Spectrum Gaming Group, REMI was able to estimate the historical and current share of gambling industry within the three aggregate sectors. The CBP publishes paid employees and payroll data for both Gambling Industries (NAICS 7132), Casino Hotels (NAICS 72112), Food and Beverage Stores and Convenience Stores (NAICS 445 and NAICS 445120, respectively), which we categorized as

SECOND DRAFT - CONFIDENTIAL

subsectors of Amusement, Gambling, Recreation Industries, Accommodation, and Retail Trade, respectively. REMI and Spectrum divided the casino gaming industry into four main groups: racinos/pari-mutuels, lottery, retail lottery, and Native American casinos. *The racinos/pari-mutuels and lottery⁵⁷¹ have been assigned to the Amusement, Gambling, Recreation Industries, the Native American casinos to Accommodation, and retail lottery⁵⁷² to Retail Trade, based on the nature of the subsectors.*

The Census Bureau withholds data for certain industries to avoid disclosing data for individual companies and casino hotels in Florida is one of the industries heavily affected by nondisclosure. The following tables show historical data for the gaming industries.

The Spectrum casino gaming assessment provides payroll data and gross gaming revenues at racinos/pari-mutuels in 2012; payroll data, gross gaming revenues and employees are available for Native American casinos in 2012; payroll, revenue, and employee data the lottery in 2012; as well as estimated employment and revenue data for retail lottery in 2012. The Florida Department of Business Professional Regulation also provided the FY 2012 regulatory costs for pari-mutuels (includes pari-mutuels, slots, and gaming compact oversight expenditures).

We estimated the number of employee in racinos/pari-mutuels through dividing the total payroll amount by the average annual wage and salary in the Amusement, Gambling, Recreation Industries. Having both the gross gaming revenue and employee number allows us to calculate a baseline for the labor productivity (output per employee) for racinos, lottery, retail lottery, and Native American casinos. The following tables show the various data collected and estimated for the gaming industry in 2012.

Figure 73: Racino employees, gross gaming revenue, wage and salary, and regulatory costs 2012

With this information, we were able to establish the gambling industry's share within the three aggregate sectors. This information is essential to the following section as we carry out a counterfactual analysis that involves removing the employment and its associated wages and output to determine the total economic and fiscal contribution of the gambling industry. The gambling industry is unique because it typically has higher labor productivity than its aggregate sector. This is evident in the following table, showing the Racinos/Pari-mutuels employment is approximately 2.8 percent of the total employment and wage and salary in the Amusement, Gambling, Recreation Industries. However, the Racinos/Pari-mutuels output is 4.4 percent of the total Amusement, Gambling, Recreation Industries output. We had to take into account this higher labor productivity of the gaming subsectors when we do the counterfactual analysis.

The Casino Hotels shows a similar pattern where the employment and associated compensation make up about 5.5 percent of the Accommodation sector, but its output is over 10 percent of the Accommodation output.

The Lottery sector (excluding retailers) has uniquely high labor productivity due to its operation design. The total Lottery output makes up nearly 38 percent of the total output but less than 1 percent of employment and compensation of the Amusement, Gambling, Recreation Industries. Typically a lottery control board oversees the operation and sells lottery tickets through sales agents (retailers). Once the lottery operation is established, the administrative cost remains largely the same. The marginal cost for producing an additional dollar of lottery sale is very low compare to other goods and services, hence the high productivity.

The Retail Lottery sector, on the other hand, behaves differently than the Lottery sector. According to *La Fleur's 2012 Lottery Almanac*,⁵⁷³ over 95 percent of the lottery sales occur at gas stations with convenience stores, convenience stores, supermarkets, and liquor stores. These businesses primarily engage in providing other goods and services aside from the lottery. Lottery sales are a supplement to these businesses and commission on lottery ticket sales makes up only a fraction of their total revenue, which would explain why the lottery sale is makes up just 0.3 percent of the output of the Retail Trade industry.

h. Historical Tax Revenue by Gaming Sectors

The Office of Economic and Demographic Research (“EDR”) of the Florida Legislature provided REMI with historical tax revenue information, allowing us to examine the historical trend of tax revenue collection from each of the gaming sector. The following table displays the tax collection, dating from FY 2000.

	Units	FY 00	FY 01	FY 02	FY 03	FY 04	FY 05	FY 06
Indian Gaming	Millions of Current Dollars	0.0	0.0	0.0	0.0	0.0	0.0	0.0

Lottery Total	Millions of Current Dollars	1,639.3	1,681.0	1,602.5	1,590.8	1,550.7	1,506.9	1,671.3

Source: The Office of Economic and Demographic Research of the Florida Legislature.

Note: The Lottery Total excludes lottery prizes, which is consistent with the calibrated budget used within Tax-PI.

I. Floridian Out-of-State Gaming Spending

Spectrum estimates the GGR currently exported from Florida. We believe it is reasonable that casinos along the Gulf Coast of Mississippi and in Alabama, as well as those in Las Vegas and Atlantic City, are generating at least \$411-plus million of GGR from Florida residents annually. Aside from the three aforementioned destinations there are hundreds of other casinos in the US and a short distance away in the Bahamas and/or various Caribbean islands that Florida residents are visiting (and exporting GGR to). Therefore, we believe it is well within reason that at least \$500 billion of GGR annually is being generated at casinos outside of Florida and is attributable to permanent Florida residents.

B. Discussion of Components of Economic and Fiscal Impacts

A description of the direct, indirect, and induced components of the economic and fiscal impact of each of the subsectors. Impacts associated with facility construction should be distinguished from impacts associated with ongoing operation of a facility.

Using the employment, output, wage & salary, tax revenue, and regulatory costs data from Chapter III(A) above, we performed a counterfactual analysis using the REMI Tax-PI model to evaluate the contribution of the gambling industry as it existed in Florida in 2012. For this modeling effort, the EDR of the Florida Legislature provided REMI with the latest tax and budget information, national benchmark based upon Global Insight June 2013 Control Forecast, and state benchmark based upon population estimates from Florida's February 2013 Economic Estimating Conference and employment estimate from September 2012 US BEA historical ES-202 data in order to correctly calibrate the Tax-PI model baseline. For further information about Tax-PI and how the EDR budget information is used in the model, please see Section E Appendix.

The REMI model forecasts the economy out to 2060 to allow analyst to evaluate any changes to the baseline. The gambling industry is already presented in the baseline forecast because it is a component in the current Florida economy. In this study we are not trying to measure the contribution of the gambling industry *on top of* the existing gambling activities in the Florida baseline. The objective is to understand the impacts of the gambling *as it exists currently*. In other words, what are the impacts to Florida if the gambling industry did not exist? Employing the counterfactual means we *remove the employment, associated output, wage & salary, tax revenue, as well as Floridian out-of-state gaming spending* to simulate the loss of the gambling industry in Florida. This approach allows us to measure the direct, indirect, and induced contribution of the existing gambling industry to the overall economy in 2012.

It is also important to consider the substitution effect of gaming spending in this counterfactual analysis. If households did not spend on gaming-related expenses, those spending do not simply disappear in the economy. Rather, we assume they would have spent it on other goods and services. In this analysis we assume 95 percent of the GGR to the pari-mutuel casinos was from Florida residents, 85 percent of GGR to Native American casinos was from Florida resident, and 98 percent of total lottery sales was from Florida residents. The full amount of GGR attributable to Florida residents are redistributed to various consumption categories via a policy variable within Tax-PI.

We selected five policy variables for this particular simulation: Industry Employment, Industry Sales without Employment, Investment, and Compensation, Wage Bill, Compensation, and Consumption Reallocation. The Industry Employment variable allows us to remove the total number of direct jobs in the gambling industry (recall that this is a *counterfactual* analysis, so we reduce the number of employment instead of adding to it); the Industry Sales without Employment, Investment, and Compensation variable is used to account for the higher labor

SECOND DRAFT - CONFIDENTIAL

productivity in the gambling industry in comparison to the Amusement, Gambling, Recreation Industries and Accommodation sectors; the Wage Bill variable is used to adjust the wage & salary differences between the gambling industry and its aggregate sectors; and the Compensation variable is used to adjust the compensation differences between the gambling industry and its aggregate sectors; the Consumption Reallocation variable is used to capture the spending of Floridians on gaming outside of Florida and to capture the substitution effect of gaming spending within Florida. The tax revenue of each gaming subsector is taken out directly through the revenue module in Tax-PI. Regulatory costs for pari-mutuels are not explicitly modeled in Tax-PI because the fees paid by pari-mutuels funds the costs. When we eliminate the direct tax revenue and fees collected from pari-mutuels, we also eliminate the expenditure (e.g., regulatory costs) associated with the revenue.

Note in the following tables that the values for employment, wage, compensation, and productivity adjustments are *negative* because this is what we are removing from the economy; the reallocation amount is positive because it represents the substitution effect of money spent on other goods and services if it were not spent on gambling:

Each gambling subsector was modeled as a discrete simulation to determine the economic and fiscal impact of each subsector. The inputs from Figure 12 to Figure 15 provided the following results:

Figure 82: Economic and fiscal impacts of Florida pari-mutuel sector in 2012

Summary	Units	2012
Total Employment	Thousands (Jobs)	5.942
Population	Thousands	1.746
Gross Domestic Product (GDP)	Billions of Fixed (2012) Dollars	0.413
Personal Income	Billions of Fixed (2012) Dollars	0.241
State Tax Revenues (fiscal year 2013)	Billions of Fixed (2012) Dollars	0.194

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 16 exhibits the total economic and fiscal impacts generated from the existence of the pari-mutuel sector in 2012. The pari-mutuel sector supports a total of 5,942 jobs in Florida. The associated gross state product (“GSP”) is \$413 million and it generated \$241 million in personal income. The tax revenue generated from the direct, indirect, and induced impacts of the pari-mutuel industry in FY 2013 is \$194 million.

Figure 83: Top 12 Florida industries with largest employment impact from pari-mutuels in 2012

Industry category, with NAICS code	Units	2012
Amusement, gambling, and recreation industries (713)	Thousands (Jobs)	4.952
Construction (23)	Thousands (Jobs)	0.217

Source: Regional Economic Models Inc.

Notes: Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 18 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel employment. It can also be interpreted as the direct input we entered into the model. The direct pari-mutuel employment impact is 4,953 jobs in 2012 and the indirect employment (Intermediate Demand Employment) supported by the pari-mutuel sector is 1,062. The induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the pari-mutuel industry is minus-1,399. The Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector. The sum of the direct, indirect, and induced employment is 4,616.

Figure 85: Economic and fiscal impacts of Florida lottery sector in 2012

Summary	Units	2012
Total Employment	Thousands (Jobs)	5.570
Population	Thousands	1.258
Gross Domestic Product (GDP)	Billions of Fixed (2012) Dollars	3.100
Personal Income	Billions of Fixed (2012) Dollars	0.459
State Tax Revenues (fiscal year 2013)	Billions of Fixed (2012) Dollars	1.884
Government Employment	Thousands (Jobs)	11.860

Source: Regional Economic Models Inc., Spectrum Gaming Group.

Note: Total Employment includes private non-farm, government, and farm employment.

Figure 19 exhibits the total economic and fiscal impacts generated from the existence of the lottery sector in 2012. The lottery supports a total of 5,570 jobs in Florida. The associated gross state product ("GSP") is \$3.1 billion and it generated \$459 million in personal income. The tax revenue generated from the direct, indirect, and induced impacts of the lottery in FY 2013 is \$1.88 billion. The lottery sector also supports 11,860 government employments in 2012.

Figure 29 shows the private non-farm industries that would have been impacted if Floridian's out-of-state gaming spending were brought back to Florida. Many of these industries, such as Retail Trade, Food Services and Drinking Places, and Private Households, are supported by local spending.

Figure 96: Employment by demand source from Floridian out-of-state gaming spending in 2012

Breakdown of Direct, Indirect, and Induced Employment	Units	2012
Private Non-Farm Employment	Thousands (Jobs)	3.836
Intermediate Demand (indirect) Employment	Thousands (Jobs)	0.693
Local Consumption Demand (induced) Employment	Thousands (Jobs)	3.033

SECOND DRAFT - CONFIDENTIAL

Government Demand (induced) Employment	Thousands (Jobs)	0.031
Investment Activity Demand (induced) Employment	Thousands (Jobs)	0.193
Exports Demand (induced) Employment	Thousands (Jobs)	-0.114
Exogenous Industry Sales (direct) Employment	Thousands (Jobs)	0.000

Source: Regional Economic Models Inc.

Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 30 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct employment. It can also be interpreted as the direct input we entered into the model. The direct employment impact is 0 in 2012 because we did not use any employment policy variables to model this consumption reallocation of Floridian's out-of-state gaming spending. The indirect employment (Intermediate Demand Employment) is 693. The induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact is 3,143. The sum of the direct, indirect, and induced employment is 3,836.

1. Impact of Hialeah Park Construction (2012)

Construction of Hialeah Park in 2012 was modeled separately from all of the gambling subsector economic impact assessments. The total cost of construction for Hialeah Park is \$63.36 million, with an annual average construction employment of 210. The construction duration was estimated to be 24 months starting in summer of 2011.

Figure 97: Economic and fiscal impacts of Hialeah Park construction in 2012

Summary	Units	2012
Total Employment	Jobs	364
Population	Individuals	125
Gross Domestic Product (GDP)	Millions of Fixed (2012) Dollars	29.602
Personal Income	Millions of Fixed (2012) Dollars	18.311
State Tax Revenues (fiscal year 2013)	Millions of Fixed (2012) Dollars	0.9219

Source: Regional Economic Models Inc., Spectrum Gaming Group

The construction activity in 2012 generates a total 364 jobs, \$29.6 million in GSP, and \$18.3 million in personal income. It also induces \$0.92 million in state tax revenue for FY 2013.

C. Assessment of Economic, Fiscal Impacts Over Time

An assessment of the changes in those impacts over time until the present day, historically, and projections for the future.

For this section, we employed the same policy variables as the Chapter III(B) above and ran a counterfactual analysis for years 2012 through 2060 to observe the impacts of the gambling industry over time. In addition, we established two alternative national forecasts representing a future with slower economic growth and the other projecting a stronger economic growth, relative to the state benchmark baseline in the model. The new national forecasts generated new regional forecasts for Florida. We then ran the same set of inputs against the three regional forecasts to quantify the impacts of the gambling industry under different economic trajectories.

REMI and Spectrum assume that over time, the employment in the overall gambling industry will expand at half the growth rate of its aggregate sectors in the REMI model. Given the regulations and restrictions imposed on the gambling industry, it is difficult to justify that the industry can expand at the same rate as a typical entertainment/recreation, retail trade, or accommodation industry. On the other hand, assuming no growth in the next 50 years is an excessively conservative assumption. We believe it is reasonable to choose a growth rate in between the two extremes. We assume wages and labor productivity will both grow at the same rate as the respective aggregate sector.

The following are tables showing the forecasted employment, output, wage & salary/compensation, and consumption reallocation for each of the gambling subsectors.

1. Results – Normal Economic Growth (2012-2060)

Figure 103: Economic and fiscal impacts of pari-mutuel sector, 2012-2060, normal growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	6.763
Average Annual Population	Thousands	7.422
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	33.326
Cumulative Personal Income	Billions of Fixed (2012) Dollars	35.154
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Billions of Fixed (2012) Dollars	0.561

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, the pari-mutuel sector is projected to support an annual average of 6,763 jobs⁵⁷⁸ in Florida under normal economic growth assumptions. The cumulative GSP is \$33.3 billion and \$35.2 billion in personal income. The average annual tax revenues generated from the direct, indirect, and induced impacts of the pari-mutuel industry between FY 2013 and FY 2060 is \$561 million.

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 38 shows the private non-farm industries with largest average annual employment impact. Aside from the Amusement, Gambling, and Recreation Industries, which is the direct impact for this subsector, the rest are the top industries that are reliant on the pari-mutuel industry in Florida. Many of these industries, such as Services to Buildings and Dwellings, Business Support Services, and Management Consulting, are intermediate input suppliers to the pari-mutuel industry.

⁵⁷⁸ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impacts. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

Figure 105: Average annual employment by demand source from pari-mutuel, 2012-2060, normal growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	3.106
Intermediate Demand Employment	Thousands (Jobs)	1.268
Local Consumption Demand Employment	Thousands (Jobs)	-1.406
Government Demand Employment	Thousands (Jobs)	0.397
Investment Activity Demand Employment	Thousands (Jobs)	0.073
Exports Employment	Thousands (Jobs)	-2.675
Exogenous Industry Sales Employment	Thousands (Jobs)	5.449

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 39 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel employment. It can also be interpreted as the direct input we entered into the model. The average annual direct pari-mutuel employment impact is 5,449 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the pari-mutuel sector is 1,268. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the pari-mutuel industry is minus-3,611. The average annual Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector. The sum of the average annual direct, indirect, and induced employment is 3,106.

Figure 106: Economic and fiscal impacts of lottery industry, 2012-2060, normal growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	34.387
Average Annual Population	Thousands	45.999
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	327.604
Cumulative Personal Income	Billions of Fixed (2012) Dollars	187.769
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Billions of Fixed (2012) Dollars	3.657
Average Annual Government Employment	Thousands (Jobs)	26.285

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, the lottery industry is projected to support an annual average of 34,387 jobs⁵⁷⁹ in Florida under normal economic growth assumptions. The cumulative GSP is \$327.6 billion and \$187.8 billion in personal income. The average annual tax revenues generated from the direct, indirect, and induced impacts of the lottery industry between FY 2013 and FY 2060 is \$3.66 billion.

⁵⁷⁹ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impacts. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

Figure 47 shows the private non-farm industries with largest average annual employment impact. Aside from Accommodation, which is the direct impact for this analysis, the rest are the top industries that are reliant on the Native American casinos industry in Florida. Some of these, such as Services to Buildings and Dwellings and Business Support Services, are intermediate input suppliers to the gaming industry. Others, such as Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (Native American casinos) or indirect jobs.

Figure 114: Average annual employment by demand source from Native American casinos, 2012-2060, normal growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	6.092
Intermediate Demand (indirect) Employment	Thousands (Jobs)	3.952
Local Consumption Demand (induced) Employment	Thousands (Jobs)	-7.047
Government Demand (induced) Employment	Thousands (Jobs)	0.264
Investment Activity Demand (induced) Employment	Thousands (Jobs)	-0.138
Exports Demand (induced) Employment	Thousands (Jobs)	-1.931
Exogenous Industry Sales (direct) Employment	Thousands (Jobs)	10.993

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 48 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The average annual direct Native American casinos employment impact is 10,993 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the gaming sector is 3,952. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the Native American casinos industry is minus-8,852. The Local Consumption Demand

SECOND DRAFT - CONFIDENTIAL

Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos. The sum of the average annual direct, indirect, and induced employment is 6,092.

Figure 115: Economic and fiscal impacts of Floridian out-of-state gaming spending, 2012-2060, normal growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	2.764
Average Annual Population	Thousands	4.563
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	14.813
Cumulative Personal Income	Billions of Fixed (2012) Dollars	13.792
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Millions of Fixed (2012) Dollars	27.060

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, if out-of-state gambling dollars by Florida residents were to instead remain in Florida, this spending will support an annual average of 2,764 jobs⁵⁸² in Florida under normal economic growth assumption. The cumulative GSP is \$14.8 billion and \$13.8 billion in personal income. The average annual tax revenues generated from the indirect and induced impacts of the out-of-state gaming spending between FY 2013 and FY 2060 is \$27.1 million.

Figure 116: Top 12 Florida industries with largest average employment impact from Floridian out-of-state gaming spending, 2012-2060, normal growth

Industry category, with NAICS code	Units	2012-2060
Retail trade (44-45)	Thousands (Jobs)	0.488
Offices of health practitioners (6211-6213)	Thousands (Jobs)	0.390
Food services and drinking places (722)	Thousands (Jobs)	0.165
Construction (23)	Thousands (Jobs)	0.152
Private households (814)	Thousands (Jobs)	0.124

Source: Regional Economic Models Inc., Spectrum Gaming Group

⁵⁸² The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impact. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

Figure 50 shows the private non-farm industries that would have been impacted if Floridian's out-of-state gaming spending were brought back to Florida. Many of these industries, such as Retail Trade, Food Services and Drinking Places, and Private Households, are commonly supported by local spending.

Figure 117: Average annual employment by demand source from Floridian out-of-state gaming spending, 2012-2060, normal growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	2.695
Intermediate Demand (indirect) Employment	Thousands (Jobs)	0.455
Local Consumption Demand (induced) Employment	Thousands (Jobs)	2.261
Government Demand (induced) Employment	Thousands (Jobs)	0.011
Investment Activity Demand (induced) Employment	Thousands (Jobs)	0.238
Exports Demand (induced) Employment	Thousands (Jobs)	-0.271
Exogenous Industry Sales (direct) Employment	Thousands (Jobs)	0.000

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 51 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents direct employment. It can also be interpreted as the direct input we entered into the model. The average annual direct employment impact is 0 jobs because we did not use any employment policy variables to model this consumption reallocation of Floridian's out-of-state gaming spending. The average annual indirect employment (Intermediate Demand Employment) is 455. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact is 2,239. The sum of the average annual direct, indirect, and induced employment is 2,695.

2. Results – Slow Economic Growth (2012-2060)

Figure 118: Economic and fiscal impacts of pari-mutuel sector, 2012-2060, slow growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	7.468
Average Annual Population	Thousands	9.096
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	36.613

Figure 62 shows the private non-farm industries with largest average annual employment impact. Aside from Accommodation, which is the direct impact for this analysis, the rest are the top industries that are reliant on the Native American casinos industry in Florida. Some of these, such as Services to Buildings and Dwellings and Business Support Services, are intermediate input suppliers to the gaming industry. Others, such as Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (Native American casinos) or indirect jobs.

⁵⁸⁶ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impacts. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

Figure 129: Average annual employment by demand source from Native American casinos, 2012-2060, slow growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	7.504
Intermediate Demand Employment	Thousands (Jobs)	4.429
Local Consumption Demand Employment	Thousands (Jobs)	-6.906
Government Demand Employment	Thousands (Jobs)	0.268
Investment Activity Demand Employment	Thousands (Jobs)	-0.090
Exports Employment	Thousands (Jobs)	-1.189
Exogenous Industry Sales Employment	Thousands (Jobs)	10.993

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 63 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The average annual direct Native American casinos employment impact is 10,993 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the gaming sector is 4,429. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the Native American casinos industry is minus-7,918. The Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos. The sum of the average annual direct, indirect, and induced employment is 7,504.

Figure 130: Economic and fiscal impacts of Floridian out-of-state gaming spending, 2012-2060, slow growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	2.889
Average Annual Population	Thousands	4.946
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	15.599
Cumulative Personal Income	Billions of Fixed (2012) Dollars	14.357
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Millions of Fixed (2012) Dollars	28.583

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, if out-of-state gambling dollars by Florida residents were to instead remain in Florida, this spending will support an annual average of 2,889 jobs⁵⁸⁷ in

⁵⁸⁷ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs

SECOND DRAFT - CONFIDENTIAL

Florida under normal economic growth assumption. The cumulative GSP is \$15.6 billion and \$14.4 billion in personal income. The average annual tax revenues generated from the indirect and induced impacts of the out-of-state gaming spending between FY 2013 and FY 2060 is \$28.6 million.

Figure 131: Top 12 Florida industries with largest average employment impact from Floridian out-of-state gaming spending, 2012-2060, slow growth

Industry category, with NAICS code	Units	2012-2060

Figure 74 shows the private non-farm industries with largest average annual employment impact. Aside from Retail Trade, which is the direct impact for retail lottery, the rest are the top industries that are reliant on the retail lottery industry in Florida. Some of these, such as Wholesale Trade and Computer Systems Design Services, are intermediate input suppliers to the gaming industry. Others, such as Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (retail lottery) or indirect jobs.

Figure 141: Average annual employment by demand source from retail lottery, 2012-2060, strong growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	74.847
Intermediate Demand Employment	Thousands (Jobs)	9.418
Local Consumption Demand Employment	Thousands (Jobs)	15.671
Government Demand Employment	Thousands (Jobs)	0.070
Investment Activity Demand Employment	Thousands (Jobs)	16.645
Exports Employment	Thousands (Jobs)	-6.055
Exogenous Industry Sales Employment	Thousands (Jobs)	39.099

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 75 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct retail lottery employment. It can also be interpreted as the direct input we entered into the model. The average annual direct retail lottery employment impact is 39,099 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the retail lottery sector is 9,418. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the retail lottery industry is 26,330. The sum of the average annual direct, indirect, and induced employment is 74,847.

Figure 142: Economic and fiscal impacts of Native American casinos industry, 2012-2060, strong growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	7.199
Average Annual Population	Thousands	8.336
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	104.284
Cumulative Personal Income	Billions of Fixed (2012) Dollars	45.846
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Billions of Fixed (2012) Dollars	0.257

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, the Native American casinos industry is projected to support an annual average of 7,199 jobs⁵⁹¹ in Florida under normal economic growth assumptions. The cumulative GSP is \$104.3 billion and \$45.8 billion in personal income. The average annual tax revenues generated from the direct, indirect, and induced impacts of the Native American casinos industry between FY 2013 and FY 2060 is \$257 million.

Figure 143: Top 12 Florida industries with largest average employment impact from Native American casinos, 2012-2060, strong growth

Industry category, with NAICS code	Units	2012-2060
Accommodation (721)	Thousands (Jobs)	9.855
Services to buildings and dwellings (5617)	Thousands (Jobs)	0.503
Construction (23)	Thousands (Jobs)	0.294
Food services and drinking places (722)	Thousands (Jobs)	0.207
Management, scientific, and technical consulting services (5416)	Thousands (Jobs)	0.183
Advertising and related services (5418)	Thousands (Jobs)	0.129
Independent artists, writers, and performers (7115)	Thousands (Jobs)	0.119

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 77 shows the private non-farm industries with largest average annual employment impact. Aside from Accommodation, which is the direct impact for this analysis, the rest are the top industries that are reliant on the Native American casinos industry in Florida. Some of these, such as Services to Buildings and Dwellings and Business Support Services, are intermediate input suppliers to the gaming industry. Others, such as Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (Native American casinos) or indirect jobs.

⁵⁹¹ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impacts. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

Figure 144: Average annual employment by demand source from Native American casinos, 2012-2060, strong growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	4.875
Intermediate Demand Employment	Thousands (Jobs)	3.542
Local Consumption Demand Employment	Thousands (Jobs)	-7.146
Government Demand Employment	Thousands (Jobs)	0.260
Investment Activity Demand Employment	Thousands (Jobs)	-0.177
Exports Employment	Thousands (Jobs)	-2.596
Exogenous Industry Sales Employment	Thousands (Jobs)	10.993

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 78 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The average annual direct Native American casinos employment impact is 10,993 jobs and the average annual indirect employment (Intermediate Demand Employment) supported by the gaming sector is 3,542. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the Native American casinos industry is minus-9,660. The Local Consumption Demand Employment, which is the main component of induced employment, shows a negative change primarily because for every dollar Floridian spends on Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos. The sum of the average annual direct, indirect, and induced employment is 4,875.

Figure 145: Economic and fiscal impacts of Floridian out-of-state gaming spending, 2012-2060, strong growth

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	2.655
Average Annual Population	Thousands	4.263
Cumulative Gross State Product	Billions of Fixed (2012) Dollars	14.138
Cumulative Personal Income	Billions of Fixed (2012) Dollars	13.334
Average Annual State Tax Revenues (fiscal year 2013 to 2060)	Millions of Fixed (2012) Dollars	24.474

Source: Regional Economic Models Inc., Spectrum Gaming Group

Between 2012 and 2060, if out-of-state gambling dollars by Florida residents were to instead remain in Florida, this spending would support an annual average of 2,655 jobs⁵⁹² in Florida under normal economic growth assumption. The cumulative GSP is \$14.1 billion and

⁵⁹² The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impact. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

\$13.3 billion in personal income. The average annual tax revenues generated from the indirect and induced impacts of the out-of-state gaming spending between FY 2013 and FY 2060 is \$24.5 million.

Figure 146: Top 12 Florida industries with largest average employment impact from Floridian out-of-state gaming spending, 2012-2060, strong growth

Industry category, with NAICS code	Units	2012-2060
Retail trade (44-45)	Thousands (Jobs)	0.467
Offices of health practitioners (6211-6213)	Thousands (Jobs)	0.383
Food services and drinking places (722)	Thousands (Jobs)	0.157

Figure 80 shows the private non-farm industries that would have been impacted if Floridian's out-of-state gaming spending were brought back to Florida. Many of these industries, such as Retail Trade, Food Services and Drinking Places, and Private Households, are commonly supported by local spending.

Figure 147: Average annual employment by demand source from Floridian out-of-state gaming spending, 2012-2060, strong growth

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	2.585
Intermediate Demand Employment	Thousands (Jobs)	0.428
Local Consumption Demand Employment	Thousands (Jobs)	2.185
Government Demand Employment	Thousands (Jobs)	0.011
Investment Activity Demand Employment	Thousands (Jobs)	0.224
Exports Employment	Thousands (Jobs)	-0.262
Exogenous Industry Sales Employment	Thousands (Jobs)	0.000

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 81 is a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents direct employment. It can also be interpreted as the direct input we entered into the model. The average annual direct employment impact is 0 jobs because we did not use any employment policy variables to model this consumption reallocation of Floridian's out-of-state gaming spending. The average annual indirect employment (Intermediate Demand Employment) is 428. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact is 2,157. The sum of the average annual direct, indirect, and induced employment is 2,585.

4. Out-of-State Gambling Spending Contribution

While the previous section evaluates the impacts of total Florida gaming sector as well as the substitution effects of Floridian gambling spending, we carried out another simulation to specifically assess at the contribution of gambling spending from out-of-state (non-Florida residents). For this simulation, we assume 5% of the GGR to the pari-mutuel was from out-of-state, 2% of the GGR to the lottery (excluding retailers) was from out-of-state, and 15% of the GGR to Native American casinos as from out-of-state.

Figure 82: Economic and fiscal impacts from non-resident gambling spending in 2012

Summary	Units	2012
Total Employment	Thousands (Jobs)	4.289
Population	Thousands	1.053
Gross Domestic Product (GDP)	Billions of Fixed (2012) Dollars	0.404
Personal Income	Billions of Fixed (2012) Dollars	0.191
State Tax Revenues (fiscal year 2013)	Millions of Fixed (2012) Dollars	90.063

Source: Regional Economic Models Inc., Spectrum Gaming Group

Figure 82 exhibits the total economic and fiscal impacts generated from non-Florida residents gambling spending in 2012. The total non-resident gambling spending supports a total of 4,289 jobs⁵⁹³ in Florida. The associated gross state product (“GSP”) is \$404 million and it generated \$191 million in personal income. The tax revenue generated from the direct, indirect, and induced impacts of the non-resident gambling spending in FY 2013 is \$90.1 million.

Figure83: Top 12 Florida industries with largest employment impact from non-resident gambling spending in 2012

Industry category, with NAICS code	Units	2012
Accommodation (721)	Thousands (Jobs)	1.212
Amusement, gambling, and recreation industries (713)	Thousands (Jobs)	0.279
Retail trade (44-45)	Thousands (Jobs)	0.243
Construction (23)	Thousands (Jobs)	0.228
Services to buildings and dwellings (5617)	Thousands (Jobs)	0.162
Food services and drinking places (722)	Thousands (Jobs)	0.152
Offices of health practitioners (6211-6213)	Thousands (Jobs)	0.098
Real estate (531)	Thousands (Jobs)	0.087
Wholesale trade (42)	Thousands (Jobs)	0.073
Business support services; Investigation and security services; Other support services (5614, 5616, 5619)	Thousands (Jobs)	0.068
Employment services (5613)	Thousands (Jobs)	0.047
Private households (814)	Thousands (Jobs)	0.046

⁵⁹³ The job numbers in REMI are not cumulative. If the job impact is 5,000 in 2012 and 4,000 in 2013, we cannot conclude that the total job impact in 2012 and 2013 is 9,000 because the 4,000 jobs in 2013 can be the same jobs from 2012. Therefore we compute an annual average when we evaluate long-term job impact. In the above example, the annual average employment in 2012 and 2013 is 4,500 jobs.

SECOND DRAFT - CONFIDENTIAL

Figure 83 shows the private non-farm industries that are dependent on the gaming industry (Accommodation and Amusement, Gambling, Recreation Industries). Some of these, such as Services to Buildings and Dwellings and Business Support Services, are intermediate input suppliers to the gaming industry. Others, such as Retail Trade and Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (gaming) or indirect jobs.

Figure 84: Employment by demand source from non-resident gambling spending in 2012

Breakdown of Direct, Indirect, and Induced Employment	Units	2012
Private Non-Farm Employment	Thousands (Jobs)	3.468
Intermediate Demand Employment	Thousands (Jobs)	1.128
Local Consumption Demand Employment	Thousands (Jobs)	0.704
Government Demand Employment	Thousands (Jobs)	0.093
Investment Activity Demand Employment	Thousands (Jobs)	0.120
Exports Employment	Thousands (Jobs)	-0.070
Exogenous Industry Sales Employment	Thousands (Jobs)	1.492

Source: Regional Economic Models Inc.

Notes: Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 84 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel, lottery, and Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The direct employment impact is 1,492 jobs in 2012, and the indirect employment (Intermediate Demand Employment) supported by non-resident gambling spending is 1,128. The induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the non-resident gambling spending is 847. The sum of the direct, indirect, and induced employment is 3,468.

Figure 85: Economic and fiscal impacts from non-resident gambling spending, 2012-2060

Summary	Units	2012-2060
Average Annual Employment	Thousands (Jobs)	5.288

Figure 86 shows the private non-farm industries that are dependent on the gaming industry (Accommodation and Amusement, Gambling, Recreation Industries). Some of these, such as Services to Buildings and Dwellings and Business Support Services, are intermediate input suppliers to the gaming industry. Others, such as Retail Trade and Food Services and Drinking Places, provide goods and services to consumers whose income is dependent on the direct (gaming) or indirect jobs.

Figure 87: Employment by demand source from non-resident gambling spending, 2012-2060

Breakdown of Direct, Indirect, and Induced Employment	Units	2012-2060 Average
Private Non-Farm Employment	Thousands (Jobs)	4.164
Intermediate Demand Employment	Thousands (Jobs)	1.395
Local Consumption Demand Employment	Thousands (Jobs)	1.196
Government Demand Employment	Thousands (Jobs)	0.126
Investment Activity Demand Employment	Thousands (Jobs)	0.249
Exports Employment	Thousands (Jobs)	-0.695
Exogenous Industry Sales Employment	Thousands (Jobs)	1.893

Source: Regional Economic Models Inc.

Notes: Direct Employment = direct amount of employment entered into the model; Intermediate Demand Employment = employment needed to satisfy demand for material inputs to the production of final goods; Local Consumption Employment = Employment needed to satisfy demand for consumer goods; Government Demand Employment = Employment needed to satisfy demand for goods and services by government expenditures; Investment Activity Demand Employment = Employment needed to satisfy demand for residential and non-residential capital goods; Export Demand Employment = Employment needed to satisfy demand for a region's good services from outside Florida

Figure 87 above provides a breakdown of employment by demand source. The Exogenous Industry Sales Employment represents the direct pari-mutuel, lottery, and Native American casinos employment. It can also be interpreted as the direct input we entered into the model. The average annual direct employment impact is 1,893 job, and the average annual indirect employment (Intermediate Demand Employment) supported by non-resident gambling

spending is 1,395. The average annual induced employment (sum of Local Consumption Demand, Government Demand, Investment Activity Demand, and Exports Demand Employment) impact as a result of the non-resident gambling spending is 876. The sum of the direct, indirect, and induced employment is 4,164.

5. Hialeah Park Construction Impacts, 2011-2013

Similar to the previous section, we modeled the construction of Hialeah Park separately from the gambling industry assessment. Instead of modeling the impact of construction for only 2012, however, we modeled the construction activity in its entirety, starting in 2011 and ending in 2013, under the assumption that the construction duration is 24 months starting in summer of 2011. The total cost of construction for Hialeah Park is \$63,360,000 with an annual employment of 210.

Figure 148: Economic and fiscal impacts of Hialeah Park construction, 2011-2013

Summary	Units	2011-2013
Average Annual Employment	Jobs	248
Average Annual Population	Individuals	107
Cumulative Gross State Product	Millions of Fixed (2012) Dollars	60.730
Cumulative Personal Income	Millions of Fixed (2012) Dollars	38.513
Cumulative State Tax Revenues (fiscal year 2013 to 2014)	Millions of Fixed (2012) Dollars	1.445

Source: Regional Economic Models Inc., Spectrum Gaming Group

The construction activity from 2011 to 2013 generates an annual average of 248 jobs, a total of \$60.7 million in GSP, and \$38.5 million in personal income in Florida. It also induces \$1.45 million in state tax revenue from FY 2013 to FY 2014.

D. Conclusion

This analysis examines the gambling industry and its economic and fiscal contribution to Florida. The first part of the REMI economic impact analysis (“Assessing the Florida’s Existing Economic Base, Now and Future”) illustrates that although the various gambling subsectors (racinos/pari-mutuels, lottery, and Native American casinos) account for only a fraction of employment and wages within its respective aggregate sector, they are highly productive industries and generate a considerable amount of direct economic output to Florida.

In addition, the gaming industry has consistently brought it revenue for the state of Florida historically, below is tax collection information from FY 2000:

Figure 83: FY 2000 to FY 2012 tax revenue by gaming sectors

	Units	FY 00	FY 01	FY 02	FY 03	FY 04	FY 05	FY 06
Indian Gaming	Millions of Current Dollars	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Pari-mutuel Fees, Licenses,	Millions of Current Dollars	57.5	34.7	35.1	32.4	32.1	32.0	33.6

SECOND DRAFT - CONFIDENTIAL

	Units	FY 00	FY 01	FY 02	FY 03	FY 04	FY 05	FY 06
Taxes Total								
Slot Machine Total	Millions of Current Dollars	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Lottery Total	Millions of Current Dollars	1,159.5	1,157.3	1,181.0	1,327.6	1,361.9	1,393.4	1,639.3

The second section (“Discussion of Components of Economic and Fiscal Impacts”) examines the total economic and fiscal impacts of the gambling industry by subsectors in 2012. The results show that there are, or would be:

- Racinos/Pari-mutuels:
 - 4,953 direct racinos/pari-mutuels jobs in 2012.
 - These direct jobs support an additional 1,062 indirect jobs.
 - The induced jobs impact is minus-1,399; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities from racinos/pari-mutuels generated \$194 million in tax revenue for Florida.
- Lottery:
 - 394 direct lottery jobs in 2012.
 - These direct jobs support an additional 8,277 indirect jobs.
 - The induced jobs impact is minus-14,960; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Households have a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery.
 - The total economic activities from the lottery generated \$1.9 billion in tax revenue for Florida.
- Retail Lottery:
 - 39,900 direct retail lottery jobs in 2012.

SECOND DRAFT - CONFIDENTIAL

- These direct jobs support an additional 4,206 indirect jobs and 14,042 induced jobs
- The total economic activities from the retail lottery generated \$124 million in tax revenue for Florida.
- Native American Casinos:
 - 10,387 direct Native American casinos jobs in 2012.
 - These direct jobs support an additional 3,646 indirect jobs.
 - The induced jobs impact is minus-7,506; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos.
 - The total economic activities from the Native American casinos generated \$238 million in tax revenue for Florida.
- Floridian Out-of-State Gaming
 - No direct employment because we did not use an employment variable to model the reallocation of the gaming spending.
 - 693 indirect jobs and 3,143 induced jobs.
 - The total economic activities from the out-of-state gaming spending generated \$15.4 million in tax revenue for Florida.

The third section (“Assessment of Economic, Fiscal Impacts Over Time”) evaluates the total economic and fiscal impacts of the gambling industry by subsectors over between 2012 and 2060 under three different economic growth assumptions. Under normal economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,268 indirect jobs.
 - The average annual induced jobs impact is minus-3,611; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.

SECOND DRAFT - CONFIDENTIAL

- The total economic activities generated an annual average \$561 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 12,510 indirect jobs.
 - The average annual induced jobs impact is minus-4,151; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.
 - The total economic activities generated \$3.7 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,775 indirect jobs and 27,674 induced jobs.
 - The total economic activities generated an annual average \$590 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,952 indirect jobs.
 - The average annual induced jobs impact is minus-8,852; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$280 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:

SECOND DRAFT - CONFIDENTIAL

- No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
- An average annual of 455 indirect jobs and 2,239 induced jobs.
- The total economic activities generated an annual average \$27.1 million in tax revenue for Florida between 2012 and 2060.

Under slower economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,397 indirect jobs.
 - The average annual induced jobs impact is minus-3,030; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$544 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 13,645 indirect jobs and 147 induced jobs.
 - The total economic activities generated an annual average \$3.5 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 10,148 indirect jobs and 29,918 induced jobs.
 - The total economic activities generated an annual average \$581 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.

SECOND DRAFT - CONFIDENTIAL

- The direct jobs support an additional average annual of 4,429 indirect jobs.
- The average annual induced jobs impact is minus-7,918; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
- The total economic activities generated an annual average \$283 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 488 indirect jobs and 2,334 induced jobs.
 - The total economic activities generated \$28.6 billion in tax revenue for Florida between 2012 and 2060.

Under stronger economic growth:

- The results for racinos/pari-mutuels show that there were:
 - An annual average of 5,449 direct racinos/pari-mutuels jobs from 2012-2060.
 - The direct jobs support an additional average annual of 1,159 indirect jobs.
 - The average annual induced jobs impact is minus-4,119; There is a negative change in induced jobs primarily because for every dollar Floridian spends on pari-mutuel, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the pari-mutuel sector.
 - The total economic activities generated an annual average \$534 million in tax revenue for Florida between 2012 and 2060.
- The results for the lottery show that there were:
 - An annual average of 445 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 11,525 indirect jobs.

SECOND DRAFT - CONFIDENTIAL

- The average annual induced jobs impact is minus-7,778; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the lottery, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the lottery sector.
- The total economic activities generated an annual average \$3.6 billion in tax revenue for Florida between 2012 and 2060.
- The results for retail lottery show that there were:
 - An annual average of 39,099 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 9,418 indirect jobs and 26,330 induced jobs.
 - The total economic activities generated an annual average \$551 million in tax revenue for Florida between 2012 and 2060.
- The results for the Native American casinos show that there were:
 - An annual average of 10,993 direct lottery jobs from 2012-2060.
 - The direct jobs support an additional average annual of 3,542 indirect jobs.
 - The average annual induced jobs impact is minus-9,660; There is a negative change in induced jobs primarily because for every dollar Floridian spends on the Native American casinos, it means a dollar less they can spend elsewhere. Household has a fixed amount of disposable income and this negative number represents the jobs their spending could have supported if it were not for the Native American casinos sector.
 - The total economic activities generated an annual average \$257 million in tax revenue for Florida between 2012 and 2060.
- The results for Floridian out-of-state gaming spending show that there were:
 - No direct employment from 2012-2060 because we did not use an employment variable to model the reallocation of the gaming spending.
 - An average annual of 428 indirect jobs and 2,157 induced jobs.
 - The total economic activities generated \$24.5 million in tax revenue for Florida between 2012 and 2060.
 -

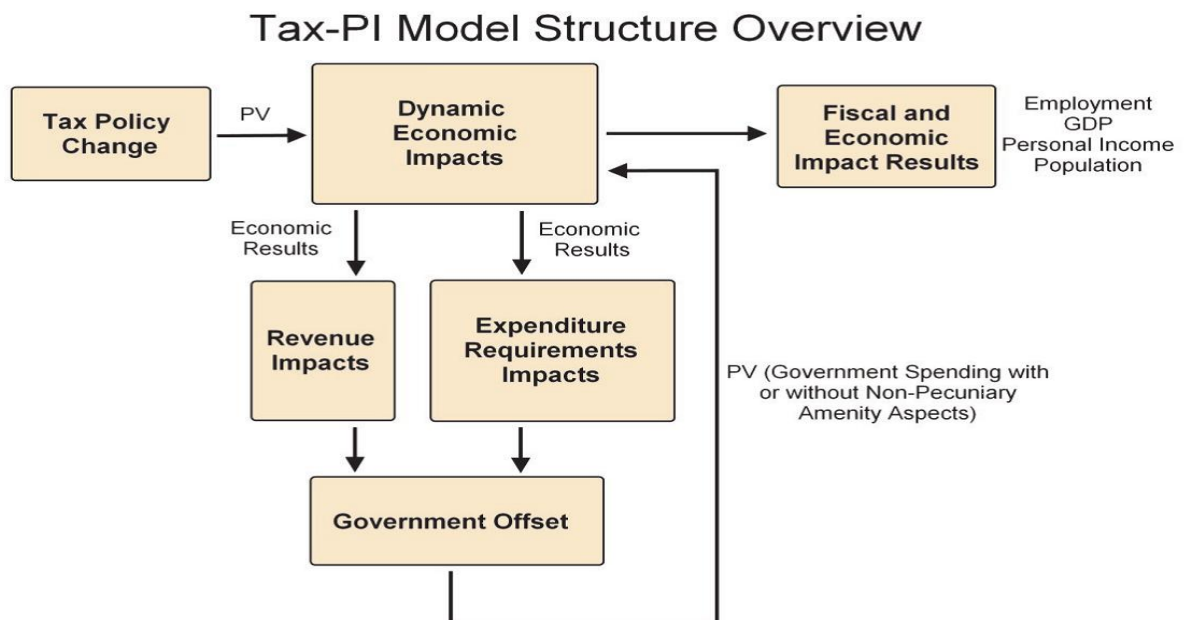

E. Appendix

Tax-PI is a new tool for evaluating the total fiscal and economic effects of tax policy changes. Tax-PI is based on over 30 years of experience in modeling the economic effects of tax policy changes. As states begin to demand better methods for estimating the economic and fiscal impacts of alternative tax scenarios, they look to experts to respond with sophisticated, flexible and relevant tools that can meet their needs.

Tax-PI is a dynamic fiscal and economic impact model that captures the direct, indirect and induced fiscal and economic effects of taxation and other policy changes over multiple years (up to 2060). It can model the complete dynamic economic and demographic impacts of any manner of tax policy change. States need to thoroughly evaluate both the short- and long-term effects of any tax changes in order to best serve the needs of the people. Tax-PI allows state agencies to do this with a model backed by years of dependability and experience. Highlights include

- Budget Editor: Customizable table that users calibrate to reflect actual or projected revenue and expenditure details for the current, past or future fiscal years.
- Taxes: Dynamic capability to adjust state-specific tax revenues. Users assign tax-specific variables to each of the custom revenue categories in order to track the fiscal effects of policy changes along with the economic effects. There is also a built-in feedback mechanism that automatically feeds revenue impacts back into the model to account for price and disposable income changes, therefore adjusting government spending accordingly.

Figure 149: Tax-PI Structure

SECOND DRAFT - CONFIDENTIAL

As Figure 1 shows, the methodology of Tax-PI revolves around the estimation of dynamic economic impacts. These impacts serve as the basis for the estimation of budgetary changes through the calibration done by REMI's economists and clients. For this analysis, REMI used a budget calibrated by Tax-PI users at the Office of Economic and Demographic Research. Prior to running simulations, the newest available year of revenue data is used to calibrate the budget. Each category is individually entered into Tax-PI. Then each revenue source is assigned an economic driver from the dynamic impact model that will form the basis of future estimates of the amount of revenue gained from that particular source. For example, the amount of sales tax revenue collected is connected to the amount of consumption in taxable categories in the state in that year as given by Tax-PI's baseline economic and demographic forecast. Using these two pieces of information (collections and driver), Tax-PI creates a quantified relationship between the two that can then predict changes in the future. A similar process is carried out for each revenue source. In Florida, the expenditures are mapped to specific revenue categories so the amount of government spending is tied to the availability of applicable revenues.

1. Detailed Model Methodology

Tax-PI is a structural economic forecasting and policy analysis model. It integrates input-output, computable general equilibrium, econometric and economic geography methodologies. The model is dynamic, with forecasts and simulations generated on an annual basis and behavioral responses to compensation, price, and other economic factors.

The model consists of thousands of simultaneous equations with a structure that is relatively straightforward. The exact number of equations used varies depending on the extent of industry, demographic, demand, and other detail in the specific model being used. The overall structure of the model can be summarized in five major blocks: (1) Output and Demand, (2) Labor and Capital Demand, (3) Population and Labor Supply, (4) Compensation, Prices, and Costs, and (5) Market Shares. The blocks and their key interactions are shown in Figures 2 and 3.

Figure 150: Model Linkages

REMI Model Linkages (Excluding Economic Geography Linkages)

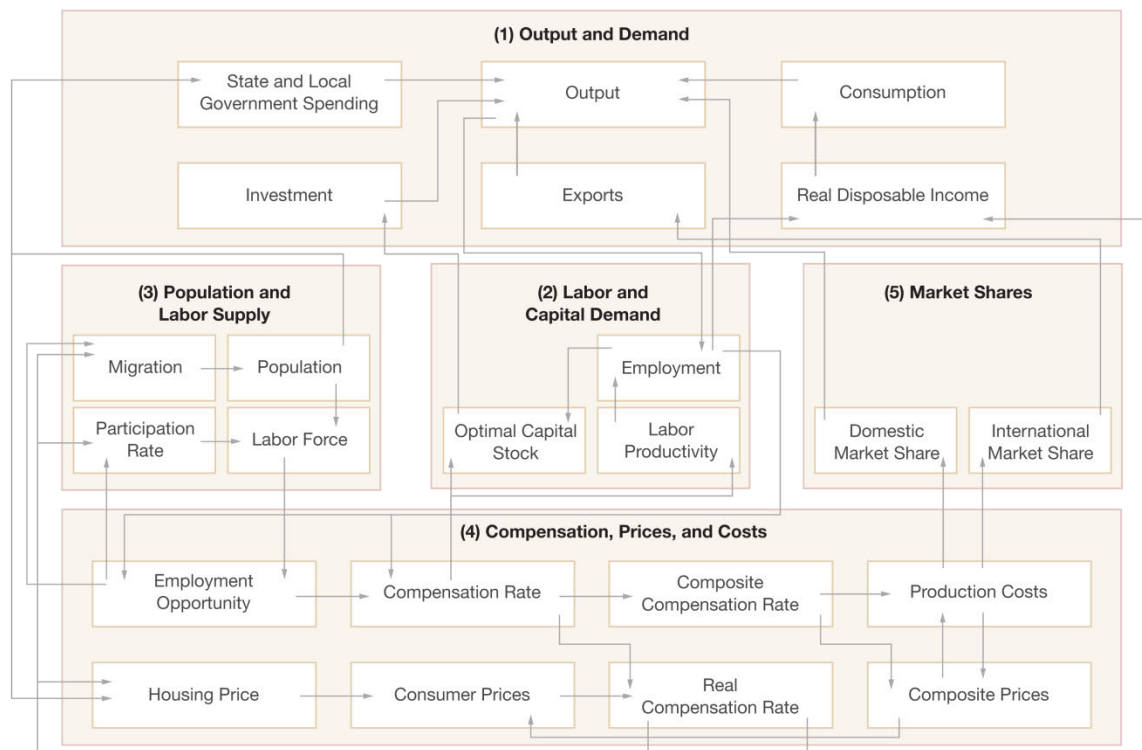

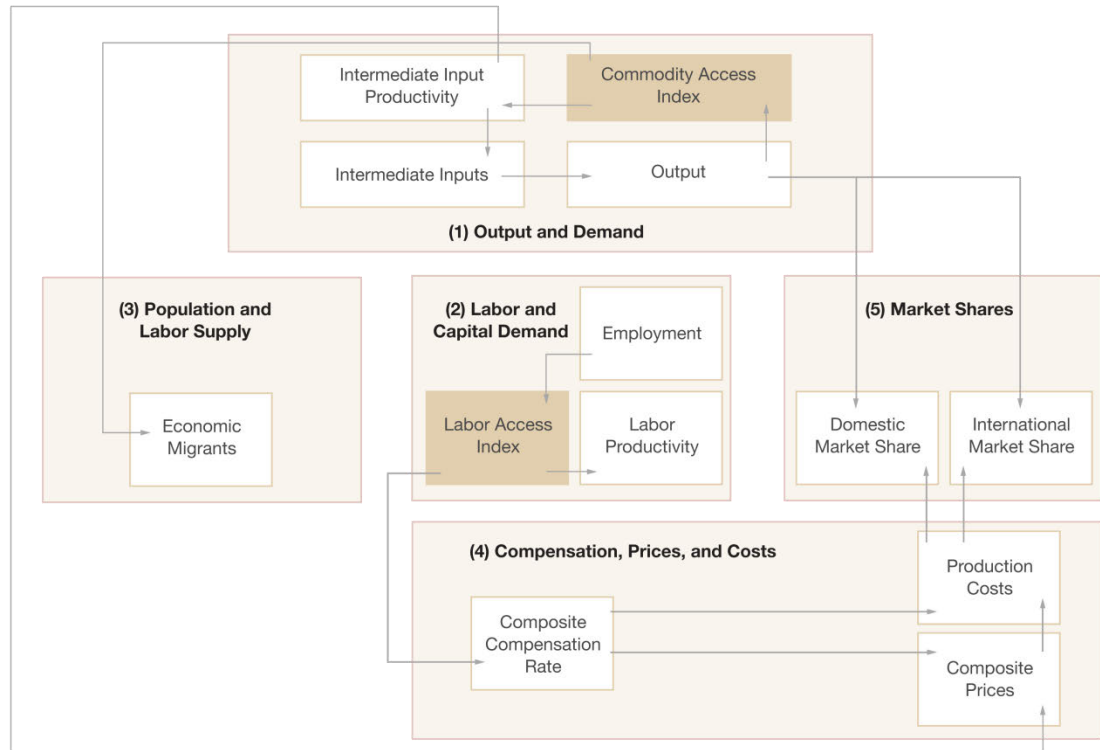

Figure 151: Economic Geography Linkages

Economic Geography Linkages

The Output and Demand block consists of output, demand, consumption, investment, government spending, exports, and imports, as well as feedback from output change due to the change in the productivity of intermediate inputs. The Labor and Capital Demand block includes labor intensity and productivity as well as demand for labor and capital. Labor force participation rate and migration equations are in the Population and Labor Supply block. The Compensation, Prices, and Costs block includes composite prices, determinants of production costs, the consumption price deflator, housing prices, and the compensation equations. The proportion of local, inter-regional, and export markets captured by each region is included in the Market Shares block.

Single-region models consist of an individual region, called the home region. The rest of the nation is also represented in the model. However, since the home region is only a small part of the total nation, the changes in the region do not have an endogenous effect on the variables in the rest of the nation.

A. Block 1. Output and Demand

This block includes output, demand, consumption, investment, government spending, import, commodity access, and export concepts. Output for each industry in the home region is determined by industry demand in all regions in the nation, the home region's share of each market, and international exports from the region.

For each industry, demand is determined by the amount of output, consumption, investment, and capital demand on that industry. Consumption depends on real disposable income per capita, relative prices, differential income elasticities, and population. Input productivity depends on access to inputs because a larger choice set of inputs means it is more likely that the input with the specific characteristics required for the job will be found. In the capital stock adjustment process, investment occurs to fill the difference between optimal and actual capital stock for residential, non-residential, and equipment investment. Government spending changes are determined by changes in the population.

B. Block 2. Labor and Capital Demand

The Labor and Capital Demand block includes the determination of labor productivity, labor intensity, and the optimal capital stocks. Industry-specific labor productivity depends on the availability of workers with differentiated skills for the occupations used in each industry. The occupational labor supply and commuting costs determine firms' access to a specialized labor force.

Labor intensity is determined by the cost of labor relative to the other factor inputs, capital and fuel. Demand for capital is driven by the optimal capital stock equation for both non-residential capital and equipment. Optimal capital stock for each industry depends on the relative cost of labor and capital, and the employment weighted by capital use for each industry. Employment in private industries is determined by the value added and employment per unit of value added in each industry.

C. Block 3. Population and Labor Supply

The Population and Labor Supply block includes detailed demographic information about the region. Population data is given for age, gender, and race, with birth and survival rates for each group. The size and labor force participation rate of each group determines the labor supply. These participation rates respond to changes in employment relative to the potential labor force and to changes in the real after-tax compensation rate. Migration includes retirement, military, international, and economic migration. Economic migration is determined by the relative real after-tax compensation rate, relative employment opportunity, and consumer access to variety.

D. Block 4. Compensation, Prices and Costs

This block includes delivered prices, production costs, equipment cost, the consumption deflator, consumer prices, the price of housing, and the compensation equation. Economic geography concepts account for the productivity and price effects of access to specialized labor, goods, and services.

These prices measure the price of the industry output, taking into account the access to production locations. This access is important due to the specialization of production that takes place within each industry, and because transportation and transaction costs of distance are significant. Composite prices for each industry are then calculated based on the production costs of supplying regions, the effective distance to these regions, and the index of access to the variety of outputs in the industry relative to the access by other uses of the product.

The cost of production for each industry is determined by the cost of labor, capital, fuel, and intermediate inputs. Labor costs reflect a productivity adjustment to account for access to specialized labor, as well as underlying compensation rates. Capital costs include costs of non-residential structures and equipment, while fuel costs incorporate electricity, natural gas, and residual fuels.

The consumption deflator converts industry prices to prices for consumption commodities. For potential migrants, the consumer price is additionally calculated to include housing prices. Housing prices change from their initial level depending on changes in income and population density.

Compensation changes are due to changes in labor demand and supply conditions and changes in the national compensation rate. Changes in employment opportunities relative to the labor force and occupational demand change determine compensation rates by industry.

E. Block 5. Market Shares

The market shares equations measure the proportion of local and export markets that are captured by each industry. These depend on relative production costs, the estimated price elasticity of demand, and the effective distance between the home region and each of the other regions. The change in share of a specific area in any region depends on changes in its delivered price and the quantity it produces compared with the same factors for competitors in that market. The share of local and external markets then drives the exports from and imports to the home economy.

About This Report

This report was prepared by Spectrum Gaming Group, an independent research and professional services firm founded in 1993 that serves private- and public-sector clients worldwide. Our professionals have backgrounds regulation, economic and financial analysis, law enforcement, gaming operations, market research and journalism.

Spectrum neither supports nor opposes legalized gambling or the expansion of it. Neither the company nor its employees hold a beneficial interest in any casino operating companies or gaming equipment manufacturers or suppliers. We employ only senior-level executives and associates who have earned reputations for honesty, integrity and the highest standards of professional conduct. Our work is never influenced by the interests of past or potentially future clients.

Each Spectrum project is customized to our client's specific requirements and developed from the ground up. Our findings and conclusions are based solely on our research, analysis and experience. Our mandate is not to tell clients what they want to hear; we tell them what they need to know. We will not accept, and have never accepted, engagements that seek a preferred result.

Spectrum's public-sector clients have included agencies or branches for 14 US state or territory governments and several international government agencies. Our private-sector clients have included most major casino companies, as well as investment firms, developers, law firms and architects. Our past clients in Florida, which have been disclosed to the Legislature in connection with this engagement, include Genting, Hialeah Park, the Seminole Tribe of Florida, and Sunrise Sports & Entertainment.

Spectrum executives have testified before the following government bodies:

- Georgia Joint Committee on Economic Development and Tourism
- Illinois Gaming Board
- Indiana Horse Racing Commission
- Indiana Gaming Study Commission
- International Tribunal, The Hague
- Massachusetts Gaming Commission
- Massachusetts Joint Committee on Bonding, Capital Expenditures, and State Assets
- New Hampshire Gaming Study Commission
- National Gambling Impact Study Commission
- New Jersey Assembly Tourism and Gaming Committee
- New Jersey Senate Legislative Oversight Committee
- New Jersey Senate Wagering, Tourism & Historic Preservation Committee
- Ohio Casino Control Commission

SECOND DRAFT - CONFIDENTIAL

- Ohio House Economic Development Committee
- Ohio Senate Oversight Committee
- Pennsylvania Gaming Control Board
- US House Congressional Gaming Caucus
- US Senate Indian Affairs Committee
- US Senate Select Committee on Indian Gaming
- US Senate Subcommittee on Organized Crime

Disclaimer

Spectrum has made every reasonable effort to ensure that the data and information in this study reflect the most accurate and timely information possible. The data are believed to be generally reliable. This study is based on estimates, assumptions, and other information developed by Spectrum from its independent research efforts, general knowledge of the gaming industry, and secondary research. Spectrum shall not be responsible for any inaccuracies in reporting by the Client or its agents and representatives, or any other data source used in preparing or presenting this study. The data presented in this study were collected through the cover date of this report. Spectrum has not undertaken any effort to update this information since this time.

Some significant factors that are unquantifiable and unpredictable – including, but not limited to, economic, governmental, managerial and regulatory changes; and acts of nature – are qualitative by nature, and cannot be readily used in any quantitative projections.

No warranty or representation is made by Spectrum that any of the projected values or results contained in this study will actually be achieved. We shall not be responsible for any deviations in the project's actual performance from any predictions, estimates, or conclusions contained in this study.

This study is qualified in its entirety by, and should be considered in light of, these limitations, conditions and considerations.

Appendix: Research Interviews

Spectrum Gaming Group staff and associates have interviewed the following through June 28, 2013, as part of our research for the Florida Gaming Study. The interviews were conducted in person, by telephone and/or by email. The purpose of some of the interviews may have been primarily for Part 1-B or Part II, which are being submitted to the State on or before October 1, 2013.

SANTA ROSA C.I.

PREA-Prison Rape
Elimination Act

Confinement

Inmate JONATHAN JOHNSON M62772 was causing a disturbance by beating and kicking his cell door and yelling obscenities down the wing. The inmate was ordered to cease his disruptive behavior or chemical agents would be applied. The inmate refused to comply. Duty Warden Foskey authorized the use of chemical agents. A review of the DC4-650B indicated no restrictions. At 2253 hours, Johnson administered three, one-second bursts of OC. The inmate calmed down and all force ceased. During incident, Inmate stated that Hollis, Bloom, and COREY SETTLEMIRE made a statement that "they were going to rape his black ass". The inmate was showered, examined by medical, continued property restrictions and returned to a SHOS cell. Duty Warden Foskey has been notified of the conclusion and this incident was videotaped in compliance with rule.

Action: Noted.

EAC-2013-08-12979	Sgt JAMES BLACK was conducting routine security checks in P-Dorm when he observed Inmate ANTONIO ADAMS U08976 with an unknown object tied around his arm stating it was going to be a blood shed. The inmate was ordered to cease his behavior, to no avail and refused to be restrained for a search of his cell. Duty Warden Landrum authorized the cell extraction team to use force if necessary to bring the inmate into compliance with orders. The cell extraction team assembled and breached the cell at approximately 1454 hours. Sgt BRYON DICKERSON (shield man) used the shield and redirected the inmate to the ground. The team placed the inmate in the hand and leg restraints and all force ceased. The inmate was examined by medical staff, and returned to a cleaned/SHOS cell. Duty Warden Landrum has been notified and this incident was videotaped in compliance with rule.

President-Elect

June 3, 2013

The Honorable Rick Scott
Governor, State of Florida
PL - The Capitol
Tallahassee, Florida 32399-0001

Re: Florida Bar Nominees for First DCA Judicial Nominating Commission

Dear Governor Scott:

Pursuant to the letter from your General Counsel on April 16, 2013, below are two lists as requested of three different candidates for two vacancies on the First District Court of Appeal Judicial Nominating Commission. The Florida Bar solicited and strongly encouraged all attorneys to apply for these vacancies. Below please find our list of nominees as approved by our Board of Governors at its meeting on May 31, 2013.

1st DCA (2014 – Bookman seat)

Timothy M. Cerio, Tallahassee
David B. Pleat, Sandestin
JoLen R. Wolf, Tallahassee

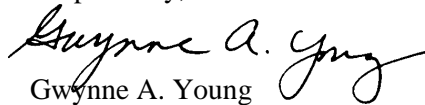

1st DCA (2016 – Glazer seat)

Paul A. Donnelly, Gainesville
James E. Messer, Jr., Tallahassee
Gigi Rollini, Tallahassee

Each nominee has agreed to serve, if selected, and each has expressed an interest in the extremely important work of Florida's Judicial Nominating Commissions. For your information in reviewing these nominees, we are sending a completed application form for each nominee to your General Counsel's Office.

If I can be of any further assistance, please do not hesitate to contact me or our Executive Director Jack Harkness.

Respectfully,

Gwynne A. Young

cc: Mr. Peter Antonacci, Governor's General Counsel (w/encs.)
Mr. Eugene K. Pettis, President-elect
Mr. Gregory Coleman, President-elect Designate
Mr. John F. Harkness, Jr., Executive Director
The Florida Bar Board of Governors
Ms. Vicki Brand

36. Do you know of any reason why you will not be able to attend fully to the duties of the office or position to which you have been or will be appointed? Yes ☐ No ☒ If Yes, explain:

37. State your experiences and interests or elements of your personal history that qualify you for this appointment.

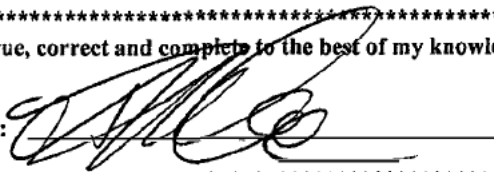

I care very much about the quality of our judiciary, and our profession. Both will erode, as will our freedoms, if we do not elevate to the bench women and men dedicated to the proposition that judging should be impartial, grounded in law and fact, and independent from the pressures of politics or shifting public opinion. My legal practice brings me in contact with not only our bench, but also legislators and our executive branch. Accordingly, I truly appreciate the delicate balance required to preserve separation of powers in government, whether it be state or federal. I also have an appreciation for public servants—in all three branches of government—who are likeminded about preserving this balance. Importantly, a good judge was first a good lawyer, and a good lawyer is developed through a sound legal education and, in my opinion, sound mentoring. The more time we can spend cultivating young lawyers the better our bar—and our bench—will become. Sadly, the reverse is also true. Therefore, when choosing to become involved in activities outside the office, I have gravitated toward opportunities related to legal education and the mentoring of law students. As a member, and later chair, of the Student Education and Admissions to the Bar Committee, I and my colleagues tackled some politically thorny issues related to accreditation and the promotion of the best educational opportunities for students studying law in the State of Florida. I have also tried to give back by mentoring law students in my capacity as a Trustee of the UF Law College Alumni Board and as President of the UF Law Alumni Council.

Under penalty of perjury, I declare the foregoing facts are true, correct and complete to the best of my knowledge and belief.

Timothy M. Cerio

35. Name any business, professional, occupational, civic, or fraternal organization(s) of which you are now a member, or of which you have been a member during the past five (5) years, the organization address(es), and date(s) of your membership(s).

EXPERIENCE

Tim focuses his practice on health care and health care regulation; government affairs; administrative law, including representation of clients in regulatory, administrative, and quasi-judicial proceedings; and complex litigation in state and federal courts.

Tim previously served as General Counsel of the Florida Department of Health. With over 16,000 employees and a 2.8 billion-dollar budget, the Florida Department of Health is responsible for regulating all licensed health care practitioners, and delivering public health services, throughout the State of Florida. As General Counsel, Tim provided advice and counsel to the Secretary and other Department leaders on legal issues impacting the operation and administration of the Department of Health, and managed and supervised the activities of a state-wide team of over 75 lawyers under the Office of the General Counsel. Tim was later named Chief of Staff of the Department. As Chief of Staff, Tim functioned as the chief operations officer for the Department of Health and served as the Secretary's primary strategic liaison with the Executive Office of the Governor and other governmental and community partners.

BACKGROUND

Tim was raised in Bradenton, Florida, and received his B.A. degree in Political Science from the University of Florida in 1990. During his tenure at the University, Tim was appointed by Governor Lawton Chiles to serve as the Student Member of the Florida Board of Regents. As a Regent, Tim created and chaired the State University System Minority Student Retention Task Force. Additionally, Tim received the Outstanding Male Leader award for his graduating class, was a member of the Florida Blue Key leadership honorary, and was elected to the University of Florida Hall of Fame. Tim earned his J.D. degree, with honors, from the University of Florida College of Law in 1995. During law school, Tim was a member of the Florida Law Review Editorial Board. Tim also served as a law clerk to the Honorable Thomas G. Wilson, United States Magistrate Judge for the Middle District of Florida.

PROFESSIONAL

Admitted to practice in all Florida state courts, as well as the United States District Courts for the Northern and Middle Districts of Florida, the United States Court of Federal Claims, and the Eleventh and Federal Circuit Courts of Appeals.

33. Have you been a registered lobbyist or have you lobbied at any level of government at any time during the past five (5) years? Yes ☐ No ☒

A. Did you receive any compensation other than reimbursement for expenses? Yes ☐ No ☐

B. Name the agency or entity you lobbied for and the principal(s) represented:

<u>AGENCY LOBBIED</u>	<u>PRINCIPAL REPRESENTED</u>
-----------------------	------------------------------

34. List three persons who have known you well within the past five (5) years. Include a current, complete address and telephone number. Exclude your relatives and members of the Florida Senate.

<u>NAME</u>	<u>MAILING ADDRESS</u>	<u>ZIP CODE</u>	<u>AREA CODE / PHONE NUMBER</u>
Elaine N. Duggar	1391 Timberlaine Road, Tallahassee, FL	32312	850 386-6124
Edwin B. Browning, Jr.	P.O. Box 652, Madison, FL	323410652	850 973-4186
Jeanne B. Curtin	3002 Golden Eagle Dr. E., Tallahassee, FL	32312	850 893-0354

35. Name any business, professional, occupational, civic, or fraternal organization(s) of which you are now a member, or of which you have been a member during the past five (5) years, the organization address(es), and date(s) of your membership(s).

<u>NAME</u>	<u>ADDRESS</u>	<u>OFFICE(S) HELD & TERM</u>	<u>DATE(S) OF MEMBERSHIP</u>
Stafford Inn of Court	Tallahassee, FL		2011- 2013
First District Inn of Court	Tallahassee FL		2011- present

36. Do you know of any reason why you will not be able to attend fully to the duties of the office or position to which you have been or will be appointed? Yes ☐ No ☒ If Yes, explain:

37. State your experiences and interests or elements of your personal history that qualify you for this appointment.

As an Assistant State Attorney, I obtained trial experience and had the good fortune to practice before excellent trial judges, who displayed knowledge, willingness to listen, and even temperments. As a Research Assitant to the Honorable George W. Hersey on the Fourth District Court of Appeal, I learned the appellate process, how trial work and trial rulings shape the questions before an appellate court, and the "job" of an intermediate appellate court. Judge Hersey also taught me to analyze cases from each side's point of view and to maintin impartiality when making a recommendation to the panel of judges assigned to a case.

When I moved back to Tallahassee from West Palm Beach, I worked as a Cabinet aide for then Attorney General, Jim Smith. In that position, I worked on various issues that came before the Governor and Cabinet, making recommendations to the Attorney General. The position gave me a new and different way to see how the law is shaped and to understand the political process.

When I entered private practice, I worked in the family law area with Elaine Duggar. My work included trial support work for Mrs. Duggar, appellate work on family law cases, and work in estate planning and probate. Each of these areas gave me insight into the judicial process at various levels.

After my daughter experienced medical difficulties, I phased out my practice of law to focus on her needs. After about two years, I was able to return to work - this time as a Legal Writing Professor at FSU College of Law. In that position, I also taught courses in Florida disssolution of marriage and in family law, a course that included the many aspects of family law that are not related to dissolution of a marriage. This position gave me the opportunity to interact with students who were the future of the legal profession and judicial procees. For the Florida dissolution of marriage course, I created a "book "that I updated every year. In my classes, I emphasized ethical and civil behavior, as well as the legal aspects of the courses. And I learned new points regarding the law, both from the materials and from my students.

I am now practicing appellate law with a focus on family law appeals and post-judgment trial work. Again, I have learned new legal concepts and seen how the judiciary affects ordinary lives.

These varied experiences in the legal profession qualify me for this appointment, but elements of my personal history also show why I have a unique perspective and bond with assuring quality and impartiality in the judiciary. My father, John S. Rawls, was the fourth judge appointed to the First District Court of Appeal. Before that, he was a state senator from Jackson County, Florida and a private practioner in Marianna, Florida. From a very early age, I learned about politics, the law, the judicial process, and what makes a good judge. Although I did not carry on my father's tradition in the judiciary, my husband , Jim Wolf, did. He is presently the longest serving judge on the First District Court of Appeal.

Under penalty of perjury, I declare the foregoing facts are true, correct and complete to the best of my knowledge and belief.

American Inns of Court 1229 King Street, 2 nd Floor Alexandria, VA 22314			approximately 25 years
The Florida Bar, Labor and Employment Law Section 651 E. Jefferson Street Tallahassee, FL 32399			approximately 20 years
The Florida Bar, Real Property Law Section 651 E. Jefferson Street Tallahassee, FL 32399			approximately 5 years

36. Do you know of any reason why you will not be able to attend fully to the duties of the office or position to which you have been or will be appointed? Yes ☐ No ☒ If Yes, explain:

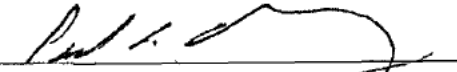

37. State your experiences and interests or elements of your personal history that qualify you for this appointment.

During my service on the 8th Judicial Circuit Judicial Nominating Commission, including the last two years when I served as Chairperson, we have had numerous circuit and county court vacancies, and for each vacancy we identified a slate of high-qualified candidates for gubernatorial appointment. I am further uniquely qualified for this appointment by my professional success, my broad experience with attorneys and judges in my circuit and throughout the State of Florida, and my continuing service to the legal profession through teaching law students at the University of Florida Frederic G. Levin College of Law, lecturing on behalf of The Florida Bar Labor and Employment Law Section and Local Government Law Section and Department of Management Services, Division of Retirement, and actively supporting local efforts to improve the skills, professionalism and ethics of the bench and bar.

I have resided in the 8th Judicial Circuit for more than thirty years, graduated from University of Florida Frederic G. Levin College of Law, and founded Donnelly & Gross, P.A., labor and employment lawyers. From our offices in Gainesville and Fort Myers, Donnelly & Gross, P.A., counsels and defends businesses and professionals in employment law matters and represents fire-rescue and law enforcement associations statewide from the Keys through the Panhandle. In addition to teaching and lecturing, I am a Master of the Bench of the James C. Adkins, Jr., American Inn of Court, past board member of the 8th Judicial Circuit Bar Association, charter member of Federal Bar Association Gainesville Chapter, and past member of our circuit's professionalism committee which drafted our circuit's original professionalism guidelines. Through peer ratings, I am AV-rated in Martindale Hubbell and have been selected for inclusion in The Best Lawyers of America, Bar Register of Preeminent Lawyers, and Florida Super Lawyers.

Under penalty of perjury, I declare the foregoing facts are true, correct and complete to the best of my knowledge and belief.

Gigi Rollini practices in Holland & Knight's Litigation Group in Tallahassee, Fla. Ms. Rollini's practice focuses on Florida appellate law (particularly appeals to Florida's District Courts of Appeal), general civil and administrative litigation and litigation support, and all aspects of administrative law, including licensing matters, health law, energy law and utility regulation. Ms. Rollini also serves as the Women's Initiative Coordinator for Holland & Knight's Tallahassee office.

Since entering private practice, Ms. Rollini has been recognized by Florida Super Lawyers magazine in both appellate and administrative law, and currently serves on The Florida Bar's Appellate Court Rules Committee and its civil appeals, administrative appeals and appellate e-filing subcommittees. She was named one of Florida's 2013 Top 40 Litigators Under 40 by the American Society of Legal Advocates, a 2012 Leader in the Law by the Florida Association for Women Lawyers and the 2010 Most Productive Young Lawyer in Florida by The Florida Bar's Young Lawyers Division. In addition to serving as president of the Tallahassee Women Lawyers, she also served as president of the Florida Association for Women Lawyers – only the fifth Tallahassee woman to serve as president of this statewide voluntary bar association since its inception in 1951. Ms. Rollini currently serves as Florida's Delegate to the National Association of Women Lawyers.

Prior to entering private practice, Ms. Rollini worked as senior law clerk to The Honorable Chief Judge Robert T. Benton II at Florida's First District Court of Appeal. While in law school, Ms. Rollini received a Florida Bar Foundation Public Service Fellowship enabling her to work in the Office of the State Attorney (2nd Judicial Circuit), where she focused on felony division cases involving children and women victims. Ms. Rollini also worked as a judicial intern for The Honorable Robert L. Hinkle at the U.S. District Court for the Northern District of Florida. Prior to law school, Ms. Rollini served as a legislative aide in the Florida House of Representatives.

Under penalty of perjury, I declare the foregoing facts are true, correct and complete to the best of my knowledge and belief.

No. 142, Original

**In The
Supreme Court of the United States**

STATE OF FLORIDA,

Plaintiff,

v.

STATE OF GEORGIA,

Defendant.

Before the Special Master

Hon. Ralph I. Lancaster

**STATE OF FLORIDA’S SECOND SUPPLEMENTAL RESPONSES TO STATE OF
GEORGIA’S FIRST SET OF INTERROGATORIES**

Pursuant to Rules 26(e) and 33 of the Federal Rules of Civil Procedure, the State of Florida hereby supplements its objections and responses to the State of Georgia’s First Set of Interrogatories (the “Requests”). The State of Florida reserves the right to further supplement these responses in accordance with Fed. R. Civ. P. 26(e), and provides these supplemental responses subject to and without waiver of the General Objections stated in its initial Objections and Responses to the Requests.

INTERROGATORY NO. 7:

Identify and describe in detail each and every injury that Florida alleges is caused, at least in part, by Georgia’s allegedly inequitable water use in the ACF Basin, including for each injury the nature, magnitude, and alleged economic harm of that injury.

SUPPLEMENTAL RESPONSE:

Subject to and without waiving the General and Specific Objections served on February 26, 2015, Florida responds as follows:

In the broad sense, Florida has alleged harm to the Apalachicola Region’s ecosystem and economy due to Georgia’s increased consumption of water. Compl. ¶ 5.

Florida has alleged (and continues to allege) harm in the following more specific ways:

- Environmental/Ecological harm: Florida has alleged that the Apalachicola Bay and River's ecosystems and species have been, and will continue to be, harmed by Georgia's depletions, including overall biodiversity in the Region. Compl. ¶ 25-26. Specifically, Florida is alleging the following injuries:
 - Apalachicola Bay: Florida is alleging specific harm to the Bay's productive estuarine ecosystem. Compl. ¶¶ 27, 57; Br. in Supp. of Compl. 20. Fish and shellfish in this ecosystem that are harmed by reduced inflow include oysters, shrimp, blue crab, and finfish. Compl. ¶¶ 31-32. The reduction in abundance of these species also reduces their ecosystem services which include water filtration and flood attenuation. Compl. ¶ 34. Oysters are the most striking example of the harm Georgia has already inflicted upon Florida, but are just one such example. Compl. ¶¶ 54-56, Montagna Decl. ¶¶ 4-6. More broadly, the increases in salinity levels and reduction in nutrient levels in the Bay as a result of low flows will alter the historical community structure and species within the Bay, changing its character and resulting in permanent injury to Florida. Compl. ¶¶ 31, 55-56, Montagna Decl. ¶¶ 4-7.
 - Apalachicola River: Florida is alleging harm to a variety of species and their habitat present in the River, including protected mussels and the Gulf sturgeon. Compl. ¶ 29, 52-53. The reduction in flow affects the available habitat for these species, as well as for non-threatened and endangered species of freshwater fish. Compl. ¶ 58. Reductions in flow also reduce the extent of flooding, which affects floodplain trees such as the Ogeechee tupelo tree. Compl. ¶¶ 25-26, 58. Specific examples of harm that has already occurred, and will continue to occur unless Georgia curbs its consumption, are stranding of mussels, dying of floodplain trees, and reductions in the spawning and rearing habitat of freshwater fish. Allan Decl. ¶¶ 10-12. The River basin is also home to the largest diversity of reptiles and amphibians in the U.S., and such species (including the species for which Florida has received grants) may also have been harmed by Georgia's consumption. Allan Decl. ¶ 8.
- Economic and social harm: Florida is also alleging that the Apalachicola Region's population, which relies heavily on the health of the ecosystem, has been and continues to be harmed though such injury stands separate and apart from the ecological injuries asserted above. Compl. ¶¶ 5, 30, 42.
 - Seafood industry: Reductions in flow have reduced the abundance of valuable estuarine species including oysters, shrimp, blue crab, and finfish. Compl. ¶¶ 31-32, 54-56, Br. in Supp. of Compl. 6, 21.
 - Recreation: Reductions in flow affect species that are used in recreational fishing and attract tourists. Br. in Supp. of Compl. 6, 9, 21.

- Documentation: Proof of injury to Florida can be found in many publicly available documents and datasets, including but not limited to the following:

DESCRIPTION	AVAILABLE AT
Apalachicola National Estuarine Research Reserve – Oyster Growth Data	FL-ACF-00000030 through FL-ACF-00002573

Robert Livingston – Historical Trawling and Other Data	FL-ACF-01812218
Academic literature and government reports, listed in Appendix A	Publicly available (or previously produced)

As Georgia notes, Florida only has to articulate a “basis for each injury it claims” to allow Georgia to understand Florida’s alleged harm and requested relief, and Florida asserts this description of its harm sufficiently puts Georgia on notice of the various distinct ways in which Florida has been injured.

Florida continues to investigate through its experts additional specific ways in which Georgia’s consumption has harmed the Apalachicola ecosystem and economy, as well as the full magnitude of such harm. Florida reserves the right to supplement its response to this Interrogatory as additional information is developed.

Respectfully submitted,

/s/

No. 142, Original

In the
Supreme Court of the United States

STATE OF FLORIDA,

Plaintiff,

v.

STATE OF GEORGIA,

Defendant.

Before the Special Master

Hon. Ralph I. Lancaster

THE STATE OF FLORIDA’S OCTOBER 2, 2015 PROGRESS REPORT

The State of Florida respectfully submits this Progress Report to the Special Master pursuant to Section 4 of the December 3, 2014 Case Management Plan (“CMP”), as subsequently amended.

I. CHANGES IN THE GENERAL STATUS OF THE MATTER.

Since the State of Florida’s September 4, 2015 Progress Report, Florida has: (1) issued subpoenas and deposition notices for eighteen depositions, pursuant to Section 6.2 and Appendix C of the CMP; (2) continued to produce thousands of pages of responsive documents to Georgia pursuant to its broad production requests; (3) served additional written discovery; (4) begun taking its previously noticed depositions; (5) worked to resolve discovery disputes with third parties; and (6) participated in multiple meet-and-confer calls with Georgia on discovery issues. Additional detail about Florida’s discovery efforts is provided below.

II. DISCOVERY EFFORTS.

A. Written Discovery Among The Parties

Since the September 4, 2015 Progress Report, Florida has continued to move forward with written discovery. Specifically, on September 25, 2015 Florida served its Third Set of Interrogatories to Georgia and its First Set of Requests for Admission. For its part, Georgia served Interrogatories and 336 separate Requests for Admission on the same day.

B. Production of Responsive Documents

The States are continuing to produce documents on a rolling basis. As noted previously, Florida has mobilized a large document review team to review and produce responsive information in accordance with the schedule established by the CMP. To date, Florida has produced approximately 660,000 emails (including more than 160,000 this week), more than 100,000 pages of non-email electronically stored information, and nearly 90,000 documents received from third parties. In all, Florida has produced more than 3 million pages of documents in response to Georgia's document requests.

The States continue to meet-and-confer to facilitate the discovery process and to resolve discovery issues promptly. As noted in previous Progress Reports, the States have devoted a considerable amount of time to further developing and refining the parameters of electronic discovery, and have reached agreement on an initial set of email custodians and search terms for each side. However, certain issues regarding email productions have arisen.

First, Georgia has informed Florida that it did not preserve the email accounts of four of Florida's selected custodians—Harold Reheis, Carol Couch, Allen Barnes, and Ed Holcombe. Reheis, Couch, and Barnes were Directors of the Georgia Environmental Protection Division for the majority of the period since litigation over the ACF was filed in 1990 and were integral to prior compact negotiations between the States and water policy in Georgia during relevant

periods. Similarly, Holcombe is the former Chief of Staff to Governor Purdue and a key member of the Governor's 2009 Water Contingency Task Force studying potential conservation measures. Georgia has yet to provide a full or satisfactory explanation for why these email accounts were not preserved. Florida is concerned that these issues have remained unresolved for so long and is raising them yet again with Georgia.

Second, in the September 30 deposition of Dr. Martin Kistenmacher, counsel for Florida learned that Georgia counsel (who is now also representing witnesses from Georgia universities) chose not to produce relevant Kistenmacher emails that Florida had subpoenaed specifically for purposes of the deposition.¹ Florida was disappointed when Georgia indicated that the emails were not being produced, but nevertheless proceeded with the initial scheduled day of the deposition. Although the written objections to production submitted by the Office of the Georgia Attorney General indicated that email records would be “unduly burdensome” to produce (these objections did not identify any privilege from production), the witness testified that he has preserved the subject emails for production in a specific folder on his computer, and would not be inconvenienced by such a production. Failure to produce the Kistenmacher and other relevant email files, and certain metadata, impacted the deposition. Counsel lacked context and explanations for key analytical documents that were the focus of the deposition. And the witness encountered difficulties authenticating certain documents and differentiating between drafts and final versions of others. We have been unable to schedule a meet and confer session with Georgia on this issue before this coming Monday, and remain uncertain if the emails will be produced. The deposition remains open pending resolution of this issue.

¹ By agreement among the parties, Georgia and Florida universities were previously regarded as third parties subject to subpoena, and thus outside of the scope of the email custodian agreement between the States. Florida's subpoena *duces tecum* for Dr. Kistenmacher specifically requested the communications at issue.

These two issues have not yet ripened into disputes, but given the rapid pace of discovery in the case, Florida felt compelled to mention them now. If at all possible, we will work to resolve these and other ongoing issues with Georgia amicably.

C. Written Discovery to Third Parties

Florida has continued on a daily basis to pursue responses to its written discovery from numerous non-parties, including a number of federal agencies and departments.

1. Touhy Requests and Subpoenas to Federal Agencies

The States are continuing to cooperate with the agencies and departments upon which they have served *Touhy* requests. Since the September 4, 2015 status report, Florida has received supplemental productions from USGS and the Corps, and has followed up with counsel for the United States regarding additional documents for production from the Corps, and counsel for the State Department regarding its production in response to Florida's July 8, 2015 *Touhy* request for production of documents. Although certain key materials have not yet been produced, Florida believes that the U.S. Government is diligently responding to its requests.

In addition, on September 21, 2015 counsel for Florida informed counsel for the United States that it intended to seek testimony from seven U.S. agency employees, specifically including four from USFWS, two from USGS, and one from the Corps. Florida has (to date) delayed serving these requests pending resolution of the question of deposition limits raised by Georgia. Given the pace of discovery, Florida may serve these requests in the coming week.

The States will continue to meet and confer with the agencies regarding their *Touhy* requests to facilitate the agencies' response to them.

2. Non-Party Subpoenas Seeking Production of Documents

Florida has not served any additional subpoenas for production of documents since the September 4 Progress Report. Thus far, counsel for Florida has conferred with representatives of,

or otherwise obtained documents from 90 of the 93 entities it has subpoenaed. Florida continues to work with these subpoenaed third parties to facilitate production of documents and resolve any outstanding issues. With the exception of a few entities, noted below, these efforts have been successful. Subpoenaed entities have made at least a partial production of documents, yielding almost 90,000 documents produced to date. Florida will continue to make every effort to facilitate the third parties' timely, cost-efficient production of documents. However, given the scope of the search required to respond, several of the non-parties have been unable to complete their productions within 120 days. Florida is continuing to work with counsel for these entities to facilitate production, and will apprise the Special Master promptly of any concerns that cannot be resolved by the parties.

As noted above, the vast majority of the subpoenaed entities have worked cooperatively with Florida to produce responsive documents. However, as reported previously, *see August 7, 2015 Progress Report* at 3-4 & *September 4, 2015 Progress Report* at 3-5, Florida has a continuing disagreement with ACF Stakeholders, Inc. ("ACFS") over the production of responsive documents it is seeking to discover. ACFS is a group of non-litigants, the majority of whom are located in Georgia. Among other activities, the group cooperated with advisors (including certain researchers and professors at the Georgia Institute of Technology) to analyze the impacts of agricultural irrigation and other upstream consumption on river flows in the ACF Basin, for purposes of making public recommendations to policy makers in the region. Florida is pursuing these analyses because they incorporate key data relevant to issues in this case, and because the analyses demonstrate that Georgia researchers and professors specializing in relevant fields developed data and reached conclusions at odds with the position of the State of Georgia in this litigation.

As Florida noted in its September 4 Progress Report, Florida has sought to avoid imposing significant financial burdens on ACFS—a non-profit with limited funding—so Florida has pursued discovery of ACFS’s modeling and technical files from other entities involved in the ACFS process, including the Georgia Water Resources Institute (“GWRI,” a part of the Georgia Institute of Technology, now represented by Georgia counsel), Atkins, and Black & Veatch. *September 4, 2015 Progress Report* at 4-5. To date, Florida has obtained the vast majority of the analytical documents developed during the ACFS process—most of which were provided by GWRI.

Notwithstanding GWRI’s production of these materials, counsel for ACFS continues to attempt to prevent production of additional relevant documentation, insisting that non-privileged email communications relating to and explaining these analyses must not be produced. Florida does not object to maintaining the confidentiality of this material under this Court’s confidentiality order. ACFS has never asserted attorney-client privilege as a basis for withholding these communications, and Florida believes that ACFS counsel’s position is not “substantially justified” under Federal Rules of Civil Procedure. Florida desires to resolve this issue and has repeatedly requested that ACFS counsel produce a log of the documents withheld so that a specific focused motion to compel can be pursued. To date, ACFS counsel has refused to provide any such log. We are currently working with counsel for Black and Veatch and Atkins to narrow any remaining issues so that an appropriate motion to compel can be brought.

D. Depositions

Written discovery concludes on November 10, and a number of the key depositions in this case will necessarily occur after that date. That said, Florida has been aggressively pursuing deposition discovery already, and (based on documents received to date) has carefully targeted each of its depositions to elicit specific probative information. As counsel for Florida noted in

the September 29, 2015 hearing on Georgia's request for a limit of 20 depositions per side, Florida anticipates taking up to 40 or 45 fact depositions. Florida has already noticed 28 depositions of Georgia witnesses and third parties, and, as noted above, has notified counsel for the United States that it intends to seek testimony from up to seven employees of federal agencies. Florida anticipates noticing up to eight to ten other depositions in the coming weeks.

Since the September 4, 2015 Progress Report, Florida has served subpoenas seeking testimony from eighteen additional individuals and organizations.

1. Judson Turner: Judson Turner is the current Director of the Georgia Environmental Protection Division ("EPD"). Mr. Turner was former Georgia Governor Sonny Perdue's executive counsel and also served as the then-governor's legal representative in negotiations with the Corps and USFWS regarding drought operations at the federal reservoirs of the ACF Basin. Turner has served both Governors Perdue and Nathan Deal as special executive counsel in negotiations between the states of Alabama, Georgia and Florida related to the ACF Basin. Turner signed an Affidavit on January 10, 2013 detailing Georgia's projected water supply demands through the year 2040, and has specific knowledge relevant to a large number of issues in this case.

2. Allen Barnes: Allen Barnes was the Director of the Georgia EPD from 2009-2011. Barnes was one of Governors Perdue's and Deal's chief negotiators with Florida and Alabama over allocation of water in the ACF Basin, both while he worked at the EPD and as a private contractor while working at Joe Tanner and Associates. Barnes was also involved in Georgia decisions regarding application of its Flint River Drought Protection Act, and should testify about a number of relevant Flint River issues.

3. Harold Reheis: Harold was the Director of the Georgia EPD from 1991-2003. He was directly involved with Georgia's water management policies and practices, including in the ACF Basin, while he worked at the EPD. Reheis managed water resource allocation and was involved in the interstate water compact negotiations among Georgia, Alabama and Florida.

4. Joe Tanner: Joe Tanner served as Commissioner of the Georgia Department of Natural Resources, from the department's creation in 1972 until May 1984 and from December 1990 until May 1995. Tanner participated in ACF Compact negotiations on behalf of Georgia, and has other relevant knowledge specifically relevant to arguments in this case.

5. Robert Kerr: Robert Kerr was the founding Director of the Pollution Prevention Assistance Division (P2AD) of the Georgia Department of Natural Resources. Prior to becoming the director of P2AD, Kerr served as the executive director of the Georgia Hazardous Waste Management Authority. Kerr represented Georgia on policy matters relative to two interstate water compacts. He also represented Georgia as the lead negotiator in the negotiations between Alabama, Florida, Georgia and the federal government to develop water allocation formulas under those compacts.

6. Wei Zeng: Wei Zeng is the head of the Hydrological Analysis Unit of the Watershed Protection Branch of the Georgia EPD. The Hydrological Analysis Unit provides mathematical modeling, analytical, and other technical support for water basin management issues, including in the ACF Basin. The Unit also develops water quality and surface water availability resources assessments for each river basin in Georgia. Zeng has been involved in hydrological modeling of the ACF Basin for years and has authored myriad reports, memoranda, presentations, and other communications regarding water demand, use, and flows in the ACF Basin. Georgia has produced over 30,500 of Zeng's documents in this matter.

7. Nap Caldwell: Napoleon “Nap” Caldwell is the Section Chief of the Water Supply Program in the Watershed Protection Branch of the Georgia EPD, working with Watershed Protection. Caldwell has been with the Georgia EPD for the past 20 years, he has advised the EPD Directory and Assistant Director on water and wastewater regulatory and policy matters. He oversees state water conservation and management projects, including fielding comments on proposed water and drought rules and working with population and hydrology data related to ground water permitting and water storage.

8. Cliff Lewis: Cliff Lewis is the Program Manager of the Agricultural Permitting Unit of the Georgia EPD. In this position, Lewis provides technical assistance to public and private officials, consultants, and the general public regarding hydro-geological and geological issues. He also coordinates EPD activities related to the Lower Flint River Drought Protection Act, inspects and monitors irrigation facilities to ensure compliance with state and federal regulations, and is responsible for reviewing and issuing withdrawal permit applications, as well as maintaining the permit files and databases. From 2008 through 2012, Lewis was an Assistant Branch Chief in the EPD Watershed Protection Branch and from 2005 through 2009 he was the EPD Farm Use Water Permitting Program Manager. He has been engaged in water allocation and compliance in Georgia for ten years and has a broad knowledge specifically relevant to this case.

9. David Eigenberg: David Eigenberg is the Deputy Executive Director of the Georgia Soil & Water Conservation Commission (“GSWCC”). GSWCC, and in turn, Eigenberg, were involved in the water metering program implemented by the State of Georgia (H.B. 579) to help conserve water resources. Eigenberg was also involved with the Flint River Surface and Groundwater Conservation project in which the Commission was charged with

piloting a cost-share project for the installation of water-saving irrigation technologies and/or improvements to irrigation systems in agricultural Georgia for the purpose of restoring natural discharge in the Flint River.

10. Bill Frechette: Bill Frechette is a geologist and Groundwater Unit Coordinator for the Georgia EPD. He reviews applications for groundwater permits, particularly municipal and industrial groundwater permits, including in the ACF Basin. Frechette also monitors permittees' groundwater use reports to analyze whether permittees have exceeded their permitted withdrawals. To perform his permitting duties, Frechette receives and analyses statistical data for water use and return flows in Georgia.

11. Aris Georgakakos: Dr. Aris Georgakakos is currently a Professor at the School of Civil and Environmental Engineering at Georgia Tech and Director of the GWRI. He specializes in climate/hydrologic/river basin modeling, served as a consultant to the State of Georgia, and to ACFS. He is a co-author of reports studying the hydrology of the ACF Basin. *See, e.g.,* Georgakakos, A.P., and M. Kistenmacher (2012): Unimpaired Flow Assessment for the Apalachicola Chattahoochee-Flint River Basin. Technical Report, GWRI, Georgia Tech., Atlanta, Georgia, 211p. He was the Principal Investigator for the report "Development of an Integrated Water Resources Management Plan for the Apalachicola-Chattahoochee-Flint (ACF) River Basin," sponsored by the ACF Stakeholders Association (2011-2014).

12. ARCADIS: ARCADIS is a global asset and design consulting firm. Among other things, the Georgia EPD contracted with ARCADIS-USA to develop unimpaired flow data used in the State Water Plan's Surface Water Availability Resource Assessment task. Such data contains stream flow under "natural" or "unimpaired" conditions, i.e. stream flow that would

have resulted without the human alterations. ARCADIS also provided EPD with water availability modeling, irrigation acreage, and other data related to hydrology in the ACF Basin.

13. Jon Ambrose: Dr. Jon Ambrose has been an employee of the Department of Natural Resources of Georgia for more than 28 years. Ambrose was recently named chief of the Georgia Wildlife Resources Division's Nongame Conservation Section in July 2014. As chief, Ambrose supervises an agency charged with conserving Georgia's rare and other nongame wildlife, such as fish and mussels, as well as native plants, and their natural habitats. Ambrose has worked directly on mussel conservation strategies in the lower Flint River Basin and studied the stream flow requirements and water use impacts on wildlife in the Flint River Basin.

14. Jason Wisniewski: Jason Wisniewski is a Wildlife Biologist at the Georgia Department of Natural Resources since 2004. Georgia identified Mr. Wisniewski as an individual that provided information included in Georgia's interrogatory responses. He is a mussel specialist who has created and run models to evaluate the impacts of hydrological changes on mussels. He has published many articles related to this topic such as: C.P. Shea, J.T. Peterson, M.J. Conroy, J.M. Wisniewski (2013), Evaluating the influence of land use, drought and reach isolation on the occurrence of freshwater mussel species in the lower Flint River Basin, Georgia (USA). *Freshwater Biology*; and J.C. Dycus, J.M. Wisniewski, J.T. Peterson (2014), The effects of flow and stream characteristics on the variation in freshwater mussel growth in a Southeast U.S. river basin. *Freshwater Biology*. These issues are directly relevant to impacts of agricultural irrigation on river flow.

15. Mark Masters: Mark Masters is the Director of the Georgia Water Planning and Policy Center at Albany State University. The Center acts as headquarters for the Flint River Water Planning and Policy Center. Masters conducts research focused on agricultural water use,

basin planning and the regional impacts of alternative water policies. Georgia water planning activities will be a key subject in this litigation.

16. Menghong Wen: Menghong Wen works in the Hydrological Analysis Unit of the Watershed Protection Branch of the Georgia EPD. Wen specialized in analysis of ground water and surface water withdrawals and flow levels. Wen also has knowledge of the models used to calculate streamflow simulations, and is a co-author of many reports and presentations studying the hydrology of the ACF Basin. *See, e.g.,* M. Wen, H. Liang, and W. Zeng (2011): Using the USGS Dougherty Plain Groundwater Model for Ensemble Analysis. Proceedings of the 2011 Georgia Water Resources Conference *available at* <http://www.gwri.gatech.edu/sites/default/files/files/docs/2011/3.1.3Zeng.pdf>; *see also* reports co-authored with Yi Zhang, cited below.

17. Yi Zhang: Yi Zhang is a former member of the Hydrological Analysis Unit of the Watershed Protection Branch of the Georgia EPD. Zhang is a co-author of a number of reports and presentations studying the hydrology of the ACF Basin. *See, e.g.,* Y. Zhang and M. Wen (2005), Watershed Modeling and Calibration for Spring Creek Sub-basin in Flint Basin of Georgia Using EPA BASINS/HSPF Modeling Tool. Georgia Water Resources Conference, p. 752; and Y. Zhang, D. Hawkins, W. Zeng, and M. Wen (2005), The Framework of GIS-based Decision Support Systems (DSS) for Water Resources, Georgia Water Resources Conference p. 769.

18. Jeff Regan: Jeff Regan works in the Hydrological Analysis Unit of the Watershed Protection Branch of the Georgia EPD. He is involved in the collection and analysis of data and modeling regarding water withdrawals and returns in the ACF Basin relevant to the issues before the Court.

As provided in Section 3 of Appendix C of the Case Management Plan, Florida is working with both counsel for the subpoenaed individuals and entities and counsel for Georgia to schedule these depositions at mutually convenient times and places. To date, Florida has scheduled multiple previously-noticed depositions, and has taken one—that of Dr. Martin Kistenmacher on September 30. Florida anticipates scheduling a large number of depositions over the next several weeks, and anticipates completing all noticed depositions by January 15, 2016, as required by the Case Management Plan.

III. UNRESOLVED DISPUTES.

There are no unresolved disputes with third parties other than the disputes detailed above, and no unresolved disputes between the States. While the States have identified certain issues regarding the sufficiency of written discovery responses and the completeness of designated and identified email custodians, they continue to meet and confer on a frequent basis to resolve such issues. As noted in prior Progress Reports, Florida believes that the scope and frequency of counsel interaction has facilitated—and will continue to facilitate—resolution of the foregoing and other issues.

IV. OTHER ISSUES OF CONCERN.

A. Technological Issues with the Production of Models and Data Sets

As Florida has noted in prior Progress Reports, technological issues with models and other data sets are slowing the States' progress in discovery. The States are continuing to discuss technological issues associated with the production of certain data sets and scientific models, but the production of such documentation remains challenging. Moreover, the assimilation and analysis of the data and modeling information produced to date by Georgia and various third parties is time consuming for both States, and has required multiple meet-and-confer sessions regarding the accessibility and scope of what has been produced. Florida anticipates such issues

will continue to arise as discovery progresses.

B. Timing

With the extensions of the discovery schedule granted by the Court on April 8, 2015 and May 11, 2015, Florida anticipates completing discovery in accordance with the schedule delineated in Sections 6 and 7 of the CMP, as amended.

V. FURTHER DISCOVERY ANTICIPATED DURING THE COMING MONTH.

Florida continues to analyze responses it received from Georgia and various third parties, and intends to serve additional deposition notices during the coming month. As it has endeavored to do throughout this proceeding, Florida will work to minimize the burden and narrow the scope of any additional discovery requests it issues to Georgia or any third parties.

Subject: ACLU Challenge of Abortion Restriction Law

Counselors –

We filed this morning a constitutional challenge to HB 633 imposing a 24-hour waiting period for abortions, which Gov. Scott signed into law yesterday afternoon. Please find attached the filed complaint and motion for an emergency injunction along with their exhibits and a notice of constitutional challenge.

We will request an immediate hearing on our motion. Please let me know if you will represent the respective parties or if we should coordinate with other counsel.

IN THE CIRCUIT COURT OF THE SECOND JUDICIAL CIRCUIT
IN AND FOR LEON COUNTY, FLORIDA

GAINESVILLE WOMAN CARE LLC d/b/a
BREAD AND ROSES WOMEN'S HEALTH
CENTER, on behalf of itself, its doctor, and its
patients; and MEDICAL STUDENTS FOR
CHOICE, on behalf of its members and their
patients,

Plaintiffs,

v.

STATE OF FLORIDA; FLORIDA
DEPARTMENT OF HEALTH; JOHN H.
ARMSTRONG, M.D., in his official capacity as
Secretary of Health for the State of Florida;
FLORIDA BOARD OF MEDICINE; JAMES
ORR, M.D., in his official capacity as Chair of the
Florida Board of Medicine; FLORIDA BOARD OF
OSTEOPATHIC MEDICINE; ANNA HAYDEN,
D.O., in her official capacity as Chair of the Florida
Board of Osteopathic Medicine; FLORIDA
AGENCY FOR HEALTH CARE
ADMINISTRATION; and ELIZABETH DUDEK,
in her official capacity as Secretary of the Florida
Agency for Health Care Administration,

Defendants.

Case No. _____

COMPLAINT

I. PRELIMINARY STATEMENT

1. This action challenges the validity of House Bill 633 under the Florida Constitution. *See* Ch. 2015-1__, § 1, Laws of Fla. ("H.B. 633" or "the Act") (amending § 390.0111, Fla. Stat). H.B. 633 was signed by Governor Rick Scott on June 10, 2015, and is scheduled to take effect on July 1, 2015. The Act is attached hereto as Exhibit A-1.

2. H.B. 633 will impose an unwarranted twenty-four-hour delay and requirement of an additional trip to their doctor on women seeking abortion care in Florida. Existing law already requires physicians to provide patients with certain state-mandated information in

person, including the nature and risks of the procedure and the risks of carrying a pregnancy to term, and the probable gestational age of the embryo or fetus, as verified by ultrasound. H.B. 633 will require that information to be provided in person at least twenty-four hours before the abortion is performed. The Act thus will require a woman seeking to terminate a pregnancy to make an additional trip to her doctor at least twenty-four hours before she can then return to obtain her abortion. Violations of the Act will subject physicians and health care facilities to disciplinary action, including license revocation, license non-renewal, and monetary fines.

3. Article I, section 23 of the Florida Constitution guarantees the right to privacy of Florida citizens. This includes a woman's right to decide to terminate a pregnancy.

4. In imposing a mandatory delay and an additional-trip requirement before a woman may obtain abortion care, the Act will unlawfully intrude upon this right and violate the privacy rights of Florida women.

5. The Florida Legislature does not impose a similar mandatory delay or additional-trip requirement on any other medical procedure.

6. Both current Florida law and current medical best practices ensure that a woman's decision to obtain an abortion is fully informed. The state cannot meet its burden of proving that the Act satisfies strict scrutiny by furthering a compelling state interest through the least intrusive means, as required by the Florida Constitution's protection of the right to privacy.

7. If it goes into effect, the Act will cause immediate and irreparable harm to all Florida women seeking abortions and to Plaintiffs. It will also make it more difficult to obtain a medication abortion, and will impose particular harms on low-income women, women who have been abused or sexually assaulted, women facing medical risks from pregnancy that do not rise

to the level of a life-threatening medical emergency, and women who seek abortion due to a diagnosis of a severe fetal anomaly.

8. In addition, the Act will violate women's right to equal protection of the laws, as guaranteed by article I, section 2 of the Florida Constitution, by impermissibly singling out abortion as the only type of medical care for which a delay prior to the procedure is mandated by Florida law, and by impermissibly discriminating against women on the basis of their sex and on the basis of gender stereotypes.

9. Plaintiffs seek a declaratory judgment and a temporary and permanent injunction pursuant to Chapter 86, Florida Statutes, and Florida Rules of Civil Procedure Rule 1.610 to prevent the violation of their constitutional rights, those of their patients, and those of all Florida women.

II. JURISDICTION AND VENUE

10. This Court has jurisdiction over this action pursuant to article V, section 5(b) of the Florida Constitution and Sections 26.012 and 86.011, Florida Statutes.

11. Venue is proper in this Court pursuant to section 47.011, Florida Statutes because Defendants are located in this Circuit.

III. THE PARTIES

A. Plaintiffs

12. Plaintiff Gainesville Woman Care LLC d/b/a Bread and Roses Women's Health Center ("Bread and Roses") is a clinic located in Gainesville, Florida, which provides safe, legal, high-quality reproductive health care services to Florida women. Bread and Roses provides surgical abortions up to thirteen weeks and six days of pregnancy, dated from the first day of a woman's last menstrual period ("LMP"), and medication abortions up to eight weeks LMP.

Bread and Roses also offers pregnancy testing, contraception counseling and services, and referrals for other reproductive health care services, as well as for prenatal care and adoption services. Bread and Roses is licensed biannually and inspected annually by the Florida Agency for Health Care Administration. Bread and Roses sues on behalf of itself, its doctor, and its patients.

13. Plaintiff Medical Students for Choice is a not-for-profit organization that seeks to ensure abortion remains safe and legal in the United States and abroad. The organization works to destigmatize abortion provision and to make reproductive health care, including abortion care, a standard part of medical school education and residency training. Medical Students for Choice is composed of individual members who are organized into chapters located at medical school campuses and residency programs in seventeen countries, including seven affiliated chapters in Florida. Florida members of Medical Students for Choice receive training in abortion care and assist in providing abortions across the state, under the guidance and supervision of licensed physicians. Medical Students for Choice sues on behalf of its members and their patients.

B. Defendants

14. Defendant State of Florida, through its Legislature and Governor, adopted the challenged Act.

15. Defendant Florida Department of Health is the state agency authorized to impose penalties on providers of abortion care for violations of the Act. Defendant John H. Armstrong, M.D., is Secretary of the Department. Defendant Armstrong is sued in his official capacity as Secretary of Health for the State of Florida, as are his agents and successors.

16. Defendant Florida Board of Medicine is part of the Florida Department of Health. Defendant James Orr, M.D., is the Chair of the Florida Board of Medicine. Pursuant to Florida

law, the Florida Board of Medicine exercises supervisory powers over the state’s physicians and conducts disciplinary proceedings and imposes penalties against physicians. Defendants Florida Board of Medicine and Orr are authorized to impose penalties on providers of abortion for violations of the Act. Defendant Orr is sued in his official capacity as Chair of the Florida Board of Medicine, as are his agents and successors.

17. Defendant Florida Board of Osteopathic Medicine is part of the Florida Department of Health. Defendant Anna Hayden, D.O., is the Chair of the Florida Board of Osteopathic Medicine. Pursuant to Florida law, the Florida Board of Osteopathic Medicine exercises supervisory powers over the state’s osteopathic physicians and conducts disciplinary proceedings and imposes penalties against osteopathic physicians. Defendants Florida Board of Osteopathic Medicine and Hayden are authorized to impose penalties on providers of abortion for violations of the Act. Defendant Hayden is sued in her official capacity as Chair of the Florida Board of Osteopathic Medicine, as are her agents and successors.

18. Defendant Florida Agency for Health Care Administration is the state agency authorized to license abortion clinics, including Plaintiff Bread and Roses, and to refuse to renew those licenses for failure to comply with the Act. Defendant Elizabeth Dudek is Secretary of the Agency. Defendant Dudek is sued in her official capacity as Secretary of the Agency for Health Care Administration, as are her agents and successors.

IV. STATUTORY FRAMEWORK

19. Florida’s general informed consent law for medical procedures is codified at section 766.103, Florida Statutes. It provides for informed consent “in accordance with an accepted standard of medical practice among members of the medical profession,” with a doctor providing information that would allow “a reasonable individual, . . . under the circumstances,

[to] have a general understanding of the procedure, the medically acceptable alternative procedures or treatments, and the substantial risks and hazards inherent in the proposed treatment or procedures.” § 766.103, Fla. Stat. The general informed consent statute does not mandate any waiting period or additional visit to a patient’s medical provider. *Id.*

20. Florida has a separate statutory provision for obtaining informed consent from patients seeking abortion. Under the current statutory scheme, a “termination of pregnancy” may not be performed or induced “except with the voluntary and informed . . . consent of the pregnant woman;” such consent is “voluntary and informed” if the “physician who is to perform the procedure, or the referring physician, has, at a minimum, orally, informed the woman” of certain information, including “the nature and risks of the procedure, the probable gestational age of the fetus, and the risks to the woman and the fetus of carrying the pregnancy to term.” § 390.0111(3)(a)(1), Fla. Stat. A woman must confirm in writing that she has received this information orally from her physician. *Id.*

21. Pursuant to the Florida Supreme Court’s decision in *State v. Presidential Women’s Center*, 937 So. 2d 114 (Fla. 2006), the existing abortion-specific informed consent statute requires physicians to obtain informed consent in the same manner as is required under the general informed consent statute, and the information to be disclosed to patients—the risks of the procedure and the alternatives—is analogous to what is required under the general informed consent statute and at common law.

22. Section one of H.B. 633 would amend current law to provide that a woman’s consent to an abortion is “voluntary and informed” only if she makes an additional, separate visit to her provider’s office to receive that same information, at least twenty-four hours before returning for her procedure. H.B. 633 § 1.

23. The Act incorporates a narrow exception to the mandatory delay and additional-trip requirements for a life-threatening “medical emergency”—and even then, only where a physician “has obtained at least one corroborative medical opinion attesting to the medical necessity for emergency procedures and to the fact that to a reasonable degree of medical certainty the continuation of the pregnancy would threaten the life of the pregnant woman.” § 390.0111(3)(b), Fla. Stat. If a second physician is not available, the physician must “document reasons for the medical necessity in the patient’s medical records.” *Id.*

24. Thus, the Act’s mandatory delay and additional-trip requirements apply for every woman who seeks abortion care to protect her life or health because she is suffering from an illness, disease, or medical condition—except if and when that illness or condition rises to the level of a life-threatening medical emergency. There is no exception to the mandatory delay for non-emergency threats to a woman’s life, and no exception to protect a woman’s health.

25. The Act also makes no exception for women who receive a diagnosis of a severe fetal anomaly during pregnancy. Thus, a woman seeking to end her pregnancy after receiving such a diagnosis must fulfill the delay and additional-trip requirements before she can terminate.

26. The only other exception to the Act’s requirements applies if, at the time the patient “schedules or arrives for her appointment . . . she presents to the physician a copy of the restraining order, police report, medical record, or other court order or documentation evidencing that she is obtaining the abortion because she is a victim of rape, incest, domestic violence, or human trafficking.” H.B. 633 § 1.

27. This “exception” is no exception at all: The reality is that most women who are victims of rape, domestic violence, or other forms of assault do not seek medical attention in the

aftermath of these crimes or report these incidents to law enforcement. This narrow exception's stringent requirements provide no relief for these women.

28. Physicians are subject to disciplinary action for violating the Act, including revocation of their licenses to practice medicine and administrative fines of up to \$10,000 for each violation. § 390.011(3)(c), Fla. Stat.; *see also* §§ 458.331, 459.015, 456.072(2), Fla. Stat.

29. In addition, abortion clinics may be prevented from renewing their clinic licenses for violations of the Act. Fla. Admin. Code R. 59A-9.020.

30. The Act, by its terms, is scheduled to take effect July 1, 2015. H.B. 633 § 3.

V. STATEMENT OF FACTS

31. Legal abortion is one of the safest procedures in contemporary medical practice.

32. Women decide to terminate a pregnancy for a variety of reasons, including familial, medical, financial, and personal. Some women have abortions because they conclude that it is not the right time in their lives to have a child or to add to their families; some to preserve their life or their health; some because they receive a diagnosis of a severe fetal medical condition or anomaly; some because they have become pregnant as a result of rape; and others because they choose not to have biological children.

33. Approximately one in three women in this country will have an abortion by age forty-five. A majority of women having abortions (61%) already have at least one child, while most (66%) also plan to have a child or additional children in the future.

34. Women in Florida may obtain two types of abortion care: medication abortion and surgical abortion. Medication abortion is a method of terminating an early pregnancy by taking medications that cause the woman to undergo a procedure similar to an early miscarriage.

Medication abortion is available only through nine weeks LMP. Surgical abortion is available in Florida through twenty-three weeks and six days LMP.

35. Plaintiff Bread and Roses currently uses a comprehensive informed consent process for abortion, available on the day of the procedure, which provides women with the state-mandated information, as well as all other information necessary for them to fully understand the risks and benefits of abortion and of the alternatives to abortion. This process also ensures that after thoroughly considering this information, a woman gives consent that is informed and voluntary, and that she is confident in her decision. Bread and Roses gives its patients multiple opportunities to ask questions and discuss any concerns with their physician prior to an abortion.

36. Thus, Bread and Roses' existing informed consent process is consistent with current best medical practices, requirements under current Florida law, and informed consent processes for medical procedures with a comparable degree of risk.

37. The Act's requirement that all women seeking abortion care receive certain state-mandated information in person and at least twenty-four hours prior to the procedure will require women to make a minimum of two trips to their health care provider and to wait at least one additional day before they are able to obtain an abortion.

38. This forced delay and additional-trip requirement will injure all Florida women seeking abortions in multiple ways.

39. First, the Act will require women who have decided to terminate a pregnancy to make an additional, unnecessary visit to the clinic, and to wait twenty-four hours before the state permits them to effectuate their decision. This unwarranted intrusion into their personal privacy and autonomy, the interference with the physician-patient relationship, the judgment and moral

disapproval from the state the Act communicates, and the anxiety associated with delaying an abortion that a woman has decided she wants will harm all Florida women seeking this care.

40. Second, the Act will impose tangible costs: the mandatory extra trip will require greater outlays of time and money, including an additional day's absence from work, home, and/or school. For many women it will involve lost wages and added travel and child-care costs, and for some women, it will also require an overnight stay away from home.

41. Third, by requiring a woman to make time for and to take an additional trip to her health care provider, the Act will threaten her confidentiality. Forcing a woman to make an unnecessary additional trip increases the risk that her partner, family members, employer, co-workers, or others whom she has not told will learn that she is having an abortion.

42. Fourth, the Act will cause delays of greater than twenty-four hours for some women. For many women, it will be difficult, if not impossible, to schedule an appointment on two consecutive days due to work and/or school schedules, child-care availability, and the need to secure transportation to and from a provider. Moreover, Plaintiff Bread and Roses' doctor has a limited schedule, allowing her to provide care on only certain days, which will likely be true at other clinics as well. The mandatory delay and additional-trip requirement will thus significantly delay some women in obtaining abortion care.

43. Delay in obtaining an abortion can in turn cause additional harms. Although abortion is extremely safe, delays in performing an abortion increase the risk to a woman's health and well-being. Even a short delay will be sufficient to prolong some women's pregnancies into the second trimester, thereby significantly increasing the inconvenience and risk associated with the procedure, and/or requiring travel to a more distant health care provider if the

original provider does not offer services at that later point in pregnancy. Abortions are also more expensive the later they are performed.

44. Fifth, the additional-trip requirement exposes patients to further harassment by anti-abortion activists including those who regularly picket Plaintiff Bread and Roses.

45. The mandatory delay and additional-trip requirements will also be problematic for women seeking a medication abortion, which is available only early in pregnancy. Medication abortion allows patients to end a pregnancy at the earliest stages without undergoing a surgical procedure, and some women prefer it because they find it to be less invasive and more like a spontaneous miscarriage; others prefer medication abortion because it is more private and allows them to feel more in control of the process. For some women, medication abortion is medically indicated for physiological reasons that make surgical abortion difficult or impossible to perform. For other women, such as survivors of sexual assault, medication abortion is indicated to protect their mental health, as it is less intrusive into a woman's body. The delays the Act will impose, as described *supra* ¶¶ 42-43, will push some women beyond the timeframe in which medication abortion is an available option.

46. While a follow-up appointment is not considered medically necessary after a surgical abortion in most circumstances, the standard of care in the United States is to recommend some manner of a follow-up visit for a medication abortion. As a result, the Act's additional-trip requirement may fall more heavily on medication abortion patients. Some women may thus choose to have a surgical abortion, instead of the medication abortion they would otherwise prefer, to avoid yet another visit to their provider.

47. In addition to these harms common to all Florida women seeking abortions, and in addition to the difficulty it poses to women who would prefer medication abortion, the

mandatory delay and additional-trip requirements will pose particular harms to especially vulnerable populations of Florida women: low-income women; women who are the victims of domestic violence and those whose pregnancy is the result of rape or other forms of abuse; those who face medical risks from pregnancy that fall short of a life-threatening medical emergency; those whose pregnancies involve a severe fetal anomaly; and those minors who must seek a judicial bypass of the parental notification law in order to obtain a safe and legal abortion.

48. Nationally, approximately 70% of women seeking abortions are below 200% of the federal poverty level (“the FPL”), a frequent measure of low-income populations: in approximate terms, 40% are below the FPL, and another 30% are between 100% and 200% of the FPL. Because Florida’s poverty rate is higher than the national rate, it is likely that an even greater majority of women seeking abortions in Florida are low-income.

49. Low-income women will have the most difficulty in rearranging inflexible work schedules at low-wage jobs; arranging and paying for child-care; paying for the travel costs for an additional trip to the clinic; foregoing lost wages for missed work; paying for any increased costs associated with a later procedure; and saving up the money required to cover any or all of these additional expenses.

50. Women who are the victims of domestic violence will also face particular challenges as a result of this law. Having a child with an abuser can legally bind the woman to her abuser for life; having an infant to care for can make it that much harder for a woman to escape. Abusers may, if they know a woman is pregnant, try to force her to carry to term. Additional trips to the clinic increase exponentially the likelihood that an abuser will discover that his victim is terminating a pregnancy.

51. For a woman who has survived rape, the additional-trip requirement is likewise menacing: forcing her to make an unnecessary additional trip may be emotionally and psychologically damaging and increases the risk of unwanted disclosure of the rape and resulting pregnancy. Moreover, the many logistical difficulties of arranging a separate visit to the provider, including taking time off from work and/or school, arranging child-care, and making the necessary travel arrangements, are likely to be even more difficult for a woman following a traumatic event such as a rape.

52. The Act's narrow exception for victims of rape, incest, domestic violence, and human trafficking—which requires documentation—is meaningless for the vast majority of women who become pregnant under these horrific circumstances. The reality is that the majority of victims do not seek police or medical assistance in the aftermath of these crimes.

53. Forcing such women to make an additional trip in order to obtain abortion care may threaten their safety or well-being, could significantly delay them in seeking care, and could prevent them from obtaining an abortion altogether.

54. The Act will also threaten the health of Florida women seeking abortion care to protect their lives or health. While the Act incorporates a limited exception for medical emergencies that “threaten the *life* of the pregnant woman,” § 390.0111(3)(c), Fla. Stat., (emphasis added), there exists no exception for non-emergency threats to a woman's life or for *any* kind of threat to a woman's health.

55. For women who decide to terminate a wanted pregnancy after receiving a diagnosis of a severe fetal anomaly, the mandatory delay and additional-trip requirements are especially cruel, and will delay physicians in exercising their judgment to provide the care that is most appropriate for patients who have made that decision.

56. The Act will further infringe upon the right to abortion of minor women who choose to seek a judicial bypass of the requirement that they notify a parent, as permitted by Section 390.01114, Florida Statutes. Those minors will need to make an extra trip to the provider, in addition to the separate trips, delays, stresses, and costs involved in obtaining a judicial bypass.

57. Finally, by imposing a delay on abortion—a delay the Legislature does not impose on any other medical procedure—the Act suggests to abortion patients that the Legislature believes women are not competent to render considered, appropriate medical decisions for themselves and their families, and must instead be forced by the state to reconsider their medical decisions. This mandatory delay reflects and perpetuates the stereotype that women do not understand the nature of the abortion procedure, do not think carefully about their decision, and/or are less capable of making informed decisions about their health care than are men.

58. The Legislature considered a number of amendments that would have either ameliorated the Act's effects or applied its requirements to other procedures, all of which were rejected:

- One amendment would have imposed similar mandatory delay and additional-trip requirements before a man could obtain a vasectomy. *See* S.B. 724, A. 829796, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-2; *H.B. 633 – Informed Patient Consent*, Florida House of Representatives, <http://www.myfloridahouse.gov/Sections/Bills/billsdetail.aspx?BillId=53704> (last visited June 5, 2015) [hereinafter *H.B. 633 Legislative History*]
- Another would have permitted women certain of their decisions to waive the Act's requirements and receive the mandated information on the same day as the abortion procedure. *See* H.B. 633, A. 213635, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-3; *H.B. 633 Legislative History*.
- Another would have allowed women who live 100 miles or more from the nearest abortion provider to waive the mandatory delay and additional-trip requirements. *See*

S.B. 724, A. 449942, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-4; *S.B. 274 – Termination of Pregnancies*, Florida House of Representatives, <http://www.myfloridahouse.gov/Sections/Bills/billsdetail.aspx?BillId=53671&> (last visited June 5, 2015) [hereinafter *S.B. 724 Legislative History*].

- Two more would have permitted the informed consent information to be provided to the woman electronically, rather than in person, twenty-four hours before her abortion procedure. *See* S.B. 724, A. 853480, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-5; S.B. 724, A. 231828, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-6; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Two others would have allowed the physician who would perform the abortion to delegate the informed consent requirements to a registered nurse, licensed practical nurse, advanced registered nurse, nurse practitioner, or physician assistant, addressing the delay for women sometimes created by doctors' limited clinic schedules. *See* S.B. 724, A. 930638, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-7; *H.B. 633*, A. 711443, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-8; *H.B. 633 Legislative History*.
- Three amendments would have allowed women who are victims of rape, incest, domestic violence, or human trafficking to waive the mandatory delay and additional-trip requirements without requiring official documentation. *See* S.B. 724, A. 874120, 974400, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-9; S.B. 724, A. 888882, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-10; S.B. 724, A. 113284, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-11; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Two others would have waived the mandatory delay and additional-trip requirements for women who have received a diagnosis of a severe fetal anomaly. *See* SB. 724, A. 591932, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-12; Ex. A-11. *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Two would have created an exception from the mandatory delay and additional-trip requirements in cases where the pregnancy poses a risk to the woman's health. *See* Ex. A-11, A-12; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.

59. If the Act goes into effect, Bread and Roses' physician risks the loss of her license to practice medicine and other disciplinary penalties for any violation of the Act.

60. If the Act goes into effect, Bread and Roses faces non-renewal of its license as an abortion clinic for failure to comply with the Act.

61. If the Act goes into effect, members of Medical Students for Choice who are trained in and assist in the provision of abortion care in Florida will be forced to deliver care that is not in the best interests of patients, that is antithetical to the instruction they otherwise receive regarding the informed consent process, and that is detrimental to their training as conscientious physicians, due to their participation in medical care that puts patients at risk of harm.

62. Florida law does not impose the Act's unnecessary and onerous provisions upon any other medical procedure.

63. The Act will irreparably harm Plaintiffs' patients in numerous ways, including by requiring women who have decided to terminate a pregnancy to make an additional, unnecessary visit to the clinic and to wait twenty-four hours before the state permits them to effectuate their decision; intruding into their personal privacy and autonomy; interfering with the physician-patient relationship; conveying judgment and moral disapproval from the state; requiring unnecessary delay that perpetuates outdated stereotypes about women; making the process of obtaining an abortion more costly; threatening the health of women seeking abortions; threatening the confidentiality of women seeking abortions; and cruelly forcing women pregnant under untenable circumstances to wait to terminate their pregnancies.

64. The state has no compelling interest in imposing the mandatory delay and additional-trip requirements on women who have made the decision to terminate their pregnancies.

65. Even if the mandatory delay were justified, the state has no compelling interest in requiring a patient to make an additional trip to her health care provider to receive the mandated information in person.

66. Even if there were compelling state interests behind these unnecessary requirements, there are other, less intrusive means that would adequately serve these interests.

VI. CLAIMS FOR RELIEF

COUNT I – RIGHT TO PRIVACY

67. Plaintiffs hereby reaffirm and reallege each and every allegation made in ¶¶ 1-66 above as if set forth fully herein.

68. The Act violates the right to privacy of women seeking and obtaining abortions in the state of Florida, as guaranteed by article I, section 23 of the Florida Constitution.

COUNT II – RIGHT TO EQUAL PROTECTION

69. Plaintiffs hereby reaffirm and reallege each and every allegation made in ¶¶ 1-66 above as if set forth fully herein.

70. The Act violates Plaintiffs’ and their patients’ rights to equal protection of the laws in the state of Florida, as guaranteed by article I, section 2 of the Florida Constitution, by:

(a) singling out abortion for onerous and medically unnecessary restrictions that the Florida Legislature does not impose upon any other medical procedure for which people may consent; and

(b) discriminating against women on the basis of their sex and on the basis of gender stereotypes.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that this Court:

1. Issue a declaratory judgment that Section 1 of H.B. 633 violates the rights of Plaintiffs, their patients, and Florida women, as protected by the Florida Constitution, and is therefore void and of no effect.

2. Issue temporary and final injunctive relief, without bond, restraining the enforcement, operation and execution of Section 1 of H.B. 633 by enjoining Defendants, their agents, employees, appointees, or successors from enforcing, threatening to enforce, or otherwise applying the provisions of that statute.
3. Grant Plaintiffs' costs.
4. Grant such further relief as may be just and proper.

Respectfully submitted this 11th day of June 2015.

Exhibit A-1

ENROLLED

HB 633, Engrossed 1

2015 Legislature

1
2 An act relating to informed patient consent; amending
3 s. 390.0111, F.S.; revising conditions for the
4 voluntary and informed consent to a termination of
5 pregnancy; reenacting s. 390.012(3)(d), F.S., relating
6 to Agency for Health Care Administration rules
7 regarding medical screening and evaluation of abortion
8 clinic patients, to incorporate the amendment made by
9 this act to s. 390.0111, F.S., in a reference thereto;
10 providing an effective date.
11

12 Be It Enacted by the Legislature of the State of Florida:
13

14 Section 1. Paragraph (a) of subsection (3) of section
15 390.0111, Florida Statutes, is amended to read:

16 390.0111 Termination of pregnancies.—

17 (3) CONSENTS REQUIRED.—A termination of pregnancy may not
18 be performed or induced except with the voluntary and informed
19 written consent of the pregnant woman or, in the case of a
20 mental incompetent, the voluntary and informed written consent
21 of her court-appointed guardian.

22 (a) Except in the case of a medical emergency, consent to
23 a termination of pregnancy is voluntary and informed only if:

24 1. The physician who is to perform the procedure, or the
25 referring physician, has, at a minimum, orally, while physically
26 present in the same room, and at least 24 hours before the

ENROLLED

HB 633, Engrossed 1

2015 Legislature

27 procedure ~~in person~~, informed the woman of:

28 a. The nature and risks of undergoing or not undergoing
29 the proposed procedure that a reasonable patient would consider
30 material to making a knowing and willful decision of whether to
31 terminate a pregnancy.

32 b. The probable gestational age of the fetus, verified by
33 an ultrasound, at the time the termination of pregnancy is to be
34 performed.

35 (I) The ultrasound must be performed by the physician who
36 is to perform the abortion or by a person having documented
37 evidence that he or she has completed a course in the operation
38 of ultrasound equipment as prescribed by rule and who is working
39 in conjunction with the physician.

40 (II) The person performing the ultrasound must offer the
41 woman the opportunity to view the live ultrasound images and
42 hear an explanation of them. If the woman accepts the
43 opportunity to view the images and hear the explanation, a
44 physician or a registered nurse, licensed practical nurse,
45 advanced registered nurse practitioner, or physician assistant
46 working in conjunction with the physician must contemporaneously
47 review and explain the images to the woman before the woman
48 gives informed consent to having an abortion procedure
49 performed.

50 (III) The woman has a right to decline to view and hear
51 the explanation of the live ultrasound images after she is
52 informed of her right and offered an opportunity to view the

ENROLLED

HB 633, Engrossed 1

2015 Legislature

53 images and hear the explanation. If the woman declines, the
54 woman shall complete a form acknowledging that she was offered
55 an opportunity to view and hear the explanation of the images
56 but that she declined that opportunity. The form must also
57 indicate that the woman's decision was not based on any undue
58 influence from any person to discourage her from viewing the
59 images or hearing the explanation and that she declined of her
60 own free will.

61 (IV) Unless requested by the woman, the person performing
62 the ultrasound may not offer the opportunity to view the images
63 and hear the explanation and the explanation may not be given
64 if, at the time the woman schedules or arrives for her
65 appointment to obtain an abortion, a copy of a restraining
66 order, police report, medical record, or other court order or
67 documentation is presented which provides evidence that the
68 woman is obtaining the abortion because the woman is a victim of
69 rape, incest, domestic violence, or human trafficking or that
70 the woman has been diagnosed as having a condition that, on the
71 basis of a physician's good faith clinical judgment, would
72 create a serious risk of substantial and irreversible impairment
73 of a major bodily function if the woman delayed terminating her
74 pregnancy.

75 c. The medical risks to the woman and fetus of carrying
76 the pregnancy to term.

77
78 The physician may provide the information required in this

ENROLLED

HB 633, Engrossed 1

2015 Legislature

79 subparagraph within 24 hours before the procedure if requested
80 by the woman at the time she schedules or arrives for her
81 appointment to obtain an abortion and if she presents to the
82 physician a copy of a restraining order, police report, medical
83 record, or other court order or documentation evidencing that
84 she is obtaining the abortion because she is a victim of rape,
85 incest, domestic violence, or human trafficking.

86 2. Printed materials prepared and provided by the
87 department have been provided to the pregnant woman, if she
88 chooses to view these materials, including:

89 a. A description of the fetus, including a description of
90 the various stages of development.

91 b. A list of entities that offer alternatives to
92 terminating the pregnancy.

93 c. Detailed information on the availability of medical
94 assistance benefits for prenatal care, childbirth, and neonatal
95 care.

96 3. The woman acknowledges in writing, before the
97 termination of pregnancy, that the information required to be
98 provided under this subsection has been provided.

99
100 Nothing in this paragraph is intended to prohibit a physician
101 from providing any additional information which the physician
102 deems material to the woman's informed decision to terminate her
103 pregnancy.

104 Section 2. For the purpose of incorporating the amendment

ENROLLED

HB 633, Engrossed 1

2015 Legislature

made by this act to section 390.0111, Florida Statutes, in a reference thereto, paragraph (d) of subsection (3) of section 390.012, Florida Statutes, is reenacted to read:

390.012 Powers of agency; rules; disposal of fetal remains.—

(3) For clinics that perform or claim to perform abortions after the first trimester of pregnancy, the agency shall adopt rules pursuant to ss. 120.536(1) and 120.54 to implement the provisions of this chapter, including the following:

(d) Rules relating to the medical screening and evaluation of each abortion clinic patient. At a minimum, these rules shall require:

1. A medical history including reported allergies to medications, antiseptic solutions, or latex; past surgeries; and an obstetric and gynecological history.

2. A physical examination, including a bimanual examination estimating uterine size and palpation of the adnexa.

3. The appropriate laboratory tests, including:

a. Urine or blood tests for pregnancy performed before the abortion procedure.

b. A test for anemia.

c. Rh typing, unless reliable written documentation of blood type is available.

d. Other tests as indicated from the physical examination.

4. An ultrasound evaluation for all patients. The rules shall require that if a person who is not a physician performs

ENROLLED

HB 633, Engrossed 1

2015 Legislature

131 an ultrasound examination, that person shall have documented
132 evidence that he or she has completed a course in the operation
133 of ultrasound equipment as prescribed in rule. The rules shall
134 require clinics to be in compliance with s. 390.0111.

135 5. That the physician is responsible for estimating the
136 gestational age of the fetus based on the ultrasound examination
137 and obstetric standards in keeping with established standards of
138 care regarding the estimation of fetal age as defined in rule
139 and shall write the estimate in the patient's medical history.
140 The physician shall keep original prints of each ultrasound
141 examination of a patient in the patient's medical history file.

142 Section 3. This act shall take effect July 1, 2015.

IN THE CIRCUIT COURT OF THE SECOND JUDICIAL CIRCUIT
IN AND FOR LEON COUNTY, FLORIDA

GAINESVILLE WOMAN CARE LLC d/b/a
BREAD AND ROSES WOMEN'S HEALTH
CENTER, on behalf of itself, its doctor, and its
patients; and MEDICAL STUDENTS FOR
CHOICE, on behalf of its members and their
patients,

Plaintiffs,

v.

STATE OF FLORIDA; FLORIDA
DEPARTMENT OF HEALTH; JOHN H.
ARMSTRONG, M.D., in his official capacity as
Secretary of Health for the State of Florida;
FLORIDA BOARD OF MEDICINE; JAMES
ORR, M.D., in his official capacity as Chair of the
Florida Board of Medicine; FLORIDA BOARD OF
OSTEOPATHIC MEDICINE; ANNA HAYDEN,
D.O., in her official capacity as Chair of the Florida
Board of Osteopathic Medicine; FLORIDA
AGENCY FOR HEALTH CARE
ADMINISTRATION; and ELIZABETH DUDEK,
in her official capacity as Secretary of the Florida
Agency for Health Care Administration,

Case No. _____

Defendants.

**PLAINTIFFS' MOTION FOR AN EMERGENCY TEMPORARY INJUNCTION
AND/OR A TEMPORARY INJUNCTION**

Pursuant to Florida Rule of Civil Procedure 1.610, Plaintiffs GAINESVILLE WOMAN CARE LLC d/b/a BREAD AND ROSES WOMEN'S HEALTH CENTER ("Bread and Roses") and MEDICAL STUDENTS FOR CHOICE ("MSFC") move the Court for a temporary injunction enjoining Defendants STATE OF FLORIDA, FLORIDA DEPARTMENT OF HEALTH, JOHN H. ARMSTRONG, M.D, FLORIDA BOARD OF MEDICINE, JAMES ORR,

M.D., FLORIDA BOARD OF OSTEOPATHIC MEDICINE, ANNA HAYDEN, D.O.,
FLORIDA AGENCY FOR HEALTH CARE ADMINISTRATION, and ELIZABETH DUDEK
("Defendants" or "the state") from enforcing House Bill 633, before that Act's effective date of
July 1. In support of their motion, Plaintiffs state as follows:

INTRODUCTION

Absent injunctive relief from this Court, a sweeping restriction on Florida women's ability to access abortion services, unprecedented in this state, will take effect on July 1, 2015. Section one of Florida House Bill 633, signed by Governor Scott last night (June 10, 2015) would require a woman seeking an abortion to make an additional, unnecessary trip to her health care provider at least twenty-four hours before obtaining an abortion, in order to receive the same information she may currently receive on the day of the procedure. *See* Ch. 2015-1__, § 1, Laws of Fla. ("H.B. 633" or "the Act") (amending § 390.0111, Fla. Stat). The Act's unnecessary and burdensome requirements are imposed regardless of the distance a woman must travel to reach her provider, her own medical needs, her judgment, her doctor's judgment, or her individual life circumstances. By subjecting all women seeking abortion care to both a mandatory twenty-four-hour delay and an additional-trip requirement—a burden placed on patients seeking no other medical procedure in Florida, much less a medical procedure protected by the state Constitution as a fundamental right—the Act can only serve to deter women from seeking abortions, and to punish and discriminate against those who do.

By impeding a woman's access to abortion, the Act violates her right to privacy as guaranteed under article I, section 23 of the Florida Constitution. Because Plaintiffs are likely to succeed on the merits of their claims and they, along with their patients and all Florida women seeking abortions, will suffer irreparable harm if the Act is not enjoined, and because an

injunction will serve the public interest, this Court should issue immediate temporary injunctive relief against enforcement of the Act.

STATEMENT OF THE CASE

A. Current Florida Informed Consent Laws

“Informed consent” refers to the ethical obligations of doctors and other health care professionals to ensure that a patient is informed about a procedure, has the capacity to consent to a procedure, and does in fact consent to a procedure. Decl. of Kenneth W. Goodman, attached hereto as Ex. B-4, (“Goodman Decl.”) ¶ 7. Florida has a general informed consent statute that applies to all medical procedures, providing that informed consent is valid where a doctor or other health professional conforms to accepted standards of medical practice such that “a reasonable individual, from the information provided by the [doctor], under the circumstances, would have a general understanding of the procedure, the medically acceptable alternative procedures or treatments, and the substantial risks and hazards inherent in the proposed treatment or procedures.” § 766.103, Fla. Stat. This statutory standard reflects best medical practices. Goodman Decl. ¶¶ 7-8. No waiting period or additional trip is required under Florida law for any other procedure. § 766.103, Fla. Stat.; Goodman Decl. ¶ 13.

Prior to H.B. 633’s enactment, Florida law had a specific informed consent statute for abortion, which provided that a “termination of pregnancy” may not be performed or induced “except with the voluntary and informed written consent of the pregnant woman.” § 390.0111(3), Fla. Stat. Such consent is “voluntary and informed” if the “physician who is to perform the procedure, or the referring physician, has, at a minimum, orally, informed the woman” of certain information, including “the nature and risks of . . . [the] procedure,” “the probable gestational age of the fetus,” and the “risks to the woman and the fetus of carrying the pregnancy to term.” *Id.* Pursuant to the Florida Supreme Court’s decision in *State v.*

Presidential Women's Center, 937 So. 2d 114 (Fla. 2006), the abortion-specific informed consent statute requires physicians to obtain informed consent in the same manner as is required under the general informed consent statute, and the information to be disclosed to patients—the risks of the procedure and the alternatives—is analogous.

B. Provisions of the Act

H.B. 633, which is effective July 1, adds two provisions to Section 390.0111(3), Florida Statutes. First, it requires that the information be provided in person twenty-four hours prior to the procedure. This forces the woman to make a separate, additional visit to a provider's office, at least twenty-four hours before her appointment to obtain the abortion care she seeks. H.B. 633 § 1. Second, the Act provides a narrow exception to the mandatory delay and additional-trip requirements for a woman who, when she “schedules or arrives for her appointment . . . presents to the physician a copy of a restraining order, police report, medical record, or other court order or documentation evidencing that she is obtaining the abortion because she is a victim of rape, incest, domestic violence, or human trafficking.” *Id.*

The only other exception to the mandatory delay and additional-trip requirements is the exception in the current version of the informed consent law for “a medical emergency.” § 390.0111(3), Fla. Stat. The statute does not define “medical emergency,” but provides that in a medical emergency, “a physician may terminate a pregnancy” after “obtain[ing] at least one corroborative medical opinion attesting to the medical necessity for emergency medical procedures and to the fact that to a reasonable degree of medical certainty the continuation of the pregnancy would threaten the life of the pregnant woman.” § 390.0111(3)(b), Fla. Stat. (allowing physician to proceed absent corroborating opinion only if a second physician is not available). There is no exception for threats to a woman's life that are not “medical emergencies,” and no exception for threats of any kind to a woman's health.

C. The Effect of the Act on Women Seeking Abortion Care in Florida

The Act harms all Florida women seeking abortions: Today, a woman in Florida can obtain an abortion once she and her doctor believe it is appropriate—which means that she may do so upon her first visit to a clinic, just as patients in Florida may do when seeking all other comparable medical procedures. *See* Decl. of Christine L. Curry, attached hereto as Ex. B-3, (“Curry Decl.”) ¶¶ 9, 14; Goodman Decl. ¶ 13. If the Act were allowed to go into effect, that woman would have to make an additional, unnecessary trip to the clinic, and wait at least twenty-four hours before obtaining the abortion care she seeks. This in itself is a burden. Further, the mandatory delay and additional-trip requirements will force women to expend more time and money, including an additional day’s absence from work, home, and/or school. They will require paying for additional travel costs and child-care; involve lost wages for many women; and require an overnight stay away from home for some women. Decl. of Kristin Davy, attached hereto as Ex. B-2, (“Davy Decl.”) ¶ 5; Decl. of Sheila Katz, attached hereto as Ex. B-5, (“Katz Decl.”) ¶ 18.

The Act will also require that a physician be at the health center to provide the required information on the patient’s first visit. For Plaintiff Bread and Roses, this requirement will lead to delays far greater than 24 hours for patients, because its sole physician works no more than two days per week. Davy Decl. ¶ 16. Moreover, because it is likely not possible to staff a physician at every facility offering abortions each single day of the week, and because many women will not be able to take time away from their existing obligations to travel on two consecutive days, the Act will inevitably force many women to delay their abortion procedures by a significantly longer period of time than twenty-four hours. Curry Decl. ¶¶ 15, 20; Davy Decl. ¶¶ 16. That will in turn impose medical harm on women: While abortion is an extremely safe procedure, the later an abortion takes place in pregnancy, the greater the medical risks for

the woman, and the greater the cost as well. Curry Decl. ¶¶ 13, 15; Davy Decl. ¶ 18. The additional-trip requirement also poses a very real threat to a woman's confidentiality and privacy by increasing the risk that partners, family members, employers, co-workers, or others will discover that she is having an abortion. Davy Decl. ¶ 20; Katz Decl. ¶ 17. For some women, the mandatory delay and additional-trip requirements will prevent them from obtaining a medication abortion, which is an early method of ending a pregnancy involving drugs rather than surgery. Curry Decl. ¶¶ 10, 15. Medication abortion is medically indicated for physiological or mental health reasons for some women and is strongly preferred over surgical abortion by others for personal reasons. *Id.* ¶¶ 10-12; Davy Decl. ¶¶ 7, 17.

The mandatory delay and additional-trip requirements will also pose particular harms to especially vulnerable groups of Florida women, including low-income women; women who are victims of intimate partner violence; those whose pregnancy is the result of rape or other forms of abuse; those with wanted pregnancies that involve a severe fetal anomaly, and those with medical complications of pregnancy that are not immediately life-threatening. For these women, the mandatory delay and additional-trip requirements may inflict psychological harm, increase significantly costs and burdens, threaten their safety, threaten their health and even their lives, or prevent them from obtaining an abortion altogether. Davy Decl. ¶¶ 14, 19; Katz Decl. ¶¶ 15-23; Decl. of Lenore Walker, attached hereto as Ex. B-6, ("Walker Decl.") ¶¶ 16-25; Curry Decl. ¶¶ 15-19.

Low-income women will have the greatest difficulty in rearranging inflexible work schedules at low-wage jobs; arranging and paying for childcare; paying for the travel costs for an additional trip to the clinic; foregoing lost wages for missed work; and paying any additional costs associated with a later procedure. Katz Decl. ¶¶ 15-22; Davy Decl. ¶¶ 13-15. A significant

number of women seeking abortions have incomes that are at, or below, the federal poverty level. Nationally, in 2008, 42% of women having abortions had incomes below the federal poverty level, and another 27% had incomes below 200% of the federal poverty level, which is often considered a better measure of who is low-income. Katz Decl. ¶¶ 10, 14-15. Florida has a higher poverty rate than the United States, and a higher proportion of people living below 200% of the poverty line; thus, it is likely a large majority of women seeking abortions in Florida are low-income. *Id.* ¶¶ 8, 10, 15. Low-income women will find it more difficult to pay these increased costs without foregoing other necessities. *Id.* ¶ 22. The need to find and save money to pay for additional costs resulting from the Act will likely delay low-income women in seeking abortions, causing the harms associated with delay discussed *supra*.

For a woman with an abusive partner who is seeking an abortion without detection, the need for privacy—and thus the threat posed by the Act—is particularly acute. Walker Decl. ¶ 17. Women in abusive relationships often are carefully monitored and have limited unaccounted-for time. *Id.* ¶¶ 11, 18, 21. Forcing these women to make a medically unnecessary trip is not only cruel, but could also subject them to further violence. *Id.* ¶¶ 17-21.

Similarly, forcing women whose pregnancies are the result of rape or other violent crimes to comply with the Act’s requirements may cause them further trauma and psychological harm. *Id.* ¶¶ 22-24. While the Act does contain a purported “exception” for these circumstances, a woman who has survived these crimes cannot avail herself of it unless she first reports the crime to authorities. That makes the “exception” meaningless: Most victims of these forms of violence and abuse do not report the abuse to authorities in the first instance, and they too will be forced to wait before terminating pregnancies that result from this violence. *Id.* ¶¶ 26-29.

Those women with wanted pregnancies who seek abortions to protect their medical well-being or because they have received a diagnosis of a severe fetal anomaly will also face grave harms. While the Act incorporates a limited exception for medical emergencies that immediately threaten a woman's life, there is no exception for non-emergency threats to a woman's life, and no exception for *any* threat to a woman's health.¹ The Act will thus impose serious medical risks on women facing one of the numerous complications of pregnancy that threaten a woman's life or health outside the dangerously narrow confines of the Act's exception for life-threatening medical emergencies. Curry Decl. ¶¶ 18-19. The Act also contains no exception for women whose pregnancies involve grave or even lethal fetal anomalies, on whom the Act may impose psychological harm. Curry Decl. ¶ 16.

Finally, by imposing a waiting period on abortion—a waiting period the Legislature does not impose on any other medical procedure—the Act stigmatizes women seeking abortions and sends the message that they are incompetent decision-makers. This waiting period reflects and perpetuates the gender stereotype that women do not understand the nature of the abortion procedure, have not thought carefully about their decision to have an abortion, or are less capable of making an informed decision about their health care than men.

D. The Effect of the Act on Abortion Providers in Florida

The Act is enforced through penalties against doctors who provide abortions, who face both monetary fines of up to \$10,000 for each violation and disciplinary sanctions up to and

¹ The underlying statute provides that a physician's "reasonable belief that complying with the requirements of informed consent would threaten the life or health of the patient is a defense to any action brought under this paragraph." § 390.0111(3)(c), Fla. Stat. This affirmative defense to disciplinary action in limited cases, which a physician must prove to the medical board before she can avail herself of it, does not constitute an adequate health exception, nor provide any protection to licensed abortion clinics for potential violations of the Act.

including revocation of their licenses to practice medicine. § 390.0111(3)(c), Fla. Stat.; *see also* §§ 458.331, 459.015, 456.072(2), Fla. Stat. Abortion clinics, which must be licensed by the Florida Agency for Healthcare Administration, may be prevented from renewing their clinic licenses for violations of the Act. Fla. Admin. Code R. 59A-9.020.

ARGUMENT

A. Standard for Granting a Motion for Injunctive Relief

The “obvious purpose” of a temporary injunction is to maintain the status quo pending the determination of a case. *Smith v. Hous. Auth.*, 3 So. 2d 880, 881 (Fla. 1941) (en banc). Plaintiffs are entitled to a temporary injunction if they “satisfy a four-part test under Florida law: ‘a substantial likelihood of success on the merits; lack of an adequate remedy at law; irreparable harm absent the entry of an injunction; and that injunctive relief will serve the public interest.’” *Liberty Counsel v. Fla. Bar Bd. of Governors*, 12 So. 3d 183, 186 n.7 (Fla. 2009) (quoting *Reform Party of Fla. v. Black*, 885 So. 2d 303, 305 (Fla. 2004)); *see also St. John’s Inv. Mgmt. Co. v. Albaneze*, 22 So. 3d 728, 731 (Fla. 1st DCA 2009). As set forth below, Plaintiffs easily satisfy these four requirements, and granting a temporary injunction will preserve the status quo, allowing Florida women to continue making informed decisions about their own medical care without burdensome, unnecessary, and unconstitutional intrusion by the state.

B. Plaintiffs Have a Substantial Likelihood of Success on the Merits of Their Claim that the Act Violates the Right to Privacy

Plaintiffs have a substantial likelihood of success on the merits of their claim that the Act violates a woman’s fundamental right to privacy as guaranteed by article I, section 23 of the Florida Constitution, by infringing on her right to access abortion services. As discussed below, the Florida Supreme Court has repeatedly held that laws infringing on a woman’s privacy right

to determine whether or not to continue a pregnancy are subject to strict scrutiny. The Act unquestionably infringes on that right and cannot survive such scrutiny.

1. The Florida Constitution Requires Strict Scrutiny of All Incursions on the Fundamental Right to Privacy, Including a Woman's Right to Decide to End a Pregnancy

The Florida Constitution begins with a Declaration of Rights. “No other broad formulation of legal principles, whether state or federal, provides more protection from government overreaching or a richer environment for self-reliance and individualism than does this ‘stalwart set of basic principles.’” *Traylor v. State*, 596 So. 2d 957, 963 (Fla. 1992) (quoting *State ex rel. Davis v. City of Stuart*, 120 So. 335, 347 (Fla. 1929)). Unlike the Federal Constitution, the Florida Constitution’s Declaration of Rights contains “an express, freestanding Right of Privacy Clause,” added to the Constitution directly by Florida citizens in a 1980 general election. *N. Fla. Women’s Health & Counseling Servs., Inc. v. State*, 866 So. 2d 612, 619 (Fla. 2003) (“*North Florida*”). Florida’s explicit constitutional guarantee of the right to privacy provides in relevant part:

Every natural person has the right to be let alone and free from governmental intrusion into the person’s private life except as otherwise provided herein.

Art. I, § 23, Fla. Const.

As recognized by Florida courts, this *explicit* state right to privacy affords greater protections from governmental intrusion and is “a broader, more protective right” than the *implicit* right to privacy recognized under the Federal Constitution. *North Florida*, 866 So. 2d at 619; *id.* at 634 (“While the United States Supreme Court has read into the federal constitution an *implicit* right of privacy, that particular right is a weak version of our *explicit* freestanding state right” (internal footnote omitted)); *see also In re T.W.*, 551 So. 2d 1186, 1191-92 (Fla. 1989) (Florida’s “amendment embraces more privacy interests, and extends more protection to the

individual in those interests, than does the federal Constitution.”). As the Florida Supreme Court has explained at length:

Article I, section 23, was intentionally phrased in strong terms. The drafters of the amendment rejected the use of the words “unreasonable” or “unwarranted” before the phrase “governmental intrusion” in order to make the privacy right as strong as possible. Since the people of this state exercised their prerogative and enacted an amendment to the Florida Constitution which expressly and succinctly provides for a strong right of privacy not found in the United States Constitution, it can only be concluded that the right is much broader in scope than that of the Federal Constitution.

Winfield v. Div. of Pari-Mutuel Wagering, 477 So. 2d 544, 548 (Fla. 1985); *see also Von Eiff v. Azicri*, 720 So. 2d 510, 514 (Fla. 1998) (“The state constitutional right to privacy is much broader in scope, embraces more privacy interests, and extends more protection to those interests than its federal counterpart.”).

Under Florida law, an infringement upon the fundamental right to privacy warrants judicial review under the strict scrutiny standard, and is “presumptively unconstitutional unless proved valid by the State.” *North Florida*, 866 So. 2d at 626. The state bears the evidentiary “burden of proof to . . . justify an intrusion on privacy,” and in order to meet this burden, the state must demonstrate “that the challenged regulation serves a compelling state interest and accomplishes its goal through the use of the least intrusive means.” *In re T.W.*, 551 So. 2d at 1192 (quoting *Winfield*, 477 So. 2d at 547). This standard is a “highly stringent” one. *North Florida*, 866 So. 2d at 620-21 (quoting *In re T.W.*, 551 So. 2d at 1192). Indeed, “no government intrusion in the personal decisionmaking cases . . . has survived” such scrutiny. *Id.*

The Florida Supreme Court has repeatedly held that the state constitutional right to privacy “is clearly implicated in a woman’s decision of whether or not to continue her pregnancy.” *In re T.W.*, 551 So. 2d at 1192; *see also North Florida*, 866 So. 2d at 620-22, 632; *Renee B. v. Fla. Agency for Health Care Admin.*, 790 So. 2d 1036, 1041 (Fla. 2001). The

constitutional right to privacy “embodies the principle that [f]ew decisions are more personal and intimate, more properly private, or more basic to individual dignity and autonomy, than a woman’s decision . . . whether to end her pregnancy. A woman’s right to make that choice freely is fundamental.” *In re T.W.*, 551 So. 2d at 1193 (internal quotations and citations omitted).

In *In re T.W.*, the Florida Supreme Court held that strict scrutiny applied to restrictions on abortion that implicated the right to privacy. *Id.* In assessing whether the state had shown a compelling state interest, the court looked to the original trimester framework of *Roe v. Wade*, 410 U.S. 113 (1973). The *In Re T.W.* court held that “the state’s interest in maternal health” does not “become[] compelling” until “the end of the first trimester;”² the state’s interest in embryonic or fetal life only “becomes compelling upon viability.” *In re T.W.*, 551 So. 2d at 1193. The state is thus foreclosed from asserting a compelling interest in maternal health before the end of the first trimester, or a compelling interest in potential life before viability. “[P]rior to the end of the first trimester, the abortion decision must be left to the woman and may not be significantly restricted by the state. Following this point, the state may impose significant restrictions only in the least intrusive manner designed to safeguard the health of the mother.” *In re T.W.*, 551 So. 2d at 1193; *see also North Florida*, 866 So. 2d at 639-40 (reaffirming *In re T.W.*).

Since *In re T.W.*, Florida courts have consistently applied strict scrutiny to statutes that impose state-created burdens on a woman’s right to decide whether or not to continue a

² As the Florida Supreme Court recognized in *In re T.W.*, 551 So. 2d at 1193, the reason that *Roe* had identified the end of the first trimester as meaningful for women’s health restrictions is that in 1973, abortion beyond the first trimester was considered more dangerous than carrying to term. *Roe*, 410 U.S. at 163. With advances in medical technology, the evidence no longer supports this assumption. *See In re T.W.*, 551 So. 2d at 1197 (Ehrlich, J., concurring).

pregnancy.³ In 2003, the Florida Supreme Court held a newly enacted parental notification law unconstitutional under the strict scrutiny standard. *See North Florida*, 866 So. 2d 612. The law required a minor to notify a parent of her decision to have an abortion, or to convince a court that she was mature enough to make that decision on her own or that an abortion was in her best interests. *Id.* at 615. In *North Florida*, the court once again underscored the strength of the Florida Constitution’s protection of the right to privacy, especially as compared to federal protections. The court expressly rejected the state’s arguments that it should apply the lower, undue burden standard the U.S. Supreme Court articulated in *Planned Parenthood v. Casey*, rather than strict scrutiny,⁴ in determining whether a state law impermissibly infringes on the right to decide to end a pregnancy:

³ In *Renee B.*, the Florida Supreme Court determined that the exclusion of medically necessary abortions from Medicaid coverage did not implicate the privacy right: “the right of privacy does not create an entitlement to the financial resources to avail herself of this choice.” *Renee B. v. Fla. Agency for Health Care Admin.*, 790 So. 2d 1036, 1041 (Fla. 2001). That is, while the state cannot itself impose particular burdens on abortion without satisfying strict scrutiny, in *Renee B.*, “the State ha[d] imposed no restriction on access to abortions that was not already present.” *Id.* However, the *Renee B.* court emphasized that if the right to privacy were implicated, as is clearly the case here, strict scrutiny would apply. *Id.* at 1040.

⁴ In *Casey*, the United States Supreme Court upheld a twenty-four-hour waiting period, but only under this lesser, undue burden standard. *See Planned Parenthood of Se. Pa. v. Casey*, 505 U.S. 833, 885 (1992). Unlike the strict scrutiny standard Florida applies, the lesser undue burden standard does not require that a law serve a compelling state interest through the least restrictive means, but instead required that the law not impose an undue burden on a woman’s right to choose while serving an “important” interest, which could include an interest in protecting potential life. *See generally Casey*, 505 U.S. 833; *In re T.W.*, 551 So. 2d at 1193. As discussed further *infra*, the Florida Supreme Court and the Florida people have emphatically rejected attempts to lessen Florida’s constitutional protection of the right to privacy. *See North Florida*, 866 So. 2d at 635-36; *Initiative Information: Prohibition on Public Funding of Abortions; Construction of Abortion Rights*, Fla. Dep’t of St., Division of Elections, <http://dos.elections.myflorida.com/initiatives/initdetail.asp?account=10&seqnum=82> (last visited June 6, 2015) (proposed amendment defeated with fifty-five percent of Florida voters in opposition).

Florida courts consistently have applied the “strict” scrutiny standard whenever the Right of Privacy Clause was implicated, regardless of the nature of the activity. The “undue burden” standard, on the other hand, is an inherently ambiguous standard and has no basis in Florida’s Right of Privacy Clause.

North Florida, 866 So. 2d at 635 (internal footnote omitted). The court stated that adopting the federal standard would require “abandon[ing] an extensive body of clear and settled Florida precedent in favor of an ambiguous federal standard,” and most important, it would require the court “to forsake the will of the people”:

If Floridians had been satisfied with the degree of protection afforded by the federal right of privacy, they never would have adopted their own freestanding Right of Privacy Clause. In adopting the privacy amendment, Floridians deliberately opted for substantially more protection than the federal charter provides.

Id. at 635-36. Indeed, Florida voters reasserted their will in 2012, when they defeated a ballot initiative that would have rolled back the independent state constitutional protection of abortion in favor of the lower federal constitutional standard. *See Initiative Information: Prohibition on Public Funding of Abortions; Construction of Abortion Rights*, Fla. Dep’t of St., Division of Elections, <http://dos.elections.myflorida.com/initiatives/initdetail.asp?account=10&seqnum=82> (last visited June 5, 2015).⁵ There can thus be no question that the Right of Privacy Clause protects the right to choose abortion and subjects laws that burden that right to strict scrutiny.

2. *Unlike the Prior Version of the Informed Consent Law as Construed, the Act Singles Out Abortion for a State-Imposed Burden and Is Therefore Subject to Strict Scrutiny*

Under the Florida Supreme Court’s interpretation of the state constitution’s strong privacy clause, strict scrutiny is required whenever the Legislature singles out abortion in

⁵ Earlier, in 2004, Florida voters did ratify a separate ballot initiative that authorized the Legislature to enact a parental notification requirement for abortion. *See* Article X, § 22, Fla. Const.

imposing a burden on access to health care. The Act is just such a burden, as illustrated by the history and holding of *State v. Presidential Women's Center*, 937 So. 2d 114 (Fla. 2006).

The challenged Act is an amendment to the Women's Right to Know Act, originally passed in 1998, and challenged in *Presidential Women's Center*, *see id.* at 115. That statute was upheld only after the state accepted a limiting construction to bring it in line with informed consent laws for other medical procedures. *See id.* at 120-21. Prior to that limiting construction, the Right to Know Act imposed unique burdens on abortion and the Court of Appeals had accordingly applied strict scrutiny and held the statute was unconstitutional. The intermediate court noted that unlike the informed consent requirements for other medical procedures, the challenged law would "not allow a physician to tailor the information to the woman's circumstances, [and] infringe[d] on the woman's ability to receive her physician's opinion as to what is best for her, considering her circumstances." *State v. Presidential Women's Ctr.*, 707 So. 2d 1145, 1150 (Fla. 4th DCA 1998).

On appeal before the Florida Supreme Court, the state, for the first time, offered a limiting construction permitting physicians to provide information tailored to each individual patient, rather than information that would be considered material by an abstract "reasonable patient." *Presidential Women's Ctr.*, 937 So. 2d at 119. The state also conceded that the mandated informed consent information only contemplated medical risks, not social, economic, or other risks. *Id.* Accordingly, the Supreme Court upheld the statute, *so construed*, as "comparable to [the informed consent requirements] of the common law and other Florida informed consent statutes implementing the common law." *Id.* at 118.

In contrast to the requirement ultimately upheld as construed in *Presidential Woman's Center*, the Act challenged in the instant case goes far beyond common law and other Florida

informed consent statutory requirements: It singles out women seeking abortion care and will require them, alone among patients, to receive state-mandated information in person at least twenty-four hours before their medical procedure. As the proponents of the Act themselves admitted, the Florida Legislature has never imposed a mandatory waiting period for any other medical procedure.⁶ *See* Fla. H.R., recording of proceedings (Apr. 22, 2015), *available at* http://www.myfloridahouse.gov/VideoPlayer.aspx?eventID=2443575804_2015041243&TermID=86, 1:27:55 - 1:28:04, (Representative Sullivan Closing on H.B. 633). The Act imposes a unique burden on women seeking abortion care. It burdens their right to privacy and is thus subject to strict scrutiny under the Florida Constitution.

3. *The Act Cannot Survive Strict Scrutiny*

As detailed above, under Florida law, a statutory requirement that infringes upon a woman's right to privacy in choosing abortion is presumptively unconstitutional unless the state can prove that it "serves a compelling state interest and accomplishes its goal through the use of the least intrusive means." *Winfield*, 477 So. 2d at 547; *see also In re T.W.*, 551 So. 2d at 1192 (applying this standard to abortion restriction); *North Florida*, 866 So. 2d at 620 (same). The Act will neither serve a compelling state interest, nor employ the least intrusive means to serve any such hypothetical interest.

a. The Act Will Not Serve a Compelling State Interest

The Florida Supreme Court has recognized only two compelling state interests that can justify restrictions on abortion: the promotion of maternal health and potential life. *In re T.W.*,

⁶ The only patients who must observe a waiting period in Florida do so pursuant to *federally* mandated guidelines, not state law, and those are patients who qualify for Medicaid and seek financial coverage for sterilization procedures. *See* Fla. Admin. Code R. 64F-7.007(2) (citing statute codifying federal Medicaid requirement of 30-day waiting period for Medicaid-reimbursed sterilization, with exceptions).

551 So. 2d at 1193-94. However, both are significantly limited: the state's interest in maternal health becomes compelling no earlier than the beginning of the second trimester and its interest in potential life becomes compelling only after viability. *Id.*; see also *Presidential Women's Ctr.*, 707 So. 2d at 1149. Thus, "[u]nder Florida law, prior to the end of the first trimester, the abortion decision must be left to the woman *and may not be significantly restricted by the state.*" *In re T.W.*, 551 So.2d at 1193.

Here, the Act will serve no compelling state interests recognized by the Florida Supreme Court. There is no compelling interest in protecting potential life before viability; there is no compelling interest in protecting maternal health before the second trimester. But by its terms, the Act will apply throughout a woman's pregnancy.⁷ For this reason alone, the state is unable to demonstrate that the Act will further a compelling state interest and it must be struck down.

b. The Act Would Not Serve a Compelling Interest in Maternal Health Even if It Were Limited to Second-Trimester Abortions

Even if the Act were limited to the second trimester of pregnancy (which it is not), the state could not demonstrate it would serve a compelling state interest in protecting women's health, for two reasons.

First, the Florida Supreme Court has held that where the state claims it has a compelling interest in burdening abortion, the state's failure to impose parallel burdens on comparable medical procedures requires the conclusion that the state interest is not, in fact, compelling. In *In re T.W.*, the state claimed a compelling interest in protecting minors, but the state required parental consent only when a minor sought an abortion, and not for any other pregnancy-related medical procedure. "In light of this wide authority that the state grants [to minors,] we are

⁷ Florida generally bans post-viability abortions, with certain limited exceptions to protect a woman's health or life. § 390.01112, Fla. Stat.

unable to discern a special compelling interest on the part of the state under Florida law in protecting the minor only where abortion is concerned.” 551 So. 2d at 1195.

Hence, because the Florida Legislature has not imposed a mandatory delay and additional-trip requirement on any other medical procedure, including those that pose greater risks than abortion, there cannot be a genuine “compelling interest” in protecting women’s health that will be furthered by the Act. Curry Decl. ¶ 14; Goodman Decl. ¶¶ 13-14. Most medical procedures performed in the state of Florida are governed by the general informed consent statute, which, as the Supreme Court noted in *Presidential Women’s Center*, imposes obligations that are comparable to the *current* abortion-specific informed consent statute. See § 766.103, Fla. Stat.; *Presidential Women’s Center*, 937 So. 2d at 120; Goodman Decl. ¶ 13. That general informed consent statute does not require a patient to make a separate visit at least twenty-four hours before receiving medical services in order to hear, in person, information that could be provided on the day of the service. See § 766.103, Fla. Stat. Nor has the Florida Legislature deemed it necessary to require a patient to make a separate trip to a health center or hospital in order to fulfill informed consent requirements for any other pregnancy-related treatment, or for *any other* medical procedure, including procedures that are riskier than a first- or second-trimester abortion procedure.⁸ Curry Decl. ¶ 14; Goodman Decl. ¶ 14. In fact, the Legislature soundly rejected an amendment to the Act that would have imposed a similar twenty-four-hour waiting period for a vasectomy, a surgical sterilization procedure for men with comparable risks.

⁸ The *Presidential Women’s Center* opinion cites to three informed consent statutes that apply to specific medical procedures: breast cancer treatment, electroconvulsive and psychosurgical procedures, and, for inmates, psychiatric treatment. See 937 So. 2d at 118 (citing §§ 458.324, 458.325, 945.48, Fla. Stat. (2005)). These three statutes, both at the time of *Presidential Women’s Center* and now, require the physician to give information and to receive consent from the patient—but do not require information to be provided in person hours or days prior to the procedure, and thus do not impose a separate trip and delay.

See Compl., Ex. A-2, at 2; *H.B. 633 – Informed Patient Consent*, Fla. H.R., <http://www.myfloridahouse.gov/Sections/Bills/billsdetail.aspx?BillId=53704&> (last visited June 5, 2015) [hereinafter *H.B. 633 Legislative History*]; see also *Women's Med. Ctr. of Providence, Inc. v. Cannon*, 463 F. Supp. 531, 537 (D.R.I. 1978) (vasectomy comparably risky to, or potentially more risky than, abortions). Because the Act targets only abortion and not comparable or riskier medical procedures, any state claim that a “compelling” interest in women’s health animates the Act must be rejected.

Second, the Act will not only fail to further, but will actually harm, any interest the state could possibly assert in maternal health. As explained in more detail *supra*, the Act’s requirements in practice will cause some women to delay their procedures far longer than a day, thus increasing their medical risk. See *supra* pp. 5-6. While abortion is an extremely safe medical procedure, delaying a woman in obtaining care increases the risk she faces. Curry Decl. ¶¶ 13, 15. Moreover, as the Act includes no exception for abortions necessary to protect a woman’s health, the Act will force a physician to wait even where delay unquestionably imposes additional medical risk on a patient whose health is already threatened by continued pregnancy. See § 390.0111(3)(a), Fla. Stat. Indeed, under the Federal Constitution as well as the Florida State Constitution, the lack of any exception to the mandatory waiting period when necessary to preserve a woman’s health is a fatal flaw. The United States Supreme Court in *Casey*, for example, held that it “would be required to invalidate the restrictive operation of” a twenty-four-hour mandatory delay if “it foreclose[d] the possibility of an *immediate* abortion despite some significant health risks. . . . [F]or the essential holding of *Roe* forbids a State from interfering with a woman’s choice to undergo an abortion procedure if continuing her pregnancy would constitute a threat to her *health*.” 505 U.S. at 880 (emphases added). But that is exactly what the

Act will do: It forecloses the possibility of an immediate abortion despite threats to a woman's health, by allowing an immediate abortion only in life-threatening medical emergencies.

Therefore, rather than serving a state interest in maternal health, the Act will do the opposite, and must certainly fall under Florida's Declaration of Rights.

c. The Act Does Not Use the Least Intrusive Means to Address Any Interest the State Might Assert

Even if there were a compelling state interest underlying the Act—which there is not, *see supra* Parts 3.a-b—“the state may impose significant restrictions only in the least intrusive manner designed to” serve those interests. *In re T.W.*, 551 So. 2d at 1193. “Any inquiry under this prong must consider procedural safeguards relative to the intrusion.” *Id.* at 1195-96. The state cannot meet its burden of demonstrating that the Act is the least intrusive means of serving any interest it may assert.

First, as discussed above, the state is already using less intrusive means to ensure that a woman's decision to have an abortion is well informed. Under current law, women are already advised of exactly the information the Act will require, § 390.0111(3)(a), Fla. Stat., and indeed have been receiving safe and legal abortion care in Florida for forty years with no need for a mandatory delay to ensure their decisions are informed. A less intrusive means of ensuring that women's decisions are informed is thus the current law; the Act will add only stigma, burden, and delay.

Second, even if the Florida Legislature had evidence that the current law were somehow inadequate, which it does not, it could easily have strengthened the law's requirements in a less intrusive way, as demonstrated by the numerous proposed Amendments to the Act that the Legislature rejected. Several of these would have made the Act less intrusive for all women:

- Amendment 213635 would have permitted a woman to waive the Act's requirements and have the procedure on the same day as receiving the required information. *See* Compl. Ex. A-3. This would have allowed women who wanted a day or more to consider the information they had received to do so, without imposing such delay on all women. That amendment was rejected. *See H.B. 633 Legislative History*.
- Amendments 853480 and 231828 would have allowed a woman to receive the required information in advance of the procedure over the phone, via mail, or by viewing a web site. *See* Compl. Ex. A-5, A-6. Women would still meet with their physicians to confirm their receipt and understanding of the information and to discuss any questions or concerns. Those amendments were rejected. *See H.B. 633 Legislative History; S.B. 724 – Termination of Pregnancies*, Fla. H.R., <http://myfloridahouse.gov/sections/Bills/billsdetail.aspx?BillId=53671> (last visited June 5, 2015) [hereinafter *S.B. 724 Legislative History*].
- Amendments 930638 and 711443 would have allowed doctors to delegate provision of the required information to a registered nurse or a physician assistant, mitigating difficulties clinics may have scheduling a doctor to be present on multiple days and the resulting delay to women. *See* Compl. Ex. A-7, A-8. Those amendments were rejected. *See H.B. 633 Legislative History*.

Other rejected amendments would have alleviated the intrusion the Act will impose on specific groups of women:

- Amendments 591932 and 113284 would have incorporated an exception for women with health conditions that do not rise to the level of a threat to the woman's life. *See* Compl. Ex. A-11, A-12; *H.B. 633 Legislative History; S.B. 724 Legislative History*.

- Amendment 449942 would have allowed a woman who lives more than 100 miles away from the nearest abortion provider to waive the mandatory delay and additional-trip requirement. *See* Compl. Ex. A-4; *H.B. 633 Legislative History*.
- Amendments making a meaningful exception for victims of certain crimes were also introduced. As explained in Part C, *supra*, a woman qualifies for the Act’s exception only if she has “documentation” that she is “a victim of rape, incest, domestic violence, or human trafficking.” H.B. 633. This punitively narrow exception is meaningless for the majority of sexual assault and domestic violence victims who do not report their assaults to the authorities. Several amendments would have dispensed with the Act’s demeaning and unnecessary “proof” requirements. *See* Compl. Ex. A-9, A-10, A-11; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Amendments 591932 and 113284 would have added an exception to the Act’s requirements in the event that a woman receives a diagnosis of a severe fetal anomaly. *See* Comp., Ex. A-11, A-12; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.

Many of the amendments the Florida Legislature rejected reflect the current practices of other states’ abortion-specific mandated information and waiting period requirements,⁹ further

⁹ *See, e.g.*, Ga. Code Ann. § 31-9A-3(1) (state-mandated information can be given “by telephone” and by “a qualified agent”); Idaho Code § 18-609(3)(c), (4) (physician’s agent can certify patient’s receipt of state-mandated information); Ky. Rev. Stat. § 311.725(1)(a) (mandated information can be provided verbally by telephone, and by other professionals, including social workers); Mich. Comp. Laws § 333.17015(3) (mandated information can be provided by a “qualified person” in addition to doctor); Minn. Stat. § 145.4242(a)(1) (mandatory information can be provided by telephone); N.D. Cent. Code § 14-02.1-03 (mandatory information can be provided by telephone and designated agent of physician); Neb. Rev. Stat. § 28-327-(2) (mandatory information can be provided by telephone and by certain agents of physician); S.C. Code § 44-41-330(C), (D) (mandatory information can be mailed by health

demonstrating that the Florida Legislature did not utilize the least intrusive means available. *See North Florida*, 866 So. 2d at 642 (Anstead, C.J., concurring) (legislation at issue is not the least intrusive means, as other states have “less intrusive schemes that serve the same purpose”).

Whatever interests it may assert, the state could have pursued those interests through means less intrusive than forcing every patient seeking an abortion to make an additional trip to her doctor at least 24 hours prior to the procedure.

* * *

The Act cannot survive judicial review under strict scrutiny: the state lacks a compelling interest, and the Act is not narrowly tailored to serve any interest the state may assert, compelling or no. It is thus no surprise that the vast majority of courts to consider mandatory delays under strict scrutiny have struck them down.¹⁰ Plaintiffs are likely to succeed on the merits of their argument that the Act should meet the same fate.

worker); V.A. Code § 18.2-76(B) (mandatory information can be provided by trained professional; waiting period reduced to two hours for patients who travel at least 100 miles); Wis. Stat. § 253.10(3)(c)(2) (mandatory information can be provided by qualified person); W. Va. Code § 16-2I-2(a) (mandatory information can be provided by telephone and by health professional).

C. Plaintiffs Lack an Adequate Remedy at Law and Will Suffer Irreparable Harm if an Injunction Is not Issued

Plaintiffs must also prove “two interrelated requirements” necessary to establish their right to injunctive relief: that the injury they allege cannot be adequately remedied at law and irreparable harm will occur if an injunction is not issued. *Liza Danielle, Inc. v. Jamko, Inc.*, 408 So. 2d 735, 738 (Fla. 3d DCA 1982).

Plaintiffs lack an adequate remedy at law where damages are unavailable or are “so speculative as not to be susceptible of proof.” *So. Colonization Co. v. Derfler*, 75 So. 790, 794 (Fla. 1917); *see also Thompson v. Planning Comm’n*, 464 So. 2d 1231, 1237 (Fla. 1st DCA 1985) (where calculation of damages is speculative, legal remedy is inadequate). Money damages are ordinarily not available for violations of Florida state constitutional privacy rights. *See Resha v. Tucker*, 670 So. 2d 56, 59 (Fla. 1996) (Grimes, C.J., concurring); *see also Tucker v. Resha*, 634 So. 2d 756, 757 (Fla. 1st DCA 1994); *Stephens v. Geoghegan*, 702 So. 2d 517, 521 n.1 (Fla. 2d DCA 1997) (“[v]iolation of privacy provisions of the Florida Constitution does not give rise to a cause of action for money damages” (citation omitted)); *cf. Garcia v. Reyes*, 697 So. 2d 549, 551 (Fla. 4th DCA 1997) (“there is ‘no support for the availability of an action for money damages, based [] on . . . violation of the right of due process, as guaranteed by the Florida Constitution’” (emphasis and citation omitted)); *Fernez v. Calabrese*, 760 So. 2d 1144, 1146 (Fla. 5th DCA 2000) (relying on *Garcia*, 697 So. 2d at 651).

Alternatively, Plaintiffs satisfy their burden of showing irreparable harm where they demonstrate injury that cannot be adequately compensated by money damages. *See Liza Danielle*, 408 So. 2d at 738 (“[i]rreparable injury is an injury of such a nature that it cannot be

Cir. Ct. July 15, 1994), *rev’d on other grounds sub nom. Mahaffey v. Attorney Gen.*, 564 N.W.2d 104 (Mich. App. Ct. 1997).

redressed in a court of law”; “the injury must be of a peculiar nature, so that compensation in money cannot atone for it” (quoting 29 Fla. Jur. 2d, Injunctions § 22 at 674-75)). The threatened or actual loss of constitutional rights, even for a minimal period of time, constitutes *per se* irreparable harm. *See, e.g., Ne. Fla. Chapter of Ass’n of Gen. Contractors of Am. v. City of Jacksonville*, 896 F.2d 1283, 1285 (11th Cir. 1990) (“on-going violation[s]” of the right to privacy “constitute[] irreparable injury”); *Brenner v. Scott*, 999 F. Supp. 2d 1278, 1291 (N.D. Fl. 2014) (enjoining Florida constitutional provision and statutes banning same-sex marriage because “the ongoing unconstitutional denial of a fundamental right almost always constitutes irreparable harm.”); *see also Elrod v. Burns*, 427 U.S. 347, 373 (1976) (holding that loss of constitutional “freedoms . . . unquestionably constitutes irreparable injury”). Here, the deprivation of a woman’s fundamental right to privacy, guaranteed by article I, section 23 of the Florida Constitution, *see supra* Part B.2, will result in irreparable harm.

Thus, an injunction is appropriate and necessary in this case to protect against the violations of women’s constitutional rights. *Cf. Deerfield Med. Ctr. v. City of Deerfield Beach*, 661 F.2d 328, 338 (5th Cir. Unit B 1981) (explaining that a threatened violation of women’s constitutional right to abortion mandates a finding of irreparable injury because “once an infringement has occurred it cannot be undone by monetary relief”). In previous abortion cases asserting violations of the right to privacy under the Florida Constitution, Florida courts have found injunctions to be the proper remedy. *See, e.g., North Florida*, 866 So. 2d at 640 (Fla. 2003) (permanently enjoining the state from enforcing parental notification statute, based in part on violation of right to privacy); *Presidential Women’s Ctr.*, 707 So. 2d 1145 (upholding trial court’s decision temporarily enjoining state from enforcing informed consent statute, based in part on alleged violation of right to privacy). Because the Act will undermine women’s health

and deprive them of their rights under the Florida Constitution, the Act threatens irreparable harm for which there is no adequate remedy at law.

D. Considerations of Public Interest Support Issuance of an Injunction

Finally, the issuance of an injunction will serve the public interest. No public interest is served by enforcing unconstitutional laws, while the public has a significant interest in ensuring that constitutional rights are not violated, and that citizens can access needed reproductive health care without unwarranted hardship. *See, e.g., A Choice for Women v. Butterworth*, 54 F. Supp. 2d 1148, 1159 (S.D. Fla. 1998) (finding that “the public interest is well served when the Court protects the constitutional rights of the public; in this case, the constitutionally protected right of women to have abortions”); *see also Carey v. Klutznick*, 637 F.2d 834, 839 (2d Cir. 1980) (“the public interest [] requires obedience to the Constitution”); *Saint v. Neb. Sch. Activities Ass’n*, 684 F. Supp. 626, 630 (D. Neb. 1988) (holding that public interest is served by preventing violations of an individual’s constitutional rights). A temporary injunction will preserve the status quo by allowing Plaintiff Bread and Roses and other abortion providers in the state to continue providing and the Florida members of Medical Students for Choice to continue assisting in providing and their patients to continue receiving safe and informed reproductive health care services until this case can be resolved on the merits.

CONCLUSION

Because Plaintiffs have shown a substantial likelihood of success on the merits, that irreparable harm will result if the Act is not enjoined, that they lack an adequate remedy at law, and that the relief requested will serve the public interest, this Court should issue a temporary injunction against enforcement of the Act before it goes into effect on July 1.

Dated: June 11, 2015

Respectfully submitted,

/s/ Benjamin James Stevenson

DECLARATION OF KRISTIN DAVY

I, Kristin Davy, am over 18 years of age and declare and state the following based on my personal knowledge:

1. I am the owner of Gainesville Woman Care LLC d/b/a Bread and Roses Women's Health Center ("Bread and Roses" or "the Clinic"), located in Gainesville, which has provided safe and legal abortion care for women in Florida for three decades. I have worked at Bread and Roses since 1998, and been its owner and director since 2004.

2. As the Clinic's owner and director, I oversee its daily operations, business matters, and compliance with all applicable laws and regulations. Bread and Roses was last inspected by the Florida Agency for Health Care Administration in mid-March of this year and no deficiencies were found.

3. Bread and Roses is a plaintiff in this lawsuit on behalf of itself, its patients, and its doctor. Based on my knowledge and experience working at and operating Bread and Roses, I submit this declaration in support of Plaintiffs' Motion for an Emergency Temporary Injunction and/or a Temporary Injunction against Section 1 of 2015 House Bill 633.

4. For nearly thirty years, Bread and Roses has provided safe, compassionate, and legal abortion care to the women of Florida. I have read this law and understand that it requires the doctor who will perform the abortion procedure, or the referring physician, to counsel the patient in person and 24 hours before the abortion procedure. For the reasons I discuss below, by requiring women seeking abortion services to make an additional trip to the clinic, this law will infringe upon women's access to abortion.

5. If this law were to go into effect, I believe our patients would be harmed in several ways: virtually all will be burdened by the additional logistical difficulties of arranging to be away from school or work to make the additional trip to the clinic, and many will need to save more money to pay for travel, childcare, and related expenses; many will be delayed in obtaining the care that they need as a result of these additional logistical difficulties, particularly our most vulnerable patients; some may be at increased risk of having their decision to seek an abortion revealed to others, despite their desire to keep that confidential; and some women, particularly those who must travel long distances or are very poor, may be unable to overcome all of these difficulties and will therefore be forced to carry an unwanted pregnancy to term.

BREAD AND ROSES AND OUR PATIENTS

6. At Bread and Roses, we provide high quality surgical abortion services up to 13 weeks and 6 days of pregnancy, as measured from the woman's last menstrual period ("LMP"), and medication abortions up to 8 weeks LMP. In addition to abortion care, we also offer pregnancy tests and options counseling and refer for prenatal care and adoption services. We provide roughly 800 abortions each year. Our abortions cost between \$450 and \$675. The average appointment for a surgical abortion lasts three to four hours, and for a medication abortion about two hours. Our medical director is an obstetrician-gynecologist and has been the only doctor providing abortions at Bread and Roses for the past ten years. She is now in semi-retirement and provides abortions only two days per week.

7. Surgical abortion involves the use of instruments to evacuate the contents of the uterus. In contrast, a woman undergoing a medication abortion (sometimes referred to as RU 486 or the abortion pill), terminates an early pregnancy by taking medications that cause her to miscarry within a relatively short time. In my experience, a patient's reasons for deciding to have a medication abortion are often very strongly held, personal, and important to her. Many women choose medication abortion because they find it less invasive and more like a spontaneous miscarriage. Some patients also choose medication abortion because it allows them to feel more in control of the process and offers more privacy because the abortion is completed at home.

8. At Bread and Roses we take very seriously our responsibility as health care providers to make sure that every patient's decision to have an abortion is voluntary and informed. Before an abortion is performed, we take a full medical history from the patient, perform additional laboratory tests, and walk her through the abortion procedure, making sure the woman understands what the procedure entails, the side effects, and the risks of the

procedure. Every patient is given multiple opportunities to ask questions and discuss concerns, if any, with our staff, including the physician, prior to the abortion procedure. Bread and Roses takes a number of additional steps to ensure that every patient has considered her options, is confident in her decision, and was not coerced into obtaining an abortion. For example, we meet with the patient alone, where she can discuss freely any questions or concerns she may have.

9. Florida also already regulates the nature of the counseling patients receive before obtaining an abortion. Pursuant to existing law, our doctor discusses the relevant medical information, including the risks of the procedure and alternatives, and performs an ultrasound and offers the woman the opportunity to view the image. The woman is also offered the opportunity to receive printed materials prepared by the state, which include a description of the fetus at various stages of development, a list of entities that offer alternatives to abortion, and detailed information regarding medical assistance for prenatal care, childbirth, and neonatal care.

10. The overwhelming majority of our patients have carefully considered their options, understand the nature of the abortion procedure, and are sure of their decision to have an abortion by the time they schedule their procedure. These women are currently able to obtain an abortion on the first day they come to the clinic.

11. Occasionally, we have patients who seek an appointment not for abortion, but for a pregnancy test and/or options counseling, and we schedule those appointments on days when we do not offer abortion care. If, after undergoing options counseling, the woman decides she would like to terminate her pregnancy, we will schedule her for an abortion on another day. Or, if the woman decides she would like to carry the pregnancy to term or consider adoption, we will refer her for prenatal care or adoption services.

12. Our patients seek abortions for a variety of reasons. Many of our patients already have children and are seeking an abortion because they understand the responsibilities of raising a child and feel that they cannot care for another child at this time. Some of our patients are students at nearby universities, colleges, and community colleges and want to complete their education before they start a family. Other patients seek abortions because they want to leave an abusive relationship, and fear that a pregnancy will tie them legally to their abuser.

13. In Florida, Medicaid does not cover abortion care except in cases of rape, incest, and when the woman's life is endangered. Most of our patients must pay for their abortions out of pocket, and the \$450-675 can be a significant and unexpected expense. Many of our patients have difficulty paying for the procedure and approximately one-fourth of our patients receive funding from charitable organizations that help poor women pay for abortions. Many of our patients must turn to friends and family to pay for the abortion, or forego other important expenses in order to gather the necessary funds.

EFFECT OF THE 24-HOUR DELAY AND ADDITIONAL-TRIP REQUIREMENT

14. The requirement that every patient meet in person with the physician who will perform the abortion, or the referring physician, at least 24 hours before the procedure, will add to the burdens our patients already face by requiring them to make an additional trip to the clinic in order to have an abortion. Based on working with our patients over the past seventeen years, I know that for some women, making an extra trip to the clinic will simply be too much. It will be especially difficult for those women who come from far away. These women will face a difficult choice: either pay for a hotel to stay overnight, pay for and arrange for childcare, miss work or school, and forego lost wages for a few days; or take two trips to the clinic and make a separate set of arrangements for work, childcare, or school for that extra visit.

15. Even women who live near the clinic will be significantly burdened. Many of our patients have jobs with unpredictable schedules, or schedules that are not set well in advance, such as those in the food service or retail industries. It is hard to overstate how extremely difficult it is for some women to ensure that they will not be scheduled to work during their single appointment. Requiring these women to arrange at least two shifts off work in a single week so that they can make an extra visit to the clinic will be tremendously difficult, and may threaten their employment. This is a profound risk and burden on the lives of these women and their families. Moreover, this will double the amount of lost wages these women suffer, adding to the expense of having an abortion. For our patients who already have children, arranging for childcare so they can attend even one appointment can be costly and/or difficult. Requiring a woman to arrange for childcare for two days in a week will again pose a greater burden.

16. As mentioned above, Bread and Roses has had a single doctor for the last ten years, who is now semi-retired and provides care at the clinic only two days per week. It already can be difficult for our patients to find time to match their work and family obligations with our schedule. If a woman must make an additional trip to the clinic, these difficulties will be exacerbated, and may cause her to wait at least an extra week for her abortion at our clinic.

17. Such delays may push patients past the gestational age for having a medication abortion, which, as I explained above, many of our patients prefer for personal reasons. This delay may also push patients past the gestational age up to which we schedule surgical abortions—13 weeks and 6 days LMP.

18. Moreover, aside from the increased risks of the procedure, I understand that there are patients for whom it is particularly inadvisable to delay the procedure, including those suffering from severe symptoms of pregnancy, and those who are in abusive relationships and

may need to conceal their pregnancy. Finally, the costs of the procedure go up as gestational age increases. This is especially true for procedures after the first trimester. This will only exacerbate the obstacles our patients must overcome, as they must save even more money to have a later procedure.

19. While the additional-trip requirement will inconvenience all of our patients and will burden their access to abortion, it will be especially dangerous for some of our most vulnerable patients—women who are victims of intimate partner violence. We have had patients who were in abusive relationships and wanted to extricate themselves from these dangerous situations. These women desperately wanted abortions in order to terminate pregnancies that could potentially tie them to their abusive partners forever. These women had an extremely difficult time concealing their pregnancies, gathering the funds to pay for their abortions, and finding the time to evade the scrutiny of their abusive partners for the three to four hours necessary for the abortion procedure. While it can be difficult and embarrassing for women to ask others for support and assistance to pay for and obtain an abortion—for example, by asking for a ride to the clinic, or for childcare—for women in abusive relationships, these concerns are exacerbated. We have treated some women whose friends and families did not want to provide assistance or support for the woman in obtaining an abortion, out of fear that should the abusive partner learn of the abortion, he would target them for helping her. For these women, an additional trip to the clinic would not only be extremely difficult, but could be fatal. Each additional trip to the clinic is another opportunity for the woman to be caught by her abusive partner. When a patient reveals to us that she is a victim of intimate partner violence, we provide her with information regarding local resources, including shelters, counselors, and groups at the university, which can provide assistance.

20. The question of confidentiality raises a broader concern. The decision to terminate a pregnancy is a deeply private one, and all of our patients, not just those in abusive relationships, have concerns about protecting their privacy. Requiring a woman to make an additional visit will only increase the chance that she will be seen or judged by people she knows. Moreover, it also subjects our patients to further harassment by anti-abortion activists who are routinely outside our clinic holding signs with upsetting messages and images, yelling messages at all who walk through our doors. While we occasionally have volunteers who escort our patients, that is not always the case. For many of our patients it can be very distressing to be harassed and called horrible names while walking into our clinic. Forcing our patients to endure this harassment and humiliation once more will harm our patients' emotional well-being.

21. For all of these reasons I believe the Act is unnecessary and will, in fact, harm women in Florida seeking abortions.

Under penalties of perjury, I declare that I have read the foregoing declaration and that the facts stated in it are true to the best of my knowledge and belief.

Executed on June 5, 2015 in Gainesville, Florida.

Case No. _____

Defendants.

DECLARATION OF CHRISTINE L. CURRY, M.D., Ph.D.

I, CHRISTINE CURRY, M.D., Ph.D., declare under penalty of perjury that I am over 18 years of age, and that the following statements are true and correct:

1. I am a physician licensed to practice medicine in Florida. I am board certified by the American Board of Obstetrics and Gynecology. I currently serve as an Assistant Professor in the Obstetrics and Gynecology Department at University of Miami Hospitals and at Jackson Memorial Hospital, where I supervise, mentor, and train medical students and residents. I

mention these affiliations for purposes of identification only; the opinions I offer here are my own, and do not reflect those of any institution with which I am affiliated.

2. In 2009, I received an M.D. from Loyola University Stritch School of Medicine and a Ph.D. from Loyola University's Department of Microbiology and Immunology. I completed my residency in obstetrics and gynecology at Boston University Medical Center in 2013, where I also completed the Ryan Program in Abortion and Family Planning. As part of the Ryan Program, I received specialized training in abortion care. My experience and credentials are more fully set forth in my curriculum vitae, a true and accurate copy of which is attached to this declaration.

3. In my practice, I provide a full spectrum of obstetrical and gynecologic care to patients, including prenatal care and labor and delivery; outpatient well-woman care, such as pap smears, cancer screening, STI testing and treatment, and contraception counseling and provision; medical and surgical abortions; and inpatient gynecologic surgeries, such as hysterectomies and fibroid removals. I provide surgical abortions up to thirteen weeks, as measured from the first day of a woman's last menstrual period ("LMP") and medication abortions up to nine weeks LMP.

4. I have read the challenged Act, Florida House Bill 633, and understand that it requires the physician who will perform the abortion procedure, or the referring physician, to provide information and counseling to a patient in person and twenty-four hours before the abortion procedure. I also understand that the Act contains two extremely narrow exceptions: one for women who have become pregnant as a result of abuse and reported the abuse to the authorities, and another for a woman whose very life is threatened by their pregnancy in medical emergencies.

5. I provide the following facts and opinions as an expert in the fields of obstetrics and gynecology and reproductive health. The statements below are based on my education, teaching, and clinical experience, as well as my review of the relevant medical and scientific literature.

Safety of Legal Abortion in the United States and Florida

6. Legal abortion is one of the most common medical procedures performed in the United States. Nearly one in three women in the United States will have an abortion by the age of 45, and the majority of women who have abortions are already mothers. The vast majority of abortion procedures performed in the United States occur in the first trimester.

7. Abortion is also one of the safest medical procedures in the United States and is substantially safer than childbirth. A woman's risk of death associated with childbirth is approximately 14 times higher than her risk of death associated with abortion.¹ The risk of death is less than one out of every 100,000 legal induced abortions.² Because abortion is so safe, the vast majority of abortions in the United States can be, and are, safely and effectively performed in an outpatient setting. This is also true in Florida.

8. From my experience, women have abortions for a variety of reasons, including medical, familial, personal, and financial reasons. Some women have abortions to preserve their life or their health. For these women, carrying a pregnancy to term can put their lives at grave risk, significantly shorten their life expectancy, or cause permanent damage. Other women have abortions to terminate wanted pregnancies after the fetus has been diagnosed with an anomaly.

¹ Raymond, Elizabeth G., & Grimes, David A., "The Comparative Safety of Legal Induced Abortion and Childbirth in the United States," *Ob. & Gyn.* 119 (Feb. 2012): 215-19.

² Raymond, Elizabeth G., Grossman, Daniel, Weaver, Mark A., Toti, Stephanie, & Winikoff, Beverly, "Mortality of induced abortion, other outpatient surgical procedures, and common activities in the United States," *Contraception* 90, no. 5 (July 2014): 476-79.

Others have abortions because their pregnancy was a result of rape or sexual assault. Still other women have abortions because they appreciate the responsibilities of motherhood and feel they cannot adequately provide for a child at that time. In my experience, whatever a woman's reasons for terminating a pregnancy, she makes the decision thoughtfully after much consideration and deliberation with those she includes in her process: her family, friends, and/or physician.

9. There are two methods of abortion in the United States: surgical abortion and medication abortion. Surgical abortion involves the use of instruments to evacuate the contents of the uterus. Despite its name, surgical abortion involves no incision into the woman's skin or other bodily membrane. In Florida, surgical abortion is available through 23.6 weeks LMP. Surgical abortion is comparable to other gynecological procedures in terms of risk, invasiveness, instrumentation, and duration. For example, first-trimester surgical abortions are nearly identical to diagnostic dilation and curettage ("D&C") and to surgical completion of miscarriage. Second-trimester surgical abortions are similar to hysteroscopy, a gynecological procedure that uses endoscopy for diagnostic and operative purposes. Florida law does not require a twenty-four-hour waiting period before either of these other gynecological procedures with comparable risks, nor indeed any other procedure I perform in my practice.

10. Medication abortion (also called medical abortion) involves administration of medication to induce an abortion. Medication abortions are available for women up to 9 weeks LMP. In the most commonly used medication abortion protocol, women take mifepristone and misoprostol to induce an abortion. The patient takes the mifepristone in the clinic, which blocks the hormones needed to maintain a pregnancy, and the misoprostol at home, which causes her uterus to contract and expel its contents.

11. In my experience, most patients will have a strong preference for either surgical or medical abortion. For example, young women, women who are survivors of sexual assault, and women who are otherwise fearful of undergoing a “surgical procedure” or of having instruments inserted into the vagina, often prefer medication abortion. From the patient perspective, a medication abortion is similar to a spontaneous miscarriage, and feels more private, by allowing the patient to experience the abortion in her own home. For many women who have experienced physical or sexual trauma, having the abortion experience in private, with family members or friends available for support (rather than hospital staff), helps them feel more in control of the situation and is therefore important to their mental and psychological health.

12. For some women, including some of my patients, medication abortion is medically indicated for physiological reasons that make surgical abortion difficult or impossible to perform, including women with uterine anomalies, such as uterine fibroids, or women who are morbidly obese.

13. Although abortion is an extremely safe procedure, the risk of medical complications increases as the pregnancy advances.³ Thus delay in obtaining an abortion increases the risk of complications.

The Act Will Harm Women’s Health

14. The Act singles out abortion procedures from all other medical procedures to impose a twenty-four-hour delay and an additional-trip requirement, with no medical benefit to the patient. For example, having obtained informed consent from a woman, a physician can perform a D&C procedure for diagnostic purposes, or to complete a miscarriage—which is the same procedure used to perform a first-trimester abortion—without requiring the patient to delay

³ Bartlett, Linda A., *et al.*, “Risk Factors for Legal Induced Abortion-Related Mortality in the United States,” *Ob. & Gyn.* 103, no. 4 (Apr. 2004): 729-37.

for any period of time, or to make an additional, separate visit to the medical facility. It is my opinion that by forcing women seeking abortions—but not patients seeking any other medical procedure, including those riskier than abortion—to wait twenty-four hours and to make an additional visit to the medical provider before they can obtain the treatment, the Act will harm Florida women seeking abortion and undermine the physician-patient relationship. It will prevent physicians from administering the care they believe will protect their patients' well-being.

15. By forcing women to delay the procedure at least twenty-four hours and to make arrange for an additional trip to a provider, the Act will cause women to delay their abortion by at least one day, and in some cases, even longer. Such delays may push women past the gestational limit when medication abortion is available. This will force women for whom a medication abortion is clinically indicated to undergo a procedure that is less safe for them. It will also force a woman who prefers a medication abortion for psychological reasons to undergo a surgical abortion, which may harm her emotional and psychological state, and this pertains especially to victims of sexual trauma. In other cases, delays may push women past the gestational limit of the nearest abortion provider, forcing them to travel farther. This, in turn, is very likely to create further delay, increasing the risks of the procedure. Additionally, the later an abortion takes place in the pregnancy, the greater the cost of the procedure for the patient.

16. Moreover, by forcing virtually all women to wait twenty-four hours and make an additional trip to the clinic, the Act will inflict emotional distress and psychological trauma on women who seek abortions under distressing circumstances. This includes women who have made the extremely difficult decision to terminate a wanted pregnancy because of grave or even

lethal fetal anomalies, such as anencephaly, where the fetal brain stem has failed to develop, or a severe cardiac defect.

17. Additionally, the twenty-four-hour waiting period may prevent some women from obtaining an abortion altogether, such as women who are victims of domestic violence. For example, I recently saw a patient who was being physically and verbally abused by her husband. She came to my practice seeking an abortion; however, she had forgotten her wallet and said she would return the next day for the procedure. When she did not return the next day, we called her on her cell phone and learned that her husband, who had discovered that she was trying to obtain an abortion, had locked her in the house to prevent her from leaving. She asked us not to alert the authorities because she feared that doing so might lead to further abuse and violence. We followed the patient's wishes and she did not present for her rescheduled appointment. If women who are victims of domestic violence are required to make an additional, dangerous trip to the clinic, the chances that the woman's abuser will learn of the woman's intention to have an abortion increases, thereby increasing the chances that a woman will be furthered abused and/or forced to carry the pregnancy to term.

18. Further, the Act fails to provide an adequate health and life exception for women with health issues, including conditions caused by or exacerbated by pregnancy. As a result, the Act will impose serious medical risks on women facing pregnancy complications such as placenta previa (abnormal presentation of the placenta which can cause life-threatening bleeding), hypertension and preeclampsia (which can lead to stroke, heart attack, or death if untreated), and premature rupture of membranes (which, if untreated, can lead to serious infection). Conditions such as these pose an immediate threat to a woman's health and threaten her life if untreated, but do not always occur in the context of a medical emergency. For a

woman who has decided to terminate her pregnancy because of one or more of these conditions, delay poses serious medical risks. In such cases, the standard of care is to terminate the pregnancy as soon as the woman decides to, not to wait until the woman's condition rises to the level of a life-threatening medical emergency. Yet the Act would prevent physicians from providing this necessary and important medical care as soon as is medically appropriate.

19. Forcing women in these circumstances to wait twenty-four hours harms them, both physically and psychologically, and will undermine the physician-patient relationship. A physician treating a patient needs to be able to deliver care in the manner and at the time that she or he, in the exercise of medical judgment, decides best promotes the patient's health. The Act would prevent physicians from doing so, and force them to unnecessarily delay delivering medically appropriate care.

20. Finally, if the Act goes into effect, the mandatory delay requirement will create extra administrative burdens for physicians who will have to counsel and obtain consent from every single abortion patient during a separate visit on a different day—and coordinate those visits to minimize the disruption for women. This added administrative burden will reduce the hours physicians have to see all their patients, including those seeking obstetrical and well-woman care. This, in turn, will exacerbate Florida's existing shortage of qualified physicians who provide abortions.

21. For all of these reasons, it is my expert opinion that rather than promote women's health, the Act will have the opposite effect: it will be detrimental and dangerous to women's health.

Exhibit B-4

IN THE CIRCUIT COURT OF THE SECOND JUDICIAL CIRCUIT
IN AND FOR LEON COUNTY, FLORIDA

GAINESVILLE WOMAN CARE LLC et al.,

Plaintiffs,

v.

Case No. _____

STATE OF FLORIDA et al.,

Defendants.

DECLARATION OF KENNETH W. GOODMAN, PH.D.

1. I am the founder and director of the University of Miami Miller School Of Medicine's Institute for Bioethics and Health Policy and co-director of the university's Ethics Programs. I am a Professor of Medicine at the University of Miami, with appointments in the Department of Philosophy, Department of Public Health Sciences, and the School of Nursing and Health Studies.

2. I direct the Florida Bioethics Network, chair the UHealth/University of Miami Hospital Ethics Committee and the Adult Ethics Committee for Jackson Memorial Health System, and am vice-chair of the Sylvester Comprehensive Cancer Center/University of Miami Hospital and Clinics Ethics Committee.

3. I received my PhD in Philosophy in 1991 from the University of Miami.

4. My responsibilities include teaching medical ethics to medical students and trainees and providing continuing education in medical ethics to health professionals at the University of Miami and elsewhere. A full list of my credentials and experience is listed in my *curriculum vitae*, which is attached to this report.

5. I submit this declaration as an expert in the field of bioethics and the issue of informed consent. All institutional affiliations and positions listed here and in my *curriculum vitae* are purely and exclusively for the sake of identification and to demonstrate expertise. The views expressed herein are mine alone.

6. I have reviewed 2015 Florida House Bill No. 633 ("H.B. 633" or the "Act"), Florida 179th Reg. Sess., § 1, amending Fla. Stat. § 390.0111, which requires a 24-hour waiting period and an additional visit to a physician in order to have an abortion. I believe this Act embodies a fundamental misunderstanding of the role of informed consent (more appropriately called "valid consent") for medical procedures. Far from serving an interest in protecting the health of a woman seeking abortion care, this law subverts that interest.

7. “Informed consent” names the ethical and legal obligation of health care professionals to ensure that certain fundamental conditions are met before patients undergo medical procedures. Those conditions may be simply and straightforwardly itemized:

- The patient must receive adequate information about the procedure, including its risks, likely benefits and accepted alternatives;
- The patient must have the mental capacity to understand and appreciate the information as provided; and
- The patient’s agreement to receive the treatment must be voluntary—that is, free of coercion or undue influence.

8. All three components apply, meaning that the term “valid consent” is more accurate than “informed consent” because, for instance, a patient might be adequately informed but lack the mental capacity to consent. Although there is disagreement and controversy on some subjects within the field of bioethics, these standards for valid consent are not subject to dispute: they are universally accepted as core components of medical practice and research. The fundamental idea is that every mature person who is capable of making decisions should have the right to decide what should be done to her or his body.

9. This is at the foundation of uncontested United States and international recognition of rights to self-determination and personal autonomy. The bioethics literature is unequivocal about this.¹

10. There is no ethically appropriate medical justification for legislative stipulations regarding the exact content, setting, or timing for valid consent, much less such rigid requirements as the Act imposes. There are several powerful and related reasons for this.

11. First, consent is overwhelmingly context-sensitive: physicians, patients and the procedure contemplated can vary greatly and, together, form an often unique pattern, a kind of “clinical fingerprint.” Factors including physicians’ communication skills; patients’ educational levels, health history, age and background; and the vast variety of procedures and their risks combine to render impractical and inappropriate any attempt to stipulate or require that valid consent contain certain facts but not others, or be obtained at one time and not another. This applies to *every* medical procedure—there is nothing medically unique about abortion (or blood transfusions, brain surgery, tooth extractions, and so on) in this regard.

12. Second, there is common and widespread agreement that the doctor-patient relationship is of fundamental importance and therefore should be free from interference by any legislature. That is, the relationship is itself a source of such great social and personal value that any possible benefits gained from interfering in the relationship should be outweighed by the

¹ See e.g., Gert, B., Culver, C.M., and Clouser, K.D. 2006. *Bioethics: A Systematic Approach*. New York: Oxford University Press, esp. Ch. 9, pp. 213 ff.; and Beauchamp, T.L., Faden, R.R. Informed Consent, I. History of informed consent, and II. Meaning and elements, in Jennings, B., ed., *Bioethics*, 4th Edition. Farmington Hills, MI: Macmillan Reference USA, 2014, Vol. 3, pp. 1673-1687.

damage of interfering. Any law such as the Act requiring a waiting period before a specific kind of procedure must therefore be seen to undermine the physician's judgment about how to serve a patient's best interests. It also drives a wedge between the patient and physician: Why would a physician who just completed the consent process and obtained valid consent then delay the agreed-upon treatment? This erodes and undermines the relationship and, moreover, prevents the physician from delivering such care as she or he believes best protects patient interests and wellbeing.

13. Third, any legal stipulation, such as the Act, that itemizes procedures for the obtaining of valid consent is by its nature intrusive. Indeed, the idea that a physician might be punished for exercising her or his best clinical judgment would constitute a peculiar requirement in ordinary medical practice. No other Florida statute of which I am aware dictates the details and standards for obtaining consent for a medical procedure, or requires a waiting period before a medical procedure.

14. It follows from this that there is no ethical or medical justification for singling out any particular medical procedure for special legislatively fashioned consent requirements. There is nothing medically unique about abortion that is necessary or sufficient to warrant specific external requirements for obtaining valid consent. That is, the termination of a pregnancy (itself generally of lower risk than many common procedures) should no more be subject to specific information requirements, timing, or "waiting periods" than other, riskier, procedures or, for instance, in reproductive medicine, the obtaining of reproductive cells, the fertilization of ova, or the implantation of a fertilized ovum in a uterus. Put differently: If a legislature were keen to protect patients from vagaries, inadequacies, or inconsistencies in obtaining consent, then it should specify and identify adequate information components and the timing for all—and certainly for all riskier—medical procedures.

15. These arguments should be seen to apply—and should be advanced—as a matter of professional ethics no matter whether one believes in or denies a right to termination of pregnancy. Those who don't believe in abortion may advocate by any and all appropriate means against legal abortion, but this ought not include enacting laws to alter universal requirements and standards for valid consent. In other words, there is no medical justification for the Act as a tool of informed consent.

16. I have been advised that the Plaintiff, Bread and Roses Women's Health Center, carries out a comprehensive valid consent process. As described, that process embodies best practices for the obtaining of valid consent.

17. This legislation, in requiring a patient in a doctor's clinic to receive information regarding abortion and then to return at least 24 hours later for the actual procedure, constitutes an intrusion into universally accepted medical standards. A state-mandated waiting period for this kind of medical procedure overrides professional judgment, undermines the physician-patient relationship and subverts the correct, traditional, and universal standards for valid consent.

Under penalties of perjury, I declare that I have read the foregoing declaration and that the facts stated in it are true to the best of my knowledge and belief.

Executed on June 4, 2015 in Miami, Florida.

Kenneth Goodman

UNIVERSITY OF MIAMI
Curriculum Vitae

1. Date: May 1, 2015

I. PERSONAL

2. Name: Kenneth W. Goodman
3. Home Phone: [REDACTED]; mobile: [REDACTED]
4. Office Phone: (305) 243-5723
5. Home Address: [REDACTED]
6. Current Academic Rank: Professor (as of June 1, 2008; tenure awarded June 1, 2003)
7. Primary Department: Medicine
8. Secondary or Joint Appointments: Philosophy, Public Health Sciences, Health Informatics, Electrical and Computer Engineering, Nursing and Health Studies, Anesthesiology
9. Citizenship: USA
10. Visa Type: NA

II. HIGHER EDUCATION

11. Institutional:
- Department of Philosophy, University of Miami, Ph.D., 1991 (Dissertation: "Progress and Truth in Science").
 - Department of Language and Linguistics, University of Essex, Colchester, United Kingdom, M.A., 1982. Program in theoretical linguistics; degree conferred with distinction. (Thesis: "Linguistics and Indeterminacy.")
 - Department of Journalism and Communication, University of Florida, B.S., 1975. Degree conferred with high honors.
12. Non-Institutional: NA
13. Certification, licensure: NA

III. EXPERIENCE

14. Academic:

University of Miami Ethics Programs, co-founder and co-director, 1991-present

University of Miami Bioethics Program, founder and director, 1991-present; redesignated in April 2015 as University of Miami Miller School of Medicine Institute for Bioethics and Health Policy

World Health Organization Collaborating Centre in Ethics and Global Health Policy, director, 2008-present

U.S. Centers for Disease Control and Prevention, Ethics Subcommittee of the Advisory Committee to the Director, member, 2011-2013 (committee dissolved May 2013). Public Health Ethics Collaboration Steering Group, member, 2012-2013

Adjunct Professor of Medicine, Florida International University, 2009-2012

Director, Florida Bioethics Network, 2004-present

University of Miami/NIEHS Marine and Freshwater Biomedical Science Center, center investigator, 2001-2003

University of Miami Pan American Bioethics Initiative; founder and director; 1994-present

Member, Course Developers' Group, Comprehensive Institutional Training Initiative (CITI), 2004-2013. Member, CITI Executive Advisory Board, 2006-2012

University of Miami Minority Science Outreach Programs; director; 1994-1998

University of Miami School of Medicine, Department of Medicine; adjunct and joint appointments; 1991-Present

University of Miami College of Arts and Sciences, Department of Philosophy; adjunct and joint appointments; 1991-Present

University of Miami Hospital and Clinics / Sylvester Comprehensive Cancer Center; Director, Clinical and Research Ethics Education; 1995-Present

University of Miami School of Medicine, Division of Minority Affairs, Health Careers Opportunity Program summer faculty, 1999-2003

University of Miami School of Medicine, Division of Minority Affairs, Minority Students Health Careers Motivation Program summer faculty, 2000-2003

Markle Foundation, New York and Washington, D.C., Connecting for Health, Personal Health Technology Council member, 2005-2007

American Society for Bioethics and the Humanities, member, Web Editorial Board, 1998-2001

Barry University, School of Graduate Medical Sciences, Physician Assistant Program, CAAHEP Self Study Advisory Committee, 1998-2000

American College of Epidemiology. As consultant to Ethics and Standards of Practice Committee, developed a "Review and analysis of key documents on ethics and epidemiology," 1993-1994

Carnegie Mellon University, Center for the Advancement of Applied Ethics, Pittsburgh; research associate; 1989-1995

Carnegie Mellon University, Computer Science Department, Center for Machine Translation; research editor; December 1988-August 1991

University of Pittsburgh School of Medicine, Center for Medical Ethics, clinical ethics training program,; adjunct faculty and associate; May 1990-July 1991

Department of Communication, Duquesne University, Pittsburgh; adjunct faculty; August 1988-May 1991

School of Business and Administration, Duquesne University, Pittsburgh; adjunct faculty; June to July 1991

University of Miami School of Medicine, Health and Human Values Program; adjunct assistant professor; August 1987 to June 1988

University of Miami College of Arts and Sciences, Department of Philosophy; graduate teaching assistant; September 1983-May 1987

Bethune-Cookman College, Daytona Beach, Florida; journalism instructor and student-newspaper adviser, September 1979 to March 1981

15. Hospital Appointments

Founder and chair, University of Miami Hospital, 2012-present.

Member and Vice Chair, University of Miami Hospital and Clinics / Sylvester Comprehensive Cancer Center Ethics Committee, 1995-present.

Member, Jackson Memorial Hospital Adult Ethics Committee, 1993-present. Chair as of August 2007.

Member, Jackson Memorial Hospital Pediatric Ethics Committee, 1994-present.

Member, VAMC Miami Ethics Committee, 1994-2003.

16. Non-academic:

Consultant to and educator for various health care organizations and professional organizations, including Alpha-1 Foundation, Baptist Health System, Miami Children's Hospital, etc.

17. Military: NA

V. PROFESSIONAL

22. Funded Research Performed:

Current

National Institutes of Health, Clinical and Translational Science Award. Miami-CTSI.
 1UL1TR000460 (Szapocznik) 06/27/12 – 05/31/17. Role: Ethics unit coordinator, 20-30%.

Alpha-1 Foundation, Social media as an interactive educational medium for quality of life issues for those with Alpha-1 (Moseley): 07/01/13 – 06/31/15. Role: Investigator, 10%.

Previous

National Institutes of Health, Fogarty International Center. Pan American Bioethics Initiative.
 1R25TW008186 (Braunschweiger and Goodman) 09/23/08 – 05/31/12, with no-cost extension to 05/31/14. The major goal of this project is to help build capacity in research ethics education in the Latin American and Caribbean regions. Role: Co-PI, 15%.

ARRA Supplement to Fogarty award, 3R25TW008186, to develop additional curricular tools on research ethics for international learners. 9/1/2009-8/31/2011, \$39,908. Role: Co-PI. (Under no-cost extension)

National Center on Minority Health and Health Disparities. A Targeted Decision Aid to Improve Minority Participation in Clinical Trials (1RC2MD004784), Byrne MB, PI, 09/28/2009 – 06/30/2011. NIH – NCMHD/NCI, \$1,652,959. (M. Byrne) The major goal of this project is to develop and assess decision support tools for prospective research participants. Role: Investigator. 5%

Robert Wood Johnson Foundation (Goodman); 12/01/06-02/28/09; 20%
 Ethical, Legal and Social Issues, Project HealthDesign \$160,000 (incl. \$10k transition funds). Role: PI, to direct efforts to identify and address ethical, legal and social issues related to the use of personal health records (project number 59879).

Beier J. Vector-Borne Disease Control in Urban Environments. 1 P20 RR020770-03 (NIH Director's Exploratory Centers for Interdisciplinary Research), 09/28/04-07/31/07 (5%). Role: Co-investigator to coordinate ethics activities as part of development of new interdisciplinary approaches for the control of vector-borne diseases in urban environments, through collaborative studies involving investigators from 11 Departments and Centers at University of Miami, Kenya, Egypt, Israel, Costa Rica, and Trinidad. (\$1,668,869.)

Goodman KW. The CITI Course in the Responsible Conduct of Research – Part B. Office of Research Integrity. \$25,000 curriculum development contract, 2006. Role: PI.

Walsh, P. Atmospheric and Marine-Based Interdisciplinary Environmental Health Training Project, NIEHS, R25 ES10713, 0-20-00—8-31-07 (7-10%). Role: Develop environmental health and ethics curriculum.

Scott, G. Fellowship in Clinical Research, NIH, OD-00-002, 9-30-02—9-29-05 (5%). Role: contribute to ethics curriculum.

Shor-Posner, G. Optimizing HIV/TB Management in the HAART Era, NIH Fogarty D43 TW000017-16, 7/29/04—5-31-07 (2-5%). Role: Contribute to ethics activities, including annual conference.

Mack, A., others and Goodman, K, Health Careers Motivation Program , HRSA, D 18 MB 02868-01, 9-1-99—8-31-02, \$623,248 (2-5%). Role: Provide ethics instruction to program participants.

Goodman, KW. principal investigator, Difficult Challenges in Human Subjects Research, U.S. Department of Health and Human Services, National Institutes of Health, NIAID, T15 AI07591, 10-1-99—9-30-02, \$265,986 (15%). Role: As PI, oversee training grant to develop conferences.

Beckwith, S., others and Goodman, K, Community-State Partnerships to Improve Care of the Dying, Robert Wood Johnson Foundation, 1-1-00—12-31-02, \$449,961 (20%). Role: Develop ethics and other resources for end-of-life education project.

O'Connell, M., others and Goodman, K, . Undergraduate Medical Education for the 21st Century, HRSA/AACOM, 240-97-0038, 9-1-98 — 8-31-01, \$375,000 (8%). Role: Contribute to creation of a Web-based training module in managed care ethics.

Goodman, KW. Minority Precollege Health Science Outreach Project; U.S. Department of Health and Human Services, National Institutes of Health, National Center for Research Resources; \$219,891; September 1994- September 1997. Role: Coordinate placement of minority students in UM labs.

Goodman, K. principal investigator, Precollege Health Science Outreach Project; U.S. Department of Health and Human Services, National Institutes of Health, National Center for Research Resources; \$58,615; application dates April 1, 1998-March 31, 1999. PI status transferred to colleague as of June 1998 at awardee's request. Role: Coordinate placement of minority students in UM labs.

Goodman, K. principal investigator, Summer Outreach Program, Dade County Public Schools, 1994-1997, \$219,998. Role: Coordinate Miami-Dade County Public Schools minority summer science education program at UM.

Various philanthropic, corporate and other grants in support of UM ethics programs; 1991-2007, approximately \$3,500,000 (including Arsht gift of \$3 million).

Grant-related Consulting

Fogarty International Center, 1 R25 TW010026-01: Research Ethics Education Program in Jordan, University of California at San Diego. PI: W. Al Delaimy. Consultant 2015-present

NIH SE Best Practice, Challenge Grant, 1 R01 DA029258-01: Ethical issues in broad data sharing for genetic research on addiction: best practices. University of Colorado, Denver. PI: M. Coors. Consultant 2010-11.

23. Editorial responsibilities

Study Sections

European Union Research Executive Agency, Ethics Review Panel, H2020, July 2014, Brussels.

European Union Research Executive Agency, Ethics Review Panel, FP7, July 2013, November 2012, July 2012, March 2011.

National Institute Of Allergy And Infectious Diseases Special Emphasis Panel ZAI1-JBS-A-S1, S2, RFA-12-018: Clinical Trials Units for NIAID Networks, June 2013.

AHRQ, 2011

Wellcome Trust, UK, 2011 (WT095887RR) grant review

HHS Special Emphasis Panel, FOA-OC-HIT-10-001: Health Information Technology, Special Emphasis Panel, Office of the National Coordinator for Health Information Technology, Curriculum Development Centers, 2010.

Maryland Stem Cell Research Fund Peer Review, 2009.

CDC, Coordinating Office for Terrorism Preparedness and Emergency Response (COTPER), study section, FOA RFA TP08-001: Preparedness and Emergency Response Research Centers: A Public Health Systems Approach, 2008.

NIH research ethics Study Section, 2002-2006.

National Science Foundation, Ethics Section, 2004, 2005

Reviewer, Alpha-1 Foundation, 2007-present

International Advisor, European Union-funded project, "Personalized health monitoring (PHM) – Interdisciplinary research to analyze the relationship between ethics, law and psychosocial as well as medical sciences. Project meeting, Linköping, Sweden, December 1-2, 2011.

Other

Editor, Ethics and Health Information Technology section, *Cambridge Quarterly of Healthcare Ethics*, 2014-present

Editorial Board, *Journal of Biomedical Informatics*, 2014-present

Associate Member, ALERT (Aspects of Law and Ethics Related to Technology) Research Group, London, UK, 2014-present.

Associate Editor, *Acta Bioethica*, 2010-present

Consultant/reviewer, "WHO Online Research Ethics Training Course," Geneva: World Health Organization, 2013.

Consultant/reviewer, "WHO Strategy on People-Centered and Integrated Health Services," Geneva: World Health Organization, 2014.

Technical expert / peer reviewer, Gibbons MC et al. Impact of Consumer Health Informatics Applications. Evidence Reports/Technology Assessments, No. 188, Agency for Healthcare Quality

and Research, 09(10)-E019, Johns Hopkins University, 2009:
<http://www.ncbi.nlm.nih.gov/bookshelf/br.fcgi?book=erta188>

Member, Faculty Advisory Board, Department of Institutional Review Ethics and Administration, Nicholas Cardinal Cheong Graduate School for Life, Catholic University of Korea, 2010-present.

Member, Comité Científico Internacional, *Revista Colombiana de Bioética*, 2009-2011.

Reviewer, American Medical Association Council on Ethical and Judicial Affairs report on "Ethical Guidelines for the Use of Electronic Communication between Patients and Physicians," January 2002.

Reviewer, National Academy of Sciences, Institute of Medicine, Committee on Battlefield Radiation Exposure Criteria, 1999. (Document: S Thaul, H O'Maonaigh, eds. *Potential Radiation Exposure in Military Operations*, Washington, D.C.: National Academy Press, 1999.)

Advisor/contributor, 1998-1999, Institute of Medicine, "Strategies to Protect the Health of Deployed U.S. Forces." (Document: LM. Joellenbeck, PK Russell, SB Guze, eds., Medical Follow-Up Agency, Institute of Medicine, *Strategies to Protect the Health of Deployed U.S. Forces: Medical Surveillance, Record Keeping, and Risk Reduction*, Washington, D.C.: National Academy Press, 1999.)

Co-editor, "Scope: Issues and insights" column, *MD Computing*, 1998-2001.

Contributing Editor, *Physicians & Computers*; 1992-2001.

Conference organizer and director, and program editor, annual "Clinical Ethics: Debates, Decisions, Solutions" conference, Bioethics Program, University of Miami, 1994-2010.

Conference organizer and director, Florida Bioethics Network Seventh Annual Conference, "Bioethics in Florida: Challenges in Daily Practice," Tampa, Oct. 8-10, 1997.

Member, Program Directorate and Proceedings Editorial Board, First World Congress on Computational Medicine, Public Health and Biotechnology, April 24-28, 1994, Austin, Texas.

Guest Issue Editor, *Miami Medicine*, special number on bioethics, Vol. 64, No. 7, August 1993.

Symposium organizer and chair, "Computers and Ethics in Medicine," American Association for the Advancement of Science annual meeting, Chicago, Feb. 7, 1992.

Managing editor, *Machine Translation*, quarterly journal of computers and translation published by Kluwer Academic Press; Aug. 1989-Nov. 1991.

Goodman K. Guest Editor, *Machine Translation* 4.1 and 4.2; 1989. Special issues on knowledge-based machine translation.

24. Professional and honorary organizations:

AMIA (American Medical Informatics Association)

- Founder and Chair, Ethical, Legal and Social Issues Working Group, 1996-1998; chair, 2003-2004
- Chair, Ethics Committee, 2008-2014
- Chair, Vendor Contracts Task Force, 2009-2011
- Member, Working Group Steering Committee, 2006-2007
- Member International Affairs Committee, 2014-

Member, American College of Epidemiology Ethics Committee, 1995-1999, 2005-present; chair, 2006-2008.

Co-executive director, Florida Bioethics Network, 1999-2005; director, 2005-present; president, 1997-1998; board member, 1993-1997.

Member, Director's Advisory Committee, University of Miami Interdisciplinary Stem Cell Institute, 2009-present.

Member, Advisory Committee, Institute for Ethics in Health Care, Miami-Dade College, 2001-present.

Member, Bioethics Committee, Florida Department of Corrections Health Services, 1994-2002.

Member American Association for the Advancement of Science

Member American Medical Informatics Association

Member American Society for Bioethics and the Humanities

Member Association for Practical and Professional Ethics

Member Florida Bioethics Network

25. Honors and awards:

Inducted Alpha Omega Alpha Medical Honor Society, March 20, 2012.

Honorable Mention, Dorland Health People Awards, October 2011
(<http://accessintelligence.imirus.com/Mpowered/book/vcip11/i6/p1>).

Leadership Award, AMIA (American Medical Informatics Association), Nov. 13, 2010.

Outstanding Faculty Award nominee, University of Miami Association of Greek Letter Organizations, April 2010.

"Health Care Hero" award nominee, "Individual of Merit," Greater Miami Chamber of Commerce, May 2009.

Visiting Scholar, Erasmus Mundus Programme in Applied Ethics, Centre for Applied Ethics, Linköping University, Nov. 26-Dec. 4, 2009, Linköping, Sweden.

Elected as Fellow, American College of Medical Informatics, American Medical Informatics Association, October 2008.

"Heavy Hitter in Education," *South Florida Business Review*, June 2006

"Guardian Angel Award," South Florida Guardianship Association, March 2003.

Inducted Honorary Member, Golden Key National Honor Society, November 1996.

First place in Florida Philosophical Association 1987 graduate-student paper competition, for "Theoretical Terms"; see above.

M.A. awarded with distinction by the University of Essex, 1982.

Rotary Foundation scholarship for work in journalism, applied to post-graduate study at Essex, 1981-1982

B.S. awarded with high honors by the University of Florida, 1975.

Selected for admission by Kappa Tau Alpha national communications honor society, 1975.

Selected for admission by Phi Kappa Phi national scholastic honor society, 1974.

Several journalistic writing and editing awards.

Various travel awards to attend conferences and/or present papers.

Goodman KW. Panelist. Is there a future and promise in stem cell research? South Florida Bioscience Consortium & South Florida Hospital and Healthcare Association, Davie, Fla., Oct. 26.

Goodman KW. Pharmacogenomics and human subjects research: New challenges for IRBs. Baptist Health South Florida, Sixth Annual Educational Retreat, Naples, Oct. 28.

Goodman KW. Panelist. Uncertain health informatics decisions: How should we address them. American Medical Informatics Association Annual Symposium, Washington, Nov. 14.

Goodman KW. Bioterrorism and pandemic preparedness. Public Health Ethics, Policy and Law course, The Wharton School, University of Pennsylvania, Philadelphia, Nov. 14.

Goodman KW. When the law is silent: Managing public health emergencies. Federal Judicial Law Clerks seminar, U.S. Federal Courthouse, Miami, Nov. 16.

Goodman KW, Panel moderator. Medical and legal challenges of long-term-care policies. Miami Area Geriatric Education Center, 15th Annual Advances in Geriatrics conference, Fort Lauderdale, Dec. 2.

2005

Goodman KW. Glowfish, racism and other oddities: Ethical challenges in environmental genomics. Florida A&M University, Environmental Sciences Institute, Tallahassee, Feb. 4.

Goodman KW. Ethical issues on obstetrics and gynecology: Focus on cord blood banking. University of Miami Miller School of Medicine Department of Obstetrics and Gynecology Grand Rounds, March 10.

Goodman KW. Embryonic stem cells: Hope for the future or ethical minefield? American Academy of Neurology 2005 Annual Meeting, Miami Beach, April 16.

Goodman KW. Arguments in favor of embryonic stem cell research. National Multiple Sclerosis Society Task Force on Stem Cell Research, Washington, D.C., May 10.

Goodman KW. Ethics in pediatrics. Florida Pediatric Society annual meeting, Orlando, June 11.

Goodman KE. Ethics, technology and healthcare. Biotecnología, Genómica y Bioética, Sus Implicancias en Salud Publica, Pan American Health Organization and Hospital Clínico Universidad de Chile, Santiago, July 15 (in Spanish).

Goodman KW. Disability and guardianship in the post-Schiavo era. Invited keynote presentation, Florida State Guardianship Association, 18th Annual Conference, Doral, Fla., Aug. 6.

Goodman KW. Information, evidence and technological uncertainty: Implications for environmental ethics. Federación Latinoamericana y del Caribe de Instituciones de Bioética (FELAIBE), 5^o Congreso de Bioética, Panama City, Panama, Aug. 10.

Goodman KW. Public understanding of bioethics: Media successes, failures – and duties. Federación Latinoamericana y del Caribe de Instituciones de Bioética (FELAIBE), 5^o Congreso de Bioética, Panama City, Panama, Aug. 10.

Schneider J, Spike J, Goodman KW. Ethics and aging: Priorities for the 21st century. Florida Council on Aging annual meeting, Orlando, Aug. 24.

Goodman KW. Ethics and Medicaid planning. Florida Bar Elder Law Section annual retreat, Naples, Florida, Sept. 17.

Goodman KW. Medical futility. Baptist Health System Conversations in Ethics, South Miami Hospital, Sept. 30.

Goodman KW. The Terri Schiavo case. University of Miami Miller School of Medicine Department of Medicine Grand Rounds, Oct. 19.

Goodman KW. Secret science: Pressures to hide – and sell – drug research data. University of Miami Miller School of Medicine MD/PhD Program Grand Rounds, Nov. 10

2004

Goodman KW. Applying ethics in a real-life medical setting. Understanding the Law and Healthcare Decision Making: Could the Schiavo Case Happen to You? Sarasota County Bar Association, Sarasota, Fla., Jan. 10.

Barron TJ, Powers R, Goodman KW. Ethics, caregiving and the law. Florida Alzheimer's Summit 2004, Tallahassee, Feb. 5.

Goodman KW. Ethics in cancer care. Joint Cancer Conference of the Florida Universities, Orlando, Feb. 6. (And moderator, Workshop on Ethical and Complex Issues in Cancer Care.)

Goodman KW. Evidence, error, ethics: How science and morality intersect in clinical practice. American College of Medical Quality/American College of Preventive Medicine joint annual conference, Orlando, Feb. 20 (Nigel Roberts Award Lecture in Healthcare Ethics).

Goodman KW. The sad case of Terri Schiavo: Easy ethics, weird politics, faulty law. Keynote speech, Academy of Florida Elder Law Attorneys (AFELA), Fort Lauderdale, March 12; Tampa, March 13.

Goodman KW. Panelist, Research at international sites: Whose standards apply? Recognizing and Protecting Vulnerable Subjects: Theory, Practice and Compliance, U.S. Office for Human Research Protections (OHRP), Orlando, April 2.

Goodman KW. Panelist, Protecting the cognitively impaired research participant. Recognizing and Protecting Vulnerable Subjects: Theory, Practice and Compliance, U.S. Office for Human Research Protections (OHRP), Orlando, April 2.

Goodman KW. Bioterrorism, guest speaker, Public Health Policy, Ethics and Law, University of Pennsylvania School of Medicine, April 6.

Goodman KW. Ethical, legal and social implications of genetics. Genetics: The Health Care Genie Coming out of the Bottle, Nova Southeastern University College of Osteopathic Medicine, Master of Public Health Program, May 1.

Goodman KW. ID ethics: Treatment, genetics and public health. UM Infectious Diseases/HIV Grand Rounds, May 3.

Goodman KW. HIPAA as applied ethics. Bioethics in Contemporary Clinical Practice, Palm Beach County Legal Aid Society Bioethics Law Project, West Palm Beach, May 14.

Goodman KW. Ethics and patient records: making the most of outcomes research, error reduction and evidence-based practice; & Ethics and patient records: From HIPAA to decision support. Toward an Electronic Patient Record (TEPR) Annual Convention, Fort Lauderdale, May 20.

Goodman KW, Black K, Jackson MA. What the Schiavo case means to health care decision makers. Florida Council on Aging / Florida Conference on Aging, Miami, Aug. 31.

Goodman KW, small group leader, Prevention and Public Health Working Group business meeting, American Medical Informatics Association, San Francisco, September 9.

Goodman KW, panelist, Gender and role identity in IT design and use. International Medical Informatics Association, Medinfo, San Francisco, September 10.

Goodman KW. Trust me: New challenges in conflict, advocacy and social commitment. American College of Epidemiology Annual Scientific Sessions, Boston, September 13.

Goodman KW. Human suffering: Ethical, social and cultural considerations. Hospice of Naples, Naples, Florida, Oct. 9.

Goodman KW. Ethics and diversity. Miami Area Geriatric Education Center Ethno-Geriatrics Conference, Miami, Oct. 14.

Goodman KW. Ethical controversies in dermatology practice. Miami Society for Dermatology and Cutaneous Surgery, Miami, Oct. 21. (Lecture follows clinical rounds and case presentations.).

Goodman KW. Panelist, Law and ethics of bloodless medicine, International Symposium in Blood Management, UMSM, Miami Beach, Nov. 12

2003

Leon MB, Goodman KW. Conflicts of interest in the lab. 15th International Symposium on Endovascular Therapy, Miami Beach, Jan. 20.

Goodman KW. Ethics and evidence-based psychiatry. Masters of Psychiatry, Florida Psychiatric Society, Miami Beach, Feb. 23.

Goodman KW, with Trotter G and Middleton JR. Panel: Author meets the critics: *Ethics and Evidence-Based Medicine*. Association for Practical and Professional Ethics, 12th Annual Meeting, Charlotte, N.C., March 1.

Goodman KW. Training in ethics: A curricular requirement? American Gastroenterological Association Training Directors' Workshop, Advancing GI Fellowship Training, Chicago, March 23.

Goodman KW. ID Ethics: Genetics, Treatment and Public Health. UM Department of Medicine Division of Infectious Diseases Grand Rounds, March 25.

Goodman KW. Ética en investigación internacional. VIII Curso Internacional de Enfermedades Infecciosas, IX Seminario Integral del Sida, Corporación de Lucha Contra el Sida, Cali, Colombia, April 11.

Panelist. Orchestration of business and science in the public interest: Protection of patient rights when developing and testing new drugs. Association for Research in Vision and Ophthalmology Annual Meeting, Fort Lauderdale, May 5.

Goodman KW. Death, stroke and disability: Ethical issues in managing complexity and uncertainty. Annual Stroke Conference, South Miami Hospital and American Stroke Association, South Miami, May 16.

Facilitating expert, American Medical Informatics Association 2003 Spring Congress, "Bridging the Digital Divide: Informatics and Vulnerable Populations," Philadelphia, May 28-30.

Facilitator, U.S. Department of Health and Human Services, Developing a National Agenda for National Health Information Infrastructure, Privacy and Confidentiality Track, Washington, D.C, June 30-July 2.

Goodman KW. HIPAA. Florida Bar Elder Law Section 2003 Retreat, Duck Key, Florida, July 26.

Goodman KW. Technology and ethics, keynote presentation, Eighth Annual Community Bioethics Consortium, Panama City, Fla., Sept. 5.

Gertel A, Goodman KW, Singer G, Gyi F. Panel, Communicating science and medicine to the public: an ethics exploration of power and perception. American Medical Writers Association, 63rd Annual Meeting, Miami, Sept. 19.

Goodman KW. Ethics in Ob-Gyn. University of Miami Department of Obstetrics and Gynecology Grand Rounds, Sept. 18.

Goodman KW. Ethics issues in creating, using, studying and sharing patient registries. Impact of Genotyping Testing: Ethical, Legal, and Social Issues, Alpha-1 Foundation Gordon L. Snider Critical Issues Workshop Series No. 8, Coral Gables, Fla., Oct. 10.

Panel Moderator, Medical and ethical issues involved in aging, Florida Bar Continuing Legal Education Committee, Miami Lakes, Nov. 7.

Goodman KW. Informed consent and the role of IRBs. Arizona State University College of Law, guest lecture, "Bioethics and Genetics in an Intercultural Context" course, Prof. Joan L. McGregor, Nov. 19, 2003, Tempe, Ariz.

2002

Goodman KW. Ethics, law and policy: Sometimes there's no dilemma at all. Presentation, Florida Hospice and Palliative Care, 17th Annual Symposium, Orlando, Jan. 10.

Goodman KW. From Hippocrates to digital genetics. UM Masters of Pediatrics annual conference, Miami Beach, Jan. 19.

Goodman KW. Public health and bioterrorism: How can we prepare? Association of Subspecialty Professors Leadership Conference, Miami, Feb. 1.

Goodman KW. Ethical, legal and social issues in medical informatics. Visiting lecture, MINF 515, Oregon Health Sciences University, Portland, March 7.

Sponsored by the Harvard Program in Ethics and the Professions, Indiana University-Bloomington Chancellor, The Lilly Endowment and the Poynter Center, July 5-8, 1989.

Goodman, K. Kant's Categories as Semantic Primitives, presented to 34th Annual Conference of the International Linguistic Association, New York, April 18, 1989.

1987

Goodman, K. Theoretical Terms, presented to annual meeting of Florida Philosophical Association, St. Petersburg, Nov. 9, 1987.

VI. TEACHING

28. Teaching awards received

29. Teaching specialization:

2014

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2013

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2012

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2011

"Knowledge and Evidence in Medicine," University of Miami Department of Philosophy (spring)

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2010

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2009

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with D. Buckner), University of Miami Department of Medicine / medicine clerkship (all semesters).

2008

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with D. Buckner), University of Miami Department of Medicine / medicine clerkship (all semesters).

2007

"Computing Ethics," University of Miami Departments of Computer Science and Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with D. Buckner), University of Miami Department of Medicine / medicine clerkship (all semesters).

2006

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

Other: "Patient Safety Course," University of Miami School of Medicine, faculty member, "Error Disclosure and Patient Centeredness" lecture.

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2005

"Bioethics," University of Miami Department of Philosophy (fall).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2004

"Environmental Ethics," University of Miami Department of Philosophy (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2003

"Bioethics," University of Miami Department of Philosophy (spring).

"International Health Policy and Ethics" (with S. Porcelain), University of Miami School of International Studies (spring).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2002

"Professional Ethics," University of Miami Department of Philosophy (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Medical Ethics," University of Miami School of Medicine, co-design and coordinate new ethics curriculum.

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2001

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1999

"Ethics, Epidemiology and Public Health," University of Miami School of Medicine, Department of Epidemiology and Public Health (spring).

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1998

"Ethics, Epidemiology and Public Health," University of Miami School of Medicine, Department of Epidemiology and Public Health (spring).

"International Health Policy and Ethics" (with S. Porcelain), University of Miami School of International Studies (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1997

"Bioethics," University of Miami Department of Philosophy (spring)

"International Health Policy and Ethics" (with S. Porcelain), University of Miami Graduate School of International Studies (spring).

"Medical Informatics" (with others), University of Miami departments of Radiology and Electrical Engineering (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Ethics and Epidemiology," New England Epidemiology Institute and Tufts University, Medford, MA (summer).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

"Ethical Values in Health Care: Lessons from the Nazi Era," UM School of Medicine Senior Elective, with Drs. Michael Franzblau and Jeffrey Brosco.

1996

"Ethics and Epidemiology," University of Miami School of Medicine, Department of Epidemiology and Public Health (fall).

Dissertation Seminar, University of Miami Graduate School of International Studies (spring).

"Ethics and Epidemiology," New England Epidemiology Institute and Tufts University, Medford, MA (summer).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1995

"Health Care Reform: Policy, Structure, Ethics" University of Miami School of Nursing (fall and spring).

"Ethics and Epidemiology," University of Miami School of Medicine, Department of Epidemiology and Public Health (fall).

"Ethics and Epidemiology," New England Epidemiology Institute and Tufts University, Medford, MA (summer).

"International Health Policy and Ethics" (with S. Porcelain), University of Miami Graduate School of International Studies (spring).

"Professional Ethics," University of Miami Department of Philosophy (spring).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

1994

"Health Care Reform: Policy, Structure, Ethics" University of Miami School of Nursing (spring).

"Computers, Ethics and Society," University of Miami Freshman Seminar series (fall).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami School of Medicine, Department of Medicine / medicine clerkship (all semesters).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

1993

"Health Care Organization, Policy and Ethics," University of Miami Freshman Seminar series (fall).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami School of Medicine, Department of Medicine (all semesters).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

1992-present

"Clinical Ethics," (with others) University of Miami School of Medicine, Department of Medicine; third-year medical students on Medicine clerkship.

1991

"Professional Writing," Duquesne University Department of Communication (spring).

"Business Ethics," Duquesne University School of Business and Administration (summer).

1990

"Professional Writing," Duquesne University Department of Communication (fall).

1989

"Professional Writing," Duquesne University Department of Communication (fall).

1988

"Professional Writing," Duquesne University Department of Communication (fall).

1985

"Introduction to Logic," University of Miami College of Arts and Sciences, Department of Philosophy (fall, spring)

1984

"Introduction to Logic," University of Miami College of Arts and Sciences, Department of Philosophy (fall)

30. Thesis and dissertation advising/post-doctoral student supervision:

Wanda Castro, doctoral candidate, Epidemiology, 2006-2011; committee member
 Maritza Flores, doctoral candidate, Sociology, 2001-2003; committee member
 Jeremy Morris, doctoral candidate, Philosophy, 2006-2007; committee member
 Yvette Pearson, doctoral candidate, Philosophy, 2001-2002; committee member
 Nenad Popovic, doctoral candidate, Philosophy, 2005-2006; committee member
 Marguerite Purnell, doctoral candidate, Nursing, 2001-2003; committee member
 Ruben Rabinsky, NIEHS postdoc, 2001-2003; committee member
 Matthew Schuh, doctoral candidate, Philosophy, 2008; committee member

VII. SERVICE

31. University committee and administrative responsibilities:

Member, Academy of Medical Educators, 2012-present.

Member, UM College of Arts and Sciences graduate faculty, 2012-present.

Member, University of Miami Center for Computational Science, 2011-present.

Member, University of Miami Conflict of Interest Committee, 2010-present.

Member, University of Miami Task Force Committee, Civic Engagement Project, Office of the Senior Vice Provost, 2010-present.

Member, University of Miami Embryonic Stem Cell Research Oversight Committee, 2009-2011.

Member, Faculty Steering Committee, University of Miami Jay Weiss Center for Social Medicine and Health Equity, 2007-present.

Member, University of Miami Medical Group Clinical Operations committee, 2006-2009.

Member, University of Miami Faculty Senate Hearing Panel, 2004-present

Member, Jackson Memorial Hospital/UM HIPAA Steering Committee, 2001-2005.

Member, Responsible Conduct of Research Educational Initiative Committee, 2001-2005.

Member, University of Miami core faculty for Human Subjects Protection Seminars, 2001-present

Member, University of Miami Advisory Group for Education in Human Subjects Protections, 2001-2005.

Faculty Advisor, Ethics Society, UM undergraduate service organization, 1994-present.

Member, Bioethics Committee, University of Miami / Jackson Memorial Hospital, 1992-Present.
Chair as of July 2007.

Member, Pediatric Bioethics Committee, University of Miami / Jackson Memorial Hospital, 1992-Present.

Member, Jackson Memorial Hospital Transplant Center, Transplant Emergency Panel, November 2008-Present.

Member, Human Studies Subcommittee (IRB), Veterans Affairs Medical Center, Miami, 1992-2001.

Member, Ethics Committee, University of Miami Hospitals and Clinics/Sylvester Comprehensive Cancer Center, 1996-Present; vice chair, 2000-present.

Member, Fetal Board Registry, University of Miami Department of Obstetrics and Gynecology, 1993-1999.

Member, Medical Sciences Subcommittee for the Protection of Human Subjects (IRB), University of Miami/Jackson Memorial Hospital, 1994-2000; alternate, 2000-2003.

Director, Clinical and Research Ethics Education, University of Miami Hospital and Clinics / Sylvester Comprehensive Cancer Center, 1994-present.

Member, Steering Committee, University of Miami Medical Informatics Programs, 1995-1998.

Member, Steering Committee, Outcomes Research Group, 1996-1998.

Preceptor, Clinical Skills Program, University of Miami Department of Medicine, 1992-2000.

Member, Clinical Pastoral Education Professional Advisory Group, Jackson Memorial Hospital, 1993-Present.

Member, Animal Studies Subcommittee, Veterans Affairs Medical Center, Miami, 1994-Present.

Member, Animal Studies Subcommittee, University of Miami, 1994-Present.

Member, Computers in Medical Education committee for LCME accreditation, 1994.

Member, Information Systems Ethics Committee, Jackson Memorial Hospital, 1994-1996.

31a. Other Misc. UM/JMH/VA Contributions

2015

Goodman KW. Guest speaker. MD/MPH Class of 2018 Anatomy Rose Ceremony, UM Miller School of Medicine, May 18.

Goodman KW. Ethics and leadership. Leadership Development in Neurodevelopmental Disabilities (LEND) Project, UM Miller School of Medicine, Department of Pediatrics, May 15.

2014

Goodman KW. Ethical issues in academia. Faculty Roles and Responsibilities, University of Miami School of Nursing and Health Studies, January 8.

2013

Goodman KW. Access to health care: how ethics should influence public policy. Friends of Philosophy, UM Department of Philosophy, February 13.

Goodman KW. Strategic data sharing by ordinary people: Translational science's reliance on trust and reciprocity. Miami CTSI Translational Science Institute Seminar Series, November 20.

Goodman KW. Ethics, translational science and the IRB: The future is (still) not what it used to be. IRB Grand Rounds, University of Miami, December 10.

2012

Panelist, Miami Council for International Visitors and U.S. Department of State, delegation from Zambia on media freedom, licensing of journalists, etc. UM School of Communication, March 8.

Moderator, HealthCanes, presidential debate, Oct. 1.

2011

Goodman KW. Ethics and translational research: New challenges in genetics, public policy and health information technology. Miami Clinical and Translational Science Seminar Series, UM Miller School of Medicine, November 9.

Goodman KW. Conflicts of interest. UM Miller School of Medicine, Teaching Professionalism Series, March 7.

Goodman KW Ethics in cancer care. Surgical oncology fellows, SCCC, June 8.

2010

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 28

Goodman KW. Wireless pediatrics: Ethics and the role of personal health records. Clinical Research Forums in Pediatrics, UM Division of Pediatric Clinical Research, March 3.

2009

Panelist, of 5. Brands, cultures and globalization. University of Miami School of Business Global Business Forum, January 16.

Goodman KW. Pediatric contributions to biobanks. Clinical Research Forums in Pediatrics, Division of Pediatric Clinical Research, UM Miller School of Medicine, January 28.

Goodman KW. Ethics and Information Technology. Department of Electrical and Computer Engineering Seminar Series, University of Miami College of Engineering, February 4.

Panelist, of 5. Academic Integrity Forum. University of Miami Undergraduate Honor Council, April 15.

Special seminar for Kenyan and other journalists specializing in HIV and medical reporting, on ethics and science writing, UM School of Communication, April 29.

Goodman KW. Stanford Food for Thought Dinner Series, Stanford Residential College, Nov. 9.

Goodman KW. Awkward research: sects, sex and drugs. UM Human Subjects Protection Seminar, Nov. 10.

2008

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 24.

Goodman KW, Wilkinson JD, Pericak-Vance M. Ethics and genomics panel. 34th Eastern-Atlantic Student Research Forum, UM Miller School of Medicine, Feb. 29.

Goodman KW. Digital genetics and the future of pediatrics: The role of ethics. UM Department of Pediatrics Clinical Research Forum, March 5.

Panelist, of 5. Global Climate Change: Your Health. (National Public Health Week activity.) UM Department of Epidemiology and Public Health, April 7.

Panelist, of 4. Climate change projections: Communicating uncertainty without losing the message. Rosenstiel School of Marine and Atmospheric Sciences, May 8.

Goodman KW. Stem cell research: Issues in ethics, science and public policy. Osher Lifelong Learning Institute, September 24.

2007

Panel discussion on codes of ethics in public relations. With International Public Relations Association President Philip Sheppard; Jay Black, Poynter Jamison Media Ethics Chair, University of South Florida-St. Petersburg; and Roger Bolton, President of the Arthur W. Page Society. Feb. 20, UM School of Communication.

Goodman KW. Moral responsibility of Holocaust/Legacy Project survivors, JUS421 (M. Sokoloff), April 12.

Panel, Academic Integrity, with Anita Cava, co-director, UM Ethics Programs, and Katie Meier, UM women's basketball coach. Undergraduate Honor Council, Academic Integrity Week, April 17.

Goodman KW. Conflict and consent: Managing disclosure in human subjects research. UM HSRO Human Subjects Research Symposium, May 11.

Goodman KW. Clinical and research ethics. Core Curriculum for Oncology Fellows. Sylvester Comprehensive Cancer Center, Aug. 7.

Cava A, Goodman KW. Community academic expectations. Graduate Student Orientation, Coral Gables, Aug. 16.

Goodman KW. STRIVE student group leadership facilitator, Coral Gables, Oct. 7.

Goodman KW. Ethics and leadership. Freshmen Leadership Academy, Butler Center for Volunteer Service & Leadership Development, Coral Gables, Oct. 15.

2006

Presentation to International Commission on Holocaust Era Insurance Claims (ICHEIC) Service Corps, Miller Center for Contemporary Jewish Studies, April 10.

Presentation to Department of English, Prof. Johanna Johnson, composition.

2005

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 27.

Goodman KW. Ethics in plastic and reconstructive surgery, UM Department of Surgery, Division of Plastic and Reconstructive Surgery, May 18.

Goodman KW. Error disclosure and patient centeredness. UM Department of Anesthesiology, June 7.

Goodman KW. Research or surveillance? The case of bioterror preparedness. UM Human Subjects Research Forum, August 30.

Goodman KW. The role of ethics in Sponsored Programs. UM Sponsored Programs Education Center, Dec. 15.

2004

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 22

Goodman KW. The Terri Schiavo tragedy and the use of ethics committees. Ryder Trauma Center TICU nurses, Feb. 10.

Goodman KW. What IRBs need to know about evidence-based practice. UM Human Subjects Research Forum, March 30.

Goodman KW, panelist, Ethics, Reporting and Politics, UM School of Communication and South Florida chapter, Society of Professional Journalists, UMSoc, April 27.

Goodman KW . Questions of ethics. Atlanta Hurricane and Alumni Club, Atlanta, May 5.

Goodman KW. Ethical issues in HIV/AIDS. Visiting speaker, AIDS as a Public Health Issue (EPH583), Department of Epidemiology and Public Health. July 12

Goodman KW. Some ethical issues in hematology/oncology. SCCC didactic conference, July 14.

Goodman KW Research ethics and integrity. UM Department of Dermatology & Cutaneous Surgery, Aug. 27.

Goodman KW. Think about it, talk about it: A discussion on ethics. UM Honor Council, Nov. 17.

Goodman KW. Bioethics and nursing practice. UM Professional Development and Training Office, Dec. 16.

2003

Goodman KW. Ethics and education research II. UM School of Education, Center for Research, January 29.

Panelist. Oceans and Human Health: Risks and remedies from the sea, Town Meeting, National Institute for Environmental Health Sciences and UM Rosenstiel School of Marine and Atmospheric Sciences, Key Biscayne, Feb. 27.

Goodman KW. Foundations of ethics. UM Department of Orthopaedics and Rehabilitation, residents' rounds, March 20.

Panelist. Artificial Intelligence: Ambition and Ethics. UM Solutions and Ethics Society student groups. March 27.

Goodman KW. Do-not-resuscitate orders – and issues. Sylvester Comprehensive Cancer Center nursing staff, April 29.

Goodman KW. Legal issues in end-of-life care, Sylvester Comprehensive Cancer Center EPEC series, June 24.

Goodman KW. Ethics and evidence-based practice. VAMC Miami Medical Center, Research Committee for Nursing, An Evidence-Based Practice, Dec. 4

2002

Panelist, Solutions 2nd Annual Interdisciplinary Symposium, "Science: The Double-Edged Sword," with Luis Glaser, Joyce Schuld, and David Wilson, with Asma Uddin moderating, March 2.

Goodman K, Making sense of consent: Readability, comprehension and the consent process. Office of Research IRB human subject protection/IRB series, March 26.

Goodman K, Evidence-based practice and human subjects research: Oh, great: More stuff for IRBs to have to worry about. Office of Research IRB human subject protection/IRB series, April 9.

Goodman K. Death and dying. Department of Surgery, Division of Trauma/Surgical Critical Care, April 26.

Goodman K. Discussant, "Local growth coalitions, environmental groups and air pollution," by George Gonzalez, American Politics Research Workshop, UM Political Science Department, May 15.

Goodman K. Ethics-schmethics – or practical strategies for IRB review? UM IRB "A," June 17; "B," Aug. 5.

Goodman K. Intro to ethics. Research in Ecology 2002, a UM-Miami-Dade County Public Schools program, under a Howard Hughes Medical Institute grant, Aug. 1.

Goodman K. Death, dying and ethics in pediatrics, UM/JMH Pediatric Noon Conference, Aug. 5.

Goodman K. Questions of ethics, The Audrey R. Finkelstein Experience, Alumni Week, Oct. 11.

Goodman K. What HIPAA will mean for IRBs and researchers. VAMC Miami, Research: Stimulus for Change, Nov. 8.

Sandoval C, Goodman K. Physician-assisted suicide, EPEC Series, UMHC/SCCC, Dec. 17.

2001

Panelist, "En/gendering Sex, Session III: Testing women: Sex and gender in the lab," Solutions student group, April 11.

Goodman KW. Stem cells: Ethical, legal and policy issues. UM Institute for Retured Professionals, Oct. 4.

Goodman KW. End-of-life ethical issues. Jackson Memorial Hospital Clinical Pastoral Education Program, Nov. 13.

Goodman KW. Ethical issues in use of animal models in surgical procedures. VAMC Animal Studies Training Workshop, Nov. 29.

Panelist, "Ethical dimensions of the post-September 11 milieu," UMSM Council on Honorable and Professional Conduct, Dec. 11.

Goodman KW. Policy, justice and international studies: Why ethics matters and why you should care, commencement address, UM School of International Studies, Dec. 13.

2000

Goodman K. Ethics: Why it matters, what it's good for and why you should care. Family Weekend 2000, Department of Student Life, Coral Gables, Oct. 6.

Panelist, "Animal Rights," Humans Helping Animals student group, Coral Gables, Nov. 15.

32. Community activities:

2013

Goodman KW. What would you do? Everyday ethical dilemmas. JFK Medical Center, Challenges for the Hospital Ethics Committee, Atlantis, Florida, October 18.

Goodman KW. DNR vs. AND. Vitas Hospice Corp. Fort Lauderdale, October 18.

2012

Goodman KW. Advance directives and the Florida journey. Integrating Advance Directives, Mercy Hospital, Miami, October 27.

Goodman KW. Dying is not what it used to be: Ethics, technology and the role of the courts. Dade County Bar Association Probate and Guardianship Committee, December 6, Miami.

2010

IN THE CIRCUIT COURT OF THE SECOND JUDICIAL CIRCUIT
IN AND FOR LEON COUNTY, FLORIDA

<p>GAINESVILLE WOMAN CARE LLC et al.,</p> <p style="text-align: center;">Plaintiffs,</p> <p>v.</p> <p>STATE OF FLORIDA et al.,</p> <p style="text-align: center;">Defendants.</p>	<p>Case No. _____</p> <p style="text-align: center;">DECLARATION OF SHEILA KATZ</p>
---	--

I, Sheila Katz, am over 18 years of age and declare and state the following:

A. Qualifications for Expert Testimony

1. I am an Assistant Professor of Sociology at the University of Houston, in Houston, Texas. My areas of expertise include gender, poverty, and social policy.

2. I joined the faculty at the University of Houston in August 2014. Previously, I worked for six years as a professor at Sonoma State University in Rohnert Park, California, and I received tenure there in May 2014. I earned my MA and PhD in Sociology from Vanderbilt University. I earned my B.A. in Sociology and Women's Studies from the University of Georgia. For the last fifteen years, I have conducted research on poverty, women's economic status, and social policies at the state and federal level in the United States.

3. I have published on these topics in sociology and poverty journals, and I am finishing a book manuscript on my research in this area. I have presented my research at numerous professional conferences and given expert testimony on these issues to the United States Congress in 2005, 2006, and 2011. In 2011, I was named an "Emerging Scholar" in poverty and welfare research by the Department of Health and Human Services and received

two national grants to support my work in this area from the National Poverty Center and the National Science Foundation. I serve on several national research and poverty advisory committees, where I work with other scholars on these issues. Recently, I have become involved with the Persistent Poverty in the South Project, a project of the Southern Sociological Society that examines persistent poverty in the South, including in Florida.

4. I have given prior expert testimony regarding the effects of abortion restrictions on women living in poverty. *See Planned Parenthood Se., Inc. v. Strange*, 33 F. Supp. 3d 1381, 1395 (M.D. Ala. 2014) (finding my testimony “credible and helpful in understanding the effects of the law on women seeking abortions”); *see also June Medical Servs. v. Kliebert*, No. 14-cv-00535-JWD-RLB (M.D. La. Apr. 1, 2015) (denying motion to exclude my expert testimony). I submit this declaration as an expert in issues facing women living in poverty in the United States.

5. My *curriculum vitae*, which sets forth my experience and credentials in greater detail and contains a full list of my publications, is attached to my declaration. All of my opinions in this declaration are stated to a reasonable degree of professional certainty.

B. Effects of the Act on Low-Income Women in Florida

6. I understand from Plaintiffs’ counsel that Florida House Bill 633, codified at Florida Statutes § 390.0111 (“the Act”)—the law at issue in this case—would require all Florida women to make an additional visit to a doctor at least twenty-four hours before their appointments, in order to secure an abortion. I further understand that the only exceptions from this waiting period are for victims of abuse who have previously reported that abuse to the police or other authorities or for women whose pregnancies create life-threatening emergencies.

7. Through my research, I am familiar with the barriers to seeking medical services faced by low-income women. It is my belief that the Act will cause particular harm to low-income women in Florida. The Act will increase the time, money, and labor required to obtain an abortion in Florida—resources that low-income women lack. This harm is particularly concerning both because most women who seek abortions are low-income, as defined as living at or below 200% of the federal poverty level, and because of the high levels of deep and persistent poverty in Florida. In order to overcome these obstacles, women will resort to dangerous means to get the money necessary to cover the costs of obtaining abortions, where they are able to obtain them at all.

C. Women and Poverty in Florida

8. Florida has a higher poverty rate than the nation as a whole. According to 2013 estimates from the Census Bureau, 17% of people in Florida are at or below 100% of the federal poverty level, compared to 14.5% of those in the nation as a whole. In general, women tend to be poorer than men, and the same is true in Florida, where women have a higher poverty rate (18%) than men (16%).¹ Based on data from the American Community Survey for the last twelve months, over a million women (1,037,524) between the ages of 16 and 64 live below the federal poverty line in Florida. Of people below the poverty level in Florida, 54% are women and 46% are men.²

¹ *Poverty, 2013 Highlights*, U.S. Census Bureau, www.census.gov/hhes/www/poverty/about/overview (last visited June 4, 2015); *Poverty Status in the Past 12 Months, 2013 American Community Survey 1-Year Estimates*, U.S. Census Bureau, <http://factfinder2.census.gov/faces/nav/jsf/pages/searchresults.xhtml?refsh=t> (last visited June 4, 2015) (enter “Poverty Status in the Past Twelve Months 2013 ACS 1-Year Estimates” and “Florida”).

² *Easy Stats, Poverty Status in the Past 12 Months*, U.S. Census Bureau, <http://www.census.gov/easystats> (last visited June 4, 2015) (select “Florida,” “Financial,” “Poverty Status in the Past 12 Months by Sex by Age” (calculated)).

9. In order to understand women's poverty in Florida, and the effect it has on women's lives and those of their families, it is also important to look at child poverty in the state. Many women who live in poverty have children; additionally, most women seeking abortions already have children.³ In Florida, 38.7% of families headed by single mothers with dependent children live at or below the federal poverty threshold, according to the American Community Survey.⁴ Florida has 588,000 families with children under the age of eight that live below the poverty line; for 49% of children in those low-income households, no adult in the household has full-time, year-round employment.⁵ Florida ranks 37th in the nation in child poverty, and nearly one in four Florida children, or 24.5%, live in poverty.⁶ Nearly half of those, or 10.4% overall, live in deep poverty, below 50% of the federal poverty line.⁷

10. The federal poverty line, used to count people who live in poverty in the United States, is defined by the Department of Health and Human Services as a single person who makes less than \$11,770 per year, with an additional \$4,160 per year for each additional member of the household.⁸ The federal poverty level, although used in many statistics, is

³ Rachel K. Jones et al., Guttmacher Inst., *Characteristics of U.S. Abortion Patients, 2008* 8 (2010), <http://www.guttmacher.org/pubs/US-Abortion-Patients.pdf> (about 61% of abortions are obtained by women who have one or more children).

⁷ *Selected Characteristics Of People At Specified Levels Of Poverty In The Past 12 Months, 2009-2013 American Community Survey 5-Year Estimates*, U.S. Census Bureau, <http://factfinder2.census.gov/faces/nav/jsf/pages/searchresults.xhtml?refresh=t> (last visited June 4, 2015) (enter "Selected Characteristics of People at Specified Levels of Poverty 2013 ACS 5-Year Estimates" and "Florida").

⁸ *2015 Poverty Guidelines*, U.S. Dep't of Health & Human Servs., <http://aspe.hhs.gov/poverty/15poverty.cfm> (last visited June 4, 2015).

generally considered an inadequate measure of poverty in the United States. The guideline is based on a formula from the 1960s that assumes that families spend approximately one-third of their budget on food, which is no longer the case amid rising costs for housing and transportation. The guideline also does not take into account other costs that most families pay, such as childcare, medical expenses, utilities, and taxes. Some federal, state, and local social programs recognize that this guideline is too low, and set eligibility requirements at 125, 150, or 200 % of the guideline. For a family of three, a single mother and two children, those amounts would be \$24,737 (at 125%), \$29,685 (at 150%), and \$39,580 (at 200%) respectively. Research shows that even families who are making more than twice the federal poverty level still have trouble making ends meet and paying for basic expenses.⁹ In Florida, 34.8% of residents, or over seven million people, live under 200% of the federal poverty threshold.¹⁰

11. The amount needed to maintain a minimally self-sufficient standard of living in Florida is closer to at least twice the amount of the federal poverty threshold. For example, the 2014 fair market rent in Gainesville, as designated by the Department of Housing and Urban Development, is \$695 for a one-bedroom apartment and \$883 for a two-bedroom apartment.¹¹ If a woman in Gainesville is working full time at the Florida minimum wage, her annual earnings are approximately \$15,400 (\$1,288/month), which is just above the federal poverty threshold if no one else lives in her household, and below the poverty line if

⁹ Gregory Acs & Pamela Loprest, *Who are Low-Income Working Families?*, The Urban Institute (Sept. 2005), http://www.urban.org/UploadedPDF/311242_working_families.pdf.

¹⁰ *Poverty Status in the Past 12 Months, 2013 American Community Survey 1-Year Estimates*, *supra* note 1 (calculated).

¹¹ *Fair Market Rent (FY 2015) and Income Limit (FY 2015) Summary System*, U.S. Dep't of Hous. & Urban Dev., http://www.huduser.org/portal/datasets/fmr/fmr_il_history/select_Geography.odn (last visited June 4, 2015) (Select "Gainesville, FL MSA" from "FY Metropolitan FMR Area" Menu).

she has any children. Her housing cost is 54% of her monthly income for a one-bedroom apartment, and 69% of her monthly income for a two-bedroom apartment. It is thus no surprise that the Children’s Defense Fund reported that “in 2014 more than 2 full-time minimum wage jobs are necessary to be able to afford a fair market rent two-bedroom apartment in Florida and still have enough left over for food, utilities, and other necessities.”¹² It is thus important in considering the effects of the Act on “low-income women” that we include women living at up to 200% of the poverty line.

12. In understanding the effects of the Act, it is also important to consider those people who live in deep or persistent poverty. Seven percent of Floridians live below 50% of the poverty line, characterized as “deep poverty” by those that study the issue.¹³ These households tend to be clustered together in pockets of deep poverty, whether in the urban inner city or in a rural county.

13. Indeed, Florida has four rural counties that are defined as having “persistent poverty.” Persistent poverty is defined as a county where the poverty level has been above 20% at each of the last four censuses (1980, 1990, 2000, and 2010).¹⁴ Those four counties are Alachua (where Plaintiff Bread and Roses is located), Hamilton, Hardee, and Madison.¹⁵ Women living in deep or persistent poverty are at the greatest risk of injury from the Act

¹² *The State of America’s Children 2014, Children in the States, Florida*, Children’s Defense Fund (May 6, 2014), <http://www.childrensdefense.org/library/data/state-data-repository/cits/2014/2014-florida-children-in-the-states.pdf>.

¹⁴ *Rural Poverty and Well-being*, U.S. Dep’t of Agric., Econ. Research Serv., <http://www.ers.usda.gov/topics/rural-economy-population/rural-poverty-well-being/geography-of-poverty.aspx> (last updated May 18, 2015)

¹⁵ *Persistent Poverty Counties Data Set*, U.S. Dep’t of Agric., Econ. Research Serv., http://www.ers.usda.gov/dataFiles/County_Typology_Codes/PersistentPovertyCounties.xls (last updated May 18, 2015).

because they have the least access to transportation or child-care and the largest psychological hurdles to travelling to a provider.

D. Poverty and Abortion

14. Approximately 13% of women of reproductive age below the poverty line will have an unintended pregnancy in a year, versus 9% of women between 100% and 200% of poverty and 2.4% of women above 200% of poverty.¹⁶ Thus, a woman below 100% of the poverty line is over five times more likely to experience an unintended pregnancy than a woman who is above 200% of the poverty line.

15. Nationally, in 2008, 42% of women having abortions in the United States had incomes below the federal poverty level, and another 27% had incomes below 200% of the federal poverty level.¹⁷ However, I would expect these percentages to be greater in Florida. Given the high rate of poverty in Florida, it is likely that the overwhelming majority of abortion patients in Florida are below 200% of the federal poverty level.

E. Effects of the Act

16. While the Act's unnecessary requirements are burdensome for any woman, low-income women can ill afford the additional costs associated with an extra trip, given how tight their budgets already are.

17. For instance, for those low-income women who are employed, a missed shift of work may be a serious barrier in obtaining an abortion. The Act, which requires an additional trip to a health-care provider, will require a woman to take an additional day off work and travel to her nearest provider. Low-wage workers often have no access to paid time

¹⁶ Lawrence B. Finer & Mia R. Zolna, *Unintended Pregnancy in the United States: Incidence and Disparities*, 84 *Contraception* 478, 483 (2011), <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3338192/>.

¹⁷ Jones et al., *supra* note 3, at 6.

off or sick days. According to the Institute for Women's Policy Research, 41% of working parents at or below 200% of the poverty line have no access to paid sick leave, vacation days, personal days, or any other form of compensated leave.¹⁸ Even seeking uncompensated time off can be a struggle for low-wage workers, who often have less autonomy in setting their work schedules than other workers. Because so much low-wage work is considered unskilled, workers can be replaced easily and may face termination if they insist on taking time off on a particular day. Many jobs that low-income workers have are shift-based and therefore may not allow for missing only an hour or two of work. Also, many employers require workers to disclose the reason why they are taking time off, especially for more than one day in a row or very close together. The additional time off required by the waiting period may make it difficult for a low-income woman to keep her abortion confidential from her supervisor or other employees.

18. If a low-income woman is able to get time off from work, she is likely to forgo wages. The mean hourly wage in Gainesville for servers, a common low-wage occupation for women, is \$8.89.¹⁹ Taking off an additional eight-hour shift will cost her \$71.12, more than 1/10 her monthly rent if she lives in a one-bedroom apartment.

19. Many women may also have to travel to reach their nearest providers; doubling these travel costs will also be significant, both in terms of monetary cost and added obstacles. Low-income women are far more likely to use public transportation as their primary source of

¹⁸ *An Introduction to Paid Time Off Banks*, Inst. for Women's Policy Research (June 20, 2012), <http://www.iwpr.org/blog/2012/06/20/an-introduction-to-paid-time-off-banks>

¹⁹ *May 2014 Metropolitan and Nonmetropolitan Area Occupational Employment and Wage Estimates, Gainesville, FL*, U.S. Dep't of Labor, Bureau of Labor Statistics, http://www.bls.gov/oes/current/oes_23540.htm (last modified Mar. 25, 2015).

transportation than any other sector of the population.²⁰ Many low-income women in Florida do not own or have access to cars. At a national level, as of 1995, a quarter of low-income families, and a third of low-income families headed by single parents were without a private car, versus only 4% of other families. And in those low-income households that have cars, these cars are more likely to be shared among adults.²¹

20. Around sixty percent of women who obtain abortions have previously had at least one child.²² For many low-income women, then, requiring an additional trip to seek an abortion will require paying for an additional day of childcare. Some women may instead leave their children in the care of a trusted family member or friend. This still often involves additional costs to meet the child's needs outside of the home, as that caretaker is likely low-income herself and will need some payment to cover food and other costs for the children. Having to ask a family member or friend for more than one day of child care in order to obtain the abortion could require a woman to disclose why she needs that care, making it more difficult for a low-income woman to keep her abortion confidential. And for many low-income women, there may not be a friend or relative they are able to trust to take care of their child.

21. Because of these burdens, I think it is likely that many low-income women will not be able to schedule two appointments at an abortion provider precisely twenty-four hours apart. Instead, they will likely have to wait a week or more to find another day for which they can arrange for time off work and/or childcare and transportation to the provider. I believe

²⁰ Am. Pub. Transp. Ass'n, A Profile of Public Transportation Passenger Demographics and Travel Characteristics Reported in On-Board Surveys, (2007), http://www.apta.com/resources/statistics/Documents/transit_passenger_characteristics_text_5_29_2007.pdf.

²¹ Elaine Murakami & Jennifer Young, *Daily Travel by Persons with Low Income* (Nat'l Pers. Transp. Survey Symposium, Oct. 26, 1997), <http://nhts.ornl.gov/1995/Doc/lowinc.pdf>.

²² Jones et al., *supra* note 3.

the Act will likely cause some low-income women to delay obtaining their abortions, potentially by significant amounts of time. Because delay increases the cost of an abortion, its effects can be cascading: a woman who has to wait an extra week because she can't string together two days off work may in doing so find her abortion now costs an extra \$100, meaning she must wait another week to save up the money, and so on.

22. In order for a low-income woman to afford the additional costs associated with the new law, she would have to make financial sacrifices and hard decisions. I know from my own research with low-income women and review of the extensive literature on the subject that when emergencies or additional necessary expenses occur in their lives, low-income women attempt to meet those expenses in three primary ways. First, they make sacrifices in other areas, usually by not paying rent or utilities, or by drastically reducing their food budgets and going hungry. This jeopardizes their health and well-being, or their housing situation, as well as that of their children and families. A second strategy is using payday loans or other predatory lending practices, incurring high interest rates and fees that compound costs exponentially. The third strategy can be more dangerous. Some low-income women may be lucky enough to know a trusted friend with the discretionary income to loan her the tens or hundreds of dollars needed for the months or years it may take her to pay it back, but many are not. Instead, they may borrow that money from a boyfriend or partner, even if they are no longer together or even if he was abusive. Given the high rate of domestic violence among low-income women, this strategy can be extremely dangerous.²³

23. These tangible costs make clear why an extra trip to an abortion provider and a waiting period of at least 24 hours impose significant harms on low-income women. The Act

²³ Martha Davis, *The Economics of Abuse: How Violence Perpetuates Women's Poverty in Battered Women, Children, and Welfare Reform* 17 (Ruth Brandwein ed., 1999).

also imposes a serious intangible cost. Research has shown that the predominant experience low-income women have with their employers and social service workers is distrust emanating from those authorities, and that the resulting social-psychological injury of feeling distrusted makes it much harder for women to find routes out of poverty through work or welfare.²⁴ In these interactions, even genuinely benevolent advice can be taken as a critique. A similar dynamic can come into play with abortion restrictions, particularly where a hostile climate begins to emerge that tells women that the state does not trust their choices. The Act does just that: by telling a woman she must observe a waiting period the state deems necessary before getting the abortion she has already decided she needs, the Act imposes this kind of social-psychological injury on women, particularly low-income women who experience that dynamic in other parts of their lives.

F. Conclusion

24. Ultimately, the Act will cause harm to thousands of low-income women in Florida who will experience serious increased costs relative to their incomes in seeking abortion care and who will be told that their choices are not trusted by the state. I also believe that the Act, by harming low-income women and forcing them to make sacrifices in order to be able to afford safe, legal abortion care, will harm Florida children and families.

CV of Sheila Katz

Sheila M. Katz, Ph.D.

Department of Sociology, University of Houston
4800 Calhoun, 450 Phillip G. Hoffman Hall
smkatz@uh.edu 713-734-1918

CURRENT ACADEMIC POSITION

2014-present Assistant Professor, Department of Sociology, University of Houston, Houston, TX

- Teach 2 sociology courses a semester (6 units), with 50% time on research and publication expectations, and also service to department, profession, university, and community.

PREVIOUS TENURE-TRACK POSITION

2008-2014 Assistant Professor, Sociology Department, Sonoma State University, Rohnert Park, CA

- Taught 3 sociology courses (12 units) a semester with liberal arts focus, advising load of 100 students, active research agenda, service to university, profession, and community.
- Tenure and promotion to Associate Professor awarded May 2014.

EDUCATION

- 2008 Ph.D. Sociology, Vanderbilt University, Nashville, TN
Dissertation Title: *Pursuing a 'Reformed' Dream: CalWORKs Mothers in Higher Education after "Ending Welfare As We Know It"* Dissertation Committee: Karen Campbell (Chair), Laura Carpenter, Daniel Cornfield, and Brooke Ackerly.
- 2001 M.A. Sociology, Vanderbilt University
Passed Master's Comprehensive Exams in January 2000
Concentration on effects of gender, class, and race on education
- 1998 B.A. Sociology with Women's Studies certificate, University of Georgia
Senior Thesis: "Acquaintance Rape on a Southern Campus"
Study Abroad: Two semesters at Richmond College, London, England

RESEARCH AND TEACHING INTERESTS

Gender/Class/Race, Poverty, Social Policy, Social Problems, Qualitative Methodologies, Sociology of Education, Inequalities, Violence Against Women, Sociology of Drugs.

CURRENT RESEARCH PROJECTS

CALWORKS AND HIGHER EDUCATION STUDY (CHES)

Longitudinal qualitative research with mothers on welfare in the San Francisco Bay Area enrolled in higher education programs. Data was collected in three waves: 2006, 2008, 2011 with a 78% retention rate: 35 of the original 45 participants completed interviews in 2011. Project explores the experiences of single mothers pursuing higher education on TANF before, during, and after the "Great Recession," the role of grassroots advocacy organizations, and policy issues for TANF reauthorization. Received external funding from the National Science Foundation in 2007 (\$7500) and the National Poverty Center (\$11,700) in 2011 and internal funding from the University of Houston, Sonoma State University and Vanderbilt University.

KEYS TO SUCCESS: STUDENT PARENTS ON CAMPUS (SPOC)

Research project and manuscript in progress, *Supporting Student Parents on Campus From Baby Boomers to Millennials: History and Best Practices for Helping Student Parents Succeed in Postsecondary Education*, co-authored with Dr. Autumn Green (Endicott College), about the history, development, and best practices of programs that serve college student who have children. The book will be co-researched and co-written by the lead authors, but chapters may also include segments or contributions from various student parent programs highlighted in the book. The project is a multi-site ethnographic study of programs throughout the United States that serve student who have children, with a sociological and best practices

lens on the issues. The programs studied include those that are institutional (located at colleges and universities), nonprofit community based organizations, cross-sector collaborations, and governmental programs.

AMERICAN DREAMS OF INEQUALITY

Lead co-editor on the American Dreams of Inequality reader for advanced undergraduate students in sociology, American Studies, and related disciplines. The edited volume explores the historical and theoretical perspectives on the American Dream, and the current research about the American Dream for low-income, working class, middle income, and wealthy families; as well as the role that housing, celebrity culture, sexual orientation, and immigration play on the American Dream. The project is a co-edited work with Dr. Robert Hauhart and Dr. Jeff Torlina.

STUDENT PARENT SURVEY

The first national project to survey the needs and experiences of students who are also parents. SSU was the first university in the country to launch the survey, a project of the Institute for Women's Policy Research (IWPR)'s Student Parent Success Initiative. The survey explores the challenges of being a student and a parent, the effectiveness of campus resources, and ways that SSU or other universities can better serve student parents. 122 completed surveys collected, 106 of them current SSU students, a 45% response rate. www.sonoma.edu/newscenter/2014/02/ssu-is-first-in-us-to-launch-national-student-as-parents-survey.html

TEACHING EXPERIENCE

COURSES TAUGHT AT THE UNIVERSITY OF HOUSTON (2014-PRESENT)

- Soc 3346: Qualitative Research Methods (Fall 2014, Fall 2015)
- Soc 3390: Sociology of Gender (Spring 2015, Fall 2015)
- Soc 6390: Graduate Seminar in Sociology of Gender (Fall 2014)
- Soc 6311: Graduate Seminar in Sociology of Poverty (Spring 2015)

COURSES TAUGHT AT SONOMA STATE UNIVERSITY (2008-2014)

- Soci 201: Introduction to Sociology: Fall 2013; 3 unit lower-division GE area D-1 course, large format course with 200 students.
- Soci 375: Classical Sociological Theory: Fall 2008, Spring 2009, Spring 2010, Fall 2010, Fall 2011, Fall 2012; 4 units, 30 students, Sociology majors/minors and GE D-1 course.
- Soci 443: Methods Seminar: Women and Social Policy (Focus Groups method): Spring 2009, Spring 2010, Fall 2010, Fall 2011, Fall 2012, Spring 2013; 4 units, 25 students, Sociology majors, second methods course in a three-course sequence.
- Soci 498: Senior Research Seminar, Topic: The American Dream (Soci 498): Fall 2009, Spring 2011, Spring 2012, Spring 2014; 4 units, 20 students, third required methods course in a three-course sequence, Capstone course for Sociology majors.
- Soci 312: Sociology of Gender: Fall 2008, Fall 2009, Spring 2012; 4 units, 40 students, Sociology majors/minors, cross-listed with Women and Gender Studies.
- Soci 306: Careers in Sociology: Fall 2009, Fall 2010, Spring 2012, Spring 2013, Fall 2013; 4 units, 40 students, Sociology majors/minors.
- Soci 340: Drugs and Society: Fall 2008, Spring 2009, Summer 2009, Spring 2010, Summer 2010, Fall 2011, Fall 2012, Spring 2014; 4 units, 40 students, Sociology majors/minors, cross-listed with Criminology and Criminal Justice Studies.
- Soci 496: Internship Practicum and Internship Coordinator: Spring 2010 and Spring 2013; 1 unit, 15 students per section, 2 sections offered at a time, Sociology majors/minors.

EXPERT WITNESS REPORTS, DEPOSITIONS, AND TRIAL TESTIMONY

- Center for Reproductive Rights consultant in the case: June Medical Services LLC, et al., Plaintiffs, v. Kathy Kliebert, et al., Defendants. Civil Action No. 3:14-CV-525-JWD-RLB in the United States District Court for the Middle District of Louisiana. Researched and wrote expert witness report, researched and wrote a rebuttal report to other expert witnesses, and gave live deposition and will give trial testimony about women's poverty in Louisiana and the impact of Louisiana's HB 388 on low-income women's access to reproductive health services for the plaintiffs. Reports submitted to the court in December 2014, deposition given in Miami, FL in January 2015, trial testimony in June 2015.
- Planned Parenthood National consultant in the case: Planned Parenthood Southwest Ohio Region vs. Richard Hodges et al., in the United States District Court for Southern District of Ohio Western Division. Case No. 1:14-cv-867. Researched and wrote expert witness declaration about women's poverty in Cincinnati, OH and on low-income women's access to reproductive health services for the plaintiffs (Planned Parenthood). October 2014-November 2014. The case was dropped by the plaintiffs after Richard Hodges, Director of the Ohio Health Department granted a variance for the clinic from state law. Media coverage of the case: <http://www.dispatch.com/content/blogs/the-daily-briefing/2014/11/11-20-14-abortion-variance.html>
- Planned Parenthood of the Southeast vs. the State of Alabama. *Pro-Bono*. Researched and wrote expert witness report and gave live depositions and trial testimony about women's poverty in Alabama and the impact of Alabama H.B. 57 on low-income women's access to reproductive health services for the plaintiffs (ACLU's Reproductive Freedom Project). August 2013-June 2014. Judge Myron Thompson ruled for the plaintiffs (striking down the Alabama state law) on August 4, 2014. Full ruling (reference to my testimony and research starts on page 87):
https://ecf.almd.uscourts.gov/cgi-bin/show_public_doc?2013cv0405-238

INVITED CONTRIBUTIONS AT ACADEMIC - COMMUNITY CONFERENCES

- Katz, Sheila. Participant at the “Achieving Wider Access to Higher Education” conference convened and invited by the Howard Samuels Center of the City University of New York, at the Ford Foundation, New York City, February 2010.
- Katz, Sheila. Workshop Facilitator: “What We Need to Succeed: Low-Income Student Mothers’ Narratives about Resources, Programs, Welfare, and Public Policy.” Ohio Student Parent Support Symposium: Ohio State University, Columbus, OH, June 2007.
- Spatz, Diana and Sheila Katz. Workshop Facilitator: “Economic Context of Domestic Violence: Poverty and Welfare Policies Fail to Protect Battered Women with Children.” Collaboration between Fatherhood and Domestic Violence Programs in Communities of Color Institute: San Antonio, TX, October 2005.

PROFESSIONAL SERVICE

- Chair and committee member, Pacific Sociological Association’s Community, Clinical and Applied Sociology committee, 2012-present. Elected chair in April 2015.
- Project Partner, Persistent Poverty in the South Project, of the Southern Sociological Society. March 2015-present. <http://uncw.edu/povertyproject/>
- Chair, American Sociological Association’s Local Arrangements Committee for 2014 ASA annual meetings in San Francisco. Appointed by ASA President Annette Lareau to organize and chair the local arrangements committee for the national conference attended by approximately 6,000 sociologists each year. The committee organized eight local-themed sessions, conducted four tours, and wrote five local-themed articles for the ASA newsletter *Footnotes* for the 2014 annual meetings in San Francisco. I led 3 sociologically themed local tours, co-organized the “Evolving Oakland” session, solo-authored one article, and co-authored another article.
- Elected Board Member, Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS). June 2014-present. 3-year term. <http://www.sociologycommission.org/>
- Advisory Board member of the Student Parent Study Initiative, Institute for Women’s Policy Research, Washington, D.C., December 2011-present, funded by the Bill and Melinda Gates Foundation initiative on access to higher education.
- Article Reviewer, *Journal of Poverty, Sociological Perspectives, Sociological Quarterly, Work and Occupations, Journal of Contemporary Ethnography, Michigan Journal of Sociology*.
- Book Reviewer, “Seeking the American Dream” by Robert Hauhart, Palgrave Publications, under contract; “Drugs and Drugs Policy” by Moshin and Atkins, Second Edition, Sage Publications, 2013; and “Drugs and The American Dream” by Adler, Adler, and O’Brien, February 2012 from Wiley Blackwell Publishing.
- Faculty Mentor, American Sociological Association Honor Program 2010, Jessica Muscatell.
- Session Organizer, Pacific Sociological Association meetings in April 2010, 3 sessions: Qualitative Research on Poverty, Qualitative Research on Welfare, and Teaching Focus Group Methodology.
- Session Organizer, California Sociological Association annual meeting November 2011: Women and Social Policy, and November 2009: Sociology of Gender.

UNIVERSITY OF HOUSTON SERVICE

- Faculty Mentor for Edwin Villa for his Honor’s Thesis on masculinity and sexuality, December 2014-present.
- Sociology Student Association, faculty sponsor, Department of Sociology, September 2014-present.
- Hiring committee, Department of Sociology, October 2014-present.

SONOMA STATE UNIVERSITY SERVICE

- Chair and Elected Representative from the School of Social Sciences on the Student Affairs Committee Sub-Committee on Academic Advising, 2009-present. Elected Chair of committee in August 2013.
- Faculty representative, SSU Alcohol and Drug Advisory Committee, September 2013-May 2014.

Workshop Facilitator, SSU Professional Development Sponsored Faculty Teaching Workshop series, "Connecting Students to Careers: How Faculty Can Translate Course Knowledge into Employment Skills" March 2013.

Faculty representative, Academic Advisor Search Committee, October-November 2013.

Social Sciences member on Interdisciplinary Studies Program Committee, 2009-May 2014.

Member, Center for Community Engagement Strategic Action Committee, 2010-2014.

Social Science Faculty Mentor for the SSU NoGap McNair Scholar Program, mentor Social Sciences students in creating posters for the spring research symposium and finalize their papers for publication in the McNair Scholar journal, August 2013-present. Faculty mentor for student research: Kristal Raheem (May 2013-present), Holly Phillips (August 2012-present), Hector Ruiz (April 2012-May 2013), Vanessa Hernandez (September 2010-May 2012), Kristel England (April 2011-May 2012), Andrea Huhn (August 2011-December 2012), Lauren Stavish (Feb. 2009-May 2010).

Faculty Sponsor and mentor, 2009, 2010, 2011 CSU Undergraduate Research Competition.

Proposal Reviewer, SSU Academic Undergraduate Research Grants, 2011, 2010 and 2008.

Presenter and Co-Organizer of Speaker's Panel in JUMP's Homelessness and Hunger Awareness Week, November 2011, 2010, 2009, 2008.

Organizer and Presenter, SSU Disability Awareness Week Brownbag "Reducing Disability Stigma in the Classroom," May 2010.

SSU SCHOOL OF SOCIAL SCIENCES SERVICE

Summer Freshman Orientation Faculty Mentor for Social Sciences, June 2013, July 2011.

Committee member, Sophomore Year Experience (SYE) Program Planning Committee, February 2012-present. Coordinated project's focus group research in Spring 2012, conducted 5 focus groups with a total of 30 SSU students, analyzed data Summer 2012, presented to SSU School of Social Sciences meeting in August 2012, presented to SSU's Graduation Initiative Committee, October 2012. SYE Program implemented in Fall 2013.

Social Sciences Brown Bag Series lecture, "The Role of Advocates in Helping Welfare Mothers Achieve Higher Education." October 2011.

Presenter, SSU Gendered Intersections Lecture Series: "Envisioning Another World: Grassroots Activism and Welfare Mothers' Perspective on Poverty Policy." March 2010.

New Faculty Mentor, 2009-2010.

SSU SOCIOLOGY DEPARTMENT SERVICE

Chair, Program Review Committee, Sociology Department, September 2013-May 2014.

Designated as the "Veterans Advisor" by the Sociology Department, September 2013.

Committee member, Hiring committee for tenure-track Assistant Professor, Fall 2013.

Peer teaching evaluations of adjunct faculty: November 2012 and October 2013.

Faculty Mentor for students (Kristel Raheem and Holly Phillips) applying for Undergraduate Research Grants and research mentor to attend the Pacific Sociological Association annual meetings in Portland, OR, March 2014.

Designated as the "Study Away Advisor" by Sociology Department, September 2012.

Academic Advisor, advisor for 110 sociology majors/minors, Spring 2009-May 2014

Committee member, Hiring committee for adjunct pool refresh, Spring 2011.

Committee Member, Department Curriculum Committee, Fall 2008-May 2014.

Coordinator, Announcement Listserv for Sociology Majors and Minors: Fall 2008-May 2014.

Faculty Co-Editor, Sociology Department Newsletter, Fall 2008-Summer 2012.

Facilitator, Transfer Student Advising workshops: 2010-2013.

COMMUNITY SERVICE

Issue Expert Mentor, JCI of Houston (Junior Chamber International) for IMPACT Days 2015, February 2015-October 2015. "Reverse Pitch" to a group of 120 social entrepreneurs, I pitched a social problem that can be solved through social innovation and they will work in small groups for 8 months to develop social ventures that could solve this problem. I serve as the "issue mentor" during the program. <http://impactdays.info/>

Treasurer, Executive Committee and board member to City of Oakland's KONO (Koreatown Northgate) Community Benefit District Board, April 2010-July 2014, (re-elected in January 2012). Elected as Secretary on the Executive Committee, May 2010-August 2013 (re-elected January 2012). Elected Treasurer in September 2013. Chair of Security and Operations Committee, October 2011-October 2013. www.konooakland.org.

KONO Representative, Neighborhood Crime Prevention Council (NCPC) of District 8: Area 2, organized by the Oakland Police Department and City of Oakland, October 2012-December 2013.

Volunteer, Hopalong Animal Rescue, feline program: fostering kittens, transporting cats to medical appointments, and helping with fundraising events. June-November 2013.

Research Coordinator, "Homeless in Pacifica" project, Pacifica Resource Center, December 2012-June 2013. Worked with Executive Director to write a research brief about the increasing number of homeless in Pacifica, and worked with community members, police department, and city council to create the Pacifica Homeless Response Team to increase services and programs for the unsheltered on San Mateo county coast.

Guest on "The Project Censored Show" discussing American poverty, as part of the Morning Mix on KPFA Pacifica Radio, 94.1 FM, live from Berkeley, CA. May 2013.

Taught the course "Exploring the American Dream" in the University of Georgia's OLLI "Alumni College" Summer School program in June 2012.

Chair of Executive Director Search Committee, City of Oakland Koreatown Northgate Community Benefit District Board, December 2010-February 2011.

President and elected member of the Telegraph Gateway Homeowners' Association Board, November 2010-present, and previously served as Secretary (Nov 2009-10).

Policy Research Committee Chair and grant-writing volunteer for Low-Income Families' Empowerment through Education (LIFETIME), Spring 2008-March 2010.

Participant, California Partnership, community coalition fighting poverty, 2004-2009.

PROFESSIONAL AFFILIATIONS

American Sociological Association (2004-present)
ASA member of Sex & Gender; Sociology of Education; Race, Gender, Class; Teaching Sociology; Poverty, Inequality, and Mobility sections

Pacific Sociological Association (2004-present)

California Sociological Association (2009-present)

Society for the Study of Social Problems (2007-present)

RECENT PROFESSIONAL DEVELOPMENT

Participant, New Faculty Scholars Program, University of Houston, October 2014-present.

Participant, SSU's Faculty Writing Program, Coordinated by Dr. Kathy Charmaz: 2007-May 2014.

Participant, SSU's Faculty Research Expo, March 2013, March 2011 and March 2010.

Participant, ASA's Section on Teaching and Learning's Workshop, "The Best Teachers We Can Be: Learning Scholarly Teaching." Atlanta, GA, August 2010.

PREVIOUS RESEARCH AND TEACHING EXPERIENCE

Adjunct Lecturer, Sonoma State University Department of Sociology; Drugs and Society,
Fall 2007 and Spring 2008

Qualitative Data Analysis Consultant, University of California Berkeley, School of Public Health
June 2007-August 2007: Conducted qualitative data analysis (using Atlas.ti) on focus groups and interviews for the Benefits of Diversity Project, addressing issues of racial and ethnic diversity in students and faculty in medical and public health schools, which was funded by the California Endowment.

Research Coordinator, Low-Income Families' Empowerment through Education (LIFETIME)
October 2003-December 2006: Coordinated community engaged research projects on a statewide research team to conduct research on welfare, domestic violence, and the experiences of welfare mothers in education. Co-authored "Family Violence Is *Not* an Option," a research report (June 2005) about the failure of CalWORKs to protect domestic violence victims and their children in the welfare system. Worked with media and other community-based organizations to disseminate research; worked with Executive and Associate Directors to raise \$1.5 million in foundation grants (average grant approximately \$20,000) over 2.5 years.

Research Associate, Vanderbilt University Women's Social Policy and Research Center
March 2002-October 2003: Lead author and researcher for *Tennessee Women's Scholarship Directory* (August 2003), a resource book of scholarships and financial aid options for higher education available to women in Tennessee; designed web site to support the directory, wrote grants, and conduct other fundraising to provide independent funding for the scholarship directory and the research center.

Adjunct Instructor, Vanderbilt University Department of Sociology; Women and Men in American Society, Fall 2002, Spring 2003, Summer I, Summer II 2003.

Research Assistant, Vanderbilt Institute for Public Policy, Immigrant Community Assessment
April 2003-August 2003: Performed qualitative data analysis of focus group data.

Teaching Assistant, Vanderbilt University, Department of Sociology; Gender in American Society, Contemporary Social Problems, Sociological Research Methods, Gender, Sexuality, and the Body, Women and the Law, Human Behavior in Organizations, Social Movements, Introduction to Sociology, Images of Women. Fall 1998-Spring 2002.

**DECLARATION OF
LENORE WALKER**

Defendants.

I, LENORE E. A. WALKER, Ed.D., am over 18 years of age and declare and
state the following:

1. I am a clinical psychologist licensed to practice psychology in Florida,
New Jersey, and Colorado. I am currently a Professor at Nova Southeastern University
Center for Psychological Studies in Fort Lauderdale, Florida, where I also serve as
Coordinator of the Clinical Forensic Psychology Concentration. In my role as a
Professor, I train and supervise doctoral students in psychology programs in the Center

for Psychological Studies, including overseeing students' provision of psychotherapy services to women, men, adolescents, children, and families. Although I am no longer seeing my own patients on a regular basis, over the course of my career, I have treated or counseled over 2,000 victims of battering, rape, and incest.

2. I have a Doctorate in Psychology from Rutgers University and a Diplomate in Clinical Psychology and Family Psychology from the American Board of Professional Psychology. I have a national practice in clinical and forensic psychology, with particular expertise in violence against women, including rape and other forms of sexual violence, intimate partner violence, and family violence, including child abuse. I have provided expert testimony on these topics in civil and criminal cases throughout the United States. I have also been invited to testify before several committees of the United States Congress on national policy regarding violence against women and family violence, and am frequently asked to give presentations and lectures on these and related topics throughout the United States and internationally. My research on domestic violence was cited by the United States Supreme Court in *Planned Parenthood of Southeastern Pennsylvania v. Casey*, 505 U.S. 833 (1992).

3. Currently, I am a fellow of the American Psychological Association (APA), and serve on the APA Council of Representatives. I have previously served on the APA's Board of Directors and a number of APA committees and task forces. I am also a Board Member of the National Association for Practicing Professional Psychologists, and I serve on the editorial board for a number of major psychological journals, some published by the APA and some published independently. I have published 20 books and approximately 60 articles on violence against women, family

violence, and related topics. A copy of my curriculum vitae, which summarizes my background, experience, publications, and research, is attached to this declaration.

4. I submit this declaration in support of Plaintiffs' motion for a temporary injunction against enforcement of Florida House Bill 633 (the Act). I understand the Act requires Florida women seeking abortion to receive certain state-mandated information in person at least 24 hours before the procedure can be performed. This declaration focuses on the Act's impact on women who have experienced domestic abuse and sexual assault, including sex trafficking. My opinions are based on my training, education, and clinical experience, the research I have conducted, and my knowledge and review of the professional literature.

5. In my professional opinion, and as discussed in more detail below, the Act's 24 hour delay and additional trip requirement will harm abused women and sexual assault victims who seek abortions in Florida. While the Act purports to provide an exception for women who are victims of rape, incest, domestic violence, or trafficking, the exception does not allow women to self-report these incidents to the physician providing their abortion and instead requires them to present documentary proof, which they are unlikely to have. By delaying battered women or sexual assault victims in obtaining the care they need, subjecting them to additional emotional and psychological trauma, and increasing the risk of disclosure of their abortion to others, the Act will endanger the health and lives of Florida women.

Background Information on Violence Against Women

6. Violence against women can take the form of physical violence with or without injury; stalking; sexual assault including exploitation, being trafficked, stranger, partner, or acquaintance rape; and various forms of psychological abuse and

maltreatment. When the abuse is committed by a woman's current or former spouse, partner, or boyfriend, it is commonly referred to as intimate partner violence or domestic violence. There is significant overlap among these forms of abuse, as sexual assault can often include physical injury, and stalking can occur simultaneously with psychological abuse, to provide but two examples. In my U.S. National Institute of Mental Health funded research of 400 battered women, approximately one-half of the women interviewed said they had also experienced sexual abuse, mostly within their families.

7. One of the challenges of working in this field is the fact that there are no standardized definitions for these acts and behaviors. Another significant challenge stems from the fact that so many victims do not wish to reveal their own experiences, or will make intense efforts to conceal them, making it difficult to assess the prevalence of domestic violence and sexual assault. Terms such as "rape," "incest," "abuse," and "violence" carry certain social and cultural stigmas, and the use of these labels can prevent women from disclosing their experiences. For example, many battered women I have interviewed and counseled are uncomfortable labeling an unwanted or coerced sexual encounter with their partner as "rape." The same is often true for women who are sexually assaulted by an acquaintance or someone they are dating.

8. Although it can be difficult to measure the true prevalence of these acts of violence, because so many victims choose not to seek help from law enforcement or the justice system, the Center for Disease Control and Prevention (CDC) estimates that approximately one-third of all women in the United States have experienced rape, physical abuse, or stalking by a current or former intimate partner at some point in their lives.¹ For purposes of this declaration, I may use the terms "battered women" or

¹ Black, M.C., Basile, K.C., Breiding, M.J., Smith, S.G., Walters, M.L., Merrick, M.T., Chen, J., & Stevens, M.R. *The National Intimate Partner and Sexual Violence Survey (NISVS): 2010 Summary Report*. National Center for Injury Prevention and Control, Centers for Disease Control and Prevention (2011) (the NISVS Report), at 39.

“abused women” interchangeably to refer to women who are victims of domestic violence.

9. Recent statistics estimate that nearly one-fifth of all women in the United States will be raped at some point in their lives.² Over 80% of rapes are committed by someone known to the victim (i.e. an intimate partner, family member, or acquaintance), and the perpetrator is a current or former intimate partner in nearly two-thirds of all rapes.³ While women can be victims of violence regardless of age, ethnicity, or class, women who experience domestic violence, rape, and sexual assault are disproportionately low-income.⁴

10. According to the CDC’s National Intimate Partner and Sexual Violence Survey (NISVS), 34.2% of Florida women have experienced rape, physical violence, or stalking by an intimate partner at some point in their lifetime, which amounts to over 2.5 million women.⁵ Estimates of the number of women who become pregnant as a result rape vary, with rates ranging from approximately 1.7% to approximately 5% of all rapes resulting in an unwanted pregnancy.

11. Perpetrators of domestic violence subject their partners to various forms of violence—including physical, psychological, economic, and sexual abuse—in order to assert their control and dominance. Physical violence includes a range of behaviors from slapping, pushing, or shoving, to more severe acts such as beating, choking/strangulation,

or use of a gun or knife. In addition, it is common for an abuser to threaten to use physical violence against the woman, or to physically harm her children or other family members, as a means of intimidation and control. Stalking by an intimate partner entails repeated acts of harassment, intimidation, and/or threats that cause the victim to fear for her safety. Psychological or emotional abuse includes verbal abuse intended to shame, insult, and humiliate the abused woman, as well as a range of coercive and manipulative behaviors, such as interfering with the battered woman's relationships with family and friends, and limiting her access to money. Sexual abuse by an intimate partner can include rape as well as other unwanted sexual contact. Based on my own research, I would estimate that nearly one in three battered women has been raped one or more times by her abuser.⁶

12. Incest is a form of sexual assault committed by a family member or relative, other than a spouse, that involves multiple acts of sexual violation and exploitation over a period of time, ranging from several months to several years. Incest often begins when the victim is still a young child, and may go on for many years without the victim ever disclosing the abuse. Based on my work in this field, there is a strong correlation between acts of domestic violence committed by an abuser and acts of child abuse, including both physical abuse and incest.⁷ Incest is vastly underreported in the United States; most victims of incest do not report the abuse because they fear their abuser may harm them physically, because they feel guilty about the abuse, and/or because they are afraid to disrupt the family unit.⁸

13. Similar to other victims of gender violence, sex trafficking victims suffer extreme exploitation through the use of physical abuse, threats, coercion, and other

⁷ *Id.*; Walker, L.E.A. *The Battered Woman* (Harper and Row 1979).

⁸ Walker, L.E.A. *The Battered Woman Syndrome* (Springer Publishing Co., 3d ed. 2009).

control tactics. Although it is quite difficult to estimate the prevalence of trafficking in the United States, the U.S. Department of State estimates between 14,500 and 17,500 individuals are trafficked in the United States each year.⁹ Florida is known to have a high rate of sex trafficking victims such that the legislature has passed measures to provide “safe harbor” for these mostly young girls and women. Many of the treatment programs in local areas are being funded through this legislation. The experience with these victims has shown how reluctant they are to utilize established institutions and agencies in the community, including police.

14. Reproductive coercion or control is a form of domestic violence involving coercive behavior related to reproductive health. For example, many batterers will forcibly impregnate a woman, or employ some other form of reproductive coercion, such as refusing to wear a condom or destroying or manipulating a woman’s contraception as a means of impregnating her, in order to further demonstrate his control and dominance. Indeed, compelling a woman to carry an unwanted pregnancy to term and give birth is a common form of abuse, and one that can keep the abused woman trapped in the abusive relationship. Having a child, or an additional child, with her abuser makes it even more difficult for a woman to escape.

15. According to information collected by the CDC, between 4% and 8% of all pregnant women report that they have experienced physical abuse during pregnancy.¹⁰ Studies show that women are at increased risk of physical abuse during pregnancy,

⁹ Clawson, H. et al. *Human Trafficking into and within the United States: a review of the literature*. U.S. Department of Health & Human Services (2009), available at <http://aspe.hhs.gov/hsp/07/humantrafficking/litrev/index.pdf>.

¹⁰ *Intimate Partner Violence During Pregnancy, A Guide for Clinicians*. American College of Obstetricians and Gynecologists, Centers for Disease Control and Prevention (2013), at 12, available at http://www.cdc.gov/reproductivehealth/violence/intimatepartnerviolence/ipvdp_slide.htm

including an increased risk of homicide.¹¹ A recent study comparing the long-term health effects of women who received abortions at or near the gestational age limit with women who were unable to obtain an abortion because they were beyond the gestational age limit found that physical violence decreased over time for the women who obtained an abortion, but not for women who were turned away and subsequently gave birth.¹² The researchers suggest that carrying an unwanted pregnancy to term may make it more difficult for abused women to leave the abusive relationship.¹³ Women, especially low-income women, are afraid of leaving the relationship because of their inability to support themselves and their children, and to pay for basic necessities like food, housing, medical care, and clothing. And even if a woman separates from her abuser, he can use the children as a means of maintaining his power and control over the woman. Forced co-parenting, based on an award of joint custody, can keep the woman in the same neighborhood and in continued danger from her abuser.

The Act's Impact on Victims of Violence and Sexual Assault

16. The Act's 24 hour waiting period and mandatory additional visit will have devastating consequences for abused women and survivors of rape and sexual assault. First, the Act's mandatory delay and additional trip requirement will make it extremely difficult, if not impossible, for women in abusive relationships to seek an abortion. Those women who are able to obtain an abortion may have to delay the procedure. These additional hurdles are amplified for women who are poor and lack the resources to make all of the necessary arrangements while avoiding detection by their abuser. Second, by

¹² Roberts, S., Biggs, M.A., Chibber, K., Gould, H., Rocca, C. and Greene Foster, D. *Risk of violence from the man involved in the pregnancy after receiving or being denied an abortion*. 12 BMC Medicine 144 (2014).

¹³ *Id.*

forcing women in these horrific circumstances to wait an additional 24 hours before they can obtain an abortion, the Act subjects these women to additional emotional trauma, to the detriment of their health and well-being.

17. As I explain above, pregnancy is a time of extreme danger, and even lethality, for abused women, and abusers may use forced pregnancy as a way of keeping a partner under their control. Thus, it is often essential for many abused women to keep their pregnancy and/or intent to end the pregnancy a secret until after the abortion is obtained, and perhaps beyond that time as well. However, the Act will make it that much harder for a woman to obtain an abortion without detection by an abusive partner.

18. First, it will be extremely difficult for some battered women to make an additional trip to the abortion clinic without detection. Battered and abused women are carefully monitored by their abusers, such that going to a doctor's office or clinic in secret, even for a single visit, may require significant planning. Abusers have many ways of closely monitoring every move of the women they abuse; for example, many women have told me that their partner regularly checks the mileage on the car, and some abusers take more drastic measures such as removing the distributor cap of the car, or nailing doors and windows shut, in order to prevent the battered woman from leaving. An abuser may also call the woman multiple times at home and/or at work to ensure that he knows her whereabouts at all times. In addition, an abuser might show up unexpectedly at a woman's place of work to check up on her. In fact, battering at the worksite is not an uncommon event for victims of abuse. Abused women are expected to explain any absence from home or work. If an abusive partner suspects that a woman is leaving home or work during the day without his knowledge, he may become enraged and lash out with violence. Simply put, for some abused women, finding a way to get to an abortion provider for several hours for a single appointment may be extremely difficult. Finding a way to make an additional trip, especially within a close time period, is a hardship and may be impossible.

19. Second, abused women will have great difficulty obtaining the resources necessary to make the additional trip to an abortion provider. Abusive partners often maintain control and dominance by limiting a woman's access to money; even if an abused woman is employed, she may be forced to turn over her paycheck to the abuser. In addition, even if an abused woman's insurance plan would cover all or part of the costs of the procedure, she may not want to submit a claim to insurance out of fear of notifying the abuser of her abortion. For the same reason, she may be unable or unwilling to pay for the procedure with a credit card that can be traced back to her, and will therefore have to come up with all of the necessary funds in cash. Further complicating matters, perpetrators of abuse will often cut off or monitor a woman's communications with her family and friends in order to weaken her support system. Thus, an abused woman may not have any other person to turn to in order to loan her money for the abortion procedure itself, or for the additional costs of travel and childcare. Without her partner, or friends or family to turn to for support, an abused woman will have to delay the procedure in order to come up with the resources to afford an additional trip to the clinic.

20. In addition, women who are trying to conceal their pregnancy (not just their intent to seek an abortion) from their abusive partners must seek an abortion as soon possible, before the pregnancy becomes visible. Indeed, one study of women presenting at an abortion clinic reported that 8% of women seeking an abortion had not disclosed their intentions to their partner because they feared physical harm if the abortion was discovered.¹⁴ Due to the logistical and financial challenges of complying with the additional visit requirement, the Act will delay women in obtaining an abortion, thereby increasing the chances that the abuser will discover the pregnancy. If a woman's abuser discovers her plans to have an abortion, he will most likely prevent her from doing so.

¹⁴ Woo, J., Fine, P., & Goetzl, L. *Abortion Disclosure and the Association with Domestic Violence*, 105 *Obstet. Gynecol.* 1329 (2005).

Moreover, as I explained above, once a woman's pregnancy status is apparent, physical abuse by the batterer escalates; thus, the longer a woman is pregnant, the greater the threat to her health, and possibly even her life, from the abuse.

21. Even if an abused woman is able to make all of the arrangements for the additional required visit, in most cases she will not be able to travel on two consecutive days, both because of logistical difficulties and because of the intense monitoring and scrutiny that goes on in an abusive relationship. Thus, a woman will likely be delayed days, or possibly even weeks beyond her initial appointment, due to the difficulties of coming up with the funds to make the required additional visit and making all of the necessary arrangements, all without alerting the abuser. Moreover, for a woman who must travel a significant distance in order to reach an abortion provider, it is exceedingly unlikely that she would be able to stay away from home overnight without raising the abuser's suspicions. Even if a woman manages to find a way to stay away for two days, her partner may suspect that she had left him, which would greatly increase her risk of suffering physical violence.

22. In addition to the physical harms caused by the Act, the mandatory delay and additional trip requirement will also inflict psychological harms on women who have already endured psychological trauma. Many rape survivors are extremely distraught afterwards and may be suffering from post-traumatic stress disorder, anxiety, and/or depression. An unwanted pregnancy can be even more traumatizing for a rape survivor, as the pregnancy is a constant reminder of the rape. It is extremely important for women in these situations to be able to begin to resume their normal lives and move on from the tragic situation. Thus, for a rape survivor who wishes to terminate the resulting pregnancy, having the abortion is an important step in this recovery. For these women, the waiting period and mandatory additional trip will prolong their psychological suffering, because the pregnancy is a continual reminder of the assault.

23. Furthermore, the Act's waiting period and additional trip requirement will make it more difficult for rape victims to obtain an abortion. The planning necessary to arrange an appointment, make the necessary travel arrangements, and come up with the funds to pay for the abortion may be difficult for victims of rape who are suffering from post-traumatic stress disorder or other psychological effects. Even though a rape survivor may feel very strongly that she wishes to terminate the pregnancy, the prospect of complying with the mandatory delay and the additional trip requirement, and raising the funds necessary to make the additional visit, may prove to be insurmountable. At the very least, the Act will likely delay a rape victim's ability to obtain abortion for far more than 24 hours.

24. In addition, many victims of rape are afraid of disclosing the incident to friends or family. Some fear the stigma associated with rape; others fear being judged as somehow responsible for it. Forcing these women to make arrangements to be away from work, school, and family obligations on at least two separate occasions will increase the risk of discovery, and thereby jeopardize their privacy and confidentiality.

25. In sum, for victims of abuse and rape, the Act will cause a number of serious harms. For battered women living in poverty, the combined effects of the abuse and the lack of outside support or other resources may make it impossible to comply with state-mandated delay and additional visit requirement.

The Act's Limited Exception Will Not Apply to the Majority of Women Who
Experience Violence or Sexual Assault

26. I understand that the Act includes a waiver of the mandatory waiting period if a woman presents her physician with “a copy of a restraining order, police report, medical record, or other court order or documentation evidencing that . . . she is a victim of rape, incest, domestic violence, or human trafficking.” However, in my opinion, this exception is so narrow as to be effectively meaningless for the vast majority of victimized women.

27. In reality, very few women who have experienced these crimes will report them.¹⁵ Thus, statistics on the rates of rape, sexual assault, domestic violence, and stalking in this country are very likely to underestimate the prevalence of these crimes. And even if a woman does choose to make an official report, she may not feel ready to do so until months after the assault or abuse has ended.

28. Abuse and sexual assault victims are reticent to report these incidents for a number of reasons. First, many fear that disclosing the abuse or assault will subject them to retaliation and further abuse by the perpetrator. Abusers may become more violent after a woman discloses the abuse. Second, survivors of abuse and rape may be unwilling to report these incidents because of shame, embarrassment, and/or a belief that their reports will not be taken seriously. In addition, for victims of violence and sexual assault, describing these incidents to a stranger, such as a police officer or medical professional, can be extremely painful and traumatic. Many women, especially in the African/Caribbean and Latina communities in Florida, do not trust the police to make such a report. In my own clinical practice, I have known many women who were

¹⁵ Tjaden, Patricia N. T., and Thoennes, N. *Extent, Nature, and Consequences of Intimate Partner Violence*. National Institute for Justice, Centers for Disease Control and Prevention (2000), at 57 (finding that most intimate partner rapes, physical assaults, and stalkings are not reported to law enforcement); Kilpatrick, Dean, et al. *Drug-Facilitated, Incapacitated, and Forcible Rape: A National Study* (2007), at 2 (finding that only 16% of all rapes were reported to law enforcement).

unwilling to cooperate with law enforcement officials, even when doing so would have made them eligible for free medical care and counseling services.

29. Moreover, many victims do not seek medical care at all, and of those that do, many are reluctant to disclose their experiences to a medical provider.¹⁶ Thus, a woman's first time disclosing her abuse or assault to anyone could be at the time she seeks the abortion. Requiring a woman to present documentary proof to a physician in order to verify her abuse or assault could be emotionally devastating, making her feel as if her own report of what happened cannot be trusted. Moreover, medical professionals are trained to treat victims with dignity and compassion, and without passing judgment, but requiring physicians to request official documentation beyond the woman's own report of the incident could undermine the physician-patient relationship.

Conclusion

30. Abused women and rape survivors who seek abortions, especially those who wish to keep their abortions private, must overcome enormous odds to obtain the care they need. It may be very difficult for them to come to a clinic once, and even more so for them to safely make multiple trips. In my opinion, if the Act is allowed to take effect, it will cause severe and irreparable harm to abused women and sexual assault survivors, including victims of rape, incest, and sex trafficking.

Executed on June 5, 2015 in Fort Lauderdale, Florida.

Subject: ACLU Challenge of Abortion Restriction Law

Counselors –

We filed this morning a constitutional challenge to HB 633 imposing a 24-hour waiting period for abortions, which Gov. Scott signed into law yesterday afternoon. Please find attached the filed complaint and motion for an emergency injunction along with their exhibits and a notice of constitutional challenge. We will request an immediate hearing on our motion. Please let me know if you will represent the respective parties or if we should coordinate with other counsel.

Board of Osteopathic Medicine; FLORIDA
AGENCY FOR HEALTH CARE
ADMINISTRATION; and ELIZABETH DUDEK,
in her official capacity as Secretary of the Florida
Agency for Health Care Administration,

Defendants.

Case No. _____

COMPLAINT

I. PRELIMINARY STATEMENT

1. This action challenges the validity of House Bill 633 under the Florida Constitution. *See* Ch. 2015-1__, § 1, Laws of Fla. ("H.B. 633" or "the Act") (amending § 390.0111, Fla. Stat). H.B. 633 was signed by Governor Rick Scott on June 10, 2015, and is scheduled to take effect on July 1, 2015. The Act is attached hereto as Exhibit A-1.

2. H.B. 633 will impose an unwarranted twenty-four-hour delay and requirement of an additional trip to their doctor on women seeking abortion care in Florida. Existing law already requires physicians to provide patients with certain state-mandated information in

person, including the nature and risks of the procedure and the risks of carrying a pregnancy to term, and the probable gestational age of the embryo or fetus, as verified by ultrasound. H.B. 633 will require that information to be provided in person at least twenty-four hours before the abortion is performed. The Act thus will require a woman seeking to terminate a pregnancy to make an additional trip to her doctor at least twenty-four hours before she can then return to obtain her abortion. Violations of the Act will subject physicians and health care facilities to disciplinary action, including license revocation, license non-renewal, and monetary fines.

3. Article I, section 23 of the Florida Constitution guarantees the right to privacy of Florida citizens. This includes a woman's right to decide to terminate a pregnancy.

4. In imposing a mandatory delay and an additional-trip requirement before a woman may obtain abortion care, the Act will unlawfully intrude upon this right and violate the privacy rights of Florida women.

5. The Florida Legislature does not impose a similar mandatory delay or additional-trip requirement on any other medical procedure.

6. Both current Florida law and current medical best practices ensure that a woman's decision to obtain an abortion is fully informed. The state cannot meet its burden of proving that the Act satisfies strict scrutiny by furthering a compelling state interest through the least intrusive means, as required by the Florida Constitution's protection of the right to privacy.

7. If it goes into effect, the Act will cause immediate and irreparable harm to all Florida women seeking abortions and to Plaintiffs. It will also make it more difficult to obtain a medication abortion, and will impose particular harms on low-income women, women who have been abused or sexually assaulted, women facing medical risks from pregnancy that do not rise

to the level of a life-threatening medical emergency, and women who seek abortion due to a diagnosis of a severe fetal anomaly.

8. In addition, the Act will violate women's right to equal protection of the laws, as guaranteed by article I, section 2 of the Florida Constitution, by impermissibly singling out abortion as the only type of medical care for which a delay prior to the procedure is mandated by Florida law, and by impermissibly discriminating against women on the basis of their sex and on the basis of gender stereotypes.

9. Plaintiffs seek a declaratory judgment and a temporary and permanent injunction pursuant to Chapter 86, Florida Statutes, and Florida Rules of Civil Procedure Rule 1.610 to prevent the violation of their constitutional rights, those of their patients, and those of all Florida women.

II. JURISDICTION AND VENUE

10. This Court has jurisdiction over this action pursuant to article V, section 5(b) of the Florida Constitution and Sections 26.012 and 86.011, Florida Statutes.

11. Venue is proper in this Court pursuant to section 47.011, Florida Statutes because Defendants are located in this Circuit.

III. THE PARTIES

A. Plaintiffs

12. Plaintiff Gainesville Woman Care LLC d/b/a Bread and Roses Women's Health Center ("Bread and Roses") is a clinic located in Gainesville, Florida, which provides safe, legal, high-quality reproductive health care services to Florida women. Bread and Roses provides surgical abortions up to thirteen weeks and six days of pregnancy, dated from the first day of a woman's last menstrual period ("LMP"), and medication abortions up to eight weeks LMP.

Bread and Roses also offers pregnancy testing, contraception counseling and services, and referrals for other reproductive health care services, as well as for prenatal care and adoption services. Bread and Roses is licensed biannually and inspected annually by the Florida Agency for Health Care Administration. Bread and Roses sues on behalf of itself, its doctor, and its patients.

13. Plaintiff Medical Students for Choice is a not-for-profit organization that seeks to ensure abortion remains safe and legal in the United States and abroad. The organization works to destigmatize abortion provision and to make reproductive health care, including abortion care, a standard part of medical school education and residency training. Medical Students for Choice is composed of individual members who are organized into chapters located at medical school campuses and residency programs in seventeen countries, including seven affiliated chapters in Florida. Florida members of Medical Students for Choice receive training in abortion care and assist in providing abortions across the state, under the guidance and supervision of licensed physicians. Medical Students for Choice sues on behalf of its members and their patients.

B. Defendants

14. Defendant State of Florida, through its Legislature and Governor, adopted the challenged Act.

15. Defendant Florida Department of Health is the state agency authorized to impose penalties on providers of abortion care for violations of the Act. Defendant John H. Armstrong, M.D., is Secretary of the Department. Defendant Armstrong is sued in his official capacity as Secretary of Health for the State of Florida, as are his agents and successors.

16. Defendant Florida Board of Medicine is part of the Florida Department of Health. Defendant James Orr, M.D., is the Chair of the Florida Board of Medicine. Pursuant to Florida

law, the Florida Board of Medicine exercises supervisory powers over the state’s physicians and conducts disciplinary proceedings and imposes penalties against physicians. Defendants Florida Board of Medicine and Orr are authorized to impose penalties on providers of abortion for violations of the Act. Defendant Orr is sued in his official capacity as Chair of the Florida Board of Medicine, as are his agents and successors.

17. Defendant Florida Board of Osteopathic Medicine is part of the Florida Department of Health. Defendant Anna Hayden, D.O., is the Chair of the Florida Board of Osteopathic Medicine. Pursuant to Florida law, the Florida Board of Osteopathic Medicine exercises supervisory powers over the state’s osteopathic physicians and conducts disciplinary proceedings and imposes penalties against osteopathic physicians. Defendants Florida Board of Osteopathic Medicine and Hayden are authorized to impose penalties on providers of abortion for violations of the Act. Defendant Hayden is sued in her official capacity as Chair of the Florida Board of Osteopathic Medicine, as are her agents and successors.

18. Defendant Florida Agency for Health Care Administration is the state agency authorized to license abortion clinics, including Plaintiff Bread and Roses, and to refuse to renew those licenses for failure to comply with the Act. Defendant Elizabeth Dudek is Secretary of the Agency. Defendant Dudek is sued in her official capacity as Secretary of the Agency for Health Care Administration, as are her agents and successors.

IV. STATUTORY FRAMEWORK

19. Florida’s general informed consent law for medical procedures is codified at section 766.103, Florida Statutes. It provides for informed consent “in accordance with an accepted standard of medical practice among members of the medical profession,” with a doctor providing information that would allow “a reasonable individual, . . . under the circumstances,

[to] have a general understanding of the procedure, the medically acceptable alternative procedures or treatments, and the substantial risks and hazards inherent in the proposed treatment or procedures.” § 766.103, Fla. Stat. The general informed consent statute does not mandate any waiting period or additional visit to a patient’s medical provider. *Id.*

20. Florida has a separate statutory provision for obtaining informed consent from patients seeking abortion. Under the current statutory scheme, a “termination of pregnancy” may not be performed or induced “except with the voluntary and informed . . . consent of the pregnant woman;” such consent is “voluntary and informed” if the “physician who is to perform the procedure, or the referring physician, has, at a minimum, orally, informed the woman” of certain information, including “the nature and risks of the procedure, the probable gestational age of the fetus, and the risks to the woman and the fetus of carrying the pregnancy to term.” § 390.0111(3)(a)(1), Fla. Stat. A woman must confirm in writing that she has received this information orally from her physician. *Id.*

21. Pursuant to the Florida Supreme Court’s decision in *State v. Presidential Women’s Center*, 937 So. 2d 114 (Fla. 2006), the existing abortion-specific informed consent statute requires physicians to obtain informed consent in the same manner as is required under the general informed consent statute, and the information to be disclosed to patients—the risks of the procedure and the alternatives—is analogous to what is required under the general informed consent statute and at common law.

22. Section one of H.B. 633 would amend current law to provide that a woman’s consent to an abortion is “voluntary and informed” only if she makes an additional, separate visit to her provider’s office to receive that same information, at least twenty-four hours before returning for her procedure. H.B. 633 § 1.

23. The Act incorporates a narrow exception to the mandatory delay and additional-trip requirements for a life-threatening “medical emergency”—and even then, only where a physician “has obtained at least one corroborative medical opinion attesting to the medical necessity for emergency procedures and to the fact that to a reasonable degree of medical certainty the continuation of the pregnancy would threaten the life of the pregnant woman.” § 390.0111(3)(b), Fla. Stat. If a second physician is not available, the physician must “document reasons for the medical necessity in the patient’s medical records.” *Id.*

24. Thus, the Act’s mandatory delay and additional-trip requirements apply for every woman who seeks abortion care to protect her life or health because she is suffering from an illness, disease, or medical condition—except if and when that illness or condition rises to the level of a life-threatening medical emergency. There is no exception to the mandatory delay for non-emergency threats to a woman’s life, and no exception to protect a woman’s health.

25. The Act also makes no exception for women who receive a diagnosis of a severe fetal anomaly during pregnancy. Thus, a woman seeking to end her pregnancy after receiving such a diagnosis must fulfill the delay and additional-trip requirements before she can terminate.

26. The only other exception to the Act’s requirements applies if, at the time the patient “schedules or arrives for her appointment . . . she presents to the physician a copy of the restraining order, police report, medical record, or other court order or documentation evidencing that she is obtaining the abortion because she is a victim of rape, incest, domestic violence, or human trafficking.” H.B. 633 § 1.

27. This “exception” is no exception at all: The reality is that most women who are victims of rape, domestic violence, or other forms of assault do not seek medical attention in the

aftermath of these crimes or report these incidents to law enforcement. This narrow exception's stringent requirements provide no relief for these women.

28. Physicians are subject to disciplinary action for violating the Act, including revocation of their licenses to practice medicine and administrative fines of up to \$10,000 for each violation. § 390.011(3)(c), Fla. Stat.; *see also* §§ 458.331, 459.015, 456.072(2), Fla. Stat.

29. In addition, abortion clinics may be prevented from renewing their clinic licenses for violations of the Act. Fla. Admin. Code R. 59A-9.020.

30. The Act, by its terms, is scheduled to take effect July 1, 2015. H.B. 633 § 3.

V. STATEMENT OF FACTS

31. Legal abortion is one of the safest procedures in contemporary medical practice.

32. Women decide to terminate a pregnancy for a variety of reasons, including familial, medical, financial, and personal. Some women have abortions because they conclude that it is not the right time in their lives to have a child or to add to their families; some to preserve their life or their health; some because they receive a diagnosis of a severe fetal medical condition or anomaly; some because they have become pregnant as a result of rape; and others because they choose not to have biological children.

33. Approximately one in three women in this country will have an abortion by age forty-five. A majority of women having abortions (61%) already have at least one child, while most (66%) also plan to have a child or additional children in the future.

34. Women in Florida may obtain two types of abortion care: medication abortion and surgical abortion. Medication abortion is a method of terminating an early pregnancy by taking medications that cause the woman to undergo a procedure similar to an early miscarriage.

Medication abortion is available only through nine weeks LMP. Surgical abortion is available in Florida through twenty-three weeks and six days LMP.

35. Plaintiff Bread and Roses currently uses a comprehensive informed consent process for abortion, available on the day of the procedure, which provides women with the state-mandated information, as well as all other information necessary for them to fully understand the risks and benefits of abortion and of the alternatives to abortion. This process also ensures that after thoroughly considering this information, a woman gives consent that is informed and voluntary, and that she is confident in her decision. Bread and Roses gives its patients multiple opportunities to ask questions and discuss any concerns with their physician prior to an abortion.

36. Thus, Bread and Roses' existing informed consent process is consistent with current best medical practices, requirements under current Florida law, and informed consent processes for medical procedures with a comparable degree of risk.

37. The Act's requirement that all women seeking abortion care receive certain state-mandated information in person and at least twenty-four hours prior to the procedure will require women to make a minimum of two trips to their health care provider and to wait at least one additional day before they are able to obtain an abortion.

38. This forced delay and additional-trip requirement will injure all Florida women seeking abortions in multiple ways.

39. First, the Act will require women who have decided to terminate a pregnancy to make an additional, unnecessary visit to the clinic, and to wait twenty-four hours before the state permits them to effectuate their decision. This unwarranted intrusion into their personal privacy and autonomy, the interference with the physician-patient relationship, the judgment and moral

disapproval from the state the Act communicates, and the anxiety associated with delaying an abortion that a woman has decided she wants will harm all Florida women seeking this care.

40. Second, the Act will impose tangible costs: the mandatory extra trip will require greater outlays of time and money, including an additional day's absence from work, home, and/or school. For many women it will involve lost wages and added travel and child-care costs, and for some women, it will also require an overnight stay away from home.

41. Third, by requiring a woman to make time for and to take an additional trip to her health care provider, the Act will threaten her confidentiality. Forcing a woman to make an unnecessary additional trip increases the risk that her partner, family members, employer, co-workers, or others whom she has not told will learn that she is having an abortion.

42. Fourth, the Act will cause delays of greater than twenty-four hours for some women. For many women, it will be difficult, if not impossible, to schedule an appointment on two consecutive days due to work and/or school schedules, child-care availability, and the need to secure transportation to and from a provider. Moreover, Plaintiff Bread and Roses' doctor has a limited schedule, allowing her to provide care on only certain days, which will likely be true at other clinics as well. The mandatory delay and additional-trip requirement will thus significantly delay some women in obtaining abortion care.

43. Delay in obtaining an abortion can in turn cause additional harms. Although abortion is extremely safe, delays in performing an abortion increase the risk to a woman's health and well-being. Even a short delay will be sufficient to prolong some women's pregnancies into the second trimester, thereby significantly increasing the inconvenience and risk associated with the procedure, and/or requiring travel to a more distant health care provider if the

original provider does not offer services at that later point in pregnancy. Abortions are also more expensive the later they are performed.

44. Fifth, the additional-trip requirement exposes patients to further harassment by anti-abortion activists including those who regularly picket Plaintiff Bread and Roses.

45. The mandatory delay and additional-trip requirements will also be problematic for women seeking a medication abortion, which is available only early in pregnancy. Medication abortion allows patients to end a pregnancy at the earliest stages without undergoing a surgical procedure, and some women prefer it because they find it to be less invasive and more like a spontaneous miscarriage; others prefer medication abortion because it is more private and allows them to feel more in control of the process. For some women, medication abortion is medically indicated for physiological reasons that make surgical abortion difficult or impossible to perform. For other women, such as survivors of sexual assault, medication abortion is indicated to protect their mental health, as it is less intrusive into a woman's body. The delays the Act will impose, as described *supra* ¶¶ 42-43, will push some women beyond the timeframe in which medication abortion is an available option.

46. While a follow-up appointment is not considered medically necessary after a surgical abortion in most circumstances, the standard of care in the United States is to recommend some manner of a follow-up visit for a medication abortion. As a result, the Act's additional-trip requirement may fall more heavily on medication abortion patients. Some women may thus choose to have a surgical abortion, instead of the medication abortion they would otherwise prefer, to avoid yet another visit to their provider.

47. In addition to these harms common to all Florida women seeking abortions, and in addition to the difficulty it poses to women who would prefer medication abortion, the

mandatory delay and additional-trip requirements will pose particular harms to especially vulnerable populations of Florida women: low-income women; women who are the victims of domestic violence and those whose pregnancy is the result of rape or other forms of abuse; those who face medical risks from pregnancy that fall short of a life-threatening medical emergency; those whose pregnancies involve a severe fetal anomaly; and those minors who must seek a judicial bypass of the parental notification law in order to obtain a safe and legal abortion.

48. Nationally, approximately 70% of women seeking abortions are below 200% of the federal poverty level (“the FPL”), a frequent measure of low-income populations: in approximate terms, 40% are below the FPL, and another 30% are between 100% and 200% of the FPL. Because Florida’s poverty rate is higher than the national rate, it is likely that an even greater majority of women seeking abortions in Florida are low-income.

49. Low-income women will have the most difficulty in rearranging inflexible work schedules at low-wage jobs; arranging and paying for child-care; paying for the travel costs for an additional trip to the clinic; foregoing lost wages for missed work; paying for any increased costs associated with a later procedure; and saving up the money required to cover any or all of these additional expenses.

50. Women who are the victims of domestic violence will also face particular challenges as a result of this law. Having a child with an abuser can legally bind the woman to her abuser for life; having an infant to care for can make it that much harder for a woman to escape. Abusers may, if they know a woman is pregnant, try to force her to carry to term. Additional trips to the clinic increase exponentially the likelihood that an abuser will discover that his victim is terminating a pregnancy.

51. For a woman who has survived rape, the additional-trip requirement is likewise menacing: forcing her to make an unnecessary additional trip may be emotionally and psychologically damaging and increases the risk of unwanted disclosure of the rape and resulting pregnancy. Moreover, the many logistical difficulties of arranging a separate visit to the provider, including taking time off from work and/or school, arranging child-care, and making the necessary travel arrangements, are likely to be even more difficult for a woman following a traumatic event such as a rape.

52. The Act's narrow exception for victims of rape, incest, domestic violence, and human trafficking—which requires documentation—is meaningless for the vast majority of women who become pregnant under these horrific circumstances. The reality is that the majority of victims do not seek police or medical assistance in the aftermath of these crimes.

53. Forcing such women to make an additional trip in order to obtain abortion care may threaten their safety or well-being, could significantly delay them in seeking care, and could prevent them from obtaining an abortion altogether.

54. The Act will also threaten the health of Florida women seeking abortion care to protect their lives or health. While the Act incorporates a limited exception for medical emergencies that “threaten the *life* of the pregnant woman,” § 390.0111(3)(c), Fla. Stat., (emphasis added), there exists no exception for non-emergency threats to a woman's life or for *any* kind of threat to a woman's health.

55. For women who decide to terminate a wanted pregnancy after receiving a diagnosis of a severe fetal anomaly, the mandatory delay and additional-trip requirements are especially cruel, and will delay physicians in exercising their judgment to provide the care that is most appropriate for patients who have made that decision.

56. The Act will further infringe upon the right to abortion of minor women who choose to seek a judicial bypass of the requirement that they notify a parent, as permitted by Section 390.01114, Florida Statutes. Those minors will need to make an extra trip to the provider, in addition to the separate trips, delays, stresses, and costs involved in obtaining a judicial bypass.

57. Finally, by imposing a delay on abortion—a delay the Legislature does not impose on any other medical procedure—the Act suggests to abortion patients that the Legislature believes women are not competent to render considered, appropriate medical decisions for themselves and their families, and must instead be forced by the state to reconsider their medical decisions. This mandatory delay reflects and perpetuates the stereotype that women do not understand the nature of the abortion procedure, do not think carefully about their decision, and/or are less capable of making informed decisions about their health care than are men.

58. The Legislature considered a number of amendments that would have either ameliorated the Act's effects or applied its requirements to other procedures, all of which were rejected:

- One amendment would have imposed similar mandatory delay and additional-trip requirements before a man could obtain a vasectomy. *See* S.B. 724, A. 829796, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-2; *H.B. 633 – Informed Patient Consent*, Florida House of Representatives, <http://www.myfloridahouse.gov/Sections/Bills/billsdetail.aspx?BillId=53704> (last visited June 5, 2015) [hereinafter *H.B. 633 Legislative History*]
- Another would have permitted women certain of their decisions to waive the Act's requirements and receive the mandated information on the same day as the abortion procedure. *See* H.B. 633, A. 213635, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-3; *H.B. 633 Legislative History*.
- Another would have allowed women who live 100 miles or more from the nearest abortion provider to waive the mandatory delay and additional-trip requirements. *See*

S.B. 724, A. 449942, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-4; *S.B. 274 – Termination of Pregnancies*, Florida House of Representatives, <http://www.myfloridahouse.gov/Sections/Bills/billsdetail.aspx?BillId=53671&> (last visited June 5, 2015) [hereinafter *S.B. 724 Legislative History*].

- Two more would have permitted the informed consent information to be provided to the woman electronically, rather than in person, twenty-four hours before her abortion procedure. *See* S.B. 724, A. 853480, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-5; S.B. 724, A. 231828, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-6; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Two others would have allowed the physician who would perform the abortion to delegate the informed consent requirements to a registered nurse, licensed practical nurse, advanced registered nurse, nurse practitioner, or physician assistant, addressing the delay for women sometimes created by doctors' limited clinic schedules. *See* S.B. 724, A. 930638, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-7; *H.B. 633*, A. 711443, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-8; *H.B. 633 Legislative History*.
- Three amendments would have allowed women who are victims of rape, incest, domestic violence, or human trafficking to waive the mandatory delay and additional-trip requirements without requiring official documentation. *See* S.B. 724, A. 874120, 974400, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-9; S.B. 724, A. 888882, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-10; S.B. 724, A. 113284, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-11; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Two others would have waived the mandatory delay and additional-trip requirements for women who have received a diagnosis of a severe fetal anomaly. *See* SB. 724, A. 591932, 2015 Leg., Reg. Sess. (Fla. 2015), attached hereto as Ex. A-12; Ex. A-11. *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Two would have created an exception from the mandatory delay and additional-trip requirements in cases where the pregnancy poses a risk to the woman's health. *See* Ex. A-11, A-12; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.

59. If the Act goes into effect, Bread and Roses' physician risks the loss of her license to practice medicine and other disciplinary penalties for any violation of the Act.

60. If the Act goes into effect, Bread and Roses faces non-renewal of its license as an abortion clinic for failure to comply with the Act.

61. If the Act goes into effect, members of Medical Students for Choice who are trained in and assist in the provision of abortion care in Florida will be forced to deliver care that is not in the best interests of patients, that is antithetical to the instruction they otherwise receive regarding the informed consent process, and that is detrimental to their training as conscientious physicians, due to their participation in medical care that puts patients at risk of harm.

62. Florida law does not impose the Act's unnecessary and onerous provisions upon any other medical procedure.

63. The Act will irreparably harm Plaintiffs' patients in numerous ways, including by requiring women who have decided to terminate a pregnancy to make an additional, unnecessary visit to the clinic and to wait twenty-four hours before the state permits them to effectuate their decision; intruding into their personal privacy and autonomy; interfering with the physician-patient relationship; conveying judgment and moral disapproval from the state; requiring unnecessary delay that perpetuates outdated stereotypes about women; making the process of obtaining an abortion more costly; threatening the health of women seeking abortions; threatening the confidentiality of women seeking abortions; and cruelly forcing women pregnant under untenable circumstances to wait to terminate their pregnancies.

64. The state has no compelling interest in imposing the mandatory delay and additional-trip requirements on women who have made the decision to terminate their pregnancies.

65. Even if the mandatory delay were justified, the state has no compelling interest in requiring a patient to make an additional trip to her health care provider to receive the mandated information in person.

66. Even if there were compelling state interests behind these unnecessary requirements, there are other, less intrusive means that would adequately serve these interests.

VI. CLAIMS FOR RELIEF

COUNT I – RIGHT TO PRIVACY

67. Plaintiffs hereby reaffirm and reallege each and every allegation made in ¶¶ 1-66 above as if set forth fully herein.

68. The Act violates the right to privacy of women seeking and obtaining abortions in the state of Florida, as guaranteed by article I, section 23 of the Florida Constitution.

COUNT II – RIGHT TO EQUAL PROTECTION

69. Plaintiffs hereby reaffirm and reallege each and every allegation made in ¶¶ 1-66 above as if set forth fully herein.

70. The Act violates Plaintiffs' and their patients' rights to equal protection of the laws in the state of Florida, as guaranteed by article I, section 2 of the Florida Constitution, by:

(a) singling out abortion for onerous and medically unnecessary restrictions that the Florida Legislature does not impose upon any other medical procedure for which people may consent; and

(b) discriminating against women on the basis of their sex and on the basis of gender stereotypes.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that this Court:

1. Issue a declaratory judgment that Section 1 of H.B. 633 violates the rights of Plaintiffs, their patients, and Florida women, as protected by the Florida Constitution, and is therefore void and of no effect.

2. Issue temporary and final injunctive relief, without bond, restraining the enforcement, operation and execution of Section 1 of H.B. 633 by enjoining Defendants, their agents, employees, appointees, or successors from enforcing, threatening to enforce, or otherwise applying the provisions of that statute.
3. Grant Plaintiffs' costs.
4. Grant such further relief as may be just and proper.

Respectfully submitted this 11th day of June 2015.

Exhibit A-1

ENROLLED

HB 633, Engrossed 1

2015 Legislature

1
2 An act relating to informed patient consent; amending
3 s. 390.0111, F.S.; revising conditions for the
4 voluntary and informed consent to a termination of
5 pregnancy; reenacting s. 390.012(3)(d), F.S., relating
6 to Agency for Health Care Administration rules
7 regarding medical screening and evaluation of abortion
8 clinic patients, to incorporate the amendment made by
9 this act to s. 390.0111, F.S., in a reference thereto;
10 providing an effective date.
11

12 Be It Enacted by the Legislature of the State of Florida:
13

14 Section 1. Paragraph (a) of subsection (3) of section
15 390.0111, Florida Statutes, is amended to read:

16 390.0111 Termination of pregnancies.—

17 (3) CONSENTS REQUIRED.—A termination of pregnancy may not
18 be performed or induced except with the voluntary and informed
19 written consent of the pregnant woman or, in the case of a
20 mental incompetent, the voluntary and informed written consent
21 of her court-appointed guardian.

22 (a) Except in the case of a medical emergency, consent to
23 a termination of pregnancy is voluntary and informed only if:

24 1. The physician who is to perform the procedure, or the
25 referring physician, has, at a minimum, orally, while physically
26 present in the same room, and at least 24 hours before the

ENROLLED

HB 633, Engrossed 1

2015 Legislature

27 procedure ~~in person~~, informed the woman of:

28 a. The nature and risks of undergoing or not undergoing
29 the proposed procedure that a reasonable patient would consider
30 material to making a knowing and willful decision of whether to
31 terminate a pregnancy.

32 b. The probable gestational age of the fetus, verified by
33 an ultrasound, at the time the termination of pregnancy is to be
34 performed.

35 (I) The ultrasound must be performed by the physician who
36 is to perform the abortion or by a person having documented
37 evidence that he or she has completed a course in the operation
38 of ultrasound equipment as prescribed by rule and who is working
39 in conjunction with the physician.

40 (II) The person performing the ultrasound must offer the
41 woman the opportunity to view the live ultrasound images and
42 hear an explanation of them. If the woman accepts the
43 opportunity to view the images and hear the explanation, a
44 physician or a registered nurse, licensed practical nurse,
45 advanced registered nurse practitioner, or physician assistant
46 working in conjunction with the physician must contemporaneously
47 review and explain the images to the woman before the woman
48 gives informed consent to having an abortion procedure
49 performed.

50 (III) The woman has a right to decline to view and hear
51 the explanation of the live ultrasound images after she is
52 informed of her right and offered an opportunity to view the

ENROLLED

HB 633, Engrossed 1

2015 Legislature

53 images and hear the explanation. If the woman declines, the
54 woman shall complete a form acknowledging that she was offered
55 an opportunity to view and hear the explanation of the images
56 but that she declined that opportunity. The form must also
57 indicate that the woman's decision was not based on any undue
58 influence from any person to discourage her from viewing the
59 images or hearing the explanation and that she declined of her
60 own free will.

61 (IV) Unless requested by the woman, the person performing
62 the ultrasound may not offer the opportunity to view the images
63 and hear the explanation and the explanation may not be given
64 if, at the time the woman schedules or arrives for her
65 appointment to obtain an abortion, a copy of a restraining
66 order, police report, medical record, or other court order or
67 documentation is presented which provides evidence that the
68 woman is obtaining the abortion because the woman is a victim of
69 rape, incest, domestic violence, or human trafficking or that
70 the woman has been diagnosed as having a condition that, on the
71 basis of a physician's good faith clinical judgment, would
72 create a serious risk of substantial and irreversible impairment
73 of a major bodily function if the woman delayed terminating her
74 pregnancy.

75 c. The medical risks to the woman and fetus of carrying
76 the pregnancy to term.

77
78 The physician may provide the information required in this

ENROLLED

HB 633, Engrossed 1

2015 Legislature

79 subparagraph within 24 hours before the procedure if requested
80 by the woman at the time she schedules or arrives for her
81 appointment to obtain an abortion and if she presents to the
82 physician a copy of a restraining order, police report, medical
83 record, or other court order or documentation evidencing that
84 she is obtaining the abortion because she is a victim of rape,
85 incest, domestic violence, or human trafficking.

86 2. Printed materials prepared and provided by the
87 department have been provided to the pregnant woman, if she
88 chooses to view these materials, including:

89 a. A description of the fetus, including a description of
90 the various stages of development.

91 b. A list of entities that offer alternatives to
92 terminating the pregnancy.

93 c. Detailed information on the availability of medical
94 assistance benefits for prenatal care, childbirth, and neonatal
95 care.

96 3. The woman acknowledges in writing, before the
97 termination of pregnancy, that the information required to be
98 provided under this subsection has been provided.

99
100 Nothing in this paragraph is intended to prohibit a physician
101 from providing any additional information which the physician
102 deems material to the woman's informed decision to terminate her
103 pregnancy.

104 Section 2. For the purpose of incorporating the amendment

ENROLLED

HB 633, Engrossed 1

2015 Legislature

made by this act to section 390.0111, Florida Statutes, in a reference thereto, paragraph (d) of subsection (3) of section 390.012, Florida Statutes, is reenacted to read:

390.012 Powers of agency; rules; disposal of fetal remains.—

(3) For clinics that perform or claim to perform abortions after the first trimester of pregnancy, the agency shall adopt rules pursuant to ss. 120.536(1) and 120.54 to implement the provisions of this chapter, including the following:

(d) Rules relating to the medical screening and evaluation of each abortion clinic patient. At a minimum, these rules shall require:

1. A medical history including reported allergies to medications, antiseptic solutions, or latex; past surgeries; and an obstetric and gynecological history.

2. A physical examination, including a bimanual examination estimating uterine size and palpation of the adnexa.

3. The appropriate laboratory tests, including:

a. Urine or blood tests for pregnancy performed before the abortion procedure.

b. A test for anemia.

c. Rh typing, unless reliable written documentation of blood type is available.

d. Other tests as indicated from the physical examination.

4. An ultrasound evaluation for all patients. The rules shall require that if a person who is not a physician performs

ENROLLED

HB 633, Engrossed 1

2015 Legislature

131 an ultrasound examination, that person shall have documented
132 evidence that he or she has completed a course in the operation
133 of ultrasound equipment as prescribed in rule. The rules shall
134 require clinics to be in compliance with s. 390.0111.

135 5. That the physician is responsible for estimating the
136 gestational age of the fetus based on the ultrasound examination
137 and obstetric standards in keeping with established standards of
138 care regarding the estimation of fetal age as defined in rule
139 and shall write the estimate in the patient's medical history.
140 The physician shall keep original prints of each ultrasound
141 examination of a patient in the patient's medical history file.

142 Section 3. This act shall take effect July 1, 2015.

July 1. In support of their motion, Plaintiffs state as follows:

INTRODUCTION

Absent injunctive relief from this Court, a sweeping restriction on Florida women's ability to access abortion services, unprecedented in this state, will take effect on July 1, 2015. Section one of Florida House Bill 633, signed by Governor Scott last night (June 10, 2015) would require a woman seeking an abortion to make an additional, unnecessary trip to her health care provider at least twenty-four hours before obtaining an abortion, in order to receive the same information she may currently receive on the day of the procedure. *See* Ch. 2015-1__, § 1, Laws of Fla. ("H.B. 633" or "the Act") (amending § 390.0111, Fla. Stat). The Act's unnecessary and burdensome requirements are imposed regardless of the distance a woman must travel to reach her provider, her own medical needs, her judgment, her doctor's judgment, or her individual life circumstances. By subjecting all women seeking abortion care to both a mandatory twenty-four-hour delay and an additional-trip requirement—a burden placed on patients seeking no other medical procedure in Florida, much less a medical procedure protected by the state Constitution as a fundamental right—the Act can only serve to deter women from seeking abortions, and to punish and discriminate against those who do.

By impeding a woman's access to abortion, the Act violates her right to privacy as guaranteed under article I, section 23 of the Florida Constitution. Because Plaintiffs are likely to succeed on the merits of their claims and they, along with their patients and all Florida women seeking abortions, will suffer irreparable harm if the Act is not enjoined, and because an

injunction will serve the public interest, this Court should issue immediate temporary injunctive relief against enforcement of the Act.

STATEMENT OF THE CASE

A. Current Florida Informed Consent Laws

“Informed consent” refers to the ethical obligations of doctors and other health care professionals to ensure that a patient is informed about a procedure, has the capacity to consent to a procedure, and does in fact consent to a procedure. Decl. of Kenneth W. Goodman, attached hereto as Ex. B-4, (“Goodman Decl.”) ¶ 7. Florida has a general informed consent statute that applies to all medical procedures, providing that informed consent is valid where a doctor or other health professional conforms to accepted standards of medical practice such that “a reasonable individual, from the information provided by the [doctor], under the circumstances, would have a general understanding of the procedure, the medically acceptable alternative procedures or treatments, and the substantial risks and hazards inherent in the proposed treatment or procedures.” § 766.103, Fla. Stat. This statutory standard reflects best medical practices. Goodman Decl. ¶¶ 7-8. No waiting period or additional trip is required under Florida law for any other procedure. § 766.103, Fla. Stat.; Goodman Decl. ¶ 13.

Prior to H.B. 633’s enactment, Florida law had a specific informed consent statute for abortion, which provided that a “termination of pregnancy” may not be performed or induced “except with the voluntary and informed written consent of the pregnant woman.” § 390.0111(3), Fla. Stat. Such consent is “voluntary and informed” if the “physician who is to perform the procedure, or the referring physician, has, at a minimum, orally, informed the woman” of certain information, including “the nature and risks of . . . [the] procedure,” “the probable gestational age of the fetus,” and the “risks to the woman and the fetus of carrying the pregnancy to term.” *Id.* Pursuant to the Florida Supreme Court’s decision in *State v.*

Presidential Women's Center, 937 So. 2d 114 (Fla. 2006), the abortion-specific informed consent statute requires physicians to obtain informed consent in the same manner as is required under the general informed consent statute, and the information to be disclosed to patients—the risks of the procedure and the alternatives—is analogous.

B. Provisions of the Act

H.B. 633, which is effective July 1, adds two provisions to Section 390.0111(3), Florida Statutes. First, it requires that the information be provided in person twenty-four hours prior to the procedure. This forces the woman to make a separate, additional visit to a provider's office, at least twenty-four hours before her appointment to obtain the abortion care she seeks. H.B. 633 § 1. Second, the Act provides a narrow exception to the mandatory delay and additional-trip requirements for a woman who, when she “schedules or arrives for her appointment . . . presents to the physician a copy of a restraining order, police report, medical record, or other court order or documentation evidencing that she is obtaining the abortion because she is a victim of rape, incest, domestic violence, or human trafficking.” *Id.*

The only other exception to the mandatory delay and additional-trip requirements is the exception in the current version of the informed consent law for “a medical emergency.” § 390.0111(3), Fla. Stat. The statute does not define “medical emergency,” but provides that in a medical emergency, “a physician may terminate a pregnancy” after “obtain[ing] at least one corroborative medical opinion attesting to the medical necessity for emergency medical procedures and to the fact that to a reasonable degree of medical certainty the continuation of the pregnancy would threaten the life of the pregnant woman.” § 390.0111(3)(b), Fla. Stat. (allowing physician to proceed absent corroborating opinion only if a second physician is not available). There is no exception for threats to a woman's life that are not “medical emergencies,” and no exception for threats of any kind to a woman's health.

C. The Effect of the Act on Women Seeking Abortion Care in Florida

The Act harms all Florida women seeking abortions: Today, a woman in Florida can obtain an abortion once she and her doctor believe it is appropriate—which means that she may do so upon her first visit to a clinic, just as patients in Florida may do when seeking all other comparable medical procedures. *See* Decl. of Christine L. Curry, attached hereto as Ex. B-3, (“Curry Decl.”) ¶¶ 9, 14; Goodman Decl. ¶ 13. If the Act were allowed to go into effect, that woman would have to make an additional, unnecessary trip to the clinic, and wait at least twenty-four hours before obtaining the abortion care she seeks. This in itself is a burden. Further, the mandatory delay and additional-trip requirements will force women to expend more time and money, including an additional day’s absence from work, home, and/or school. They will require paying for additional travel costs and child-care; involve lost wages for many women; and require an overnight stay away from home for some women. Decl. of Kristin Davy, attached hereto as Ex. B-2, (“Davy Decl.”) ¶ 5; Decl. of Sheila Katz, attached hereto as Ex. B-5, (“Katz Decl.”) ¶ 18.

The Act will also require that a physician be at the health center to provide the required information on the patient’s first visit. For Plaintiff Bread and Roses, this requirement will lead to delays far greater than 24 hours for patients, because its sole physician works no more than two days per week. Davy Decl. ¶ 16. Moreover, because it is likely not possible to staff a physician at every facility offering abortions each single day of the week, and because many women will not be able to take time away from their existing obligations to travel on two consecutive days, the Act will inevitably force many women to delay their abortion procedures by a significantly longer period of time than twenty-four hours. Curry Decl. ¶¶ 15, 20; Davy Decl. ¶¶ 16. That will in turn impose medical harm on women: While abortion is an extremely safe procedure, the later an abortion takes place in pregnancy, the greater the medical risks for

the woman, and the greater the cost as well. Curry Decl. ¶¶ 13, 15; Davy Decl. ¶ 18. The additional-trip requirement also poses a very real threat to a woman's confidentiality and privacy by increasing the risk that partners, family members, employers, co-workers, or others will discover that she is having an abortion. Davy Decl. ¶ 20; Katz Decl. ¶ 17. For some women, the mandatory delay and additional-trip requirements will prevent them from obtaining a medication abortion, which is an early method of ending a pregnancy involving drugs rather than surgery. Curry Decl. ¶¶ 10, 15. Medication abortion is medically indicated for physiological or mental health reasons for some women and is strongly preferred over surgical abortion by others for personal reasons. *Id.* ¶¶ 10-12; Davy Decl. ¶¶ 7, 17.

The mandatory delay and additional-trip requirements will also pose particular harms to especially vulnerable groups of Florida women, including low-income women; women who are victims of intimate partner violence; those whose pregnancy is the result of rape or other forms of abuse; those with wanted pregnancies that involve a severe fetal anomaly, and those with medical complications of pregnancy that are not immediately life-threatening. For these women, the mandatory delay and additional-trip requirements may inflict psychological harm, increase significantly costs and burdens, threaten their safety, threaten their health and even their lives, or prevent them from obtaining an abortion altogether. Davy Decl. ¶¶ 14, 19; Katz Decl. ¶¶ 15-23; Decl. of Lenore Walker, attached hereto as Ex. B-6, ("Walker Decl.") ¶¶ 16-25; Curry Decl. ¶¶ 15-19.

Low-income women will have the greatest difficulty in rearranging inflexible work schedules at low-wage jobs; arranging and paying for childcare; paying for the travel costs for an additional trip to the clinic; foregoing lost wages for missed work; and paying any additional costs associated with a later procedure. Katz Decl. ¶¶ 15-22; Davy Decl. ¶¶ 13-15. A significant

number of women seeking abortions have incomes that are at, or below, the federal poverty level. Nationally, in 2008, 42% of women having abortions had incomes below the federal poverty level, and another 27% had incomes below 200% of the federal poverty level, which is often considered a better measure of who is low-income. Katz Decl. ¶¶ 10, 14-15. Florida has a higher poverty rate than the United States, and a higher proportion of people living below 200% of the poverty line; thus, it is likely a large majority of women seeking abortions in Florida are low-income. *Id.* ¶¶ 8, 10, 15. Low-income women will find it more difficult to pay these increased costs without foregoing other necessities. *Id.* ¶ 22. The need to find and save money to pay for additional costs resulting from the Act will likely delay low-income women in seeking abortions, causing the harms associated with delay discussed *supra*.

For a woman with an abusive partner who is seeking an abortion without detection, the need for privacy—and thus the threat posed by the Act—is particularly acute. Walker Decl. ¶ 17. Women in abusive relationships often are carefully monitored and have limited unaccounted-for time. *Id.* ¶¶ 11, 18, 21. Forcing these women to make a medically unnecessary trip is not only cruel, but could also subject them to further violence. *Id.* ¶¶ 17-21.

Similarly, forcing women whose pregnancies are the result of rape or other violent crimes to comply with the Act’s requirements may cause them further trauma and psychological harm. *Id.* ¶¶ 22-24. While the Act does contain a purported “exception” for these circumstances, a woman who has survived these crimes cannot avail herself of it unless she first reports the crime to authorities. That makes the “exception” meaningless: Most victims of these forms of violence and abuse do not report the abuse to authorities in the first instance, and they too will be forced to wait before terminating pregnancies that result from this violence. *Id.* ¶¶ 26-29.

Those women with wanted pregnancies who seek abortions to protect their medical well-being or because they have received a diagnosis of a severe fetal anomaly will also face grave harms. While the Act incorporates a limited exception for medical emergencies that immediately threaten a woman's life, there is no exception for non-emergency threats to a woman's life, and no exception for *any* threat to a woman's health.¹ The Act will thus impose serious medical risks on women facing one of the numerous complications of pregnancy that threaten a woman's life or health outside the dangerously narrow confines of the Act's exception for life-threatening medical emergencies. Curry Decl. ¶¶ 18-19. The Act also contains no exception for women whose pregnancies involve grave or even lethal fetal anomalies, on whom the Act may impose psychological harm. Curry Decl. ¶ 16.

Finally, by imposing a waiting period on abortion—a waiting period the Legislature does not impose on any other medical procedure—the Act stigmatizes women seeking abortions and sends the message that they are incompetent decision-makers. This waiting period reflects and perpetuates the gender stereotype that women do not understand the nature of the abortion procedure, have not thought carefully about their decision to have an abortion, or are less capable of making an informed decision about their health care than men.

D. The Effect of the Act on Abortion Providers in Florida

The Act is enforced through penalties against doctors who provide abortions, who face both monetary fines of up to \$10,000 for each violation and disciplinary sanctions up to and

¹ The underlying statute provides that a physician's "reasonable belief that complying with the requirements of informed consent would threaten the life or health of the patient is a defense to any action brought under this paragraph." § 390.0111(3)(c), Fla. Stat. This affirmative defense to disciplinary action in limited cases, which a physician must prove to the medical board before she can avail herself of it, does not constitute an adequate health exception, nor provide any protection to licensed abortion clinics for potential violations of the Act.

including revocation of their licenses to practice medicine. § 390.0111(3)(c), Fla. Stat.; *see also* §§ 458.331, 459.015, 456.072(2), Fla. Stat. Abortion clinics, which must be licensed by the Florida Agency for Healthcare Administration, may be prevented from renewing their clinic licenses for violations of the Act. Fla. Admin. Code R. 59A-9.020.

ARGUMENT

A. Standard for Granting a Motion for Injunctive Relief

The “obvious purpose” of a temporary injunction is to maintain the status quo pending the determination of a case. *Smith v. Hous. Auth.*, 3 So. 2d 880, 881 (Fla. 1941) (en banc). Plaintiffs are entitled to a temporary injunction if they “satisfy a four-part test under Florida law: ‘a substantial likelihood of success on the merits; lack of an adequate remedy at law; irreparable harm absent the entry of an injunction; and that injunctive relief will serve the public interest.’” *Liberty Counsel v. Fla. Bar Bd. of Governors*, 12 So. 3d 183, 186 n.7 (Fla. 2009) (quoting *Reform Party of Fla. v. Black*, 885 So. 2d 303, 305 (Fla. 2004)); *see also St. John’s Inv. Mgmt. Co. v. Albaneze*, 22 So. 3d 728, 731 (Fla. 1st DCA 2009). As set forth below, Plaintiffs easily satisfy these four requirements, and granting a temporary injunction will preserve the status quo, allowing Florida women to continue making informed decisions about their own medical care without burdensome, unnecessary, and unconstitutional intrusion by the state.

B. Plaintiffs Have a Substantial Likelihood of Success on the Merits of Their Claim that the Act Violates the Right to Privacy

Plaintiffs have a substantial likelihood of success on the merits of their claim that the Act violates a woman’s fundamental right to privacy as guaranteed by article I, section 23 of the Florida Constitution, by infringing on her right to access abortion services. As discussed below, the Florida Supreme Court has repeatedly held that laws infringing on a woman’s privacy right

to determine whether or not to continue a pregnancy are subject to strict scrutiny. The Act unquestionably infringes on that right and cannot survive such scrutiny.

1. The Florida Constitution Requires Strict Scrutiny of All Incursions on the Fundamental Right to Privacy, Including a Woman's Right to Decide to End a Pregnancy

The Florida Constitution begins with a Declaration of Rights. “No other broad formulation of legal principles, whether state or federal, provides more protection from government overreaching or a richer environment for self-reliance and individualism than does this ‘stalwart set of basic principles.’” *Traylor v. State*, 596 So. 2d 957, 963 (Fla. 1992) (quoting *State ex rel. Davis v. City of Stuart*, 120 So. 335, 347 (Fla. 1929)). Unlike the Federal Constitution, the Florida Constitution’s Declaration of Rights contains “an express, freestanding Right of Privacy Clause,” added to the Constitution directly by Florida citizens in a 1980 general election. *N. Fla. Women’s Health & Counseling Servs., Inc. v. State*, 866 So. 2d 612, 619 (Fla. 2003) (“*North Florida*”). Florida’s explicit constitutional guarantee of the right to privacy provides in relevant part:

Every natural person has the right to be let alone and free from governmental intrusion into the person’s private life except as otherwise provided herein.

Art. I, § 23, Fla. Const.

As recognized by Florida courts, this *explicit* state right to privacy affords greater protections from governmental intrusion and is “a broader, more protective right” than the *implicit* right to privacy recognized under the Federal Constitution. *North Florida*, 866 So. 2d at 619; *id.* at 634 (“While the United States Supreme Court has read into the federal constitution an *implicit* right of privacy, that particular right is a weak version of our *explicit* freestanding state right” (internal footnote omitted)); *see also In re T.W.*, 551 So. 2d 1186, 1191-92 (Fla. 1989) (Florida’s “amendment embraces more privacy interests, and extends more protection to the

individual in those interests, than does the federal Constitution.”). As the Florida Supreme Court has explained at length:

Article I, section 23, was intentionally phrased in strong terms. The drafters of the amendment rejected the use of the words “unreasonable” or “unwarranted” before the phrase “governmental intrusion” in order to make the privacy right as strong as possible. Since the people of this state exercised their prerogative and enacted an amendment to the Florida Constitution which expressly and succinctly provides for a strong right of privacy not found in the United States Constitution, it can only be concluded that the right is much broader in scope than that of the Federal Constitution.

Winfield v. Div. of Pari-Mutuel Wagering, 477 So. 2d 544, 548 (Fla. 1985); *see also Von Eiff v. Azicri*, 720 So. 2d 510, 514 (Fla. 1998) (“The state constitutional right to privacy is much broader in scope, embraces more privacy interests, and extends more protection to those interests than its federal counterpart.”).

Under Florida law, an infringement upon the fundamental right to privacy warrants judicial review under the strict scrutiny standard, and is “presumptively unconstitutional unless proved valid by the State.” *North Florida*, 866 So. 2d at 626. The state bears the evidentiary “burden of proof to . . . justify an intrusion on privacy,” and in order to meet this burden, the state must demonstrate “that the challenged regulation serves a compelling state interest and accomplishes its goal through the use of the least intrusive means.” *In re T.W.*, 551 So. 2d at 1192 (quoting *Winfield*, 477 So. 2d at 547). This standard is a “highly stringent” one. *North Florida*, 866 So. 2d at 620-21 (quoting *In re T.W.*, 551 So. 2d at 1192). Indeed, “no government intrusion in the personal decisionmaking cases . . . has survived” such scrutiny. *Id.*

The Florida Supreme Court has repeatedly held that the state constitutional right to privacy “is clearly implicated in a woman’s decision of whether or not to continue her pregnancy.” *In re T.W.*, 551 So. 2d at 1192; *see also North Florida*, 866 So. 2d at 620-22, 632; *Renee B. v. Fla. Agency for Health Care Admin.*, 790 So. 2d 1036, 1041 (Fla. 2001). The

constitutional right to privacy “embodies the principle that [f]ew decisions are more personal and intimate, more properly private, or more basic to individual dignity and autonomy, than a woman’s decision . . . whether to end her pregnancy. A woman’s right to make that choice freely is fundamental.” *In re T.W.*, 551 So. 2d at 1193 (internal quotations and citations omitted).

In *In re T.W.*, the Florida Supreme Court held that strict scrutiny applied to restrictions on abortion that implicated the right to privacy. *Id.* In assessing whether the state had shown a compelling state interest, the court looked to the original trimester framework of *Roe v. Wade*, 410 U.S. 113 (1973). The *In Re T.W.* court held that “the state’s interest in maternal health” does not “become[] compelling” until “the end of the first trimester;”² the state’s interest in embryonic or fetal life only “becomes compelling upon viability.” *In re T.W.*, 551 So. 2d at 1193. The state is thus foreclosed from asserting a compelling interest in maternal health before the end of the first trimester, or a compelling interest in potential life before viability. “[P]rior to the end of the first trimester, the abortion decision must be left to the woman and may not be significantly restricted by the state. Following this point, the state may impose significant restrictions only in the least intrusive manner designed to safeguard the health of the mother.” *In re T.W.*, 551 So. 2d at 1193; *see also North Florida*, 866 So. 2d at 639-40 (reaffirming *In re T.W.*).

Since *In re T.W.*, Florida courts have consistently applied strict scrutiny to statutes that impose state-created burdens on a woman’s right to decide whether or not to continue a

² As the Florida Supreme Court recognized in *In re T.W.*, 551 So. 2d at 1193, the reason that *Roe* had identified the end of the first trimester as meaningful for women’s health restrictions is that in 1973, abortion beyond the first trimester was considered more dangerous than carrying to term. *Roe*, 410 U.S. at 163. With advances in medical technology, the evidence no longer supports this assumption. *See In re T.W.*, 551 So. 2d at 1197 (Ehrlich, J., concurring).

pregnancy.³ In 2003, the Florida Supreme Court held a newly enacted parental notification law unconstitutional under the strict scrutiny standard. *See North Florida*, 866 So. 2d 612. The law required a minor to notify a parent of her decision to have an abortion, or to convince a court that she was mature enough to make that decision on her own or that an abortion was in her best interests. *Id.* at 615. In *North Florida*, the court once again underscored the strength of the Florida Constitution’s protection of the right to privacy, especially as compared to federal protections. The court expressly rejected the state’s arguments that it should apply the lower, undue burden standard the U.S. Supreme Court articulated in *Planned Parenthood v. Casey*, rather than strict scrutiny,⁴ in determining whether a state law impermissibly infringes on the right to decide to end a pregnancy:

³ In *Renee B.*, the Florida Supreme Court determined that the exclusion of medically necessary abortions from Medicaid coverage did not implicate the privacy right: “the right of privacy does not create an entitlement to the financial resources to avail herself of this choice.” *Renee B. v. Fla. Agency for Health Care Admin.*, 790 So. 2d 1036, 1041 (Fla. 2001). That is, while the state cannot itself impose particular burdens on abortion without satisfying strict scrutiny, in *Renee B.*, “the State ha[d] imposed no restriction on access to abortions that was not already present.” *Id.* However, the *Renee B.* court emphasized that if the right to privacy were implicated, as is clearly the case here, strict scrutiny would apply. *Id.* at 1040.

⁴ In *Casey*, the United States Supreme Court upheld a twenty-four-hour waiting period, but only under this lesser, undue burden standard. *See Planned Parenthood of Se. Pa. v. Casey*, 505 U.S. 833, 885 (1992). Unlike the strict scrutiny standard Florida applies, the lesser undue burden standard does not require that a law serve a compelling state interest through the least restrictive means, but instead required that the law not impose an undue burden on a woman’s right to choose while serving an “important” interest, which could include an interest in protecting potential life. *See generally Casey*, 505 U.S. 833; *In re T.W.*, 551 So. 2d at 1193. As discussed further *infra*, the Florida Supreme Court and the Florida people have emphatically rejected attempts to lessen Florida’s constitutional protection of the right to privacy. *See North Florida*, 866 So. 2d at 635-36; *Initiative Information: Prohibition on Public Funding of Abortions; Construction of Abortion Rights*, Fla. Dep’t of St., Division of Elections, <http://dos.elections.myflorida.com/initiatives/initdetail.asp?account=10&seqnum=82> (last visited June 6, 2015) (proposed amendment defeated with fifty-five percent of Florida voters in opposition).

Florida courts consistently have applied the “strict” scrutiny standard whenever the Right of Privacy Clause was implicated, regardless of the nature of the activity. The “undue burden” standard, on the other hand, is an inherently ambiguous standard and has no basis in Florida’s Right of Privacy Clause.

North Florida, 866 So. 2d at 635 (internal footnote omitted). The court stated that adopting the federal standard would require “abandon[ing] an extensive body of clear and settled Florida precedent in favor of an ambiguous federal standard,” and most important, it would require the court “to forsake the will of the people”:

If Floridians had been satisfied with the degree of protection afforded by the federal right of privacy, they never would have adopted their own freestanding Right of Privacy Clause. In adopting the privacy amendment, Floridians deliberately opted for substantially more protection than the federal charter provides.

Id. at 635-36. Indeed, Florida voters reasserted their will in 2012, when they defeated a ballot initiative that would have rolled back the independent state constitutional protection of abortion in favor of the lower federal constitutional standard. *See Initiative Information: Prohibition on Public Funding of Abortions; Construction of Abortion Rights*, Fla. Dep’t of St., Division of Elections, <http://dos.elections.myflorida.com/initiatives/initdetail.asp?account=10&seqnum=82> (last visited June 5, 2015).⁵ There can thus be no question that the Right of Privacy Clause protects the right to choose abortion and subjects laws that burden that right to strict scrutiny.

2. *Unlike the Prior Version of the Informed Consent Law as Construed, the Act Singles Out Abortion for a State-Imposed Burden and Is Therefore Subject to Strict Scrutiny*

Under the Florida Supreme Court’s interpretation of the state constitution’s strong privacy clause, strict scrutiny is required whenever the Legislature singles out abortion in

⁵ Earlier, in 2004, Florida voters did ratify a separate ballot initiative that authorized the Legislature to enact a parental notification requirement for abortion. *See* Article X, § 22, Fla. Const.

imposing a burden on access to health care. The Act is just such a burden, as illustrated by the history and holding of *State v. Presidential Women's Center*, 937 So. 2d 114 (Fla. 2006).

The challenged Act is an amendment to the Women's Right to Know Act, originally passed in 1998, and challenged in *Presidential Women's Center*, *see id.* at 115. That statute was upheld only after the state accepted a limiting construction to bring it in line with informed consent laws for other medical procedures. *See id.* at 120-21. Prior to that limiting construction, the Right to Know Act imposed unique burdens on abortion and the Court of Appeals had accordingly applied strict scrutiny and held the statute was unconstitutional. The intermediate court noted that unlike the informed consent requirements for other medical procedures, the challenged law would "not allow a physician to tailor the information to the woman's circumstances, [and] infringe[d] on the woman's ability to receive her physician's opinion as to what is best for her, considering her circumstances." *State v. Presidential Women's Ctr.*, 707 So. 2d 1145, 1150 (Fla. 4th DCA 1998).

On appeal before the Florida Supreme Court, the state, for the first time, offered a limiting construction permitting physicians to provide information tailored to each individual patient, rather than information that would be considered material by an abstract "reasonable patient." *Presidential Women's Ctr.*, 937 So. 2d at 119. The state also conceded that the mandated informed consent information only contemplated medical risks, not social, economic, or other risks. *Id.* Accordingly, the Supreme Court upheld the statute, *so construed*, as "comparable to [the informed consent requirements] of the common law and other Florida informed consent statutes implementing the common law." *Id.* at 118.

In contrast to the requirement ultimately upheld as construed in *Presidential Woman's Center*, the Act challenged in the instant case goes far beyond common law and other Florida

informed consent statutory requirements: It singles out women seeking abortion care and will require them, alone among patients, to receive state-mandated information in person at least twenty-four hours before their medical procedure. As the proponents of the Act themselves admitted, the Florida Legislature has never imposed a mandatory waiting period for any other medical procedure.⁶ *See* Fla. H.R., recording of proceedings (Apr. 22, 2015), *available at* http://www.myfloridahouse.gov/VideoPlayer.aspx?eventID=2443575804_2015041243&TermID=86, 1:27:55 - 1:28:04, (Representative Sullivan Closing on H.B. 633). The Act imposes a unique burden on women seeking abortion care. It burdens their right to privacy and is thus subject to strict scrutiny under the Florida Constitution.

3. *The Act Cannot Survive Strict Scrutiny*

As detailed above, under Florida law, a statutory requirement that infringes upon a woman's right to privacy in choosing abortion is presumptively unconstitutional unless the state can prove that it "serves a compelling state interest and accomplishes its goal through the use of the least intrusive means." *Winfield*, 477 So. 2d at 547; *see also In re T.W.*, 551 So. 2d at 1192 (applying this standard to abortion restriction); *North Florida*, 866 So. 2d at 620 (same). The Act will neither serve a compelling state interest, nor employ the least intrusive means to serve any such hypothetical interest.

a. The Act Will Not Serve a Compelling State Interest

The Florida Supreme Court has recognized only two compelling state interests that can justify restrictions on abortion: the promotion of maternal health and potential life. *In re T.W.*,

⁶ The only patients who must observe a waiting period in Florida do so pursuant to *federally* mandated guidelines, not state law, and those are patients who qualify for Medicaid and seek financial coverage for sterilization procedures. *See* Fla. Admin. Code R. 64F-7.007(2) (citing statute codifying federal Medicaid requirement of 30-day waiting period for Medicaid-reimbursed sterilization, with exceptions).

551 So. 2d at 1193-94. However, both are significantly limited: the state's interest in maternal health becomes compelling no earlier than the beginning of the second trimester and its interest in potential life becomes compelling only after viability. *Id.*; *see also Presidential Women's Ctr.*, 707 So. 2d at 1149. Thus, "[u]nder Florida law, prior to the end of the first trimester, the abortion decision must be left to the woman *and may not be significantly restricted by the state.*" *In re T.W.*, 551 So.2d at 1193.

Here, the Act will serve no compelling state interests recognized by the Florida Supreme Court. There is no compelling interest in protecting potential life before viability; there is no compelling interest in protecting maternal health before the second trimester. But by its terms, the Act will apply throughout a woman's pregnancy.⁷ For this reason alone, the state is unable to demonstrate that the Act will further a compelling state interest and it must be struck down.

b. The Act Would Not Serve a Compelling Interest in Maternal Health Even if It Were Limited to Second-Trimester Abortions

Even if the Act were limited to the second trimester of pregnancy (which it is not), the state could not demonstrate it would serve a compelling state interest in protecting women's health, for two reasons.

First, the Florida Supreme Court has held that where the state claims it has a compelling interest in burdening abortion, the state's failure to impose parallel burdens on comparable medical procedures requires the conclusion that the state interest is not, in fact, compelling. In *In re T.W.*, the state claimed a compelling interest in protecting minors, but the state required parental consent only when a minor sought an abortion, and not for any other pregnancy-related medical procedure. "In light of this wide authority that the state grants [to minors,] we are

⁷ Florida generally bans post-viability abortions, with certain limited exceptions to protect a woman's health or life. § 390.01112, Fla. Stat.

unable to discern a special compelling interest on the part of the state under Florida law in protecting the minor only where abortion is concerned.” 551 So. 2d at 1195.

Hence, because the Florida Legislature has not imposed a mandatory delay and additional-trip requirement on any other medical procedure, including those that pose greater risks than abortion, there cannot be a genuine “compelling interest” in protecting women’s health that will be furthered by the Act. Curry Decl. ¶ 14; Goodman Decl. ¶¶ 13-14. Most medical procedures performed in the state of Florida are governed by the general informed consent statute, which, as the Supreme Court noted in *Presidential Women’s Center*, imposes obligations that are comparable to the *current* abortion-specific informed consent statute. See § 766.103, Fla. Stat.; *Presidential Women’s Center*, 937 So. 2d at 120; Goodman Decl. ¶ 13. That general informed consent statute does not require a patient to make a separate visit at least twenty-four hours before receiving medical services in order to hear, in person, information that could be provided on the day of the service. See § 766.103, Fla. Stat. Nor has the Florida Legislature deemed it necessary to require a patient to make a separate trip to a health center or hospital in order to fulfill informed consent requirements for any other pregnancy-related treatment, or for *any other* medical procedure, including procedures that are riskier than a first- or second-trimester abortion procedure.⁸ Curry Decl. ¶ 14; Goodman Decl. ¶ 14. In fact, the Legislature soundly rejected an amendment to the Act that would have imposed a similar twenty-four-hour waiting period for a vasectomy, a surgical sterilization procedure for men with comparable risks.

⁸ The *Presidential Women’s Center* opinion cites to three informed consent statutes that apply to specific medical procedures: breast cancer treatment, electroconvulsive and psychosurgical procedures, and, for inmates, psychiatric treatment. See 937 So. 2d at 118 (citing §§ 458.324, 458.325, 945.48, Fla. Stat. (2005)). These three statutes, both at the time of *Presidential Women’s Center* and now, require the physician to give information and to receive consent from the patient—but do not require information to be provided in person hours or days prior to the procedure, and thus do not impose a separate trip and delay.

See Compl., Ex. A-2, at 2; *H.B. 633 – Informed Patient Consent*, Fla. H.R., <http://www.myfloridahouse.gov/Sections/Bills/billsdetail.aspx?BillId=53704&> (last visited June 5, 2015) [hereinafter *H.B. 633 Legislative History*]; see also *Women's Med. Ctr. of Providence, Inc. v. Cannon*, 463 F. Supp. 531, 537 (D.R.I. 1978) (vasectomy comparably risky to, or potentially more risky than, abortions). Because the Act targets only abortion and not comparable or riskier medical procedures, any state claim that a “compelling” interest in women’s health animates the Act must be rejected.

Second, the Act will not only fail to further, but will actually harm, any interest the state could possibly assert in maternal health. As explained in more detail *supra*, the Act’s requirements in practice will cause some women to delay their procedures far longer than a day, thus increasing their medical risk. See *supra* pp. 5-6. While abortion is an extremely safe medical procedure, delaying a woman in obtaining care increases the risk she faces. Curry Decl. ¶¶ 13, 15. Moreover, as the Act includes no exception for abortions necessary to protect a woman’s health, the Act will force a physician to wait even where delay unquestionably imposes additional medical risk on a patient whose health is already threatened by continued pregnancy. See § 390.0111(3)(a), Fla. Stat. Indeed, under the Federal Constitution as well as the Florida State Constitution, the lack of any exception to the mandatory waiting period when necessary to preserve a woman’s health is a fatal flaw. The United States Supreme Court in *Casey*, for example, held that it “would be required to invalidate the restrictive operation of” a twenty-four-hour mandatory delay if “it foreclose[d] the possibility of an *immediate* abortion despite some significant health risks. . . . [F]or the essential holding of *Roe* forbids a State from interfering with a woman’s choice to undergo an abortion procedure if continuing her pregnancy would constitute a threat to her *health*.” 505 U.S. at 880 (emphases added). But that is exactly what the

Act will do: It forecloses the possibility of an immediate abortion despite threats to a woman's health, by allowing an immediate abortion only in life-threatening medical emergencies.

Therefore, rather than serving a state interest in maternal health, the Act will do the opposite, and must certainly fall under Florida's Declaration of Rights.

c. The Act Does Not Use the Least Intrusive Means to Address Any Interest the State Might Assert

Even if there were a compelling state interest underlying the Act—which there is not, *see supra* Parts 3.a-b—“the state may impose significant restrictions only in the least intrusive manner designed to” serve those interests. *In re T.W.*, 551 So. 2d at 1193. “Any inquiry under this prong must consider procedural safeguards relative to the intrusion.” *Id.* at 1195-96. The state cannot meet its burden of demonstrating that the Act is the least intrusive means of serving any interest it may assert.

First, as discussed above, the state is already using less intrusive means to ensure that a woman's decision to have an abortion is well informed. Under current law, women are already advised of exactly the information the Act will require, § 390.0111(3)(a), Fla. Stat., and indeed have been receiving safe and legal abortion care in Florida for forty years with no need for a mandatory delay to ensure their decisions are informed. A less intrusive means of ensuring that women's decisions are informed is thus the current law; the Act will add only stigma, burden, and delay.

Second, even if the Florida Legislature had evidence that the current law were somehow inadequate, which it does not, it could easily have strengthened the law's requirements in a less intrusive way, as demonstrated by the numerous proposed Amendments to the Act that the Legislature rejected. Several of these would have made the Act less intrusive for all women:

- Amendment 213635 would have permitted a woman to waive the Act's requirements and have the procedure on the same day as receiving the required information. *See* Compl. Ex. A-3. This would have allowed women who wanted a day or more to consider the information they had received to do so, without imposing such delay on all women. That amendment was rejected. *See H.B. 633 Legislative History*.
- Amendments 853480 and 231828 would have allowed a woman to receive the required information in advance of the procedure over the phone, via mail, or by viewing a web site. *See* Compl. Ex. A-5, A-6. Women would still meet with their physicians to confirm their receipt and understanding of the information and to discuss any questions or concerns. Those amendments were rejected. *See H.B. 633 Legislative History; S.B. 724 – Termination of Pregnancies*, Fla. H.R., <http://myfloridahouse.gov/sections/Bills/billsdetail.aspx?BillId=53671> (last visited June 5, 2015) [hereinafter *S.B. 724 Legislative History*].
- Amendments 930638 and 711443 would have allowed doctors to delegate provision of the required information to a registered nurse or a physician assistant, mitigating difficulties clinics may have scheduling a doctor to be present on multiple days and the resulting delay to women. *See* Compl. Ex. A-7, A-8. Those amendments were rejected. *See H.B. 633 Legislative History*.

Other rejected amendments would have alleviated the intrusion the Act will impose on specific groups of women:

- Amendments 591932 and 113284 would have incorporated an exception for women with health conditions that do not rise to the level of a threat to the woman's life. *See* Compl. Ex. A-11, A-12; *H.B. 633 Legislative History; S.B. 724 Legislative History*.

- Amendment 449942 would have allowed a woman who lives more than 100 miles away from the nearest abortion provider to waive the mandatory delay and additional-trip requirement. *See* Compl. Ex. A-4; *H.B. 633 Legislative History*.
- Amendments making a meaningful exception for victims of certain crimes were also introduced. As explained in Part C, *supra*, a woman qualifies for the Act’s exception only if she has “documentation” that she is “a victim of rape, incest, domestic violence, or human trafficking.” H.B. 633. This punitively narrow exception is meaningless for the majority of sexual assault and domestic violence victims who do not report their assaults to the authorities. Several amendments would have dispensed with the Act’s demeaning and unnecessary “proof” requirements. *See* Compl. Ex. A-9, A-10, A-11; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.
- Amendments 591932 and 113284 would have added an exception to the Act’s requirements in the event that a woman receives a diagnosis of a severe fetal anomaly. *See* Comp., Ex. A-11, A-12; *H.B. 633 Legislative History*; *S.B. 724 Legislative History*.

Many of the amendments the Florida Legislature rejected reflect the current practices of other states’ abortion-specific mandated information and waiting period requirements,⁹ further

⁹ *See, e.g.*, Ga. Code Ann. § 31-9A-3(1) (state-mandated information can be given “by telephone” and by “a qualified agent”); Idaho Code § 18-609(3)(c), (4) (physician’s agent can certify patient’s receipt of state-mandated information); Ky. Rev. Stat. § 311.725(1)(a) (mandated information can be provided verbally by telephone, and by other professionals, including social workers); Mich. Comp. Laws § 333.17015(3) (mandated information can be provided by a “qualified person” in addition to doctor); Minn. Stat. § 145.4242(a)(1) (mandatory information can be provided by telephone); N.D. Cent. Code § 14-02.1-03 (mandatory information can be provided by telephone and designated agent of physician); Neb. Rev. Stat. § 28-327-(2) (mandatory information can be provided by telephone and by certain agents of physician); S.C. Code § 44-41-330(C), (D) (mandatory information can be mailed by health

demonstrating that the Florida Legislature did not utilize the least intrusive means available. *See North Florida*, 866 So. 2d at 642 (Anstead, C.J., concurring) (legislation at issue is not the least intrusive means, as other states have “less intrusive schemes that serve the same purpose”).

Whatever interests it may assert, the state could have pursued those interests through means less intrusive than forcing every patient seeking an abortion to make an additional trip to her doctor at least 24 hours prior to the procedure.

* * *

The Act cannot survive judicial review under strict scrutiny: the state lacks a compelling interest, and the Act is not narrowly tailored to serve any interest the state may assert, compelling or no. It is thus no surprise that the vast majority of courts to consider mandatory delays under strict scrutiny have struck them down.¹⁰ Plaintiffs are likely to succeed on the merits of their argument that the Act should meet the same fate.

worker); V.A. Code § 18.2-76(B) (mandatory information can be provided by trained professional; waiting period reduced to two hours for patients who travel at least 100 miles); Wis. Stat. § 253.10(3)(c)(2) (mandatory information can be provided by qualified person); W. Va. Code § 16-2I-2(a) (mandatory information can be provided by telephone and by health professional).

Attorney Gen. of Michigan*, No. 94-406793 AZ, 1994 WL 394970, at *6-7 (Mich.

C. Plaintiffs Lack an Adequate Remedy at Law and Will Suffer Irreparable Harm if an Injunction Is not Issued

Plaintiffs must also prove “two interrelated requirements” necessary to establish their right to injunctive relief: that the injury they allege cannot be adequately remedied at law and irreparable harm will occur if an injunction is not issued. *Liza Danielle, Inc. v. Jamko, Inc.*, 408 So. 2d 735, 738 (Fla. 3d DCA 1982).

Plaintiffs lack an adequate remedy at law where damages are unavailable or are “so speculative as not to be susceptible of proof.” *So. Colonization Co. v. Derfler*, 75 So. 790, 794 (Fla. 1917); *see also Thompson v. Planning Comm’n*, 464 So. 2d 1231, 1237 (Fla. 1st DCA 1985) (where calculation of damages is speculative, legal remedy is inadequate). Money damages are ordinarily not available for violations of Florida state constitutional privacy rights. *See Resha v. Tucker*, 670 So. 2d 56, 59 (Fla. 1996) (Grimes, C.J., concurring); *see also Tucker v. Resha*, 634 So. 2d 756, 757 (Fla. 1st DCA 1994); *Stephens v. Geoghegan*, 702 So. 2d 517, 521 n.1 (Fla. 2d DCA 1997) (“[v]iolation of privacy provisions of the Florida Constitution does not give rise to a cause of action for money damages” (citation omitted)); *cf. Garcia v. Reyes*, 697 So. 2d 549, 551 (Fla. 4th DCA 1997) (“there is ‘no support for the availability of an action for money damages, based [] on . . . violation of the right of due process, as guaranteed by the Florida Constitution’” (emphasis and citation omitted)); *Fernez v. Calabrese*, 760 So. 2d 1144, 1146 (Fla. 5th DCA 2000) (relying on *Garcia*, 697 So. 2d at 651).

Alternatively, Plaintiffs satisfy their burden of showing irreparable harm where they demonstrate injury that cannot be adequately compensated by money damages. *See Liza Danielle*, 408 So. 2d at 738 (“[i]rreparable injury is an injury of such a nature that it cannot be

Cir. Ct. July 15, 1994), *rev’d on other grounds sub nom. Mahaffey v. Attorney Gen.*, 564 N.W.2d 104 (Mich. App. Ct. 1997).

redressed in a court of law”; “the injury must be of a peculiar nature, so that compensation in money cannot atone for it” (quoting 29 Fla. Jur. 2d, Injunctions § 22 at 674-75)). The threatened or actual loss of constitutional rights, even for a minimal period of time, constitutes *per se* irreparable harm. *See, e.g., Ne. Fla. Chapter of Ass’n of Gen. Contractors of Am. v. City of Jacksonville*, 896 F.2d 1283, 1285 (11th Cir. 1990) (“on-going violation[s]” of the right to privacy “constitute[] irreparable injury”); *Brenner v. Scott*, 999 F. Supp. 2d 1278, 1291 (N.D. Fl. 2014) (enjoining Florida constitutional provision and statutes banning same-sex marriage because “the ongoing unconstitutional denial of a fundamental right almost always constitutes irreparable harm.”); *see also Elrod v. Burns*, 427 U.S. 347, 373 (1976) (holding that loss of constitutional “freedoms . . . unquestionably constitutes irreparable injury”). Here, the deprivation of a woman’s fundamental right to privacy, guaranteed by article I, section 23 of the Florida Constitution, *see supra* Part B.2, will result in irreparable harm.

Thus, an injunction is appropriate and necessary in this case to protect against the violations of women’s constitutional rights. *Cf. Deerfield Med. Ctr. v. City of Deerfield Beach*, 661 F.2d 328, 338 (5th Cir. Unit B 1981) (explaining that a threatened violation of women’s constitutional right to abortion mandates a finding of irreparable injury because “once an infringement has occurred it cannot be undone by monetary relief”). In previous abortion cases asserting violations of the right to privacy under the Florida Constitution, Florida courts have found injunctions to be the proper remedy. *See, e.g., North Florida*, 866 So. 2d at 640 (Fla. 2003) (permanently enjoining the state from enforcing parental notification statute, based in part on violation of right to privacy); *Presidential Women’s Ctr.*, 707 So. 2d 1145 (upholding trial court’s decision temporarily enjoining state from enforcing informed consent statute, based in part on alleged violation of right to privacy). Because the Act will undermine women’s health

and deprive them of their rights under the Florida Constitution, the Act threatens irreparable harm for which there is no adequate remedy at law.

D. Considerations of Public Interest Support Issuance of an Injunction

Finally, the issuance of an injunction will serve the public interest. No public interest is served by enforcing unconstitutional laws, while the public has a significant interest in ensuring that constitutional rights are not violated, and that citizens can access needed reproductive health care without unwarranted hardship. *See, e.g., A Choice for Women v. Butterworth*, 54 F. Supp. 2d 1148, 1159 (S.D. Fla. 1998) (finding that “the public interest is well served when the Court protects the constitutional rights of the public; in this case, the constitutionally protected right of women to have abortions”); *see also Carey v. Klutznick*, 637 F.2d 834, 839 (2d Cir. 1980) (“the public interest [] requires obedience to the Constitution”); *Saint v. Neb. Sch. Activities Ass’n*, 684 F. Supp. 626, 630 (D. Neb. 1988) (holding that public interest is served by preventing violations of an individual’s constitutional rights). A temporary injunction will preserve the status quo by allowing Plaintiff Bread and Roses and other abortion providers in the state to continue providing and the Florida members of Medical Students for Choice to continue assisting in providing and their patients to continue receiving safe and informed reproductive health care services until this case can be resolved on the merits.

CONCLUSION

Because Plaintiffs have shown a substantial likelihood of success on the merits, that irreparable harm will result if the Act is not enjoined, that they lack an adequate remedy at law, and that the relief requested will serve the public interest, this Court should issue a temporary injunction against enforcement of the Act before it goes into effect on July 1.

Dated: June 11, 2015

Respectfully submitted,

DECLARATION OF KRISTIN DAVY

I, Kristin Davy, am over 18 years of age and declare and state the following based on my personal knowledge:

1. I am the owner of Gainesville Woman Care LLC d/b/a Bread and Roses Women's Health Center ("Bread and Roses" or "the Clinic"), located in Gainesville, which has provided safe and legal abortion care for women in Florida for three decades. I have worked at Bread and Roses since 1998, and been its owner and director since 2004.

2. As the Clinic's owner and director, I oversee its daily operations, business matters, and compliance with all applicable laws and regulations. Bread and Roses was last inspected by the Florida Agency for Health Care Administration in mid-March of this year and no deficiencies were found.

3. Bread and Roses is a plaintiff in this lawsuit on behalf of itself, its patients, and its doctor. Based on my knowledge and experience working at and operating Bread and Roses, I submit this declaration in support of Plaintiffs' Motion for an Emergency Temporary Injunction and/or a Temporary Injunction against Section 1 of 2015 House Bill 633.

4. For nearly thirty years, Bread and Roses has provided safe, compassionate, and legal abortion care to the women of Florida. I have read this law and understand that it requires the doctor who will perform the abortion procedure, or the referring physician, to counsel the patient in person and 24 hours before the abortion procedure. For the reasons I discuss below, by requiring women seeking abortion services to make an additional trip to the clinic, this law will infringe upon women's access to abortion.

5. If this law were to go into effect, I believe our patients would be harmed in several ways: virtually all will be burdened by the additional logistical difficulties of arranging to be away from school or work to make the additional trip to the clinic, and many will need to save more money to pay for travel, childcare, and related expenses; many will be delayed in obtaining the care that they need as a result of these additional logistical difficulties, particularly our most vulnerable patients; some may be at increased risk of having their decision to seek an abortion revealed to others, despite their desire to keep that confidential; and some women, particularly those who must travel long distances or are very poor, may be unable to overcome all of these difficulties and will therefore be forced to carry an unwanted pregnancy to term.

BREAD AND ROSES AND OUR PATIENTS

6. At Bread and Roses, we provide high quality surgical abortion services up to 13 weeks and 6 days of pregnancy, as measured from the woman's last menstrual period ("LMP"), and medication abortions up to 8 weeks LMP. In addition to abortion care, we also offer pregnancy tests and options counseling and refer for prenatal care and adoption services. We provide roughly 800 abortions each year. Our abortions cost between \$450 and \$675. The average appointment for a surgical abortion lasts three to four hours, and for a medication abortion about two hours. Our medical director is an obstetrician-gynecologist and has been the only doctor providing abortions at Bread and Roses for the past ten years. She is now in semi-retirement and provides abortions only two days per week.

7. Surgical abortion involves the use of instruments to evacuate the contents of the uterus. In contrast, a woman undergoing a medication abortion (sometimes referred to as RU 486 or the abortion pill), terminates an early pregnancy by taking medications that cause her to miscarry within a relatively short time. In my experience, a patient's reasons for deciding to have a medication abortion are often very strongly held, personal, and important to her. Many women choose medication abortion because they find it less invasive and more like a spontaneous miscarriage. Some patients also choose medication abortion because it allows them to feel more in control of the process and offers more privacy because the abortion is completed at home.

8. At Bread and Roses we take very seriously our responsibility as health care providers to make sure that every patient's decision to have an abortion is voluntary and informed. Before an abortion is performed, we take a full medical history from the patient, perform additional laboratory tests, and walk her through the abortion procedure, making sure the woman understands what the procedure entails, the side effects, and the risks of the

procedure. Every patient is given multiple opportunities to ask questions and discuss concerns, if any, with our staff, including the physician, prior to the abortion procedure. Bread and Roses takes a number of additional steps to ensure that every patient has considered her options, is confident in her decision, and was not coerced into obtaining an abortion. For example, we meet with the patient alone, where she can discuss freely any questions or concerns she may have.

9. Florida also already regulates the nature of the counseling patients receive before obtaining an abortion. Pursuant to existing law, our doctor discusses the relevant medical information, including the risks of the procedure and alternatives, and performs an ultrasound and offers the woman the opportunity to view the image. The woman is also offered the opportunity to receive printed materials prepared by the state, which include a description of the fetus at various stages of development, a list of entities that offer alternatives to abortion, and detailed information regarding medical assistance for prenatal care, childbirth, and neonatal care.

10. The overwhelming majority of our patients have carefully considered their options, understand the nature of the abortion procedure, and are sure of their decision to have an abortion by the time they schedule their procedure. These women are currently able to obtain an abortion on the first day they come to the clinic.

11. Occasionally, we have patients who seek an appointment not for abortion, but for a pregnancy test and/or options counseling, and we schedule those appointments on days when we do not offer abortion care. If, after undergoing options counseling, the woman decides she would like to terminate her pregnancy, we will schedule her for an abortion on another day. Or, if the woman decides she would like to carry the pregnancy to term or consider adoption, we will refer her for prenatal care or adoption services.

12. Our patients seek abortions for a variety of reasons. Many of our patients already have children and are seeking an abortion because they understand the responsibilities of raising a child and feel that they cannot care for another child at this time. Some of our patients are students at nearby universities, colleges, and community colleges and want to complete their education before they start a family. Other patients seek abortions because they want to leave an abusive relationship, and fear that a pregnancy will tie them legally to their abuser.

13. In Florida, Medicaid does not cover abortion care except in cases of rape, incest, and when the woman's life is endangered. Most of our patients must pay for their abortions out of pocket, and the \$450-675 can be a significant and unexpected expense. Many of our patients have difficulty paying for the procedure and approximately one-fourth of our patients receive funding from charitable organizations that help poor women pay for abortions. Many of our patients must turn to friends and family to pay for the abortion, or forego other important expenses in order to gather the necessary funds.

EFFECT OF THE 24-HOUR DELAY AND ADDITIONAL-TRIP REQUIREMENT

14. The requirement that every patient meet in person with the physician who will perform the abortion, or the referring physician, at least 24 hours before the procedure, will add to the burdens our patients already face by requiring them to make an additional trip to the clinic in order to have an abortion. Based on working with our patients over the past seventeen years, I know that for some women, making an extra trip to the clinic will simply be too much. It will be especially difficult for those women who come from far away. These women will face a difficult choice: either pay for a hotel to stay overnight, pay for and arrange for childcare, miss work or school, and forego lost wages for a few days; or take two trips to the clinic and make a separate set of arrangements for work, childcare, or school for that extra visit.

15. Even women who live near the clinic will be significantly burdened. Many of our patients have jobs with unpredictable schedules, or schedules that are not set well in advance, such as those in the food service or retail industries. It is hard to overstate how extremely difficult it is for some women to ensure that they will not be scheduled to work during their single appointment. Requiring these women to arrange at least two shifts off work in a single week so that they can make an extra visit to the clinic will be tremendously difficult, and may threaten their employment. This is a profound risk and burden on the lives of these women and their families. Moreover, this will double the amount of lost wages these women suffer, adding to the expense of having an abortion. For our patients who already have children, arranging for childcare so they can attend even one appointment can be costly and/or difficult. Requiring a woman to arrange for childcare for two days in a week will again pose a greater burden.

16. As mentioned above, Bread and Roses has had a single doctor for the last ten years, who is now semi-retired and provides care at the clinic only two days per week. It already can be difficult for our patients to find time to match their work and family obligations with our schedule. If a woman must make an additional trip to the clinic, these difficulties will be exacerbated, and may cause her to wait at least an extra week for her abortion at our clinic.

17. Such delays may push patients past the gestational age for having a medication abortion, which, as I explained above, many of our patients prefer for personal reasons. This delay may also push patients past the gestational age up to which we schedule surgical abortions—13 weeks and 6 days LMP.

18. Moreover, aside from the increased risks of the procedure, I understand that there are patients for whom it is particularly inadvisable to delay the procedure, including those suffering from severe symptoms of pregnancy, and those who are in abusive relationships and

may need to conceal their pregnancy. Finally, the costs of the procedure go up as gestational age increases. This is especially true for procedures after the first trimester. This will only exacerbate the obstacles our patients must overcome, as they must save even more money to have a later procedure.

19. While the additional-trip requirement will inconvenience all of our patients and will burden their access to abortion, it will be especially dangerous for some of our most vulnerable patients—women who are victims of intimate partner violence. We have had patients who were in abusive relationships and wanted to extricate themselves from these dangerous situations. These women desperately wanted abortions in order to terminate pregnancies that could potentially tie them to their abusive partners forever. These women had an extremely difficult time concealing their pregnancies, gathering the funds to pay for their abortions, and finding the time to evade the scrutiny of their abusive partners for the three to four hours necessary for the abortion procedure. While it can be difficult and embarrassing for women to ask others for support and assistance to pay for and obtain an abortion—for example, by asking for a ride to the clinic, or for childcare—for women in abusive relationships, these concerns are exacerbated. We have treated some women whose friends and families did not want to provide assistance or support for the woman in obtaining an abortion, out of fear that should the abusive partner learn of the abortion, he would target them for helping her. For these women, an additional trip to the clinic would not only be extremely difficult, but could be fatal. Each additional trip to the clinic is another opportunity for the woman to be caught by her abusive partner. When a patient reveals to us that she is a victim of intimate partner violence, we provide her with information regarding local resources, including shelters, counselors, and groups at the university, which can provide assistance.

20. The question of confidentiality raises a broader concern. The decision to terminate a pregnancy is a deeply private one, and all of our patients, not just those in abusive relationships, have concerns about protecting their privacy. Requiring a woman to make an additional visit will only increase the chance that she will be seen or judged by people she knows. Moreover, it also subjects our patients to further harassment by anti-abortion activists who are routinely outside our clinic holding signs with upsetting messages and images, yelling messages at all who walk through our doors. While we occasionally have volunteers who escort our patients, that is not always the case. For many of our patients it can be very distressing to be harassed and called horrible names while walking into our clinic. Forcing our patients to endure this harassment and humiliation once more will harm our patients' emotional well-being.

21. For all of these reasons I believe the Act is unnecessary and will, in fact, harm women in Florida seeking abortions.

Under penalties of perjury, I declare that I have read the foregoing declaration and that the facts stated in it are true to the best of my knowledge and belief.

Executed on June 5, 2015 in Gainesville, Florida.

Case No. _____

Defendants.

DECLARATION OF CHRISTINE L. CURRY, M.D., Ph.D.

I, CHRISTINE CURRY, M.D., Ph.D., declare under penalty of perjury that I am over 18 years of age, and that the following statements are true and correct:

1. I am a physician licensed to practice medicine in Florida. I am board certified by the American Board of Obstetrics and Gynecology. I currently serve as an Assistant Professor in the Obstetrics and Gynecology Department at University of Miami Hospitals and at Jackson Memorial Hospital, where I supervise, mentor, and train medical students and residents. I

mention these affiliations for purposes of identification only; the opinions I offer here are my own, and do not reflect those of any institution with which I am affiliated.

2. In 2009, I received an M.D. from Loyola University Stritch School of Medicine and a Ph.D. from Loyola University's Department of Microbiology and Immunology. I completed my residency in obstetrics and gynecology at Boston University Medical Center in 2013, where I also completed the Ryan Program in Abortion and Family Planning. As part of the Ryan Program, I received specialized training in abortion care. My experience and credentials are more fully set forth in my curriculum vitae, a true and accurate copy of which is attached to this declaration.

3. In my practice, I provide a full spectrum of obstetrical and gynecologic care to patients, including prenatal care and labor and delivery; outpatient well-woman care, such as pap smears, cancer screening, STI testing and treatment, and contraception counseling and provision; medical and surgical abortions; and inpatient gynecologic surgeries, such as hysterectomies and fibroid removals. I provide surgical abortions up to thirteen weeks, as measured from the first day of a woman's last menstrual period ("LMP") and medication abortions up to nine weeks LMP.

4. I have read the challenged Act, Florida House Bill 633, and understand that it requires the physician who will perform the abortion procedure, or the referring physician, to provide information and counseling to a patient in person and twenty-four hours before the abortion procedure. I also understand that the Act contains two extremely narrow exceptions: one for women who have become pregnant as a result of abuse and reported the abuse to the authorities, and another for a woman whose very life is threatened by their pregnancy in medical emergencies.

5. I provide the following facts and opinions as an expert in the fields of obstetrics and gynecology and reproductive health. The statements below are based on my education, teaching, and clinical experience, as well as my review of the relevant medical and scientific literature.

Safety of Legal Abortion in the United States and Florida

6. Legal abortion is one of the most common medical procedures performed in the United States. Nearly one in three women in the United States will have an abortion by the age of 45, and the majority of women who have abortions are already mothers. The vast majority of abortion procedures performed in the United States occur in the first trimester.

7. Abortion is also one of the safest medical procedures in the United States and is substantially safer than childbirth. A woman's risk of death associated with childbirth is approximately 14 times higher than her risk of death associated with abortion.¹ The risk of death is less than one out of every 100,000 legal induced abortions.² Because abortion is so safe, the vast majority of abortions in the United States can be, and are, safely and effectively performed in an outpatient setting. This is also true in Florida.

8. From my experience, women have abortions for a variety of reasons, including medical, familial, personal, and financial reasons. Some women have abortions to preserve their life or their health. For these women, carrying a pregnancy to term can put their lives at grave risk, significantly shorten their life expectancy, or cause permanent damage. Other women have abortions to terminate wanted pregnancies after the fetus has been diagnosed with an anomaly.

¹ Raymond, Elizabeth G., & Grimes, David A., "The Comparative Safety of Legal Induced Abortion and Childbirth in the United States," *Ob. & Gyn.* 119 (Feb. 2012): 215-19.

² Raymond, Elizabeth G., Grossman, Daniel, Weaver, Mark A., Toti, Stephanie, & Winikoff, Beverly, "Mortality of induced abortion, other outpatient surgical procedures, and common activities in the United States," *Contraception* 90, no. 5 (July 2014): 476-79.

Others have abortions because their pregnancy was a result of rape or sexual assault. Still other women have abortions because they appreciate the responsibilities of motherhood and feel they cannot adequately provide for a child at that time. In my experience, whatever a woman's reasons for terminating a pregnancy, she makes the decision thoughtfully after much consideration and deliberation with those she includes in her process: her family, friends, and/or physician.

9. There are two methods of abortion in the United States: surgical abortion and medication abortion. Surgical abortion involves the use of instruments to evacuate the contents of the uterus. Despite its name, surgical abortion involves no incision into the woman's skin or other bodily membrane. In Florida, surgical abortion is available through 23.6 weeks LMP. Surgical abortion is comparable to other gynecological procedures in terms of risk, invasiveness, instrumentation, and duration. For example, first-trimester surgical abortions are nearly identical to diagnostic dilation and curettage ("D&C") and to surgical completion of miscarriage. Second-trimester surgical abortions are similar to hysteroscopy, a gynecological procedure that uses endoscopy for diagnostic and operative purposes. Florida law does not require a twenty-four-hour waiting period before either of these other gynecological procedures with comparable risks, nor indeed any other procedure I perform in my practice.

10. Medication abortion (also called medical abortion) involves administration of medication to induce an abortion. Medication abortions are available for women up to 9 weeks LMP. In the most commonly used medication abortion protocol, women take mifepristone and misoprostol to induce an abortion. The patient takes the mifepristone in the clinic, which blocks the hormones needed to maintain a pregnancy, and the misoprostol at home, which causes her uterus to contract and expel its contents.

11. In my experience, most patients will have a strong preference for either surgical or medical abortion. For example, young women, women who are survivors of sexual assault, and women who are otherwise fearful of undergoing a “surgical procedure” or of having instruments inserted into the vagina, often prefer medication abortion. From the patient perspective, a medication abortion is similar to a spontaneous miscarriage, and feels more private, by allowing the patient to experience the abortion in her own home. For many women who have experienced physical or sexual trauma, having the abortion experience in private, with family members or friends available for support (rather than hospital staff), helps them feel more in control of the situation and is therefore important to their mental and psychological health.

12. For some women, including some of my patients, medication abortion is medically indicated for physiological reasons that make surgical abortion difficult or impossible to perform, including women with uterine anomalies, such as uterine fibroids, or women who are morbidly obese.

13. Although abortion is an extremely safe procedure, the risk of medical complications increases as the pregnancy advances.³ Thus delay in obtaining an abortion increases the risk of complications.

The Act Will Harm Women’s Health

14. The Act singles out abortion procedures from all other medical procedures to impose a twenty-four-hour delay and an additional-trip requirement, with no medical benefit to the patient. For example, having obtained informed consent from a woman, a physician can perform a D&C procedure for diagnostic purposes, or to complete a miscarriage—which is the same procedure used to perform a first-trimester abortion—without requiring the patient to delay

³ Bartlett, Linda A., *et al.*, “Risk Factors for Legal Induced Abortion-Related Mortality in the United States,” *Ob. & Gyn.* 103, no. 4 (Apr. 2004): 729-37.

for any period of time, or to make an additional, separate visit to the medical facility. It is my opinion that by forcing women seeking abortions—but not patients seeking any other medical procedure, including those riskier than abortion—to wait twenty-four hours and to make an additional visit to the medical provider before they can obtain the treatment, the Act will harm Florida women seeking abortion and undermine the physician-patient relationship. It will prevent physicians from administering the care they believe will protect their patients' well-being.

15. By forcing women to delay the procedure at least twenty-four hours and to make arrange for an additional trip to a provider, the Act will cause women to delay their abortion by at least one day, and in some cases, even longer. Such delays may push women past the gestational limit when medication abortion is available. This will force women for whom a medication abortion is clinically indicated to undergo a procedure that is less safe for them. It will also force a woman who prefers a medication abortion for psychological reasons to undergo a surgical abortion, which may harm her emotional and psychological state, and this pertains especially to victims of sexual trauma. In other cases, delays may push women past the gestational limit of the nearest abortion provider, forcing them to travel farther. This, in turn, is very likely to create further delay, increasing the risks of the procedure. Additionally, the later an abortion takes place in the pregnancy, the greater the cost of the procedure for the patient.

16. Moreover, by forcing virtually all women to wait twenty-four hours and make an additional trip to the clinic, the Act will inflict emotional distress and psychological trauma on women who seek abortions under distressing circumstances. This includes women who have made the extremely difficult decision to terminate a wanted pregnancy because of grave or even

lethal fetal anomalies, such as anencephaly, where the fetal brain stem has failed to develop, or a severe cardiac defect.

17. Additionally, the twenty-four-hour waiting period may prevent some women from obtaining an abortion altogether, such as women who are victims of domestic violence. For example, I recently saw a patient who was being physically and verbally abused by her husband. She came to my practice seeking an abortion; however, she had forgotten her wallet and said she would return the next day for the procedure. When she did not return the next day, we called her on her cell phone and learned that her husband, who had discovered that she was trying to obtain an abortion, had locked her in the house to prevent her from leaving. She asked us not to alert the authorities because she feared that doing so might lead to further abuse and violence. We followed the patient's wishes and she did not present for her rescheduled appointment. If women who are victims of domestic violence are required to make an additional, dangerous trip to the clinic, the chances that the woman's abuser will learn of the woman's intention to have an abortion increases, thereby increasing the chances that a woman will be furthered abused and/or forced to carry the pregnancy to term.

18. Further, the Act fails to provide an adequate health and life exception for women with health issues, including conditions caused by or exacerbated by pregnancy. As a result, the Act will impose serious medical risks on women facing pregnancy complications such as placenta previa (abnormal presentation of the placenta which can cause life-threatening bleeding), hypertension and preeclampsia (which can lead to stroke, heart attack, or death if untreated), and premature rupture of membranes (which, if untreated, can lead to serious infection). Conditions such as these pose an immediate threat to a woman's health and threaten her life if untreated, but do not always occur in the context of a medical emergency. For a

woman who has decided to terminate her pregnancy because of one or more of these conditions, delay poses serious medical risks. In such cases, the standard of care is to terminate the pregnancy as soon as the woman decides to, not to wait until the woman's condition rises to the level of a life-threatening medical emergency. Yet the Act would prevent physicians from providing this necessary and important medical care as soon as is medically appropriate.

19. Forcing women in these circumstances to wait twenty-four hours harms them, both physically and psychologically, and will undermine the physician-patient relationship. A physician treating a patient needs to be able to deliver care in the manner and at the time that she or he, in the exercise of medical judgment, decides best promotes the patient's health. The Act would prevent physicians from doing so, and force them to unnecessarily delay delivering medically appropriate care.

20. Finally, if the Act goes into effect, the mandatory delay requirement will create extra administrative burdens for physicians who will have to counsel and obtain consent from every single abortion patient during a separate visit on a different day—and coordinate those visits to minimize the disruption for women. This added administrative burden will reduce the hours physicians have to see all their patients, including those seeking obstetrical and well-woman care. This, in turn, will exacerbate Florida's existing shortage of qualified physicians who provide abortions.

21. For all of these reasons, it is my expert opinion that rather than promote women's health, the Act will have the opposite effect: it will be detrimental and dangerous to women's health.

Exhibit B-4

IN THE CIRCUIT COURT OF THE SECOND JUDICIAL CIRCUIT
IN AND FOR LEON COUNTY, FLORIDA

GAINESVILLE WOMAN CARE LLC et al.,

Plaintiffs,

v.

Case No. _____

STATE OF FLORIDA et al.,

Defendants.

DECLARATION OF KENNETH W. GOODMAN, PH.D.

1. I am the founder and director of the University of Miami Miller School Of Medicine's Institute for Bioethics and Health Policy and co-director of the university's Ethics Programs. I am a Professor of Medicine at the University of Miami, with appointments in the Department of Philosophy, Department of Public Health Sciences, and the School of Nursing and Health Studies.

2. I direct the Florida Bioethics Network, chair the UHealth/University of Miami Hospital Ethics Committee and the Adult Ethics Committee for Jackson Memorial Health System, and am vice-chair of the Sylvester Comprehensive Cancer Center/University of Miami Hospital and Clinics Ethics Committee.

3. I received my PhD in Philosophy in 1991 from the University of Miami.

4. My responsibilities include teaching medical ethics to medical students and trainees and providing continuing education in medical ethics to health professionals at the University of Miami and elsewhere. A full list of my credentials and experience is listed in my *curriculum vitae*, which is attached to this report.

5. I submit this declaration as an expert in the field of bioethics and the issue of informed consent. All institutional affiliations and positions listed here and in my *curriculum vitae* are purely and exclusively for the sake of identification and to demonstrate expertise. The views expressed herein are mine alone.

6. I have reviewed 2015 Florida House Bill No. 633 ("H.B. 633" or the "Act"), Florida 179th Reg. Sess., § 1, amending Fla. Stat. § 390.0111, which requires a 24-hour waiting period and an additional visit to a physician in order to have an abortion. I believe this Act embodies a fundamental misunderstanding of the role of informed consent (more appropriately called "valid consent") for medical procedures. Far from serving an interest in protecting the health of a woman seeking abortion care, this law subverts that interest.

7. “Informed consent” names the ethical and legal obligation of health care professionals to ensure that certain fundamental conditions are met before patients undergo medical procedures. Those conditions may be simply and straightforwardly itemized:

- The patient must receive adequate information about the procedure, including its risks, likely benefits and accepted alternatives;
- The patient must have the mental capacity to understand and appreciate the information as provided; and
- The patient’s agreement to receive the treatment must be voluntary—that is, free of coercion or undue influence.

8. All three components apply, meaning that the term “valid consent” is more accurate than “informed consent” because, for instance, a patient might be adequately informed but lack the mental capacity to consent. Although there is disagreement and controversy on some subjects within the field of bioethics, these standards for valid consent are not subject to dispute: they are universally accepted as core components of medical practice and research. The fundamental idea is that every mature person who is capable of making decisions should have the right to decide what should be done to her or his body.

9. This is at the foundation of uncontested United States and international recognition of rights to self-determination and personal autonomy. The bioethics literature is unequivocal about this.¹

10. There is no ethically appropriate medical justification for legislative stipulations regarding the exact content, setting, or timing for valid consent, much less such rigid requirements as the Act imposes. There are several powerful and related reasons for this.

11. First, consent is overwhelmingly context-sensitive: physicians, patients and the procedure contemplated can vary greatly and, together, form an often unique pattern, a kind of “clinical fingerprint.” Factors including physicians’ communication skills; patients’ educational levels, health history, age and background; and the vast variety of procedures and their risks combine to render impractical and inappropriate any attempt to stipulate or require that valid consent contain certain facts but not others, or be obtained at one time and not another. This applies to *every* medical procedure—there is nothing medically unique about abortion (or blood transfusions, brain surgery, tooth extractions, and so on) in this regard.

12. Second, there is common and widespread agreement that the doctor-patient relationship is of fundamental importance and therefore should be free from interference by any legislature. That is, the relationship is itself a source of such great social and personal value that any possible benefits gained from interfering in the relationship should be outweighed by the

¹ See e.g., Gert, B., Culver, C.M., and Clouser, K.D. 2006. *Bioethics: A Systematic Approach*. New York: Oxford University Press, esp. Ch. 9, pp. 213 ff.; and Beauchamp, T.L., Faden, R.R. Informed Consent, I. History of informed consent, and II. Meaning and elements, in Jennings, B., ed., *Bioethics*, 4th Edition. Farmington Hills, MI: Macmillan Reference USA, 2014, Vol. 3, pp. 1673-1687.

damage of interfering. Any law such as the Act requiring a waiting period before a specific kind of procedure must therefore be seen to undermine the physician's judgment about how to serve a patient's best interests. It also drives a wedge between the patient and physician: Why would a physician who just completed the consent process and obtained valid consent then delay the agreed-upon treatment? This erodes and undermines the relationship and, moreover, prevents the physician from delivering such care as she or he believes best protects patient interests and wellbeing.

13. Third, any legal stipulation, such as the Act, that itemizes procedures for the obtaining of valid consent is by its nature intrusive. Indeed, the idea that a physician might be punished for exercising her or his best clinical judgment would constitute a peculiar requirement in ordinary medical practice. No other Florida statute of which I am aware dictates the details and standards for obtaining consent for a medical procedure, or requires a waiting period before a medical procedure.

14. It follows from this that there is no ethical or medical justification for singling out any particular medical procedure for special legislatively fashioned consent requirements. There is nothing medically unique about abortion that is necessary or sufficient to warrant specific external requirements for obtaining valid consent. That is, the termination of a pregnancy (itself generally of lower risk than many common procedures) should no more be subject to specific information requirements, timing, or "waiting periods" than other, riskier, procedures or, for instance, in reproductive medicine, the obtaining of reproductive cells, the fertilization of ova, or the implantation of a fertilized ovum in a uterus. Put differently: If a legislature were keen to protect patients from vagaries, inadequacies, or inconsistencies in obtaining consent, then it should specify and identify adequate information components and the timing for all—and certainly for all riskier—medical procedures.

15. These arguments should be seen to apply—and should be advanced—as a matter of professional ethics no matter whether one believes in or denies a right to termination of pregnancy. Those who don't believe in abortion may advocate by any and all appropriate means against legal abortion, but this ought not include enacting laws to alter universal requirements and standards for valid consent. In other words, there is no medical justification for the Act as a tool of informed consent.

16. I have been advised that the Plaintiff, Bread and Roses Women's Health Center, carries out a comprehensive valid consent process. As described, that process embodies best practices for the obtaining of valid consent.

17. This legislation, in requiring a patient in a doctor's clinic to receive information regarding abortion and then to return at least 24 hours later for the actual procedure, constitutes an intrusion into universally accepted medical standards. A state-mandated waiting period for this kind of medical procedure overrides professional judgment, undermines the physician-patient relationship and subverts the correct, traditional, and universal standards for valid consent.

Under penalties of perjury, I declare that I have read the foregoing declaration and that the facts stated in it are true to the best of my knowledge and belief.

Executed on June 4, 2015 in Miami, Florida.

4. Office Phone: (305) 243-5723
5. Home Address: [REDACTED]
6. Current Academic Rank: Professor (as of June 1, 2008; tenure awarded June 1, 2003)
7. Primary Department: Medicine
8. Secondary or Joint Appointments: Philosophy, Public Health Sciences, Health Informatics, Electrical and Computer Engineering, Nursing and Health Studies, Anesthesiology
9. Citizenship: USA
10. Visa Type: NA

II. HIGHER EDUCATION

11. Institutional:
- Department of Philosophy, University of Miami, Ph.D., 1991 (Dissertation: "Progress and Truth in Science").
 - Department of Language and Linguistics, University of Essex, Colchester, United Kingdom, M.A., 1982. Program in theoretical linguistics; degree conferred with distinction. (Thesis: "Linguistics and Indeterminacy.")
 - Department of Journalism and Communication, University of Florida, B.S., 1975. Degree conferred with high honors.
12. Non-Institutional: NA
13. Certification, licensure: NA

III. EXPERIENCE

14. Academic:

University of Miami Ethics Programs, co-founder and co-director, 1991-present

University of Miami Bioethics Program, founder and director, 1991-present; redesignated in April 2015 as University of Miami Miller School of Medicine Institute for Bioethics and Health Policy

World Health Organization Collaborating Centre in Ethics and Global Health Policy, director, 2008-present

U.S. Centers for Disease Control and Prevention, Ethics Subcommittee of the Advisory Committee to the Director, member, 2011-2013 (committee dissolved May 2013). Public Health Ethics Collaboration Steering Group, member, 2012-2013

Adjunct Professor of Medicine, Florida International University, 2009-2012

Director, Florida Bioethics Network, 2004-present

University of Miami/NIEHS Marine and Freshwater Biomedical Science Center, center investigator, 2001-2003

University of Miami Pan American Bioethics Initiative; founder and director; 1994-present

Member, Course Developers' Group, Comprehensive Institutional Training Initiative (CITI), 2004-2013. Member, CITI Executive Advisory Board, 2006-2012

University of Miami Minority Science Outreach Programs; director; 1994-1998

University of Miami School of Medicine, Department of Medicine; adjunct and joint appointments; 1991-Present

University of Miami College of Arts and Sciences, Department of Philosophy; adjunct and joint appointments; 1991-Present

University of Miami Hospital and Clinics / Sylvester Comprehensive Cancer Center; Director, Clinical and Research Ethics Education; 1995-Present

University of Miami School of Medicine, Division of Minority Affairs, Health Careers Opportunity Program summer faculty, 1999-2003

University of Miami School of Medicine, Division of Minority Affairs, Minority Students Health Careers Motivation Program summer faculty, 2000-2003

Markle Foundation, New York and Washington, D.C., Connecting for Health, Personal Health Technology Council member, 2005-2007

American Society for Bioethics and the Humanities, member, Web Editorial Board, 1998-2001

Barry University, School of Graduate Medical Sciences, Physician Assistant Program, CAAHEP Self Study Advisory Committee, 1998-2000

American College of Epidemiology. As consultant to Ethics and Standards of Practice Committee, developed a "Review and analysis of key documents on ethics and epidemiology," 1993-1994

Carnegie Mellon University, Center for the Advancement of Applied Ethics, Pittsburgh; research associate; 1989-1995

Carnegie Mellon University, Computer Science Department, Center for Machine Translation; research editor; December 1988-August 1991

University of Pittsburgh School of Medicine, Center for Medical Ethics, clinical ethics training program,; adjunct faculty and associate; May 1990-July 1991

Department of Communication, Duquesne University, Pittsburgh; adjunct faculty; August 1988-May 1991

School of Business and Administration, Duquesne University, Pittsburgh; adjunct faculty; June to July 1991

University of Miami School of Medicine, Health and Human Values Program; adjunct assistant professor; August 1987 to June 1988

University of Miami College of Arts and Sciences, Department of Philosophy; graduate teaching assistant; September 1983-May 1987

Bethune-Cookman College, Daytona Beach, Florida; journalism instructor and student-newspaper adviser, September 1979 to March 1981

15. Hospital Appointments

Founder and chair, University of Miami Hospital, 2012-present.

Member and Vice Chair, University of Miami Hospital and Clinics / Sylvester Comprehensive Cancer Center Ethics Committee, 1995-present.

Member, Jackson Memorial Hospital Adult Ethics Committee, 1993-present. Chair as of August 2007.

Member, Jackson Memorial Hospital Pediatric Ethics Committee, 1994-present.

Member, VAMC Miami Ethics Committee, 1994-2003.

16. Non-academic:

Consultant to and educator for various health care organizations and professional organizations, including Alpha-1 Foundation, Baptist Health System, Miami Children's Hospital, etc.

17. Military: NA

21. Other works accepted for publication:

V. PROFESSIONAL

22. Funded Research Performed:

Current

National Institutes of Health, Clinical and Translational Science Award. Miami-CTSI.
 1UL1TR000460 (Szapocznik) 06/27/12 – 05/31/17. Role: Ethics unit coordinator, 20-30%.

Alpha-1 Foundation, Social media as an interactive educational medium for quality of life issues for those with Alpha-1 (Moseley): 07/01/13 – 06/31/15. Role: Investigator, 10%.

Previous

National Institutes of Health, Fogarty International Center. Pan American Bioethics Initiative.
 1R25TW008186 (Braunschweiger and Goodman) 09/23/08 – 05/31/12, with no-cost extension to 05/31/14. The major goal of this project is to help build capacity in research ethics education in the Latin American and Caribbean regions. Role: Co-PI, 15%.

ARRA Supplement to Fogarty award, 3R25TW008186, to develop additional curricular tools on research ethics for international learners. 9/1/2009-8/31/2011, \$39,908. Role: Co-PI. (Under no-cost extension)

National Center on Minority Health and Health Disparities. A Targeted Decision Aid to Improve Minority Participation in Clinical Trials (1RC2MD004784), Byrne MB, PI, 09/28/2009 – 06/30/2011. NIH – NCMHD/NCI, \$1,652,959. (M. Byrne) The major goal of this project is to develop and assess decision support tools for prospective research participants. Role: Investigator. 5%

Robert Wood Johnson Foundation (Goodman); 12/01/06-02/28/09; 20%
 Ethical, Legal and Social Issues, Project HealthDesign \$160,000 (incl. \$10k transition funds). Role: PI, to direct efforts to identify and address ethical, legal and social issues related to the use of personal health records (project number 59879).

Beier J. Vector-Borne Disease Control in Urban Environments. 1 P20 RR020770-03 (NIH Director's Exploratory Centers for Interdisciplinary Research), 09/28/04-07/31/07 (5%). Role: Co-investigator to coordinate ethics activities as part of development of new interdisciplinary approaches for the control of vector-borne diseases in urban environments, through collaborative studies involving investigators from 11 Departments and Centers at University of Miami, Kenya, Egypt, Israel, Costa Rica, and Trinidad. (\$1,668,869.)

Goodman KW. The CITI Course in the Responsible Conduct of Research – Part B. Office of Research Integrity. \$25,000 curriculum development contract, 2006. Role: PI.

Walsh, P. Atmospheric and Marine-Based Interdisciplinary Environmental Health Training Project, NIEHS, R25 ES10713, 0-20-00—8-31-07 (7-10%). Role: Develop environmental health and ethics curriculum.

Scott, G. Fellowship in Clinical Research, NIH, OD-00-002, 9-30-02—9-29-05 (5%). Role: contribute to ethics curriculum.

Shor-Posner, G. Optimizing HIV/TB Management in the HAART Era, NIH Fogarty D43 TW000017-16, 7/29/04—5-31-07 (2-5%). Role: Contribute to ethics activities, including annual conference.

Mack, A., others and Goodman, K, Health Careers Motivation Program , HRSA, D 18 MB 02868-01, 9-1-99—8-31-02, \$623,248 (2-5%). Role: Provide ethics instruction to program participants.

Goodman, KW. principal investigator, Difficult Challenges in Human Subjects Research, U.S. Department of Health and Human Services, National Institutes of Health, NIAID, T15 AI07591, 10-1-99—9-30-02, \$265,986 (15%). Role: As PI, oversee training grant to develop conferences.

Beckwith, S., others and Goodman, K, Community-State Partnerships to Improve Care of the Dying, Robert Wood Johnson Foundation, 1-1-00—12-31-02, \$449,961 (20%). Role: Develop ethics and other resources for end-of-life education project.

O'Connell, M., others and Goodman, K, . Undergraduate Medical Education for the 21st Century, HRSA/AACOM, 240-97-0038, 9-1-98 — 8-31-01, \$375,000 (8%). Role: Contribute to creation of a Web-based training module in managed care ethics.

Goodman, KW. Minority Precollege Health Science Outreach Project; U.S. Department of Health and Human Services, National Institutes of Health, National Center for Research Resources; \$219,891; September 1994- September 1997. Role: Coordinate placement of minority students in UM labs.

Goodman, K. principal investigator, Precollege Health Science Outreach Project; U.S. Department of Health and Human Services, National Institutes of Health, National Center for Research Resources; \$58,615; application dates April 1, 1998-March 31, 1999. PI status transferred to colleague as of June 1998 at awardee's request. Role: Coordinate placement of minority students in UM labs.

Goodman, K. principal investigator, Summer Outreach Program, Dade County Public Schools, 1994-1997, \$219,998. Role: Coordinate Miami-Dade County Public Schools minority summer science education program at UM.

Various philanthropic, corporate and other grants in support of UM ethics programs; 1991-2007, approximately \$3,500,000 (including Arsht gift of \$3 million).

Grant-related Consulting

Fogarty International Center, 1 R25 TW010026-01: Research Ethics Education Program in Jordan, University of California at San Diego. PI: W. Al Delaimy. Consultant 2015-present

NIH SE Best Practice, Challenge Grant, 1 R01 DA029258-01: Ethical issues in broad data sharing for genetic research on addiction: best practices. University of Colorado, Denver. PI: M. Coors. Consultant 2010-11.

23. Editorial responsibilities

Study Sections

European Union Research Executive Agency, Ethics Review Panel, H2020, July 2014, Brussels.

European Union Research Executive Agency, Ethics Review Panel, FP7, July 2013, November 2012, July 2012, March 2011.

AMIA (American Medical Informatics Association)

- Founder and Chair, Ethical, Legal and Social Issues Working Group, 1996-1998; chair, 2003-2004
- Chair, Ethics Committee, 2008-2014
- Chair, Vendor Contracts Task Force, 2009-2011
- Member, Working Group Steering Committee, 2006-2007
- Member International Affairs Committee, 2014-

Member, American College of Epidemiology Ethics Committee, 1995-1999, 2005-present; chair, 2006-2008.

Co-executive director, Florida Bioethics Network, 1999-2005; director, 2005-present; president, 1997-1998; board member, 1993-1997.

Member, Director's Advisory Committee, University of Miami Interdisciplinary Stem Cell Institute, 2009-present.

Member, Advisory Committee, Institute for Ethics in Health Care, Miami-Dade College, 2001-present.

Member, Bioethics Committee, Florida Department of Corrections Health Services, 1994-2002.

Member American Association for the Advancement of Science

Member American Medical Informatics Association

Member American Society for Bioethics and the Humanities

Member Association for Practical and Professional Ethics

Member Florida Bioethics Network

25. Honors and awards:

Inducted Alpha Omega Alpha Medical Honor Society, March 20, 2012.

Honorable Mention, Dorland Health People Awards, October 2011
(<http://accessintelligence.imirus.com/Mpowered/book/vcip11/i6/p1>).

Leadership Award, AMIA (American Medical Informatics Association), Nov. 13, 2010.

Outstanding Faculty Award nominee, University of Miami Association of Greek Letter Organizations, April 2010.

"Health Care Hero" award nominee, "Individual of Merit," Greater Miami Chamber of Commerce, May 2009.

Visiting Scholar, Erasmus Mundus Programme in Applied Ethics, Centre for Applied Ethics, Linköping University, Nov. 26-Dec. 4, 2009, Linköping, Sweden.

Elected as Fellow, American College of Medical Informatics, American Medical Informatics Association, October 2008.

"Heavy Hitter in Education," *South Florida Business Review*, June 2006

"Guardian Angel Award," South Florida Guardianship Association, March 2003.

Inducted Honorary Member, Golden Key National Honor Society, November 1996.

First place in Florida Philosophical Association 1987 graduate-student paper competition, for "Theoretical Terms"; see above.

M.A. awarded with distinction by the University of Essex, 1982.

Rotary Foundation scholarship for work in journalism, applied to post-graduate study at Essex, 1981-1982

B.S. awarded with high honors by the University of Florida, 1975.

Selected for admission by Kappa Tau Alpha national communications honor society, 1975.

Selected for admission by Phi Kappa Phi national scholastic honor society, 1974.

Several journalistic writing and editing awards.

Various travel awards to attend conferences and/or present papers.

1990

Goodman, K. Ethics and research in publishing, University of Pittsburgh College of Medicine Student Publishing Workshop, Graduate School of Public Health, Nov. 27, 1990.

Goodman, K. Ethical Issues in Medicine and Communication, presented to the University of Pittsburgh College of Medicine Center for Medical Ethics, Nov. 8, 1990.

Goodman, K. Doing Good and Doing Well: Questions of Ethics and Economics, presented to Hospital Council of Western Pennsylvania, Erie, Oct. 4, 1990.

Goodman, K., Nirenburg S. To Save the Semantic Phenomena: Machine Translation and Interlingua Texts, presented at the Fifth Annual Computers and Philosophy Conference, Stanford University, Palo Alto, Calif., August 1990.

Goodman, K. Communicating Change: Experts and Progress in Medicine, Spring Conference of the Society for Health and Human Values, Hershey, Pennsylvania, April 20, 1990.

Goodman, K. Ethical, Social, Legal and Economic Responsibilities in Medical Rehabilitation, Panel discussion with Arnold S. Relman, Editor, *New England Journal of Medicine*, sponsored by Harnmarville Rehabilitation Center, Pittsburgh, March 20, 1990.

1989

Goodman, K., invited participant, Professional Ethics in Higher Education: Methods, Theories, Practices, The Poynter Center for the Study of Ethics and American Institutions; Bloomington, Ind. Sponsored by the Harvard Program in Ethics and the Professions, Indiana University-Bloomington Chancellor, The Lilly Endowment and the Poynter Center, July 5-8, 1989.

Goodman, K. Kant's Categories as Semantic Primitives, presented to 34th Annual Conference of the International Linguistic Association, New York, April 18, 1989.

1987

Goodman, K. Theoretical Terms, presented to annual meeting of Florida Philosophical Association, St. Petersburg, Nov. 9, 1987.

VI. TEACHING

28. Teaching awards received

29. Teaching specialization:

2014

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2013

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2012

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2011

"Knowledge and Evidence in Medicine," University of Miami Department of Philosophy (spring)

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2010

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter, spring).

2009

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with D. Buckner), University of Miami Department of Medicine / medicine clerkship (all semesters).

2008

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with D. Buckner), University of Miami Department of Medicine / medicine clerkship (all semesters).

2007

"Computing Ethics," University of Miami Departments of Computer Science and Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with D. Buckner), University of Miami Department of Medicine / medicine clerkship (all semesters).

2006

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

Other: "Patient Safety Course," University of Miami School of Medicine, faculty member, "Error Disclosure and Patient Centeredness" lecture.

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2005

"Bioethics," University of Miami Department of Philosophy (fall).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2004

"Environmental Ethics," University of Miami Department of Philosophy (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2003

"Bioethics," University of Miami Department of Philosophy (spring).

"International Health Policy and Ethics" (with S. Porcelain), University of Miami School of International Studies (spring).

"Professional Ethics, Law and Medicine," University of Miami School of Medicine (winter).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2002

"Professional Ethics," University of Miami Department of Philosophy (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Medical Ethics," University of Miami School of Medicine, co-design and coordinate new ethics curriculum.

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

2001

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1999

"Ethics, Epidemiology and Public Health," University of Miami School of Medicine, Department of Epidemiology and Public Health (spring).

"Bioethics," University of Miami Department of Philosophy (spring)

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1998

"Ethics, Epidemiology and Public Health," University of Miami School of Medicine, Department of Epidemiology and Public Health (spring).

"International Health Policy and Ethics" (with S. Porcelain), University of Miami School of International Studies (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1997

"Bioethics," University of Miami Department of Philosophy (spring)

"International Health Policy and Ethics" (with S. Porcelain), University of Miami Graduate School of International Studies (spring).

"Medical Informatics" (with others), University of Miami departments of Radiology and Electrical Engineering (spring).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Ethics and Epidemiology," New England Epidemiology Institute and Tufts University, Medford, MA (summer).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

"Ethical Values in Health Care: Lessons from the Nazi Era," UM School of Medicine Senior Elective, with Drs. Michael Franzblau and Jeffrey Brosco.

1996

"Ethics and Epidemiology," University of Miami School of Medicine, Department of Epidemiology and Public Health (fall).

Dissertation Seminar, University of Miami Graduate School of International Studies (spring).

"Ethics and Epidemiology," New England Epidemiology Institute and Tufts University, Medford, MA (summer).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

1995

"Health Care Reform: Policy, Structure, Ethics" University of Miami School of Nursing (fall and spring).

"Ethics and Epidemiology," University of Miami School of Medicine, Department of Epidemiology and Public Health (fall).

"Ethics and Epidemiology," New England Epidemiology Institute and Tufts University, Medford, MA (summer).

"International Health Policy and Ethics" (with S. Porcelain), University of Miami Graduate School of International Studies (spring).

"Professional Ethics," University of Miami Department of Philosophy (spring).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami Department of Medicine / medicine clerkship (all semesters).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

1994

"Health Care Reform: Policy, Structure, Ethics" University of Miami School of Nursing (spring).

"Computers, Ethics and Society," University of Miami Freshman Seminar series (fall).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami School of Medicine, Department of Medicine / medicine clerkship (all semesters).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

1993

"Health Care Organization, Policy and Ethics," University of Miami Freshman Seminar series (fall).

"Clinical Ethics" (with J.P. Pennell and M.H. Needell), University of Miami School of Medicine, Department of Medicine (all semesters).

"Research Ethics," University of Miami schools of Medicine, Arts and Sciences and Marine and Atmospheric Sciences (varia).

1992-present

"Clinical Ethics," (with others) University of Miami School of Medicine, Department of Medicine; third-year medical students on Medicine clerkship.

1991

"Professional Writing," Duquesne University Department of Communication (spring).

"Business Ethics," Duquesne University School of Business and Administration (summer).

1990

"Professional Writing," Duquesne University Department of Communication (fall).

1989

"Professional Writing," Duquesne University Department of Communication (fall).

1988

"Professional Writing," Duquesne University Department of Communication (fall).

1985

"Introduction to Logic," University of Miami College of Arts and Sciences, Department of Philosophy (fall, spring)

1984

"Introduction to Logic," University of Miami College of Arts and Sciences, Department of Philosophy (fall)

30. Thesis and dissertation advising/post-doctoral student supervision:

Wanda Castro, doctoral candidate, Epidemiology, 2006-2011; committee member
 Maritza Flores, doctoral candidate, Sociology, 2001-2003; committee member
 Jeremy Morris, doctoral candidate, Philosophy, 2006-2007; committee member
 Yvette Pearson, doctoral candidate, Philosophy, 2001-2002; committee member
 Nenad Popovic, doctoral candidate, Philosophy, 2005-2006; committee member
 Marguerite Purnell, doctoral candidate, Nursing, 2001-2003; committee member
 Ruben Rabinsky, NIEHS postdoc, 2001-2003; committee member
 Matthew Schuh, doctoral candidate, Philosophy, 2008; committee member

VII. SERVICE

31. University committee and administrative responsibilities:

Member, Academy of Medical Educators, 2012-present.

Member, UM College of Arts and Sciences graduate faculty, 2012-present.

Member, University of Miami Center for Computational Science, 2011-present.

Member, University of Miami Conflict of Interest Committee, 2010-present.

Member, University of Miami Task Force Committee, Civic Engagement Project, Office of the Senior Vice Provost, 2010-present.

Member, University of Miami Embryonic Stem Cell Research Oversight Committee, 2009-2011.

Member, Faculty Steering Committee, University of Miami Jay Weiss Center for Social Medicine and Health Equity, 2007-present.

Member, University of Miami Medical Group Clinical Operations committee, 2006-2009.

Member, University of Miami Faculty Senate Hearing Panel, 2004-present

Member, Jackson Memorial Hospital/UM HIPAA Steering Committee, 2001-2005.

Member, Responsible Conduct of Research Educational Initiative Committee, 2001-2005.

Member, University of Miami core faculty for Human Subjects Protection Seminars, 2001-present

Member, University of Miami Advisory Group for Education in Human Subjects Protections, 2001-2005.

Faculty Advisor, Ethics Society, UM undergraduate service organization, 1994-present.

Member, Bioethics Committee, University of Miami / Jackson Memorial Hospital, 1992-Present.
Chair as of July 2007.

Member, Pediatric Bioethics Committee, University of Miami / Jackson Memorial Hospital, 1992-Present.

Member, Jackson Memorial Hospital Transplant Center, Transplant Emergency Panel, November 2008-Present.

Member, Human Studies Subcommittee (IRB), Veterans Affairs Medical Center, Miami, 1992-2001.

Member, Ethics Committee, University of Miami Hospitals and Clinics/Sylvester Comprehensive Cancer Center, 1996-Present; vice chair, 2000-present.

Member, Fetal Board Registry, University of Miami Department of Obstetrics and Gynecology, 1993-1999.

Member, Medical Sciences Subcommittee for the Protection of Human Subjects (IRB), University of Miami/Jackson Memorial Hospital, 1994-2000; alternate, 2000-2003.

Director, Clinical and Research Ethics Education, University of Miami Hospital and Clinics / Sylvester Comprehensive Cancer Center, 1994-present.

Member, Steering Committee, University of Miami Medical Informatics Programs, 1995-1998.

Member, Steering Committee, Outcomes Research Group, 1996-1998.

Preceptor, Clinical Skills Program, University of Miami Department of Medicine, 1992-2000.

Member, Clinical Pastoral Education Professional Advisory Group, Jackson Memorial Hospital, 1993-Present.

Member, Animal Studies Subcommittee, Veterans Affairs Medical Center, Miami, 1994-Present.

Member, Animal Studies Subcommittee, University of Miami, 1994-Present.

Member, Computers in Medical Education committee for LCME accreditation, 1994.

Member, Information Systems Ethics Committee, Jackson Memorial Hospital, 1994-1996.

31a. Other Misc. UM/JMH/VA Contributions

2015

Goodman KW. Guest speaker. MD/MPH Class of 2018 Anatomy Rose Ceremony, UM Miller School of Medicine, May 18.

Goodman KW. Ethics and leadership. Leadership Development in Neurodevelopmental Disabilities (LEND) Project, UM Miller School of Medicine, Department of Pediatrics, May 15.

2014

Goodman KW. Ethical issues in academia. Faculty Roles and Responsibilities, University of Miami School of Nursing and Health Studies, January 8.

2013

Goodman KW. Access to health care: how ethics should influence public policy. Friends of Philosophy, UM Department of Philosophy, February 13.

Goodman KW. Strategic data sharing by ordinary people: Translational science's reliance on trust and reciprocity. Miami CTSI Translational Science Institute Seminar Series, November 20.

Goodman KW. Ethics, translational science and the IRB: The future is (still) not what it used to be. IRB Grand Rounds, University of Miami, December 10.

2012

Panelist, Miami Council for International Visitors and U.S. Department of State, delegation from Zambia on media freedom, licensing of journalists, etc. UM School of Communication, March 8.

Moderator, HealthCanes, presidential debate, Oct. 1.

2011

Goodman KW. Ethics and translational research: New challenges in genetics, public policy and health information technology. Miami Clinical and Translational Science Seminar Series, UM Miller School of Medicine, November 9.

Goodman KW. Conflicts of interest. UM Miller School of Medicine, Teaching Professionalism Series, March 7.

Goodman KW Ethics in cancer care. Surgical oncology fellows, SCCC, June 8.

2010

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 28

Goodman KW. Wireless pediatrics: Ethics and the role of personal health records. Clinical Research Forums in Pediatrics, UM Division of Pediatric Clinical Research, March 3.

2009

Panelist, of 5. Brands, cultures and globalization. University of Miami School of Business Global Business Forum, January 16.

Goodman KW. Pediatric contributions to biobanks. Clinical Research Forums in Pediatrics, Division of Pediatric Clinical Research, UM Miller School of Medicine, January 28.

Goodman KW. Ethics and Information Technology. Department of Electrical and Computer Engineering Seminar Series, University of Miami College of Engineering, February 4.

Panelist, of 5. Academic Integrity Forum. University of Miami Undergraduate Honor Council, April 15.

Special seminar for Kenyan and other journalists specializing in HIV and medical reporting, on ethics and science writing, UM School of Communication, April 29.

Goodman KW. Stanford Food for Thought Dinner Series, Stanford Residential College, Nov. 9.

Goodman KW. Awkward research: sects, sex and drugs. UM Human Subjects Protection Seminar, Nov. 10.

2008

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 24.

Goodman KW, Wilkinson JD, Pericak-Vance M. Ethics and genomics panel. 34th Eastern-Atlantic Student Research Forum, UM Miller School of Medicine, Feb. 29.

Goodman KW. Digital genetics and the future of pediatrics: The role of ethics. UM Department of Pediatrics Clinical Research Forum, March 5.

Panelist, of 5. Global Climate Change: Your Health. (National Public Health Week activity.) UM Department of Epidemiology and Public Health, April 7.

Panelist, of 4. Climate change projections: Communicating uncertainty without losing the message. Rosenstiel School of Marine and Atmospheric Sciences, May 8.

Goodman KW. Stem cell research: Issues in ethics, science and public policy. Osher Lifelong Learning Institute, September 24.

2007

Panel discussion on codes of ethics in public relations. With International Public Relations Association President Philip Sheppard; Jay Black, Poynter Jamison Media Ethics Chair, University of South Florida-St. Petersburg; and Roger Bolton, President of the Arthur W. Page Society. Feb. 20, UM School of Communication.

Goodman KW. Moral responsibility of Holocaust/Legacy Project survivors, JUS421 (M. Sokoloff), April 12.

Panel, Academic Integrity, with Anita Cava, co-director, UM Ethics Programs, and Katie Meier, UM women's basketball coach. Undergraduate Honor Council, Academic Integrity Week, April 17.

Goodman KW. Conflict and consent: Managing disclosure in human subjects research. UM HSRO Human Subjects Research Symposium, May 11.

Goodman KW. Clinical and research ethics. Core Curriculum for Oncology Fellows. Sylvester Comprehensive Cancer Center, Aug. 7.

Cava A, Goodman KW. Community academic expectations. Graduate Student Orientation, Coral Gables, Aug. 16.

Goodman KW. STRIVE student group leadership facilitator, Coral Gables, Oct. 7.

Goodman KW. Ethics and leadership. Freshmen Leadership Academy, Butler Center for Volunteer Service & Leadership Development, Coral Gables, Oct. 15.

2006

Presentation to International Commission on Holocaust Era Insurance Claims (ICHEIC) Service Corps, Miller Center for Contemporary Jewish Studies, April 10.

Presentation to Department of English, Prof. Johanna Johnson, composition.

2005

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 27.

Goodman KW. Ethics in plastic and reconstructive surgery, UM Department of Surgery, Division of Plastic and Reconstructive Surgery, May 18.

Goodman KW. Error disclosure and patient centeredness. UM Department of Anesthesiology, June 7.

Goodman KW. Research or surveillance? The case of bioterror preparedness. UM Human Subjects Research Forum, August 30.

Goodman KW. The role of ethics in Sponsored Programs. UM Sponsored Programs Education Center, Dec. 15.

2004

Goodman KW. Clinical ethics. UM Division of Gastroenterology, Jan. 22

Goodman KW. The Terri Schiavo tragedy and the use of ethics committees. Ryder Trauma Center TICU nurses, Feb. 10.

Goodman KW. What IRBs need to know about evidence-based practice. UM Human Subjects Research Forum, March 30.

Goodman KW, panelist, Ethics, Reporting and Politics, UM School of Communication and South Florida chapter, Society of Professional Journalists, UMSoc, April 27.

2004-2010	Chair, Academic Advisory Board, Youth Ethics Initiative
2005-2007	Member Florida PTA Child Protection Committee
2007	Member, Miami-Dade County Commission on Ethics and Public Trust Ethics, Integrity and Accountability Task Force

Exhibit B-5

IN THE CIRCUIT COURT OF THE SECOND JUDICIAL CIRCUIT
IN AND FOR LEON COUNTY, FLORIDA

<p>GAINESVILLE WOMAN CARE LLC et al.,</p> <p style="text-align: center;">Plaintiffs,</p> <p>v.</p> <p>STATE OF FLORIDA et al.,</p> <p style="text-align: center;">Defendants.</p>	<p>Case No. _____</p> <p style="text-align: center;">DECLARATION OF SHEILA KATZ</p>
---	--

I, Sheila Katz, am over 18 years of age and declare and state the following:

A. Qualifications for Expert Testimony

1. I am an Assistant Professor of Sociology at the University of Houston, in Houston, Texas. My areas of expertise include gender, poverty, and social policy.

2. I joined the faculty at the University of Houston in August 2014. Previously, I worked for six years as a professor at Sonoma State University in Rohnert Park, California, and I received tenure there in May 2014. I earned my MA and PhD in Sociology from Vanderbilt University. I earned my B.A. in Sociology and Women's Studies from the University of Georgia. For the last fifteen years, I have conducted research on poverty, women's economic status, and social policies at the state and federal level in the United States.

3. I have published on these topics in sociology and poverty journals, and I am finishing a book manuscript on my research in this area. I have presented my research at numerous professional conferences and given expert testimony on these issues to the United States Congress in 2005, 2006, and 2011. In 2011, I was named an "Emerging Scholar" in poverty and welfare research by the Department of Health and Human Services and received

two national grants to support my work in this area from the National Poverty Center and the National Science Foundation. I serve on several national research and poverty advisory committees, where I work with other scholars on these issues. Recently, I have become involved with the Persistent Poverty in the South Project, a project of the Southern Sociological Society that examines persistent poverty in the South, including in Florida.

4. I have given prior expert testimony regarding the effects of abortion restrictions on women living in poverty. *See Planned Parenthood Se., Inc. v. Strange*, 33 F. Supp. 3d 1381, 1395 (M.D. Ala. 2014) (finding my testimony “credible and helpful in understanding the effects of the law on women seeking abortions”); *see also June Medical Servs. v. Kliebert*, No. 14-cv-00535-JWD-RLB (M.D. La. Apr. 1, 2015) (denying motion to exclude my expert testimony). I submit this declaration as an expert in issues facing women living in poverty in the United States.

5. My *curriculum vitae*, which sets forth my experience and credentials in greater detail and contains a full list of my publications, is attached to my declaration. All of my opinions in this declaration are stated to a reasonable degree of professional certainty.

B. Effects of the Act on Low-Income Women in Florida

6. I understand from Plaintiffs’ counsel that Florida House Bill 633, codified at Florida Statutes § 390.0111 (“the Act”)—the law at issue in this case—would require all Florida women to make an additional visit to a doctor at least twenty-four hours before their appointments, in order to secure an abortion. I further understand that the only exceptions from this waiting period are for victims of abuse who have previously reported that abuse to the police or other authorities or for women whose pregnancies create life-threatening emergencies.

7. Through my research, I am familiar with the barriers to seeking medical services faced by low-income women. It is my belief that the Act will cause particular harm to low-income women in Florida. The Act will increase the time, money, and labor required to obtain an abortion in Florida—resources that low-income women lack. This harm is particularly concerning both because most women who seek abortions are low-income, as defined as living at or below 200% of the federal poverty level, and because of the high levels of deep and persistent poverty in Florida. In order to overcome these obstacles, women will resort to dangerous means to get the money necessary to cover the costs of obtaining abortions, where they are able to obtain them at all.

C. Women and Poverty in Florida

8. Florida has a higher poverty rate than the nation as a whole. According to 2013 estimates from the Census Bureau, 17% of people in Florida are at or below 100% of the federal poverty level, compared to 14.5% of those in the nation as a whole. In general, women tend to be poorer than men, and the same is true in Florida, where women have a higher poverty rate (18%) than men (16%).¹ Based on data from the American Community Survey for the last twelve months, over a million women (1,037,524) between the ages of 16 and 64 live below the federal poverty line in Florida. Of people below the poverty level in Florida, 54% are women and 46% are men.²

¹ *Poverty, 2013 Highlights*, U.S. Census Bureau, www.census.gov/hhes/www/poverty/about/overview (last visited June 4, 2015); *Poverty Status in the Past 12 Months, 2013 American Community Survey 1-Year Estimates*, U.S. Census Bureau, <http://factfinder2.census.gov/faces/nav/jsf/pages/searchresults.xhtml?refsh=t> (last visited June 4, 2015) (enter “Poverty Status in the Past Twelve Months 2013 ACS 1-Year Estimates” and “Florida”).

² *Easy Stats, Poverty Status in the Past 12 Months*, U.S. Census Bureau, <http://www.census.gov/easystats> (last visited June 4, 2015) (select “Florida,” “Financial,” “Poverty Status in the Past 12 Months by Sex by Age” (calculated)).

9. In order to understand women's poverty in Florida, and the effect it has on women's lives and those of their families, it is also important to look at child poverty in the state. Many women who live in poverty have children; additionally, most women seeking abortions already have children.³ In Florida, 38.7% of families headed by single mothers with dependent children live at or below the federal poverty threshold, according to the American Community Survey.⁴ Florida has 588,000 families with children under the age of eight that live below the poverty line; for 49% of children in those low-income households, no adult in the household has full-time, year-round employment.⁵ Florida ranks 37th in the nation in child poverty, and nearly one in four Florida children, or 24.5%, live in poverty.⁶ Nearly half of those, or 10.4% overall, live in deep poverty, below 50% of the federal poverty line.⁷

10. The federal poverty line, used to count people who live in poverty in the United States, is defined by the Department of Health and Human Services as a single person who makes less than \$11,770 per year, with an additional \$4,160 per year for each additional member of the household.⁸ The federal poverty level, although used in many statistics, is

³ Rachel K. Jones et al., Guttmacher Inst., *Characteristics of U.S. Abortion Patients, 2008* 8 (2010), <http://www.guttmacher.org/pubs/US-Abortion-Patients.pdf> (about 61% of abortions are obtained by women who have one or more children).

⁷ *Selected Characteristics Of People At Specified Levels Of Poverty In The Past 12 Months, 2009-2013 American Community Survey 5-Year Estimates*, U.S. Census Bureau, <http://factfinder2.census.gov/faces/nav/jsf/pages/searchresults.xhtml?refresh=t> (last visited June 4, 2015) (enter "Selected Characteristics of People at Specified Levels of Poverty 2013 ACS 5-Year Estimates" and "Florida").

⁸ *2015 Poverty Guidelines*, U.S. Dep't of Health & Human Servs., <http://aspe.hhs.gov/poverty/15poverty.cfm> (last visited June 4, 2015).

generally considered an inadequate measure of poverty in the United States. The guideline is based on a formula from the 1960s that assumes that families spend approximately one-third of their budget on food, which is no longer the case amid rising costs for housing and transportation. The guideline also does not take into account other costs that most families pay, such as childcare, medical expenses, utilities, and taxes. Some federal, state, and local social programs recognize that this guideline is too low, and set eligibility requirements at 125, 150, or 200 % of the guideline. For a family of three, a single mother and two children, those amounts would be \$24,737 (at 125%), \$29,685 (at 150%), and \$39,580 (at 200%) respectively. Research shows that even families who are making more than twice the federal poverty level still have trouble making ends meet and paying for basic expenses.⁹ In Florida, 34.8% of residents, or over seven million people, live under 200% of the federal poverty threshold.¹⁰

11. The amount needed to maintain a minimally self-sufficient standard of living in Florida is closer to at least twice the amount of the federal poverty threshold. For example, the 2014 fair market rent in Gainesville, as designated by the Department of Housing and Urban Development, is \$695 for a one-bedroom apartment and \$883 for a two-bedroom apartment.¹¹ If a woman in Gainesville is working full time at the Florida minimum wage, her annual earnings are approximately \$15,400 (\$1,288/month), which is just above the federal poverty threshold if no one else lives in her household, and below the poverty line if

¹⁰ *Poverty Status in the Past 12 Months, 2013 American Community Survey 1-Year Estimates*, *supra* note 1 (calculated).

¹¹ *Fair Market Rent (FY 2015) and Income Limit (FY 2015) Summary System*, U.S. Dep't of Hous. & Urban Dev., http://www.huduser.org/portal/datasets/fmr/fmr_il_history/select_Geography.odn (last visited June 4, 2015) (Select "Gainesville, FL MSA" from "FY Metropolitan FMR Area" Menu).

she has any children. Her housing cost is 54% of her monthly income for a one-bedroom apartment, and 69% of her monthly income for a two-bedroom apartment. It is thus no surprise that the Children’s Defense Fund reported that “in 2014 more than 2 full-time minimum wage jobs are necessary to be able to afford a fair market rent two-bedroom apartment in Florida and still have enough left over for food, utilities, and other necessities.”¹² It is thus important in considering the effects of the Act on “low-income women” that we include women living at up to 200% of the poverty line.

12. In understanding the effects of the Act, it is also important to consider those people who live in deep or persistent poverty. Seven percent of Floridians live below 50% of the poverty line, characterized as “deep poverty” by those that study the issue.¹³ These households tend to be clustered together in pockets of deep poverty, whether in the urban inner city or in a rural county.

13. Indeed, Florida has four rural counties that are defined as having “persistent poverty.” Persistent poverty is defined as a county where the poverty level has been above 20% at each of the last four censuses (1980, 1990, 2000, and 2010).¹⁴ Those four counties are Alachua (where Plaintiff Bread and Roses is located), Hamilton, Hardee, and Madison.¹⁵ Women living in deep or persistent poverty are at the greatest risk of injury from the Act

because they have the least access to transportation or child-care and the largest psychological hurdles to travelling to a provider.

D. Poverty and Abortion

14. Approximately 13% of women of reproductive age below the poverty line will have an unintended pregnancy in a year, versus 9% of women between 100% and 200% of poverty and 2.4% of women above 200% of poverty.¹⁶ Thus, a woman below 100% of the poverty line is over five times more likely to experience an unintended pregnancy than a woman who is above 200% of the poverty line.

15. Nationally, in 2008, 42% of women having abortions in the United States had incomes below the federal poverty level, and another 27% had incomes below 200% of the federal poverty level.¹⁷ However, I would expect these percentages to be greater in Florida. Given the high rate of poverty in Florida, it is likely that the overwhelming majority of abortion patients in Florida are below 200% of the federal poverty level.

E. Effects of the Act

16. While the Act's unnecessary requirements are burdensome for any woman, low-income women can ill afford the additional costs associated with an extra trip, given how tight their budgets already are.

17. For instance, for those low-income women who are employed, a missed shift of work may be a serious barrier in obtaining an abortion. The Act, which requires an additional trip to a health-care provider, will require a woman to take an additional day off work and travel to her nearest provider. Low-wage workers often have no access to paid time

¹⁶ Lawrence B. Finer & Mia R. Zolna, *Unintended Pregnancy in the United States: Incidence and Disparities*, 84 *Contraception* 478, 483 (2011), <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3338192/>.

¹⁷ Jones et al., *supra* note 3, at 6.

off or sick days. According to the Institute for Women's Policy Research, 41% of working parents at or below 200% of the poverty line have no access to paid sick leave, vacation days, personal days, or any other form of compensated leave.¹⁸ Even seeking uncompensated time off can be a struggle for low-wage workers, who often have less autonomy in setting their work schedules than other workers. Because so much low-wage work is considered unskilled, workers can be replaced easily and may face termination if they insist on taking time off on a particular day. Many jobs that low-income workers have are shift-based and therefore may not allow for missing only an hour or two of work. Also, many employers require workers to disclose the reason why they are taking time off, especially for more than one day in a row or very close together. The additional time off required by the waiting period may make it difficult for a low-income woman to keep her abortion confidential from her supervisor or other employees.

18. If a low-income woman is able to get time off from work, she is likely to forgo wages. The mean hourly wage in Gainesville for servers, a common low-wage occupation for women, is \$8.89.¹⁹ Taking off an additional eight-hour shift will cost her \$71.12, more than 1/10 her monthly rent if she lives in a one-bedroom apartment.

19. Many women may also have to travel to reach their nearest providers; doubling these travel costs will also be significant, both in terms of monetary cost and added obstacles. Low-income women are far more likely to use public transportation as their primary source of

¹⁸ *An Introduction to Paid Time Off Banks*, Inst. for Women's Policy Research (June 20, 2012), <http://www.iwpr.org/blog/2012/06/20/an-introduction-to-paid-time-off-banks>

¹⁹ *May 2014 Metropolitan and Nonmetropolitan Area Occupational Employment and Wage Estimates, Gainesville, FL*, U.S. Dep't of Labor, Bureau of Labor Statistics, http://www.bls.gov/oes/current/oes_23540.htm (last modified Mar. 25, 2015).

transportation than any other sector of the population.²⁰ Many low-income women in Florida do not own or have access to cars. At a national level, as of 1995, a quarter of low-income families, and a third of low-income families headed by single parents were without a private car, versus only 4% of other families. And in those low-income households that have cars, these cars are more likely to be shared among adults.²¹

20. Around sixty percent of women who obtain abortions have previously had at least one child.²² For many low-income women, then, requiring an additional trip to seek an abortion will require paying for an additional day of childcare. Some women may instead leave their children in the care of a trusted family member or friend. This still often involves additional costs to meet the child's needs outside of the home, as that caretaker is likely low-income herself and will need some payment to cover food and other costs for the children. Having to ask a family member or friend for more than one day of child care in order to obtain the abortion could require a woman to disclose why she needs that care, making it more difficult for a low-income woman to keep her abortion confidential. And for many low-income women, there may not be a friend or relative they are able to trust to take care of their child.

21. Because of these burdens, I think it is likely that many low-income women will not be able to schedule two appointments at an abortion provider precisely twenty-four hours apart. Instead, they will likely have to wait a week or more to find another day for which they can arrange for time off work and/or childcare and transportation to the provider. I believe

²⁰ Am. Pub. Transp. Ass'n, A Profile of Public Transportation Passenger Demographics and Travel Characteristics Reported in On-Board Surveys, (2007), http://www.apta.com/resources/statistics/Documents/transit_passenger_characteristics_text_5_29_2007.pdf.

²¹ Elaine Murakami & Jennifer Young, *Daily Travel by Persons with Low Income* (Nat'l Pers. Transp. Survey Symposium, Oct. 26, 1997), <http://nhts.ornl.gov/1995/Doc/lowinc.pdf>.

²² Jones et al., *supra* note 3.

the Act will likely cause some low-income women to delay obtaining their abortions, potentially by significant amounts of time. Because delay increases the cost of an abortion, its effects can be cascading: a woman who has to wait an extra week because she can't string together two days off work may in doing so find her abortion now costs an extra \$100, meaning she must wait another week to save up the money, and so on.

22. In order for a low-income woman to afford the additional costs associated with the new law, she would have to make financial sacrifices and hard decisions. I know from my own research with low-income women and review of the extensive literature on the subject that when emergencies or additional necessary expenses occur in their lives, low-income women attempt to meet those expenses in three primary ways. First, they make sacrifices in other areas, usually by not paying rent or utilities, or by drastically reducing their food budgets and going hungry. This jeopardizes their health and well-being, or their housing situation, as well as that of their children and families. A second strategy is using payday loans or other predatory lending practices, incurring high interest rates and fees that compound costs exponentially. The third strategy can be more dangerous. Some low-income women may be lucky enough to know a trusted friend with the discretionary income to loan her the tens or hundreds of dollars needed for the months or years it may take her to pay it back, but many are not. Instead, they may borrow that money from a boyfriend or partner, even if they are no longer together or even if he was abusive. Given the high rate of domestic violence among low-income women, this strategy can be extremely dangerous.²³

23. These tangible costs make clear why an extra trip to an abortion provider and a waiting period of at least 24 hours impose significant harms on low-income women. The Act

²³ Martha Davis, *The Economics of Abuse: How Violence Perpetuates Women's Poverty in Battered Women, Children, and Welfare Reform* 17 (Ruth Brandwein ed., 1999).

also imposes a serious intangible cost. Research has shown that the predominant experience low-income women have with their employers and social service workers is distrust emanating from those authorities, and that the resulting social-psychological injury of feeling distrusted makes it much harder for women to find routes out of poverty through work or welfare.²⁴ In these interactions, even genuinely benevolent advice can be taken as a critique. A similar dynamic can come into play with abortion restrictions, particularly where a hostile climate begins to emerge that tells women that the state does not trust their choices. The Act does just that: by telling a woman she must observe a waiting period the state deems necessary before getting the abortion she has already decided she needs, the Act imposes this kind of social-psychological injury on women, particularly low-income women who experience that dynamic in other parts of their lives.

F. Conclusion

24. Ultimately, the Act will cause harm to thousands of low-income women in Florida who will experience serious increased costs relative to their incomes in seeking abortion care and who will be told that their choices are not trusted by the state. I also believe that the Act, by harming low-income women and forcing them to make sacrifices in order to be able to afford safe, legal abortion care, will harm Florida children and families.

²⁴ Judith Levine *Ain't No Trust: How Bosses, Boyfriends, and Bureaucrats Fail Low-Income Mothers and Why It Matters* (2013)

CV of Sheila Katz

Sheila M. Katz, Ph.D.

Department of Sociology, University of Houston
4800 Calhoun, 450 Phillip G. Hoffman Hall
smkatz@uh.edu 713-734-1918

CURRENT ACADEMIC POSITION

2014-present Assistant Professor, Department of Sociology, University of Houston, Houston, TX

- Teach 2 sociology courses a semester (6 units), with 50% time on research and publication expectations, and also service to department, profession, university, and community.

PREVIOUS TENURE-TRACK POSITION

2008-2014 Assistant Professor, Sociology Department, Sonoma State University, Rohnert Park, CA

- Taught 3 sociology courses (12 units) a semester with liberal arts focus, advising load of 100 students, active research agenda, service to university, profession, and community.
- Tenure and promotion to Associate Professor awarded May 2014.

EDUCATION

- 2008 Ph.D. Sociology, Vanderbilt University, Nashville, TN
Dissertation Title: *Pursuing a 'Reformed' Dream: CalWORKs Mothers in Higher Education after "Ending Welfare As We Know It"* Dissertation Committee: Karen Campbell (Chair), Laura Carpenter, Daniel Cornfield, and Brooke Ackerly.
- 2001 M.A. Sociology, Vanderbilt University
Passed Master's Comprehensive Exams in January 2000
Concentration on effects of gender, class, and race on education
- 1998 B.A. Sociology with Women's Studies certificate, University of Georgia
Senior Thesis: "Acquaintance Rape on a Southern Campus"
Study Abroad: Two semesters at Richmond College, London, England

RESEARCH AND TEACHING INTERESTS

Gender/Class/Race, Poverty, Social Policy, Social Problems, Qualitative Methodologies, Sociology of Education, Inequalities, Violence Against Women, Sociology of Drugs.

CURRENT RESEARCH PROJECTS

CALWORKS AND HIGHER EDUCATION STUDY (CHES)

Longitudinal qualitative research with mothers on welfare in the San Francisco Bay Area enrolled in higher education programs. Data was collected in three waves: 2006, 2008, 2011 with a 78% retention rate: 35 of the original 45 participants completed interviews in 2011. Project explores the experiences of single mothers pursuing higher education on TANF before, during, and after the "Great Recession," the role of grassroots advocacy organizations, and policy issues for TANF reauthorization. Received external funding from the National Science Foundation in 2007 (\$7500) and the National Poverty Center (\$11,700) in 2011 and internal funding from the University of Houston, Sonoma State University and Vanderbilt University.

KEYS TO SUCCESS: STUDENT PARENTS ON CAMPUS (SPOC)

Research project and manuscript in progress, *Supporting Student Parents on Campus From Baby Boomers to Millennials: History and Best Practices for Helping Student Parents Succeed in Postsecondary Education*, co-authored with Dr. Autumn Green (Endicott College), about the history, development, and best practices of programs that serve college student who have children. The book will be co-researched and co-written by the lead authors, but chapters may also include segments or contributions from various student parent programs highlighted in the book. The project is a multi-site ethnographic study of programs throughout the United States that serve student who have children, with a sociological and best practices

lens on the issues. The programs studied include those that are institutional (located at colleges and universities), nonprofit community based organizations, cross-sector collaborations, and governmental programs.

AMERICAN DREAMS OF INEQUALITY

Lead co-editor on the American Dreams of Inequality reader for advanced undergraduate students in sociology, American Studies, and related disciplines. The edited volume explores the historical and theoretical perspectives on the American Dream, and the current research about the American Dream for low-income, working class, middle income, and wealthy families; as well as the role that housing, celebrity culture, sexual orientation, and immigration play on the American Dream. The project is a co-edited work with Dr. Robert Hauhart and Dr. Jeff Torlina.

STUDENT PARENT SURVEY

The first national project to survey the needs and experiences of students who are also parents. SSU was the first university in the country to launch the survey, a project of the Institute for Women's Policy Research (IWPR)'s Student Parent Success Initiative. The survey explores the challenges of being a student and a parent, the effectiveness of campus resources, and ways that SSU or other universities can better serve student parents. 122 completed surveys collected, 106 of them current SSU students, a 45% response rate. www.sonoma.edu/newscenter/2014/02/ssu-is-first-in-us-to-launch-national-student-as-parents-survey.html

EXPERT WITNESS REPORTS, DEPOSITIONS, AND TRIAL TESTIMONY

- Center for Reproductive Rights consultant in the case: June Medical Services LLC, et al., Plaintiffs, v. Kathy Kliebert, et al., Defendants. Civil Action No. 3:14-CV-525-JWD-RLB in the United States District Court for the Middle District of Louisiana. Researched and wrote expert witness report, researched and wrote a rebuttal report to other expert witnesses, and gave live deposition and will give trial testimony about women's poverty in Louisiana and the impact of Louisiana's HB 388 on low-income women's access to reproductive health services for the plaintiffs. Reports submitted to the court in December 2014, deposition given in Miami, FL in January 2015, trial testimony in June 2015.
- Planned Parenthood National consultant in the case: Planned Parenthood Southwest Ohio Region vs. Richard Hodges et al., in the United States District Court for Southern District of Ohio Western Division. Case No. 1:14-cv-867. Researched and wrote expert witness declaration about women's poverty in Cincinnati, OH and on low-income women's access to reproductive health services for the plaintiffs (Planned Parenthood). October 2014-November 2014. The case was dropped by the plaintiffs after Richard Hodges, Director of the Ohio Health Department granted a variance for the clinic from state law. Media coverage of the case: <http://www.dispatch.com/content/blogs/the-daily-briefing/2014/11/11-20-14-abortion-variance.html>
- Planned Parenthood of the Southeast vs. the State of Alabama. *Pro-Bono*. Researched and wrote expert witness report and gave live depositions and trial testimony about women's poverty in Alabama and the impact of Alabama H.B. 57 on low-income women's access to reproductive health services for the plaintiffs (ACLU's Reproductive Freedom Project). August 2013-June 2014. Judge Myron Thompson ruled for the plaintiffs (striking down the Alabama state law) on August 4, 2014. Full ruling (reference to my testimony and research starts on page 87):

INVITED CONTRIBUTIONS AT ACADEMIC - COMMUNITY CONFERENCES

- Katz, Sheila. Participant at the “Achieving Wider Access to Higher Education” conference convened and invited by the Howard Samuels Center of the City University of New York, at the Ford Foundation, New York City, February 2010.
- Katz, Sheila. Workshop Facilitator: “What We Need to Succeed: Low-Income Student Mothers’ Narratives about Resources, Programs, Welfare, and Public Policy.” Ohio Student Parent Support Symposium: Ohio State University, Columbus, OH, June 2007.
- Spatz, Diana and Sheila Katz. Workshop Facilitator: “Economic Context of Domestic Violence: Poverty and Welfare Policies Fail to Protect Battered Women with Children.” Collaboration between Fatherhood and Domestic Violence Programs in Communities of Color Institute: San Antonio, TX, October 2005.

PROFESSIONAL SERVICE

- Chair and committee member, Pacific Sociological Association’s Community, Clinical and Applied Sociology committee, 2012-present. Elected chair in April 2015.
- Project Partner, Persistent Poverty in the South Project, of the Southern Sociological Society. March 2015-present. <http://uncw.edu/povertyproject/>
- Chair, American Sociological Association’s Local Arrangements Committee for 2014 ASA annual meetings in San Francisco. Appointed by ASA President Annette Lareau to organize and chair the local arrangements committee for the national conference attended by approximately 6,000 sociologists each year. The committee organized eight local-themed sessions, conducted four tours, and wrote five local-themed articles for the ASA newsletter *Footnotes* for the 2014 annual meetings in San Francisco. I led 3 sociologically themed local tours, co-organized the “Evolving Oakland” session, solo-authored one article, and co-authored another article.
- Elected Board Member, Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS). June 2014-present. 3-year term. <http://www.sociologycommission.org/>
- Advisory Board member of the Student Parent Study Initiative, Institute for Women’s Policy Research, Washington, D.C., December 2011-present, funded by the Bill and Melinda Gates Foundation initiative on access to higher education.
- Article Reviewer, *Journal of Poverty, Sociological Perspectives, Sociological Quarterly, Work and Occupations, Journal of Contemporary Ethnography, Michigan Journal of Sociology*.
- Book Reviewer, “Seeking the American Dream” by Robert Hauhart, Palgrave Publications, under contract; “Drugs and Drugs Policy” by Moshin and Atkins, Second Edition, Sage Publications, 2013; and “Drugs and The American Dream” by Adler, Adler, and O’Brien, February 2012 from Wiley Blackwell Publishing.
- Faculty Mentor, American Sociological Association Honor Program 2010, Jessica Muscatell.
- Session Organizer, Pacific Sociological Association meetings in April 2010, 3 sessions: Qualitative Research on Poverty, Qualitative Research on Welfare, and Teaching Focus Group Methodology.
- Session Organizer, California Sociological Association annual meeting November 2011: Women and Social Policy, and November 2009: Sociology of Gender.

UNIVERSITY OF HOUSTON SERVICE

- Faculty Mentor for Edwin Villa for his Honor’s Thesis on masculinity and sexuality, December 2014-present.
- Sociology Student Association, faculty sponsor, Department of Sociology, September 2014-present.
- Hiring committee, Department of Sociology, October 2014-present.

SONOMA STATE UNIVERSITY SERVICE

- Chair and Elected Representative from the School of Social Sciences on the Student Affairs Committee Sub-Committee on Academic Advising, 2009-present. Elected Chair of committee in August 2013.
- Faculty representative, SSU Alcohol and Drug Advisory Committee, September 2013-May 2014.

Workshop Facilitator, SSU Professional Development Sponsored Faculty Teaching Workshop series, "Connecting Students to Careers: How Faculty Can Translate Course Knowledge into Employment Skills" March 2013.

Faculty representative, Academic Advisor Search Committee, October-November 2013.

Social Sciences member on Interdisciplinary Studies Program Committee, 2009-May 2014.

Member, Center for Community Engagement Strategic Action Committee, 2010-2014.

Social Science Faculty Mentor for the SSU NoGap McNair Scholar Program, mentor Social Sciences students in creating posters for the spring research symposium and finalize their papers for publication in the McNair Scholar journal, August 2013-present. Faculty mentor for student research: Kristal Raheem (May 2013-present), Holly Phillips (August 2012-present), Hector Ruiz (April 2012-May 2013), Vanessa Hernandez (September 2010-May 2012), Kristel England (April 2011-May 2012), Andrea Huhn (August 2011-December 2012), Lauren Stavish (Feb. 2009-May 2010).

Faculty Sponsor and mentor, 2009, 2010, 2011 CSU Undergraduate Research Competition.

Proposal Reviewer, SSU Academic Undergraduate Research Grants, 2011, 2010 and 2008.

Presenter and Co-Organizer of Speaker's Panel in JUMP's Homelessness and Hunger Awareness Week, November 2011, 2010, 2009, 2008.

Organizer and Presenter, SSU Disability Awareness Week Brownbag "Reducing Disability Stigma in the Classroom," May 2010.

SSU SCHOOL OF SOCIAL SCIENCES SERVICE

Summer Freshman Orientation Faculty Mentor for Social Sciences, June 2013, July 2011.

Committee member, Sophomore Year Experience (SYE) Program Planning Committee, February 2012-present. Coordinated project's focus group research in Spring 2012, conducted 5 focus groups with a total of 30 SSU students, analyzed data Summer 2012, presented to SSU School of Social Sciences meeting in August 2012, presented to SSU's Graduation Initiative Committee, October 2012. SYE Program implemented in Fall 2013.

Social Sciences Brown Bag Series lecture, "The Role of Advocates in Helping Welfare Mothers Achieve Higher Education." October 2011.

Presenter, SSU Gendered Intersections Lecture Series: "Envisioning Another World: Grassroots Activism and Welfare Mothers' Perspective on Poverty Policy." March 2010.

New Faculty Mentor, 2009-2010.

SSU SOCIOLOGY DEPARTMENT SERVICE

Chair, Program Review Committee, Sociology Department, September 2013-May 2014.

Designated as the "Veterans Advisor" by the Sociology Department, September 2013.

Committee member, Hiring committee for tenure-track Assistant Professor, Fall 2013.

Peer teaching evaluations of adjunct faculty: November 2012 and October 2013.

Faculty Mentor for students (Kristel Raheem and Holly Phillips) applying for Undergraduate Research Grants and research mentor to attend the Pacific Sociological Association annual meetings in Portland, OR, March 2014.

Designated as the "Study Away Advisor" by Sociology Department, September 2012.

Academic Advisor, advisor for 110 sociology majors/minors, Spring 2009-May 2014

Committee member, Hiring committee for adjunct pool refresh, Spring 2011.

Committee Member, Department Curriculum Committee, Fall 2008-May 2014.

Coordinator, Announcement Listserv for Sociology Majors and Minors: Fall 2008-May 2014.

Faculty Co-Editor, Sociology Department Newsletter, Fall 2008-Summer 2012.

Facilitator, Transfer Student Advising workshops: 2010-2013.

COMMUNITY SERVICE

Issue Expert Mentor, JCI of Houston (Junior Chamber International) for IMPACT Days 2015, February 2015-October 2015. "Reverse Pitch" to a group of 120 social entrepreneurs, I pitched a social problem that can be solved through social innovation and they will work in small groups for 8 months to develop social ventures that could solve this problem. I serve as the "issue mentor" during the program. <http://impactdays.info/>

Treasurer, Executive Committee and board member to City of Oakland's KONO (Koreatown Northgate) Community Benefit District Board, April 2010-July 2014, (re-elected in January 2012). Elected as Secretary on the Executive Committee, May 2010-August 2013 (re-elected January 2012). Elected Treasurer in September 2013. Chair of Security and Operations Committee, October 2011-October 2013. www.konooakland.org.

KONO Representative, Neighborhood Crime Prevention Council (NCPC) of District 8: Area 2, organized by the Oakland Police Department and City of Oakland, October 2012-December 2013.

Volunteer, Hopalong Animal Rescue, feline program: fostering kittens, transporting cats to medical appointments, and helping with fundraising events. June-November 2013.

Research Coordinator, "Homeless in Pacifica" project, Pacifica Resource Center, December 2012-June 2013. Worked with Executive Director to write a research brief about the increasing number of homeless in Pacifica, and worked with community members, police department, and city council to create the Pacifica Homeless Response Team to increase services and programs for the unsheltered on San Mateo county coast.

Guest on "The Project Censored Show" discussing American poverty, as part of the Morning Mix on KPFA Pacifica Radio, 94.1 FM, live from Berkeley, CA. May 2013.

Taught the course "Exploring the American Dream" in the University of Georgia's OLLI "Alumni College" Summer School program in June 2012.

Chair of Executive Director Search Committee, City of Oakland Koreatown Northgate Community Benefit District Board, December 2010-February 2011.

President and elected member of the Telegraph Gateway Homeowners' Association Board, November 2010-present, and previously served as Secretary (Nov 2009-10).

Policy Research Committee Chair and grant-writing volunteer for Low-Income Families' Empowerment through Education (LIFETIME), Spring 2008-March 2010.

Participant, California Partnership, community coalition fighting poverty, 2004-2009.

PROFESSIONAL AFFILIATIONS

American Sociological Association (2004-present)
ASA member of Sex & Gender; Sociology of Education; Race, Gender, Class; Teaching Sociology; Poverty, Inequality, and Mobility sections

Pacific Sociological Association (2004-present)

California Sociological Association (2009-present)

Society for the Study of Social Problems (2007-present)

RECENT PROFESSIONAL DEVELOPMENT

Participant, New Faculty Scholars Program, University of Houston, October 2014-present.

Participant, SSU's Faculty Writing Program, Coordinated by Dr. Kathy Charmaz: 2007-May 2014.

Participant, SSU's Faculty Research Expo, March 2013, March 2011 and March 2010.

Participant, ASA's Section on Teaching and Learning's Workshop, "The Best Teachers We Can Be: Learning Scholarly Teaching." Atlanta, GA, August 2010.

PREVIOUS RESEARCH AND TEACHING EXPERIENCE

Adjunct Lecturer, Sonoma State University Department of Sociology; Drugs and Society,
Fall 2007 and Spring 2008

Qualitative Data Analysis Consultant, University of California Berkeley, School of Public Health
June 2007-August 2007: Conducted qualitative data analysis (using Atlas.ti) on focus groups and interviews for the Benefits of Diversity Project, addressing issues of racial and ethnic diversity in students and faculty in medical and public health schools, which was funded by the California Endowment.

Research Coordinator, Low-Income Families' Empowerment through Education (LIFETIME)
October 2003-December 2006: Coordinated community engaged research projects on a statewide research team to conduct research on welfare, domestic violence, and the experiences of welfare mothers in education. Co-authored "Family Violence Is *Not* an Option," a research report (June 2005) about the failure of CalWORKs to protect domestic violence victims and their children in the welfare system. Worked with media and other community-based organizations to disseminate research; worked with Executive and Associate Directors to raise \$1.5 million in foundation grants (average grant approximately \$20,000) over 2.5 years.

Research Associate, Vanderbilt University Women's Social Policy and Research Center
March 2002-October 2003: Lead author and researcher for *Tennessee Women's Scholarship Directory* (August 2003), a resource book of scholarships and financial aid options for higher education available to women in Tennessee; designed web site to support the directory, wrote grants, and conduct other fundraising to provide independent funding for the scholarship directory and the research center.

Adjunct Instructor, Vanderbilt University Department of Sociology; Women and Men in American Society, Fall 2002, Spring 2003, Summer I, Summer II 2003.

Research Assistant, Vanderbilt Institute for Public Policy, Immigrant Community Assessment
April 2003-August 2003: Performed qualitative data analysis of focus group data.

Teaching Assistant, Vanderbilt University, Department of Sociology; Gender in American Society, Contemporary Social Problems, Sociological Research Methods, Gender, Sexuality, and the Body, Women and the Law, Human Behavior in Organizations, Social Movements, Introduction to Sociology, Images of Women. Fall 1998-Spring 2002.

**DECLARATION OF
LENORE WALKER**

Defendants.

I, LENORE E. A. WALKER, Ed.D., am over 18 years of age and declare and
state the following:

1. I am a clinical psychologist licensed to practice psychology in Florida,
New Jersey, and Colorado. I am currently a Professor at Nova Southeastern University
Center for Psychological Studies in Fort Lauderdale, Florida, where I also serve as
Coordinator of the Clinical Forensic Psychology Concentration. In my role as a
Professor, I train and supervise doctoral students in psychology programs in the Center

for Psychological Studies, including overseeing students' provision of psychotherapy services to women, men, adolescents, children, and families. Although I am no longer seeing my own patients on a regular basis, over the course of my career, I have treated or counseled over 2,000 victims of battering, rape, and incest.

2. I have a Doctorate in Psychology from Rutgers University and a Diplomate in Clinical Psychology and Family Psychology from the American Board of Professional Psychology. I have a national practice in clinical and forensic psychology, with particular expertise in violence against women, including rape and other forms of sexual violence, intimate partner violence, and family violence, including child abuse. I have provided expert testimony on these topics in civil and criminal cases throughout the United States. I have also been invited to testify before several committees of the United States Congress on national policy regarding violence against women and family violence, and am frequently asked to give presentations and lectures on these and related topics throughout the United States and internationally. My research on domestic violence was cited by the United States Supreme Court in *Planned Parenthood of Southeastern Pennsylvania v. Casey*, 505 U.S. 833 (1992).

3. Currently, I am a fellow of the American Psychological Association (APA), and serve on the APA Council of Representatives. I have previously served on the APA's Board of Directors and a number of APA committees and task forces. I am also a Board Member of the National Association for Practicing Professional Psychologists, and I serve on the editorial board for a number of major psychological journals, some published by the APA and some published independently. I have published 20 books and approximately 60 articles on violence against women, family

violence, and related topics. A copy of my curriculum vitae, which summarizes my background, experience, publications, and research, is attached to this declaration.

4. I submit this declaration in support of Plaintiffs' motion for a temporary injunction against enforcement of Florida House Bill 633 (the Act). I understand the Act requires Florida women seeking abortion to receive certain state-mandated information in person at least 24 hours before the procedure can be performed. This declaration focuses on the Act's impact on women who have experienced domestic abuse and sexual assault, including sex trafficking. My opinions are based on my training, education, and clinical experience, the research I have conducted, and my knowledge and review of the professional literature.

5. In my professional opinion, and as discussed in more detail below, the Act's 24 hour delay and additional trip requirement will harm abused women and sexual assault victims who seek abortions in Florida. While the Act purports to provide an exception for women who are victims of rape, incest, domestic violence, or trafficking, the exception does not allow women to self-report these incidents to the physician providing their abortion and instead requires them to present documentary proof, which they are unlikely to have. By delaying battered women or sexual assault victims in obtaining the care they need, subjecting them to additional emotional and psychological trauma, and increasing the risk of disclosure of their abortion to others, the Act will endanger the health and lives of Florida women.

Background Information on Violence Against Women

6. Violence against women can take the form of physical violence with or without injury; stalking; sexual assault including exploitation, being trafficked, stranger, partner, or acquaintance rape; and various forms of psychological abuse and

maltreatment. When the abuse is committed by a woman's current or former spouse, partner, or boyfriend, it is commonly referred to as intimate partner violence or domestic violence. There is significant overlap among these forms of abuse, as sexual assault can often include physical injury, and stalking can occur simultaneously with psychological abuse, to provide but two examples. In my U.S. National Institute of Mental Health funded research of 400 battered women, approximately one-half of the women interviewed said they had also experienced sexual abuse, mostly within their families.

7. One of the challenges of working in this field is the fact that there are no standardized definitions for these acts and behaviors. Another significant challenge stems from the fact that so many victims do not wish to reveal their own experiences, or will make intense efforts to conceal them, making it difficult to assess the prevalence of domestic violence and sexual assault. Terms such as "rape," "incest," "abuse," and "violence" carry certain social and cultural stigmas, and the use of these labels can prevent women from disclosing their experiences. For example, many battered women I have interviewed and counseled are uncomfortable labeling an unwanted or coerced sexual encounter with their partner as "rape." The same is often true for women who are sexually assaulted by an acquaintance or someone they are dating.

8. Although it can be difficult to measure the true prevalence of these acts of violence, because so many victims choose not to seek help from law enforcement or the justice system, the Center for Disease Control and Prevention (CDC) estimates that approximately one-third of all women in the United States have experienced rape, physical abuse, or stalking by a current or former intimate partner at some point in their lives.¹ For purposes of this declaration, I may use the terms "battered women" or

¹ Black, M.C., Basile, K.C., Breiding, M.J., Smith, S.G., Walters, M.L., Merrick, M.T., Chen, J., & Stevens, M.R. *The National Intimate Partner and Sexual Violence Survey (NISVS): 2010 Summary Report*. National Center for Injury Prevention and Control, Centers for Disease Control and Prevention (2011) (the NISVS Report), at 39.

“abused women” interchangeably to refer to women who are victims of domestic violence.

9. Recent statistics estimate that nearly one-fifth of all women in the United States will be raped at some point in their lives.² Over 80% of rapes are committed by someone known to the victim (i.e. an intimate partner, family member, or acquaintance), and the perpetrator is a current or former intimate partner in nearly two-thirds of all rapes.³ While women can be victims of violence regardless of age, ethnicity, or class, women who experience domestic violence, rape, and sexual assault are disproportionately low-income.⁴

10. According to the CDC’s National Intimate Partner and Sexual Violence Survey (NISVS), 34.2% of Florida women have experienced rape, physical violence, or stalking by an intimate partner at some point in their lifetime, which amounts to over 2.5 million women.⁵ Estimates of the number of women who become pregnant as a result rape vary, with rates ranging from approximately 1.7% to approximately 5% of all rapes resulting in an unwanted pregnancy.

11. Perpetrators of domestic violence subject their partners to various forms of violence—including physical, psychological, economic, and sexual abuse—in order to assert their control and dominance. Physical violence includes a range of behaviors from slapping, pushing, or shoving, to more severe acts such as beating, choking/strangulation,

or use of a gun or knife. In addition, it is common for an abuser to threaten to use physical violence against the woman, or to physically harm her children or other family members, as a means of intimidation and control. Stalking by an intimate partner entails repeated acts of harassment, intimidation, and/or threats that cause the victim to fear for her safety. Psychological or emotional abuse includes verbal abuse intended to shame, insult, and humiliate the abused woman, as well as a range of coercive and manipulative behaviors, such as interfering with the battered woman's relationships with family and friends, and limiting her access to money. Sexual abuse by an intimate partner can include rape as well as other unwanted sexual contact. Based on my own research, I would estimate that nearly one in three battered women has been raped one or more times by her abuser.⁶

12. Incest is a form of sexual assault committed by a family member or relative, other than a spouse, that involves multiple acts of sexual violation and exploitation over a period of time, ranging from several months to several years. Incest often begins when the victim is still a young child, and may go on for many years without the victim ever disclosing the abuse. Based on my work in this field, there is a strong correlation between acts of domestic violence committed by an abuser and acts of child abuse, including both physical abuse and incest.⁷ Incest is vastly underreported in the United States; most victims of incest do not report the abuse because they fear their abuser may harm them physically, because they feel guilty about the abuse, and/or because they are afraid to disrupt the family unit.⁸

13. Similar to other victims of gender violence, sex trafficking victims suffer extreme exploitation through the use of physical abuse, threats, coercion, and other

control tactics. Although it is quite difficult to estimate the prevalence of trafficking in the United States, the U.S. Department of State estimates between 14,500 and 17,500 individuals are trafficked in the United States each year.⁹ Florida is known to have a high rate of sex trafficking victims such that the legislature has passed measures to provide “safe harbor” for these mostly young girls and women. Many of the treatment programs in local areas are being funded through this legislation. The experience with these victims has shown how reluctant they are to utilize established institutions and agencies in the community, including police.

14. Reproductive coercion or control is a form of domestic violence involving coercive behavior related to reproductive health. For example, many batterers will forcibly impregnate a woman, or employ some other form of reproductive coercion, such as refusing to wear a condom or destroying or manipulating a woman’s contraception as a means of impregnating her, in order to further demonstrate his control and dominance. Indeed, compelling a woman to carry an unwanted pregnancy to term and give birth is a common form of abuse, and one that can keep the abused woman trapped in the abusive relationship. Having a child, or an additional child, with her abuser makes it even more difficult for a woman to escape.

15. According to information collected by the CDC, between 4% and 8% of all pregnant women report that they have experienced physical abuse during pregnancy.¹⁰ Studies show that women are at increased risk of physical abuse during pregnancy,

⁹ Clawson, H. et al. *Human Trafficking into and within the United States: a review of the literature*. U.S. Department of Health & Human Services (2009), available at <http://aspe.hhs.gov/hsp/07/humantrafficking/litrev/index.pdf>.

¹⁰ *Intimate Partner Violence During Pregnancy, A Guide for Clinicians*. American College of Obstetricians and Gynecologists, Centers for Disease Control and Prevention (2013), at 12, available at http://www.cdc.gov/reproductivehealth/violence/intimatepartnerviolence/ipvdp_slide.htm

including an increased risk of homicide.¹¹ A recent study comparing the long-term health effects of women who received abortions at or near the gestational age limit with women who were unable to obtain an abortion because they were beyond the gestational age limit found that physical violence decreased over time for the women who obtained an abortion, but not for women who were turned away and subsequently gave birth.¹² The researchers suggest that carrying an unwanted pregnancy to term may make it more difficult for abused women to leave the abusive relationship.¹³ Women, especially low-income women, are afraid of leaving the relationship because of their inability to support themselves and their children, and to pay for basic necessities like food, housing, medical care, and clothing. And even if a woman separates from her abuser, he can use the children as a means of maintaining his power and control over the woman. Forced co-parenting, based on an award of joint custody, can keep the woman in the same neighborhood and in continued danger from her abuser.

The Act's Impact on Victims of Violence and Sexual Assault

16. The Act's 24 hour waiting period and mandatory additional visit will have devastating consequences for abused women and survivors of rape and sexual assault. First, the Act's mandatory delay and additional trip requirement will make it extremely difficult, if not impossible, for women in abusive relationships to seek an abortion. Those women who are able to obtain an abortion may have to delay the procedure. These additional hurdles are amplified for women who are poor and lack the resources to make all of the necessary arrangements while avoiding detection by their abuser. Second, by

¹² Roberts, S., Biggs, M.A., Chibber, K., Gould, H., Rocca, C. and Greene Foster, D. *Risk of violence from the man involved in the pregnancy after receiving or being denied an abortion*. 12 BMC Medicine 144 (2014).

¹³ *Id.*

forcing women in these horrific circumstances to wait an additional 24 hours before they can obtain an abortion, the Act subjects these women to additional emotional trauma, to the detriment of their health and well-being.

17. As I explain above, pregnancy is a time of extreme danger, and even lethality, for abused women, and abusers may use forced pregnancy as a way of keeping a partner under their control. Thus, it is often essential for many abused women to keep their pregnancy and/or intent to end the pregnancy a secret until after the abortion is obtained, and perhaps beyond that time as well. However, the Act will make it that much harder for a woman to obtain an abortion without detection by an abusive partner.

18. First, it will be extremely difficult for some battered women to make an additional trip to the abortion clinic without detection. Battered and abused women are carefully monitored by their abusers, such that going to a doctor's office or clinic in secret, even for a single visit, may require significant planning. Abusers have many ways of closely monitoring every move of the women they abuse; for example, many women have told me that their partner regularly checks the mileage on the car, and some abusers take more drastic measures such as removing the distributor cap of the car, or nailing doors and windows shut, in order to prevent the battered woman from leaving. An abuser may also call the woman multiple times at home and/or at work to ensure that he knows her whereabouts at all times. In addition, an abuser might show up unexpectedly at a woman's place of work to check up on her. In fact, battering at the worksite is not an uncommon event for victims of abuse. Abused women are expected to explain any absence from home or work. If an abusive partner suspects that a woman is leaving home or work during the day without his knowledge, he may become enraged and lash out with violence. Simply put, for some abused women, finding a way to get to an abortion provider for several hours for a single appointment may be extremely difficult. Finding a way to make an additional trip, especially within a close time period, is a hardship and may be impossible.

19. Second, abused women will have great difficulty obtaining the resources necessary to make the additional trip to an abortion provider. Abusive partners often maintain control and dominance by limiting a woman's access to money; even if an abused woman is employed, she may be forced to turn over her paycheck to the abuser. In addition, even if an abused woman's insurance plan would cover all or part of the costs of the procedure, she may not want to submit a claim to insurance out of fear of notifying the abuser of her abortion. For the same reason, she may be unable or unwilling to pay for the procedure with a credit card that can be traced back to her, and will therefore have to come up with all of the necessary funds in cash. Further complicating matters, perpetrators of abuse will often cut off or monitor a woman's communications with her family and friends in order to weaken her support system. Thus, an abused woman may not have any other person to turn to in order to loan her money for the abortion procedure itself, or for the additional costs of travel and childcare. Without her partner, or friends or family to turn to for support, an abused woman will have to delay the procedure in order to come up with the resources to afford an additional trip to the clinic.

20. In addition, women who are trying to conceal their pregnancy (not just their intent to seek an abortion) from their abusive partners must seek an abortion as soon possible, before the pregnancy becomes visible. Indeed, one study of women presenting at an abortion clinic reported that 8% of women seeking an abortion had not disclosed their intentions to their partner because they feared physical harm if the abortion was discovered.¹⁴ Due to the logistical and financial challenges of complying with the additional visit requirement, the Act will delay women in obtaining an abortion, thereby increasing the chances that the abuser will discover the pregnancy. If a woman's abuser discovers her plans to have an abortion, he will most likely prevent her from doing so.

¹⁴ Woo, J., Fine, P., & Goetzl, L. *Abortion Disclosure and the Association with Domestic Violence*, 105 *Obstet. Gynecol.* 1329 (2005).

Moreover, as I explained above, once a woman's pregnancy status is apparent, physical abuse by the batterer escalates; thus, the longer a woman is pregnant, the greater the threat to her health, and possibly even her life, from the abuse.

21. Even if an abused woman is able to make all of the arrangements for the additional required visit, in most cases she will not be able to travel on two consecutive days, both because of logistical difficulties and because of the intense monitoring and scrutiny that goes on in an abusive relationship. Thus, a woman will likely be delayed days, or possibly even weeks beyond her initial appointment, due to the difficulties of coming up with the funds to make the required additional visit and making all of the necessary arrangements, all without alerting the abuser. Moreover, for a woman who must travel a significant distance in order to reach an abortion provider, it is exceedingly unlikely that she would be able to stay away from home overnight without raising the abuser's suspicions. Even if a woman manages to find a way to stay away for two days, her partner may suspect that she had left him, which would greatly increase her risk of suffering physical violence.

22. In addition to the physical harms caused by the Act, the mandatory delay and additional trip requirement will also inflict psychological harms on women who have already endured psychological trauma. Many rape survivors are extremely distraught afterwards and may be suffering from post-traumatic stress disorder, anxiety, and/or depression. An unwanted pregnancy can be even more traumatizing for a rape survivor, as the pregnancy is a constant reminder of the rape. It is extremely important for women in these situations to be able to begin to resume their normal lives and move on from the tragic situation. Thus, for a rape survivor who wishes to terminate the resulting pregnancy, having the abortion is an important step in this recovery. For these women, the waiting period and mandatory additional trip will prolong their psychological suffering, because the pregnancy is a continual reminder of the assault.

23. Furthermore, the Act's waiting period and additional trip requirement will make it more difficult for rape victims to obtain an abortion. The planning necessary to arrange an appointment, make the necessary travel arrangements, and come up with the funds to pay for the abortion may be difficult for victims of rape who are suffering from post-traumatic stress disorder or other psychological effects. Even though a rape survivor may feel very strongly that she wishes to terminate the pregnancy, the prospect of complying with the mandatory delay and the additional trip requirement, and raising the funds necessary to make the additional visit, may prove to be insurmountable. At the very least, the Act will likely delay a rape victim's ability to obtain abortion for far more than 24 hours.

24. In addition, many victims of rape are afraid of disclosing the incident to friends or family. Some fear the stigma associated with rape; others fear being judged as somehow responsible for it. Forcing these women to make arrangements to be away from work, school, and family obligations on at least two separate occasions will increase the risk of discovery, and thereby jeopardize their privacy and confidentiality.

25. In sum, for victims of abuse and rape, the Act will cause a number of serious harms. For battered women living in poverty, the combined effects of the abuse and the lack of outside support or other resources may make it impossible to comply with state-mandated delay and additional visit requirement.

The Act's Limited Exception Will Not Apply to the Majority of Women Who
Experience Violence or Sexual Assault

26. I understand that the Act includes a waiver of the mandatory waiting period if a woman presents her physician with “a copy of a restraining order, police report, medical record, or other court order or documentation evidencing that . . . she is a victim of rape, incest, domestic violence, or human trafficking.” However, in my opinion, this exception is so narrow as to be effectively meaningless for the vast majority of victimized women.

27. In reality, very few women who have experienced these crimes will report them.¹⁵ Thus, statistics on the rates of rape, sexual assault, domestic violence, and stalking in this country are very likely to underestimate the prevalence of these crimes. And even if a woman does choose to make an official report, she may not feel ready to do so until months after the assault or abuse has ended.

28. Abuse and sexual assault victims are reticent to report these incidents for a number of reasons. First, many fear that disclosing the abuse or assault will subject them to retaliation and further abuse by the perpetrator. Abusers may become more violent after a woman discloses the abuse. Second, survivors of abuse and rape may be unwilling to report these incidents because of shame, embarrassment, and/or a belief that their reports will not be taken seriously. In addition, for victims of violence and sexual assault, describing these incidents to a stranger, such as a police officer or medical professional, can be extremely painful and traumatic. Many women, especially in the African/Caribbean and Latina communities in Florida, do not trust the police to make such a report. In my own clinical practice, I have known many women who were

¹⁵ Tjaden, Patricia N. T., and Thoennes, N. *Extent, Nature, and Consequences of Intimate Partner Violence*. National Institute for Justice, Centers for Disease Control and Prevention (2000), at 57 (finding that most intimate partner rapes, physical assaults, and stalkings are not reported to law enforcement); Kilpatrick, Dean, et al. *Drug-Facilitated, Incapacitated, and Forcible Rape: A National Study* (2007), at 2 (finding that only 16% of all rapes were reported to law enforcement).

unwilling to cooperate with law enforcement officials, even when doing so would have made them eligible for free medical care and counseling services.

29. Moreover, many victims do not seek medical care at all, and of those that do, many are reluctant to disclose their experiences to a medical provider.¹⁶ Thus, a woman's first time disclosing her abuse or assault to anyone could be at the time she seeks the abortion. Requiring a woman to present documentary proof to a physician in order to verify her abuse or assault could be emotionally devastating, making her feel as if her own report of what happened cannot be trusted. Moreover, medical professionals are trained to treat victims with dignity and compassion, and without passing judgment, but requiring physicians to request official documentation beyond the woman's own report of the incident could undermine the physician-patient relationship.

Conclusion

30. Abused women and rape survivors who seek abortions, especially those who wish to keep their abortions private, must overcome enormous odds to obtain the care they need. It may be very difficult for them to come to a clinic once, and even more so for them to safely make multiple trips. In my opinion, if the Act is allowed to take effect, it will cause severe and irreparable harm to abused women and sexual assault survivors, including victims of rape, incest, and sex trafficking.

Executed on June 5, 2015 in Fort Lauderdale, Florida.

Defendants.

NOTICE OF CONSTITUTIONAL QUESTION

Plaintiffs draw the following constitutional question in their June 11, 2015 Complaint,
attached:

Does Ch. 2015-1__, § 1, Laws of Fla. (H.B. 633, amending § 390.0111, Fla. Stat),
infringe upon a woman's right to abortion, in violation of the Right to Privacy, as
protected by Article I, section 23 of the Florida Constitution?

Subject: EO 11-58

Dear Mr. Tanner,
Please find the following attached items:
1. EO11-58.doc. Opinions and supporting references.
2. EO11-58.ppt. Tables referenced in my opinions.
3. Testimony.pptx. My testimony listing.
4. FeeScheduleForensics. UF's forensic fee schedule.
5. ReisCV2014. My current curriculum vitae.

Best regards and have a Happy Thanksgiving.

Gary

Table 1

Alcohol use in past month, individuals age 18+: 2013

Alcohol	Number	Percent
Any use	134,000,000	56.4
Binge use	58,000,000	24.6
Heavy use	16,200,000	6.8

Source: SAMHSA, Center for Behavioral Health Statistics and Quality, National Survey on Drug Use and Health (NSDUH), 2013.

Table 2

Illicit drug use in past month, individuals age 18 or older (2013)

Substance	Number	Percent
Illicit drug use	22,376,000	9.4
Marijuana	18,048,000	7.6
Abuse of prescription drugs	5,935,000	2.5
Pain relievers (opioids)	4,096,000	1.7
Cocaine	1,505,000	0.6
Hallucinogens	1,179,000	0.5
Inhalants	375,000	0.2
Heroin	277,000	0.1

Note: Numbers and percentages do not sum to the illicit drug use estimate as individuals may have used more than one illicit drug.
Source: SAMHSA, Center for Behavioral Health Statistics and Quality, National Survey on Drug Use and Health (NSDUH), 2013.

Table 3

Abuse or addiction, past year, age 18+ (2013)

	Age 18-25		Age 26+		Age 18+	
	Number	Percent	Number	Percent	Number	Percent
ILLICIT DRUGS	2,557,000	7.4	3,419,000	1.7	5,976,000	2.5
Marijuana	1,878,000	5.4	1,612,000	0.8	3,490,000	1.5
Cocaine	232,000	0.7	601,000	0.3	833,000	0.3
Heroin	173,000	0.5	325,000	0.2	498,000	0.2
Hallucinogens	147,000	0.4	67,000	0.0	214,000	0.0
Inhalants	47,000	0.1	45,000	0.0	92,000	0.0
PRESCRIPTION DRUGS	666,000	1.9	1,438,000	0.7	2,104,000	0.9
Pain relievers	485,000	1.4	1,260,000	0.6	2,879,000	1.2
Tranquilizers	147,000	0.4	236,000	0.1	383,000	0.2
Stimulants	171,000	0.5	256,000	0.1	427,000	0.2
Sedatives	30,000	0.1	58,000	0.0	88,000	0.0
ALCOHOL	4,529,000	13.0	12,072,000	6.0	16,601,000	7.0

Date of Birth: June 23, 1959

Place of Birth: Miami Beach, Florida

Present Positions: Assistant Professor
Divisions of Addiction Medicine, Pain Medicine, and Forensic Psychiatry
Department of Psychiatry
University of Florida College of Medicine
Gainesville, FL

Education:

1985 M.D. George Washington University School of Medicine
Washington, DC

1981 B.S. Trinity College
Hartford, CT

Postdoctoral Training:

2009-2010 Fellowship in Addiction Medicine
Department of Psychiatry
University of Florida College of Medicine
Gainesville, FL

1996-1997 Fellowship in Pain Management
Harvard Medical School / Massachusetts General Hospital
Boston, MA

1986-1989 Residency in Anesthesiology
University of Florida College of Medicine
Gainesville, FL

1985-1986 Internship in Internal Medicine
George Washington University School of Medicine
Washington, DC

Additional Training:

2007	<i>Certified</i> Medical Review Officer, AAMRO
2004	<i>Practitioner</i> , Office-based opioid agonist therapy with buprenorphine

Board Certification:

2010	American Board of Addiction Medicine
2001	American Board of Hospice and Palliative Medicine
1998	American Board of Pain Management
1990	American Board of Anesthesiology
1986	<i>Diplomat</i> , National Board of Medical Examiners

Licensure:

1996	Commonwealth of Massachusetts, #15117
1987	State of Florida Board of Examiners, #ME 54511

Professional Positions and Major Visiting Appointments:

2005 – 2008	Consultant in Palliative Medicine Haven Hospice of Jacksonville Jacksonville, FL
2001 – 2002	Medical Director, inpatient unit Community Hospice of Northeast Florida Jacksonville, FL
1989 – 2001	Staff Anesthesiologist <ul style="list-style-type: none">• Chairman (1994-1995)• Vice-Chairman (1993-1994; 1995-1996) Orange Park Medical Center Orange Park, FL
1996 – 1997	Clinical Fellow in Anesthesia (Pain Management) Associate Editor, MGH Pain Center Internet Journal Harvard Medical School Massachusetts General Hospital Department of Anesthesia and Critical Care

Committees:

2014	American Academy of Pain Medicine, Acute Pain Special Interest Group
2014	Organizing Committee, International Conference on Opioids 2014
2013	Organizing Committee, International Conference on Opioids 2013
2012 –	Committee on Drug Testing – American Society of Addiction Medicine

- 2011 – Drugged Driving Committee – Institute for Behavior and Health (Washington, DC)
- 2011 – Pharmacy and Therapeutics Committee – Shands Hospital and the University of Florida

Awards and Honors:

- 2014 Exemplary Teacher Award, University of Florida College of Medicine
- 2013 Exemplary Teacher Award, University of Florida College of Medicine
- 2013 Visiting Scholar, Hastings Center, Garrison, NY
- 1996 Mass. General Hospital, Alyssa LeBel Fellowship Teaching Award
- 1985 Kane –King Obstetrical Honor Society
- 1985 Alpha Omega Alpha Medical Honor Society
- 1982 American Cancer Society Fellowship, U. Miami School of Medicine
- 1981 Phi Beta Kappa

Editorial Positions:

- 2012 – present Editorial Review Board, *Pain Medicine*
- 2005 – present Editorial Review Board, *Journal of Opioid Management*
- 2007 – 2008 Editorial Advisory Board, *The Open Clinical Cancer Journal*
- 1996 – 1997 Associate Editor, *Cases of the Massachusetts General Hospital Pain Center*
<http://www.mghdacc.com/mghpc/cases.html>

- Reviewer at large:** *American Journal of Epidemiology, BMC Medical Education, BMJ, CA: A Cancer Journal for Clinicians, Current Drug Abuse Reviews, Journal of Addiction and Prevention, Journal of Addiction Medicine & Therapy, Journal of Analytical Toxicology, Journal of Multidisciplinary Healthcare, Journal of Pain & Palliative Care Pharmacotherapy, Journal of Palliative Medicine, Journal of Psychopharmacology, Mayo Clinic Proceedings, Pain Medicine, Journal of Global Drug Policy and Practice, Substance Abuse and Rehabilitation, Substance Abuse Treatment, Prevention, and Policy*

Other Positions:

- 2012 – present Evaluator, Professional Resources Network (PRN)
- 2012 – present Evaluator, Intervention Project for Nurses (IPN)
- 2012 – present Evaluator, Florida CARES & C.A.P., Comprehensive Assessment Services for Health Care Practitioners & Competency Advancement Program
- 2011 – present Advisory Board, Florida Professional Resource Network (PRN)
- Medical School Committee
 - Research Committee
- 2010 – present American Board of Pain Medicine, Examination Council
- Vice-chairman (2014 – present)
- 2010 – present Florida Prescription Drug Monitoring Program, Implementation and Oversight Task Force (gubernatorial appointment)

RE: Executive Order 11-58

Dear Mr. Tanner,

In response to your request, I have documented my opinions on 1) the nature of addiction; 2) the current landscape of drug and alcohol use, abuse, and addiction in the United States; and 3) drug and alcohol use, abuse, and addiction with regard to the workplace. This letter summarizes my opinions, which I hold with a reasonable degree of medical certainty. The facts and data that I used in forming my opinions are listed in the reference section of this letter. I have included several tables to allow for easier viewing and to provide more granularity.

I am a medical doctor, licensed to practice medicine in the State of Florida. I am board certified in the specialty of anesthesiology and the subspecialties of addiction medicine and pain medicine. I am also a faculty member of the University of Florida College of Medicine, Department of Psychiatry, Divisions of Addiction Medicine, Pain Medicine, and Forensic Psychiatry. In these capacities, I routinely evaluate and provide clinical care to individuals who use, abuse, or are addicted to alcohol, illicit drugs, and prescription controlled substances. I also teach and research on these and related subjects.

My qualifications and publications can be found in the attached curriculum vitae. My testimony history and the University of Florida Forensic Institute fee schedule are also attached.

1. **Alcohol and drug consumption exists on a continuum from use to abuse to addiction. Addiction is a chronic brain disease that is characterized by diminished control over drug use despite negative consequences.**
 - a. **Definitions of addiction**
 - i. The National Institute on Drug Abuse, one of the National Institutes of Health, defines addiction as "a chronic relapsing brain disease that is characterized by compulsive drug-seeking and use, despite harmful consequences."¹

- ii. The American Society of Addiction Medicine defines addiction as “a primary, chronic disease of brain reward, motivation, memory, and related circuitry. Dysfunction in these circuits leads to characteristic biological, psychological, social, and spiritual manifestations. This is reflected in an individual pathologically pursuing reward and/or relief by substance use and other behaviors.

“Addiction is characterized by inability to consistently abstain, impairment in behavioral control, craving, diminished recognition of significant problems with one’s behaviors and interpersonal relationships, and a dysfunctional emotional response. Like other chronic diseases, addiction often involves cycles of relapse and remission. Without treatment or engagement in recovery activities, addiction is progressive and can result in disability or premature death.”²

- iii. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-V)³ defines substance use disorders (which include abuse and addiction) as “a problematic pattern of drug use leading to significant impairment or distress, as manifested by at least two of the following:”
 - 1. The drug is used in larger quantities or over a longer period than was intended.
 - 2. There is a persistent desire or unsuccessful efforts to cut down or control the use of the drug.
 - 3. A great deal of time is spent obtaining, using, or recovering from the effects of the drug.
 - 4. Craving for the drug.
 - 5. Continued use of the drug despite failure to fulfill major role obligations at work, school, or home.
 - 6. Continued use of the drug despite recurrent social or interpersonal problems caused by its use.
 - 7. Important social, recreational, or occupational activities are given up or reduced because of drug use.
 - 8. Recurrent use of the drug in physically hazardous situations
 - 9. Continued drug use despite knowledge that it has caused or worsened a physical or psychological problem.
 - 10. Tolerance (the need for increasing amounts of the drug to achieve the desired intoxicating effect *or* markedly diminished drug effect with the same amount of drug).
 - 11. Drug withdrawal.

- b. Addiction and the brain. The risk for developing an addiction is the product of a complex interplay of “nature” and “nurture.” With regard to nature, genetic factors account, on average, for about 50% of risk, and psychiatric co-morbidities (e.g. anxiety, mood, and thought disorders) also contribute to risk. With regard to nurture, factors such as early drug use (risk is higher in adolescence than in adulthood) and environmental factors (e.g. access to

drugs; type of drugs; drug use by peers and role models; poor parental support) contribute to risk.⁴

i. The effects of drugs on the brain.

1. The rewarding properties of drugs derive, in part, from their ability to increase the neurotransmitter dopamine in the nucleus accumbens and associated mesocorticolimbic pathways (i.e. brain pathways that subserve reward, motivation, and cognitive control). Under normal conditions, physiologic dopamine release in these brain pathways motivates the individual to seek adaptive rewards such as food, sex, and social interaction. Drugs of abuse, however, release dopamine in a more prolonged and unregulated manner, producing intensely pleasurable effects that dwarf those of adaptive rewards, and thereby reinforcing drug use. The potency with which drugs increase dopamine release, and the precise mechanism(s) by which they do so, vary by drug and route of administration.⁵
2. Although the initial decision to use drugs is a voluntary one, with continued use the individual's ability to control their drug use may diminish.⁶
3. In addiction, obtaining and using drugs become the major motivational drives, displacing other, adaptive drives, such as those associated with familial, social, occupational, and recreational activities. The addicted individual is highly motivated by (immediate) drug reward and experiences diminished motivation to pursue (delayed) non-drug rewards.⁵
4. Addiction is accompanied by functional and, sometimes, structural brain changes. Positron emission tomography (PET) and functional magnetic resonance imaging (fMRI) studies have demonstrated that addiction affects not only the "reward" pathways, but also pathways involving interoception (awareness of cognitive, emotional, and physical states), memory and learning, and executive function (assessment of value, inhibitory control, evaluation of outcomes associated with behavioral choices, emotional regulation, insight, motivation, decision-making).^{5,7}

2. Alcohol and drug use, abuse, and addiction are prevalent in the United States.

The data in subsections a., b., and c. below are derived from the 2013 National Survey on Drug Use and Health (NSDUH).⁸

a. Alcohol and drug use

- i. Alcohol is the most used psychoactive drug in the United States. Past-month alcohol use (defined as one or more drinks) was endorsed by about 134 million individuals (56% of individuals age 18 or older); past-

month binge use (defined as five or more drinks per occasion) was endorsed by 58 million individuals (25%); and past-month heavy use (defined as five or more drinks on a single occasion, on five or more days) was endorsed by 16 million individuals (7%) (Table 1).

- ii. Cumulatively, past-month illicit drug use was endorsed by more than 22 million individuals (9.4% of individuals age 18 or older). Specific drug use, in descending order of prevalence, included marijuana (18 million; 7.6%), (nonmedical use of) prescription drugs (6 million; 2.5%), cocaine (1.5 million; 0.6%), hallucinogens (1.2 million; 0.5%), inhalants (0.4 million; 0.2%), and heroin (0.3 million; 0.1%) (Table 2).
- b. Alcohol and drug abuse or addiction (Table 3).
 - i. Alcohol is the most common drug of abuse or addiction. Past-year alcohol abuse or addiction was endorsed by 16.6 million individuals (7.0% of individuals 18 or older).
 - ii. Abuse or addiction to illicit drugs was endorsed by 6.0 million individuals (2.5% of individuals 18 or older). Abuse or addiction to specific drugs, in descending order of prevalence, included marijuana 3.5 million (1.5%), prescription drugs 2.1 million (0.9%), cocaine 0.8 million (0.3%), heroin 0.5 million (0.2%), hallucinogens 0.2 million (0.0%), and inhalants 0.1 million (0.0%).
- c. Alcohol and drug addiction (Table 4).
 - i. Past-year alcohol addiction was endorsed by 7.7 million individuals (3.3% of individuals age 18 or older).
 - ii. Past-year illicit drug addiction was endorsed by 4.4 million individuals (1.9%)
- d. Financial aspects of drug use, abuse, and addiction.
 - i. Illicit drugs. The acquisition costs of illicit drugs vary in accordance with supply, demand, drug type, and quantity and frequency of use. According to a 2014 study by the Rand Corporation, the monthly cost of illicit drugs ranged from a low of \$165 for 4-10 episodes of methamphetamine use to \$1,834 for 21+ episodes of heroin use ⁸ (Table 5).
 - ii. Prescription controlled substances. The acquisition costs of prescription drugs vary by specific drug, strength, dose, brand vs. generic, procurement on the black market vs. by physician prescription. If acquired by physician prescription, costs will be dependent insurance status, specific insurance plan, co-payment, and other factors. A major prescription drug of abuse in Florida is immediate-release oxycodone, 30 mg. Recently, black market cost of this drug has been approximately one dollar per mg. ^{10,11}

3. Alcohol and drug use, abuse, and addiction are legitimate workplace concerns

- a. Alcohol and drug abuse or addiction and employment status.

The statistics in this subsection were obtained or derived from the 2013 NSDUH⁸ (Table 6).

- i. Overall, past-year abuse or addiction to drugs or alcohol in individuals age 18 and older was endorsed by 11.3 million (9.5%) of full-time employed individuals and by 3.1 million (9.3%) of part-time employed individuals.
 - ii. Most individuals who endorsed past-year abuse or addiction to alcohol or illicit drugs were employed.
 - iii. Of employed individuals who endorsed past-year abuse or addiction to alcohol or illicit drugs, most were employed full-time.
 - iv. The prevalence of abuse/addiction to alcohol or illicit drugs was greater in the 18-25 age range than in the 26+ age range.
- b. Alcohol and illicit drug use and impairment in the workplace. The data in this subsection derive from the National Survey of Workplace Health and Safety (2002-2003).^{12,13}
- i. Alcohol. An estimated 2.3 million individuals (1.8% of the workforce) endorsed consumption of alcohol at least once *in the two hours before reporting to work* in the previous year. Twenty-nine percent of these individuals indicated having done so at least monthly.

An estimated 8.9 million individuals (7.1% of the workforce) endorsed consumption of alcohol *during work* in the previous year. Thirty-eight percent of these individuals endorsed having done so at least monthly.

An estimated 2.1 million individuals (1.7% of the workforce) endorsed *working under the influence of alcohol* in the previous year. Forty-two percent of these individuals reported having done so at least monthly.

An estimated 11.6 million individuals (9.2% of the workforce) endorsed *working with a hangover* during the previous year. Twenty-one percent of these employees endorsed having done so at least monthly.

- ii. Illicit drugs. Past-year illicit drug use *in the workplace* was endorsed by 3.9 million employees (3.1% of employed adults). This included, in descending order of prevalence, marijuana (2 million; 1.6%), (illicit use of) prescription drugs (2.3 million; 1.8%), and cocaine (169,000; 0.1%).

Past-year *working under the influence* of illicit drugs comprised, in descending order of prevalence, marijuana (2.2 million; 1.7%), (illicit use of) prescription drugs (1.8 million; 1.4%), cocaine (233,000; 0.2%). Overall, 3.6 million employees (2.9% of the workforce) reported being impaired in the workplace from any illicit drug.

- c. Signs and symptoms of alcohol and drug use, abuse, and addiction in the workplace
- i. Signs of drug and/or alcohol use in the workplace exist on a spectrum from none to witnessed impairment and/or drug use. The presence and recognition of these signs are influenced by several variables, including whether the behavior represents use, abuse, or addiction; the severity of the addiction; the specific drug(s); the presence of acute effects, alcohol or drug withdrawal, or chronic effects; the cognitive and/or psychomotor demands of the job; the experience of the employee; and the number, type, and sophistication of witnesses.
 - ii. Drug use, abuse, and addiction can go unnoticed (and/or unreported) in the workplace for weeks, months, or even years.
 - iii. Alcohol or drug-related impairment may result from the acute effects of drug(s); the chronic effects of drug(s); or from drug withdrawal. Note: drug withdrawal typically manifests with signs and symptoms that are opposite those of acute effects. Thus, for example, acute effects of stimulants, such as confidence, energy, focus, and mood elevation, may be replaced in withdrawal by anxiety, depression, fatigue, and inability to concentrate.
 1. General effects. In general, drug abuse/addiction affects brain pathways that subserve alertness, decision-making and judgment, emotions, learning, memory, mood, and psychomotor function. These brain changes manifest as drug craving, compulsive drug use, diminished control over drug use, and continued use despite adverse consequences.
 2. For clarity, I will divide drugs of potential abuse into two major classes: central nervous system (CNS) stimulants and CNS depressants. Note that these signs and symptoms, in and of themselves, are nonspecific, and may be the result of medical or psychiatric illness. They are of greatest value when occur in characteristic patterns, and when viewed in the context of the specific circumstances.
 - a. Stimulants (e.g. amphetamine, cocaine, methamphetamine). Acute and chronic effects include aggression, anxiety, appetite loss, bloody or runny nose and/or frequent sniffing, dental hygiene deterioration, dilated pupils, erratic behavior, financial difficulties, grinding of teeth, insomnia and/or diminished need for sleep, itching/scratching, interpersonal difficulties, irrational behavior and/or speech, irritability, paranoia, persistent stereotyped behaviors ("punding"), psychosis, sweating, talkativeness, twitching/jerking, weight loss.¹⁴
 - b. Depressants (e.g. alcohol, marijuana, opioids). Acute and chronic effects include balance difficulties, concentration

difficulties, confusion, financial difficulties, gait unsteadiness, impaired distance perception, impaired time perception, increased appetite and/or thirst, interpersonal difficulties, odor of alcohol or marijuana on breath or clothes, pinpoint pupils, psychomotor impairment, redness or glassiness of eyes, sleepiness, slurred or slowed speech.¹⁴

iv. Workplace implications

1. Use of, abuse of, or addiction to alcohol and/or illicit drugs can result in 1) psychomotor impairment, with resulting diminished productivity, inconsistent or lower work quality, accidents and workers' compensation claims; 2) cognitive impairment, with impaired memory, judgment, insight, concentration, and decision-making ability, with resulting diminution in creativity and productivity; 3) financial hardship, with resulting potential for theft and law enforcement encounters; 4) neglect of health needs, with resulting tardiness, absenteeism, sick time, and healthcare use.^{15,16}
2. Data from the National Survey of Workplace Health and Safety indicated that drug use in the workplace is associated with lower perceptions of workplace safety, higher perceptions of work strain, and lower levels of employee morale.¹⁷

Sincerely,

Gary M. Reisfield, M.D.
Assistant Professor

Hi folks. Thank you for another great conference. It was great to see you!
Please see the attached email exchange from Cincinnati.
I'd say they would love to host the NAEO in 2015!

Susan Meier, Extradition Secretary & Executive Clemency Assistant
Division of Criminal Justice

Subject: RE: NAEO Conference

Thank you so much for your positive reply Gary. I am very happy the NAEO conference was helpful to you. That IS what we are all about.

If you don't mind I would like to share your email with the rest of the executive board in hopes that they will be encouraged to lean toward final selection of Cincinnati and your enthusiasm to make it happen. Please let me know.

From a local perspective tourism in your County would experience an increase in revenue and that is always a good thing.

Sometimes once proposals come in from the sites one stands out. Let's hope it is Cincinnati!

Thanks again.

Susan,

I absolutely remember you. We had a great conversation. I want to start by saying how much I enjoyed the conference. It was very informational. I am the Sergeant that will soon be in charge of the Fugitive section for the Hamilton County Sheriff's Office. I have not had a lot of experience in Extradition and IAD's, so for me I took a lot away from this conference. As far as having the conference in Cincinnati I believe it would be a great location. As for the hotel location, I would look into the Hyatt Regency Cincinnati, The Millennium, or The Hilton. All three hotels are in walking distance to shopping and dining as well as Fountain square. You are two blocks away from the Banks project which consist of the Cincinnati Reds and Cincinnati Bengals stadiums, and also the Freedom Center. The Banks are full of great new restaurants and have an awesome night life. The hotels all offer a short shuttle ride to the new Horseshoe Casino, which is actually only a short walk through downtown. A short walk across the bridge will take you to Newport Kentucky. There you have Newport on the Levy, which is full of dining and entertainment. Cincinnati is currently in progress of constructing a street car system which would consist of transportation through all of downtown and the above mentioned attractions. If I can be of any further assistance let me know I would be more than happy to help.

Sergeant Gary Wolfzorn
Hamilton County Sheriff's Office
Court Service Division

Subject: NAEO Conference

Good morning Gary. I hope you remember me from the conference. I am a member of the NAEO's executive board and I asked you about siting the 2016 conference in Cincinnati vs. Cleveland. We had a great discussion on the matter actually.

Well, at our executive board meeting following the conference I brought up Cincinnati and they like it very much. We voted to consider Cincinnati or Milwaukee.

After a short break our secretary (and hardest working board member) Fran Lushenko will be contacting the chambers of commerce in both locales so that they may reach out to hotels that might accommodate us.

Therefore if you can think of anything that might help us make a decision in the interim, please let me know.

I/we really appreciate your input in this and if Cincinnati is selected would also hope to integrate your experience and knowledge of the area into the planning and hosting of the conference.

Thanks again. I hope to talk soon.

Ben,

Great to speak with you earlier today and thank you for considering one of our students for this upcoming summer. Jeremy provided me a number of references in case you are not able to get a hold of one of the top three. (He doesn't want that to delay your decision making process). Please feel free to contact him directly to schedule an interview. If you can let me know when you have reached a decision about him, that would be helpful on my end.

Thanks again.

Best regards,

Paul Watkins

Hi Laura!

Attached is the full Subscriber Agreement including the embedded Terms & Privacy Policy. I just sent it to the company. Dawn had sent word to me late Friday that the subscription was approved.

If you're asked questions about the subscription such as use or distribution beyond the Authorized User, you'll have the full contract.

Please verify with Pete the four additional individuals he authorizes having a password.

Please email me back with their name preferences and EOG email if it's different. It's needed when the order reaches customer service to build the new account.

Please let me know if you have any questions.

Thanks!

User Agreement - Terms and Conditions of Use - Privacy Policy - Disclaimer

The use of www.Law360.com and all related and ancillary services and products (collectively, the "website" or "site") is subject to the following terms and conditions. All of these may be changed or updated from time to time without notice by posting to this site. Read this user agreement ("Agreement") carefully before accessing the content on this website or any affiliated websites. By accessing this website, you are accepting and agreeing to, and are deemed to accept and agree to, the terms contained herein.

1. GENERAL RULES.

1.1. This Agreement is between Client (as defined below) and Portfolio Media, Inc. ("Portfolio Media"), publisher of Law360. This Agreement contains the terms and conditions for, and governs Client's purchase and ongoing use of, certain of the news, media, data and related subscription services offered by Portfolio Media and subscribed to by Client (the "Services"), as indicated on Client's Subscription Order Form (the "Subscription Form") the terms of which are hereby fully incorporated herein and made a part hereof. By subscribing to or using the Services, Client agrees to abide by all of the terms and conditions of this Agreement, as it now exists and as may hereafter be amended. Without limiting the foregoing, the terms of this Agreement shall also govern, to the extent applicable, the use of any free daily e-mail newsletters signed up for, or subscribed to, by any Client, Authorized User or any free trial participant.

1.2. "Client" shall mean the individual or entity indicated on the Subscription Form on behalf of itself and all Authorized Users as such term is defined below. Client and Portfolio Media are sometimes referred to herein collectively as the "Parties" or individually as a "Party." Without limiting the foregoing, the term "Client" shall also, as context requires, apply to any person that is accessing the publicly-available portions of the website or the Events Website (as defined below).

1.3. By accessing or using the Services, Client represents that Client is authorized to access and/or use the Services, and that the only individuals within Client's organization accessing the Services are authorized and permitted to do so (each an "Authorized User"). Client and each Authorized User agrees to abide and be bound by all of the terms and conditions herein.

2. LAW360 CONTENT.

2.1. Scope of Services. The Services within the scope of this Agreement include only access to those Services indicated on the "Service Plan(s)" section of the Subscription Form and are provided subject to the terms of this Agreement. Certain other Law360 products and services may not be within the scope of this Agreement and may be governed by separate agreements and terms of service.

2.2. Scope of Use. The Services and their contents are intended for Client's personal, internal business, noncommercial, informational and/or educational use and may not be used for any other purposes, including Mass Distribution (as defined below).

2.3. Property of Portfolio Media. Except as explicitly provided in this Agreement, nothing herein shall be construed as granting or conferring on Client or any Authorized User any license or right, by implication, estoppel or otherwise, under any law (whether common law or statutory), rule or regulation, including, without limitation, those related to copyright or other intellectual property rights. Client acknowledges and agrees that title, ownership and all rights (including intellectual property rights) in and to the content of, and materials published on, the Services are and shall remain the property of Portfolio Media (or such other third party that may have granted Portfolio Media rights in such content).

2.4. Trademarks; Copyrights; Other Intellectual Property.

2.4.1. Law360 is a registered trademark of Portfolio Media. All of Portfolio Media's trademarks, service marks, and trade names, and the goodwill associated therewith shall remain the sole and exclusive property of Portfolio Media and, except as otherwise explicitly provided in this Agreement, may not be used, by Client without the express prior written consent of Portfolio Media.

2.4.2. All Services published and distributed by Portfolio Media are protected by copyright pursuant to U.S. and international copyright laws. Except as explicitly provided in this Agreement or with the express prior written consent of Portfolio Media (which may be granted or withheld in Portfolio Media's sole and absolute discretion), Client may not modify, publish, republish, transmit, retransmit, reproduce, participate in the transfer or sale of, reproduce, create new works from, distribute, perform, display, or in any way exploit or otherwise use, any of the content of the Services, including any images contained in the content of the Services (which, for the avoidance of doubt, may not be downloaded as stand-alone files), software or other computer-readable or computer-executable code, in whole or in part (collectively, the "Use Restrictions"). To the extent any action or usage constituting a violation of the Use Restrictions is otherwise explicitly permitted or authorized pursuant to this Agreement, such authorization is not intended to and shall not vest in Client any ownership interests or other rights of any kind beyond those expressly granted herein. Unauthorized use of the Services, including usage of the Services in violation of the Use Restrictions, shall be a material breach of this Agreement and may subject Client to legal action. Client agrees to abide by any and all additional copyright notices or restrictions contained in any content accessed via the Services.

2.4.3. Digital Millennium Copyright Act ("DMCA") Notice. The Digital Millennium Copyright Act of 1998 (the "DMCA") provides recourse for copyright owners who believe that material appearing on the Internet infringes their rights under U.S. copyright law. If a Client or Authorized User has a good faith belief that materials hosted by the Portfolio Media infringe their copyright, they (or their agent) may send Portfolio Media a notice requesting that the material be removed, or access to it blocked. The notice must include the following information: (a) a physical or electronic signature of a person authorized to act on behalf of the owner of an exclusive right that is allegedly being infringed upon; (b) identification of the copyrighted work claimed to have been infringed upon (or if multiple copyrighted works located on the site are covered by a single notification, a representative list of such works); (c) identification of the material that is claimed to be infringing or the subject of infringing activity, and information reasonably sufficient to allow Portfolio Media to locate the material on the site; (d) the name, address, telephone number, and e-mail address (if available) of the complaining party; (e) a statement that the complaining party has a good faith belief that use of the material in the manner complained of is not authorized by the copyright owner, its agent, or the law; and (f) a statement that the information in the notification is accurate, and under penalty of perjury, that the complaining party is authorized to act on behalf of the owner of an exclusive right that is allegedly infringed. If a Client or Authorized User believes in good faith that a notice of copyright infringement has been wrongly filed against them, the DMCA permits such person to send Portfolio Media a counter-notice. Notices and counter-notices must meet the then-current statutory requirements imposed by the DMCA; see <http://www.copyright.gov> for details. Notices and counter-notices with respect to the Website should be sent to Portfolio Media, Inc., Attn: General Counsel, 860 Broadway, 6th Floor, New York, NY 10003, (tel) (646) 783-7100, (fax) (646) 783-7161. Portfolio Media suggests that users consult their legal advisor before filing a notice or counter-notice. Also, be aware that there can be penalties for false claims under the DMCA. It is Portfolio Media's policy to terminate relationships regarding content with third parties who repeatedly infringe the copyrights of others.

2.5. Guest Columns and User-Generated Content. Certain aspects of the Services may include access to guest columns or other user-generated content, including, without limitation, the "Expert Analysis" sections on the website (collectively, "User Content"). Client understands and agrees that User Content may include information, views, opinions, and recommendations of third parties unrelated to, and unaffiliated with, Portfolio Media and that such User Content is provided without any endorsement, recommendation or representation or warranty from or by Portfolio Media and is made available solely for educational and/or informational, noncommercial purposes. Without limiting the foregoing, Portfolio Media is not responsible for the accuracy or legitimacy of such User Content and shall have no liability whatsoever to Client with respect thereto. Client shall be responsible for, and shall hold Portfolio Media harmless from, any use of User Content. Client further agrees that it shall be Client's sole responsibility to verify and/or confirm any information contained in the User Content prior to relying on it, in connection with which Client assumes all risk. Portfolio Media reserves the right to remove or modify User Content without notice to Client.

2.6. User Comments. The Services may be presented in such a way as to permit visitors to the website or users of the Services, who may be unaffiliated with Portfolio Media, to

post or publish comments ("Comments") with respect to certain published content. Client understands and agrees that with respect to any Comments, Portfolio Media and the Services act merely as a passive conduit for any and all communication and/or distribution of information, and Portfolio Media does not control the Comments. Portfolio Media cannot and will not evaluate, and shall not be responsible for, the accuracy, reliability, completeness, veracity or suitability of any Comments or for verifying the identity of anyone posting a Comment. While Portfolio Media will endeavor to monitor Comments on the Services and flag and/or remove Comments which Portfolio Media finds unsuitable (as determined in its sole and absolute discretion) Portfolio Media shall be under no obligation to do so and shall have no liability to any party for failure to monitor or remove any Comments or User Content. Prior to being granted access to post Comments, individuals may be required to input or provide certain data or information, including (without limitation) their name and/or email address which may be displayed in connection with their Comment; Portfolio Media reserves the right to impose any additional restrictions or requirements with respect to Comments in its sole discretion.

2.7. Third-Party Websites. Certain aspects of, or links contained on, the Services may link to websites or services operated by parties other than, and unaffiliated with, Portfolio Media. Such links are provided for Client's convenience only. Portfolio Media does not control such third-party websites and is not responsible for any content thereon, including with respect to any comments posted on such third-party websites. Portfolio Media's inclusion of links to such third-party websites does not amount to or imply any endorsement or warranty of the material on such sites or any association with their owners or operators. Client agrees that Portfolio Media is not responsible for any such third-party websites and services or any content thereon and agrees to hold Portfolio Media harmless from any and all claims or liability arising from Client's use of such third-party websites or services. Any concerns or questions related to third-party websites should be directed to the webmaster or other appropriate contact person for such third party.

3. SUBSCRIPTION AND PAYMENT TERMS; TERMINATION.

3.1. Subscription Form. The terms and conditions of this Agreement are expressly incorporated into and made a part of each of Client's Subscription Form(s) which set forth payment terms, the Subscription Fee and a description of the Services to which Client has subscribed. Client hereby agrees to pay the Subscription Fee for the Services as invoiced after receipt by Portfolio Media of a signed Subscription Form, failure of which shall be a breach of this Agreement that may result in suspension or termination of Client's access to Services. The Subscription Fee is non-refundable.

3.1.1. Purchase Orders. If Client issues a purchase order or other similar document relating to payment for Client's subscription to the Services, Client agrees that such purchase order or other similar document, and any terms related to registration on Client's procurement site for purposes thereof, shall be for Client's internal purposes, (i.e., administrative convenience) only and shall not modify or affect any of the terms or conditions of the Agreement between Client and Portfolio Media relating to the Services.

3.2. Breach. Client's breach of any obligations under this Agreement may result in immediate termination of this Agreement and immediate suspension or termination of Client's access to the Services; provided that with respect to any non-monetary, curable breach, Portfolio Media will use commercially reasonable efforts to notify Client of, and grant Client the opportunity to cure such breach, although it shall be under no obligation to do so. In the event of such breach, Client shall remain liable for, and Portfolio Media shall not be obligated to refund or credit, any fees incurred for the full contract term as set forth in the Subscription Form. Without limiting the foregoing, Client acknowledges and agrees that any action in violation of the Use Restrictions shall be an incurable breach of this Agreement.

3.3. Limited Rights after Termination. In the event of termination of this Agreement for any reason other than a violation of the Use Restrictions, Client may retain for its personal, noncommercial use, any materials or content of the Services that have already been delivered; provided, however, that Client agrees to be bound by the restrictions on distribution and dissemination of the content of the Services provided herein (including, without limitation, the Use Restrictions) even after termination of the term set forth in the Subscription Form. In the event of a termination resulting from a breach of the Use Restrictions, Client shall promptly return to Portfolio Media, or destroy (and provide Portfolio Media with a certification of destruction in compliance with this Section 3.3 by an officer or authorized person of Client) any and all materials or content of the Services in Client's possession or control within thirty (30) days of such breach.

3.4. Rights Regarding Section Reorganization and Website Reconfiguration. Client agrees and acknowledges that Portfolio Media reserves the right, in its sole and absolute discretion, to amend, alter, reorganize, reconfigure or otherwise change the interface, sections (and names of sections) and banners of legal news and data on the site (any such change, a "Section Reorganization"), provided that any such Section Reorganization shall not materially degrade the Client's access to information or services that are substantially similar to the Services for which Client subscribed pursuant to the Subscription Form.

4. ACCESS AND AVAILABILITY OF SERVICES.

4.1. Limited Right to Use, Save, and Distribute.

4.1.1. Except as provided herein, Client shall not use, save or distribute the content of the Services without the express prior written consent of Portfolio Media.

4.1.2. Client agrees not to grant access to the Services to any person other than an Authorized User and to safeguard and, to the extent provided, maintain the confidentiality of its username and password. Client is responsible for ensuring compliance with the foregoing by each Authorized User in Client's organization. Client shall have a limited right to save the content of the Services for its personal, internal business or other noncommercial use. Client shall have, subject to Section 4.1.3. (Mass Distribution), a limited right to distribute the content of the Services to business associates, clients, and prospective clients or their respective representatives, agents, or assigns provided that Client has a reasonable basis to believe that such selective distribution may be useful or helpful to the recipient for a particular purpose. The foregoing limited right to distribute is limited to personal communications to clients, such as email or letters, and does not include the right to engage in any Mass Distribution (as defined below). Any other distribution of the content of the Services is prohibited without the express prior written consent of Portfolio Media.

4.1.3. Mass Distribution. Client shall not engage in any Mass Distribution (as defined below) without the express prior written consent of Portfolio Media. Without limitation to any and all other remedies available to Portfolio Media (which are hereby expressly reserved), unauthorized Mass Distribution by Client shall be immediate grounds for suspension of Client's account and/or termination of Client's access to the Services. As used herein, 'Mass Distribution' means (i) the use, publication or inclusion of any content or materials (in whole or in part) obtained through use of the Services in (x) any press releases, blog postings, newsletters, articles, bulletin boards, or any other publicly accessible publications or (y) any communication by any Authorized User of Client (including, without limitation, via email or facsimile) containing specific content of the Services that is addressed to more than ten (10) individuals that are not Authorized Users (e.g., the simultaneous transmission of any article or other content of the Services to more than 10 recipients by any one Authorized User); (ii) setting up, creating, configuring or automating any email (or other) alert functionality of the Services on behalf of any non-Authorized User or utilizing email auto-forwarding or any similar email filter or functionality to distribute the content of any Services (including alerts) to any non-Authorized User, (iii) utilizing, configuring or distributing any of the content (in whole or in part) of the Services for marketing and/or promotional purposes or otherwise establishing or allowing establishment of the Services as a service bureau for any third party or non-Authorized User (iv) otherwise using or configuring the Services in any manner that (x) replicates, or seeks to replicate, in whole or in part, the Services on behalf of or for the benefit of any non-Authorized User or (y) undermines the ability of Portfolio Media, as determined in its sole and absolute discretion, to market or sell any of its services, including the Services, to any third party. Without limiting the foregoing, if Client, or any Authorized User of Client, desires to transmit a particular item or story contained in the Services to more than ten (10) individuals outside of Client's organization, Client must purchase a Law360 Reprint Package. More information about Law360 Reprint Packages can be found [here](#).

4.1.4. Any content otherwise permitted to be distributed pursuant to Section 4.1 must not be altered, abbreviated, or edited in any fashion without the prior express written consent of Portfolio Media; provided that, subject to the restrictions on Mass Distribution contained herein, Client shall have the limited right to use or excerpt brief quotations from such content so long as all such content is properly attributed to Portfolio Media and any other copyright owner identified in the content. All content of the Services permitted to be distributed by this Agreement must be clearly marked as originating from Portfolio Media and must preserve all original copyright and other notices contained thereon. Any copyright notice appended by Client to distributed content of the Services should be in a form substantially similar to the following: "Copyright [Current Year] Portfolio Media, Inc. Content may not be shared, reproduced, modified, published, distributed, or otherwise recreated in any fashion without the express prior written consent of Portfolio Media, Inc. For inquiries about this article, please contact customerservice@law360.com."

4.1.5. The provisions of Section 4.1 shall survive the termination, cancellation, or expiration of the term set forth in the Subscription Form.

4.2. Unlawful Use Prohibited. Client agrees not to use the Services for any unlawful purpose. Portfolio Media reserves the right to terminate Client's access to the Services if Client's use of the Services violates or, in Portfolio Media's sole and absolute discretion, is likely to violate, any laws, regulations, or rulings, infringes upon another person's rights, or violates the terms of this Agreement.

4.3. Sole Responsibility. Client shall be solely liable for any damages resulting from any infringement of copyrights, trademarks, proprietary rights, or any other claims, damages or liability arising from or in connection with Client's distribution or dissemination of any portion or content of the Services and agrees to hold harmless and indemnify Portfolio Media with respect thereto.

4.4. Technical Requirements. Client acknowledges and agrees that all features and content of the Services are subject to availability of a suitable or adequate internet connection, valid email account, computer equipment, and sufficiently available bandwidth at the time of Client's attempted use or access. Client shall be solely responsible for procuring the necessary computer equipment and internet connection required for accessing and using the Services. Client shall hold Portfolio Media harmless from any failure or inability to access the Services resulting from Client's failure to procure any such necessary equipment or services.

4.5. Publication Holidays. Client acknowledges and agrees that Portfolio Media may, in its sole discretion, opt to not publish or otherwise make available the Services, either in whole or in part, on any United States holiday or on any court holiday. Portfolio Media may, in its sole discretion, determine to change, add, or remove publication holidays hereunder.

4.6. Downtime; Service Outages or Unavailability. Client agrees and acknowledges that the Services may be interrupted or unavailable during Downtime (as defined below). Portfolio Media shall use commercially reasonable efforts to restore Services after any interruption caused by Downtime. Portfolio Media shall not be liable for, and Client agrees to hold Portfolio Media harmless from, any service interruption or unavailability of the Services as a result of Downtime, events beyond the reasonable control of Portfolio Media (including any Force Majeure Event), anticipated or scheduled maintenance of the Services or website, the publication holidays identified in Section 4.5 above or otherwise. Without limiting the foregoing, Portfolio Media shall not be responsible for (i) delivering or otherwise providing access to any Services that were published during Downtime or otherwise retroactively restoring, or reimbursing Client for, any content published during such Downtime (whether or not such content is subsequently available on the Services after such Downtime) or (ii) any interruption to the Services caused by Client or Client's service provider(s) or other vendor(s) providing services to Client, for which Client assumes all liability and responsibility. For purposes of this Agreement, "Downtime" shall mean a malfunction in a core component of the Services, the loss of a material function of the Services, or any other action that prevents Client's access to or use of the Services, which malfunction or loss was caused solely by a failure of the Services or Portfolio Media's computer or server equipment controlling the same.

5. REGISTRATION, SECURITY, AND PRIVACY.

5.1. As part of the registration process, Client will be required to provide Portfolio Media with certain registration information, all of which must be accurate and updated, and which may include, without limitation, an authorized contact person's name; business address; business phone number; facsimile number; e-mail address; etc.

5.2. Portfolio Media is committed to protecting its clients' privacy. Portfolio Media uses the information it collects about clients to enhance the quality of the services that it provides. Technologies are rapidly changing as are the services that Portfolio Media offers. Therefore, these policies are subject to change. By using the Services, Client consents to the collection and use of this information by Portfolio Media. Sometimes, Portfolio Media may request that Client verify the information collected, either by sending Client an e-mail to check an online database or by mail, facsimile or telephone. Portfolio Media does not sell, trade, or rent its subscribers' personal information to others. Portfolio Media may provide aggregate statistics about its customers, sales, traffic patterns, and related site information to others, but these statistics will include no personally identifying information. Notwithstanding the foregoing, Portfolio Media may release account information when it believes, in good faith, that such release is reasonably necessary to (i) comply with law, (ii) enforce or apply the terms of any user agreements or (iii) protect the rights, property or safety of Portfolio Media, its users, or others. Click here to view our privacy policy.

5.3. Client hereby agrees to maintain as confidential and not disclose any username or password to any person not within the scope of Client's subscription for Services, subject to the terms of this Agreement and as indicated on Client's Subscription Form. Portfolio Media may change Client's password at any time, provided that Portfolio Media shall provide Client with written notice of such change prior to, or as soon as reasonably practicable after, such change.

5.4. Client agrees and acknowledges that under certain circumstances, Portfolio Media may store Client's IP address(es) or other information transmitted by Client's computer(s) or network as are reasonably necessary for Portfolio Media to identify Client and provide access to Services.

5.5. Client assumes full and total responsibility for all usage or activity on Client's account, including use of Client's account by any third party, whether or not authorized by Client, and agrees to indemnify and hold Portfolio Media harmless from any claims arising from or as a result of such usage. Client shall immediately notify Portfolio Media of any known or suspected unauthorized use of Client's account, or any known or suspected breach of security, including loss, theft, or unauthorized disclosure of Client's account information and agrees to fully cooperate with Portfolio Media in good faith and as reasonably required to remedy such security breach.

6. REPRESENTATIONS AND WARRANTIES.

6.1. Client agrees that it shall take any other means reasonably necessary to ensure compliance with this Agreement by any and all employees or authorized users of the Services.

6.2. CLIENT AGREES THAT THE USE OF AND ACCESS TO THE SERVICES IS STRICTLY ON AN "AS IS" AND "AS AVAILABLE" BASIS, AND PORTFOLIO MEDIA SPECIFICALLY AND EXPRESSLY DISCLAIMS ANY AND ALL REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY REPRESENTATIONS OR WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND ANY WARRANTIES THAT MAY ARISE FROM COURSE OF DEALING, COURSE OF PERFORMANCE OR USAGE OF TRADE, WITH RESPECT TO THE OPERATION OF THIS WEBSITE, THE CONTENT OR INFORMATION CONTAINED THEREIN, OR THE SERVICES. NO WARRANTY OF ANY KIND IS IMPLIED REGARDING REIMBURSEMENT FOR LOSSES OF INCOME DUE TO DISRUPTION OF SERVICE BY PORTFOLIO MEDIA. PORTFOLIO MEDIA MAKES EVERY REASONABLE EFFORT TO ASSURE THAT ALL INFORMATION PUBLISHED BY IT IS CORRECT; HOWEVER, PORTFOLIO MEDIA DISCLAIMS ANY LIABILITY FOR ERRORS IN THE SERVICES. AS A SUBSCRIBER, CLIENT ASSUMES THE RISK OF POSSIBLE ERRORS CONTAINED IN THE SERVICES. CLIENT AGREES TO INDEPENDENTLY VERIFY ANY INFORMATION IT INTENDS TO RELY UPON, AND, IF REASONABLY NECESSARY, CLIENT SHOULD SEEK THE ASSISTANCE OF AN ATTORNEY IN DOING SO. NOTWITHSTANDING ANYTHING TO THE CONTRARY CONTAINED IN THIS AGREEMENT, THIS IS A COMPREHENSIVE LIMITATION OF LIABILITY AND NO EVENT SHALL PORTFOLIO MEDIA AND ITS SUBSIDIARIES, AFFILIATES, SHAREHOLDERS, MEMBERS, DIRECTORS, OFFICERS, EMPLOYEES, AGENTS, REPRESENTATIVES, LICENSORS, SUCCESSORS, AND ASSIGNS ("THE PORTFOLIO MEDIA PARTIES") BE LIABLE, JOINTLY OR SEVERALLY, TO CLIENT OR ANY OTHER PERSON AS A RESULT OF CLIENT'S ACCESS OR USE OF THE SERVICES, INCLUDING, WITHOUT LIMITATION, FOR INDIRECT, CONSEQUENTIAL, SPECIAL, INCIDENTAL, PUNITIVE, OR EXEMPLARY DAMAGES, LOST PROFITS, LOST SAVINGS, AND LOST REVENUES, OR OTHER PECUNIARY LOSS (COLLECTIVELY, THE "EXCLUDED DAMAGES"), WHETHER OR NOT CHARACTERIZED IN NEGLIGENCE, TORT, CONTRACT, OR ANY OTHER THEORY OF LIABILITY, EVEN IF ANY OF THE PORTFOLIO MEDIA PARTIES HAVE BEEN ADVISED OF THE POSSIBILITY OF OR COULD HAVE FORESEEN ANY OF THE EXCLUDED DAMAGES, AND IRRESPECTIVE OF ANY FAILURE OF AN ESSENTIAL PURPOSE OF A LIMITED REMEDY. IF ANY APPLICABLE AUTHORITY HOLDS ANY PORTION OF THIS SECTION TO BE UNENFORCEABLE, THEN THE PORTFOLIO MEDIA PARTIES' LIABILITY WILL BE LIMITED TO THE FULLEST POSSIBLE EXTENT PERMITTED BY APPLICABLE LAW. WITHOUT LIMITING THE FOREGOING, UNDER NO CIRCUMSTANCES SHALL PORTFOLIO MEDIA BE LIABLE FOR ANY CLAIM, LOSS, COST, EXPENSE, OR DAMAGE WHATSOEVER TO CLIENT OR ANY THIRD PARTY IN AN AMOUNT EXCEEDING THE SUM OF THE SUBSCRIPTION FEES ACTUALLY PAID UNDER THIS AGREEMENT DURING THE TWELVE-MONTH PERIOD IMMEDIATELY PRECEDING THE DATE ON WHICH PORTFOLIO MEDIA IS NOTIFIED OF SUCH CLAIM IN WRITING.

6.3. Indemnification. Client agrees to indemnify, defend, and hold harmless Portfolio Media and its officers, directors, employees, affiliates, agents, licensors and suppliers from and against all claims, actions, proceedings, damages, losses, costs, and expenses (including reasonable attorneys' fees) arising or resulting from: (i) the use of or reliance on any information, material, or content of the Services by Client or any third party to whom Client has provided such information, material, or content, regardless of whether or not such information, material or content contained any errors or omissions and whether or not Portfolio Media was aware or should have been aware of any such errors or omissions; (ii) Client's violation or breach of this Agreement; (iii) Client's negligent acts or omissions or willful misconduct; or (iv) any allegation that Client's use of or access to the Services infringes upon the patent, trademark, copyright, trade name, trade secret, or other proprietary rights of any third party. Client's duty to indemnify, defend and hold harmless Portfolio Media under this Agreement shall survive the termination, cancellation, or expiration of the term set forth in the Subscription Form.

7. MISCELLANEOUS.

7.1. No Legal Advice. None of the Services provided by Portfolio Media are, nor are intended to be, legal, accounting or other professional advice or a substitute for advice of an attorney, accountant or any other professional. Client agrees and acknowledges that the content of the Services is intended only as news and general legal information and is not intended to be, and should not be relied upon as, legal advice. Portfolio Media shall not be liable, and shall be held harmless, for any errors or omissions in the Services, and Client assumes all risks and liabilities in relying on the Services, contributing to a third party's reliance on the Services, or inducing a third party to rely upon the Services. All content of the Services should be independently verified by Client. If legal advice or other expert assistance is required, Client will obtain the services of a competent, professional person, and will not rely on information provided on the Services as a substitute for such advice or assistance. No attorney-client relationship exists or shall be deemed to exist between Client (or any Authorized User) and Portfolio Media.

7.2. Governing Law and Venue. This Agreement shall be governed by and shall be construed in accordance with the laws of the State of New York, without regard to its conflicts

of law principles. Any action or proceeding between Client and Portfolio Media relating to or arising out of this Agreement or use of the Services shall be commenced and maintained exclusively in the state or federal courts in the State of New York, and Client hereby consents to the exclusive jurisdiction and venue of any state or federal court in the State of New York.

7.3. **Waiver of Jury Trial.** THE PARTIES HERETO, ON BEHALF OF THEMSELVES AND THEIR HEIRS, EXECUTORS, ADMINISTRATORS, SUCCESSORS AND ASSIGNS, AGREE THAT ANY SUIT, ACTION, DISPUTE OR PROCEEDING, WHETHER BY CLAIM OR COUNTERCLAIM, BROUGHT OR INSTITUTED BY OR AGAINST ANY PARTY HERETO OR ANY HEIR, EXECUTOR, ADMINISTRATOR, SUCCESSOR OR ASSIGN OF ANY PARTY HERETO, ARISING OUT OF, CONCERNING OR IN ANY WAY RELATING TO THIS AGREEMENT OR THE USE OF THE SERVICES, OR ANY FACTS OR CIRCUMSTANCES IN WHICH THIS AGREEMENT OR SERVICES IS INVOLVED IN ANY WAY, SHALL BE TRIED WITHOUT A JURY. EACH PARTY HEREBY KNOWINGLY, EXPRESSLY, VOLUNTARILY AND INTENTIONALLY WAIVES ITS RIGHT TO A JURY TRIAL IN ANY SUCH SUIT, ACTION, DISPUTE OR PROCEEDING, TO THE FULLEST EXTENT PERMITTED BY LAW.

7.4. **No Third Party Beneficiaries.** This Agreement shall be binding upon and inure solely to the benefit of the Parties and their respective permitted successors or assigns. Nothing herein, express or implied, is intended to or shall confer upon any other person or entity any legal or equitable right, benefit, or remedy of any nature whatsoever.

7.5. **No Assignment.** Neither party may assign this Agreement, in whole or in part, without the other party's prior written consent; provided, however, that either party may assign this Agreement to a successor in interest in the event of a reorganization, merger, consolidation or sale of all or substantially all of its assets or stock. Any assignment in violation of this section is null and void, ab initio.

7.6. **Severability.** If any provision of this Agreement is declared void or unenforceable by any court of competent jurisdiction in a final, non-appealable order or judgment, then all remaining provisions of this Agreement shall remain in full force and effect unless otherwise agreed to in writing by the Parties.

7.7. **Waiver; Remedies Cumulative.** The rights and remedies of the Parties are cumulative and not alternative. Neither any failure nor any delay by Portfolio Media in exercising any right, power, or privilege under this Agreement or any of the documents referred to in this Agreement will operate as a waiver of such right, power, or privilege or any future exercise thereof, and no single or partial exercise of any such right, power, or privilege will preclude any other or further exercise of such right, power or privilege, or the exercise (or future exercise) of any other right, power, or privilege.

7.8. **Headings.** Headings or titles to sections or subsections in this Agreement are for convenience of reference only and shall not affect the meaning or interpretation of this Agreement or any part hereof.

7.9. **Compliance with Laws.** Client shall ensure that any activities undertaken by Client (or by any Authorized User) pursuant to this Agreement and any use of or access to the Services shall comply with all laws, rules, and regulations of the United States and other applicable jurisdictions, as such may be amended and in effect from time to time. Without limiting the foregoing, Client recognizes the global nature of the Internet, and further agrees to comply with all local rules regarding online conduct and acceptable content. Specifically, Client agrees to comply with all applicable laws regarding the transmission of technical data exported from the United States or the country in which Client may reside or access the Services.

7.10. **Notices.** Subject to Section 7.11, all notices, consents, communications, and transmittals under this Agreement shall be in writing and shall be deemed received on the day of delivery if delivered by hand, by nationally recognized overnight courier or delivery service, or by facsimile (with written confirmation of the completed transmittal); or within three (3) business days if mailed by United States mail as certified or registered mail with return receipt, postage prepaid, addressed to the party to whom such notice is given at the address of such party stated in the Subscription Form.

7.11. **Consent to Communication.** Client agrees that Portfolio Media reserves the right to send electronic or paper mail to Client for the purpose of informing Client of changes or additions to the Services or this Agreement. Client further agrees that from time to time Portfolio Media may contact Client via electronic or paper mail for the purpose of soliciting feedback or participation in user surveys relating to the Services. Any information obtained from Client will not be shared with any third parties except in aggregate form, in which case Client will not be identified in any manner as a respondent. Client shall have no obligation to participate in or respond to any such survey.

7.12. **Force Majeure.** Except for any payment obligations, neither Party will be liable to the other for failure to fulfill obligations hereunder if such failure is due to causes beyond its control, including, without limitation, acts of God, earthquake, explosion, fire, flood, unusually severe or abnormal weather, embargo, catastrophe, sabotage, utility or transmission failures, strikes, lockouts or other labor difficulties, governmental actions, prohibitions or regulations, voluntary or involuntary compliance with any law or request of any governmental authority, national emergencies, insurrections, riots, wars or other civil disturbances, acts of terrorism, viruses or network outages, which did not result from the acts or omissions of such Party, its employees or agents ("Force Majeure Event"). The time for any performance required hereunder will be extended by the delay incurred as a result of such Force Majeure Event.

7.13. **Entire Agreement.** This Agreement, together, if applicable, with Client's Subscription Form, constitutes the entire agreement between the Parties with respect to its subject matter and supersedes all prior or contemporaneous agreements, representations, and understandings of the Parties, whether written or oral. There are no representations, promises, warranties, covenants, or undertakings other than those contained in this Agreement or the Subscription Form.

Portfolio Media, Inc. Privacy Policy

1. Scope of this Privacy Policy
2. Collection of Information
3. Use of Your Personal Information
4. Sharing or Disclosing Your Personal Information
5. Children's privacy
6. Your Choices and Selecting your Privacy Preferences
7. Access to and Accuracy of Your Personal Information
8. Security
9. Changes to this Policy
10. Cross Border Transfer of Data
11. Contacting Us

1. Scope of this Privacy Policy

This privacy policy describes how Portfolio Media, Inc. and its worldwide affiliated group companies (collectively, "Portfolio Media") will use the personal information collected when you visit the Portfolio Media, Inc. websites, application websites and mobile platforms that contain a link to this privacy policy, as well as any newsletters subscribed to via any of the foregoing (each, a "Service"). A Service may supplement this privacy policy with additional privacy terms or with additional privacy notices in connection with certain features of that Service.

This privacy policy does not apply to websites, applications or mobile platforms that are not linked to this privacy policy or to those operated by third parties. We encourage you to review the privacy policies posted on those websites, applications and mobile platforms.

2. Collection of Information

The Service collects information from you in two ways: directly from your input and automatically through the Service's technologies.

a. Information provided by you

The types of information the Service collects directly from you may include the following as well as any other information type that we expressly ask you to enter and submit to the Service:

- Contact information, such as your name, email address, and telephone number;
- Usernames and passwords;
- Comments and feedback;
- Interests and communication preferences.

b. Information Collected Automatically

The Service automatically collects certain information regarding your use of the Service. Examples of information collected automatically include:

- Internet Protocol ("IP") address used to connect your computer to the Internet;
- Computer, device and connection information, such as browser type and version, operating system, mobile platform and unique device identifier ("UDID") and other technical identifiers;
- Uniform Resource Locator ("URL") click stream data, including date and time, and content you viewed or searched for on a Service;

We may use and disclose automatically collected information for any purpose, except where we are restricted by applicable law. If we combine any automatically collected information with personal information, the combined information will be treated by us as personal information.

We may also use aggregated information for any purpose, however, this information does not identify specific individuals and so is not personal information.

c. Cookies and Web Beacons

The Service may also automatically collect information through the use of cookies or similar technologies, such as web beacons. Cookies are small text files that a website sends to the browser on your computer or mobile device when you first visit a web page so that the website can recognize your device the next time you visit. Most websites typically use the following:

- "Session" cookies, which are temporary and deleted when you close your browser;
- "Persistent" cookies, which remain until you delete them or they expire;
- Web beacons, which are electronic images also known as single-pixel gifs.

In general, cookies, web beacons and similar technologies do not contain personally identifiable information, but when you furnish your personal information through the Service, this information may be linked to the non-personally identifiable data stored in cookies sent to your browser from the Service.

Portfolio Media and its service providers use these technologies for various purposes, including: facilitating the login process, administering, customizing and improving the Service, personalizing the browsing experience; advertising, promotions and surveys. [as well as tracking and analyzing user preferences and trends.

There are a number of ways to manage cookies. The "help" portion of the toolbar on most browsers will tell you how to stop accepting cookies, how to be notified when you receive a new browser cookie, and how to disable existing browser cookies. However, if you block cookies, you may not be able to register, login or make full use of the Service. You can also use your mobile device's settings to manage the available privacy options.

Our HTML-formatted emails may contain a web beacon to tell us whether our emails are opened and verify any clicks through to links or advertisements within the email. We may use this information for purposes including determining which of our emails are more interesting to users. The web beacon will be deleted when you delete the email. Emails in plain text (if applicable) rather than HTML will not include the web beacon.

3. Use of Your Personal Information

We use the personal information collected through the Service to complete various actions:

- to provide and improve service and support;
- to update you on relevant new services and benefits;
- to personalize the Service and to select content to be communicated to you or to use features on the Service such as sharing content with a friend or colleague;

- for data analysis, audits, developing new products, enhancing the Service, identifying usage trends and determining the effectiveness of our promotional campaigns, or in other ways to which you have expressly agreed in a customer agreement with us;
- to prevent and detect security threats, fraud or other malicious activity; and
- to comply with our legal obligations, resolve disputes, and enforce our agreements.

We may on occasion also match or combine the personal information that you provide with information that we obtain from other sources or that is already in our records, whether collected online or offline or by predecessor or affiliated group companies, for the purposes described above.

4. Sharing or Disclosing Your Personal Information

We share your personal information in the following ways:

- **Affiliates.** Your personal information may be accessible to all Portfolio Media affiliated companies worldwide for the purposes described in this policy.
- **Service Providers.** Your personal information may be accessible to our service providers and suppliers, which assist us with producing and delivering our products and services, operating our business, and marketing, promotion and communications. These providers and suppliers include, for example, editors, reviewers, credit card processors, customer support, email service providers, IT service providers and shipping agents.
- **Institutional Subscribers.** If the Service offers a content database or learning service ("Subscription Service") and you access the Subscription Service through an institution-sponsored subscription, your personal information and certain usage data gathered through the Subscription Service, may be shared with your institution for the purposes of usage analysis or subscription management.
- **Other Third Parties.** We may share personal Information with other third parties if we expressly told you about such potential disclosure at the point at which you submitted the Information to us.
- **Compliance with Law and Similar Obligations.** We may share personal information in order to: (i) respond to or comply with any law, regulation, subpoena or court order; (ii) investigate and help prevent security threats, fraud or other malicious activity; (iii) enforce and protect the rights and properties of Portfolio Media or its affiliates; or (iv) protect the rights or personal safety of our employees and third parties on or using our property.
- **Change in Corporate Circumstances.** If Portfolio Media, the Service or a related asset or line of business is acquired by, transferred to or merged with another company, your personal information may be disclosed to the prospective or actual purchasers.

The Service also may provide access to social media features, message boards, chat, forums, blogs, profile pages and other services to which you are able to post personal information and materials. Any information you post or disclose through these services is public. Please be careful when disclosing personal information in these public areas.

5. Children's Privacy

We do not knowingly collect information from children under the age of 13 and Portfolio Media does not target its websites to children under 13.

6. Your Choices and Selecting Your Privacy Preferences

You can manage available communications preferences when you register with the relevant Service, by updating your account preferences, or, where applicable, by using the "opt-out" or unsubscribe mechanism or other means provided within the communications that you receive. We reserve the right to notify you of changes or updates to the Service whenever necessary.

7. Access to and Accuracy of Your Personal Information

You may request access to personal information about you that you have provided to us through the websites or mobile platforms governed by this policy. You may also request to review and correct any of that personal information. Additional rights may also apply under applicable laws. The Service may allow registered users to access their registration information and make corrections or updates. The accuracy of such information is solely the responsibility of the user. No access is given to other data that may have been collected about users.

To protect your privacy and security, we will also take reasonable steps to verify your identity. To view and change the personal information that you directly provided to us (if any), contact us at the address listed below.

8. Data Security

We use a variety of data security measures intended to ensure the confidentiality and integrity of your personal information.

9. Changes to Privacy Policy

If we modify this privacy policy, we will post the revised version here, with an updated revision date.

10. Cross-Border Transfer of Personal Information

Your personal information may be transferred to other countries for processing, and by using the Service you consent to the transfer of information to countries outside of your country of residence, which may have different personal data protection rules than in your country.

11. Contacting Us

If you have comments or questions about this privacy policy or our processing of your information, please contact:

Memorandum

Florida Department of Environmental Protection

ATTORNEY WORK PRODUCT

under s. 119.071(1)(d)1., F.S.

May be released only upon completion of litigation.

May 23, 2014

TO: Herschel T. Vinyard Jr., Secretary

FROM: Matthew Z. Leopold, General Counsel

RE: Office of General Counsel's Weekly Status Report

Below is the report on significant matters from May 5 – May 16, 2014.

Significant Matters

- Emergency Final Order for April Flooding: As authorized by the Governor's Executive Order 14-144, on May 2, the Department issued an Emergency Final Order to address the damage caused by severe flooding in 26 counties in the Panhandle and Big Bend Regions of Florida. The Emergency Final Order is effective until May 30 unless terminated or extended by amendment, and can be viewed at:
http://www.dep.state.fl.us/mainpage/em/files/050114_Emerg_Order.pdf (Betsy Hewitt/Program Section & Heather Chapman)
- Siting Board Hearing – IN RE: Florida Power & Light, Turkey Point Units 6 & 7 (DOAH): In June of 2009, the Department received a Site Certification Application from Florida Power and Light Company (FPL) for power plant site certification. The application seeks certification for: two additional nuclear generating units, each with an approximate electrical output of 1,100 MW; supporting buildings, facilities and equipment; off-site facilities including nuclear administrative building, training building, parking area; transmission lines and system improvements within Miami-Dade County; and other facilities as necessary.

The hearing began July 8, 2013, in Miami, and ran for five consecutive weeks, with an additional three weeks thereafter, ultimately concluding on October 3, 2014. The Administrative Law Judge Issued a Recommended Order on December 5, 2013, and the parties filed responses to the Recommended Order and exceptions to the responses. On May 13, this matter went before the Siting Board, which voted unanimously to adopt the Department's draft Final Order. (Matthew Z. Leopold, Francine M. Ffolkes/Office of General Counsel; Frederick L. Aschauer, Jr./Defense Section)

- Davis and Florida Wildlife Federation v. EPA ("Antideg Case") (U.S. District Court of the Middle District of Florida): Plaintiffs sued EPA to challenge a number of decisions related to the approval of verified impaired waters lists, the methodology in Florida's impaired water

rule, and a number of miscellaneous issues pertaining to Florida's antidegradation policy. On March 4, the Department filed a motion to intervene in the lawsuit. In that motion, the Department supported EPA's pending motion to strike and described its general opposition to the Plaintiff's position. As argued by the Department, Plaintiffs' position, if adopted, would substantially disrupt existing policies and programs. The Plaintiffs oppose the Department's motion to intervene, and have filed a response in opposition.

While the motion to intervene has been pending, EPA and the Plaintiffs began formal mediation on May 15. The parties reached an impasse on two counts addressing the 2008 IWR determination. EPA and the Plaintiffs will continue to mediate on the remaining counts. (Jeff Brown/Defense Section)

Litigation

The Department's Defense Section received one Complaint, which was served on the Board of Trustees during this timeframe. The Defense Section received one Amended Petition for Administrative Hearing, three Petitions for Administrative Hearing, and one Verified Petition to Intervene. The Defense Section did not dismiss any Petitions for Administrative Hearing, and did not forward any Petitions for Administrative Hearing to the Division of Administrative Hearings (DOAH) during this timeframe.

- David W.R. Brown v. DEP (DOAH): Mr. Brown filed a rule challenge petition against those portions of Rule 62-555.360 governing backflow protection on September 11, 2013. The rule, which directly regulates public water suppliers, requires backflow prevention devices to prevent cross connection between non-potable water and potable water. It allows utilities to choose between any of several backflow prevention devices. Mr. Brown wants only one type of backflow prevention device to be allowed in residential areas.

Proposed changes to the challenged rule were submitted by rule package by the Department in January of 2014. The proposed changes were adopted without challenge in April of 2014, and became effective on May 5. The parties submitted status reports to DOAH on May 2. DOAH dismissed this matter as moot on May 5.

On May 5, Mr. Brown filed a new rule challenge to the newly adopted Rule 62-555.360. The hearing is scheduled for June 5. (Benjamin Melnick & Sidney Bigham/Defense Section)

- Mosher & Preserve our Paradise v. DEP (Circuit Court, Leon County): Petitioners filed a Writ of Mandamus and Request for Accelerated Hearing alleging that the Department failed to reasonably respond to a public records request. The matter was assigned to Judge Cooper.

The parties, through counsel, conducted a quick phone conference on May 16 in an attempt to settle the matter. (Frederick L. Aschauer, Jr., Benjamin Melnick/Defense Section)

- Bernard and Marien Spinrad v. William Guerrero, Christina Bang, DEP and BOT (DOAH): The Petitioners challenged the Department's decision to enter into a settlement with the Guerreros, which modified the activities originally authorized by the Department. The modifications included the authorization of a transfer into the names William Guerrero and

Christina Guerrero, repair of the shoreline, repair of jetties, replacement of an earthen boat ramp with a concrete boat ramp, repair and replacement of a wood dock, replacement of mooring piles, removal of a mid-jetty extension, and maintenance dredging of an existing channel. A hearing was held November 18-21, 2013, but was not able to be concluded. The Guerreros filed an interlocutory appeal with the Third District Court of Appeal asking to overturn a ruling of the Administrative Law Judge that denied their request to disqualify counsel for the Petitioners and, in the alternative, stay the hearing for further discovery. The Third District Court of Appeal denied their appeal on January 6. The final hearing continued on March 31 through April 4. Immediately prior to the continued hearing date, the Guerreros filed another Motion to Disqualify the Petitioners counsel; the Petitioners moved to disqualify the Guerreros counsel; and the Petitioners moved to disqualify the Administrative Law Judge (ALJ) and to stay the proceeding. All requests were denied.

The Petitioners filed a Petition for Writ of Prohibition regarding the denial of their Motion to Disqualify the ALJ. The Department has asked for an extension of time to file its response. The Department's motion for extension is still pending. The Guererro have filed their response to the petition, and the Spinrads filed their corresponding reply on May 14. (Brynna Ross & Jeffrey Brown/ Defense Section)

- Schwartz v. Dan A. Hughes Co. and DEP and Thomas Mosher & Preserve Our Paradise, Inc. v. Dan A. Hughes Company & DEP (DOAH): Petitioner Schwartz and Petitioner Mosher are challenging the Department's decision to issue a permit to Dan A. Hughes Company, authorizing the applicant to drill an exploratory well to evaluate the geology of the Lower Sunniland Formation as the primary target. Preserve Our Paradise (POP) moved to Intervene on October 11, 2013. Petitioner Mosher and POP specifically challenge the Hydrogen Sulfide Gas (H₂S) Contingency Plan incorporated into the permit, claiming it is insufficient. After two dismissals with leave to amend, Petitioner Schwartz timely filed its second amended petition, which was referred to the Division of Administrative Hearings on December 19, 2013. After a second dismissal with leave to amend, Petitioner Mosher filed an amended petition on December 20, 2013. Respondent Dan A. Hughes Co. filed a motion to consolidate these cases and filed a motion to dismiss the amended petition on December 23. The Administrative Law Judge (ALJ) granted the motion to consolidate the two cases. On February 13, Petitioner Mosher filed a motion for leave to amend his existing petition, which the ALJ granted on February 17. The hearing took place February 25-27. On the first day of hearing, the ALJ granted the Department's motion for bifurcation, allowing an opportunity to present into the record any recommendation by a separate advisory committee. Each of the parties filed their proposed recommended orders on May 14, and are awaiting the recommended order. (Jeffrey Brown/Defense Section)
- Collier County & Conservancy of SW Fla. v. DEP & Dan A Hughes (DOAH): On April 22, the Collier County Board of Commissioners (Collier Board) voted to challenge a Consent Order. The Collier Board directed its County Attorney to seek the revocation of permit number 1349H, issued to Dan A. Hughes for its 20-3H Collier-Hogan well, or, if revocation is not ordered, to seek certain amendments to the Consent Order. The County Attorney eventually requested an extension of time on April 25 to allow for settlement discussions. A

second requested extension of time to file a petition was granted, giving the County until June 13 to file a Petition. A settlement meeting was set for May 15.

While the County, through its County Attorney, the Department and Dan A. Hughes were communicating, in an effort to arrive at some potential settlement, the Conservancy filed a Petition to Intervene on May 12, even though the County had not filed a Petition. On May 13 the Collier Board voted to proceed with filing a Petition and forego attending the settlement meeting. The County has not yet filed a petition. (Frederick L. Aschauer, Jr & Benjamin Melnick/Defense Section: Larry Morgan/Enforcement Section)

- Kline Properties, Inc. v. BOT (Circuit Court, Lee County): Kline Properties sued the Board of Trustees to quiet title to certain submerged land lying within Hurricane Bay in Fort Myers. The Board of Trustees answered the complaint and filed a counterclaim to quiet title. Kline Properties alleges that the disputed land was dry land at statehood and became submerged as a result of a 1926 hurricane through avulsion, and thus the Board of Trustees has no ownership interest in this submerged land. The Division of State Lands believes that the historical evidence coupled with the Board of Trustees' expert witnesses retained in coastal engineering, geology, and surveying will demonstrate that the disputed land is state-owned because it was submerged and "navigable in fact" at statehood.

The trial was held on May 13-15 in Fort Myers. The Court is allowing the parties to submit written closing arguments by May 29. (Ronnie Hoenstine/Enforcement Section)

Enforcement

- DEP v. Worldwide Tire Rec, Inc., and Paul Faustin (Circuit Court, Orange County): In January of 2012, a Final Order was issued after Defendants did not timely file a petition or respond to the Department's Notice of Violation issued in December of 2012 regarding Defendants unauthorized maintenance of a waste tire site. The Final Order required Defendants to cease accepting waste tires, appropriately separate and store waste tires at their facility, provide mosquito control, obtain a fire survey, pay \$8,500 in civil penalties and costs, and properly remove all waste tires by February 9, 2013. Defendants did not comply with the Final Order by failing to remove all waste tires, provide proof of proper disposal of the removed tires, submit a fire survey, or pay the penalties and costs.

On July 22, 2013, the Department filed a lawsuit against Defendants to enforce the Department's Final Order, seeking proper removal of the remaining tires, proof of disposal, and attorney's fees, costs and expenses. On April 28, the Court entered a Final Judgment after Defendants failed to respond to the lawsuit. The Final Judgment requires Defendants to pay \$8,500 in costs and civil penalties within ten days of the Final Judgment. The remaining waste tires were removed by the property owner, so there are no further corrective actions necessary. (Bonnie Malloy/Enforcement Section)

- DEP v. Fritz Enterprises, Inc. (DOAH): In 2006, Fritz Enterprises, Inc., purchased real property contaminated with drycleaning solvents. In March of 2014, the Department issued a Notice of Violation against Fritz Enterprises, Inc., as the current owner of the property, requiring Fritz Enterprises, Inc., to conduct assessment and rehabilitation of the site in

accordance with Chapter 62-780. Fritz Enterprises filed a Petition for Administrative Hearing.

On May 5, the Petition was forwarded to the Division of Administrative Hearings. The Department served discovery on Fritz Enterprises, Inc., and has reached out to Mr. Fritz in an attempt to reach a resolution in this case. (Alissa Meyers/ Enforcement Section)

- DEP v. Charles L. Mott (Circuit Court, Polk County): On August 30, 2011, the Department issued a Final Order against the Defendant requiring him to restore a pond dredged in wetlands without a permit and pay \$500 in Department costs. The Department filed a Petition for Enforcement of the Final Order after the Defendant failed to timely comply with the terms of the Final Order. On April 16, in an effort to resolve this matter, the Department agreed to hold off on all litigation efforts for a period of 60 days while Mr. Mott and the Southwest District attempted to reach settlement.

On May 5, staff met with Mr. Mott and his daughter on the property. After viewing the site and discussing the possibility of resolving the case, the parties were unable to agree on an approach to settlement. The Department will continue to hold off on litigation during the 60 day litigation hold window and will then proceed accordingly. (Alissa Meyers/ Enforcement Section)

- DEP v. Chevron Environmental Management Company, et al: Rouse Steel Drum Company (“RSDC”) operated a drum reconditioning facility from 1965 to 1990 in Jacksonville, Florida. During the operation, RSDC procured used plastic and steel drums from a number of businesses and reconditioned the drums for resale. During investigations of the site during the 80s, the Department found that hazardous substances generated by the reconditioning process were released to the soil and groundwater at the site. After soil removal actions were conducted at the site under an EPA Administrative Order on Consent, there remained potentially contaminated soil under buildings and slabs at the site, and the groundwater remained contaminated by a number of contaminants in excess of the Department’s cleanup target levels. About five years ago, the Department filed a claim in a bankruptcy proceeding involving Millennium Specialty Chemicals, Inc., one of the businesses that sent drums to RSDC for reconditioning. As part of the settlement of the bankruptcy proceeding, the Department received shares of stock from Millennium Specialty Chemicals, Inc.’s parent company, Lyondell Chemical Company to be used for restoration of the RSDC site. The Department has been receiving dividends from the stock that have been deposited in a temporary account with the Florida Department of Financial Services (DFS). The amount of dividends paid to date is approximately \$435,000. The stock held by the Department is worth approximately \$2 million dollars. The District has been working with the responsible parties that sent drums to the RSDC site to get the contamination at the site assessed. After work stalled at the site, negotiations began with 13 companies that sent drums to the site and the two companies and trusts that currently own the land.

On May 7, the Department entered into a Consent Order as trustee for a number of land trusts. The Consent Order requires, among other things, the companies that sent drums to the RSDC site to complete the contamination assessment and cleanup of the site. The parties to the Consent Order have set up an escrow account with DFS to which the Lyondell Chemical

Company stock dividends and stock liquidation funds will be deposited. C It is currently estimated that the work needed to address the contamination at the site will cost about \$1 million dollars. If the work costs less than the funds in the escrow account, the balance of the escrow funds will be deposited in the Water Quality Assurance Trust Fund for use at other sites. (Larry Morgan/Enforcement Section & Jon Alden/Defense Section)

Public Lands

- Veterans4 You Concessions Contract: The Office of Operations is negotiating with Veterans4 You to provide Florida State Parks merchandise that will be sold via a website built and designed by the company. Members of the Office of Operations and a member of OGC met with representatives of Veterans4 You and their counsel. A concessions agreement is currently being drafted and the terms are being worked out. (West Gregory/ Public Lands Section)

Rulemaking and Other Matters

- State Lands and Petroleum Contamination Cleanups: The Petroleum Restoration Program (PRP) receives funds from the Inland Protection Trust Fund (IPTF) to assess and remediate certain petroleum discharges reported prior to 1998. The Board of Trustees, through the Division of State Lands (DSL), owns property that has petroleum contamination which is eligible for remediation under the IPTF. In addition, the Waste Cleanup program uses IPTF money under a program called “State Owned Lands Cleanup” (SOLCUP) to assess and remediate contamination not eligible under PRP. The DSL currently has several surplus properties up for bid in mid-May, including the following two properties that have contaminated sites being cleaned up under the SOLCP: Hendry Correctional Institution and Glades Correctional Institution.

Procedures for coordinating with DSL on eligible cleanups have been drafted for review and approval before distributing to all PRP site managers. A preliminary process will be drafted for management’s review for handling the funds to cover program copayments and deductibles that are normally required of real property owners or other responsible parties for some of the PRP IPTF programs. (Rebecca Robinette and Lisa Duchene/Program Section)

- Chapter 62-348 (Permitting and Alternative Mitigation for the Mining of High-Quality Peat): The Division of Water Resource Management sought to delete cross-references in Chapter 62-348, F.A.C., to rule chapters that were repealed as a result of the Statewide Environmental Resource Permitting rules that became effective on October 1, 2013. The Joint Administrative Procedures Committee (JAPC) advised OGC that these proposed amendments required rulemaking. However, OGC disagreed with JAPC and proceeded to accomplish the deletion of the repealed rule chapters through a technical change letter to the Department of State’s Administrative Code and Register Section in lieu of formal rulemaking. OGC argued that under Florida law agency rules that cross-reference other rules of that agency automatically incorporate any subsequent amendments to the referenced rule. As a result of the rule repeals, Chapter 62-348 referenced rules that no longer exist and had no present meaning. Therefore, the deletion of the repealed rule references could be accomplished as a technical change without formal rulemaking because the changes were

non-substantive and would not affect the construction or meaning of the rule. (Krystle Hoenstine/Program Section)

- Virginia Key WWTP/Miami-Dade Water and Sewer Authority Department (M-DWASD): The United States Environmental Protection Agency (EPA) issued a National Pollutant Discharge Elimination System (NPDES) permit for this facility's discharge effective on July 1, 1999, with a June 30, 2004 expiration date. This facility was retained by EPA for permitting under the 1995 DEP/EPA NPDES Memorandum of Agreement, since it had a permit under challenge at the time of program approval, and was also identified as discharging to federal waters. The facility is currently operating under the administratively continued EPA permit. The Department issued a "state-only" non-NPDES permit to the landside treatment facility on October 17 which expires on October 16, 2017. M-DWASD and EPA are currently litigating with the Biscayne Bay Waterkeepers over a consent decree that calls in part for extensive upgrades to the facility.

On May 13, EPA informed the Department that a new survey provided by M-DWASD shows that the discharge outfall is located in state waters, and that they would be transferring the obligation to issue the NPDES permit to the State. Department staff object to transfer of the draft permit at this point in the process. Staff recommends taking the permit only after any litigation on the EPA's proposed permit and other federal issues are resolved so an orderly transfer can be made. It may be expected that EPA will unilaterally transfer the permit to the Department, despite our objection. At this time, staff and OGC are discussing options. (Betsy Hewitt/Program Section)

- Implementation of 2014 Petroleum Restoration Program Legislation: In the 2014 legislative session, CS/HB 7093 (not yet signed by the Governor) made some changes to the Petroleum Restoration Program (PRP). In addition to modifying certain procedures to reflect these changes, assuming they become law, the PRP will need to develop procedures to address the changes to the Preapproved Advanced Cleanup program (PAC). This program was modified to allow an applicant to bid to participate in the program by showing a 25% or more cost savings in lieu of paying 25% or more of the cost to cleanup. The application would propose to enter in to a performance-based contract with an agency term contractor for the cleanup of 20 or more sites.

A number of questions have come to the Department in the past week about how an applicant can show those cost savings. In addition to answering these questions, the PRP will need to develop internal procedures to efficiently process, review and implement any winning applications. OGC will be assisting PRP in answering the public's questions, developing procedures, modifying old PAC template agreements to address this new concept, and providing input to the development of the internal process. The deadline to apply for PAC is June 30, therefore, the information and procedures should be posted by the end of May. (Rebecca Robinette/Program Section)

- EPA Water Transfers Rule: In 2008, EPA promulgated a rule, 40 CFR 122.3(i), that exempted from NPDES permitting any "activity that conveys or connects waters of the United States without subjecting the transferred water to intervening industrial, municipal, or

commercial use.” Numerous lawsuits challenging the rule were filed. In 2012, the 11th Circuit ruled that the federal district courts have original jurisdiction to hear the challenge.

On March 28, a federal judge in the Southern District of New York granted summary judgment to the parties challenging EPA's Water Transfers Rule. In so doing, the judge found the statutory text ambiguous but determined that EPA had not provided a reasoned explanation for the rule. The judge remanded the rule to EPA to provide further justification for the rule or to modify the rule. Appellate jurisdiction is limited to final decisions of the district courts and typically does not extend to remand orders. However, if EPA chooses not to change its rule or the justification for the rule, then the remand order will be final and can be immediately appealed. It is unknown whether EPA will take such action. Regardless of EPA's decision, the South Florida Water Management District has indicated an intention to file a notice of appeal on or about May 27. (Kenny Hayman/Program Section)

Upcoming Litigation

Date	Case Name	Litigation	Location	Attorney
May 28-29	Paul Still v. SRWMD and DEP	Rule Challenge Hearing	Leon County	Jeff Brown
June 4	DEP v. Rondolino	Hearing on DEP's Motion to Compel Discovery, Leave to Propound, and Motion in Limine	Marion County	Alissa Meyers
June 5	Brown v. DEP	Rule Challenge Hearing	Leon County	Ben Melnick

Subject: Press Release - Testing the Waters for US Senate race
Date: Friday, June 12, 2015 4:10:36 PM
Attachments: [Press Release Todd Wilcox announces US Senate exploratory efforts.pdf](#)

Good afternoon. I want to share a recent press release with everyone from last night's Ernst&Young Entrepreneur of the Year award gala here in Orlando. I was a finalist and used the event to publically disclose my intentions to explore a run for the US Senate.

My last update email that I sent out earlier this week showed up in a Politico blog but obviously, after having spoken to so many of you, it was no secret that I am exploring a run at the US Senate seat in 2016. Feel free to share this news release with anyone you think might be interested.

Thanks again for all the encouragement and support. I'll keep you posted on my progress as we close in on a final decision. Have a great weekend.

Best regards,

Todd

For Immediate Release

Subj: Todd Wilcox announces US Senate exploratory efforts at EY Entrepreneur of the Year Award Gala

Orlando, Fla (June 12, 2015) - Todd Wilcox, an Orlando based entrepreneur who is considering a run for the US Senate in 2016, was recognized last night as a finalist for the Ernst&Young 2015 Entrepreneur of the Year Award for Florida. The finalists were recognized and category award recipients announced at a gala event on June 11, 2015, at The Omni Orlando Resort at Champions Gate.

Todd spoke to members of the audience which included the 28 other Florida Entrepreneurs and an audience of over 400 people. In his comments he announced his imminent resignation as CEO of Patriot Capital, LLC to pursue exploratory efforts to test the waters for his potential candidacy in the Republican primary for the US Senate in 2016.

http://www.ey.com/US/en/About-us/Entrepreneurship/Entrepreneur-Of-The-Year/SEA_FL_Article_regional-finalists_2015

Text of Todd Wilcox's remarks to members of the audience:

"This is the world's most prestigious award for entrepreneurs and it is an honor to be recognized. This celebration of the entrepreneurial spirit could not come at a better time as free market capitalism is under constant attack by the left of the Democratic Party. The President once said "You didn't create that..."; he was talking to all of us as entrepreneurs. While I took exception to those comments when he said them and still do today, there was some truth in his comments.

I had a vision to start my business. I put together a plan and mustered the intestinal fortitude and determination to implement my plan. I took significant financial risk to initiate my plan and I inspired a small group of people to get behind me as I launch my business. But I did not do it alone. I had the support of my wife Christine and my three daughters who sacrificed my lack of presence in mind and spirit as we worked long hours to create something significant out a mere idea. I had the support of my angel investor Ammar who trusted me with his seed investment that sparked life into my idea. And I have had the loyalty, dedication and hard work from the talented team of very professional employees that helped build the business over the last 9 years. I was merely the conductor and they were the instruments that made the music. To all of them I am very grateful and any accolades of our success is shared with all of them.

Only in America can you go from dirt poor to Entrepreneur of the Year. We as successful entrepreneurs owe so much to our free market capitalist democracy. For without this system we would not have been able to fulfill our dreams of creating something larger than ourselves. I have served my country as a combat veteran, first as an infantry platoon leader in Desert Storm and later as a Green Beret in the US Army Special Forces. I also served as a CIA officer in the Middle East and then I started a business that is dedicated to supporting America's military, diplomatic and economic prominence. Because I feel so strongly that our free market capitalist democracy is under attack, I am stepping up to serve again. In the coming weeks I will resign my position as CEO of Patriot Capital to fully explore the viability of running for the US Senate in 2016 as a Republican candidate. I thought there was no better place to announce my exploratory efforts than here tonight as we celebrate the entrepreneurial spirit that has defined America for so many years.

It is not too late to restore America's prominence. More to follow.

God bless you all and God bless America!" END TEXT.

I thought you were because you could sign them and send on to Peter. I do not mind doing it. Just let me know. I sent you an example. Do we know where we might be headed this fall for mid-year? I will send the first 6 boxes to you on Friday. They are already packaged (you had sent them to me originally and I did not open them) so I am not quite sure what is in them. Must be historical information because I have not needed them ☺

Importance: High

Susan, hi there. I am ready to receive the boxes if you want to start shipping. Also, did you send certificates out to McQuaid and Staudt? Was I suppose to? How are things going? Fran
Wendy, did the updated list of the attendees get emailed? I thought so. If so could you resent to McQuaid and Staudt?

Thanks. Fran

Importance: High

NAEO Board -

As discussed with Wendy, Sue etc..... Contact information for Millennium Hotel Contact as discussed during 2011 and 2012 Conference. Possibly use our contact to work out a "nationwide" deal with Millennium to use them as our Hotel chain for future conferences: (50th???) Chicago, Nashville, Phoenix, Boston, NY etc.

dmass@mill-USA.com

Hope all is well with everyone. Did we ever print off Cook Counties Certificates (McQuaid / Staudt)? We haven't received them yet. Also did we send out a finalized contact list for the attendees, if so, didn't receive it.

Thanks.

Tom

Committee Meeting Notes (2013)

Meeting Logistics:

Chamber: **Committee:**

Senate Appropriations Subcommittee on General Government

Chairman:

Hays, Alan (S, 11, R)

Date:

2/12/2013

OPB Unit:

GGU

Vice Chairman:

Thompson, Geraldine (S, 12, D)

Time:

2:00 PM

Analyst(s):

Frankel, Danielle

Location:

Members / Attended:

Bradley, Rob (S, 7, R)	<input checked="" type="checkbox"/>	110 - SOB
Braynon, Oscar (S, 36, D)	<input checked="" type="checkbox"/>	
Bullard, Dwight (S, 39, D)	<input checked="" type="checkbox"/>	
Dean, Charlie (S, 5, R)	<input checked="" type="checkbox"/>	
Detert, Nancy (S, 28, R)	<input checked="" type="checkbox"/>	
Hays, Alan (S, 11, R)	<input checked="" type="checkbox"/>	
Joyner, Arthenia (S, 19, D)	<input checked="" type="checkbox"/>	
Latvala, Jack (S, 20, R)	<input checked="" type="checkbox"/>	
Legg, John (S, 17, R)	<input checked="" type="checkbox"/>	
Simpson, Wilton (S, 18, R)	<input checked="" type="checkbox"/>	
Soto, Darren (S, 14, D)	<input checked="" type="checkbox"/>	
Stargel, Kelli (S, 15, R)	<input checked="" type="checkbox"/>	
Thompson, Geraldine (S, 12, D)	<input type="checkbox"/>	

Objective:

Chairman Hays

- All members present except for Senator Thompson
- Agenda:
 - Base budget review and agency legislative budget request for the following agencies: Department of Citrus, Division of Administrative Hearings, and the Office of Financial Regulation.
 - Presentations by the Department of Management Services (DMS) on the Florida State Owned Lands Records Information System and Florida Facilities Pool Overview and the Office of Insurance Regulation on the 2012 Workers' Compensation Annual Report and FSU Catastrophic Storm Risk Management Center

Attached is the meeting packet which includes the agency presentations.

Department of Citrus, Douglas Ackerman, Executive Director

Discussed the department's base budget, performance evaluations on recurring local funding initiatives, and legislative budget request in addition to overview of agency and organizational structure

Sen. Bullard: Has the citrus industry tied themselves to individuals who are living a healthier lifestyle, such as juicing, etc.?

- **Mr. Ackerman:** We have approached the grocery chains to get fresh processing products available. But when there are limited resources and limited crops you have to get everyone together and figure out what is the best way to target and get the message out there. There are ongoing conversations with the juicing companies to take that approach.

Sen. Joyner: Who is your advertising agency?

- **Mr. Ackerman:** BBDO from Atlanta. We have a five year contract and we are three years into that contract. The goal is to attract the millennium generation; we also have an aggressive public relations campaign.

Sen. Joyner: Made a suggestion that the Department of Citrus should plant an orange tree at every school and to include the local community members as well. Sen. Joyner had visited several schools that have their own gardens and the students take great pride in growing their own fruits and vegetables.

- **Mr. Ackerman** agreed that this was a great idea but the department has a school-friendly character called Captain Citrus that teaches students the importance of healthy eating and an active lifestyle.

Sen. Soto: Now that the citrus industry is a \$9B industry, what do you anticipate it to be in one year from now as far as total revenue, including the diseases impacting the crops?

- **Mr. Ackerman:** I haven't made a projection but what we are seeing is of great concern. We were forecasting 157M boxes and we are already down to 140M boxes and we haven't even started harvesting Valencia oranges yet. A cold snap now would crush the industry. An exact number is unknown at this time, but I will follow up with you off line.

Office of Insurance Regulation 2012 Workers' Compensation Annual Report

Kevin McCarty, Insurance Commissioner

Chairman Hays: Why is there a 3.8 percent difference in Florida and the national average on repackaged drugs?

- **Mr. McCarty:** There are a number of explanations which I will get into later; however, Florida has seen an explosion in the amount of drug repackaging and drugs being dispensed by physicians.

Chairman Hays: Is something similar to that in hospital outpatient fees?

- **Mr. McCarty:** Florida uses a traditional way of reimbursing hospitals' inpatient fees. They are based on a per diem and we charge about \$3K a day. Once you exceed the \$51K stop-log, you move to a percent of charges which you are basically paying a percentage of what the hospital bills you.

Sen. Latvala: When we do cost studies is there any factor for the additional medical expense incurred by those injured workers who can't get prescriptions in a timely manner at pharmacies? Going to the physician the medicine is available right then and there versus the wait time, etc, that you have to deal with when going to a pharmacy.

- **Mr. McCarty:** The information is based upon information we received from the National Council on Compensation Insurance (NCCI) which has done a cost estimate if we were to compensate at the same amount. We are not suggesting that physicians be prohibited from dispensing drugs, but there needs to be an equalizer in terms of the cost of that drug whether it is dispensed at a pharmacy or at a physician's office. If that were the case, that simply alone would reduce the cost in Florida by \$25M. According to the Workers Compensation Research Institute (WCRI), Florida has the second highest number of prescriptions in total payment and a disproportionate amount of premium dollars is going to physician dispensed drugs.

Division of Administrative Hearings, Robert Cohen, Chief Judge

Discussed the division's base budget, performance evaluations on recurring local funding initiatives, and legislative budget request in addition to overview of agency and organizational structure

Chairman Hays: Commended the Division of Administrative Hearings on operating on a 5 percent administrative base budget.

Office of Financial Regulation (OFR), Drew Breakspear, Commissioner

Discussed the office's base budget, performance evaluations on recurring local funding initiatives, and legislative budget request in addition to overview of agency and organizational structure

Sen. Joyner: Were the FTE reductions due to attrition, retirement or layoffs?

- **Mr. Breakspear:** A combination of attrition, layoffs and retirements. We closed four of our nine offices as well.

Sen. Joyner: Were those laid off offered employment within the state government?

- **Mr. Breakspear:** I don't know the answer to that as that was before my time but I do know that we offered employment to some people when there were vacancies available in OFR.

Florida State Owned Lands Records Information System and Florida Facilities Pool

Rick Mercer – Department of Environmental Protection (DEP)

Tom Berger – Department of Management Systems

Sen. Detert: I worked on this a few years ago to identify buildings sitting empty around the state and the results were very disappointing. Is there anything different now with DEP versus DMS?

- **Mr. Berger:** You are correct; there was a problem - we didn't know what we had or who owned what. That data now exists in one place. The sale process belongs to DEP, Division of State Lands. The Governor and Cabinet determine if we actually sell a piece of land. If any agency has a facility that they declare a surplus, they are responsible to tell DEP to start the process. It is a bit of a long process. Statutorily they have to offer it to state agencies, universities systems, colleges, local governments, etc. We have been working very closely with DEP on some language in a bill to streamline the process.

Sen. Detert: Wanted to see a more expedited process in this area and is supportive of a bill that would do as such.

Sen. Joyner: Do you all have a small business enterprise?

- **Mr. Berger:** Specifically no, but the Office of Supplier Diversity (OSD) is within DMS and we work closely with them on getting vendors qualified to work on state projects.

Sen. Joyner: So you wouldn't be able to tell me the percentage of construction business that has gone to

women, blacks, or veterans?

- **Mr. Berger:** We do not track that information.

Chair Hays responded that OSD might track that information.

Sen. Joyner: Why don't you all track that information?

- **Mr. Berger** stated that there was not a requirement to do so.
- **Secretary Nichols** spoke to clarify that OSD does have that data. Confirmed that they do track the spending and can get that information to the Sen. Joyner.

Sen. Bullard: Have you all done any studies on retro-fitting existing buildings for solar paint or solar paneling front end investment versus how much cost savings it would be long term for energy consumption?

- **Mr. Berger:** We have an analysis on the existing solar project on the capital circle office complex site and how it compares with other energy savings. The focus is on life cycle cost and how much energy is used.

FSU Catastrophic Storm Risk Management Center, Patrick Maroney, Director

Sen. Joyner: The partners that were listed. How did you go about selecting them..was it competitive?

- **Mr. Maroney:** We looked at folks that had a common interest.

Sen. Soto: Are you all evolving your models to deal with storm surges?

- **Mr. Maroney:** The storm surge project also incorporates rising sea levels. We are looking at that. This is an unknown cost at this point.
